CHAMBERS'S
TECHNICAL DICTIONARY

Comprising terms used in Pure and Applied Science:
Medicine: the chief Manufacturing Industries:
Engineering: Construction: the Mechanic Trades

With Definitions by recognised Authorities

EDITED BY

C. F. TWENEY
Editor of *A Technological and Scientific Dictionary,*
Standard Books, etc. etc.

at the University Press, Edinburgh

PREFACE

THE aim of this dictionary is to give, in the light of present knowledge and opinion, definitions of terms that are of importance in pure and applied science, in all branches of engineering and construction, and in the larger manufacturing industries and skilled trades. It is a dictionary of technical terms, written by specialists, partly for other specialists but more particularly for the technically minded man-in-the-street, and for students and interested workers of all kinds and ages : indeed, for all who wish to understand what scientists and engineers have to say to each other.

What, it may be asked, is a technical term ? It may be defined as a word or expression which has special significance and value to a person learned or dexterous in a branch of knowledge relating to some particular human activity or to some particular aspect of nature. A dictionary of technical terms, therefore, must aim at including, as far as its scope allows, all terms having such 'special significance and value.' It will naturally include many thousands of words which form no part of daily speech. On the other hand, it will also include very many which do form part of daily speech but which, having acquired at the hands of scientists and technical workers 'special significance and value,' have become technical terms. *Accuracy, error, mistake, efficiency, work, speed*—all these are technical terms because they mean more (or, at any rate, something more definite) to the scientist than to the ordinary man. Similarly, many everyday words (e.g. *canaries, miser, capitalist,* even *plum* and *apple*), having acquired meanings which will be totally unsuspected by most people, are as 'technical,' and therefore eligible for inclusion, as, say, *pericardiomediastinitis* or *diplochlamydeous chimaera.*

To be safe, indeed, one must regard technical language as a language apart from ordinary speech. Technical terms are in reality symbols adopted, adapted, or invented by specialists and technicians to facilitate the precise expression and recording of their ideas. Without them they would find themselves hindered in their mental processes, just as the ancients were hindered by the lack of a convenient system of numbering. Each word or expression is a short method of denoting a particular idea ; it is a term *ad hoc,* and its meaning cannot safely be guessed. Etymological deduction may, and often does, help, but it is dangerously apt to mislead, for countless technical terms, many of them relics of a less understanding or a less particular day, are misnomers, e.g. *vitamins, maria* (of the moon), *magnetising force, legal ohm,* and the names of many minerals.

From what has been said above it follows that the safest authorities on the meanings of technical terms are those who understand and use them. The Editors have, therefore, in every field covered by this work, turned without hesitation to specialists who are actively engaged in the practice and teaching of their respective subjects. In the various departments of pure science, as well as in engineering, construction, and mining, the selection and definition of the terms have been entrusted to experienced teachers of the different subjects at university colleges. Each contributor has been charged with setting forth his ideas in an explicit form, and in language more readable, more 'humanised,' than that of the specialised glossaries with which he has normally to deal. Such glossaries have naturally been of great assistance in the compilation of this work, which is not, however, for various reasons rendered superfluous by their existence. For one thing, the glossaries have been prepared to co-ordinate, to codify, the fundamental conceptions in some particular branch of knowledge or activity, and they necessarily demand a specially trained mind for their complete comprehension. Again, the glossaries vary greatly in nature, form, and bulk—not to speak of price and accessibility—from the great medical and botanical dictionaries to the brief specifications of the British Standards Institution. Finally, they take time to compile: that of the International Electrotechnical Commission was thirty-four years in the making.

Meanwhile the world must go on, and for many years the need has existed for a convenient yet sufficiently comprehensive dictionary. Much, very much, has happened in the development of science and technology since the senior editor of the present work brought out, in 1906, his earlier *Technological and Scientific Dictionary*. While it is broadly true that there is much technical language that will never change, it is also true that with time the special meaning of a technical term may expand or contract, as more kinds of things are shown to have common attributes, or when the subject of a technical term is seen to be more complex than was at first imagined, or to consist of perhaps discordant elements which may require separate definition; for example, when the generality of *isotopes* was established the definition of the *atom* had to be slightly revised. In addition, however, to such adjustments, scientific and industrial activity proceeds apace, and the advancing complexity means on balance an increasing collection of technical terms. The Editors and Publishers of the present work believe that they are here presenting a very full and representative cross-section of the language of science and technology to-day.

Scope.—In SCIENCE, many thousands of astronomical, meteorological, geological, mineralogical, chemical, and physical terms are defined. In zoology and botany the terms selected relate mainly to the conditions, growth, and functions of animal and vegetable parts. The larger subdivisions of the plant and animal kingdoms are adequately treated, as are all the important types of rocks and minerals. The medical and veterinary terms are largely supplemented by those occurring in zoology, biology, physiology, psychology, chemistry, and botany.

In ENGINEERING, the terms used in every branch, including metallurgy, are fully dealt with. In electrical engineering due consideration has been given to terms in electrical communication, telephony, radio, and television. Particular attention has been given to the rapidly developing subject of acoustics, with its applications in cinematography. Mining terms have presented a special difficulty, for there are many thousands of them with but a very localised currency. Within the limits set, our contributor has attempted to give a representative selection of such terms as enjoy general usage.

In MANUFACTURES, the terms cover a wide range of industries, including raw materials, processes of manufacture, machinery, and, in the textile industries, fabrics, bleaching, and dyeing.

In CONSTRUCTION, the terms are similarly comprehensive, including buildings, bridges, ships, and docks. Materials and methods are named and defined, as are structural parts and features.

Appendix, Supplement.—The Appendix (pp. 923-951) contains useful tables in the fields of chemistry, geology, botany, and zoology; while to the present (second) edition of the dictionary is added a Supplement (pp. 952-975) which both amplifies existing topics and embraces new ones.

A full list of the subjects covered by this dictionary is given on page viii.

Pronunciations.—Bearing in mind the very great diversity in the pronunciation of technical terms, even among technical men themselves, it has not been deemed advisable to superimpose a thoroughgoing pronunciation system upon the present work. Instead, the Editors have asked contributors to indicate their own pronunciation and accentuation in cases where they think such an aid helpful. Accordingly, if the reader pronounces or accents a word as shown in the dictionary, he may rest assured that he is doing so in good company. A very large number of terms have no pronunciation indicated; in these the ordinary rules of pronunciation and accentuation of ordinary English speech may be said to hold good.

Where pronunciations are indicated by respelling, the following system of phonetics is used:

a	as in	**fat**	ī	as in	pine	ü	as in	Fr. *pur,* Ger. *für*
ā	,,	**fāte**	o	,,	hop			
ah	,,	**Ah !**	ō	,,	hope	g	,,	**go**
aw	,,	**cause**	oo	,,	**hoop**	j	,,	**jam**
e	,,	**met**	ow	,,	**cow**	s	,,	**seat**
ē	,,	**meet**	u	,,	**cub**	zh	,,	plea**s**ure
ė	,,	**her**	ū	,,	**cube**	ahn^{g}	,,	Fr. *blanc*
i	,,	**pin**				on^{g}	,,	Fr. *mont*

Where pronunciations are not indicated by respelling, the following general rules apply:

(1) An accent after a syllable indicates stress on that syllable. If the accent is placed after a vowel, that vowel is long (e.g. **adre′nal**); if it is placed after a consonant, the vowel preceding that consonant is short (e.g. **adren′aline**).

(2) In words derived from Greek, **ch** is commonly pronounced **k**.

(3) In chemical terms the suffix **-ine** is commonly pronounced **-ēn** (e.g. **aniline** =an′il-ēn; **alkaline**=al′kal-īn is an exception).

Alphabetical Arrangement.—Certain departures have been made from the conventional arrangement of articles in strict alphabetical order as determined

LIST OF SUBJECTS AND ABBREVIATIONS

Acoustics (*Acous.*).

CHAMBERS'S
TECHNICAL DICTIONARY

***Note.*—An asterisk ★ after an article or cross-reference directs attention to the Supplement**

A, *a*

a-. A prefix meaning *not, lacking, without*; sometimes used in the forms **an-, ap-.**

a (*Chem.*). A symbol for *activity* (2).

***a*-** (*Chem.*). An abbrev. for (1) Asymmetrically substituted.—(2) *Ana*-, i.e. containing a condensed double aromatic nucleus substituted in the 1.5 positions.

a (*Elec. Eng.*). See **A** (*Elec. Eng.*).

[**a**] (*Light*). A group of dark lines in the red of the solar spectrum, having a head at wavelength 7164 725 A. The group is due to absorption in the earth's atmosphere. See **Fraunhofer lines.**

α (*Chem.*). A symbol for (1) Degree of electrolytic dissociation.—(2) Angle of optical rotation.

α- (*Chem.*). A symbol indicating (1) Substitution on the carbon atom of a chain next to the functional group.—(2) Substitution on a carbon atom next to one common to two condensed aromatic nuclei.—(3) Substitution on the carbon atom next to the hetero-atom in a heterocyclic compound.—(4) A stereo-isomer of a sugar.

$[\alpha]_D^t$ (*Chem.*). The symbol for the specific optical rotation of a substance at *t*° C., measured for the D line of the sodium spectrum.

α-brass, α-iron, etc. (*Met.*). See **alpha brass, alpha iron,** etc.

α female (*Zool.*). See **alpha female.**

α-particle (*Phys.*). See **alpha particle.**

α-rays (*Phys.*). See **alpha-rays.**

A (*Chem.*). The symbol for *argon.*

A (*Chem.*). Symbol for (1) Free energy—*Helmholtz.*—(2) Atomic weight.

A or **a** (*Elec. Eng.*). The commonly used abbreviation for *ampere*; e.g. 25A signifies a current of 25 amperes.

[**A**] (*Light*). A strong absorption band in the deep red of the solar spectrum (wavelength 7621·28 Å.U.), caused by oxygen in the earth's atmosphere. The first of the Fraunhofer lines.

A (*Phys.*). Abbrev. for *absolute temperature.*

Å, Å.U., A, A.U. (*Phys.*). Abbrevs. for *Ångstrom unit.*

A-amplifier (*Elec. Comm.*). The amplifier associated with, or immediately following, a high-quality microphone, as in broadcasting studios.

A-battery (*Elec. Comm.*). The battery or power supply for heating the cathodes of thermionic valves to a temperature suitable for the emission required.

A-digit-selector (*Auto. Teleph.*). In a Strowger system, the first two-motion switch, which is operated by dialling, and which engages a free director.

A-operator (*Teleph.*). The operator who asks for subscribers' requirements and controls local and junction calls.

A-position (*Teleph.*). A section of the switchboard allocated to an A-operator.

A-position keysending (*Teleph.*). The setting-up of trains of impulses by the A-operator in a manual system to extend a call into an automatic system.

A-service-area (*Radio*). That region around a broadcasting station where the field strength is greater than ten millivolts per metre.

A-side (*Teleg.*). The double-current channels in a quadruplex system.

A-type pole (*Elec. Comm.*). Support for open-wire lines constructed from two inclined poles fastened together at the top and braced with a cross-tie.

A-wire (*Teleph.*). The wire of the subscriber's pair which is connected to the T or tip-wire of the answering plug of the cord circuit and so to the positive (earthed) end of the battery. It is normally a few volts below earth potential to expose faults.

a.a. (*Photog.*). Abbrev. for *take one of each* in photographic solution recipes.

a.b. (*Build.*). Abbrev. for *as before.*

ab- (*Elec. Eng.*). A prefix attached to the practical electrical units to obtain names for the absolute electromagnetic units—e.g. *abampere, abohm, abvolt,* etc. Used chiefly in America.

abac'tinal (*Zool.*). See **abambulacral.**

ab'acus. A term applied to various early forms of an instrument used for mechanically performing addition and subtraction.

abacus (*Arch.*). The upper member of a column or pilaster, on which the architrave rests.

abacus (*Carp., etc.*). The part of a baluster on which the handrail rests.

abambula'cral (*Zool.*). Pertaining to that part of the surface of an Echinoderm lacking tube-feet.

abamu'rus (*Build.*). A supporting wall or buttress, built to add strength to another wall.

aba'pical (*Zool.*). Pertaining to, or situated at, the lower pole: remote from the apex.

abatement (*Join.*). Waste of timber in shaping to size.

abatjour, ab-a-joor' (*Build.*). An opening to admit light, and generally to deflect it downwards; a skylight.

abattoir, ab-at-war'. A public slaughter-house.

abatvoix, ab-a-vwa' (*Acous.*). A sounding-board or other arrangement over a pulpit or rostrum, to deflect speech downwards and in the direction of those listening.

abaxial (*Bot.*). The side of a leaf, petal, etc. which is farthest from the axis.—(*Zool.*) Remote from the axis.

abaxial (*Photog.*). Said of rays of light which do not coincide with the optical axis of a lens system.

Abbé refractometer (*Chem.*). An instrument for measuring directly the refractive index of oils, etc.

abbreviated (*Bot.*). Shortened rather suddenly.

A.B.C. process (*Sewage*). A process of sewage treatment in which alum, blood, clay, and charcoal are used as precipitants.

Abderhalden reaction (*Chem.*). A test for the presence of protective ferments in the blood. The prepared albumin and the serum are mixed and any change in optical activity noted; or else the mixture is dialysed and the dialysate tested by the ninhydrin reaction. The test can be used to detect pregnancy, malignant disease, dementia praecox, etc.

abdo'men (*Zool.*). In *Arachnida*, a loose term roughly equivalent to *opisthosoma* (q.v.): in *Insecta*, the third or posterior part of the body behind the thorax: in *Crustacea Entomostraca*, the apodous region behind the genital openings: in *Crustacea Malacostraca*, the posterior part of the body bearing pleiopods and uropods: in *Diplopoda*, the part of the body composed of double segments: in other *Arthropoda*, a posterior part of the body: in tubicolous *Polychaeta*, the posterior part of the body differing from the anterior part (thorax) in arrangement of chaetae and parapodia: in *Tunicata*, the part of the body containing the stomach and intestine: in lower *Vertebrata*, that region of the body which corresponds to the Mammalian abdomen but is not usually demarcated by a diaphragm: in Mammals, the region of the body, lying between the diaphragm and the pelvis, which contains the urinogenital and digestive organs.

abdom'inal (*Zool.*). Pertaining to or situated in the abdomen.

abdominal legs (*Zool.*). Soft, fleshy, unjointed locomotor appendages of the abdomen in some insect larvae; not homologous with the true or thoracic legs.

abdominal pores (*Zool.*). Apertures leading from the coelom to the exterior in certain Fish and in *Cyclostomata*.

abdominal reflex (*Zool.*). Contraction of the abdominal wall muscles when the skin over the side of the abdomen is stimulated.

abdominal regions (*Anat.*). Nine regions into which the human abdomen is divided by two horizontal and two vertical imaginary planes, i.e. right and left hypochondriac, right and left lumbar, right and left iliac, epigastric, umbilical, and hypogastric.

abdominal ribs (*Zool.*). In certain Reptiles, rods of dermal bone in the ventral body wall, between true ribs and pelvis.

abdom'inohyoi'deus (*Zool.*). In *Amphibia*, a muscle continuing the rectus abdominis forward into the throat region.

abdu'cens (*Zool.*). In Vertebrates, the sixth cranial nerve, supplying the rectus externus muscle of the eye.

abduction (*Zool.*). The action of pulling a limb or part away from the main axis.

abductor (*Zool.*). Any muscle that draws a limb or part away from the median axis; e.g. the *abductor pollicis*, which moves the thumb outwards.

Abel flash-point apparatus (*Chem.*). A petroleum-testing apparatus for determining the flash-point.

Aberdeen granite (*Build.*). A grey or pink granite, widely used as a building-stone for heavy work. See **granite.**

aber'rant (*Bot., Zool.*). Showing some unusual difference of structure: having characteristics not strictly in accordance with type.

aberration (*Astron.*). An apparent change of position of a heavenly body, due to the velocity of light having a finite ratio to the relative velocity of the source and the observer.

aberration (*Bot.*). Some peculiarity of an individual plant not capable of transmission to offspring, and usually due to some special environmental condition.

aberration (*Light*).

See **chromatic—** **spherical—**

aberration (*Television*). Distortion in a television image similar in type to one or other of the optical aberrations.

abietic acid, ab-i-et'ik (*Chem.*). $C_{20}H_{30}O_2$, m.p. 153° C. Acid isolated from rosin or colophonium.

abi'ogen'esis (*Zool.*). See **spontaneous generation.**

abjection (*Bot.*). The forcible projection of spores from the sporophore.

abjunction (*Bot.*). The delimitation of a spore from its stalk by means of a septum.—*v.* **abjoint.** —*adj.* **abjointed.**

ablation (*Surg.*). Removal of body-tissue by surgical methods.

Abney colour sensitometer (*Photog.*). An apparatus, using a rotary stepped sector-disc behind a number of apertures, for matching the luminosities of different colours.

Abney level (*Surv.*). A particular form of reflecting level, devised for the measurement of vertical angles.

Abney mounting (*Light*). A form of mounting for a concave diffraction grating, in which the eyepiece (or photographic-plate holder) is fixed at the centre of curvature of the grating and the slit can move round the circumference of the Rowland circle, in order to bring different orders of spectrum into view.

abnormal (*Psychol.*). Said of a person who is badly adjusted to himself and/or to the outside world.

abnormal polarisation (*Radio*). The condition of polarisation of an electromagnetic wave when the magnetic field contains a vertical component.

abomasi'tis (*Vet.*). Inflammation of the *abomasum* (q.v.).

aboma'sum (*Zool.*). In ruminant Mammals, the true or fourth stomach. Also called REED, RENNET.

abo'ral (*Zool.*). Opposite to, leading away from, or distant from, the mouth.

abortifa'cient (*Med.*). Anything which causes artificial abortion: a drug which does this.

abortion (*Bot.*). A state of imperfect or incomplete development, or the product of such defective development.

abortion (*Med.*). Expulsion of the foetus from the uterus during the first three months of pregnancy. Abortion may be spontaneous or induced.

abortion (*Zool.*). Cessation of development in an organ or foetus.

abortion, contagious bovine (*Vet.*). A contagious infection of bovines due to *Brucella abortus.*

abortion, contagious equine (*Vet.*). A contagious infection of equines due to *Bacterium abortus-equi.*

abortive. *Adj.* from *abortion.*

about'sledge (*Eng.*). The large hammer used by a blacksmith's mate, turn-about with the smaller hammer of the blacksmith.

abra'dant (*Eng.*). A substance, usually in powdered form, employed for grinding. See **abrasive.**

abran'chiate (*Zool.*). Lacking gills.

abrasion, a rubbing away.—(*Med.*) A rubbed-away area of the surface-covering of the body; i.e. of skin or of mucous membrane.

abrasion marks (*Photog.*). Scratches on emulsions, visible after development.

abrasive (*Chem.*). A substance used for the removal of matter by scratching and grinding (abrasion); e.g. silicon carbide.

abrasive pencil (*Photog.*). A composition of wax and pumice, for reducing densities in retouching.

abreac'tion (*Psycho-an.*). A release of blocked psychic energy attaching to repressed and forgotten memories and phantasies; effected by living through these in feeling or action.

abreuvoir, ab-roov-war' (*Masonry*). The mortar joint between two arch-stones, or between stones in a wall.

abruptly pinnate (*Bot.*). Said of a pinnate leaf without a terminal leaflet.

abscess (*Med.*). Pus localised in infected tissue and separated from healthy tissue by an abscess wall.

absciss layer (*Bot.*). A layer of parenchymatous cells across the base of a petiole or of a branch, or embedded in bark, through which the leaf or branch, or a scale of bark, separates off. Also called ABSCISSION LAYER, SEPARATION LAYER.

absciss-phelloid (*Bot.*). The unsuberised cells of an absciss layer situated in bark.

abscis'sa (*Maths.*). For rectilineal axes of co-ordinates, the distance of a point from the axis of ordinates measured in a direction parallel to the axis of abscissae, which is usually horizontal. —*pl.* **abscissae.**

abscission (*Bot.*). (1) The organised shedding of a part of a plant by means of an absciss layer.—(2) The liberation of a fungal spore by the breakdown of a sterile portion of the stalk of the spore.

abscission layer (*Bot.*). See **absciss layer.**

absolite (*Min.*). See **earthy cobalt.**

absolute alcohol (*Chem.*). Water-free alcohol; obtained from rectified spirit by adding benzene and refractionating. Very hygroscopic.

absolute ampere (*Elec. Eng.*). The current which, when flowing in a circular conductor of one centimetre radius, produces at the centre a field strength of 2π gauss. The ampere normally used in electrical engineering is one-tenth of this quantity.

absolute ceiling (*Aero.*). See **ceiling (absolute).**

absolute electrometer (*Elec. Eng.*). A high-grade attracted-disc electrometer, in which an absolute measurement of potential can be made by weighing the attraction between two charged discs against gravity.

absolute galvanometer (*Elec. Eng.*). A galvanometer which can be used for making an absolute measurement of a current; the galvanometer constant must be determined from its dimensions and not by calibration.

absolute humidity (*Meteor.*). The number of grammes of water-vapour per cubic metre of the atmosphere: with vapour pressure e and temperature T (absolute) the absolute humidity is represented by $\delta = 216{\cdot}7\ e/T$ gms./cu. m.

absolute hydraulic gradient (*Hyd.*). An imaginary curve parallel to the *hydraulic gradient* (q.v.) but higher by the amount $\frac{po}{w}$, where po = atmospheric pressure intensity, w = density of the fluid in the flow system.

absolute instrument (*Phys.*). An instrument which measures a quantity directly in absolute units, without the necessity for previous calibration.

absolute magnitude (*Astron.*). See **magnitudes.**

absolute potential (*Chem.*). The true potential difference between a metal and a solution.

absolute pressure (*Phys.*). Pressure measured with respect to zero pressure, in units of force per unit of area.

absolute-rest precipitation tanks (*Sewage*). Tanks in which a given amount of sewage is dealt with at a time, as opposed to tanks taking a continuous flow. After two or three hours' settlement, the top water is drawn off from above and the precipitated sludge from below.

absolute temperature (*Phys.*). Temperature measured with respect to the *absolute zero* (q.v.) on a scale having a thermodynamic basis.

absolute transpiration (*Bot.*). The rate of loss of water from a plant, as determined by experiment.

absolute unit (*Phys.*). A unit which may be defined directly in terms of the fundamental units of length, mass, and time.

absolute unit of current (*Elec.*). The current which, flowing in a circular conductor of radius one centimetre, will produce at the centre a magnetic field of strength 2π gauss. The *ampere* is equal to one-tenth of an absolute unit of current.

absolute weight (*Chem.*). The weight of a body in a vacuum.

absolute zero (*Phys.*). The temperature at which a *perfect gas* (q.v.), kept at constant volume, would exert no pressure; equal to $-273{\cdot}1°$ C.

absorber (*Elec. Comm.*). The resistance and condenser in series which is placed across a break in an electrical circuit in order to damp any possible oscillatory circuit which would tend to maintain an arc or spark when a current is interrupted. Also called SPARK ABSORBER.

absorber, harmonic (*Elec. Eng.*). Apparatus for removing harmonics in current or voltage wave-forms, using tuned circuits or a wave-filter.

absorber valve (*Radio*). The valve used in an absorption modulator, to absorb excess energy during troughs of the modulation cycle. In a radio telegraph transmitter, the absorber valve is used to prevent changes of voltage in the power supply during keying.

absorbing hair, absorbing trichome (*Bot.*). A hair which absorbs water.

absorbing well (*Civ. Eng.*). A shaft sunk through an impermeable stratum to allow water to drain through to a permeable one.

absorptiom'eter (*Chem.*). An apparatus for determining the solubilities of gases in liquids.

absorption (*Acous.*).
See **acoustic—** **atmospheric—**

absorption (*Chem.*). Penetration of a substance into the body of another. Cf. *adsorption.*

absorption (*Med.*). The taking-up of fluids or other substances by the vessels and tissues of the body.

absorption (*Radio*). Reduction in the intensity of an electromagnetic wave, due to eddy currents and dielectric losses in the earth. Also called ATTENUATION.

absorption band (*Light*). A dark gap in the continuous spectrum of white light transmitted by a substance which exhibits *selective absorption.*

absorption band (*Photog.*). In a colour filter, the range of approximate limits of wavelength where marked changes in effective transmission of intensity are evident; thus the relative colour-sensitivity of an emulsion is effectively altered by filtering the incident light with filters of suitable absorption bands. With infra-red emulsions, visible light must be removed by a filter.

absorption coefficient (*Chem.*). The volume of gas, measured at N.T.P., dissolved by unit volume of a liquid under normal pressure (i.e. 1 atmosphere).—(*Phys.*) See **absorptivity.**

absorption control (*Radio*). See **absorption modulation.**

absorption dynamometer (*Eng.*). A dynamometer which absorbs and dissipates the power which it measures; e.g. the ordinary rope brake and the Froude hydraulic brake. Cf. *transmission dynamometer.*

absorption edge (*Phys.*). The limit, on the longer wavelength side, of the X-ray absorption band of a substance.

absorption, electrical (*Elec.*). An effect in a dielectric whereby, after an initially charged condenser has been once discharged, it is possible after a few minutes to obtain from it another discharge, usually smaller than the first.

absorption factor (*Illum.*). The ratio of the difference between the total luminous flux falling on a surface and the sum of the fluxes transmitted through and reflected from the surface, to the total luminous flux falling on the surface. Also called COEFFICIENT OF ABSORPTION, ABSORPTION RATIO.

absorption hygrometer (*Meteor.*). An instrument by which the quantity of water vapour in the air may be measured. A known volume of air is drawn through tubes containing a drying agent such as phosphorus pentoxide; the increase in weight of the tubes gives the weight of water vapour in the known volume of air.

absorption keying (*Radio*). A method of keying a radio-telegraph transmitter in which an absorber valve is made conductive during the spacing intervals, causing a reduction in the anode supply voltage to the transmitter valves.

absorption modulation (*Radio*). A method of modulating a radio-telephone transmitter in which an absorber valve is made conductive during the troughs and non-conductive during the peaks of the modulation cycle. The power dissipated by the absorber valve is drawn from the antenna, the current in which is thereby modulated.

absorption ratio (*Illum.*). See **absorption factor.**

absorption refrigerator (*Eng.*). A plant in which ammonia is continuously evaporated from an aqueous solution under pressure, condensed, allowed to evaporate (so absorbing heat), and then reabsorbed.

absorption spectrum (*Light*). The system of absorption bands, or lines, seen when a selectively absorbing substance is placed between a source of white light and a spectroscope. See **Kirchhoff's law.**

absorption tubes (*Chem.*). Tubes filled with solid absorbent for the absorption of moisture and gases.

absorption wave-meter (*Radio*). A tuned circuit with indication of current resonance when either the frequency of the applied electromotive force is varied, or the inductance or capacity of the tuned circuit. By calibration or calculation, the system is generally in use for measuring the frequency or wavelength of radio-frequency currents.

absorptivity, absorptive power (*Phys.*). The fraction of the incident radiation which is absorbed by a surface on which it falls.

abstat- (*Elec. Eng.*). A prefix attached to the practical electrical units to obtain names for the absolute electrostatic units; e.g. *abstatampere*, *abstatfarad*, etc. Used chiefly in America.

abstracting (*Build.*, *Civ. Eng.*). In drawing up a bill of quantities, the process involved in collecting together pieces of work of the same sort in the same part of the contract, each having the same unit price.

abstriction (*Bot.*). A general term for the separation of a spore from its stalk; it includes *abjection* and *abscission*.

Abt rack (*Civ. Eng.*). A multi-plate rack which is sometimes used for mountain railways. It has the teeth on the different rackplates staggered in relation to one another.

abutment (*Eng.*). A point or surface provided to withstand thrust; e.g. the end supports of an arch or bridge.

abutment pier (*Civ. Eng.*). A pier to a wall supporting one end of a bridge. Cf. *standing pier.*

abutting joint (*Carp.*). A joint whose plane is at right-angles to the fibres, the fibres of both jointing pieces being in the same straight line.

abys'sal, abys'mal (*Ocean.*). Relating to the greatest depths of the ocean: relating to the abyssal realm.

abyssal deposits (*Geol.*). The deposits of the deep sea, accumulating in depths of more than 1500 fathoms of water; they comprise the organic oozes, various muds, and the red clay of the deepest regions.

abyssal intrusions (*Geol.*). An alternative name for *plutonic intrusions*.

abyssal realm (*Ocean.*). The waters of the ocean beyond the limits of the continental shelf and below a depth of one hundred fathoms.

Abyssinian pump (*Civ. Eng.*). A pump having a well-tube attached to the suction tube, for use in the *Abyssinian well* (q.v.).

Abyssinian well (*Civ. Eng.*). A tube driven into strata of moderate hardness in order to obtain a supply of water. The tube is pointed at its lower end, with perforations above the point.

abys'soben'thic (*Ocean.*). Relating to that part of the abyssal realm which includes the ocean floor: pertaining to or living on the ocean floor at great depths.

abyssopela'gic (*Ocean.*). Relating to that part of the abyssal realm which excludes the ocean floor: floating in the depths of the ocean.

ac- (*Chem.*). An abbrev. indicating substitution in the alicyclic ring.

a.c., A.C. (*Elec. Eng.*). Abbrevs. for *alternating current* (q.v.).

Ac (*Chem.*). (1) The symbol for *actinium.*—(2) A symbol for the acetate radical, $CH_3{\cdot}COO'$.—(3) A symbol for the acetyl radical, $CH_3{\cdot}CO-$.

a.c. resistance (*Thermionics*). See **differential anode resistance.**

acacia gum (*Chem.*). See **gum arabic.**

Acadian (*Geol.*). A series name applied to the Middle Cambrian strata of the Atlantic Province in N. America (Newfoundland, Nova Scotia to eastern Massachusetts).

Acale'phae (*Zool.*). See **Scyphozoa.**

acana'ceous (*Bot.*). A general term for prickly.

acan'tha (*Bot.*). A prickle or spine. The term occurs in such compounds as *acanthocarpous* (spiny-fruited) and *acanthocladous* (having spiny branches).

acan'thin (*Zool.*). A substance which forms the skeleton of some *Radiolaria*; formerly believed to be of an organic nature, but now known to be strontium sulphate.

acan'thite (*Min.*). An ore of silver, Ag_2S, crystallising in the orthorhombic system.

Acanthobdel'lida (*Zool.*). An order of *Hirudinea* the members of which are exclusively parasitic on fish; distinguished by the possession of numerous setae on the anterior segments of the body.

Acan'thoceph'ala (*Zool.*). A phylum of elongate worms with rounded body and a protrusible proboscis, furnished with recurved hooks; there is no mouth or alimentary canal; the young stages are parasitic in various Arthropods, the adults in fish and aquatic birds and mammals. Thorny-Headed Worms.

acantho'sis ni'gricans (*Med.*). A condition in which warty pigmented growths appear on the surface of the body.

acanthozo'oid (*Zool.*). In *Cestoda*, the proscolex, or head-portion, of a bladder-worm. Cf. *cystozooid.*

acap'nia (*Med.*). Excessive diminution of carbon dioxide in the blood.

acari'asis (*Med.*, *Vet.*). Contagious disease of the skin due to mites (*acari*).

Acari'na (*Zool.*). An order of small *Embolobranchiata* having a globular body with uniform prosoma and opisthosoma; the chelicerae and pedipalpi are small and associated with the mouth-parts, which may be modified for biting, rasping, or piercing and sucking; respiration is by tracheae or cutaneously; the young forms usually have six legs; a vast group, of world-wide distribution, varied habit and great economic importance. Mites and Ticks.

aca'rodoma'tium (*Bot.*). A hollow or other protective structure formed by some plants which harbour mites and appear to live in symbiosis with them.

aca'rophily, aca'rophy'tism (*Bot.*). A symbiotic association between plants and mites.

ac'arus (*Biol.*). A mite; an arachnid of the family

Acaridae. The variety called *Sarcoptes scabiei* causes scabies.

a'cauline, a'caulose (*Bot.*). Stemless or nearly so.

accelerated ageing test (*Cables*). A stability test using twice normal working voltage. It is claimed that this gives quick results that correlate with service records.

accelerated filtration (*Chem.*). The process of increasing the speed of filtration by applying suction to draw the liquid through the filter, or by applying pressure to force it through.

accelerating contactor (*Elec. Eng.*). One of the contactors of an electric-motor control panel which cuts out starting resistance, thereby causing the motor to accelerate.

accelerating electrode (*Thermionics*). An electrode in a thermionic valve or cathode ray tube maintained at a high positive potential with respect to the electronic source. It accelerates the electrons in their flight to the anode but does not collect a high proportion of them. Also called ACCELERATOR.

accelerating potential (*Thermionics*). The potential of an accelerating electrode with respect to the cathode.

accelerating pump (*Automobiles, etc.*). A small cylinder and piston fitted to some types of carburettor, and connected to the throttle so as to provide a momentarily enriched mixture when the engine is accelerated.

acceleration (*Mech.*). The rate of change of velocity, expressed in feet (or centimetres) per second per second. Certain restricted and special applications of the word occur in Astronomy; e.g. *secular acceleration* (q.v.).

acceleration due to gravity (*Mech*). The acceleration with which a body would fall freely under the action of gravity in a vacuum. This varies according to the distance from the earth's centre, but its mean value is 980·6 cm./sec.^{2} or 32·2 ft./sec.^{2} See **Helmert's formula.**

accelerator (*Bot.*). Any substance which increases the efficient action of an enzyme.

accelerator (*Chem.*). A substance which increases the speed of a chemical reaction. See **catalysis.**—(*Civ. Eng., etc.*) Any substance mixed with cement concrete for the purpose of hastening hardening.—(*Photog.*) A chemical used to increase the rate of development; e.g. sodium or potassium carbonate or hydrate.—(*Rubber*) Any substance effecting acceleration of the vulcanisation process of rubber. The principal types are aldehyde derivatives of Schiff's bases,

butyraldehyde-butylidene-aniline,
di-orthotolyl-guanidine,
diphenyl-guanidine,
benzthiazyl disulphide,
tetramethyl-thiuran disulphide,
zinç dimethyl-dithiocarbamate.

accelerator or **accelerator pedal** (*Automobiles, etc.*). A pedal connected to the carburettor throttle valve of a motor vehicle, or to the fuel injection control where oil engines are used.

accelerator (*Heating*). A centrifugal pump located in the return circuit of a central heating system, by means of which it is possible to increase the flow.

accelerator (*Thermionics*). See **accelerating electrode.**

accelerator (*Zool.*). Any muscle or nerve which increases rate of action.

accelerom'eter (*Aero.*). An instrument, specially designed for carrying in aircraft, which measures acceleration in a certain specific direction. There are three types: indicating, maximum reading, and recording. The instrument is sometimes attached to the pilot, as distinct from the aircraft itself.

accent (*Typog.*). An indication of pronunciation. The most common are: (´) acute; (\`) grave; (^) circumflex; (¨) diaeresis or umlaut. Accents made separately and superimposed when setting up the type are called *floating accents.*

accentuation (*Photog.*). High-lights or high contrasts in the composition of a photographic picture.

acceptor (*Chem.*). (1) The reactant in an induced reaction which does not react directly with the inductor.—(2) The atom which contributes no electrons to a semi-polar bond.

access (*Auto Teleph.*). The possibility of getting on to a circuit for testing or for trunk offering.

access eye (*San. Eng.*). A screwed plug provided in soil, waste, and drain pipes at bends and junctions, so that access is possible in order to clear a stoppage.

access selector (*Auto. Teleph.*). A selector which permits connection of a routiner to switches, which are tested in order.

accesso'rius (*Zool.*). A muscle which supplements the action of another muscle: in Vertebrates, the eleventh cranial nerve or spinal accessory.

accessory (*Bot.*). An additional member beyond the normal.

accessory (*Zool.*). The eleventh cranial nerve of higher Vertebrates, supplying certain of the shoulder muscles.

accessory bud (*Bot.*). A bud additional to a normal axillary bud.

accessory cell (*Bot.*). A cell associated with the guard cell of a stoma, differing in structure both from it and from the ordinary cells of the epidermis.

accessory character (*Bot., Zool.*). A non-essential character of a species, sometimes used to distinguish one race from another.

accessory chromosome (*Cyt.*). See **sex-chromosome.**

accessory fructification (*Bot.*). A reproductive structure in lower plants which is not sexual or concerned with sexuality.

accessory glands (*Zool.*). Glands of varied structure and function in connexion with the genitalia, especially of *Arthropoda.*

accessory minerals (*Geol.*). Minerals which occur in small, often minute, amounts in igneous rocks; their presence or absence makes no difference to classification and nomenclature.

accessory multiplication, accessory reproduction (*Bot.*). Any reproductive process which is not sexual.

accessory pulsatory organs (*Zool.*). In insects, sac-like contractile organs, pulsating independently of the heart, and variously situated on the course of the circulatory system.

accessory spore (*Bot.*). (1) A spore of non-sexual origin.—(2) A conidium of a type different from that usual in the species.

accidental errors. Small residual differences from the correct values, due to unavoidable defects in instruments or to inaccuracy of observation. They are equally likely to be positive or negative in sign. Sometimes called COMPENSATING ERRORS. See **systematic errors.**

acclimatisation (*Chem.*). The change produced in a colloidal sol by the addition of a precipitating agent in small quantities, resulting in less complete precipitation for the addition of a given total amount of precipitant.

accommodation (*Bot.*). The capacity possessed by a plant to adjust itself to new conditions of life, provided the changed conditions come gradually into operation.

accommodation (*Physiol.*). The ability of the eye to change its effective focal length in order to see objects distinctly at varying distances. The range of vision for a normal eye is from about ten inches to infinity. Power of accommodation usually diminishes with advancing age.

accordion (*Build.*). A folding door or partition working in a manner similar to the bellows of an accordion.

accoucheur, ak-oo-shėr' (*Med.*). A physician who practises midwifery.

account book paper (*Paper*). A specially tough paper which will stand erasures with a penknife. Usually azure laid.

accouplement, a-kup'le— (*Carp.*). A tie or brace of timber.

accres'cent (*Bot.*). Enlarged and persistent; usually applied to a calyx which increases in size as the fruit ripens.

accretion (*Zool.*). External addition of new matter · growth by such addition.

accroi'des (*Chem.*). A gum obtained from a species of Xanthorrhoea trees; of red colour, soluble in hot alcohol; used for polishes, stains, lacquers, etc.

accumbent (*Bot.*). Said of an embryo in which the edges of the cotyledons lie against the radicle.

accumulated temperature (*Meteor.*). The integrated product of the excess of air temperature above 42° F. and the period in days during which such excess is maintained.

accumulator (*Elec. Eng.*). A voltaic cell which can be charged and discharged. On charge, when an electric current is passed through it, into the positive and out of the negative terminal, according to the conventional direction of flow of current, electrical energy is converted into chemical energy. The process is reversed on discharge, the chemical energy, less losses, both in potential and current, being converted into useful electrical energy. Accumulators therefore form a useful portable supply of electric power, but have the disadvantage of being heavy.

See **alkaline—**
Drumm—
Edison—
lead-acid—
Ni-Fe—
nickel-iron-alkaline—
portable—

accumulator (*Ocean.*). A spring of rubber or steel attached to a trawling warp, to lessen any sudden strain due to the trawl catching.

accumulator box (*Elec. Eng.*). A vessel, usually made of glass, lead-lined wood or celluloid, for containing the plates and electrolyte of an accumulator.

accumulator grid (*Elec. Eng.*). The lead grid which forms one of the plates of a lead-acid accumulator having pasted plates.

accumulator insulator (*Elec. Eng.*). The insulators, usually of glass, upon which the individual cells of an accumulator are stood in order to insulate them from earth.

accumulator switchboard (*Elec. Eng.*). A switchboard upon which are mounted all the necessary switches and instruments for controlling the charging and discharging of a battery of accumulators.

accumulator traction (*Elec. Eng.*). See **battery traction.**

accumulator vehicle (*Elec. Eng.*). An electrically propelled vehicle which derives its energy from an accumulator carried on the vehicle.

accuracy. Accuracy implies exactitude in measurement. The accuracy—strictly, the *inaccuracy*—of a measurement is a matter of degree, indicating how near our estimation, arrived at by means of, e.g., a scaled ruler, time-machine, protractor, or other aid to measurement, comes to the true value, which is always unknown. The degree of inaccuracy is a matter of probability, assuming that the mode of measurement is theoretically correct and the desired quantity is suitably isolated and defined. It is one of the aims of science to eliminate as far as possible such errors as can be recognised, and minimise such random errors as arise from peculiarities of the instrument, the observer, or external conditions. See **error.**

A.C.E. mixture (*Med.*). A common general anaesthetic, containing 1 part of alcohol, 2 parts of chloroform, and 3 parts of ether.

AcEm (*Chem.*). The symbol for *actinium emanation*, or *actinon.*

acen'trous (*Zool.*). Having a persistent notochord with no vertebral centra, as in the *Cyclostomata.*

aceph'alous (*Bot.*). Said of a style which does not terminate in a well-marked stigma.

acephalous (*Zool.*). Showing no appreciable degree of cephalisation: lacking a head-region, as *Pelecypoda.*

acerose, acerous, as'er-ōz, —us (*Bot.*). Needle-shaped.

acer'vuline (*Zool.*). Having the form of an irregular heap, as the shells of some *Foraminifera.*

acervulus (*Bot.*). A dense cushion-like mass of conidiophores and conidia formed by some fungi.—*adj.* **acervulate.**

acervulus cerebri (*Zool.*). See **brain-sand.**

acetab'ular bone (*Zool.*). In Crocodiles, the separate lower end of the ilium: in some Mammals, as *Galeopithecus*, an additional bone lying between the ilium and the pubis and frequently fused with one or the other.

acetab'ulum (*Zool.*). In *Platyhelminthes*, *Hirudinea*, and *Cephalopoda*, a circular muscular sucker: in *Insecta*, a thoracic aperture for the insertion of a leg: in *Vertebrata*, a facet or socket of the pelvic girdle with which articulates the pelvic fin or the head of the femur: in ruminant Mammals, one of the cotyledons of the placenta.

acetal, as'et-al (*Chem.*). $CH_3CH(OC_2H_5)_2$, b.p. 104° C., ethylidene di-ethyl-ether. The term *acetal* is applied to any compound of the type $R\,CH\,(OR')_2$, where R and R′ are organic radicals and R may be hydrogen.

acetals (*Chem.*). The dehydration products of aldehydes, with an excess of alcohols present. Acetals may be termed dialkyl ethers of the dihydrates.

acetal'dehyde (*Chem.*). CH_3CHO, colourless, ethereal, pungent liquid, b.p. 21° C., m.p. −121° C., sp. gr. 0·8, oxidation product of ethyl alcohol; intermediate for production of acetic acid, important raw material for the synthesis of organic compounds.

acet'amide (*Chem.*). $CH_3{\cdot}CO{\cdot}NH_2$, needles, soluble in water and alcohol, m.p. 82° C., b.p. 222° C., a primary amide of acetic acid.

acetan'ilide (*Chem.*). $C_6H_5NH{\cdot}COCH_3$, made from aniline and glacial acetic acid, m.p. 112° C., b.p. 304° C. Used pharmaceutically against fever (*Antifebrin*).

acetates, as'et-āts (*Chem.*). The salts of acetic acid; e.g. sodium acetate. Also the acetylation products of acetic acid; e.g. cellulose acetate.

acetate film (*Cinema.*). Positive or negative film consisting of emulsion carried on a base of cellulose acetate, which is *non-flam* (see **safety film**).

acetate rayon (*Textiles*). Rayon made from cellulose acetate which is produced from cotton linters by treatment with acetic anhydride, acetic acid, and sulphuric acid. See **rayon, cuprammonium rayon, viscose rayon.**

acetate wire (*Elec. Eng.*). Wire with an insulation covering of cellulose tetracetate.

ace'tic acid (*Chem.*). $CH_3{\cdot}COOH$, an important raw material of the chemical industry, synthesised from acetylene; also obtained by the destructive distillation of wood; and by the oxidation of alcohol. Acetic acid has a m.p. 16·6° C., b.p. 118° C., sp. gr. (20° C.) 1·0497.

acetic anhydride (*Chem.*). The anhydride of acetic acid, $(CH_3CO)_2O$, a colourless liquid, b.p. 137° C.

acetic ether (*Chem.*). *Ethyl acetate* (q.v.).

acetic fermentation (*Chem.*). The fermentation of dilute alcohol solutions by oxidation in presence of bacteria, especially *Bacterium aceti*. Acetic acid is formed.

acetin (*Chem.*). Monoacetin, glyceryl monoacetate, $CH_3COO{\cdot}C_3H_5(OH)_2$, b.p. 130° C., sp. gr. 1·22, a colourless hygroscopic liquid, used as intermediate for explosives, solvent for basic dyestuffs, tanning agent.

aceto-acetic ether (*Chem.*). $CH_3CO{\cdot}CH_2COOC_2H_5$, b.p. 94° C. (45 mm), sp. gr. 1·03; a colourless or slightly yellow liquid, of fruity odour, used in organic synthesis and in perfumery.

acetone, as'— (*Chem.*). CH_3COCH_3, b.p. 56 C., of ethereal odour, a very important solvent, basis for organic synthesis. Acetone is the simplest type of a saturated ketone.

acetone oils (*Chem.*). Crude distillates containing acetone and other higher homologues, slightly coloured, syrupy, of pungent odour. Boiling range 75° C. to 125° C., sp. gr. 0·81 to 0·87. Used as solvent for cellulose esters, and for denaturing alcohol.

acetonu'ria (*Med.*). *Ketonuria* (q.v.).

acetophenone' (*Chem.*). $C_6H_5COCH_3$, phenyl methyl ketone, m p. 20° C., b.p. 202° C., sp. gr. 1·03, large colourless crystals or liquid, soluble in most organic solvents, insoluble in water; used for organic synthesis and in perfumery.

acetox'yl group (*Chem*). The group $CH_3{\cdot}CO{\cdot}O-$.

acetyl group, as'— (*Chem.*). The radical of acetic acid, viz. CH_3CO- .

acetylcelluloses (*Chem.*). See **cellulose acetates.**

acetyl chloride (*Chem.*). CH_3COCl, m.p. −112° C., b.p. 51° C., sp. gr. 1·105. Colourless liquid, of pungent acrimonious odour, used for synthesis, in particular for introducing the acetyl group into other compounds.

acetyl value (*Chem.*). A test used chiefly for recognising and determining oils of the castor-oil group. It indicates the hydrogen in the hydroxyl groups replaceable by the acetyl radical (not in the carboxyl group). Basis for the determination of alcohols, glycerides, hydroxy-acids.

acetyl-salicylic acid (*Chem.*). $C_6H_4(O{\cdot}COCH_3)COOH$, m.p. 128° C. Used in medicine. The acid or its salts are identical with *aspirin* or *Aspro*.

acet'ylene (*Chem.*). $HC{:}CH$, a colourless poisonous gas, owing its disagreeable odour to impurities, soluble in alcohol, in acetone (25 times its volume at N.T.P.), and in water. B.p. −84° C., sp. gr. 0·91. Prepared by the action of water on calcium carbide. Used for welding, illuminating, acetic acid synthesis, and for manufacturing derivatives.

achala'sia (*Med.*). Failure to relax.

achalasia of the cardia (*Med.*). Failure to relax on the part of the sphincter round the opening of the oesophagus into the stomach.

Achanarras Band (*Geol.*). A fossiliferous bed, yielding fish-remains, which occurs some 10,000 ft. above the base of the Old Red Sandstone in N.E. Scotland.

achene, achae'nocarp, akene, ak-ēn (*Bot.*). A dry indehiscent, one-seeded fruit, formed from a single carpel, and with the seed distinct from the fruit wall.

Acheson furnace (*Elec. Eng.*). An electric furnace for the production of carborundum. The constituents of the carborundum (coke and sand) are packed round a central core of coke, through which a heavy current is passed.

Achil'lis tendo (*Zool.*). In *Mammalia*, the united tendon of the soleus and gastrocnemius muscles; the hamstring.

achlamyd'eous (*Bot.*). Lacking a perianth.

achlorhy'dria (*Med.*). Absence of hydrochloric acid from the gastric juice.

acholu'ric jaundice (*Med.*). See **spherocytosis.**

achon'drite (*Geol.*). A type of stony meteorite which compares closely with some basic igneous rocks such as eucrite.

achon'dropla'sia (*Med.*). A condition of dwarfism characterised by shortness of the arms and the legs and by a big head.

achondroplas'tic (*Zool.*). Having a normal body with stunted limbs or appendages.

achroglo'bin (*Zool.*). A colourless respiratory pigment occurring in some *Mollusca* and some *Urochorda.*

ach'roite (*Min.*). See **tourmaline.**

achroma'sie (*Cyt.*). The escape of chromatin from the nucleus.

achromatic figure (*Cyt.*). The double set of delicate radiating strands, and, when present, the asters, as seen in preparations of dividing nuclei.

achromatic lens (*Light*). A lens designed to minimise chromatic aberration. The simplest form consists of two component lenses, one convergent, the other divergent, made of glasses having different dispersive powers, the ratio of their focal lengths being equal to the ratio of the dispersive powers.

achromatic spindle (*Cyt.*). In cell-division, a system of apparent fibres joining the poles of the nucleus and diverging towards the equator.

achro'matin (*Cyt.*). That part of the nucleus which does not stain with basic dyes, generally comprising the nuclear sap or ground-substance.—*adj.* **achromatinic.**—Cf. *chromatin.*

achy'lia gastri'ca (*Med.*). Complete absence of ferments and hydrochloric acid from the gastric secretion.

acic'ular (*Bot., Zool.*). Slender, stiff, and pointed, like a pine needle.—(*Min.*) Said of elongated or needle-like crystals.

acic'ulate (*Bot.*). Marked on the surface by fine scratches.

acic'ulum (*Zool.*). A strong needle-shaped chitinous rod in the parapodium of *Polychaeta*, acting as a muscle-attachment.

acid (*Chem.*). (1) A substance which tends to lose a proton.—(2) A substance which dissolves in water with the formation of hydrogen ions.—(3) A substance containing hydrogen which may be replaced by metals with the formation of salts.

acid amides (*Chem.*). A group of compounds derived from an acid by the introduction of the amino group in place of the hydroxyl radical of the carboxyl group.

acid azides (*Chem.*). The acyl derivatives of hydrazoic acid, obtainable from *acid hydrazides* (q.v.) by treatment with nitrous acid. They are very unstable.

acid chlorides (*Chem.*). Compounds derived from acids by the replacement of the hydroxyl group by chlorine.

acid dyes (*Photog.*). Dyes which have their colour associated with the negative ion or radical.

acid esters (*Chem.*). Compounds derived from acids in which part of the replaceable hydrogen has been exchanged for an alkyl radical.

acid fixing (*Photog.*). Acidulated hypo, which ensures rapid cessation of development by the absorbed developer in the emulsion.

acid hydrazides (*Chem.*). Hydrazine derivatives into which an acyl group has been introduced.

acid polishing (*Glass*). A method of polishing cut decorations on glass ware by immersing the article in an acid bath for a few minutes, rinsing in water and brushing out the cut parts.

acid process (*Met.*). A steel-making process, either Bessemer, open-hearth, or electric, in which the furnace is lined with a siliceous refractory, and for which pig iron low in phosphorus is required, as this element is not removed. See **basic process.**

acid radical (*Chem.*). A molecule of an acid minus the replaceable hydrogen.

acid refractory (*Met.*). See **silica.**

acid rocks (*Geol.*). Those igneous rocks which contain more than 66% of silica, and which, therefore, when crystalline, carry free quartz as an essential constituent.

acid salts (*Chem.*). Salts formed by the replacement of part of the replaceable hydrogen of the acid.

acid solution (*Chem.*). An aqueous solution containing more hydrogen ions than hydroxyl ions; one which turns blue litmus red.

acid steel (*Met.*). Steel made by an acid process.

acid value (*Chem.*). The volume (in c.c.) of a N/10 caustic soda or potash solution used to neutralise 1 gram of a vegetable oil, resin, etc.

acids, strengths of (*Chem.*). See **strengths of acids.**

acidaemia (*Med.*). See **acidosis.**

acid'ic (*Chem.*). Said of dyes the colour-base of which is an acid, usually combined with an inorganic base, e.g. acid fuchsin, the sodium salt of a sulphonic acid derived from fuchsin.

acidim'etry (*Chem.*). The determination of acids by titration with a standard solution of alkali as in volumetric analysis. See **titration** and **volumetric analysis.**

acidity (*Chem.*). (1) The extent to which a solution is acid. See **pH-value.**—(2) The number of replaceable hydroxyl groups in a molecule of a base.—(3) The amount of free acid in vegetable oils, resins, etc.

acidol'ysis (*Chem.*). Acid hydrolysis.

acidom'eter (*Elec. Eng.*) A hydrometer for ascertaining the specific gravity of the electrolyte in an accumulator.

acid'ophil (*Zool.*). Said of structures which stain intensely with acid dyes; e.g. *acidophil* leucocytes.

acido'sis (*Med.*). Acidaemia. Concentration of hydrogen ions in the blood beyond normal limits.

acidum ace'ticum aromat'icum (*Chem.*). Acetic acid flavoured with the essential oils of cloves, lavender, orange, bergamot, sometimes thyme, cinnamon or camphor.

acina'ceous (*Bot.*). Full of pips.

acinaciform,—as'i-form (*Bot.*). Scimitar-shaped.

Acineta'ria (*Zool.*). See **Suctoria.**

acin'iform (*Zool.*). Berry-shaped; e.g. in Spiders, the *aciniform* glands producing silk and leading to the median and posterior spinnerets.

acisculis, acis'— (*Masonry*). A small pick having a square flat face and a pointed peen.

Ackerman steering (*Automobiles*). The arrangement of the track-arms on the stub axles, and their connexion by the track-rod, in such a way that the inner axle moves through a greater angle than the outer, so giving approximately true rolling of the wheels in cornering.

ac'me (*Biol.*). The period of maximum vigour of an individual, race, or species: the adult period: the ephebic period: the phyloephebic period.

acme screw-thread (*Eng.*). A thread having a profile angle of 29 degrees and a flat crest, sometimes used for lathe lead screws, etc., for easy engagement by a split nut.

ac'mite (*Geol.*). An important member of the pyroxene group of minerals, consisting essentially of silicate of iron and sodium, $NaFeSi_2O_6$; occurs in certain alkali-rich igneous rocks.

ac'ne (*Med.*). Inflammation of a sebaceous gland. Pimples in adolescents are commonly due to infection with the acne bacillus.

acne rosa'cea (*Med.*). A condition in which there is chronic congestion of the superficial vessels of the nose and central part of the face, associated with dyspepsia.

Acoela, ā-sē'la (*Zool.*). An order of small marine *Turbellaria* in which there is no gut, and the parenchyma is not differentiated into endoderm and mesoderm.

acoe'lomate, acoelom'atous (*Zool.*). Without a true coelom.

acoe'lous (*Zool.*). Lacking a gut-cavity.

acone' (*Zool.*). (In Insects) said of compound eyes in which the ommatidia contain no cone of any kind.

aconit'ic acid (*Chem.*). An unsaturated tribasic acid extracted from *Aconitum napellus*; its formula is $CH_2(COOH)\cdot C(COOH){:}CH(COOH)$.

acon'itine (*Chem.*). $C_{34}H_{45}O_{11}N$ or $C_{34}H_{47}O_{11}N$, an alkaloid of unknown constitution, to which may be ascribed the following extended formula:

$$\left.\begin{matrix}(HO)_3\\(CH_3O)_4\end{matrix}\right> C_{20}H_{21}NMe \left<\begin{matrix}O\cdot CO\cdot C_6H_5\\O\cdot CO\cdot CH_3\end{matrix}\right.$$

It crystallises in rhombic prisms, m.p. 197°-198° C., insoluble in water and petrol, soluble in benzene and chloroform. It is obtained from *Aconitum napellus*. It is highly toxic, affecting the heart and the respiratory organs.

acontia, a-kon'sha (*Zool.*). In *Anthozoa*, free threads, loaded with nematocysts, arising from the mesenteries or the mesenteric filaments, and capable of being discharged via the mouth or via special pores.

acorn (*Aero.*). A small streamline-shaped clip, placed at the intersection of external bracing-wires to avoid chattering and abrasion.

acorn valve (*Thermionics*). The colloquial name for a thermionic valve of very small dimensions, designed for operation at very high frequencies. The electrode capacity and electron-transit time effects are reduced in proportion to the dimensions.

acotyle'donous (*Bot.*). Said of an embryo of a higher plant which has no cotyledons.

acoustex'tile (*Acous.*). A unit of material specially designed for increasing the acoustic absorption of walls.

Acousti-celotex (*Acous.*). Celotex with increased thickness and perforations, particularly adapted for acoustic absorption. Made in standard tiles from sugar-cane fibre.

Acousti-meter (*Acous.*). The same as *noise meter*.

Acousti-tentest (*Acous.*). Acoustic absorbing material of thick tentest mounted on edge; made from maple-wood fibre.

acoustics. The science of sounds. The term includes propagation and conduction of all kinds of material vibration, their generation, perception, measurement, reproduction, and control.

acoustic absorption (*Acous.*). The diminution of energy in a sound-wave during reflection from a surface which is not completely reflecting, mainly because of its lack of hardness.

acoustic absorption factor (or **coefficient**). See **sound absorption factor.**

acoustic absorption unit. See **sabin.**

acoustic concentration (*Acous.*). For a given distance from a radiating source of sound, the ratio of the intensity of the directly radiated sound to the mean spherical intensity. The polar concentration indicates the measure of the directivity of a source of sound.

acoustic construction (*Acous.*). Building construction which aims at the control of transmission of sound, or of mechanical vibration giving rise to sound, particularly unwanted noises. The parts of the structure are separated by air-spaces or acoustic absorbing material and decoupled by the interposing of springs.

acoustic dazzle (*Acous.*). The psychological effect associated with high density of radiation of sound from small sources.

acoustic delay (*Elec. Comm.*). Delay in the transmission of telephonic speech; obtained by conversion into a sound-wave, which is caused to travel a suitable distance along a tube before reconversion into electric currents.

acoustic distortion (*Acous.*). Distortion in sound-reproducing systems, due to alteration in the acoustic ratio of sounds arriving at the listener's ears when compared with the original or with a natural ratio.

acoustic engineering (*Elec. Comm.*). The branch of electrical communication concerned with the reproduction of sound in all its forms, and with assessing the criteria for sound reproduction and the means for measuring it.

acoustic feed-back (*Acous.*). The operation of the microphone in a public-address system by sound generated by the reproducers of the same system. If this is excessive the system builds up a sustained oscillation. See **howler.**

acoustic gramophone (*Acous.*). A reproducer of sound from gramophone records, characterised by a sound-box and a metal or wood horn for sound radiation.

acoustic impedance, —resistance, —reactance, —power factor (*Acous.*). In a propagating sound-wave, those factors which determine the relation between the particle velocity and the sound pressure, in analogy with an electric circuit. The unit is *mechanical ohm per square centimetre*, the latter being perpendicular to the direction of propagation. Beyond approximately a wave-length from the source of radiating sound power the power factor approaches unity, and the particle velocity and the sound pressure come into phase.

acoustic perspective (*Acous.*). The quality of depth and localisation inherent in a pair of ears, which is destroyed in a single channel for sound reproduction. It is transferable with two microphones and two telephone ear-receivers with matched channels, and more adequately realised with three microphones and three radiating receivers with three matched channels.

acoustic plaster (*Acous.*). Rough or flocculent plaster which has good acoustic absorbing properties and which can be used for covering walls. It contains metal, such as fine aluminium, which evolves gas on contact with water and so aerates the mass. These tiny holes lower the acoustic impedance and so reduce the reflection of incident sound-waves.

acoustic power factor (*Acous.*). See under **acoustic impedance.**

acoustic pressure (*Acous.*). See **sound pressure.**

acoustic radiator (*Acous.*). A vibrating area giving off acoustic energy in the form of sound-waves, usually of high audio or supersonic frequency; often used in depth-sounding. The radiator may be a steel plate which is hit with a magnetic plunger, or a resonating mass of quartz crystals. See **loudspeaker.**

acoustic ratio (*Acous.*). The ratio between the directly radiated sound intensity from a source, at the ear of a listener (or a microphone), and the intensity of the reverberant sound in the enclosure. The ratio depends on the distance from the source, the polar distribution of the radiated sound power, and the period of reverberation of the enclosure.

acoustic reactance (*Acous.*). See under **acoustic impedance.**

acoustic recording (*Acous.*). In the manufacture of gramophone discs, the use of the unaided voice for operating the cutting stylus in making the original recording.

acoustic reflection factor (or **coefficient**). See **sound reflection factor.**

acoustic reproduction (*Acous.*). The reproduction of sound from gramophone records by means of a needle attached to a sound-box, with sound radiation from a horn, either of metal or built into a box.

acoustic resistance (*Acous.*). See under **acoustic impedance.**

acoustic resonance (*Acous.*). Enhancement of response to an acoustic pressure for a band of frequencies, the response increasing to a maximum and then decreasing as the frequency is increased through the frequency of resonance. It arises from progressive neutralisation of the reactive component of the acoustic impedance until, at the frequency of resonance, the acoustic impedance becomes entirely resistive. Prominent in organ and other pipes, Helmholtz resonators, and, to a less degree, in shallow cavities.

acoustic saturation (*Acous.*). The aural effectiveness of a source of sound amid other sounds; it is low for a violin, but high for a triangle. The relative saturation of instruments indicates the number required in an auditorium of given acoustic properties.

acoustic shock (*Acous.*). The temporary deafness following a sudden large rush of current in a telephone receiver, e.g. in a telephonist's receiver when connected to a telephone line making contact with a power line.

acoustic transmission factor (or **coefficient**). See **sound transmission factor.**

acou'sticolat'eral system (*Zool.*). In Vertebrates, afferent nerve-fibres related to the neuromast organs and to the ear, receptors in aquatic forms of relatively slow vibrations.

acquired character (*Bot*). An individual peculiarity in the morphology or physiology of a plant, developed during growth.—(*Zool.*) A modification of an organ or organs appearing during the life-time of an individual and due to use or disuse; essentially not a result of mutilation.

acquired variation (*Biol.*). Any departure from normal structure or behaviour which becomes evident as an individual develops.

acran'drous (*Bot.*). Having antheridia at the stem apices, as in some mosses.

Acras'peda (*Zool.*). See **Scyphozoa.**

acras'pedote (*Zool.*). (Of *Coelenterata*) lacking a velum.

acre (*Surv.*). A unit of area, equal to 10 sq. chains (1 chain = 66 ft.) or 4840 sq. yds. The following terms are now obsolete:

Cheshire acre, 10,240 sq. yds.
Cunningham acre, 6250 sq. yds.
Irish acre, 7840 sq. yds.
Scottish acre, 6150·4 sq. yds.

Acree's reaction (*Chem.*). A qualitative test for detecting proteins. It consists in adding to the protein solution an equal volume of a 0·002% formaldehyde solution containing a trace of ferric chloride. When concentrated sulphuric acid is introduced below the mixed solutions, a violet ring is formed.

ac'ridine (*Chem.*). $C_{13}H_9N$, a basic constituent of the crude anthracene fraction of coal-tar. It crystallises in colourless needles and has a very irritating action upon the epidermis. Chemically it may be considered an analogous compound to anthracene, in which one of the CH groups of the middle ring is replaced by N.

acro- (Greek *akros*, topmost, farthest). A prefix used in the construction of compound terms; e.g. *acrocarpous* (q.v.).

acrobatics (*Aero.*). See **aerobatics.**

ac'roblast (*Zool.*). In the spermatid, a complex composed of idioplasm surrounded by Golgi bodies from which the acrosome is formed.

acrocar'pous (*Bot.*). Having fruit at the end of the stem or branch.

acrochor'dal (*Zool.*). In Birds, an unpaired cartilage of the chondrocranium.

acrocor'acoid (*Zool.*). A process of the dorsal end of the coracoid in Birds.

ac'rocyano'sis (*Med.*). A vascular disorder (usually of young women) in which there is persistent blueness of the extremities.

ac'rodont (*Zool.*). Said of teeth which are fused to the bone bearing them.

acrodro'mous (*Bot.*). Said of venation when the main veins, after running parallel along most of the leaf, unite at the leaf apex.

acrodyn'ia (*Med.*). See **erythroedema**.

acrogy'nous (*Bot.*). Having one or more archegonia at the tip of the axis.

acro'lein (*Chem.*). $CH_2{:}CH{\cdot}CHO$, acrylaldehyde, propenal, a colourless liquid, b.p. 52·5° C., of pungent odour, obtained by dehydrating glycerine in the presence of a catalyst.

acromeg'aly (*Med.*). A disease in which, among other things, there are enlargement of the hands and feet, and thickening of the nose, jaw, ears, and brows, due to over-activity of the anterior part of the pituitary gland.

acro'mion (*Zool.*). In higher Vertebrates, a ventral process of the spine of the scapula.—*adj.* **acromial.**

ac'ron (*Zool.*). In Insects, the region in front of the mouth.

ac'roparaesthe'sia, acroparesthesia (*Med.*). Numbness and tingling of the fingers, tending to persist, in middle-aged women.

acrop'etal succession (*Bot.*). The development of lateral members in such order that the youngest is nearest the tip of the axis.

ac'ropleurogenous, —oj'en-us (*Bot.*). Having the spores borne at the tips and along the sides of hyphae.

acropo'dium (*Zool.*). That part of the pentadactyl limb of land Vertebrates which comprises the digits and includes the phalanges.

acroscop'ic (*Bot.*). On the side towards the apex.

ac'rosome (*Zool.*). The structure forming the tip of a mature spermatozoon.—*adj.* **acrosomal.**

ac'rospore (*Bot.*). A spore formed at the tip of a hypha.

acrote'rium (*Build.*). A pedestal on a pediment, for the reception of a figure.—*pl.* **acroteria.**

Ac'rothoracica, —as'ik-a (*Zool.*). An order of minute *Cirripedia* the females of which possess a flask-shaped mantle; the trunk appendages are reduced in number and the posterior pairs are widely separated from the first pair; they live in hollows excavated in the shells of Molluscs; the males, where known, are dwarfs, without an alimentary canal, living attached to the mantle of the female.

acrotro'phic (*Zool.*). (In *Insecta*) said of ovarioles in which nutritive cells occur at the apex.

acrylal'dehyde (*Chem.*). See **acrolein.**

acryl'ic acid (*Chem.*). $CH_2{:}CH{\cdot}COOH$, m.p. 7° C., b.p. 141° C., of similar odour to acetic acid, a very reactive substance, the acid belongs to the series of olefine-monocarboxylic, or oleic, acids.

acrylic resins (*Plastics*). Resins formed by the polymerisation of the monomeric derivatives, generally esters or amides, of acrylic acid or α-methylacrylic acid. They are transparent, water-white, and thermoplastic; resistant to age, light, weak acids, alkalies, alcohols, paraffins, and fatty oils; but attacked by oxidising acids, aromatic hydrocarbons, chlorinated hydrocarbons, ketones, and esters. They are mainly used for optical purposes, as lenses and instrument covers.

actinal, ak-tē'nal (*Zool.*). (In *Echinodermata*) see **ambulacral**: (in *Anthozoa*) pertaining to the crown, including the mouth and tentacles: star-shaped.

actin'ic rays (*Photog.*). Incident electromagnetic rays of wavelengths which can cause a latent image, potentially developable, in a photographic emulsion. Such rays include extensions at both ends of the visible spectrum and X-rays.

actinium (*Chem.*). Symbol, Ac. A radioactive element in the third group of the periodic system. At. no. 89; half-life 20 years.

ac'tinobacillo'sis (*Vet.*). A chronic inflammation of cattle due to infection by *Actinobacillus lignieresi.*

acti'noblast (*Zool.*). In *Porifera*, a spicule-forming cell.

actinodro'mous (*Bot.*). Having the main veins radiating from the tip of the petiole.

acti'noid (*Zool.*). Star-shaped.

actin'olite (*Min.*). A monoclinic amphibole, $CaMg_3(SiO_3)_4$, green in colour, and generally showing an elongated or needle-like habit; occurs in schists and altered basic igneous rocks.

acti'nomere (*Zool.*). A radial segment.

actinom'eter (*Photog.*). An apparatus for determining, under standard conditions, the degree of actinic action in rays of specified wavelength on samples of photographic material.

actinomor'phic (*Bot., Zool.*). Star-shaped; therefore radially symmetrical, and divisible into two similar parts by more than one plane passing through the centre. See **radial symmetry.**

ac'tinomyco'sis (*Vet.*). A chronic inflammation of cattle, and rarely of sheep and swine, due to infection usually of the tongue, jaws, or stomach by the fungus *Actinomyces bovis.* Occasionally transmitted to man.

ac'tinon (*Chem.*). Actinium emanation, an isotope of radon produced by the disintegration of actinium; half-life 3·92 seconds.

ac'tinophyto'sis (*Vet.*). See **streptotricosis.**

acti'nost (*Zool.*). In bony Fish, one of the bones of a fin-ray.

acti'nostome (*Zool.*). In *Asteroidea*, the radially-symmetrical mouth-opening.

ac'tinotrich'ia (*Zool.*). In Fish, horny fibres forming the distal part of the fin-rays.

actinotro'cha (*Zool.*). In *Phoronidea*, the free-swimming pelagic larval form which possess characteristic ciliated lobes, and passes into the adult by a remarkable metamorphosis.

Actinozo'a (*Zool.*). See **Anthozoa.**

actin'ula (*Zool.*). In certain *Hydrozoa* (e.g. in *Tubularia*), an advanced larva, representing a polyp with a short stem.

action (*Acous.*). The mechanism for selecting notes in musical instruments: the hammers, etc. in the piano, and the keyboards and pneumatic controls in the organ.

action (*Auto. Teleph.*). The part of a selector switch that is concerned with an essential function; e.g. finding action, hunting action, impulsing action, etc.

action (*Horol.*). The functioning of the escapement of a watch, clock, or chronometer.

action, delayed (*Elec. Eng., etc.*). See **delayed action.**

activated carbon (*Chem.*). Carbon obtained from vegetable matter by carbonisation in the absence of air, preferably in a vacuum. Activated carbon has the property of absorbing large quantities of gases. Important for gas masks, absorption of solvent vapours, clarifying of liquids, and in medicine.

activated cathode (*Thermionics*). A thermionic cathode which has been activated. See **activation.**

activated filament (*Thermionics*). A form of filament used as electron emitter in thermionic devices. It consists of a basic metal, usually tungsten, alloyed with a small proportion of some other metal such as thorium.

activated sludge (*Sewage*). Sludge through which compressed air has been blown, or which has been aerated by mechanical agitation. It has the property, when added to sewage, of greatly increasing the purification effected by the simple aeration of the sewage.

activation (*Chem.*). (1) The heating process by which the capacity of carbon to absorb vapours is increased.—(2) An increase in the energy of an atom or molecule, rendering it more reactive.

activation (*Sewage*). The process of sewage purification by intimate admixture with air and activated sludge.

activation (*Thermionics*). A process used in the manufacture of thermionic cathodes to enhance their electronic emission.

activation (*Zool.*). The process of stimulating an ovum to cleavage, usually performed by a spermatozoon: the liberation of an active enzyme from a non-active compound, e.g. trypsin from trypsinogen.

activator (*Bot.*). See **accelerator.**

activator or **activating reagent** (*Mining*). A chemical added to the pulp to increase the floatability of a mineral in a froth, or to refloat a depressed (sunk) mineral.

activator (*Zool.*). Any agency bringing about *activation* (q.v.).

activators (*Chem.*). Chemical compounds (like acids, bases, or salts) which convert zymogens, proenzymes, or proferments into the true or active enzymes. See also **kinases.**

active component (*Elec. Eng.*). A term often used to denote the component of the vector representing an alternating quantity which is in phase with some reference vector; e.g. the active component of the current; commonly called the active current. See **active current, active voltage, active volt-amperes.**

active current (*Elec. Eng.*). That component of a vector representing the alternating current in a circuit which is in phase with the voltage of the circuit. The product of this component and the voltage gives power.

active deposit (*Chem.*). The radioactive deposit produced by the disintegration of a radioactive emanation.

active electrode (*Elec. Eng.*). The electrode of an electrical precipitator which is kept at a high potential. Also called the DISCHARGE ELECTRODE.

active hydrogen (*Chem.*). Molecular hydrogen is dissociated by heat into the atomic form or *active hydrogen.* Formed when hydrogen is subjected to a temperature of 2500° C. and under a pressure of 1 mm. Also prepared by activating a stream of ordinary hydrogen under a pressure of about 0·3 mm. with an alternating current of 0·5 amp. at 5000 volts.

active mass (*Chem.*). Molecular concentration, generally expressed as *gram-molecules per litre*; in the case of gases, active masses are measured by partial pressures.

active material (*Elec. Eng.*). The lead oxides, nickel oxides, or other material, which take part in the chemical changes occurring in the cells of an accumulator, and which form the major part of the plates. Also, the iron in the magnetic circuit and the copper in the windings of a machine or transformer, these being the items which take an active part in the energy conversion.

active material (*Thermionics*). The essential material on the cathode of a thermionic valve which provides the emission of electrons when heated: the phosphorescent and fluorescent material forming a phosphor in a cathode ray tube.

active network (*Elec. Comm.*). A network in which there is a source of electromotive force or a modulator.

active nitrogen (*Chem.*). Formed when nitrogen is subjected to a silent electrical discharge. Unstable. Can take part in many chemical reactions which do not occur with the ordinary gas. Active nitrogen forms with hydrocarbons hydrocyanic acid. The after-glow of active nitrogen has been said to account for the brilliant displays of *Aurora Borealis.*

active power (*Elec. Eng.*). The true power, i.e. watts, passing in an electric circuit. It is the product of the voltage by the component of current which is in phase with the voltage. Cf. *reactive volt-amperes*, which may be called *reactive power.*

active transducer (*Elec. Comm.*). Any transducer in which the applied power controls or modulates locally supplied power, which becomes the transmitted signal, as in a modulator, a radio transmitter, or a carbon microphone. Cf. *passive transducer.*

active voltage (*Elec. Eng.*). That component of a vector representing the voltage in an alternating-current circuit which is in phase with the current in the circuit.

active volt-amperes (*Elec. Eng.*). The product of the active voltage and the amperes in a circuit, or of the active current (amperes) and the voltage of the circuit. It is equal to the power in the circuit (watts).

active wire (*Elec. Eng.*). An expression sometimes used in connection with electric machines to denote that part of the armature conductor which actually 'cuts' the magnetic flux.

activity (*Chem.*). (1) See **optical activity.**—(2) The ideal or thermodynamic concentration of a substance the substitution of which for the true concentration permits the application of the law of mass action.

activity coefficient (*Chem.*). The ratio of the *activity* (2, q.v.) to the true concentration of a substance.

actor (*Chem.*). See **donor** (1).

actuality film (*Cinema*). A motion-picture employing the documentary technique in its make-up.

acu'leate (*Bot.*). Bearing prickles, or covered with needle-like outgrowths.

aculei, a-kū'le-ī (*Zool.*). In *Mecoptera* and certain *Diptera*, minute hair-like structures on the wings, lacking basal articulation.

acu'minate (*Bot.*). Having a long point bounded by hollow curves; usually descriptive of a leaf-apex.—*dim.* **acumin'ulate.**

ac'upunct'ure (*Med.*). Puncture of tissues with needles; used as a remedy in sciatica and rheumatism.

acutan'gular (*Bot.*). Said of a stem which has several sharp edges running longitudinally.

acute (*Bot.*). Bearing a sharp and rather abrupt point; said usually of a leaf-tip.

acute (*Med.*). Said of a disease which rapidly develops to a crisis. Cf. *chronic.*

acute bisectrix (*Crystal.*). The line bisecting the acute angle between the optic axes of a biaxial crystal and lying in the plane of the axes.

acy'clic (*Bot.*). Having the parts of the flower arranged in spirals, not in whorls.

acyclic generator (*Elec. Eng.*). See **homopolar generator.**

acyl group (*Chem.*). A general term for an organic acid radical.

A.D. (*Build.*). Abbrev. for *air-dried timber.*

ad. (*Photog.*). Abbrev. for *make up to* in photographic solution recipes; e.g. *ad. one pint.*

adamantine clinkers (*Build.*). Bricks similar to *Dutch clinkers* (q.v.) but harder and denser, and having a pale-pinkish colour and smooth surfaces.

adamant'oblast (*Zool.*). See **ameloblast.**

adambula'cral (*Zool.*). (In *Echinodermata*) adjacent to the ambulacral areas.

adamel'lite (*Geol.*). A type of granite with approximately equal amounts of alkali-feldspar and plagioclase.

Adam's apple (*Zool.*). In Primates, a ridge on the anterior or ventral surface of the neck, caused by the protuberance of the thyroid cartilage of the larynx.

Adams sewage lift (*San. Eng.*). An apparatus employed to force sewage from a low-level sewer into a nearby high-level sewer by using the sewage in the latter from a point that will give the air-pressure necessary to secure the lift of sewage.

Adams-Stokes syndrome (*Med.*). Sudden loss of consciousness, with or without convulsions, in heart-block.

adaptation (*Bot.*). Any morphological or physiological characteristic which may be supposed to help in adjusting the organism to the conditions under which it lives.—(*Zool.*) The process by which an animal becomes fitted to its environment, external or internal, or to changes in that environment: any structure or habit developed as a result of such a process.

adaptation (*Optics*). (Of the eye) the sensitivity adjustment effected after considerable exposure to light (light-adapted), or darkness (dark-adapted).

adaptative branching (*Zool.*). Differences arising within a group of closely related forms whose life habits are in the main similar; e.g. Black and White Rhinoceroses show a different type of lip owing to different feeding habits.

adaptative polymorphism (*Zool.*). The occurrence at different stages of the life-cycle of an animal of widely differing forms, in response to variations in the conditions of life; e.g. some *Protozoa*.

adaptative radiation (*Zool.*). Variation in the fauna of an isolated region, due to adaptation to diverse conditions; particularly modification of limbs, feet, and teeth.

adapter (*Elec. Eng.*). An accessory used in electrical installations for connecting a piece of apparatus fitted with one size or type of terminals to a supply-point fitted with another size or type of terminals.

adapter transformer (*Elec. Eng.*). A transformer for supplying a single electric lamp; it is arranged so that its primary terminals can fit into an ordinary lampholder while its secondary terminals are brought to a lampholder for a low-voltage lamp.

adaptor (*Photog.*). (1) An arrangement for using types of photographic material in a camera different from that for which it was designed; e.g. film-pack in a plate camera, or a smaller plate than normal.—(2) A device for the interchange of lenses in a camera.

adax'ial (*Bot.*). The face of a leaf, petal, etc. which is on the side nearest to the axis.

Adcock antenna (*Radio*). A directional receiving antenna consisting of two spaced vertical dipoles connected by a screened transmission line. It responds only to vertically polarised waves, and is not subject to night error.

Adcock direction-finder (*Radio*). A direction-finding system using either two vertical spaced aerials, which can be rotated (*U-type*), two spaced dipoles elevated above the ground (*H-type*)—the whole system being rotatable in both cases—or a double fixed set of either of the previous, the aerials being connected to a goniometer the setting of which determines the direction of arrival of the received wave.

addice (*Carp.*). Obsolete term for *adze* (q.v.).

addict (*Med.*). One who is unable to resist taking harmful drugs.

Addison's anaemia (*Med.*). See **pernicious anaemia.**

Addison's disease (*Med.*). A disease in which there is progressive destruction of the suprarenal cortex; characterised by extreme weakness, wasting, low blood-pressure, and pigmentation of the skin. Not to be confused with *Addison's anaemia*.

addition agent (*Elec. Eng.*). A substance added to the electrolyte in an electro-deposition process in order to improve the character of the deposit formed. The agent does not take any part in the main electrochemical reaction.

additive compounds (*Chem.*). Compounds formed by additive reactions, in which a double bond is converted into a single bond by the addition of two more atoms or radicals.

additive constant (*Surv.*). A term used in the computation of distance by tacheometric methods. It is that length (usually constant and small) which must be added to the product of staff intercept and multiplying constant in order to give the true distance of the object.

additive process of colour photography (*Photog.*). This involves the colour analysis of the object, and the making of normal black-and-white negatives and positives, using primary colour (red, green, and blue) filters. White light, similarly filtered, synthesises the coloured image on projection.

additive property (*Chem.*). One whose value for a given molecule is equal to the sum of the values for the constituent atoms and linkages.

additive reactions (*Chem.*). See **additive compounds.**

adductor (*Zool.*). A muscle that draws a limb or part inwards, or towards another part; e.g. *adductor mandibulae* in *Amphibia* is a muscle which assists in closing the jaws.

adecid'uate (*Zool.*). See **indeciduate.**

ade'locodon'ic (*Zool.*). (In *Gymnoblastea*) said of certain medusae which are always attached, and which degenerate after discharging the ripe germ-cells.

adelomor'phic (*Zool.*). Of indefinite form.

ad'elphogam'y (*Bot.*). A union between two vegetative cells, one the mother cell, the other one of its daughter cells.

adelphous (*Bot.*). Said of an androecium in which the stamens are partly or wholly united by their filaments.

adendrit'ic (*Zool.*). Without dendrites.

adenine (*Chem.*). 6-Amino-purine, a purine derivative, obtained by the decomposition of nucleic acids.

adeni'tis (*Med.*). Inflammation of a gland.

adenoid (*Bot., Zool.*). Gland-like.—(*Zool.*) In some Mammals, a mass of lymphoid tissue occurring on the dorsal wall of the pharynx, close to the internal nares.

adenoids (*Med.*). Enlargement of glandular tissue in the nasopharynx.

adeno'ma (*Med.*). A tumour with a gland-like structure.

adenomyo'ma (*Med.*). See **endometrioma.**

ade'nophyl'lous (*Bot.*). Having glandular leaves.

adeps lanae (*Chem.*). Lanolin, purified wool fat.

ades'my (*Bot.*). An abnormal condition of a flower, parts which are normally united being separate.—(*Zool.*) Division in an organ usually entire.

ad'etopneu'stic (*Zool.*). (Of some *Echinodermata*) having dermal gills extending beyond the abambulacral surface.

adfron'tal (*Zool.*). (In *Lepidoptera*) said of a pair of narrow oblique sclerites separating the frons from the median epicranial suture.

adhesion (*Bot.*). The union of members of distinct whorls, as when a calyx is grown up with the ovary wall.—*adjs.* **adherent, adhering.**

adhesion (*Elec.*). The mutual force which tends to hold two electrified non-conducting bodies together: the mutual force which arises between two magnetic bodies linked by magnetic flux.

adhesion (*Med.*). Abnormal union of two parts which have been inflamed: a band of fibrous tissue which joins such parts.

adhesive cells (*Zool.*). Glandular cells producing a glutinous secretion for purposes of attachment, as on the pedal disc of *Hydra*, the tentacles of *Ctenophores*, and in the epidermis of *Turbellaria*.

adhesive force (*Eng.*). The frictional grip between two contacting surfaces, e.g. between the driving-wheel of a locomotive and the rail; the product of the weight on the wheel and the friction coefficient between wheel and rail.

adhesive tape (*Elec. Eng.*). See **insulating tape.**

a'diabat'ic (*Bot.*). Not capable of translocation.

adiabatic (*Phys.*). Without loss or gain of heat.

adiabatic change (*Phys.*). A change in the volume and pressure of the contents of an enclosure without exchange of heat between the enclosure and its surroundings.

adiabatic curve (*Phys.*). The curve obtained by plotting P against V in the adiabatic equation.

adiabatic efficiency (*Eng.*). (1) (Of a steam-engine or turbine) the ratio of the work done per pound of steam to the available energy represented by the adiabatic heat drop.—(2) (Of a compressor) the ratio of the work required to compress a gas adiabatically to the work actually done by the compressor piston or impeller.

adiabatic equation (*Phys.*). $PV^{\gamma}=\text{constant}$. An equation expressing the law of variation of pressure (P) with volume (V) of a gas during an adiabatic change, γ being the ratio of the specific heat of the gas at constant pressure to that at constant volume.

adiabatic heat drop (*Eng.*). The heat energy released and theoretically capable of transformation into mechanical work during the adiabatic expansion of unit weight of steam or other vapour.

ad'iactin'ic (*Photog.*). Said of filters which degrade the actinic value of light sources, e.g. the filters for dark-room lamps, which are selected in relation to the type of emulsion in use.

Adie barometer (*Meteor.*). See **Kew-pattern barometer.**

adipose tissue (*Zool.*). A form of connective tissue consisting of vesicular cells filled with fat and collected into lobules.

adipo'sis doloro'sa (*Med.*). A condition characterised by the development of painful masses of fat under the skin and by extreme weakness.

adit (*Civ. Eng.*). An access tunnel (usually nearly horizontal) leading to a main tunnel, and frequently employed (in lieu of a shaft) in the excavation of the latter.—(*Mining*) A level, or nearly level, tunnel driven into a hill-side for exploration or drainage.

adjective dyes (*Chem.*). Dyes which have no direct affinity for the particular fibre but can be affixed to it by the acid of some third substance.

adjustable level (*Surv.*). A form of surveying-level having a 'level' tube on it, the inclination of which can be adjusted so that the bubble is central when the line of sight through the telescope is truly horizontal.

adjustable set-square. See **clinograph.**

adjustable speed motor (*Elec. Eng.*). A term used in America to denote a motor the speed of which can be varied continuously over a specified range but which, when once adjusted, remains almost constant and independent of the load; e.g. a shunt motor with field control.

adjusting rod (*Horol.*). An instrument for testing the pull of the mainspring. It is a rod having at one end an adjustable clamp for attaching to a fusee or barrel arbor, and provided with sliding weights for balancing the pull exerted by the mainspring. Its use is now confined to the adjustment of chronometers and English full-plate watches.

adjusting screw (*Surv.*). An instrument-screw (having usually a very fine thread) provided to give a means of moving one part relatively to another so as to adjust for level, focus, tension, etc.

adjustment (*Surv.*). (1) The operation of putting different parts of an instrument into a desired relative position.—(2) An alteration made to a set of field observations in order to reduce them to values which are consistent within the set and satisfy prescribed equations of condition.

adjustor (*Zool.*). An organ or faculty determining the behaviour of an organism in response to stimuli received: one of the neurones in a reflex arc connecting the receptor neurone with the effector neurone, or with other adjustors.

adj'utage or **aj'utage** (*Hyd.*). A tube or nozzle through which water is discharged.

adj'uvant (*Med.*). A remedy which assists the action of other remedies.

adlac'rimal (*Zool.*). The lacrimal bone of Reptiles, so called to indicate that it is not homologous with the lacrimal bone of *Mammalia* (q.v.).

adminic'ula (*Zool.*). Spines used for locomotion in certain Insect pupae.

Admiralty brass (*Met.*). α-Brass in which some of the zinc is replaced by tin to increase strength and corrosion-resistance. Composition: copper 70%, zinc 29%, and tin 1%.

Admiralty gun-metal (*Met.*). See **gun-metal.**

admission (*Mech.*). The point in the working cycles of a steam or I.C. engine at which the inlet valve allows entry of the working fluid into the cylinder.

admittance (*Elec. Eng.*). The property of an electric circuit by virtue of which a current flows under the action of a potential difference. It is equal to the reciprocal of impedance.

admittance, indicial (*Elec. Comm.*). See **indicial admittance.**

adna'sal (*Zool.*). In certain primitive Fish, e.g. *Polypterus*, a small bone lying in front of the nasal.

adnation (*Bot.*). Attachment of one organ to another by its whole length. Sometimes used as equivalent to *adhesion*.—*adj.* **adnate.**

adnexa (*Anat.*). Appendages; usually refers to ovaries and Fallopian tubes.—(*Zool.*) Adjacent structures.

adnexed (*Bot.*). Just touching, but not attached to; as the gills of some agarics which reach but are not grown up with the stipe.

adobe clay or **adobe**, ad-ō'be (*Geol.*). A name for any kind of mud which when mixed with straw can be sun-dried into bricks.

ado'ral (*Zool.*). Adjacent to the mouth.

adpressed, appressed (*Bot.*). Pressed closely together but not joined.

ad-radius (*Zool.*). In *Coelenterata*, a radius of the third order: one of eight radii each lying between a per-radius and an inter-radius.

adrectal (*Zool.*). Adjacent to the rectum.

adre'nal (*Zool.*). Adjacent to the kidney: pertaining to the adrenal gland.

adrenal gland (*Zool.*). See **suprarenal body.**

adren'aline (*Chem.*). $3,4-(OH)_2C_6H_3{\cdot}CH(OH){\cdot}CH_2{\cdot}NH{\cdot}CH_3$, a crystalline compound obtained from the suprarenal glands. It is a derivative of ethylamine, with a sympathomimetic action, stimulating the sympathetic nervous system to produce a rise in blood pressure.

adsorption (*Chem.*). The taking up of one substance at the surface of another.

adsorption isotherm (*Chem.*). The relation between the amount of a substance adsorbed and its pressure or concentration, at constant temperature.

adspersed, aspersed (*Bot.*). Scattered.

adulares'cence (*Min.*). A milky or bluish sheen in gemstones.

adula'ria (*Min.*). See **glassy feldspar.**

adun'cate (*Bot.*). Hooked

adurol (*Photog.*). A developer used in imbibition printing.

advection (*Meteor.*). The transference of heat by horizontal motion of the air.

ad'vehent (*Zool.*). See **afferent.**

adventitia, —tish'i-a (*Zool.*). Accidental or unessential structures: the superficial layers of the wall of a blood-vessel.—*adj.* **adventitious.**

adventit'ious (*Bot.*). Applied to a plant-part developed out of the usual order or in an unusual position. An *adventitious bud* is any bud except an *axillary bud*; it gives rise to an *adventitious branch*. An *adventitious root* develops from some part of a plant other than a pre-existing root.

adven'tive (*Bot.*). Denotes a plant which has not secured a permanent foothold in a given locality.

adverse (*Bot.*). Facing the main axis.

advertising film (*Cinema.*). A film which exhibits facts regarding manufactures; not generally used in cinemas.

adze (*Carp.*). A cutting tool with an arched blade at right-angles to the handle, used for dressing timber.

adze block (*Carp.*). The part carrying the cutters in a wood-planing machine.

ae'cial (*Bot.*). A term used in America for *aecidial.*

aecid'ial (*Bot.*). Relating to the aecidium.

aecid'iospore (*Bot*). A spore of the rust fungi formed in an aecidium.

aecid'ium (*Bot.*). A spore-producing structure characteristic of many rust fungi. It consists of a cup-shaped peridium of sterile hyphae, containing closely packed chains of aecidiospores.

ae'ciospore (*Bot.*). The American term for *aecidiospore.*

ae'cium (*Bot.*). The American term for *aecidium.*

aedeagus, ē'dē-ā-gus (*Zool.*). In Insects, a finger-like evagination of the ventral body-wall, enclosing the terminal section of the ejaculatory duct and forming an intromittent organ.

ae'girine, ae'girite (*Min.*). A metasilicate of sodium and iron, occurring commonly in the soda-rich igneous rocks.

aegithog'nathous (*Zool*). (Of Birds) having a type of palate in which the maxillopalatines do not meet the vomer or each other, and in which the vomer is broad and truncate anteriorly; the palatines and pterygoids articulate with the basisphenoid rostrum.

aegoph'ony, egophony (*Med.*). The bleating quality of voice heard through the stethoscope when fluid is present in the pleural cavity.

aeloso'mine (*Zool.*). A green respiratory pigment of some *Oligochaeta.*

aeo'lian rocks (*Geol.*). Rocks which have accumulated in a non-marine environment (typically on a desert surface) and consist essentially of wind-blown sand grains.

aeolian tone (*Acous.*). A musical note set up by vortex action on a stretched string when it is placed in stream of air.

Ae'olight (*Cinema.*). The gas-discharge lamp used in Movietone variable-density sound-recording system. The location of the sound-track slides across a slit cut on silver deposited on the glass envelope. Its compactness makes it useful in news-reel sound-film cameras.

aeo'lipile, aeolipyle (*Phys.*). A contrivance designed to illustrate the reaction of the air upon jets of steam issuing from an otherwise closed vessel, and usually arranged so as to produce rotary motion of the vessel about a free axis.

aeolotro'pic (*Phys.*). Having physical properties which vary according to the direction or position in which they are measured.

aerating root (*Bot.*). A type of root produced by many plants which grow in soft mud. It stands up above the mud and water, is of loose construction, and acts as a ventilating organ.

aerating tissue (*Bot.*). Loosely constructed tissue, well provided with intercellular spaces, by means of which air can circulate inside a plant.

aeration (*Illum.*). A term used to denote the mixing of air with gas in a gas burner; defined as the ratio of the volume of air drawn in to the volume of gas.

aerenchy'ma (*Bot.*). (1) The same as *aerating tissue.*—(2) A tissue of thin-walled, somewhat corky cells, present on the stems of some water-plants at about water-level.

aerial (*Radio*). Any exposed wire capable of radiating or receiving the energy to or from an electromagnetic wave. The term is preferably restricted to such, and should not be applied to aerial systems which are designed to have specified characteristics, to which the term *antenna* (q.v.) is applicable.

aerial cable (*Teleph.*). Lead-covered cable, suspended from a wire between normal telegraph-poles, containing pairs of insulated conductors for telephone circuits, the practice being economical until it is worth while to bury a larger cable.

aerial car (*Civ. Eng.*). One designed for travel in the air; usually applied to a car on an elevated railway, or to the basket of a balloon.

aerial image (*Photog.*). An image formed in space and not received on a surface.

aerial perspective (*Photog.*). Qualities in photographs which suggest natural or enhanced distance, atmosphere, or recession of objects. Obtained in black and white photography by adjustment of the lighting.

aerial photograph (*Photog.*). A vertical or oblique photograph made from an aeroplane for surveying or military purposes. The cameras may expose regularly during steady flight, using high-speed film. Pictorial and advertising photography and cinematography from aircraft are also included. See **aerial surveying.**

aerial plant (*Bot.*). See **epiphyte.**

aerial root (*Bot.*). A root, usually adventitious in origin, ordinarily arising from a stem, and commonly serving for climbing; less often it assists in the nutrition of the plant, either by containing chlorophyllous cells capable of photosynthesis or by functioning as a parasitic sucker.

aerial ropeway (*Civ. Eng.*). An apparatus for the overhead transport of materials (e.g. coal from the mines to a nearby ship) in carriers running along an overhead cable or cables supported on towers.

aerial screen (*Photog.*). A transparent screen (used in stage-work) on which images can be projected.

aerial surveying (*Surv.*). A process of surveying by photographs taken from the air, the photographs being of two types: (*a*) those giving a vertical or plan view, (*b*) those giving an oblique or bird's-eye view. See **vertical aerial photograph, oblique aerial photograph.**

aerobatics (*Aero.*). Evolutions performed by an aircraft at the will of the pilot, usually excluding those needed for normal flight. Sometimes called ACROBATICS.

aer'obe, aerobi'ont (*Bot.*). A plant which requires elementary oxygen for respiration.—*adjs.* **aero'bic, aerobiot'ic.**

aerobe (*Biol.*). An organism which can live and grow only in the presence of oxygen: an organism which employs aerobic respiration.

aerobic respiration (*Biol.*). A form of respiration in which elementary oxygen is used for the oxidation of organic compounds with the formation of water and carbon dioxide, and the liberation of energy.

aerobio'sis (*Biol.*). Existence in the presence of oxygen.

aerodrome (*Aero.*). A reserved area of land or water intended to be used for the landing or taking-off of aircraft.—Obsolete uses: Langley (U.S.A.; 1895), a flying machine; Lanchester (1918), a balloon- or airship-shed.

aerodynam'ics (*Aero.*). That part of the mechanics of fluids that deals with the dynamics of gases. Particularly, the study of forces acting upon bodies in motion in air.

aer'odyne (*Aero.*). Any form of aircraft deriving lift in flight principally from aerodynamic forces. Commonly called HEAVIER-THAN-AIR CRAFT; e.g. *aeroplane, glider, kite, Autogiro, helicopter.*

aer'ofoil (*Aero*). A surface shaped so as to produce a large aerodynamic reaction (lift) normal to its direction of motion, for a small resistance (drag) parallel to its direction of motion. A wing, plane, aileron, tail-plane, rudder, elevator.

Aer'ograph (*Paint.*). A spray-gun for paint. The paint passes from an attached container to a small nozzle, where it is blown by compressed air into a fine spray, which can be directed on to the work.—(*Photog.*) A small air-pressure brush for spraying paint on photographs, mainly for colour-reproduction.

aer'olites (*Geol.*). A general name for stony as distinct from iron meteorites.

aerol'ogy (*Aero., Meteor.*). The study of the upper air, that part of the atmosphere removed from the effect of surface conditions. The knowledge of these conditions is distributed to aerodromes for the use of pilots proposing to fly at considerable heights.

aeronautical engineering. That branch of engineering concerned with the design and production of aircraft structures.

aeronautics. The science of all forms of aerial locomotion, and the production of apparatus for its performance.

aeroperception (*Zool.*). The ability to perceive the direction of origin of the oxygen supply, e.g. in Tubificid worms.

aeroph'agy (*Med.*). The swallowing of air, with consequent inflation of the stomach.

aer'ophone (*Acous.*). An early Edison device for amplifying sounds, comprising a diaphragm mechanism operating a valve for releasing air under pressure. See **stentorphone.**

aer'ophyte (*Bot.*). See **epiphyte.**

aeroplane (*Aero.*). Any heavier-than-air power-driven flying-machine with fixed wings. Subdivisions:—land plane, seaplane (float seaplane and flying-boat), and amphibian.

aeroplane effect (*Radio*). Error in direction-finding by radio which arises from the tilt of the transmitting aerial on an aircraft, or from any horizontal component in the emitted wave.

aeroplane engines. See **aircraft engines.**

aeroplane linen (*Textiles*). A light, strong linen fabric, made of the best yarn, which has been boiled to lighten it; used for covering aeroplane wings.

aer'osol (*Chem.*). A colloidal system, such as a mist or a fog, in which the dispersion medium is a gas.

aer'ostat (*Aero.*). Any form of aircraft deriving support in the air principally from its buoyancy. Commonly called LIGHTER-THAN-AIR CRAFT, i.e. a *balloon* or *airship.*

aerostat (*Zool.*). See **air-sacs.**

aerostat'ic (*Zool.*). Pertaining to or containing air-sacs.

aerostation (*Aero.*). The manipulation and flying of such aircraft as are lighter than air, such as balloons and airships.

aerotax'is (*Bot.*). The movement of a whole motile plant, or of a motile gamete, in relation to the concentration of oxygen in the surrounding water.—(*Zool.*) Reaction to oxygen, usually manifested by movement towards or away from it.—*adj.* **aerotactic.**

aerotro'pism (*Bot.*). The curvature by means of one-sided growth of a plant member in relation to oxygen concentration.—(*Zool.*) Reaction towards, or sensitivity to, oxygen.—*adj.* **aerotropic.**

aeru'ginose, aeru'ginous (*Bot.*). Bluish-green, like verdigris.

aes'thacytes (*Zool.*). In *Porifera*, cells alleged to be sensory or nervous.

aes'thatascs (*Zool.*). In *Crustacea*, olfactory hairs occurring on most antennules and on many antennae.

aesthe'sia. Sensibility.

aesthesiom'eter, esthesiom'eter (*Med.*). An instrument for measuring the sensibility of a person to touch.

aes'thetes (*Zool.*). In amphineuran *Mollusca*, sense-organs, some of which are primitive eyes, occurring in canals traversing the shell-plates.

aes'tival (*Bot., Zool*). Occurring in summer, or characteristic of summer.

aestival aspect (*Bot.*). The condition of the vegetation of a plant community in summer.

aestivation (*Bot.*). The arrangement of the parts of a flower in the flower-bud: in particular, the arrangement of the sepals and petals.

aestivation (*Zool.*). Prolonged summer torpor, as in some Insects. Cf. *hibernation.*

aetha'lium (*Bot.*). The fruit body of some *Myxomycetes*, consisting of a number of sporangia more or less confluent and incompletely individualised.

aether. Another spelling of *ether* (q.v.).

aetiol'ogy, etiol'ogy (*Med.*). The medical study of the causation of disease.

A.F., a.f. (*Elec. Comm.*). Abbrev. for *audio frequency* (q.v.).

a.f. amplifier, a.f. transformer (*Elec. Comm.*). See **audio-frequency amplifier, audio-frequency transformer.**

A.F.C. (*Radio*). Abbrev. for *automatic frequency control.*

afeb'rile (*Med.*). Without signs or symptoms of fever.

af'fect (*Psychol.*). The degree of pleasantness-unpleasantness accompanying any emotional state.

af'ferent (*Zool.*). Carrying towards; as blood-vessels carrying blood to an organ or organs, and nerves carrying nervous impulses to the central nervous system. Cf. *efferent.*

afferent arc (*Zool.*). The sensory or receptive part of a reflex arc, including the adjustor neurone or neurones.

affinity (*Bot.*). Likeness, especially in relationship.

affinity (*Chem.*). See **chemical affinity.**

affixed (*Bot.*). Inserted upon.

aflagell'ar (*Zool.*). Lacking flagella.

African glanders (*Vet.*). See **lymphangitis (epizootic).**

afterbirth (*Zool.*). See **decidua.**

after-blow (*Met.*). In basic Bessemer process, continuation of blowing after carbon has been eliminated, to obtain removal of phosphorus.

after-burning (*I.C. Engs.*). In an internal-combustion engine, persistence of the combustion process beyond the period proper to the working cycle, i.e. into the expansion period.

aftercooler (*Mining*). A device used for cooling compressed air before it enters the mains in a shaft, thereby increasing their capacity.

after-damp (*Mining*). The non-inflammable heavy gas, carbon dioxide, left after an explosion in a coal mine. The chief gaseous product produced by the combustion of coal-gas. See **black damp, firedamp, white damp.**

after-flush compartment (*Plumb.*). A chamber at the back of a wash-down closet arranged to receive part of the flushing-water, and to allow it to escape slowly after the flushing has finished, in order that any loss of seal in the trap may be rectified.

afterglow (*Photo-electronics*). The phenomenon, exhibited by certain fluorescent substances, of persistence of luminosity after the removal of the exciting agent, usually cathode rays.

after-image (*Optics*). See **compensatory after-image.**

after-pains (*Med.*). Pains occurring after the birth of a child, due to contraction of the uterus.

after-ripening (*Bot.*). The chemical and physical changes which go on inside a seed or other dormant plant-structure, and lead to the development of conditions when growth can be resumed.

aftershaft (*Zool.*). A second shaft, or a tuft of down, arising from the hollow quill of a feather, just proximally to the superior umbilicus.

Ag (*Chem.*). The symbol for silver (*argentum*)

agalac'tia, agala'cia (*Med.*). Failure of the breast to secrete milk.

agalactia (*Vet.*). A contagious infection of sheep and goats, due to a filterable virus; characterised by inflammation of the mammary gland, eye, and joints.

agalmat'olite (*Min.*). See **pagodite.**

agamandroe'cious (*Bot.*). Having male and neuter flowers in the same inflorescence.

agam'ete (*Zool.*). In *Protozoa*, a young form which develops directly into an adult, without syngamy.

agam'ic (*Bot.*). Said of reproduction without the co-operation of a male gamete

agamo'bium (*Zool.*). In metagenesis, the asexual generation.

agam'ogen'esis (*Bot.*). Asexual reproduction by means of buds, bulbils, and other detachable parts of a plant.—(*Zool*) Asexual reproduction; parthenogenesis.—*adjs.* **agamic, agamous, agamogenetic.**

agamog'ony (*Zool.*). See **schizogony.**

agamogynae'cious (*Bot.*). Having female and neuter flowers in the same inflorescence.

agam'ohermaph'rodite (*Bot.*). Having hermaphrodite and neuter flowers in the same inflorescence.

agam'ont (*Zool.*). See **schizont.**

agamotro'pic (*Bot.*). Said of a flower which does not shut after having once opened.

agar-agar (*Chem.*). A vegetable-gelatin, free from nitrogen, used for bacteriological cultures.

agar'ic (*Bot.*). A general term for mushrooms and toadstools.

agaric mineral (*Min.*). See **rock milk.**

Agarica'les (*Bot.*). A group of *Basidiomycetes* containing many thousand species, and occurring all over the world when conditions permit plant growth. The basidia develop on a hymenium spread over the surface of gills, pores, or less often a smooth surface, and the hymenium is at first enclosed, but freely exposed at maturity. Mushrooms and toadstools are familiar examples.

Agassiz trawl, ag'a-sē (*Ocean.*). A small trawl designed to fish whichever way up the trawl falls on the bottom; useful in deep water.

ag'ate (*Min.*). A cryptocrystalline variety of silica, characterised by parallel, and often curved, bands of colour.

agate mortar (*Chem.*). A bowl-shaped vessel in which hard and brittle materials, principally glass, are ground to powder.

agate ware (*Pot.*). Bodies formed by blending differently coloured clays (known as *solid agate*), or by colouring surfaces with differently coloured slips.

age and area theory (*Zool.*). The area occupied by a group of allied species is a measure of their antiquity in evolution.

age-hardening (*Met.*). See **ageing.**

ageing (*Acous.*). The diminution of effectiveness of a carbon microphone with life, arising from the granules becoming smoother through frictional movement.

ageing (*Elec. Eng.*). A change in the properties of a substance with time. In electrical engineering the term usually denotes a change in the magnetic properties of iron, e.g. increase of hysteresis loss of sheet steel laminations. It is also the name given to a process whereby the sub-permanent magnetism of permanent magnets can be got rid of in the manufacture of permanent magnets; and to the gradual change which takes place in the electrolyte of an electrodeposition cell, causing a change in the nature of the deposit.

ageing (*Met.*). Change in properties (e.g. increase in tensile strength and hardness) that occurs in certain metals at atmospheric temperature after heat treatment (as in Duralumin), or after cold working (as in mild steel).

agene'sia, agen'esis (*Med.*). Imperfect development (or failure to develop) of any part of the body.

agent (*Mining*). The chief official of a coal-mine or group of coal-mines in the same undertaking.

age'otro'pism (*Bot.*). The condition of not reacting to gravity.—*adj.* **ageotropic.**

Agfa, Agfacolor process (*Photog.*). Trade-name of a film-stock and cinematographic colour-system.

agglomerate, agglomerated (*Bot.*). Crowded, or heaped into a cluster.

agglomerate (*Geol.*). An indurated rock built of large angular rock-fragments embedded in an ashy matrix, and resulting from explosive volcanic activity. Occurs typically in volcanic vents.

agglomerate Leclanché cell (*Elec. Eng.*). A form of Leclanché cell designed to have a low resistance; the depolariser is made up in the form of blocks which surround the carbon electrode without a porous pot; the negative electrode is an external zinc cylinder.

agglomeration (*Zool.*). In *Protozoa*, adherence of forms like Trypanosomes by the aflagellar end of the body (apparently by means of a sticky secretion produced by the kinetonucleus) to form large clumps. Agglomeration always occurs in conditions unfavourable to the parasite, and is possibly due to the formation of agglutinins in the blood of the host.

agglutinate (*Bot.*). Cemented together by sticky material.

agglutination (*Chem.*). The coalescing of small suspended particles to form larger masses which are usually precipitated. Specifically:—(*Bot.*) the clumping of bacteria under the influence of sera or other unfavourable circumstances; (*Path.*) the clumping of bacteria or of blood cells; (*Zool.*) the formation of clumps by some *Protozoa* and spermatozoa; also the clumping of red blood corpuscles when the plasma of one individual is added to the blood of another, or when the blood from two individuals of different types is mixed, e.g. bloods of groups A and B (II. and III.).

agglu'tinin (*Chem.*). The antibody substance which causes agglutination of blood corpuscles, bacteria, etc. Specifically:—(*Path.*) a constituent of the blood plasma of one individual which causes agglutination by reacting with a specific receptor in the red corpuscles in the blood of another individual.

agglu'tinogen (*Med.*). The substance in bacteria or in blood cells which stimulates the formation of, and unites with, agglutinin, as in infection and immunisation.

aggregate, aggregated (*Bot.*). Closely packed but not confluent.—(*Zool.*) Massed or clustered; e.g. the aggregate silk glands of Spiders, which are connected with the posterior spinnerets, and produce the spiral thread of orb webs and its viscid coating.

aggregate (*Civ. Eng.*). The sand and broken stone and brick which together form one of the constituents of concrete, the others being cement and water. See **coarse— fine—**

aggregate (*Geol., Min.*). A mass consisting of rock or mineral fragments.

aggregate fruit (*Bot.*). (1) The fruit formed by a flower with several free carpels.—(2) The fruit formed from several flowers growing close together; e.g. a Pineapple.

aggregate ray (*Bot.*). A group of closely placed, narrow vascular rays.

aggregate species (*Bot.*). A group of closely related species denoted by a single name.

aggressive resemblance (*Zool.*). See **anticryptic coloration.**

aggressiveness, aggressivity (*Bot.*). The capacity of a parasite to attack its host.

aging. See **ageing.**

agitator (*Met.*). A tank in which very finely crushed ore is agitated with leaching solution. Usually accomplished by means of a current of compressed air passing up a central pipe and causing circulation of the contents of the tank. Sometimes called a MIXER.

agitator (*Paper*). A device for imparting a rapid jerking or rocking to the fluid paper-pulp on the frame, so causing the suspended wood-fibres to interlace in various directions.

aglos'sate, aglos'sal (*Zool.*). Lacking a tongue.—*n.* **aglossia,** congenital absence of the tongue.

agna'thous, agna'thosto'matous (*Zool.*). Having a mouth without jaws, as in the Lampreys.

agno'sia (*Med.*). Loss of the ability to recognise the nature of an object through the senses of the body.

agon'ic line (*Magn.*). An isogon of zero magnetic declination.

ag'orapho'bia (*Psychol.*). The fear of being alone in an open space.

agran'ulocyto'sis (*Path.*). A pathological state in which there is a marked decrease in the number of granulocytes in the blood.

agraph'ia (*Med.*). Loss of the power to express thought in writing, as a result of a lesion in the brain.

agres'sin (*Zool.*). A poisonous substance, produced by disease-causing organisms, which inhibits the defensive reactions of the host.

agres'tal (*Bot.*). Growing in cultivated ground, but not itself cultivated; e.g. a weed.

agricultural bolt (*Eng.*). A type of bolt, much used in agricultural machines, whose shank is formed externally with helical grooves imparted by a rolling process.

agrostol'ogy (*Bot.*). The study of grasses.

Ag'ua Clar'a Group (*Geol.*). A series of strata of Oligocene (Aquitanian) age occurring in western Venezuela, and including dark-coloured marine shales, gypsum, ferruginous bands and, especially near the base, limestones and sandstones, the latter yielding most of the oil in that country.

ague, ā'gū (*Med.*). See **malaria.**

agy'nous (*Bot.*). Said of an abnormal flower in which the gynaeceum has failed to develop.

a.h.m. (*Elec. Eng.*). See **ampere-hour meter.**

aiguille, āg'wil (*Masonry*). A stone-boring tool.

ailerons (*Aero.*). Flaps at or near each wing-tip, under the control of the pilot, and manipulated by him so as to give a rolling motion to the aircraft on its fore and aft axis.

air. See **atmosphere (composition of, pressure of), saturation of the air.**

air bells (*Photog.*). Minute bubbles which have adhered to emulsions during processing, with consequent black or white spots where the emulsion has been protected from the action of chemicals.

air-bladder (*Zool.*). In Fish, a gas-containing sac developed as a diverticulum of the gut, with which it may retain connexion by the pneumatic duct in later life; usually it has a hydrostatic function, but in some cases it may be respiratory or auditory, or assist in phonation.

air blast (*I.C. Engs.*). See **air injection.**

air-blast switch (or **circuit-breaker**) (*Elec. Eng.*). A form of switch (or circuit-breaker) in which the arc is extinguished by a blast of air.

air-blast transformer (*Elec. Eng.*). An air-cooled transformer in which cooling is carried out by means of forced circulation of air over the windings and core.

air brake (*Eng.*). (1) A mechanical brake operated by air-pressure acting on a piston.—(2) An absorption dynamometer in which the power is dissipated through the rotation of a fan or air-screw.

air-break switch (or **circuit-breaker**) (*Elec. Eng.*). A switch (or circuit-breaker) in which the contacts are in air.

air-brick (*Build.*). A perforated cast-iron or earthenware brick built into a wall across an air-duct admitting air under the floors or into rooms.

air-brush. Any of several types of device for spraying paint by means of compressed air. See **Aerograph.**

air calorimeter test (*Elec. Eng.*). A method of measuring the losses of an enclosed electric machine by measuring the volume and temperature rise of the air passing through it.

air cavity, air space (*Bot.*). (1) A large intercellular space in a leaf into which a stoma opens.—(2) A cavity in the upper surface of the thallus of some liverworts, opening externally by an *air pore* and containing chains of photosynthetic cells.—(3) A large intercellular space in which air is stored in some water-plants.

air-cell (*I.C. Engs.*). A small auxiliary combustion chamber used in certain types of compression-ignition engines, for promoting turbulence and improving combustion.

air-cells (*Zool.*). Thin-walled cavities, filled with air, occurring in the bones of the skull (especially the ethmoid and the mastoid), generally to reduce weight.

air-classifier (*Mining*). An appliance for approximately sizing crushed minerals or ores by means of currents of air. See **air-elutriator.**

air-cleaner (*I.C. Engs.*). A filter placed at the air intake of an internal-combustion engine to remove dust from the air entering the cylinders.

air-compressor (*Eng.*). A machine which draws in air at atmospheric pressure, compresses it, and delivers it at a higher pressure. It may be of the reciprocating, centrifugal, or rotary (vane) type.

air-condenser (*Radio*). A condenser in which the dielectric is nearly all air; the most commonly employed form of tuning-condenser.

air-conditioning (*Build., etc.*). The process whereby atmospheric air is cleaned and brought to a suitable condition of temperature and humidity prior to admission to buildings, factories, cinemas, film laboratories, telephone exchanges, studios, etc. One method of adjustment is by washing the air with water refrigerated to the desired dew-point and then heating it to the required temperature.

air-conduction (*Acous.*). The passing of noise energy along an air path, as contrasted with mechanical conduction of vibrational energy.

air-cooled engine (*I.C. Engs.*). An internal-combustion engine in which the cylinders, finned to increase their surface area, are cooled by an air-stream. See **cowling.**

air-cooled machine, transformer, etc. (*Elec. Eng.*). A machine, transformer, or other piece of apparatus, in which the heat occasioned by the losses is carried away solely by means of air. The flow of air over the heated surfaces may be due to natural convection or may be produced by a fan. See **air-blast transformer.**

air-cooling (*Eng.*). The cooling of hot bodies by means of a stream of cold air, as distinct from water-cooling.

air-core cable (*Elec. Comm.*). See **dry-core cable.**

aircraft engine (*Aero.*). An engine, usually of the internal-combustion type, modified in form and weight so as to be suitable to provide the motive power of an aircraft. Types:—in-line or radial, liquid-, vapour-, or air-cooled.

aircraft noise (*Acous.*). Noise arising from the propeller, the engine, the exhaust, and the surface-friction of aircraft, characterised by unstable low frequencies. Noise from the propeller takes the form of a thrown-off impulse wave.

air-drain (*Build.*). A cavity in the external walls of a building, designed to prevent damp from getting through to the interior.

air-dry (*Timber*). Said of timber the moisture content of which is in approximate equilibrium with local atmospheric conditions.

air-drying (*Paper*). The process of drying slowly by exposure to a uniform temperature A method followed only in the manufacture of hand-made and very good machine-made paper.

air ducts (*Eng.*). Pipes or channels through which air is distributed throughout buildings for heating and ventilation.—(*Elec. Eng.*) See **cooling duct, ventilating duct.**

air-ejector (*Eng.*). A type of air-pump used for maintaining a partial vacuum in a vessel through the agency of a high-velocity steam-jet which entrains the air and exhausts it against atmospheric pressure.

air-elutriator (*Mining*). An appliance for producing, by means of currents of air, a series of sized products from a finely crushed mineral (e.g. for the paint or abrasive industries). See **air-classifier.**

air engine (*Eng.*). (1) An engine in which air is used as the working substance, the heat being supplied from an external source. Impracticable except for very small powers. See **hot air engine.**—(2) A small reciprocating engine driven by compressed air.

air escape (*Plumb.*). A contrivance for discharging excess air from a water-pipe; it consists of a *ball-cock* (q.v.) which opens the discharging air-valve when sufficient air has collected, and closes it in time to prevent loss of water.

air-exhauster (*Eng.*). A suction fan which draws vitiated air from a building, mine, shaft, etc.

air flue (*Build.*). A flue, usually fitted with an *Arnott valve* (q.v.), which is built into a chimney-stack so as to withdraw vitiated air from a room.

airframe (*Aero.*). The complete aeroplane, except the engines.

air-fuel ratio (*Eng.*). The proportion of air to fuel in the working charge of an internal-combustion engine, or in other combustible mixture, expressed by weight for liquid fuels and by volume for gaseous fuels.

air-gap (*Elec. Eng.*). A gap in the magnetic circuit of a piece of electrical apparatus; e.g. the gap between the rotor and stator of an electric machine. See also **section gap.**

air-gap (*Teleph.*). The discontinuity in the iron path of a choke or transformer designed to prevent any direct current in the windings from saturating the magnetic material and reducing its permeability, and hence inductance, for alternating currents.

air-gap torsion-meter (*Eng.*). A device for measuring the twist in a shaft by causing the relative rotation of two sections to alter the air-gap between a pair of electromagnets, the resulting change in the current flowing being indicated by an ammeter.

air-gas (*Chem.*). *Producer gas* (q.v.).

air gate (*Eng.*). A passage from the interior of a mould to allow of the escape of air and other gases as the metal is poured in. See **riser.**

air-grating (*Build.*). A perforated iron grating built into a wall across an air-duct admitting air to a building and allowing of ventilation.

air-hardening steel (*Met.*). Alloy steel which can be hardened by cooling in air instead of in water (which is required for carbon steel); e.g. carbon 0·3%, nickel 4·0%, and chromium 1·5%.

air-heater (*Ind. Heat.*). (1) See Supplement.—(2) Properly *air-preheater*. A system of tubes or passages, heated by flue gas, through which combustion air is passed for pre-heating before admission to the combustion chamber, thus appreciably raising flame temperatures and returning to the combustion chamber some utilisable heat that would otherwise be lost. See also **recuperative air-heater, regenerative air-heater, Supermiser.**

air injection (*Eng.*). The system of injecting the oil fuel into the cylinder of a Diesel engine by means of a blast of high-pressure air. Cf. *airless (solid) injection.*

air insulation (*Elec. Eng.*). At normal pressure air withstands a voltage-gradient of 35-38 kilovolts per cm. Dielectric strength increases with pressure.

air-level (*Surv.*). A *level tube* (q.v.).

air-lift pump (*Hyd.*). An apparatus for raising water from a well by the use of compressed air only; the latter is admitted into the lower end of a pipe immersed in the water to be lifted, setting up alternate plugs of water and air which are forced up the pipe by the superior hydrostatic pressure of the water in the open boring.—(*Mining*) An air-operated displacement pump for elevating or circulating pulp in cyanide plants.

air line (*Elec. Eng.*). (1) A straight line frequently drawn on the magnetisation curve of an electric machine or other piece of apparatus; it represents the magnetising force necessary to maintain the flux across the air-gap of the magnetic circuit.—(2) A transmission line carried on poles.

air-lock (*Civ. Eng.*). A device by which access is obtained to the working chamber (filled with compressed air to prevent entry of water) at the base of a hollow caisson. The workman at the surface enters and is shut in an air-tight chamber filled with air at atmospheric pressure. The pressure within this air-lock is gradually raised to that used in the working chamber, so that the workman can pass out through another door communicating with the working chamber. See **caisson.**

air-lock (*Eng.*). An air-pocket or bubble in a pipe line which obstructs the flow of liquid. See **vapour lock.**

air manometer (*Phys.*). A pressure-gauge in which the changes in volume of a small quantity of air enclosed by mercury in a glass tube indicate changes in the pressure to which it is subjected.

air-meter (*Eng.*). An apparatus used to measure the rate of flow of air or gas.

airplane (*Aero.*). American term for *aeroplane.*

air plant (*Bot.*). See **epiphyte.**

air pore (*Bot.*). See **stoma, air cavity.**

air port (*Aero.*). An aerodrome provided with arrangements for dealing with commercial aircraft, usually serving as a regular station on an air line, and frequently having customs facilities in addition.

air-preheater (*Ind. Heat.*). See **air-heater.**

air-pump (*Eng.*). A reciprocating or centrifugal pump used to remove air, and sometimes the condensate, from the condenser of a steam-plant. See **air-ejector.**—Any device used for transferring air from one place to another. A *compressor* is a pump used for increasing the pressure on the high-pressure side; an *evacuator*, or vacuum pump, is one in which the object of pumping is to reduce the pressure on the low-pressure side. A *blower* is a pump used for obtaining a rapidly moving air-blast.

air-receiver (*Eng.*). A vessel into which compressed air is discharged, to be stored until required.

air route (*Aero.*). In organised flying, a defined route between two aerodromes; usually provided with direction-finding facilities, lighting, emergency-landing grounds, etc.

air-sac mite (*Vet.*). *Cytoleichus nudus*, a mite (*acarus*) infecting the respiratory passages of gallinaceous birds.

air-sacs or **aerostats** (*Zool.*). In *Insecta*, thin-walled distensible dilations of the tracheae, occurring especially in rapid flyers, which increase the oxygen capacity of the respiratory system and otherwise assist the act of flight: in Birds, expansions of the blind ends of certain bronchial tubes, which project into the general body-cavity and assist in respiration, as well as lightening the body.

airscrew (*Aero.*). A power-driven screw producing a thrust by reason of its rotation in the air.—Types: left-hand airscrew; right-hand airscrew; ADJUSTABLE-PITCH AIRSCREW, one with blades capable of being rotated upon their own axes, thus changing the pitch of the airscrew (only when stationary); PUSHER AIRSCREW, one designed to produce a compression in its mounting in the aircraft when rotating in the normal direction; SWIVELLING AIRSCREW, one capable of being turned bodily so as to transmit its thrust in any desired direction; used principally for control purposes in airships; TRACTOR AIRSCREW, one designed to produce a tension in its mounting in the aircraft when rotating in the normal direction; VARIABLE-PITCH AIRSCREW, one with blades capable of being rotated upon their own axes, thus changing the pitch of the airscrew, while in rotation. See also **feathering airscrew.**

airscrew fan (*Eng.*). See **propeller fan.**

airscrew hub (*Aero.*). The detachable metal fitting by which an airscrew is attached to the power-driven shaft.

air-shaft (*Civ. Eng.*). An air-passage, usually vertical or nearly vertical, which provides for the ventilation of a tunnel or mine.

airship (*Aero.*). Any power-driven *aerostat* (q.v.). Types: NON-RIGID AIRSHIP, one with the envelope so designed that the internal pressure maintains its correct form without the aid of a built-in structure; small, and used for naval patrol-work; RIGID AIRSHIP, one having a rigid structure to maintain the designed shape of the hull, and to carry the loads; large, used for commercial transport work; usually carries a number of ballonets or gas-bags inside the frame; SEMI-RIGID AIRSHIP, one having a partial structure, usually a keel only, to distribute the load to, and maintain the designed shape of, the envelope or ballonets; intermediate size, obsolete.

air-slaking (*Build.*). The process of exposing quicklime to the air, as a result of which it will gradually absorb moisture and break down into a powder.

air-space (*Bot.*). See **air cavity.**

air-spaced coil (*Radio*). An inductance coil in which the adjacent turns are spaced out (instead of being wound close together) in order to reduce self-capacity and dielectric losses.

air speed (*Aero.*). Speed measured relative to the air in which the aircraft is moving, as distinct from speed relative to the ground; measured by an *air speed indicator*.

air standard cycle (*I.C. Engs.*). A standard cycle of reference by which the performance of different internal-combustion engines may be compared, and their relative efficiencies calculated.

air standard efficiency (*I.C. Engs.*). The thermal efficiency of an internal-combustion engine working on the appropriate air standard cycle.

air surveying (*Surv.*). See **aerial surveying.**

air thermometer (*Heat*). A means of measuring temperature depending on the application of the gas laws to variations of the pressure and volume of air with temperature. The air is contained in a bulb placed in the enclosure whose temperature is required, and by means of a mercury manometer the pressure required to keep the volume constant, or the volume at constant pressure, may be measured.

air-trap (*San. Eng.*). A trap which, by a water-seal, prevents foul air from rising from sinks, wash-basins, drains, sewers, etc. Sometimes called DRAIN-TRAP, STENCH-TRAP.

air valve (*Civ. Eng.*). A valve located in a pipe-line at a crest of a hill; it serves as a means of letting out air which may have accumulated there, after separating out from the water passing through the pipe.

air-vessel (*Eng.*). An air-containing vessel fitted to the delivery side of a reciprocating water-pump in order to smooth out the pulsating discharge.

airway beacon (*Illum.*). A powerful light located at an air port or along an air route, to assist the pilot in maintaining his correct course when flying at night.

airworthy (*Aero.*). (1) (In Britain) complying with certain regulations laid down by law, which aim at ensuring that aircraft shall be safe to fly.—(2) Possessing a certificate of airworthiness.

airless injection (*Eng.*). The injection of liquid fuel into the cylinder of an oil engine by a high-pressure fuel pump, so dispensing with the compressed air necessary in the early Diesel engines. Also called SOLID INJECTION.

Airy points (*Phys.*). The best points for supporting a bar horizontally so that bending shall be a minimum. The distance apart of the points is equal to $\frac{l}{\sqrt{n^2-1}}$, where l is the length of the bar and n the number of supports.

Airy's integral (*Light*). The factor, 1·22, by which the dimensions of the diffraction pattern produced by a slit must be multiplied in order to obtain the dimensions of the pattern due to a circular aperture.

aisle, il (*Build.*). A division of a church usually parallel to and flanking the nave, choir, or transept, and marked off from the wall by pillars.

aisle roof (*Build.*). See **lean-to roof.**

aitiogen'ic, aitiogen'ous (*Bot.*). Said of a reaction by a plant, induced by some external agent, generally a movement of some kind.

aitionas'tic (*Bot.*). Said of a curvature performed by a plant-member in response to a diffuse stimulus.

ajacine (*Chem.*). $C_{15}H_{21}O_4N+H_2O$, an alkaloid of unknown constitution, obtained from the seeds of the *Delphinium* species. It crystallises in colourless needles, m.p. 142°-148° C.

Ajax-Wyatt furnace (*Elec. Eng.*). A form of electric induction furnace having an iron core and a special shape of container, to ensure circulation of the charge; the furnace operates at 50 cycles.

ajutage (*Hyd.*). See **adjutage.**

akar'yote (*Zool.*). A cell lacking a nucleus, or one in which the nucleoplasm is not aggregated to form a nucleus.

akaryote stage (*Bot.*). A stage in the life-history of some lower plants during which the nuclei are very difficult to stain.

akene (*Bot.*). See **achene.**

akine'sia, akine'sis (*Med.*). Poverty of movement: a disinclination to move, as a result of a lesion in the brain.

ak'inete (*Bot*). A thick-walled cell containing oil and other reserve food materials, formed by some filamentous algae and serving as a means of vegetative multiplication

Akroyd engine (*Eng*) The first compression-ignition (C.I.) oil engine, patented by Akroyd Stuart in 1890. See **compression-ignition engine.**

Al (*Chem.*). The symbol for *aluminium*.

ala, ā'la (*Bot.*). (1) One of the side-petals of the flower of the pea and its relatives.—(2) A membranous outgrowth on a fruit, serving in wind dispersal.—(3) A narrow leafy outgrowth down the stem from a decurrent leaf.—(*Zool.*) Any flat, wing-like process or projection, especially of bone.—*pl.* **alae.**

ala spuria'lis (*Zool.*). See **bastard wing.**

ala tempora'lis (*Zool.*). In the developing chondrocranium, a small cartilage passing laterally from the side of the trabecula; the alisphenoid bone.

alaban'dite (*Min.*). Massive, granular sulphide of manganese occurring in veins in Rumania and elsewhere. Also called MANGAN-BLENDE.

alabaster (*Min.*). A massive form of gypsum, pleasingly blotched and stained. On account of its softness it is easily carved and polished, and is widely used for ornamental purposes. Chemically it is $CaSO_4 \cdot 2H_2O$.—ORIENTAL ALABASTER, onyx marble. A beautifully banded form of stalagmitic calcite occurring in Algeria, Egypt, and elsewhere.

alabastrine process (*Photog.*). The use of mercury and iron for bleaching out wet collodion positives.

al'anine (*Chem.*). α-Aminopropionic acid, $CH_3 \cdot CH(NH_2) \cdot COOH$; it occurs combined in proteins, notably in silk fibroin.

a'lar, a'lary (*Zool.*). Winglike: pertaining to wings: axillary: pertaining to alae.

alarm bell (*Teleph.*). An audible signal to indicate a defect in a circuit or group of circuits, such as a blown fusible cut-out or an earth fault.

alarum, alarum clock (*Horol.*). A clock which rings on a bell, gong, or the case of the clock itself, at a predetermined time.

alaska (*Textiles*). Yarn consisting of mohair or wool and cotton, mixed by carding, or by combing and drawing; used for ladies' dress materials and coatings.

alassoton'ic (*Zool.*). Of or against decreasing force (of muscle contraction).

alas'trim (*Med.*). Variola minor; a mild form of smallpox differing from it in certain features.

alate (*Bot.*). Winged; applied to stems when decurrent leaves are present.—(*Zool.*) Having a broad lip (especially of shells): in *Porifera*, a type of triradiate spicule with unequal angles.

albe'do (*Astron.*). A measure of the light-reflecting power of the surface of a heavenly body not self-luminous.—(*Illum.*) The term is sometimes used in photometry to indicate the degree of reflecting power of a matt surface. An ideal white matt surface absorbing no light would have unit albedo.

Albers-Schonberg disease (*Med.*). See **osteopetrosis.**

albert (*Paper*). A standard size of notepaper, 6×3¾ in.

al'bertite (*Min.*). A pitch-black solid bitumen occurring in veins in oil-bearing strata.

Albertol (*Chem.*). Trade-name for ester-gums.

Albian stage (*Geol.*). A division of the Cretaceous System, comprising the rocks between the Aptian stage below and the Cenomanian stage above; approximately equivalent to the English Gault and Upper Greensand.

al'binism (*Bot.*). An abnormal condition due to the absence of chlorophyll or other pigments.—(*Zool.*) Absence of pigmentation, especially marked in the integument, epidermal outgrowths, and the eyes.—*n.* **albino.**

albino, al-bē'no (*Bot.*). An abnormal plant of whitish colour due to the more or less complete absence of chlorophyll.—*adj.* **albinot'ic.**

albite (*Min.*). The end-member of the plagioclase group of minerals. Ideally consists of silicate of sodium and aluminium; but commonly contains small quantities of potash and lime in addition. Cf. *barbierite*.

albitisation (*Geol.*). In igneous rocks, the process by which a soda-lime feldspar (plagioclase) is replaced by albite (soda-feldspar).

al'bitite (*Geol.*). A rare type of soda-syenite consisting almost entirely of albite, with a small content of coloured silicates.

albu'men (*Bot.*). See **endosperm.**—(*Zool.*) White of egg; the nutritive material which surrounds the yolk in the eggs of higher animals.—*adj.* **albuminous.**

albumins (*Chem.*). The name given to a group of simple proteins which are soluble in pure water, the solutions being coagulated by heat. The particular albumin found in white of egg is sometimes referred to as *egg-albumin*.

albumin process (*Photog.*). An early printing-process using egg albumin as the vehicle for silver nitrate; now generally replaced by gelatine.

albuminates (*Chem.*). The alkali compounds of albumins.

albuminoids (*Chem.*). A synonym for *scleroproteins* (q.v.), a group of simple proteins which are insoluble, contain a large amount of sulphur and form many supporting tissues.

albuminous (*Bot.*). Endospermous.

albuminous cell (*Bot.*). A cell rich in contents, associated with the phloem in the leaves and stems of some Gymnosperms, and probably serving to conduct proteins.

albuminu'ria (*Med.*). Albumin in the urine.

al'bumoses (*Chem.*). A synonym for *proteoses.*

alburnum (*Bot.*). Sapwood.

Alclad (*Met.*). Composite sheets consisting of an alloy of the Duralumin type (to give strength) coated with pure aluminium (to give corrosion resistance).

alcohol (*Chem.*). A general term for hydrocarbon compounds containing a hydrogen atom substituted by the hydroxyl group. The general formula is R·OH, wherein R signifies an aliphatic or an aromatic radical. In particular, the term alcohol is commonly used for *ethyl alcohol* (q.v.).

alcohol fuel (*I.C. Engs.*). Volatile liquid-fuel consisting wholly, or partly, of alcohol, able to withstand high-compression ratios without detonation.

alcoholic fermentation (*Bot.*). The production of alcohol from sugar by yeasts. Production is best when the supply of free oxygen is limited. Carbon dioxide and heat are also produced.

al'coholom'etry (*Chem.*). The quantitative determination of alcohol in aqueous solutions.

al'cosol (*Chem.*). A colloidal solution in alcohol.

alcove (*Build.*). A recess (often arched or vaulted) in a room or wall.

al'dehydes (*Chem.*). A group of compounds containing the CO— radical attached to both a hydrogen atom and a hydrocarbon radical, viz. R·CHO.

aldehyde acids (*Chem.*). Products of the partial oxidation of dihydric alcohols, containing both an aldehyde group and a carboxyl group.

aldehyde-ammonias (*Chem.*). Crystalline compounds formed by the interaction of aldehydes and ammonia. On distillation with dilute sulphuric acid, the pure aldehydes are regenerated.

aldehyde condensations (*Chem.*). Condensations of aldehydes with aldehydes, ketones, acids, etc., by the elimination of water and the linking together of the chains of the reacting compounds.

aldehyde resins (*Plastics*). Highly polymerised resinous condensation products of aldehydes, obtained by treatment of aldehydes with strong caustic soda.

Alden power brake (*Eng.*). A form of brake used for measuring the power of an engine; consists of a disk of cast-iron revolving between two plates of copper, oil being circulated from the circumference to the centre. Water under pressure circulates outside the copper plates, cooling them, as well as maintaining contact pressure on the moving disk.

al'dimines (*Chem.*). Condensation products of phenols with hydrocyanic acid, formed in the presence of gaseous hydrogen chloride.

Al'doform (*Chem.*). Trade-name for *formaldehyde* (q.v.).

al'dohex'oses (*Chem.*). Compounds of the formula OH·CH$_2$(CH·OH)$_4$·CH:O, of which numerous stereo-isomeric forms are possible. The following aldohexoses are known:

d- and *l*-mannose,
d- and *l*-gulose,
d- and *l*-galactose,
d-altrose,
d- and *l*-glucose,
d- and *l*-idose,
d-talose,
d-allose.

aldoke'tenes (*Chem.*). A group comprising ketene, its monoalkyl-substituted derivatives, and carbon suboxide.

aldol (*Chem.*). A condensation product of acetaldehyde, viz. H$_3$C·CH(OH)·CH$_2$·CHO.

aldol condensation (*Chem.*). The condensation of two aldehyde molecules in such a manner that the oxygen of the one molecule reacts with the hydrogen of the other molecule, forming a hydroxyl group, with the simultaneous formation of a new link between the two carbon atoms.

aldoses (*Chem.*). A group of mono-saccharoses with an aldehydic constitution.

aldox'imes (*Chem.*). A group of compounds in which the oxygen of the aldehyde group is substituted by the radical :N·OH, derived from hydroxylamine H$_2$N·OH and an aldehyde by dehydration. The general formula is R·CH:N·OH.

Aldrey (*Elec. Eng.*). An alloy of aluminium and magnesium containing about 0·5% of the latter; used for transmission-line conductors on account of its having a higher tensile strength than pure aluminium.

ale (*Brew.*). One of the classes of beers, including pale ale (bitter) with a distinct hop flavour, and mild ale, sometimes sweetened, and not so strongly hopped. Burton and barley-wine are strong ales.

ale'cithal (*Zool.*). (Of ova) having little or no yolk.

Alec'toromor'phae (*Zool.*). A legion of *Aves* possessing a schizognathous palate; includes the Game-birds, Cranes, Plovers, and Gulls. See **Galliformes, Gruiformes, Charadriiformes.**

Alençon lace, a-lahn^{g}-son^{g} (*Textiles*). A French point lace made by hand with a needle; made in segments and then joined together and stiffened.

Aleppo galls (*Chem.*). A synonym for nut-galls, excrescences on various species of oak, containing gallic and gallitannic acids.

aleth'oscope (*Photog.*). A lens arrangement for obtaining the correct viewing distance of a photographic print and so correcting perspective.

aleur'iospore, aleur'ispore (*Bot.*). A conidium formed laterally on a hypha by some fungi, especially those which cause skin diseases.

aleur'one (*Bot.*). Reserve protein material occurring in granules in the *aleurone layer*, a special layer of cells just below the surface of the grains of various cereals, and in the seeds of other plants.

Alexanderson alternator (*Radio*). A high-frequency alternator of the inductor type. Slots in a rapidly revolving rotor cause fluctuations in the magnetic field, inducing currents in the stator coils.

alexan'drite (*Min.*). A variety of chrysoberyl, the colour varying, with the conditions of lighting, between emerald green and columbine red.

alex'ia (*Med.*). Word-blindness; loss of the ability to interpret written language, due to a lesion in the brain.

Alfol (*Eng.*). Trade-name for thin corrugated aluminium foil in narrow strips, used for heat insulation, for which it is effective by reason of the numerous small air-cells formed when packed.

Algae, al'jē (*Bot.*). A large group of simple organisms, mostly aquatic. They contain chlorophyll and/or other photosynthetic pigments, and have simply organised reproductive organs.

algal layer, algal zone (*Bot.*). A layer of algal cells lying inside the thallus of a heteromerous lichen. Also called GONIDIAL LAYER, GONIMIC LAYER.

Algaroth, powder of (*Chem.*). See **powder of Algaroth.**

algebra (*Maths.*). The abstract investigation of the properties of numbers by means of symbols (x, y, etc.). Typical algebraic problems are the solving of equations, the summation of series, and permutations and combinations.

Algerian onyx (*Min.*). Another name for *oriental alabaster*. See under **alabaster.**

algesim'eter (*Med.*). An instrument for measuring sensitivity to pain.

algod'onite (*Min.*). Arsenide of copper occurring as a white incrustation in the Algodona silver mine, Chile.

algol (*Chem.*). An anthraquinone vat dyestuff. Algol blue K is the *N*-dimethyl derivative of *indanthrene blue* (q.v.).

algol'ogy (*Bot.*). The study of algae.

Algo'man Granites (*Geol.*). Great acid intrusives comprising gneissose syenites and granites yielding gold in Ontario; of post-Timiskaming age and thus younger than the *Laurentian Granites* (q.v.).

algraphy (*Print.*). Printing by an aluminium plate instead of by a lithographic stone.

alhambra (*Textiles*). A cotton fabric having an elaborate pattern in colour produced by an extra warp, the ground cloth being plain; used as a bed quilt.

alicy'clic (*Chem.*). Abridged term for *aliphatic-cyclic.*

alicyclic hydrogenation (*Chem.*). Hydrogenation in the naphthalene series, wherein hydrogenation takes place only in the substituted benzene ring, e.g. in β-naphthylamine hydrogenation occurs in the benzene ring containing the amino group.

al'idade (*Surv.*). An accessory instrument used in plane-table surveying, consisting of a rule fitted with sights at both ends, which gives the direction of objects from the plane-table station. Also called SIGHT RULE.

alien (*Bot.*). A plant introduced by man, and maintaining a foothold under natural conditions.

alien frequencies or **tones** (*Acous.*). In sound reproduction, frequencies which appear in the reproduction but which are not in the original sound. The term is usually restricted to frequencies derived from the original frequencies through amplitude distortion, but is also given to added frequencies introduced by interfering currents.

a'lienist (*Med.*). One practised in the diagnosis and treatment of mental diseases.

alighting (*Aero.*). Colloquially, LANDING. The action of approaching the earth, usually with engine throttled down or completely shut off, losing flying speed, making contact with the ground or water, and finally coming to rest.

alignment (*Civ. Eng.*). (1) A setting in line (usually straight) of, e.g., successive lengths of a railway which is to be constructed.—(2) The plan of a road or earthwork.—(*Eng.*) The setting in a true line of a number of points, e.g. the centres of the bearings supporting an engine crankshaft.

al'ima (*Zool.*). A pelagic larval form of certain stomatopod *Crustacea*, usually distinguished by the possession of a narrow carapace, elongate cephalic region, and the absence of the six posterior thoracic appendages.

alimentary. Pertaining to the nutritive functions or organs.

alimentary canal (*Zool.*). The passage from the mouth to the anus which receives, digests, and assimilates food-stuffs: the digestive tract: the gut.

alimentary system (*Zool.*). All the organs connected with digestion, absorption, and nutrition, comprising the digestive tract and associated glands and masticatory mechanisms.

alimentary tract (*Zool.*). See **alimentary canal.**

aliphatic acids (*Chem.*). Fatty acids or acids derived from aliphatic compounds.

aliphatic alcohols (*Chem.*). Paraffins in which one or more hydrogen atoms are replaced by the hydroxyl group.

aliphatic aldehydes (*Chem.*). Compounds of the aliphatic series containing the aldehyde group —CHO.

aliphatic compounds (*Chem.*). Methane derivatives or fatty compounds, open-chain compounds.

aliquot scaling, aliquot tuning (*Acous.*). In a piano, the provision of extra wires above the normal wires. These are not struck, but are tuned very slightly above the octave of the struck strings below, so that by sympathetic vibration the musical quality of the note is enhanced.

alisphe'noid (*Zool.*). A wing-like cartilage bone of the Vertebrate skull, forming part of the lateral wall of the cranial cavity, just in front of the foramen lacerum: one of a pair of dorsal bars of cartilage in the developing Vertebrate skull, lying in front of the basal plate, parallel to the trabeculae: one of the sphenolateral cartilages.

a'lite (*Chem.*). The ground clinker obtained from sintering mixtures of limestone, clay, and sand in the proportions used in the manufacture of Portland cement.

al'itrunk (*Zool.*). In Insects, the thorax fused with the first somite of the abdomen.

alive or **live** (*Elec. Eng.*). Said of a circuit when it is connected to a source of e.m.f.—(*Elec. Comm.*) Said of a microphone when it is capable of normal functioning.

aliz'arin (*Chem.*). $C_{14}H_6O_2(OH)_2$, 1:2-dihydroxyanthraquinone, one of the most important natural and synthetic dyes, red prisms or needles, m.p. 289° C., soluble in alcohol and ether, very slightly soluble in water, soluble in caustic soda; insoluble stains are formed with the oxides of aluminium, tin, chromium, and iron. Alizarin can be nitrated and forms the basis of a series of other dyestuffs.

alkalae'mia (*Med.*). Diminution, below normal limits, of the hydrogen-ion concentration of the blood.

al'kali (*Chem.*). A substance which dissolves in water to form an alkaline solution, especially the hydroxides of sodium and potassium. Alkalis are often spoken of as *bases*, but the term *base* has wider significance.

alkali-granite (*Geol.*). An acid, coarse-grained (plutonic) rock carrying free quartz and characterised by a large excess of alkali-feldspar over plagioclase. Cf. *adamellite, granodiorite.* In general, the prefix used with a rock name implies a preponderance of soda- or potash-feldspar or feldspathoid over plagioclase, e.g. *alkali-dolerite.*

alkali metals (*Chem.*). The elements lithium, sodium, potassium, rubidium, and caesium, all monovalent metals in the first group of the periodic system.

alkalim'etry (*Chem.*). The determination of alkali by titration with a standard solution of acid as in volumetric analysis. See **titration** and **volumetric analysis.**

alkaline accumulator (*Elec. Eng.*). An accumulator or secondary cell in which an alkaline electrolyte is used. See **Edison accumulator.**

alkaline earth metals (*Chem.*). The elements calcium, strontium, barium, and radium, all divalent metals in the second group of the periodic system.

alkaline solution (*Chem.*). An aqueous solution containing more hydroxyl ions than hydrogen ions; one which turns red litmus blue.

alkalin'ity (*Chem.*). The extent to which a solution is alkaline. See **pH-value.**

al'kaloids (*Chem.*). Natural organic bases found in plants; characterised by their specific physiological action. Alkaloids may be related to various organic bases, the most important ones being pyridine, quinoline, isoquinoline, pyrrole, and other more complicated derivatives. Most alkaloids are crystalline solids, others are volatile liquids and some are gums. They contain nitrogen as part of a ring, and have the general properties of amines.

alkar'sine (*Chem.*). Reaction product (cacodyl and cacodyl oxide) from potassium acetate and arsenious oxide.

alkyd resins (*Plastics*). See **glyptal resins.**

alkyl (*Chem.*). A general term for monovalent aliphatic or aromatic hydrocarbon radicals. The aliphatic radicals in particular are also termed *alphyls* (q.v.), and the aromatic radicals *aryls* (q.v.).

al'kylene (*Chem.*). A general term for divalent hydrocarbon radicals.

all-electric signalling (*Elec. Eng.*). A railway signalling system in which the signals and points are operated electrically by solenoids or motors, and are also controlled electrically. See **electro-pneumatic signalling.**

all-electric house (*Elec. Eng.*). A dwelling-house in which all services (e.g. cooking, space heating, water heating, lighting, and various labour-saving devices) are operated electrically.

all-insulated switch (*Elec. Eng.*). See **shock-proof switch.**

all-or-nothing piece (*Horol.*). A piece of the mechanism of a repeating watch which either allows the striking of the hours and quarters or entirely prevents it. Also called STOP SLIDE.

all-or-nothing response (*Physiol.*). In many irritable protoplasmic systems, response to stimuli is either with full intensity or not at all; e.g. in lower animals, nematocysts; in higher animals, nerve fibres, cardiac and voluntary muscle fibres.

all-pass (*Elec. Comm.*). Said of any network or transducer which theoretically passes currents of frequency from zero to infinity, without attenuation.

all-rowlock wall (*Masonry*). A wall built to have two courses of stretchers on edge alternating with one course of headers on edge.

all-sliming process (*Met.*). A method of cyanidation of gold ores which involves reduction of all the ore to slime and treatment by agitation.

all-up weight (*Aero.*). See **weight.**

All-watt motor (*Elec. Eng.*). A type of induction motor in which a Scherbius type of phase-advancer is incorporated as an integral part, and which therefore operates at almost unity power-factor.

all-wave receiver (*Radio*). A radio receiving-set which is capable of receiving signals over wide ranges of wavelength, particularly short- and ultra-short-waves in broadcast reception.

Allan cell (*Elec. Eng.*). A type of electrolytic cell used in America for the production of hydrogen by the electrolysis of an alkaline solution.

Allan valve (*Eng.*). A steam-engine slide-valve, in which a supplementary passage increases the steam supply to the port during admission in order to reduce wire-drawing. See **trick valve.**

allanite or **orthite** (*Min.*). A cerium-bearing epidote occurring as an occasional accessory mineral in igneous rocks.

allantoic (*Zool.*). See **allantois.**

al′lantoid (*Bot.*). Sausage-shaped.

allan′toin,—tō-in (*Chem.*). The diureide of glyoxylic acid.

allan′tois, —tō-is (*Zool.*). In the embryos of higher Vertebrates, a sac-like diverticulum of the posterior part of the alimentary canal, having respiratory, nutritive, or excretory functions.—*adj.* **allan′toic.**

Al′legheny Series (*Geol.*). The Lower Productive Coal Measures of the eastern parts of the U.S A. Richly fossiliferous marine beds are interbedded with the coal measures to the west, notably in Kansas.

alle′lomorph (*Gen.*). In Mendelian inheritance, one of a pair of contrasted characters, inherited alternatively with its partner, and assumed to depend on genes situated in homologous chromosomes.

allemont′ite (*Min.*). An intergrowth of metallic antimony and arsenic occurring in reniform masses at Allemont (France) and elsewhere.

al′lene (*Chem.*). Propadiene, CH_2:C:CH_2, obtained by the electrolysis of itaconic acid.

Allen's law (*Zool.*). An evolutionary generalisation stating that feet, ears, and tails of Mammals tend to be shorter in colder climates, when closely allied forms are compared.

Allen's loop test (*Elec. Eng.*). A modification of the Varley loop test for localising a fault in an electric cable; it is particularly suitable for high-resistance faults in short lengths of cable.

al′lergen (*Med.*). A substance, usually a protein, which, introduced into the body, makes it sensitive to that substance.

aller′gy (*Med.*). A state in which the cells of the body are supersensitive to substances (*allergens*, q.v.), usually proteins, introduced into it: the reaction of the body to a substance to which it has become sensitive, characterised by oedema, inflammation, and destruction of tissue.

allette (*Build.*). (1) A wing of a building.—(2) A buttress or pilaster.

alliance (*Bot.*). A sub-class, consisting of a number of related families of plants.

alligator wrench (*Plumb.*). A tool with fixed serrated jaws, used for twisting and screwing pipes into position.

alligatoring (*Dec.*). See **crocodiling.**

alloa (*Textiles*). A thick woollen yarn, generally produced in threefold yarns for hand knitting; originally made in Alloa (Scotland).

allocar′py (*Bot.*). Fruiting after cross-fertilisation.

alloch′thonous (*Ecol.*). (In an aquatic community) said of food material reaching the community from outside: more generally, extraneous, exotic, acquired; e.g. *allochthonous* species, *allochthonous* characteristics.

allog′amy (*Bot.*). See **cross-fertilisation.**

alloi′obiogen′esis (*Zool.*). See **alternation of generations.**

alloisomerism, al′ō-ĭ-som′— (*Chem.*). See **stereoisomerism.**

allom′eric (*Chem.*). Having the same crystalline form but a different chemical composition.

allomor′phous (*Chem*). Having the same chemical composition but a different crystalline form.

allopela′gic (*Zool.*). (Of marine organisms) occurring at any depth, and apparently uninfluenced by change of temperature.

al′lophores (*Zool.*). Cells bearing a red pigment insoluble in alcohol, occurring in the skin of certain Fishes, Reptiles, and Amphibians.

al′loplasm (*Zool.*). That differentiated portion of the cell-protoplasm which does not form independent organelles.—*adjs.* **alloplasmic, alloplasmatic.**

al′loplast (*Zool.*). A morphological unit, consisting of more than one kind of tissue.

allo-polyploid (*Bot.*). A polyploid possessing unlike sets of chromosomes, these usually in pairs.

allose (*Chem.*). An aldohexose, a stereoisomer of glucose.

alloso′mal inheritance (*Gen.*). The inheritance of characters carried in an *allosome.*

allosome (*Cyt.*). Any chromosome other than a typical one, e.g. sex-chromosome. Cf. *autosome.*

allosto′ses (*Zool.*). See **membrane bone.**

allothrausmat′ic (*Geol.*). See under **homeothrausmatic.**

Allot′riognathi, —nā′thō (*Zool.*). An order of *Neopterygii* characterised by the possession of a peculiar protractile mouth; includes the Oar-fish, the Ribbon-fish, and the Moon-fish.

allotriomor′phic (*Geol.*). A textural term implying lack of crystal form.

allotro′pous flower (*Bot.*). A flower in which the nectar is readily accessible to all kinds of insect visitors.

allot′ropy (*Chem.*). The existence of an element in two or more solid, liquid, or gaseous forms, called *allotropes.*

allotter (*Teleph.*). Any arrangement for distributing channels; e.g. the loading of operators in semi-automatic working.

al′lotype (*Zool.*). An additional type-specimen of the opposite sex to the original type-specimen.

allowance (*Eng.*). A difference in dimensions prescribed in order to allow of various qualities of fit between mating pieces.

allox′an (*Physiol.*). An unstable compound playing an important part in cell-respiration; formed together with urea by oxidation of uric acid; readily reduced to dialuric acid which has an extraordinary affinity for atmospheric oxygen and is readily oxidised back to alloxan.

alloy (*Chem.*). Any metal other than a pure metallic element.—(*Met.*) Metal prepared by adding other metals or non-metals to a basic metal to secure desirable properties.

alloy cast-iron (*Met.*). Cast-iron containing alloying elements. Usually some combination of nickel, chromium, copper, and molybdenum. These elements may be added to increase the strength of ordinary irons, to facilitate heat treatment, or to obtain martensitic, austenitic, or ferritic irons.

alloy, non-ferrous (*Met.*). Any alloy based on metals other than iron, i.e. usually on copper, aluminium, lead, zinc, tin, nickel, or magnesium.

alloy (or special) steel (*Met.*). A steel to which elements not present in carbon steel have been added, or in which the content of manganese or silicon is increased above that in carbon steels. See **nickel steel, stainless steel, high speed steel,** etc.

alloy system (*Met.*). All the alloys that can be made by mixing two metals form a binary alloy system; three metals form a ternary alloy system, and so on. The limits of temperature and composition within which the constituents in a system are stable are represented by the *constitutional diagram.*

alloying (*Met.*). The addition to a metal of one or more different elements, in order to form an alloy.

alluring coloration (*Zool.*). Resemblance of an animal to some non-living object, plant, or other animal, for the purpose of attracting its prey.

alluvial clay (*Geol.*). Sediment of the clay grade which has been transported by rivers from the place of its origin, as distinct from that which has originated *in situ.*

alluvial deposits (*Geol., etc.*). Earth, sand, gravel, and other material which has been carried in suspension by river or floods, and is deposited at places where for some reason the velocity of flow is insufficient to maintain the materials in suspension. Such sediment of geologically recent age, in the process of deposition by existing rivers, is known as *alluvium.*

alluvial mining (*Mining*). The winning of ore at a placer deposit (see **placers**).

alluvium (*Geol., etc.*). See **alluvial deposits.**

allyl alcohol (*Chem.*). $H_2C{:}CH{\cdot}CH_2OH$, an unsaturated primary alcohol, present in wood spirit, made from glycerine and oxalic acid. M.p. −20° C., b.p. 96° C., sp. gr. 0·85, of very pungent odour; an intermediate for organic synthesis.

allyl group (*Chem.*). The unsaturated monovalent aliphatic group $H_2C\ CH{\cdot}CH_2{-}$.

allylene (*Chem.*). Propine, $CH_3{\cdot}C{.}CH$.

Al′magest (*Astron.*). The Arabic form of the title of Claudius Ptolemy's great astronomical treatise, 'The Mathematical Syntaxis,' written in Greek about A.D. 140.

Almalec (*Elec. Eng.*). An aluminium alloy having a higher tensile strength than pure aluminium; used for overhead transmission-line conductors.

al′mandine or **al′mandite** (*Min.*). Iron-aluminium garnet, occurring in mica-schists and other metamorphic rocks. Many precious garnets are of this type.

almandine spinel (*Min*). See **ruby spinel.**

Almen-Nylander test (*Chem.*). A test for the presence of sugar, consisting in the reduction of a bismuth salt solution to metallic bismuth.

almond oil (*Chem.*). Used for fruit essences, in perfumery and soap making; two grades are known: *bitter almond oil* and *sweet almond oil. Bitter almond oil*: m.p. 13° C., b.p. 180° C., sp. gr. 1·05, saponification no. 189-200, iodine no. 93-104, acid no. 1·5.

almucan′tar (*Astron.*). A small circle of the celestial sphere parallel to the horizontal plane. The term is also applied to an instrument for measuring altitudes and azimuths.

aloin test, al′ō-in (*Chem.*). A test for the detection of blood in the faeces, consisting in adding an alcoholic aloin solution to an ether extract of faeces and treating the mixture with hydrogen peroxide or ozonised turpentine. The presence of blood will create a cherry-red colour in the ether layer.

alope′cia (*Med.*). Baldness.

alopecia areata, ā-re-a′ta (*Med.*). A condition in which the hair falls out in patches, leaving smooth, shiny, bald areas.

aloxite (*Min.*). See **alundum.**

alpac′a (*Textiles*). (1) A long, silky, hair fibre obtained from a cameloid ruminant animal of the high mountainous regions of western South America.—(2) Dress goods and linings, made from alpaca weft with a cotton warp.

Alpax (*Met.*). Aluminium-silicon alloy, containing about 13% of silicon. Used mainly for castings. Has good casting properties and corrosion resistance, low specific gravity (2·66) and satisfactory mechanical properties. Tensile strength 10-12 tons per sq. in.; elongation 5-8%. Also called SILUMIN.

alpha-beta brass (*Met.*). Copper-zinc alloy containing 38-46% (usually 40%) of zinc. It consists of a mixture of the α constituent (see **alpha brass**) and the β constituent (see **beta brass**).

alpha brass (*Met.*). A copper-zinc alloy containing up to 38% of zinc. Consists constitutionally of a solid solution of zinc in copper. Commercial alpha brasses of several compositions are made. The most widely used contain 30-37%; others contain 5-20% of zinc. All are used mainly for cold-working.

alpha bronze (*Met.*). A copper-tin alloy consisting of the alpha solid solution of tin in copper. Commercial forms contain 4 or 5% of tin. This alloy, which differs from gun metal and phosphor bronze in that it can be worked, is used for coinage, springs, turbine blades, etc.

alpha female (*Zool.*). Among Ants (*Formicoidea*), the normal female if it co-exists with the *β female* (q.v.).

alpha iron (*Met.*). The polymorphic form of iron, stable below 906° C. Has a body-centred cubic lattice, and is magnetic up to 768° C.

alpha particle (*Phys.*). One of the products of the spontaneous disintegration of radioactive substances such as radium, uranium, and thorium. Alpha particles are ejected from such substances with velocities ranging from 1·4 to $2{\cdot}0 \times 10^9$ cm. per sec., causing considerable ionisation in the air along their path. They have been identified as the nuclei of helium atoms which are positively charged on account of each having lost two electrons.

alpha-rays (*Phys.*). Streams of *alpha particles* (q.v.).

alphyls (*Chem.*). A term for aliphatic monovalent hydrocarbon radicals.

Alpine revolution (*Geol.*). That period of earth movement in Tertiary (mainly Miocene) time when the Alps and other existing mountain chains came into existence.

alstonite (*Min.*). See **witherite.**

altar (*Civ. Eng.*). One of the steps in the stepped face of a dry dock wall; used to hold the ends of the supports which prop the vessel in its upright position.

altar tomb (*Build.*). A raised tomb or monument usually standing detached or in a position against a wall, and sometimes supporting an effigy. In appearance it resembles a solid altar, but it is never used as one.

altaz′imuth (*Surv.*). An instrument similar to the *theodolite* (q.v.), but generally larger and capable of more precise work.

alterative (*Med.*). Tending to alter favourably the processes of nutrition: a medicine which does this.

alternate (*Bot.*). Said of leaves and branches which are neither opposite nor in whorls, but placed singly on the parent axis.

alternating cleavage (*Zool.*). See **spiral cleavage.**

alternating stress (*Mech.*). The stress induced in a material by a force which acts alternately in opposite directions.

alternating current (*Elec. Eng.*). An electric current the direction of flow of which alternates in direction; the time of flow in one direction is known as a half-period, and the length of all half-periods is the same. Generally abbreviated to **a.c.**

alternating-current balancer (*Elec. Eng.*). An arrangement of transformers or reactors used to equalise the voltages between the wires of a multiple-wire a.c. or d.c. system; when used on a d.c. system (3-wire system), the ends of the balancer are connected to slip rings on the d.c. generator or on the convertor. Also called a STATIC BALANCER.

alternating-current commutator motor (*Elec. Eng.*). An alternating-current motor which embodies a commutator as an essential part of its construction. See **alternating-current series motor, repulsion motor, compensated induction motor, Schrage motor.**

alternating-current electromagnet (*Elec. Eng.*). An electromagnet excited by alternating current and having, therefore, a laminated magnetic circuit.

alternating-current exciter (*Elec. Eng.*). A term used to denote a commutator machine connected in the rotor circuit of an induction motor in order to effect power factor improvement.

alternating-current generator (*Elec. Eng.*). An electromagnetic generator for producing alternating e.m.f.'s and delivering alternating currents to an outside circuit. See **synchronous generator, induction generator.**

alternating-current motor (*Elec. Eng.*). An electric motor which operates from a single or polyphase alternating-current supply. See **alternating-current commutator motor, induction motor, synchronous motor, capacitor motor.**

alternating-current pick-up (*Elec. Comm.*). Interfering currents in a channel due to induction, either electrostatic or electromagnetic, from alternating-current power lines.

alternating-current series motor (*Elec. Eng.*). A series motor designed for operation from an a.c. supply; it is characterised by a laminated field structure and usually a compensating winding.

alternating-current transformer (*Elec. Eng.*). See **transformer.**

alternation of generations (*Bot.*). The regular alternation in the life-history of two types of plants, differing in their nuclear constitution, and often in their morphology. See **antithetic alternation of generations, homologous alternation of generations.**—(*Zool.*) The occurrence, in the typical life-cycle of a species, of two or more different forms, produced in a different manner, generally an alternation of a sexually-produced form with an asexually-produced form; as in the Hydrozoan genus *Obelia*.

alternative inheritance (*Gen.*). The kind of inheritance in which one or both of any pair of contrasted characters is/are present in the hybrid, and may be obtained unchanged in offspring from the hybrid.

alternator (*Elec. Eng.*). See **synchronous generator.**

alterne (*Bot.*). A sudden change in the nature of the plant-covering of a district, in relation to an abrupt change in soil or other environmental conditions.

altim'eter (*Aero., Phys., etc.*). An aneroid barometer used for measuring altitude by the decrease in atmospheric pressure with height. The dial of the instrument is graduated to read the altitude directly in feet or metres; the zero being set at ground-level.

altitude (*Astron.*). The angular distance of a heavenly body measured on that great circle which passes, perpendicular to the plane of the horizon, through the body and through the zenith. It is measured positively from the horizon to the zenith, from 0° to 90°.

altitude (*Aero.*). The height in feet or metres above sea-level. For precision, in determining the performance of an aircraft, this must be corrected for the deviation of the meteorological conditions from that of a standardised atmosphere.

altitude (*Surv.*). (1) The angle of elevation of a point above the plane of the horizon.—(2) The height of a point above some datum plane, usually mean sea-level.

altitude level (*Surv.*). A level, fixed to the vernier arm of the vertical circle of a theodolite, which provides a horizontal datum from which altitudes may be measured accurately even if the vertical axis of the instrument is not truly vertical.

altitude valve (*Aero.*). A manually- or automatically-operated valve fitted to the carburettor of an aero-engine for correcting the mixture-strength as it becomes richer with altitude.

alto-cumulus cloud (*Meteor.*). Rounded masses of cloud arranged in groups or lines, occurring at heights between 10,000 and 25,000 ft.

alto-stratus cloud (*Meteor.*). A dense sheet of cloud of a grey or bluish colour, sometimes forming a compact mass of dull-grey colour and fibrous structure; occurs at heights between 10,000 and 25,000 ft.

altom'eter (*Surv.*). Another name for the *theodolite* (q.v.).

altri'ces (*Zool.*) Birds whose young are hatched in a very immature condition, generally blind, naked or with down feathers only, unable to leave the nest, fed by the parents; e.g. the Perching Birds, *Passeriformes*.

altrose (*Chem.*). An aldohexose, a stereoisomer of glucose.

al'udels (*Chem.*). Pear-shaped vessels connected in long rows for the condensation of the mercury vapour liberated from the roasting of cinnabar, i.e. mercury sulphide.

Al'udur (*Elec. Eng.*). An aluminium alloy (containing magnesium) which is used for overhead transmission-line conductors on account of its having a higher tensile strength than aluminium.

al'ula (*Zool.*). In Birds, the bastard wing, a group of small feathers attached to the thumb: in *Diptera*, a free lobe on the posterior margin of the wing near the base.

alums (*Chem.*). A large number of isomorphous compounds whose general formula is:

$$R'_2SO_4{\cdot}R_2'''(SO_4)_3{\cdot}24H_2O; \text{ or,}$$
$$R'R'''(SO_4)_2{\cdot}12H_2O,$$

where R′ represents an atom of a univalent metal or radical—potassium, sodium, ammonium, rubidium, caesium, silver, thallium; and R‴ represents an atom of a tervalent metal—aluminium, iron, chromium, manganese, thallium. See also **pseudo-alums.**

alum leather (*Leather*). Light skins tanned white with alum and salt, or with aluminium salts, flour and yolk of egg; used for gloves and clothing. This process is known as *tawing*.

alum shale (*Geol.*). Occurs in the Upper Lias of Yorkshire, where it has been exploited in the manufacture of alum.

alumstone (*Min.*). See **alunite.**

alu'mina (*Min.*). The trioxide of aluminium, occurring as the mineral corundum. When the compositions of silicate-minerals are stated in terms of the component oxides, alumina is found to be important in such groups as the feldspars, feldspathoids and micas, while augite and hornblende are aluminous, i.e. they contain alumina, probably in solid solution.

alumin'ium or alu'minum (*Met.*). Light ductile metal with high electrical conductivity and good resistance to corrosion. Obtained from bauxite, it has numerous uses and is basis of light alloys. Chem. symbol, Al; at. wt. 26·97; at. no. 13; sp. gr. at 20° C. 2·705; specific electrical resistivity at 20° C., 2·825 microhms per $cm.^3$; mass conductivity 212·9% of standard annealed copper; m.p. 660·2° C.

aluminium (or **aluminum**) **alloys** (*Met.*). A general term for numerous alloys in which aluminium is the basis (i e. predominant) metal; e.g. aluminium-copper and aluminium-silicon alloys, Duralumin, *y*-alloy, etc. Also called LIGHT ALLOYS.

aluminium-anode cell (*Elec. Eng.*). An electrolytic cell with an aluminium anode immersed in an electrolyte which does not attack aluminium. The cathode may also be of aluminium or some other metal, e.g. lead. Such cells are used as rectifiers or as high-capacity low-voltage condensers. See **electrolytic condenser.**

aluminium arrester (*Elec. Eng.*). A lightning arrester made up of a number of aluminium trays containing electrolyte and arranged to form a number of electrolytic cells in series. An insulating layer is formed on each tray under normal voltage conditions, but this punctures and allows current to pass if the voltage exceeds a certain value. Also called ELECTROLYTIC ARRESTER.

aluminium brass (*Met*). Brass to which aluminium has been added, to increase its resistance to corrosion. Used for condenser tubes. Contains 1-6% Al, 24-42% Zn, 55-71% Cu.

aluminium bronze (*Met.*). Copper-aluminium alloys containing 4-11% aluminium. These alloys have high tensile strength (up to 40 tons per sq. in.), are capable of being cast or cold-worked, and are resistant to corrosion.

aluminium-steel cable (*Elec. Eng.*). See **steel-cored aluminium.**

aluminother'mic process (*Chem.*). The reduction of metallic oxides by the use of finely divided aluminium powder. An intimate mixture of the oxide to be reduced and aluminium powder is placed in a refractory crucible; a mixture of aluminium powder and sodium peroxide is placed over this and the mass fired by means of a fuse or magnesium ribbon. The aluminium is almost instantaneously oxidised, at the same time reducing the metallic oxide to metal. See also Supplement.

aluminous cement (*Civ. Eng*). A cement containing 30-50% of lime, 30-50% of alumina, and not more than 30-50% of silica, iron oxide, etc. The aluminous cements are less susceptible than ordinary Portland cements to low temperature during setting, and to the action of seawater and acids; and they possess rapid-hardening qualities which make them specially suitable for certain purposes.

aluminum (*Met.*). See **aluminium.**

Alundum (*Chem.*). Fused bauxite or fused alumina used in the manufacture of abrasive and refractory materials.

al'unite or **alumstone** (*Min.*). A hydrous sulphate of aluminium and potassium, resulting from the alteration of acid igneous rocks by solfataric action; used in the manufacture of alum.

alu'nogen (*Min.*). Hydrous sulphate of aluminium, occurring as a white incrustation or efflorescence formed in two different ways: either by volcanic action; or by the decomposition of pyrite (iron-sulphide) in carbonaceous or alum shales.

alveo'la. See **alveolus.**

alveo'lar, alveo'late (*Bot., Zool.*). Having pits over the surface, and resembling honeycomb.

alveolar layer (*Zool.*). In ciliate *Protozoa*, a layer of ectoplasm composed of minute regular vacuoles lying immediately beneath the pellicle.

alveolar theory (*Zool.*). The theory that protoplasm is composed of bubbles of a more viscid constituent containing the more fluid constituents.

alveolate (*Zool.*). Said of sessile pedicellariae in which the jaws are inserted into an *alveolus*, or depression, in the basal plate.

alveo'lus (*Bot.*). A pit in the surface of a plant member.

alveolus, alveola (*Zool.*). A small pit or depression on the surface of an organ: the cavity of a gland: a small cavity of the lungs: in higher Vertebrates, the tooth-socket in the jaw bone: in *Echinodermata*, part of Aristotle's lantern, one of five pairs of grooved ossicles which grasp the teeth: in *Gastropoda*, the glandular end-portion of the tubules of the digestive gland, secreting digestive ferments: the bubbles of the more viscid constituents of protoplasm, containing the more fluid constituents.

al'veus (*Zool.*) A thin layer of white fibres on the surface of the hippocampus.

alvine (*Med.*). Pertaining to the abdomen or the abdominal contents.

Am (*Chem.*) A symbol for (1) the ammonium radical NH_4— ; (2) the amyl radical C_5H_{11}— .

amal'gam (*Chem.*). The solution of a metal in mercury.—(*Mining*) The pasty amalgam of gold and mercury, about one-third gold by weight, obtained from the plates in a mill treating gold ores.

amalgam retort (or **still**) (*Met.*). The vessel in which the mercury is distilled off from the gold or silver amalgam obtained in amalgamation.

amalgamating table (*Met.*). A sloping wooden table covered with a copper plate on which the mercury is spread in order to amalgamate with the precious-metal particles.

amalgamation pan (*Met.*). A circular cast-iron pan in which gold or silver ore is ground and in which the precious-metal particles are amalgamated with mercury added to the pan.

amalgamation processes (*Met.*). Used in the extraction of gold and silver from their ores. The finely ground ore is carried by a stream of water over the amalgamating table, and the metallic particles are caught by the mercury.

amateur film (*Cinema.*). A motion-picture, generally using sub-standard stock, made by an individual or a group without the view to private profit.

amauro'sis (*Med.*). Blindness due to a lesion of the retina, optic nerve, or optic tracts, or to hysteria.

ama'zia (*Med.*). Non-development of the mammary glands in the female.

amazon (*Textiles*). Dress material manufactured from a fine Botany warp and a Saxony woollen weft.

amazons (*Zool.*). Among Ants (*Formicoidea*), obligatory slavemakers, entirely dependent on the workers of the subjugated species. See also **dulosis.**

amazonstone, amazonite (*Min.*). A green variety of microcline, sometimes cut and polished as a gemstone.

amber (*Min.*). A fossil resin, found on the shores of the Baltic Sea, containing succinic acid in addition to resin acid and volatile oils. Amber is used, *inter alia*, as a base for photographic varnishes. See **succinite.**

amber, pressed (*Min.*). See **ambroid.**

am'bergris, —grēs (*Zool.*) A greyish-white fatty substance with a strong but agreeable odour, obtained from the intestines of diseased sperm whales (*Physeter macrocephalus*); sometimes found floating on the surface of the sea. It is used in perfumery as a fixative; on suitable treatment it yields ambreic acid.

amberoid (*Min.*). See **ambroid.**

am'biens (*Zool.*). In certain Birds, a muscle arising from the pectineal process of the pelvis, and passing along the inner surface of the thigh to the head of the flexor muscle of the second and third toes; its action causes the toes to grasp the perch.

am'bient (*Biol.*). Environmental: surrounding.

ambient temperature (*Elec. Eng.*). A term used in connection with the testing of electrical machinery and apparatus to denote the temperature of the surrounding air.

am'bipar'ous bud (*Bot.*). A bud containing young vegetative leaves and young flowers.

am'bital (*Zool.*). In *Asteroidea*, pertaining to that part of the skeleton consisting of the inter-ambulacral and antambulacral plates: in *Ophiuroidea*, pertaining to the outer skeleton of the arm.

am'bitus (*Zool.*). Margin, outer edge: in *Echinoidea*, the outline of the shell viewed from the apical pole.

ambiva'lence (*Psychol*). The co-existence, in one person, of opposing emotional attitudes (e.g. love and hate) towards the same object.

amblyg'onite (*Min.*). Fluophosphate of aluminium and lithium, a rare white or greenish mineral, crystallising in the triclinic system.

amblyo'pia (*Med.*). Dimness of vision, from the action of noxious agents on the optic nerve or retina, or from hysteria.

ambroid (*Min.*). A synthetic amber formed by heating and compressing pieces of natural amber too small to be of value in themselves. Also known as AMBEROID and PRESSED AMBER.

ambroin (*Diel.*). A moulded insulating material prepared from copal and silicates.

ambrosia (*Zool.*). Certain Fungi which are cultivated for food by some Beetles (members of the family *Scolytidae*, Ambrosia Beetles): the pollen of flowers collected by social Bees and used in the feeding of the larvae.

ambrotype (*Photog.*). The use of a negative on glass, backed with black varnish, so that by reflected light it appears to be a positive. See **alabastrine process.**

ambula'cra (*Zool.*). In *Echinodermata*, the radial bands of locomotor tube-feet.—*adj.* **ambula'cral.**

ambulacra'lia (*Zool.*). In *Echinodermata*, the plates of the ambulacral skeleton, through which the locomotor tube-feet protrude.

ambulator (*Surv.*). See **perambulator.**

ambula'tory (*Zool.*). Having the power of walking. used for walking.

a'meio'sis (*Cyt.*). Non-pairing of the chromosomes in synapsis.

amelification (*Zool.*). The formation of enamel.

amel'oblast (*Zool.*). A columnar cell forming one of a layer immediately covering the surface of the dentine, and secreting the enamel prisms in the teeth of higher *Vertebrata.*

amenorrhoe'a, amenorrhe'a (*Med.*). Absence or suppression of menstruation.

a'ment (*Med.*). One suffering from *amentia*; a mentally deficient person.

amenta'ceous (*Bot.*). Bearing catkins.

amentia (*Med.*). Mental deficiency: failure of the mind to develop normally, whether due to inborn defect or to injury or disease.

amen'tiform (*Bot.*). Catkin-like.

amentum (*Bot.*). A *catkin* (q.v.).

American bond (*Masonry*). A form of bond in which every fifth or sixth course consists of headers, the other courses being stretchers. Very much used because it can be quickly laid.

American caisson (*Civ. Eng.*). See **stranded caisson.**

American cloth, American leather. See **enamelled cloth.**

American cotton (*Textiles*). Cotton from the U.S.A. It forms the bulk of the world's supply of medium quality material.

American standard wire gauge. See **Brown and Sharpe wire gauge.**

American transit (*Surv.*). A form of transit theodolite much used in America; it differs in certain details from the British model.

American water turbine (*Eng.*). See **mixed-flow water turbine.**

ameristic (*Bot.*). Unable to develop completely, owing to poor nourishment.

ametabol'ic (*Zool.*). (Of *Insecta*) having no obvious metamorphosis.

amethyst (*Min.*). A mauve-coloured form of quartz, used as a semi-precious gemstone.—ORIENTAL AMETHYST, a rare form of crystalline corundum, having the colour of amethyst, but the composition of sapphire.

amian'thus (*Min.*). A fine, silky variety of asbestos.

ami'cron (*Chem.*). A particle whose diameter is less than 5×10^{-7} cm., i.e. than one two-millionth of a centimetre; it is invisible under the ultra-microscope.

am'ides (*Chem.*). A group of compounds in which the hydroxyl of the carboxyl group of acids has been replaced by the amido group $-NH_2$. They may be regarded as ammonia derivatives in which the hydrogen has been replaced by an acyl group. In primary amides one, in secondary amides two, and in tertiary amides three, hydrogens have been replaced by acyl groups.

amide plant (*Bot.*). A plant which forms asparagine or glutamine from amino acids.

am'idines (*Chem*). Compounds derived from amides $R{\cdot}CO{\cdot}NH_2$, $R{\cdot}CO{\cdot}NHR'$, and $R\,CO{\cdot}NR'_2$, in which the oxygen has been replaced by the bivalent imido residue NH or NR. The amidines are crystalline bases forming stable salts, but readily hydrolysed.

ami'do group (*Chem.*). The $-NH_2$ group when replacing the hydroxyl in a carboxyl group.

ami'dogen (*Chem.*). A synonym for the amino group $-NH_2$.

am'idol (*Chem.*). Trade name for 1, 2, 4-diaminophenol, used in photography as a developer.

am'ines (*Chem.*). Organic derivatives of ammonia NH_3 in which one or more hydrogen atoms are replaced by organic radicals. According to the extent of substitution, amines are classified as primary amines or amino-bases, secondary amines or imino-bases, tertiary amines or nitrile-bases.

am'ino acids (*Chem.*). A group of fatty acids in which a hydrogen atom of the hydrocarbon radical is exchanged for the amino group.

aminoace'tic acid (*Chem*). NH_2CH_2COOH (glycocoll, glycine), m.p. 230° C., colourless crystals, sweet flavour, soluble in water, slightly soluble in alcohol; used in photography, pharmacy, varnish-making.

amino-aldehydic resins (*Plastics*). See **urea resins.**

amino-benzene-sulphonic acid (*Chem.*). A synonym for *sulphanilic acid* (q.v.).

amito'sis, amitot'ic division (*Cyt.*). Direct division of the nucleus by constriction, without the formation of a spindle and chromosomes; direct nuclear division. Cf. *mitosis, meiosis.*

am'meter (*Elec. Eng.*). An indicating instrument for measuring the current in an electric circuit.

ammeter shunt (*Elec. Eng.*). A shunt placed in parallel with an ammeter, thereby increasing its range.

am'mines (*Chem.*). Name for complex inorganic compounds which result from the addition of one or more ammonia molecules to a molecule of a salt or similar compound.

am'modyte (*Bot.*). A plant living in sandy places.

ammo'nia (*Chem.*). NH_3. A colourless, pungent gas, b.p. −33·5° C., extremely soluble in water and very soluble in alcohol. Formed by bacterial decomposition of protein, purines, and urea. Obtained on a large scale from nitrogen obtained from the atmosphere and from the ammoniacal liquor in gas manufacture. Forms salts with most acids, and nitrides with metals. The liquefied gas is used in ice-making plant.

ammonia alum (*Chem.*). See **alums.**

ammonia plant (*Bot.*). A plant which forms ammonia and organic acids from amino acids.

ammonia-soda process (*Chem.*). See **Solvay's ammonia-soda process.**

ammonisation (*Bacteriol., Bot.*). The conversion of complex organic compounds (e.g. albuminoids) into ammonium salts by the action of bacteria, being the first stage in nitrification in the soil.

am'monite (*Geol.*). An extinct fossil cephalopod found in rocks of Mesozoic age particularly characteristic of the Lias. Frequently coiled in a plane, or nearly plane, spiral.

ammo'nium (*Chem.*). The radical NH_4, which behaves in numerous respects like an atom of a monovalent alkali metal.

ammonium chloride (*Chem.*). See **sal ammoniac.**

ammonium hydroxide (*Chem.*) NH_4OH. A solution of ammonia in water.

ammonol'ysis (*Chem.*). Lyolysis in liquid ammonia solution.

ammono-system (*Chem.*). An ionic system in liquid ammonia.

amne'sia (*Med.*). Loss of memory. Common in dissociation states of hysteria. In a concussed patient *retrograde amnesia* is loss of memory of events immediately preceding the concussion.

am'nion (*Zool.*). In *Nemertinea*, the outer walls of the coalesced amniotic invaginations: in *Insecta*, the inner cell-envelope covering and arising from the edge of the germ-band: in higher *Vertebrata*, one of the embryonic membranes, the inner fold of blastoderm covering the embryo, formed of ectoderm internally and somatic mesoderm externally: in *Echinodermata*, the roof of the amniotic invagination.

Amnio'ta (*Zool.*). Those higher Vertebrates which possess an amnion during development—i.e. *Reptilia*, *Aves*, and *Mammalia*.—*adj.* **am'niote.**

amniot'ic cavity (*Zool.*). In *Amniota*, the space between the embryo and the amnion.

amniotic fluid (*Zool.*). The liquid filling the amniotic cavity.

amniotic folds (*Zool.*). Protrusions round the periphery of the blastoderm which will give rise to the amnion and the chorion.

amniotic invagination (*Zool.*). In the pilidium larva of *Nemertinea*, four ciliated invaginations of ectoderm on the flattened surface: in *Echinoplutei*, an invagination of ectoderm between the postero-dorsal and postoral arms, just above the left hydrocoele.

amniotic isthmus (*Zool.*). See **sero-amniotic connexion.**

amoe'ba (*Zool.*). A form of primitive *Protozoon*, of indeterminate shape, which moves by the protrusion of blunt, thick pseudopodia.

Amoe'bina (*Zool.*). An order of *Sarcodina* the members of which extrude lobose pseudopodia and generally lack a skeleton, or have only a simple shell; their ectoplasm is never vacuolated. Also called LOBOSA.

amoe'bocyte (*Zool.*). A metazoon cell having some of the characteristics of an amoeba, especially as regards form and locomotion: in *Porifera*, a wandering cell of varied function: in *Echinodermata*, a wandering coelomic cell of excretory function: a leucocyte.

amoe'boid (*Bot., Zool.*). Resembling an amoeba—having no fixed form, creeping, and putting out pseudopodia.

amoe'bula (*Zool.*). In *Protozoa*, an amoeboid swarm-spore moving by pseudopodia.

amor'phous (*Crystal.*). Non-crystalline.

amorphous metal (*Met.*). Metal in which the regular arrangement of atoms characteristic of the crystalline state has been destroyed. It has been shown to be produced on the surface by polishing, but does not exist at crystal boundaries nor on slip planes.

amorphous sulphur (*Chem.*). Formed when sulphur vapour is cooled quickly. If the product so formed is treated with carbon disulphide and filtered, the amorphous sulphur is left on the filter as a white substance.

amortisseur, a-mor-tis-sėr' (*Elec. Eng.*). See **damper.**

A'mosite (*Min.*). A monoclinic amphibole form of asbestos, the name embodying the initials of the company exploiting this material in the Transvaal, viz. the 'Asbestos Mines of South Africa.'

amp (*Elec. Eng.*). Abbrev. for *ampere.*

amperage (*Elec. Eng.*). A term sometimes used to denote, in amperes, the current flowing in a circuit.

ampere (*Elec. Eng.*). The most frequently used unit of current, named after the French physicist Ampère; commonly abbreviated to **amp.** See **international ampere, absolute ampere.**

ampere-balance (*Elec. Eng.*). A laboratory instrument for measuring current; in it the force between two coils carrying the current to be measured is balanced by the force of gravity on a weight sliding along a beam. Also called KELVIN BALANCE.

ampere-conductors (*Elec. Eng.*). A unit of magnetomotive force occasionally used by machine designers; it is the product of the number of conductors in a slot or on a pole by the current in each. Also called AMPERE-WIRES.

ampere-hour (*Elec. Eng.*) A practical unit of quantity of electricity; it is the quantity represented by a flow of 1 ampere for a period of 1 hour (or an equivalent quantity, e.g. 2 amperes for ½ hour). Cf. *coulomb.*

ampere-hour capacity (*Elec. Eng.*). The capacity of an accumulator battery measured in ampere-hours; it is usually specified at a certain definite rate of discharge.

ampere-hour efficiency (*Elec. Eng.*). A term used in connexion with accumulators to express the ratio of the ampere-hours output during discharge to the ampere-hours input during charge.

ampere-hour meter (*Elec. Eng.*). A meter which records the ampere-hours flowing in a circuit. If the voltage is assumed constant the meter can be calibrated in kilowatt hours: this is frequently done when measuring energy in d.c. supplies. Commonly abbreviated to **a.h.m.**

ampere-meter (*Elec. Eng.*). An obsolescent term for an *ammeter.*

ampere-turn (*Elec. Eng.*). A unit of magnetomotive force. The m.m.f., in ampere-turns, of a coil or winding is equal to the number of turns in the coil multiplied by the current flowing in each of them.

ampere-wires (*Elec. Eng.*). See **ampere-conductors.**

Ampère's rule (*Elec. Eng.*). A simple rule for remembering the direction of the magnetic field due to a current. If a man is imagined to be swimming with the current and is facing a magnet needle, the north-seeking pole of the magnet will be deflected towards his left hand.

Ampère's table (*Elec. Eng.*). An old-fashioned piece of apparatus used for demonstrating the effect of a current on a pivoted magnet.

Ampère's theory of magnetisation (*Elec. Eng.*). A theory based on the assumption that the magnetic property of a magnet is due to currents circulating in the molecules of the magnet.

am'persand (*Typog.*). The sign &, a combination of the letters *e t* (Latin *et*, and). Usually used in names of companies: Smith & Co. The word *ampersand* is a corruption of the phrase *and per se and*=and by itself makes and.

am'phi (Greek *amphi*, on both sides, around). A prefix used in the construction of compound terms; e.g. *amphitriaene*, a double triaene.

amphi- (*Chem.*). Containing a condensed double aromatic nucleus substituted in the 2.6 positions.

am'phiarthro'sis (*Zool.*). A slightly movable articulation.

amphias'ter (*Cyt.*). During cell-division by meiosis or mitosis, the two asters and the spindle connecting them.

amphias'tral figure (*Cyt.*). The achromatic figure with asters.

amphib'ian (*Aero.*). A heavier-than-air craft, such as a float seaplane or flying-boat, provided with a retractable undercarriage, so that the aircraft can rise from and alight on either land or water.

amphib'ious (*Zool.*). Adapted for life on land or in the water: resembling or pertaining to *Amphibia.*

amphiblas'tic (*Zool.*). (Of ova) showing complete but unequal segmentation.

amphiblas'tula (*Zool.*). In *Porifera*, a larval form with an anterior flagellate zone, a posterior non-flagellate zone, and a central cavity partially occluded by archaeocytes.

am'phiboles, —bōlz (*Min.*). An important group of dark-coloured, rock-forming silicates, including hornblende, the commonest.

amphibol'ic (*Zool.*). Capable of being turned backwards or forwards, as the fourth toe of Owls.

amphib'olite (*Geol.*). A crystalline, coarse-grained rock, containing amphibole as an essential constituent, together with feldspar and frequently garnet; like hornblende-schist, formed by regional metamorphism of basic igneous rocks, but not foliated.

amphicar'pic (*Bot.*). Having two kinds of fruits.

amphicli'nous progeny, amphiclinous hybrids (*Bot.*). A family, resulting from a cross, in which some of the hybrids resemble one parent and some the other parent.

amphicoelous, —sē'lus (*Zool.*). Having both ends concave, as in certain types of vertebral centrum.

amphicondyl'ous, amphicondyl'ar (*Zool.*). Having two occipital condyles.

amphicri'bal bundle (*Bot.*). A vascular bundle in which a central strand of xylem is surrounded by phloem.

amphidip'loid hybrid (*Gen.*). A hybrid which is tetraploid, and contains a diploid chromosome set derived from each of its parents.

am'phidisc (*Zool.*). In *Porifera*, a form of spicule consisting of a rod bearing at its distal extremities disc-like expansions curved towards the centre and prolonged into tooth-like protuberances; occurs especially in the gemmules of fresh-water Sponges.

amphigas'trium (*Bot.*). One of the members of the ventral row of small leaves present in some liverworts.

amphige'nous (*Bot.*). Growing all round; as when a parasitic fungus grows on both sides of a leaf.

amphig'ony (*Zool.*). Reproduction by fertilisation. Cf. *parthenogenesis.*

amphikar'yon (*Cyt.*). A nucleus with two haploid sets of chromosomes, as after normal fertilisation: an amphinucleus.—*adj.* **amphikaryot'ic.**

amphilep'sis (*Gen.*). Inheritance such that the offspring has characters derived from both parents.

amphimix'is (*Bot.*). The fusion of two distinct gametes to form a new individual.—(*Zool.*) The mingling of different hereditary tendencies in the same individual, brought about by the union of male and female pronuclei in fertilisation.

Amphineu'ra (*Zool.*). A class of bilaterally symmetrical *Mollusca* in which the foot, if present, is broad and flat, the mantle is undivided, and the shell is absent or composed of eight valves. Coat-of-Mail Shells, etc.

am'phinucleo'lus (*Zool.*). A nucleolus comprising both oxyphil and basiphil components.

amphinu'cleus (*Zool.*). A nucleus with a large karyosome; in the theory of binuclearity, representing the kinetic nucleus encapsuled by the trophic nucleus.

am'phiont (*Zool.*). See **zygote.**

amphiphlo'ic solenostele (*Bot.*). A tubular stele with a cylinder of xylem coated externally and internally by phloem.

amphiplat'yan (*Zool.*). Having both ends flat, as in certain types of vertebral centrum.

amphipneustic, —pnū'stik (*Zool.*). Possessing both gills and lungs: in dipterous larvae, having the prothoracic and posterior abdominal spiracles only functional.

Amphip'oda (*Zool.*). An order of *Peracarida* in which the carapace is absent, the eyes are sessile, and the uropods styliform; the body is compressed. They show great variety of habitat, being found on the shore, in the surface waters of the sea, in fresh water, and in the soil of tropical forests, while some are parasitic. Whale Lice, Sandhoppers, Skeleton Shrimps, etc.

amphip'odous (*Zool.*). Having both ambulatory and natatory appendages.

amphipro'tic (*Chem.*). Having both protophilic and protogenic properties.

amphirhi'nal (*Zool.*). Having two external nares.

am'phispore (*Bot.*). A thick-walled uredospore produced under dry conditions by some *Uredinales.*

amphis'tomous (*Zool.*). Having a sucker at each end of the body; as Leeches.

amphis'tyly (*Zool.*). A type of jaw suspension found in the *Heterodontidae* or Bull-headed Sharks, in which the upper jaw fits into a groove in the cranium anteriorly but is still suspended posteriorly by the hyomandibular cartilage.—*adj.* **amphistylic.**

am'phitene (*Cyt.*). The stage of meiosis in which the spireme threads are uniting in pairs.

amphitheatre (*Build.*). An oval or circular building in which the spectators' seats surround the arena or open space in which the spectacle is presented, the seats rising away from the arena.

amphito'ky (*Zool.*). Parthenogenetic reproduction by both males and females.—*adj.* **amphito'kic.**

amphitrich'ous (*Bot., Zool.*). Having a flagellum at each end of the cell.

amphitro'cha (*Zool.*). In marine *Annelida*, a free-swimming pelagic larval type, having two bands of cilia.

am'phitype (*Photog.*). A slow photographic process, originated by Herschel, in which iron, mercury, or lead compounds are impregnated into paper, which is subsequently bleached and reversed with a hot iron.

amphiva'sal bundle (*Bot.*). A vascular bundle in which a central strand of phloem is surrounded by xylem.

am'pholyte (*Chem.*). An amphoteric electrolyte.

am'pholytoid (*Chem.*). An amphoteric colloid.

amphor'ic (*Med.*). Like the sound made by blowing across a narrow-necked vase.

amphoric breathing (*Med.*). Breathing having an amphoric quality; characteristic of an air-containing cavity in the chest.

amphoter'ic (*Chem.*). Having both acidic and basic properties.

amplex'icaul (*Bot.*). Said of a sessile leaf with its base clasping the stem horizontally.

amplexus (*Zool.*). See **copulation.**

am'pliate (*Zool.*). (Of Insects) having the outer edge of the wing prominent.

amplification, contrast (*Acous.*). See **contrast amplification.**

amplification factor (*Thermionics*). The number of volts by which the potential of the anode of a thermionic tube must be changed to counteract the effect upon the anode current of a change in the grid potential of one volt. Strictly termed *voltage amplification factor*. Usually designated by the symbol μ.

amplified A.V.C. (*Radio*). A system of automatic gain control in which the biasing voltage for the variable gain stages is derived from a d.c. amplifier, controlled by the rectified output voltage from the final demodulator.

amplifier (*Elec. Comm.*). Generally an arrangement of thermionic valves for increasing, in a specified manner with respect to frequency, the power-level of the electric currents in a communication channel.

amplifier (*Photog.*). An additional or supplementary lens for altering the focal-length of a lens in a camera.

amplitude (*Phys., etc.*). The maximum value of a periodically varying quantity during a cycle; e.g. the maximum displacement from its position of rest of a vibrating particle, or the maximum value of an alternating current (see **peak value**). See also **double amplitude.**

amplitude, modulus, or tensor (*Elec. Eng.*). The magnitude of a vector, as contrasted with its *argument*, which defines its direction with reference to some standard direction.

amplitude distortion (*Elec. Comm.*). Distortion of wave-form arising from the non-linear static or dynamic response of a part of a communication system, the output amplitude of the signal at any instant not having a constant proportionality with the corresponding input signal.

amplitude factor (*Elec. Eng.*). See **peak factor.**

amplitude filter (*Television*). The valve circuit in a television receiver which separates the synchronising impulses from the video-signal, the impulses being below the datum black-level in the signal, and the video-signal above the black-level in positive modulation.

amplitude modulation (*Radio*). The system of modulation in which the amplitude of the transmitted carrier-wave is varied in accordance with the impressed signal, the frequency and phase remaining unchanged.

ampoule, ampulla (*Med.*). A small, sealed, glass capsule for holding measured quantities of vaccines, drugs, serums, etc., ready for use.

ampoule tubing (*Glass*). Tubing of special composition suited to the manufacture of ampoules. It must work well in the blowpipe flame, and must resist the action of the materials stored in the ampoule.

ampul'la (*Med.*). See **ampoule.**

ampulla (*Zool*). Any small membranous vesicle: in Vertebrates, the dilation housing the sensory epithelium at one end of a semicircular canal of the ear: in *Mammalia*, part of a dilated tubule in the mammary gland: in Fish, the terminal vesicle of a neuromast organ: in *Echinodermata*, the internal expansion of a tube-foot, the expansion of the axial sinus below the madreporite: in *Hydrocorallinae*, a pit of the skeleton lodging a medusoid: in *Ctenophora*, one of a pair of small sacs forming part of the aboral sense-organ.—*adj.* **am'pullary.**

ampulla'ceal, ampulla'ceous (*Bot., Zool.*). Flask-shaped; e.g. the *ampullaceal* silk glands of certain Spiders, which are connected with the anterior spinnerets and produce long threads.

ampullaceal sensillae (*Zool.*). In Insects, sensory organs consisting of a narrow canal swollen at the extremity into an ampulla which encloses a hair-like process.

amy'elinate (*Zool.*). (Of nerve-fibres) non-medullated, lacking a myelin sheath.

amyg'dala (*Zool.*). A lobe of the cerebellum: one of the palatal tonsils.

amyg'dale, amyg'dule (*Geol.*). An almond-shaped infilling (by secondary minerals such as agate, zeolites, calcite, etc.) of elongated steam cavities in igneous rocks.

amyg'dalin (*Chem.*). $C_{20}H_{27}O_{11}N$, colourless prisms, m.p. 200° C., a glucoside found in bitter almonds, in peach and cherry kernels.

amyg'daloid (*Bot.*). Almond-like.

amygdaloid (*Geol.*). An obsolete term connoting an amygdaloidal basalt.

am'yl group (*Chem.*). The monovalent aliphatic radical $C_5H_{11}-$.

amyl acetate (*Chem.*). $CH_3{\cdot}CO{\cdot}O{\cdot}C_5H_{11}$, colourless liquid, of ethereal pear-like odour, b.p. 138° C. *iso*Amyl acetate is also known under the name of *pear oil*. It is used for fruit essences and is an important solvent for nitrocellulose. Used as a standard light in photometry when burnt in a special lamp.

amyl alcohol (*Chem.*). $C_5H_{11}OH$, the fraction of fusel oil that distils about 131° C. There are 8 isomers possible and known, viz. four primary, three secondary, one tertiary amyl alcohol. The important isomers are:—

*iso*amyl alcohol,
d-amyl alcohol,
tertiary amyl alcohol (amylene hydrate).

amyl nitrite (*Chem.*). $C_5H_{11}{\cdot}O{\cdot}NO$, the nitrous acid ester of *iso*amyl alcohol, a yellowish liquid, b.p. 98° C., of pleasant odour. Intermediate for the preparation of nitroso- and of diazo-compounds. Also used in medicine (*amylis nitris*).

amyla'ceous (*Bot.*). Starchy.

am'ylases (*Chem.*). Enzymes capable of hydrolysing starch and similar substances.

am'ylene (*Chem.*). A synonym for pentene, C_5H_{10}, a higher olefine homologue. Four isomers are known, all low-boiling liquids.

amylene hydrate (*Chem.*). A synonym for *tertiary* amyl alcohol.

am'ylo fermentation process (*Chem.*). The use of certain moulds secreting diastase and fermentation enzymes for obtaining alcohol from starchy materials without the use of malt.

amyloclast'ic (*Bot.*). Able to break down starch.

amylogen'esis (*Bot.*). The building of starch inside the cell of a plant.

am'yloid (*Chem.*). A starch-like cellulose compound, produced by treatment of cellulose with concentrated sulphuric acid for a short period.

amyloid (*Path.*). A waxy substance formed in the body in certain diseases and composed of a protein and chondroitin sulphuric acid, which is a normal constituent of cartilage.

amyloid bodies (*Zool.*). In *Mammalia*, starch-like concretions found in the alveoli of the prostate gland of the adult.

amyloid degeneration (*Med.*). The formation of amyloid in the small arteries, capillaries, and tissues of the body, as a result of chronic infection.

amylolyt'ic (*Zool.*). Starch-digesting.

amylop'sin (*Chem.*, *Zool.*). An enzyme, produced by intestinal glands, which induces complete hydrolysis of starchy matter in the intestinal tract.

am'yloses (*Chem.*, *etc.*). Depolymerisation products of starch, crystalline substances of the sugar series. In *Botany*, amylose is a general term for starch, inulin, and related carbohydrates.

am'ylostat'olith (*Bot.*). A starch grain which acts as a statolith.

am'ylum (*Chem.*). A synonym for ***starch***.

amyot'rophy (*Med.*). Wasting or atrophy of muscle.

amyotroph'ic lateral sclerosis (*Med.*). A nervous disease in which atrophy of muscle follows degenerative changes in the motor cells of the spinal cord and brain.

an- (Greek *an*, not). A prefix used in the construction of compound terms; e.g. *anaxial*, without a distinct axis.

An (*Chem.*). The symbol for *actinon*.

ana- (Greek *ana*, up, anew). A prefix used in the construction of compound terms; e.g. *anakinetic*, restoring energy.

ana- (*Chem.*). Containing a condensed double aromatic nucleus substituted in the 1.5 positions.

anabat'ic (*Meteor.*). A term applied to winds caused by the upward convection of heated air.

anabi'on (*Biol.*). An organism in which anabolic processes predominate over katabolic processes; e.g. plants.

anabio'sis (*Zool.*). The power of returning to life after apparent death, as in certain *Tardigrada*.

anab'olism (*Biol.*). The chemical changes proceeding in living organisms with the formation of complex substances from simpler ones, together with the storage of chemical energy.

Anacan'thii (*Zool.*). An order of *Neopterygii* with flexible jointed finrays; the true caudal fin is absent or reduced, while the pelvic fins are placed far forward on the body; the duct connecting the air-bladder and the gullet is lacking. Cod, Whiting, Hake, Haddock, Ling, Pollack, Burbot, Grenadiers.

anacromyoi'dean (*Zool.*). Having the syringeal muscles attached to the dorsal ends of the bronchial cartilages.

anad'romous (*Zool.*). Having the habit of migrating from more dense to less dense water to breed, generally from oceanic to coastal waters, or from salt water to fresh water; as the Salmon.

anae'mia, ane'mia (*Med.*). Diminution of the amount of haemoglobin in the blood, from lowering of the quantity or the quality of the red blood cells.

anaemia, infectious (*Vet.*). A septicaemia of horses due to a filterable virus.

anae'robe, anaerobi'ont (*Biol.*). Names applied to an organism for whose life processes a complete or (in some cases) nearly complete absence of oxygen is essential. Facultative anaerobes can utilise free oxygen; obligate anaerobes are poisoned by it.—*adjs.* **anaerobic, anaerobiotic.**

anaero'bic decomposition (*Bot.*). The incomplete breakdown of organic material by bacteria in the absence of free oxygen.

anaerobic respiration (*Biol.*). A form of respiration in which the organism obtains its energy by reactions in which elementary oxygen is not directly involved, and carbon dioxide, together with such products as ethyl alcohol (in yeasts) or valerianic acid (in intestinal worms), is formed.

anaerobio'sis (*Bot.*, *Zool.*, *etc.*). Existence in the absence of oxygen.

anaesthe'sia, anesthe'sia (*Med.*). Loss of sensibility to touch (loosely, also to pain and temperature): the science and art of administering anaesthetics.

anaesthet'ic, anesthet'ic (*Med.*). Insensible to touch (loosely, also to pain and temperature): a drug which produces insensibility to touch, pain, and temperature, with or without loss of consciousness.—*v.* **anaes'thetise, anes'thetise.** To make anaesthetic.—*n.* **anaesthetist.** One skilled in the administration of an anaesthetic drug.

an'aglyph (*Photog.*). The use of two images of two colours, red and green, viewed with red and green spectacles (one for each eye) to obtain an approximation to stereoscopy. Used for both still and motion pictures.

anakinet'ic (*Biol.*). Leading to the restoration of energy and the formation of reactive, energy-rich substances.

anakinet'omeres (*Biol.*). Reactive, energy-rich molecules.

a'nal (*Zool.*). See **anus.**

anal cerci, —ser'si (*Zool.*). In *Insecta*, appendages of one of the posterior abdominal somites, generally the eleventh, retained throughout life.

anal cone (*Zool.*). In larvae of entoproct *Polyzoa*, a projection of the ventral surface carrying the proctodaeum.

anal-erotic individual (*Psycho-an.*). A person who is still at a pre-genital stage of development, in which physical gratification is aroused and satisfied by stimulation of the anus. The term is used in a general way to denote certain characteristics common to the anal phase of development, e.g. obstinacy, parsimony, meanness, and also tidiness, excess of which is seen specially in *obsessional neurosis* (q.v.).

anal field (*Zool.*). In Echinoderm and Tornaria larvae, an area surrounded by the posterior loop of the longitudinal ciliated band.

anal-gland disease (*Vet.*). Inflammation of the sebaceous gland on each lateral wall of the interior of the anus of dogs.

anal loop (*Zool.*). In Echinoderm and Tornaria larvae, the posterior loop of the longitudinal ciliated band.

anal papilla (*Zool.*). In Cephalopod larvae and adult Crinoidea, a small papilla at the apex of which the anus is developed.

anal-sadistic (*Psycho-an.*). Characteristic of destructiveness and aggression, common to the early anal phase of development.

anal suture (*Zool.*). In the posterior wings of some Insects, a line of folding, separating a posterior anal area of the wing from the main area.

anal'cime, anal'cite (*Min.*). An important hydrated silicate of aluminium and sodium, closely related to albite but containing less silica.

analep'tic (*Med.*). Having restorative or strengthening properties: a drug or medicine that strengthens.

analge'sia (*Med.*). Loss of sensibility to pain.—*adj.* **analge'sic.** Insensible to pain: alleviating pain: a drug which relieves pain.

anallat'ic lens (*Surv.*). The special lens which, when correctly placed between the object glass and the eye-piece lens of a tacheometric telescope, optically reduces the additive constant for the tacheometer to zero.

analiatic telescope (*Surv.*). A telescope which, when used for tacheometric purposes, has a zero additive constant.

anallatism, centre of (*Surv.*). In a distance-measuring telescope, the point from which the distance to an observed staff is proportional to the staff intercept as seen between the upper and lower stadia lines of the diaphragm.

analogous organs (*Bot.*). Organs which are similar in appearance or function, but are not equivalent morphologically.

analogy (*Bot.*, *Zool.*). Likeness in function but not in origin—e g. tendrils, which may be modified leaves, branches, inflorescences; the wings of Birds and of Insects.—*adj.* **analogous**

analyser (*Chem.*). The second Nicol prism in a polarimeter.

analyses (*Chem.*). The expression of the results obtained by chemical analysis. See **chemical analysis.**

analysis (*Struct.*). The process of reducing a problem to its primary parts, e g. the finding of the forces and moments in the members of a loaded structure, either mathematically or experimentally.

analysis, chemical (*Chem.*). See **chemical analysis.**

analysis meter (*Auto. Teleph*) A registering meter used to determine the loading of groups of circuits with calls, particularly for determining the correctness or otherwise of grading.

analyst (*Chem.*). See **analytical chemist.**

analytical chemist (*Chem.*). A person who carries out the process of analysis by chemical methods. See **chemical analysis.**

analytical psychology. The school of psychology founded by Jung of Zurich. It deviates from the Freudian school mainly in the method of dream interpretation, the theory of the causation of a neurosis in the present situation instead of the past, by the use of the term *libido* for all instinctual life, not exclusively sexual, by the postulation of a racial or collective unconscious in addition to a personal unconscious, and by an emphasis on spiritual values and a human soul or psyche.

analytical reactions (*Chem.*). The forming of two or more different substances from one substance; e.g. mercuric oxide decomposes into mercury and oxygen.

analytical reagent (*Chem.*). See **A.R.**

anamne'sis (*Med.*). The recollection of past things: the past history of all matters relating to a patient's health.

anamniot'ic (*Zool.*). Lacking an amnion during development.—*adj.* **anam'niote.**

anamor'pha (*Zool.*). Larvae which do not possess the full number of segments at the time of hatching.

anamor'phoscope (*Photog.*). A camera or viewing apparatus in which the image is registered as radial slits in unnatural order on a rotating disc.

anamor'phote lens (*Photog.*). A lens containing a cylindrical lens for special distorting effects.

anan'gian (*Zool.*). Lacking a vascular system.

anaphase (*Cyt.*). The stage in mitotic or meiotic nuclear division when the chromosomes or half-chromosomes move away from the equatorial plate: more rarely, all stages of mitosis leading up to the formation of the chromosomes.

anaphore'sis (*Chem.*). The migration of suspended particles towards the anode under the influence of an electric field.

anaphylac'tic (*Med.*). Being in a state of anaphylaxis: pertaining to anaphylaxis.

anaphylactic shock (*Med.*). The immediate reaction which takes place in the smooth muscle of the body after the injection of a protein to which a person is anaphylactic.

anaphylax'is (*Med.*). Specific supersensitiveness of the smooth or involuntary muscles of the body to a protein previously introduced into it.

anapla'sia (*Med.*, *Path.*). Loss of the distinctive character of a cell associated with proliferative activity; as in cancer.

anaplasmo'sis (*Vet*). A febrile infection of the red blood corpuscles of cattle due to protozoa of the genus *Anaplasma.*

anapoph'ysis (*Zool.*). In higher Vertebrates, a small process just below the postzygapophysis which strengthens the articulation of the lumbar vertebrae.

anap'sid (*Zool.*). Having the skull completely roofed over, i.e. having no dorsal foramina other than the nares, the orbits, and the parietal foramen.

anar'throus (*Zool.*). Without distinct joints.

anasar'ca (*Med.*). Excessive accumulation of fluid (dropsy) in the skin and subcutaneous tissues.

anaschis'tic (*Cyt.*). In meiosis, said of tetrads which divide twice longitudinally.

Anaspida'cea (*Zool.*). The only order of the division *Syncarida*, possessing the characteristics of the division; many fossil forms are known, but there are only some half-dozen living species, occurring in rocky pools of Tasmanian mountain-streams, and in wells and cave waters in various parts of Europe and the Malay Peninsula. Mountain Shrimps.

anastomo'sis (*Bot.*). Communication by cross-connexions to form a network.—(*Med.*) A communication between two blood-vessels: an artificial communication, made by operation, between any two parts of the alimentary canal.—(*Zool.*) The formation of a meshwork of blood-vessels or nerves: the union of blood-vessels or nerves arising by the splitting of a common trunk.

anas'tral (*Cyt.*). Without asters; said of a type of mitosis.

an'atase (*Min.*). One of the three naturally occurring forms of crystalline titanium dioxide, of tabular or bipyramidal habit. See also **octahedrite.**

anatomy (*Bot.*, *Zool.*, *etc.*). (1) The study of the form and structure of animals and plants; it includes the study of minute structures, and thus includes *histology.*—(2) Dissection of an organised body in order to display its physical structure and economy. The technical term for animal anatomy is *zootomy*; for vegetable anatomy, *phytotomy*; for human anatomy, *anthropotomy.*

anatox'in (*Bacteriol.*). The toxin of diphtheria detoxicated by formalin or by heat.

anatro'pous (*Bot.*). Said of an ovule in which the body is curved so that the micropyle lies close to the insertion of the funicle.

anax'ial (*Zool.*). Asymmetrical.

anchor (*Elec. Eng.*). See **anchor clamp, anchor tower, conductor-rail anchor.**

anchor (*Ships*). A heavy metal implement consisting of a shank carrying two arms at one end, and, in ordinary anchors, a stock at the other end. Used for holding a ship to the bottom by means of a connecting cable.

See **bower—** **sheet—**
kedge— **stockless—**
sea— **stream—**

anchor (*Zool.*). A type of spicule found in the integument of Holothurians.

anchor and collar (*Civ. Eng.*). A type of hinge used to support lock-gates, consisting of an *anchor* built into the masonry coping, with a *collar* attached like a clevis to the anchor, the collar forming a socket into which fits the pintle of the heel-post of the gate.

anchor bolt (*Build.*). A bolt used to secure frameworks, stanchion bases, etc. to piers or foundations, and having usually a large plate washer built into the latter as anchorage.

anchor clamp (*Elec. Eng.*). A fitting which attaches the conductor of an overhead-transmission line to a strain insulator or support.

anchor ear (*Elec. Eng.*). A fitting attached to the overhead contact wire of a tramway or railway to support the wire, and also to take the longitudinal tension and prevent movement of the wire in a direction parallel to the track.

anchor escapement (*Horol.*). See **recoil escapement.**

anchor-gate (*Civ. Eng.*). A heavy gate, such as a canal lock-gate, which is supported at its upper bearing by an anchorage in the masonry such as an *anchor and collar* (q v.).

anchor pole (*Elec. Eng.*). See **anchor tower.**

anchor tower (*Build*). A part of the staging for the support of a *derrick tower gantry* (q v.) used for shifting building materials on site, two timber anchor towers serve to anchor the gantry braces and withstand the overturning forces acting on the loaded gantry.

anchor tower (*Elec. Eng.*). A type of tower placed at intervals along an overhead-transmission line; designed to give longitudinal rigidity. Called an *anchor pole* when the line is supported on wooden poles.

anchoring (*Typog*). A method of fastening plates to metal or wood mounts when the usual flange is not available; a thin bolt is passed through the mount and secured with a nut.

anchylo'sis (*Med.*). See **ankylosis.**

ancient lights (*Build.*). The legal right, possessed by certain windows, to receive in perpetuity a reasonable amount of daylight. The right is acquired usually by enjoyment of the flow of light for nineteen years and a day before any legal action is brought about the light.

ancillary shoring (*Build.*). The auxiliary shoring which is necessary in the process of underpinning before any walling is removed, its purpose being to relieve the wall to be underpinned of as much load as possible. It consists of floor, roof, and window strutting, and perhaps raking shoring.

ancillary working (*Telcg., Teleph.*). An arrangement for increasing the effectiveness of an operator, particularly when one operator takes over the circuits of another during light loading.

an'con (*Arch.*). A console built on each side of a door-opening to carry a cornice.—*pl.* **anco'nes.**

anconeal, an-kō'ne-al (*Zool.*). Pertaining to, or situated near, the elbow.

anco'neus (*Zool.*). An extensor muscle of the arm attached in the region of the elbow.

andalu'site (*Min.*). One of several crystalline forms of aluminium silicate; a characteristic product of the contact metamorphism of argillaceous rocks.

Anderson's bridge (*Elec. Eng.*). A bridge method of measuring inductance which is a modification of the Maxwell bridge; balance is obtained by variation of resistance only.

an'desine (*Min.*). A member of the plagioclase group of minerals, with a small excess of soda over lime; typical of the intermediate igneous rocks.

an'desite (*Geol.*). A fine-grained igneous rock (usually a lava), of intermediate composition, having plagioclase as the dominant feldspar.

andiron (*Build.*). A metal support for wood in an open fire. Also called a FIREDOG.

an'dradite (*Min.*). Common calcium-iron garnet. Includes melanite (black garnet), though all andradite is not black. Also called ESSONITE.

an'drase (*Zool.*). An enzyme or hormone tending to produce maleness.

androco'nia (*Zool.*). In certain male *Lepidoptera*, scent scales serving to disseminate the secretion of the odoriferous glands situated at their bases; believed to serve the purpose of sexual attraction.

an'drocyte (*Bot.*). A sperm mother-cell.

androdioecious, —di-ē'si-us (*Bot.*). Said of a species in which some of the plants bear staminate flowers, others hermaphrodite flowers.

androecium, —drē'si-um (*Bot.*). (1) The whole of the stamens in one flower.—(2) The group of male organs in mosses.—*adj.* **androe'cial.**

androgen'esis (*Bot., Zool.*). Development from a male cell.

androgonid'ia (*Zool.*). In certain *Protozoa* (as *Volvox*), male gametes occurring after a period of asexual reproduction.

androgy'nous (*Bot.*). Bearing the male and female organs in distinct parts of the same inflorescence: having the male and female organs on or in the same branch of the thallus.

androl'ogy (*Med.*). That branch of medical science which deals with the functions and diseases peculiar to the male sex.

andromonoecious, —ē'si-us (*Bot.*). Said of a plant which has staminate and hermaphrodite flowers, but no pistillate flowers.

an'drophore (*Bot.*). An elongation of the receptacle of the flower between the corolla and the stamens. —(*Zool.*) In *Siphonophora*, a stalk bearing male gonophores.

androsporan'gium (*Bot.*). A sporangium in which one or more spores able to give rise to male plants are developed. Such spores are termed *androspores.*

anelec'tric (*Elec.*). An old-fashioned term used to denote a body which does not become electrified by friction.

anemia, anesthesia, etc. (*Med.*). See **anaemia, anaesthesia,** etc.

ane'mocho'rous (*Bot.*). Said of plants whose seeds are dispersed by wind, and particularly plants which retain their seeds through the winter, liberating them for wind-dispersal in the spring.

anemom'eter (*Meteor.*). An instrument for measuring the velocity of the wind. A common type consists of four hemispherical cups carried at the ends of four radial arms pivoted so as to be capable of rotation in a horizontal plane, the speed of rotation being indicated on a dial calibrated to read wind velocity directly. An *anemograph* records the velocity, and sometimes the direction.—(*Eng.*) An instrument for measuring the rate of flow of a gas, either by mechanical or electrical methods.

ane'mophi'ly (*Bot.*). Pollination by means of the wind.—*adj.* **anemophilous.**

an'emotro'pism (*Biol.*). Active response to the stimulus of an air current.

anenceph'aly (*Med.*). Developmental defect of the skull and absence of the brain.—*adj.* **anenceph'alous.**

anen'teron (*Zool.*). A malformed blastula, having an evaginated archenteron which later disappears entirely; usually produced by exposure to a supranormal temperature.

anen'terous, anenter'ic (*Zool.*). Without a gut.

an'er (*Zool.*). A male ant.

aneroid barometer (*Meteor., Surv.*). A portable instrument for the recording of changes in atmospheric pressure and for the approximate determination of altitude. It consists of a thin hermetically-sealed cylindrical metal box, exhausted of air so that the ends of the box tend to approach or recede from each other with change in the pressure of the atmosphere. A train of levers within the box magnifies this movement, and records it by an index-arm moving over a scale graduated to give barometric pressure in feet and inches of mercury, and sometimes to give altitudes directly, the principle of the surveyor's instrument depending upon the decrease of barometric pressure with increase of altitude.

aneuploidy, an'ū-ploi'de (*Bot.*). The condition of a nucleus, tissue, individual, or race having a chromosome number which is not an exact multiple of the haploid number.

an'eurysm (*Med.*). Pathological dilatation, fusiform or saccular, of an artery.—CARDIAC ANEURYSM, local dilatation of the heart from weakening of the wall.

angel beam (*Carp.*). A horizontal member of a mediaeval roof truss, usually decorated with angels carved on the member.

angi'na pec'toris (*Med.*). A condition characterised by the sudden onset of pain in the chest and inner side of the left arm after exertion; due to disease of the coronary arteries.—ANGINA INNOCENS. See **pseudoangina.**

angio- (Greek *angeion*, a case, vessel). A prefix used in the construction of compound terms; e.g. *angioblast* (q.v.).

an'gioblast (*Zool.*). In development, a mesodermal cell forming part of a syncytial accumulation which gives rise to blood-vessels and early blood cells.

angiocar'pic, angiocar'pous (*Bot.*). Applied to the fruit body of a fungus in which the hymenium develops, at any rate at first, within a closed envelope.

angio'ma (*Med.*). See **haemangioma.**

an'gioneurot'ic oedema (*Med.*). A disorder in which rounded oedematous swellings suddenly appear in the skin or the mucous membranes, Quinke's disease.

Angiosper'mae (*Bot.*). A major group of flowering plants, probably including over 200,000 species, in which the seeds develop and ripen inside a closed ovary. It includes all the ordinary flowering plants and most other plants of economic importance, except pines and their relatives.

angiosto'matous (*Zool.*). Having a narrow or non-distensible mouth, as certain *Mollusca*, certain *Ophidia.*

angle. The inclination of one line to another, measured in degrees (of which there are 360 to one complete revolution), or in radians (of which there are 2π to one complete revolution). ($\pi = 3{\cdot}14159\ldots$) See **dihedral—, solid—***

angle, angle bar, angle iron, angle steel (*Eng.*). Mild steel bar rolled to the cross-section of the letter L, much used for light structural work.

angle (*Textiles*). In lace manufacture, this term signifies the angles of the warp threads with regard to the horizontal perforated steel bars.

angle bar (*Carp.*). The vertical bar between two faces of a polygonal or bow window.

angle-bead (*Build.*). A small round moulding placed at an external angle formed by plastered surfaces in order to preserve the corner from accidental fracture.

angle bearing (*Eng.*). A shaft-bearing in which the joint between base and cap is not perpendicular to the direction of the load, but is set at an angle.

angle block (*Carp.*). A small wooden block used in woodwork to make joints, especially right-angle joints, more rigid.

angle-board (*Carp.*). One used as a gauge by which to plane boards to a required angle between two faces.

angle brace (*Carp.*). (1) Any bar fixed across the inside of an angle in a framework in order to render the latter more rigid (also called ANGLE TIE).—(2) A special tool for drilling in corners where there is not room to use the cranked handle of the ordinary brace.

angle bracket (*Carp.*). A bracket projecting from the corner of a building beneath the eaves, and not at right-angles to the face of the wall.

angle bracket (*Eng.*). A bracket consisting of two sides set at right-angles, often stiffened by a gusset.

angle cleat (*Build.*). A small bracket formed of angle iron, used to support or locate a member in a structural framework.

angle-closer (*Build.*). A portion of a whole brick, used to close up the bond of brickwork at corners.

angle, critical (*Light*). See **critical angle.**

angle float (*Plast.*). A plasterer's trowel, specially shaped to fit into the angle between adjacent walls of a room.

angle gauge (*Build.*). A tool which is used to set off and test angles in carpenter's, bricklayer's, and mason's work.

angle iron (*Eng.*). See **angle.**

angle of advance (*Eng.*). The angle in excess of 90° by which the eccentric throw of a steam-engine valve gear is in advance of the crank.

angle of attack (*Aero.*). See **angle of incidence.**

angle of contact (*Eng.*). The angle subtended at the centre of a pulley by that part of the rim in contact with the driving belt.

angle of contact (*Phys.*). The angle made by the surface separating two fluids (one of them generally air) with the wall of the containing vessel or with any other solid surface cutting the fluid surface. For liquid-air surfaces, the angle of contact is measured in the liquid.

angle of current flow (*Radio, Thermionics*). The fraction of the cycle of alternating grid voltage, expressed in degrees, during which anode current flows.

angle of cut-off (*Illum.*). The largest angle below the horizontal at which a reflector allows the light-source to be visible when viewed from a point outside the reflector.

angle of depression (*Surv.*). The vertical angle measured below the horizontal from the surveyor's instrument to the point observed.

angle of deviation (*Light*). The angle which the incident ray makes with the emergent ray when light passes through a prism or any other optical device.

angle of dip (*Geol.*). See **dip.**

angle of elevation (*Surv.*). The vertical angle measured above the horizontal, from the surveyor's instrument to the point observed.

angle of friction (*Eng., etc.*). The angle between the normal to the contact surfaces of two bodies, and the direction of the resultant reaction between them, when a force is just tending to cause relative sliding.

angle of heel (*Hyd., Ships*). The angle through which a floating vessel or pontoon tilts owing to eccentric placing of loads, etc.: the angle of inclination of a ship due to 'rolling,' or to a 'list.' It is the angle formed between the transverse centre line of the ship when on 'even keel' and when inclined.

angle of incidence, angle of reflection (*Acous.*). Respectively, the angle with which a beam of sound arrives at a surface, and the angle with which it leaves after reflection, the angle being measured with respect to the normal at the point of incidence.

angle of incidence, rigging (*Aero.*). The angle between the chord line of the main plane and the datum horizontal line. Shown on the rigging diagram, and used for erecting and aligning the main planes. Not to be confused with TRUE ANGLE OF INCIDENCE (*colloq.* ANGLE

OF ATTACK), i.e. the angle between the chord line of an aerofoil and the relative wind, which is normally the immediate flight path of the aircraft.

angle of incidence (*Light*). The angle which a ray makes with the normal to a surface on which it is incident.

angle of lag, angle of lead (*Elec. Eng.*). A term used in a.c. circuit theory to denote the phase angle by which the current lags behind, or leads ahead of, the voltage.

angle of lead (*Elec. Eng.*). The angle by which the brushes of a d.c. machine without compoles have to be moved forward in order to ensure sparkless commutation.

angle of lens (*Photog.*). The angular coverage of a lens when exposing a sensitised surface in a camera.

angle of minimum deviation (*Light*). The minimum value of the angle of deviation for a ray of light passing through a prism. By measuring this angle (θ) and also the angle of the prism (α), the refractive index of the prism may be calculated by means of the expression :

$$\mu=\frac{\sin\frac{1}{2}(\alpha+\theta)}{\sin\frac{1}{2}\alpha}.$$

angle of obliquity (*Eng.*). The deviation of the direction of the force between two gear teeth in contact, from that of their common tangent.

angle of pitch (*Aero.*). See **pitch.**

angle of polarisation (*Light*). That value of the angle of incidence of a ray of light on a reflecting surface for which the plane polarisation of the reflected ray is a maximum. See **Brewster's law.**

angle of reflection (*Light*). The angle which a ray, reflected from a surface, makes with the normal to the surface. The angle of reflection is equal to the angle of incidence.—(*Acous.*) See under **angle of incidence.**

angle of refraction (*Light*). The angle which is made by a ray refracted at a surface separating two media with the normal to the surface. See **Snell's law, index of refraction.**

angle of relief (*Eng.*). The angle between the back face of a cutting tool and the surface of the material being cut.

angle of repose (*Civ. Eng.*). The greatest angle to the horizontal which can be made by the inclined surface of a heap of loose material or embankment.

angle of twist (*Eng.*). The angle through which one section of a shaft is twisted relative to another section when a torque is applied.

angle of yaw (*Hyd.*). The angle between the direction of flow of a fluid stream and the direction of pointing of a velocity measuring instrument (such as a pitot tube) immersed in the flow.

angle plane (*Carp.*). A plane whose cutting-iron shapes an internal angle.

angle plate (*Eng.*). A bracket used to support work on a lathe faceplate or other machine-tool.

angle rafter (*Carp.*). The rafter at the hip of a roof. It receives the jack-rafters. Also called ANGLE RIDGE, HIP RAFTER.

angle-shaft (*Build.*). An angle-bead which is enriched with, e.g., a capital base.

angle shot, angle view (*Cinema.*). Any cinematographic shot taken with the camera axis inclined to the horizontal.

angle-staff (*Build.*). A strip of wood placed at an external angle formed by plastered surfaces to protect the corner from damage. A round staff is called an *angle-bead* (q.v.).

angle steel (*Eng.*). See **angle.**

angle-stone (*Civ. Eng.*). A *quoin* (q.v.).

angle support (*Elec. Eng.*). A transmission-line tower or pole placed at a point where the line changes its direction. Such a tower or pole differs from a normal tower or pole in that it has to withstand a force tending to overturn it (due to the resultant pull of the conductors).

angle tie (*Carp.*). See **angle brace.**

angled draft (*Woollen*). An arrangement of the warp threads in the mails of the healds so that the twill components will produce a 'herring-bone' pattern.

anglesite, an'gle-sit (*Min.*). Orthorhombic sulphate of lead—a common lead ore; named after the original locality, Anglesey.

Angola yarn (*Textiles*). A yarn consisting of wool or shoddy and cotton, coarsely carded and spun on the woollen system; used for medium and low woollens and for union fabrics.

Ångström unit, ang'strom; *Swed. pron.* ong'strum (*Phys.*). Named from the Swedish physicist, A. V. Ångström (1814-74). The unit employed for expressing wavelengths of light, ultra-violet radiations and X-rays. It equals 10^{-8} cm.; e.g. the wavelength of yellow light is approximately 5600 *Ångström units*. Frequently abbreviated to *angstrom*. Symbol Å., Å.U., or A.U. See **international Ångström.**

angular acceleration (*Phys., etc.*). The rate of change of angular velocity; usually expressed in radians per second per second.

angular aperture (*Photog.*). The ratio of the working diameter to the focal-length of a lens, i.e. reciprocal of the *f*-number.

angular diameter (*Astron.*). The angle which the apparent diameter of a heavenly body subtends at the observer's eye.

angular displacement (*Phys.*). The angle turned through by a body about a given axis, or the angle turned through by a line joining a moving point to a given fixed point.

angular distance of stars (*Astron.*). The apparent distance on the celestial sphere between two stars, measured as an arc of a great circle which passes through them and of which the observer is the centre.

angular divergence (*Bot.*). The angle between the lines of insertion of two adjacent leaves.

angular frequency (*Elec. Comm.*). The frequency of a steady recurring phenomenon expressed in radians per second, i.e. frequency in cycles per second multiplied by 2π.

angular momentum (*Mech.*). See **momentum.**

angular spacing (*Radio*). The spacing of aerials for direction-finding or broadcasting radiation, stated in terms of 360° per wavelength.

angular thread (*Eng.*). See **vee thread.**

angular velocity (*Phys., etc.*). The rate of change of angular displacement, usually expressed in radians per second.

angula're (*Zool.*). In *Vertebrata*, a membrane bone on the lower margin of the lower jaw, extending up on either side almost to the angle of the jaw.

an'gulosple'nial (*Zool.*). In *Amphibia*, a bone forming most of the inner and lower part of the lower jaw.

Angus-Smith process (*San. Eng.*). An anti-corrosion process applied to sanitary ironwork; this is heated to about 600° F. immediately after casting, and then plunged into a solution of four parts coal-tar or pitch, three parts prepared oil, and one part paranaphthaline heated to about 300° F. See **Bower-Barffing.**

angus'tifo'liate (*Bot.*). Having narrow leaves.

angus'tiros'trate (*Zool.*). Having a narrow beak, snout, or rostrum.

anhidro'sis (*Med.*). Diminution of the secretion of sweat.

anhydrae'mia, anhydre'mia (*Med.*). Loss of water from the blood.

anhy'drides (*Chem.*). Substances, including organic compounds and inorganic oxides, which either combine with water to form acids, or which may be obtained from the latter by the elimination of water.

anhy'drite (*Min.*). Anhydrous calcium sulphate; alters readily into gypsum.

anhy'drous (*Chem.*). A term applied to oxides, salts, etc., to emphasise that they do not contain water of crystallisation or water of combination, etc.

anhydrous lime (*Build.*). *Quicklime* (q.v.).

an'ilides (*Chem.*). A group of compounds in which the hydrogen of the amino group in aniline is substituted by organic acid radicals. The most important compound of this class is *acetanilide* (q.v.), also known as ANTIFEBRIN.

aniline (*Chem.*). $C_6H_5NH_2$, phenylamine, a colourless oily liquid, m.p. −8° C., b.p. 189° C., sp. gr. 1·024, slightly soluble in water; manufactured by reducing nitrobenzene with iron shavings and hydrochloric acid at 100° C. Basis for the manufacture of dyestuffs, pharmaceutical and numerous other compounds.

aniline black (*Chem.*). An azine dye, produced by the oxidation of aniline on the fabric.

aniline dyes (*Chem.*). A general term for all synthetic dyes having aniline as their base.

aniline oil (*Chem.*). A coal-tar fraction consisting chiefly of crude aniline.

aniline point (*Chem.*). The lowest temperature at which an oil is miscible with an equal volume of aniline.

aniline salt (*Chem.*). Aniline hydrochloride, $C_6H_5NH_2{\cdot}HCl$, m.p. 198° C., b.p. 245° C., sp. gr. 1·22, white crystals, soluble in most organic solvents and water.

an'ima (*Analytical Psychol.*). Term used in Jungian psychology to denote the unconscious feminine component of a male personality.

animal charcoal (*Chem.*). The carbon residue obtained from the carbonisation of organic matter such as blood, flesh, etc.

animal electricity. A term used to denote the power possessed by certain animals (e.g. electric eel) of giving powerful electric shocks.

animal field (*Zool.*). In developing blastulae, a region distinguished by the character of the contained yolk granules, and representing the first rudiment of the germ-band.

animal pole (*Zool.*). In the developing ovum, the upper hemisphere, which contains little or no yolk, and in which segmentation is more rapid: the apex of this hemisphere.

animal-sized (*Paper*). Paper which has been hardened by passing the sheet through a bath of gelatine. More costly than engine-sized.

animal starch (*Chem.*). *Glycogen* (q.v.).

animated cartoon (*Cinema.*). A cinematograph film made from black-and-white or coloured drawings, photographed one at a time: the term is applied, by extension, to step-by-step cinematography of model work.

animation (*Cinema.*). The process of preparing drawings for sequential photography in motion cartoon making.

animat'ograph (*Cinema.*). Obsolete name for the *cinematograph.*

animator (*Cinema.*). The artist who, in the making of a motion cartoon, draws the consecutive drawings between the key drawings.

Anim'ikie Series (*Geol.*). An important member of the Pre-Cambrian of the Canadian Shield, extending northwards into the Arctic regions. Perhaps 14,000 ft. in thickness, it includes important iron ores, carbonaceous slate, jaspers, and boulder conglomerates. These succeed the Huronian.

an'imus (*Analytical Psychol.*). A Jungian term denoting the unconscious masculine component of a female personality.

anion, an'i-on (*Elec., etc.*). In an electrolyte, the ion which carries the negative charge and which migrates towards the anode under the influence of an applied potential difference. Anions also exist in gaseous discharges.

anirid'ia (*Med.*). See **irideremia.**

anis'idines (*Chem.*). Amino-anisoles, methoxy-anilines, $CH_3O{\cdot}C_6H_4{\cdot}NH_2$, bases similar to aniline. Intermediates for dyestuffs.

ani'so- (Greek *an*, not; *isos*, equal). A prefix used in the construction of compound terms; e.g. *anisogamete* (q.v.).

anisocercal, —sér'kal (*Zool.*). Having the lobes of the tail-fin unequal.

anisoche'la (*Zool.*). A chela having opposable parts of unequal size.

anisoco'ria (*Med.*). Inequality in the diameter of the pupils.

anisocot'yly (*Bot.*). Inequality in the sizes of the cotyledons in a seedling.

anisodac'tylous (*Zool.*). (Of Birds) having three toes turned forward and one turned backward when perching, as in the *Passeriformes.*

anisogamete, —ga'mēt (*Zool.*). A gamete differing from the other conjugant in form or size.—*adj.* **anisogamous.**

anisogam'y (*Bot., Zool.*). Union of *anisogametes* (q.v.). See **heterogamy.**

anisogen'omat'ic (*Bot.*). Said of a chromosome complement made up of unlike sets of chromosomes.

anisole (*Chem.*). Phenyl methyl ether, $C_6H_5{\cdot}O{\cdot}CH_3$, a colourless liquid, b.p. 155° C.

anisomer'ic (*Chem.*). Not isomeric.

anisomer'y (*Bot.*). The condition of a flower in which the successive whorls do not all contain the same number of members.

anisophyl'ly (*Bot.*). See **heterophylly.**

anisopleu'ral (*Zool.*). Bilaterally asymmetrical.

anisopogo'nous (*Zool.*). Having the barbs of unequal length on opposite sides of the axis, as in some kinds of feather.

ani'sospores (*Zool.*). In *Radiolaria*, spores of two kinds found at the same time in the same species, and alleged to be gametes.

anisoton'ic (*Chem.*). Not isotonic.

anisotro'pic (*Zool.*). (Of ova) having a definite polarity, in relation to the primary axis passing from the animal pole to the vegetable pole.—*n.* **ani'sotropy.**

anisotropic coma (*Television*). Coma distortion in a television image arising from inclination of the immersion objective, which is the first electric lens adjacent to the electron-emitting cathode.

anisotropic conductivity (*Elec. Eng.*). A body which has a different conductivity for different directions of current flow through it is said to have *anisotropic conductivity.*

anisotropic liquids (*Chem.*). See **liquid crystals.**

ankerite (*Min.*). A carbonate of calcium, magnesium, and iron. Frequently associated with iron ores.

ankylo'sis, anchylo'sis (*Med.*). Fixation of a joint by fibrous bands within it, or by pathological union of the bones forming the joint.—(*Zool.*) The fusion of two or more skeletal parts, especially bones.

anlage, an'la-ge (*Zool.*). See **primordium.**

an'nabergite (*Min.*). Hydrous nickel arsenate, apple-green monoclinic crystals, rare, usually massive. Associated with other ores of nickel. Also called NICKEL BLOOM.

annealing. General term denoting heating followed by slow cooling.—(*Met.*) Annealing is used to eliminate effects of cold-working, to remove internal stress, or to improve electrical, magnetic, or other properties.—(*Glass*) See **lehr**.

Annel'ida (*Zool.*). A phylum of metameric *Metazoa*, in which the perivisceral cavity is coelomic, and there is only one somite in front of the mouth; typically there is a definite cuticle and chitinous setae arising from pits of the skin; the central nervous system consists of a pair of preoral ganglia connected by commissures to a postoral ventral ganglionated chain; if a larva occurs it is a trochophore. Ringed Worms.

annoyance (*Acous.*). The psychological effect arising from excessive noise. There is no absolute measure, but the annoyances caused by specified classes of noise can be correlated.

annual (*Bot.*). A plant which, in the same season that it develops from a seed, flowers, fruits, and dies.

annual equation (*Astron.*). One of the four principal periodic terms in the mathematical expression of the moon's orbital motion. Its period is a year, and it is caused by the varying distance between the earth and the sun.

annual load factor (*Elec. Eng.*). The load factor of a generating station, supply-undertaking, or consumer, taken over a whole year.

annual (or **heliocentric) parallax** (*Astron.*). The apparent change in the position of a star due to the earth's annual motion round the sun and hence a measure of the star's distance, a star of parallax 0″·5 being at such a distance that the mean distance of the earth from the sun would subtend half a second of arc as seen from the star.

annual ring (*Bot.*). One of the approximately circular bands seen when a branch or trunk is cut across; the band is a section of the cylinder of secondary wood added in one season of growth.

annual variation of compass (*Surv.*). The yearly change in the magnetic variation of a compass at a given place.

annular (*Bot.*). Having the form of a ring.

annular bit (*Carp.*). A bit which cuts an annular (ring-shaped) channel and leaves intact a central cylindrical plug.

annular borer (*Civ. Eng.*). A rock-boring tool which does the work of an *annular bit* (q.v.), and provides a means of obtaining a core showing a section of the strata.

annular cell, annular vessel (*Bot.*). A tracheide or a vessel of the protoxylem, bearing rings of thickening material on its walls.

annular eclipse (*Astron.*). A central eclipse of the sun, in which the moon's disc does not completely cover the sun's disc at the moment of greatest eclipse but leaves a ring of the solar surface visible.

annular gear (*Eng.*). An annular ring on which gear teeth are cut.

annular vault (*Build.*). See **barrel vault.**

annulate (*Bot.*). (1) Shaped like a ring.—(2) Having a membranous ring on the stipe.

annulated column (*Build.*). A column formed of slender shafts clustered together, or sometimes around a central column, and secured by stone or metal bands.

an'nulus (*Bot.*). (1) A membranous frill present on the stipe of some agarics.—(2) A patch or a crest of cells with thickened walls occurring in the wall of the sporangium of ferns, and bringing about dehiscence by setting up a strain as they dry.—(3) A zone of cells beneath the operculum of the sporangium of a moss, which break down and assist in the liberation of the operculum.

annulus (*Zool.*). Any ring-shaped structure: the fourth digit of a pentadactyl fore-limb: in *Arthropoda*, subdivision of a joint forming joint-lets; in *Hirudinea*, a transverse ring subdividing a somite externally.—*adj.* **annulate.**

annunciator (*Elec.*). An arrangement of indicators, tripped by relays, for indicating which of a number of circuits has operated a bell.*

ano'dal, anodic (*Bot.*). In the upward direction on the genetic spiral.

anode (*Elec.*). The electrode through which a current enters an electrolytic cell, or an electric discharge in a gas. When current is passing the anode will be at a positive potential to the cathode and will therefore collect electrons or negative ions.—(*Thermionics*) Any electrode in a thermionic tube which acts as a collector of electrons. Usually applied to the most highly positive electrode in the tube. Also called PLATE.

anode AC conductance (*Thermionics*). Another name for *differential anode conductance* (q.v.).

anode AC resistance (*Thermionics*). Another name for *differential anode resistance* (q.v.).

anode battery (*Elec. Comm.*). See **B-battery.**

anode bend (*Thermionics*). The more or less abrupt curve in the anode-current versus grid-voltage characteristic of a triode, which occurs at small values of anode current. Also called BOTTOM BEND.

anode bend rectification (*Radio*). Rectification dependent on the curvature of the anode-current versus grid-voltage characteristic.

anode circuit (*Thermionics*). The closed circuit formed by the anode cathode path of a thermionic tube, the B-battery, and the coupling impedances or transformers.

anode conductance (*Thermionics*). The anode current divided by the anode potential. Frequently, though incorrectly, used for the slope of the anode-current versus anode-voltage characteristic.

anode converter (*Radio*). A rotary converter or motor generator used for supplying the high voltage required for the anode circuits from a low-voltage source, such as the filament supply-battery.

anode current (*Thermionics*). The current flowing to the anode of a multi-electrode thermionic tube.

anode current characteristic (*Thermionics*). A curve relating the anode current of a multi-electrode tube to the potential of one of the electrodes; e.g. anode-current versus grid-voltage characteristic.

anode current surface (*Thermionics*). A surface geometrically relating the anode current to the potential of two electrodes, usually the anode and grid, of a multi-electrode tube. The z, or vertical co-ordinate, represents the anode current, whilst the x and y co-ordinates represent the grid and anode voltages.

anode dissipation (*Thermionics*). Generally, the energy produced at the anode of a thermionic tube and wasted as heat owing to the bombardment by electrons: specifically, the maximum permissible power which may be dissipated at the anode.

anode drop (*Thermionics*). The component of the anode-to-cathode potential difference in a gas-filled discharge tube which is independent of the anode current.

anode effect (*Elec. Eng.*). A term used in electrolysis to denote the sudden drop in current due to the formation of a film of gas on the surface of the anode.

anode impedance (*Thermionics*). A term frequently misapplied to differential anode resistance. Strictly, it is the complex AC impedance between anode and cathode of a thermionic tube, including the interelectrode capacitance paths and the effects of electronic inertia.

anode modulation (*Radio*). A system of modulation wherein the amplitude of the alternating component of anode current is varied in accordance with the anode-circuit supply-voltage.

anode mud (*Met.*). See **anode slime.**

anode rectification (*Radio, Thermionics*). Another name for *anode bend rectification* (q.v.).

anode resistance (*Thermionics*). The anode potential divided by the anode current: frequently, though incorrectly, applied to *differential anode resistance.*

anode slime, anode mud (*Met.*). The insoluble residue left on the anode in electrolytic refining. In copper refining, this slime contains the precious metals which are recovered from it.

anode slope conductance (*Thermionics*). Another name for *differential anode conductance* (q.v.)

anode slope resistance (*Thermionics*). Another name for *differential anode resistance* (q.v.)

anode tap (*Radio*). A tapping point on the inductance coil of a tuned-anode circuit, to which the anode is connected. The position of the tap is adjusted so that the tube operates into the optimum impedance.

anodic etching (*Elec. Eng.*). A method of preparing metals for electrodeposition by making them the anode in a suitable electrolyte and at a suitable current-density.

anodic oxidation (*Elec. Eng., Met.*). A process whereby a hard, non-corroding oxide film is deposited on aluminium or light alloys. The aluminium is made the anode in an electrolytic cell containing chromic or sulphuric acid. Also called ANODISING OR ANODIC TREATMENT.

anodon'tia. Absence of teeth.

anoestrus, —ēs'trus (*Zool.*). In Mammals, a resting stage of the oestrus cycle occurring between successive heat periods.

an'olyte (*Elec. Eng.*). That portion of the electrolyte of an electrolytic cell which is in the immediate neighbourhood of the anode.

anomalis'tic month (*Astron.*). The interval (amounting to 27·55455 days) between two successive passages of the moon in her orbit through perigee.

anomalistic year (*Astron.*). The interval (equal to 365·25964 mean solar days) between two successive passages of the sun, in its apparent motion, through perigee.

anomalous dispersion (*Light*). The type of dispersion given by a medium having a strong absorption band, the value of the refractive index being abnormally high on the longer wave side of the band, and abnormally low on the other side. In the spectrum produced by a prism made of such a substance the colours are, therefore, not in their normal order.

anomalous magnetisation (*Elec. Eng.*). An irregular distribution of magnetisation in which consequent poles exist as well as two main poles.

anomaly. Any departure from the strict characteristics of the type.

anomaly (*Astron.*). The name originally used for any periodic inequality in orbital motion, but now restricted to mean the angle between the radius vector and the apse line in elliptic orbits.

anom'eris'tic (*Zool.*). (Of metameric animals) having an indefinite number of somites.

an'omite (*Min.*). A form of biotite, identical with the latter in all characters but optical orientation.

ano'motagmo'sis (*Zool.*). In metameric animals, the formation of definite regions (*tagmata*) by the differentiation of an indefinite number of somites.

Anoplu'ra (*Zool.*). An order of small parasitic *Exopterygota* without wings; eyes are reduced or absent; the antennae are short, as are also the legs, which have one or two jointed tarsi adapted for clinging to the host; anal cerci are lacking; the mouthparts are adapted either for biting, or for piercing and sucking; all are ectoparasites of Birds and Mammals. Biting Lice, Bird Lice, Sucking Lice.

anorex'ia (*Med.*). Loss of appetite.

anorexia nervo'sa (*Med.*). A condition in which loss of appetite from emotional disturbance leads to marked wasting.

anor'thic system (*Crystal.*). A style of crystal architecture now commonly termed *triclinic system* (q.v.).

anor'thite (*Min.*). The lime-rich end-member of the plagioclase group of minerals; silicate of calcium and aluminium, occurring in some basic igneous rocks, typically in those produced by the contact metamorphism of impure calcareous sediments. Also called INDIANITE.

anor'thoclase (*Min.*). A cryptoperthitic soda-potash feldspar, characterised by a blue play of colour in the hand specimen; occurs typically in the soda-syenite, laurvigite, from S. Norway, which is largely used for facing buildings in this country and elsewhere.

anor'thosite (*Geol.*). A coarse-grained rock, derived from gabbroic magma, consisting almost exclusively of plagioclase, near labradorite in composition. Rare in Britain; but important in certain areas of Pre-Cambrian rocks, e.g. the Canadian Shield.

anosmat'ic (*Zool.*). Lacking the sense of smell.

anos'mia (*Med.*). Loss of the sense of smell.

Anos'traca (*Zool*). An order of mainly fresh-water *Branchiopoda* with an elongate body; the carapace is absent, the paired eyes are stalked, and the second antennae are prehensile in the male and reduced in the female; there are numerous pairs of trunk limbs; long unjointed caudal furca. Fairy Shrimps, Brine Shrimps.

anox'ia, anoxae'mia, anoxe'mia (*Med., Zool.*). Deficiency of oxygen in the blood: any condition of insufficient oxygen supply to the tissues: any condition which retards oxidation processes in the tissues.

anox'ybio'sis (*Zool.*). Starvation in the absence of oxygen.

Anser'iifor'mes (*Zool.*). An order of *Pelargomorphae* having a desmognathous palate and webbed feet. The members of this order are unusual in the possession of an evaginable penis; they are all aquatic forms, living on the animals found living in the mud at the bottom of shallow waters and in marshes; some are powerful fliers. Geese, Ducks, Screamers, Swans.

answer print (*Cinema.*). The first print from the edited negative, shown to the producers of the sound-film for final approval before release.

answering jack (*Teleph.*). The jack into which an A-operator inserts the answering cord of a cord circuit, to ascertain the requirements of a calling subscriber.

anta (*Build.*). A square pilaster placed at either side of a doorway or the corner of a flank wall.—*pl.* **antae.**

anta-cap (*Build.*). The capital or top of an anta.—*pl.* **antae-caps.**

antagonising screws (*Surv.*). See **clip screws.**

antagonism (*Bot.*). (1) The interactions of micro-organisms, checking the development of parasites in higher plants.—(2) The power of one toxic salt to diminish or eliminate the toxic effect of another.

antagonist (*Physiol.*). A muscle which opposes the action of another muscle.

antagonistic symbiosis (*Bot.*). The parasitism of one lichen upon another.

antambula'cral (*Zool.*). See **abambulacral.**

antapex, solar (*Astron.*). See **solar antapex.**

Antarctic Circle. The parallel of latitude 66° 33′ S. bounding the region of the earth surrounding the south terrestrial pole, this parallel being the locus of points where the sun touches the horizon but does not set at the winter solstice.

Antarctic Ocean. The ocean surrounding the South Pole, within the Antarctic Circle.

antarticular'e (*Zool.*). In *Vertebrata*, a membrane bone of the lower jaw lying inside and below the angulare, with which it usually fuses. Also DERMATICULARE, GONIALE.

ante- (Latin *ante*, before). A prefix used in the construction of compound terms; e.g. *antebrachium* (q.v.).

antebra'chium (*Zool.*). The region between the brachium and the carpus in land Vertebrates; the fore-arm.

antecedent genom (*Bot.*). The condition of the genom when it plays the principal part in determining inheritance.

antechamber (*Eng.*). A small auxiliary combustion-chamber, used in some oil-engines, in which partial combustion of the fuel is used to force the burning mixture into the cylinder, so promoting more perfect combustion. See **pre-combustion chamber.**

anteclyp'eus (*Zool.*). In *Insecta* which have the clypeus divided by a transverse suture, the anterior portion.

antecox'al piece (*Zool.*). In *Insecta*, a sclerite lying between the trochantin and the precoxal bridge, or between the trochantin and the episternum: a sclerite differentiated laterally from that portion of the clypeus which carries the process articulating with the mandible of its side.

antecu'bital (*Zool.*). In front of the elbow.

antedor'sal (*Zool.*). (In Fish) situated in front of the dorsal fin.

antefix'ae (*Build.*). Ornaments placed at the eaves and cornices of ancient buildings to hide the ends of the roof tiles; sometimes perforated to convey water away from the roof.

an'tefrons (*Zool.*). In certain *Insecta*, that part of the frons anterior to a line joining the bases of the antennae.

antenna (*Radio*). An elevated and/or extended system of conductors used for the transmission and/or reception of electromagnetic waves.—*pl.* **antennae.** Also called AERIAL (q.v.).

antenna (*Zool.*). In *Arthropoda*, one of a pair of anterior appendages, normally many-jointed and of sensory function: in certain Fish of the order *Pediculati*, the elongate first dorsal fin-ray, which bears terminally a skinny flap, used by the fish to attract prey.—*pl.* **antennae.**—*adjs.* **antennary, antennal.**

antenna array (*Radio*). A group of two or more antennae spatially arranged to have particular directional radiating and/or receiving properties.

antenna changeover switch (*Radio*). A switch used for transferring an antenna from the transmitting to the receiving equipment, and vice versa.

antenna downlead (*Radio*). A wire running from the elevated horizontal roof of an antenna down to the transmitting or receiving equipment.

antenna earthing switch (*Radio*). A switch used for disconnecting the antenna from the transmitting or receiving apparatus and connecting it directly to earth, as a protection against lightning.

antenna effect (*Radio*). The action of a loop antenna in picking up signals from directions in which it is not normally responsive, due to asymmetrical distribution of capacitance to earth.

antenna shortening condenser (*Radio*). A condenser connected in series with an antenna operated at a frequency higher than its first natural frequency, so as to lower the impedance between the base of the antenna and earth.

antenna system (*Radio*). The whole of the equipment of a radio transmitter or receiver associated with the antenna-to-earth circuit.

anten'nule (*Zool.*). A small antenna: in some *Arthropoda* (as the *Crustacea*) which possess two pairs of antennae, one of the first pair.

antepet'alous, antipet'alous (*Bot.*). Inserted opposite to the petals.

anteposition (*Bot.*). Situation opposite, and not alternate to, another plant member.

anterior (*Bot.*). (1) The side of a flower next to the bract, or facing the bract.—(2) That end of a motile organism which goes first during locomotion.

anterior (*Zool.*). In animals in which cephalisation has occurred, nearer the front or cephalad end of the longitudinal axis: in human anatomy, ventral.

antero- (Latin *anterior*, former). A prefix used in the construction of compound terms; e.g. *antero-lateral*, in front at the side.

antesep'alous, antisep'alous (*Bot.*). Inserted opposite to the sepals.

ante-sola'rium (*Build.*). A balcony which faces the sun.

ante-venna (*Build.*). An awning to provide shade.

anthelion, ant-hē'li-on (*Meteor.*). A mock sun appearing at a point in the sky opposite to and at the same altitude as the sun. It is probable that the phenomenon is caused by the reflection of sunlight by ice crystals.

anthelmin'thic, anthelmin'tic (*Med.*). Destructive to intestinal worms: a drug used against intestinal worms.

anther (*Bot.*). The fertile part of a stamen, usually containing four sporangia, and producing pollen.

antherid'iophore, antherid'ial receptacle (*Bot.*). A special branch bearing one or more antheridia.

antherid'ium (*Bot.*). The gametangium which produces the male gametes in lower plants.—(*Zool.*) In certain flagellate *Protozoa*, a cluster of microgametes.—*pl.* **antheridia.**—*adj.* **antheridial.**

antherozoid, —zō'id (*Bot.*). A motile male gamete, spermatozoid, or sperm.—(*Zool.*) A microgamete occurring in an *antheridium* (q.v.).

anthe'sis (*Bot.*). The opening of a flower bud: by extension, the duration of life of any one flower, from the opening of the bud to the setting of fruit.

an'thocarp (*Bot.*). A fruit consisting of the ripened ovary and its seeds, together with the persistent perianth or other parts of the flower.

anthocaul'is (*Zool.*). In certain *Anthozoa*, such as *Fungia*, the pedicle formed by the rest of the trophozooid after the specialisation of the anthocyathus.

Anthocerotales, —ser-ō-tā'lēz (*Bot.*). A small alliance of *Hepaticae* with a disc-shaped thallus, endogenously formed antheridia, and sporogonia which grow for some time, ripen spores in succession, and have stomata in their walls.

anthocy'anins (*Bot., Chem.*). The water-soluble colouring matters of many plants and flowers, of glucoside structure.

anthocya'thus (*Zool.*). In certain *Anthozoa*, such as *Fungia*, the free discoid adult, formed by the expansion of the upper part of the calycle of the trophozooid.

anthogen'esis (*Zool.*). A form of parthenogenesis in which both males and females are produced by asexual forms, as in some *Aphidae*.

anthoid (*Bot.*). Looking like a flower.

Anthomedu'sae (*Zool.*). The medusoid persons of the members of the order *Gymnoblastea* (q.v.), which lack otocysts, but may possess ocelli, and in which the gonads are situated on the manubrium.

anthoph'ilous (*Zool.*). Flower-loving: feeding on flowers.

an'thophore (*Bot.*). An elongation of the floral receptacle between the calyx and corolla.

anthophyl'lite (*Min.*). An orthorhombic amphibole of grey-brown colour, usually massive, and normally occurring in metamorphic rocks; a metasilicate of magnesium and iron.

Anthophy'ta (*Bot.*). See **Phanerogamae.**

anthoxanthin, —zan'thin (*Bot.*). Yellow pigment in flowers.

Anthozo'a (*Zool.*). A class of *Cnidaria* in which alternation of generations does not occur, the medusoid phase being entirely suppressed; the polyps possess gastral ridges and filaments and a stomodaeal tube, and may be solitary or colonial; the gonads are of endodermal origin.

anth'racene (*Chem.*). $C_{14}H_{10}$, colourless, blue-fluorescent crystals, m.p. 213° C., b.p. 351° C., a valuable raw material for dyestuffs obtained from the fraction of coal-tar boiling above 270° C. Anthracene is representative of a group of polycyclic compounds having a series of three benzene rings condensed together.

anthracene oil (*Chem.*). A coal-tar fraction boiling above 270° C., consisting of anthracene, phenanthrene, chrysene, carbazole, and other hydrocarbon oils.

an'thraci'ny (*Bot.*). The breakdown of organic material by fungi, and the further transformation of the results by passage through the alimentary canals of insects and worms, giving a dark-coloured soil.

anthracite coals (*Fuels*). These are slow-burning, yield very little ash, moisture, and volatiles; generally used in closed stoves, calorific value per pound, about 14,900 B.Th.U.

anthracite stove (*Build.*). A stove (for domestic heating purposes) which is specially made for the combustion of anthracite. Such stoves are usually of the closed-in type and have the advantage of being economical in use, and of keeping their fires 'in' for long periods with very little attention.

anthraco'sis (*Med.*). 'Coal-miners' lung,' produced by inhalation of coal dust.

anthrafla'vine (*Chem.*). An anthraquinone vat dyestuff, which dyes cotton greenish-yellow, obtained by heating β-methylanthraquinone with alcoholic potash at 150° C.

an'thranil (*Chem.*). The intramolecular anhydride of anthranilic acid (*o*-amino-benzoic acid), intermediate in the synthesis of indigo.

anthranil'ic acid (*Chem.*). $C_6H_4(COOH)\cdot NH_2$, *o*-amino-benzoic acid, obtained from phthalimide by the Hofmann reaction, an oxidation product of indigo.

an'thranol (*Chem.*). γ-Hydroxy-anthracene.

an'thraquinone' (*Chem.*). $C_6H_4(CO)_2C_6H_4$, yellow needles or prisms, which sublime easily, m.p. 285° C., b.p. 382° C. Synonym: diphenylene diketone, which name also signifies its closer relation to diketones than to quinones. Obtained by the oxidation of anthracene with sulphuric acid and chromic acid. Parent substance of an important group of dyes, including alizarin.

anthrax (*Med.*). An acute infective disease caused by the anthrax bacillus, communicable from animals to man. See also **woolsorter's disease.**

an'thropogen'ic climax (*Bot.*). A climax of vegetation produced under the influence of human activity.

an'thropoid (*Zool.*). Resembling Man: pertaining to, or having the characteristics of, the *Anthropoidea*.

an'thropophyte (*Bot.*). A plant introduced incidentally in the course of cultivation.

anthropot'omy. See **anatomy.**

anti- (Greek *anti*, against). A prefix used in the construction of compound terms; e.g. *antitrochanter, antiperistaltic* (qq.v.).

***anti*-albumoses** (*Chem.*). Decomposition products of albuminous matter produced by the action of the enzyme pepsin.

***anti*-aldoximes** (*Chem.*). The stereoisomeric form of aldoximes in which the H and the OH groups are far removed from each other.

an'tiae (*Zool.*). In some Birds, feathers at the base of the bill-ridge.

antibody (*Bot.*). A substance produced in a living cell in response to the attack of a parasite, and acting as a deterrent to the parasite.—(*Med.*) Any substance which, formed in the body and liberated into the blood, is antagonistic to invading organisms or their products. See **antigen.**

an'tical (*Bot.*). The upper surface of a thallus, stem, or leaf.

anti-capacity switch (*Radio*). A switch designed to have very little capacitance between the terminals when in the open condition.

anti-catalyst (*Chem.*). See **catalytic poison.**

anticathode (*Phys., Radiol.*). The anode target of an X-ray tube on which the cathode rays are focused, and from which the X-rays are emitted.

ant'icer (*Aero.*). Any means, whether fluid, paste, or a mechanical or pneumatic device, which prevents the formation of ice on aircraft surfaces, especially leading wing edges, or which dislodges ice when formed; in the latter case more properly termed a *de-icer*.

anticli'nal (*Zool.*). In *Primates*, pertaining to one of the thoracic vertebrae, which has an upright spine towards which the others incline, and which is situated at the centre of motion of the vertebral column.

anticlinal wall (*Bot.*). A wall perpendicular to the surface of a growing point.

anticline (*Geol.*). A type of fold, comparable with an arch, the strata dipping outwards, away from the fold-axis.

anticoagulin, —kō-ag'ū-lin (*Zool.*). Any substance which causes drawn blood to remain liquid instead of coagulating.

anti-coherer (*Radio*). See **decoherer.**

an'ticous (*Bot.*). Placed on the anterior side of an organ.

anticryp'tic coloration (*Zool.*). Resemblance to surroundings, in order to facilitate attack.

anticy'clone (*Meteor.*). A distribution of atmospheric pressure in which the pressure increases towards the centre. Winds in such a system circulate in a clockwise direction in the northern hemisphere and in a counterclockwise direction in the southern hemisphere. Anticyclones give rise to fine, calm weather conditions, although in winter fog is likely to develop.

anti-dazzle device (*Automobiles*). A means of preventing headlamps from dazzling oncoming traffic; e.g, the use of flat-topped beams, special lenses, or momentary dipping of lamp or reflector.

***anti*-diazo compounds** (*Chem.*). The stereoisomeric form of diazo compounds in which the groups attached to the nitrogen atoms are far removed from each other.

an'tidro'my (*Bot.*). Left- and right-hand twining in the same species of plant.

anti-enzymes (*Chem.*). The antibodies of enzymes, which neutralise the action of an enzyme; e.g. the autodigestion of the stomach is prevented by the presence of antiproteases in the walls of the stomach.

Antifebrin (*Chem.*). *Acetanilide* (q.v.), used in therapeutics against fever.

anti-flood and tidal valve (*San. Eng.*). A valve consisting of a cast-iron box containing a floating ball, fitted near a drain outlet in order to prevent back flow.

anti-fouling composition (*Civ. Eng., etc.*). A substance applied in paint form to ships' bottoms and structures subject to the action of sea water, in order to discourage marine growths.

anti-friction bearing (*Eng.*). A bearing in which special means (such as the use of narrow wheels or rollers to support the shaft) are adopted to reduce frictional drag.

anti-friction metal (*Met.*). See **white metal.**

an'tigen (*Med.*). Any toxin, bacterium, or other animal or vegetable substance which, introduced into the body, gives rise to an antibody.

antigeny, —tij'en-i (*Zool.*). Sexual dimorphism: secondary sexual differences.—*adj.* **antigen'ic.**

antig'orite (*Min.*). A bladed form of the mineral serpentine, the type locality being the Antigorio Valley, Piedmont.

anti-halation (*Photog.*). The use of backing to reduce halation in plates or films.

anti-incrustator (*Eng.*). A substance used to prevent the formation of scale on the internal surfaces of steam boilers.

anti-knock substances (*I.C. Engs.*). Substances added to petrol in order to lessen its tendency to detonate, or 'knock,' in an engine; e.g. lead tetra-ethyl.

anti-knock value (*I.C. Engs.*). The relative immunity of a volatile liquid fuel from detonation, or 'knocking,' in a petrol engine, as compared with some standard fuel. See **octane number, knock-rating.**

antimere (*Zool.*). See **actinomere.**

antimers (*Chem.*). Optical isomers.

anti-microphonic holder (*Radio*). A thermionic valve holder or base in which the tube is supported on springs or resilient material to reduce the effects of mechanical shock.

antimonial lead (*Min.*). Native lead containing small amounts of antimony and crystallising in the cubic system.

antimo'niates (*Chem.*). The antimonic acids give antimoniates with aqueous solutions of potassium hydroxide.

an'timonite (*Min.*). (1) Stibnite.—(2) Several minerals are antimonites in the chemical sense (e.g. romeite, which is antimonite of calcium).

an'timony (*Met.*). A white metallic element with a bluish tinge; symbol Sb; at. wt. 121·76; at. no. 51; sp. gr. at 20° C., 6·62; m.p. 630° C.; b.p. 1440° C. Specific electrical resistivity, 39 microhms per cm. cub. The native metal occurs either in rhombohedral crystals, or in shapeless masses. Not used in pure condition, but is a constituent of several alloys. See **antimony alloys.**

antimony alloys (*Met.*). Antimony is not used as the basis of important alloys, but it is an essential constituent in type metals, bearing metals (which contain 8-20%), in lead for shrapnel (10%), storage battery plates (4-12%), roofing, gutters, and tank linings (6-12%), cable sheaths, etc.

antimony black. Finely powdered antimony, used to give plaster casts a metallic appearance.

antimony glance (*Min.*). An obsolete name for *stibnite.*

antimony halides (*Chem.*). Antimony trifluoride SbF_3, and pentafluoride SbF_5. Trichloride $SbCl_3$, and pentachloride $SbCl_5$. Tribromide and triodide.

antimony hydrides (*Chem.*). Two hydrides, stibine SbH_3, and the solid dihydride Sb_2H_2. See also **stibine.**

an'timonyl (*Chem.*). The monovalent radical SbO—.

antinode (*Acous.*). In interference between waves of equal frequencies, the location where the resulting disturbance is a maximum, but not necessarily the greatest.—(*Phys.*) A point of maximum amplitude in a system of stationary waves. The antinodes are half a wavelength apart, and are midway between the nodes.—(*Radio*) A maximal point on a spacial distribution curve; e.g. a current *antinode* on an antenna is the point at which the current is a maximum, the voltage being generally a minimum. Strictly, *antinodal point.* Also called LOOP.

an'tinous release (*Photog.*). A flexible camera release-cable in which the action is transmitted by a steel wire passing through steel beads contained in a fabric tube.

anti-parallax (*Photog.*). An arrangement for minimising parallax in beam-splitting cameras by means of inclined glass plates.

antipep'sin (*Chem., Zool.*). An anti-enzyme preventing digestion by the proteases of the digestive juices.

antiperistal'tic (*Zool.*). Said of waves of contraction passing from anus to mouth, along the alimentary canal; cf. *peristaltic.*—*n.* **antiperistal'sis.**

antipleion (*Meteor.*). See under **pleion.**

antipo'dal cells (*Bot.*). Three cells, consisting each of a nucleus and cytoplasm, but unwalled, lying in the embryo sac at the end remote from the micropyle.

anti-polarising winding (*Elec. Comm.*). The winding on a transformer or choke to carry a direct current to neutralise the magnetising effect of another direct current (e.g. the anode current in a valve) in another winding.

anti-priming pipe (*Eng.*). A pipe placed in the steam space of a boiler, so as to collect the steam while excluding entrained water. See **priming** (1).

antiprothrom'bin (*Chem.*). An inhibitor against the activation of prothrombin to thrombin.

Antipyr (*Photog.*). Trade-name of formalin solution, used for hardening gelatines.

antipyret'ic (*Med.*). Counteracting fever: a remedy for fever.

Antipyrine,—pī'rēn (*Chem.*). 1-Phenyl-2,3-dimethylpyrazolone. Colourless crystals, m.p. 113° C. Used in medicine as a febrifuge.

antiquarian (*Paper*). A standard size of drawing paper, 53 x 31 in.

antique (*Paper*). Originally applied to machine-made papers made in imitation of hand-made printings. The term is now used to describe any good rough-surfaced paper which bulks well.

antique (*Typog.*). A bold type-face known as *Antique Roman.* The lines of the letters are almost uniform in thickness, with square corners; e.g. **Antique Roman.**

anti-sag bar (*Struct.*). A vertical rod connecting the main tie of a roof truss to the ridge in order to support it against sagging under its own weight.

antisep'sis (*Med.*). The inhibition of growth, or the destruction, of bacteria in the field of operation by chemical agents: the principle of antiseptic treatment.

antiseptic (*Med.*). Counteracting sepsis or contamination with bacteria: an agent which destroys bacteria or prevents their growth.

anti-side-tone (*Acous.*). The provision in a telephone local circuit of means of reduction of side-tone, generally by an effective electrical bridge. See **side-tone.**

anti-singing device (*Teleph.*). Any arrangement for preventing self-oscillation in a telephone circuit, generally arising from terminal unbalances which establish suitable conditions of attenuation and phase retardation round the system at the frequency of oscillation. See **Vodas.**

antispa'dix (*Zool.*). In *Tetrabranchia*, the smaller of the two parts into which the right inner tentacular lobe is divided, bearing four tentacles.

antispectroscopic lens (*Photog.*). Same as *achromatic lens* (q.v.).

anti-spray film (*Elec. Eng.*). An oil film placed on the surface of accumulator cells to prevent the formation of acid-spray due to the bursting of gas bubbles during the charging process.

antisquam'a (*Zool*). In *Insecta*, when two squamae are present, the one nearest the alula. Also SQUAMA ALARIS, ANTITEGULA.

anti-static antenna (*Radio*). An antenna in which the receptive portion is placed outside the interfering field as much as possible, and is connected to the receiver by screened leads

antistyle (*Zool.*). In *Insecta*, a projection at the base of the stylifer.

antiteg'ula (*Zool.*). See **antisquama.**

antithetic alternation of generations (*Bot.*). That explanation of alternation of generations which states that the two are distinct; the gametophyte represents the primitive aquatic phase, while the sporophyte is secondary, having arisen from the germinating zygote in relation to the migration from an aquatic to a terrestrial habitat.

antithrom'bin (*Chem*). An anti-enzyme, produced by the liver, preventing the intravascular clotting of the blood.

antitox'ins (*Path.*). Substances, produced by the organism, which, by uniting with toxins, prevent their poisonous action.

anti-trades (*Meteor.*). Winds, at a height of 3000 feet or more, which sometimes occur in regions where trade-winds are prevalent, their direction being opposite to that of the trade-winds.

antitrochanter, —trō-kan'ter (*Zool.*). In Birds, the iliac articular surface, opposed to the trochanter of the femur.

antitropic (*Bot.*). Left-handed twisting.

antitro'pous (*Bot.*). See **orthotropous.**

antitryp'sin (*Chem., Zool*). An anti-enzyme preventing digestion by the proteases of the digestive juices. It is present, e.g., in the blood.

antler (*Zool.*). In Deer, an annual outgrowth of bony material from the frontal bone.

ant'lia (*Zool.*). In *Lepidoptera* and other insects, the suctorial proboscis composed of the elongate galeae.

antorb'ital (*Zool.*). In front of the orbit.

antorbital capsule (*Zool.*). In developing Vertebrates, a cartilage arising from the outer side of the orbitosphenoid and separating the orbit from the nasal capsule.

antorbital vacuities (*Zool.*). In developing Vertebrates, gaps between certain of the bones in front of the orbit.

antrorse' (*Zool.*). Directed or bent forward.

antres'tomy (*Med.*). A surgical opening made into the antrum of Highmore.

antrot'omy (*Med.*). A cutting into the antrum of Highmore.

antrum (*Zool.*). A sinus, as the maxillary sinus in Vertebrates: a cavity, as the *antrum of Highmore* (q.v.).—*pl.* **antra.**

antrum of Highmore (*Anat.*). An air-containing cavity in the maxilla which communicates with the nasal cavity.

Anu'ra (*Zool*). See **Salientia.**

anu'ral, anu'rous (*Zool.*). Without a tail: pertaining to the *Anura* (*Salientia*, q.v.).

anu'ria (*Med.*). Suppression of the secretion of urine.

a'nus (*Zool.*). The opening of the alimentary canal by which indigestible residues are voided, generally posterior.—*adj.* **anal.**

anvil (*Anat.*) One of the three small bones (ossicles) which transmit mechanical vibrations between the outer ear drum and the inner ear.

anvil (*Eng*). A block of iron, sometimes steel-faced, on which work is supported during forging.

anvil cloud (*Meteor.*). A common feature of a thundercloud, consisting of a wedge-shaped projection of cloud suggesting the point of an anvil.

anvil cutter, anvil chisel (*Eng.*). A chisel with a square shank for insertion in the hardy hole of a smith's anvil, the cutting edge being uppermost.

anxiety (*Psychol.*). A state of mental apprehension and tension experienced by the ego in the face of impending danger. It may be (*a*) normal (or physiological) in relation to an external danger-situation threatening to cause pain to the ego, or (*b*) neurotic in relation to an internal danger-situation of strong instinctive forces threatening pain to the ego.

anxiety hysteria (*Psycho-an.*). A vague term used to denote a severe state of anxiety, often with hypochondriacal accompaniment and phobias, in which hysterical elements are present. It may also occur when hysteria becomes converted into an anxiety state.

anxiety neurosis (*Psycho-an.*). Originally classed by Freud as one of the true *neuroses* (q.v.), but later included in the psycho-neuroses. The term is used generally to denote a pathological state of anxiety, which is caused by partial failure to repress a strong instinctive force, and which is therefore in close conflict with the conscious aims and ideals of the individual, threatening to undermine these. This state gives rise to feelings of sudden panic, nightmares, etc., with general anxiety symptoms (sweating, starting, palpitation, and excitability).

aor'ta (*Zool.*). In *Arthropoda*, *Mollusca*, and most *Vertebrata*, the principal arterial vessel or vessels by which the blood leaves the heart and passes to the body: in *Amphibia*, the principal artery by which blood passes to the posterior part of the body, formed by the union of the systemic arteries: in Fish (*ventral aorta*), the vessel by which the blood passes from the heart to the gills, and also (*dorsal aorta*) the vessel by which the blood passes from the gills to the body.—*adj.* **aortic.**

aortic arches (*Zool.*). In Vertebrates, a series of pairs of vessels arising from the *ventral aorta*. See **aorta.**

aorti'tis (*Med.*). Inflammation (usually syphilitic) of the aorta.

A.P. (*Surv.*). Abbrev. for *Amsterdamsch Peil* (Amsterdam level), i.e. the datum, or mean level, used as a basis for levels in Holland, Belgium, and North Germany.

A.P. (*Typog.*). An abbrev. for *author's proof.*

A.P. shell (*Ammunition*). See **armour-piercing shell.**

ap-. Prefix. See **a-.**

apand'rous (*Bot.*). Having non-functional male organs, or lacking male organs altogether.

apatet'ic coloration (*Zool.*). Resemblance to some part of the environment, or to the appearance of another species.

ap'atite (*Min.*). Naturally occurring phosphate of calcium, with chloride or fluoride of calcium, occurring widely distributed in igneous rocks in the form of hexagonal crystals, usually of very small size.

ape'rient (*Med.*). A drug having a laxative or purgative effect.

aperiodic (*Acous., Elec., etc.*). Said of any potentially vibrating system, electrical, mechanical, or acoustic, which, because of sufficient damping, does not vibrate when impulsed. Used particularly of the pointers of indicating instruments, which, having no natural period of oscillation, do not oscillate before coming to rest in the final position, and so give their ultimate reading as fast as possible.—*n.* **aperiodicity.**

aperiodic antenna (*Radio*). An antenna in which the response to a wide range of frequencies is approximately constant.

aperiodic regeneration (*Radio*). A form of regeneration employing direct- or battery-coupled amplifiers in which the degree of regeneration is independent of frequency.

aperiodicity (*Acous., Elec., etc.*). See **aperiodic.**

aperture (*Build.*). An opening provided in a wall for a door, a window, an alcove, or for ventilation purposes.

aperture (*Optics*). The diameter of the circular passage for light through a lens The effect of the aperture is measured by the *stop*.
See
angular— focal or working— numerical—*

aperture distortion (*Television*). A form of distortion due to the scanning spot having finite, instead of infinitely small, dimensions

aperture lens (*Television*). An electron lens formed from holes in diaphragms, which are maintained at differing potentials.

aperture plate (*Photog.*). A plate with a circular hole which determines the aperture of a lens.

apertured disc (*Television*). A rotatable disc having a number of similar apertures arranged in the form of a spiral near the periphery, used for mechanical scanning.

Apet'alae (*Bot.*). See **Incompletae.**

apet'alous (*Bot.*). Devoid of petals.

apet'aly (*Bot.*). Absence of petals.

apex. The top or pointed end of anything.—(*Anat.*) Said of the root of a tooth, of the top of the upper lobe of a lung, or of the rounded end of the left ventricle of the heart.—(*Bot.*) The end of an organ remote from the point of attachment: the tip of a root or stem.

apex (*Mining*). The 'outcrop' (exposure) or upper edge of a vein reef or lode.

apex beat (*Anat.*). The point below the left nipple where the heart beat is visible and palpable.

apex law (*Mining*). The law entitling the discoverer of an outcrop or exposure of ore to mine its complete extension in depth.

apex, solar (*Astron.*). See **solar apex.**

apex stone (*Build.*). A triangular stone at the summit of a gable wall. It is often decorated with a carved trefoil.

apha'kia, apha'cia (*Med.*). The condition of the eye when the lens has been removed.

aphanip'terous (*Zool.*). Apparently lacking wings.

aphap'totro'pism (*Bot.*). The condition of not reacting to contact stimulus.

apha'sia (*Med.*). Loss of, or defect in, the faculty of expressing thought in words, due to a lesion in the brain.

aphelion, af-ē'li-on (*Astron.*). The point farthest from the sun on the apse line of a central orbit having the sun as a focus.—*pl.* **aphelia.**

apheliotro'pic (*Bot., Zool.*). See **aphototropic.**

aphen'goscope (*Photog.*). An early version of the epidiascope.

aphle'bia (*Bot.*). A lateral outgrowth from the base of the leaf stalk of some fossil ferns, and of a few living ferns.

aph'odus (*Zool.*). In *Porifera*, the opening from a flagellated chamber to an ex-current canal, when it is drawn out into a tube.—*adj.* **aphodal.**

aphonia (*Med.*). Loss of voice in hysteria, or in paralysis of the vocal cords, or in laryngitis.

apho'tic (*Bot.*). Able to grow with little or no light.

apho'tomet'ric (*Bot.*). (1) (Of a leaf) not reacting to light.—(2) (Of a motile organism) always directing the same end towards the light.

aphototac'tic (*Bot.*). Not moving in response to the light intensity.

aphototro'pic (*Bot.*). Growing away from light.—(*Zool.*) Responding actively but negatively to light stimulus. (This is a better term than *apheliotropic*, which means, strictly, growing away from the sun.)—*n.* **aphototro'pism.**

aph'tha (*Med.*). A small grey ulcer in the mouth.—*pl.* **aphthae.**

aphthous fever (*Vet.*). See **foot-and-mouth disease.**

aphyl'lous (*Bot.*). Devoid of leaves.

a'pical. Relating to, pertaining to, or situated at, the apex.

apical body (*Zool.*). See **acrosome.**

apical cell (*Bot.*). A cell at the end of a filament or of a multicellular organ, capable of repeated division, and yielding a progeny of cells from which the tissues of the organ are ultimately derived.

apical cells (*Zool.*). In some *Invertebrata*, e.g. the Limpet (*Patella*), during cleavage of the ovum, a quartette of small cells at the apex of the egg, namely, $1a^{\cdots}$, $1b^{\cdots}$, $1c^{\cdots}$, and $1d^{\cdots}$.

apical growth (*Bot.*). The elongation of a hypha by continued growth at the apex only; this is the normal condition in fungi.

apical mer'istem (*Bot.*). A group of meristematic cells at the tip of a stem or root; from it, all the tissues of the mature axis are ultimately formed.

apical nervous system (*Zool.*). In *Echinodermata*, nerves of mesodermal origin, developed from the peritoneum on the aboral side.

apical organ (*Zool.*). In some Polyzoan larvae, a thickening of ectoderm just below the apex, usually including sensory cells.

apical placentation (*Bot.*). The condition in which the ovule or ovules is/are inserted at the top of the ovary.

apical plate (*Zool.*). In various pelagic larval forms, such as trochophores, tornariae, echinoplutei, and larvae of some *Podaxonia* and *Crinoidea*, an aggregation of columnar ectoderm cells at the apical pole, usually bearing cilia.

apical rosette (*Zool.*). See **apical cells.**

apical sense organ (*Zool.*). In *Ctenophora*, an elaborate sensory structure formed of small otoliths united into a morula, supported on four pillars of fused cilia and covered by a roof of fused cilia.

apical string (*Zool.*). In tornariae, the solidified anterior prolongation of a coelomic sac connecting the apical plate with the proboscis-coelom and the oesophagus.

apicol'ysis (*Surg.*). An operation for compressing or collapsing the apex of the lung; as in the treatment of pulmonary tuberculosis.

apic'ulate (*Bot.*). Ending in a short, sharp point.

apic'ulus (*Bot.*). A short, sharp, and usually somewhat hard point, formed by the prolongation of a vein.

apiculus (*Zool.*). In some *Protozoa*, a minute apical termination.

Apjohn's formula (*Phys.*). A formula which may be used for determining the pressure of water vapour in the air from readings of the wet and dry bulb hygrometer. The formula is:

$$p_t = p_w - 0{\cdot}00075H(t-t_w)[1-{\cdot}008(t-t_w)],$$

where p_w is the saturated vapour pressure at the temperature (t_w) of the wet bulb, H is the barometric height, and t is the temperature of the dry bulb.

a'placen'tal (*Zool.*). Without a placenta.

Aplacoph'ora (*Zool.*). A subclass of worm-like marine *Amphineura* with a vestigial foot; a shell is lacking, but the mantle invests the whole body and often bears calcareous spicules; the branchiae, if present, form a circlet round the cloaca; some forms are found crawling over corals and hydroids on which they feed, while others occur on muddy bottoms and feed on Diatoms and Protozoa.

aplanat'ic (*Optics*). Said of an optical system which produces an image free from spherical aberration.

aplanatic points (*Photog.*). Special points for object and image where a lens or mirror is effectively aplanatic, while not being generally so.

apla'nogamete, —ga'mēt (*Bot.*, *Zool*). A non-motile gamete.

apla'nospore (*Bot.*). A non-motile spore.

apla'sia (*Med.*). Defective structural development

aplite or **haplite** (*Geol.*). A fine-textured, light-coloured igneous rock, in which coloured minerals are largely suppressed. Represents a magmatic residuum, and occurs as veins in intrusive rocks. Variously named according to the nature of the parent magma; e.g. *granite-aplite*, *syenite-aplite*, etc.

apneu'sis (*Physiol.*). Want of oxygen.

apneustic, ap-nū'stik (*Zool.*). Respiring either by means of the general integument, or by gills. having spiracles closed or absent.

apneustic centre (*Zool.*). In the higher Vertebrates, that part of the brain which controls the inflation of the lungs.

apnoe'a (*Zool.*). In forms with pulmonary respiration, cessation of respiratory movements, due to diminution of carbon dioxide tension in the alveolar air.

apo- (Greek *apo*, away). A prefix used in the construction of compound terms; e.g. *apopetalous*, *aposematic* (qq.v.).

apoatropine, ap-ō-at'— (*Chem.*). An alkaloid of the tropane series, obtained from atropine by dehydration and identical with the naturally occurring atropamine.

apocar'pous (*Bot.*). Consisting of two or more carpels, all distinct from one another.

apochromat'ic (*Optics*). Said of a microscope objective in which spherical and chromatic aberrations have been corrected with the greatest possible completeness.

ap'ocyte, apocy'tium (*Bot.*). A mass of multinucleate protoplasm not divided up by cell walls.

Apo'da (*Zool.*). (1) An order of *Amphibia* having a cylindrical snake-like body without limbs, reduced eyes, and an anterior sensory tentacle; burrowing forms, living near water and feeding chiefly upon earthworms. Caecilians.—(2) An order of *Cirripedia* comprising a minute vermiform animal occurring as a parasite in the mantle-cavity of other Cirripedes; it lacks a mantle and has no trunk appendages; hermaphrodite; found in West-Indian waters.

apo'dal, apo'dous (*Zool.*). Without feet: without locomotor appendages.

ap'odeme (*Zool.*). In *Arthropoda*, an ingrowth of the cuticle forming an internal skeleton and serving for the insertion of muscles: in *Insecta*, more particularly, an internal lateral chitinous process of the thorax.

Apo'des (*Zool.*). An order of *Neopterygii*, having a snake-like body without a separate caudal fin; scales are vestigial or absent; there are no pelvic fins. Eels.

ap'ogamy (*Bot.*). Loss of sexual function without the suppression of the normal products of a sexual act.—*adj.* **apog'amous.**

ap'ogee (*Astron.*). The point farthest from the earth on the apse line of a central orbit having the earth as a focus.

ap'ogeny (*Bot.*). Sterility.

ap'ogeotro'pism (*Zool.*). An active but negative response to the stimulus of gravity, as the young of Gossamer Spiders.

ap'ogy'ny (*Bot.*). Sterility in the female organs.

apomecom'eter (*Surv.*). An instrument, embodying features found in the *optical square* and the *sextant* (qq.v.), which may be used to measure the height of buildings, trees, etc. It works on the principle of reflecting rays from the top and bottom of the building (for example) and bringing them to a coincidence, when the distance of the instrument from the foot of the building will be equal to the height of the building.

apomix'is (*Bot.*). The absence of a sexual fusion: apogamy.

apomor'phine (*Chem.*). An alkaloid of the morphine series, obtained from morphine by dehydration. It is not a narcotic, but is an expectorant and emetic.

apon'euro'sis (*Zool.*). A muscle-tendon forming a broad flat sheet, which may occur not only at the end but also in the middle of a muscle.

apopet'alous (*Bot.*). Lacking petals.

apophyge, a-pof'i-jē (*Build.*). A concave moulding forming the highest member of the base of a column.

apophyl'lite (*Min.*) A secondary mineral occurring with the zeolites in geodes in decomposed basalts and other igneous rocks. Composition: hydrated silicate of potassium and calcium. Also called FISH-EYE (q.v.).

apophy'sate (*Bot.*). Possessing an apophysis.

apoph'ysis, *or* a-pof-ī'zis (*Bot.*). (1) The swollen distal end of the seta beneath a moss sporangium.—(2) An enlargement of the distal end of the scale of a pine cone.—(3) A swelling on a fungal hypha beneath a sporangium or other reproductive structure.

apophysis (*Geol.*). A vein-like offshoot from an igneous intrusion.

apophysis (*Zool.*). In *Vertebrata*, a process from a bone, usually for muscle attachment: in *Insecta*, a ventral chitinous ingrowth of the thorax for muscle insertion.

ap'oplexy (*Med.*). Sudden loss of consciousness and paralysis as a result of haemorrhage into the brain or of thrombosis of a cerebral artery.

ap'opyle (*Zool.*). In *Porifera*, the opening by which water escapes from a flagellated chamber.

apor'ogamy (*Bot.*). The entrance of the pollen tube into the ovule by a path other than through the micropyle.

aposemat'ic coloration (*Zool.*). Warning coloration, such as the gaudy colours of some stinging insects.

ap'osporog'ony (*Zool.*). In certain *Sporozoa*, the suppression of sporogony in the life-cycle.

ap'ospor'y (*Bot.*). The elimination of spore formation from the life-history, and the formation of the gametophyte from vegetative tissues and not from a spore.

apos'trophe (*Bot.*). The position assumed by chloroplasts in bright light, when they lie against the radial walls of the cells of the palisade layer.

apothe'cium (*Bot.*). An open, cup-shaped fructification, or a club-shaped derivative from it, producing ascospores; occurs in *Discomycetes* and *Discolichenes*.

ap'otro'pous (*Bot.*). The condition of an anatropous ovule with a ventral raphe.

Appala'chian revolution (*Geol.*). A period of intense mountain-building movements in post-Permian, pre-Triassic times during which the deposits in the Appalachian and Cordilleran geosynclines were folded to form the Appalachian and Palaeocordilleran mountains. Equivalent to, but later than, the Armorican and Hercynian movements in Europe.

apparat'o reticulare (*Zool.*). See **Golgi apparatus.**

apparatus rack (*Teleg.*, *Teleph.*). In telephone manual and automatic exchanges and telegraph stations, a steel structure on which large quantities of similar apparatus are uniformly mounted.

apparatus room (*Auto. Teleph.*). The room in which the automatic telephone switching apparatus is collected together and mounted on racks.

apparent altitude (*Astron.*, *Surv.*). The *altitude* (q.v.) of (usually) a heavenly body as directly observed instrumentally.

apparent depression of horizon (*Astron.*, *Surv.*). See **dip of the horizon.**

apparent expansion, coefficient of (*Phys*). The value of the coefficient of expansion of a liquid which is obtained by means of a dilatometer if the expansion of the dilatometer is neglected. It is equal to the difference between the true coefficient of expansion of the liquid and the coefficient of cubical expansion of the dilatometer.

apparent horizon (*Surv.*). See **visible horizon.**

apparent magnitude (*Astron*). See **magnitudes.**

apparent power (*Elec. Eng.*). A term occasionally used to denote the volt-amperes (i.e. the product of volts and amperes) in an a.c. circuit.

apparent resistance (*Elec. Eng.*). See **impedance.**

apparent solar day (*Astron.*). See **day.**

apparent solar time (*Astron.*). The hour angle, at any moment, of the *true*, or *apparent, sun* as distinguished from the *mean sun*. Apparent noon, for example, is the instant of the meridian transit of the true sun, and an apparent solar day the interval, not uniform, between two such transits. Sundials read apparent solar time.

appearing (*Typog*). A term referring to the length of the actual printed matter on a page, exclusive of white space.

appendage (*Bot.*). A general term for any external outgrowth which does not appear essential to the growth or reproduction of the plant.

appendage (*Zool.*). A projection of the trunk, as the parapodia and tentacles of *Polychaeta*, the sensory tentacle in *Apoda*, the fins of Fish, and the limbs of land Vertebrates: in *Arthropoda*, almost exclusively one of the paired, metamerically arranged, jointed structures with sensory, masticatory or locomotor function, but also used for the wings of *Insecta*.

appendicec'tomy, appendec'tomy (*Surg.*). The surgical removal of the appendix vermiformis.

appendici'tis (*Med.*). Inflammation of the appendix vermiformis.

appendicled (*Bot.*). Bearing small appendages.

appendicos'tomy (*Surg.*). An artificial opening in the appendix through which the bowel may be irrigated: the operation for making this opening.

appendic'ular (*Zool.*). Pertaining to, or situated on, an appendage.

appendicula'ria larva (*Zool.*). See **Ascidian tadpole.**

appendic'ulate (*Bot.*). (1) Bearing appendages.—(2) Retaining fragments of the veil.—(3) Having outgrowths at the throat of the corolla.

appendix (*Zool.*). An outgrowth.

appendix interna (*Zool.*). In *Leptostraca*, *Euphausiacea*, and some *Decapoda*, a process from the base of the inner margin of the pleopods.

appendix vermifor'mis (*Anat.*, *Zool.*). In some *Mammalia*, the distal rudiment of the caecum of the intestine, which in Man is a narrow, blind tube of gut from one to nine inches in length.

appla'nate (*Bot.*). Horizontally expanded.

applaus'eograph (*Acous.*). A recording noise-meter, suitable for recording applause or laughter in a theatre; used for assessing the value of a performance.

apple (*Cinema.*). Colloquialism for a thermionic valve for use in an audio-frequency amplifier.

Applecross Series (*Geol.*). The middle division of the Torridonian or Torridon Sandstone, the youngest Pre-Cambrian rocks in the N.W. Highlands. Consist of coarse-grained feldspathic sandstones (arkoses).

Appleton layer (*Radio*). One of the family of ionised regions in the upper atmosphere which acts as a reflector of radio waves. Frequently called the F-LAYER (q.v.).

applied (*Bot.*). Lying upon another member by a flat surface.

applied power (*Elec. Comm.*). The power applied to an electrical transducer is not equal to the actual power received, because of the reflection of power arising from non-equality of impedance matching. The *applied power* is the power which would be received if the load matched the source in impedance.

applied pressure (*Elec. Eng.*). The potential difference which is applied between the terminals of an electric circuit.

appliqué, a-plē-kā' (*Textiles*). (1) Ornament attached to the surface of a fabric.—(2) A lace in which the body and the design are made separately.

apposition (*Bot.*). The growth in thickness of the cell wall by the deposition of successive laminae of wall material.

apposition image (*Zool.*). See **mosaic image.**

appressor'ium (*Bot.*). (1) A flattened outgrowth which attaches a parasite to its host.—(2) A modified hypha closely applied to the surface of the host and facilitating the entry of a parasitic fungus into a plant cell.

approach (*Civ. Eng.*). The access road leading to a bridge or tunnel.

approach, velocity of (*Hyd.*). See **velocity of approach.**

approximate (*Bot.*). (1) Crowded together but not joined.—(2) (Of gills of agarics) approaching but not touching the stipe.

approximate quantities (*Build.*). A statement of materials and labour required on proposed building works, containing items not completely analysed into individual trade operations, such operations being grouped together, e.g. floors, including concrete, sleeper walls, plates, joists, floor boards.

appulse (*Astron.*). A term, now obsolete, which had two meanings in seventeenth-century astronomy: (1) The coming of a star or planet to the meridian; and (2) the coming to conjunction of two heavenly bodies.

apron (*Aero.*). A firm surface of concrete or 'tarmac' laid down adjacent to aerodrome buildings to facilitate the movements, loading, and unloading, of aeroplanes.

apron (*Carp.*). The wedge securing the bit of a plane.

apron (*Eng.*). (In a lathe) that part of the saddle enclosing the gear operated by the lead screw.

apron (*Furn.*). A slatted or pleated textile screen partly filling the under part of a sideboard or writing-table.

apron (*Hyd. Eng.*). (1) The protecting slope on the downstream side of the sluices of a lock-gate or dam provided to withstand the force of the falling water.—(2) The bags of concrete, blocks of masonry, etc., deposited around the toe of a sea-wall in order to protect its base from scour caused by the returning wave.

apron (*Plumb.*). The lead-sheeting or 'flashing' which is used to divert the drip from a wall into a gutter.

apron cloths (*Textiles*). Cotton fabrics, generally blue-and-white checks; also made with a figured border at one side, intended to lie across the apron.

apron conveyor (*Eng.*). A conveyor for transporting packages or bulk materials, consisting of a series of metal or wood slats attached to an endless chain, and forming a continuous 'apron.' Also called SLAT CONVEYOR.

apron lining (*Join.*). A lining of wrought boarding covering the rough apron-piece of a staircase at a landing.

apron piece (*Join.*). The horizontal timber carrying the upper ends of the carriage pieces or rough-strings of a wooden staircase. Also called a PITCHING-PIECE.

apron plate (*Mining*). An amalgamated copper plate placed in front of the discharge screens of a stamp battery for crushing gold ores.

apro'terodont (*Zool.*). (Of *Vertebrata*) lacking premaxillary teeth.

apse or **apsis** (*Build.*). The semicircular or polygonal recess, either arched or dome-roofed, terminating the choir or chancel of a church.

apse line (*Astron.*). The diameter of an elliptic orbit which passes through both foci and joins the points of greatest and least distance of a planet from the sun, or of the moon from the earth. Also called LINE OF APSIDES.

apteria, ap-tēr'i-a (*Zool.*). In carinate Birds, patches which are naked or covered with down only, lying between the tracts of contour feathers.

apt'erous (*Zool.*). Without wings.

apterygial, ap-ter-ij'i-al (*Zool.*). Without wings: without fins.

Apterygo'ta, ap-ter-i-gō'ta (*Zool.*). A subclass of *Insecta* of small size and retiring habits. They never exhibit any traces of wings; metamorphosis is slight or absent; the mandibles are similar to those of the *Crustacea*, and a pair of maxillulae occurs; they occur in all parts of the world.

Aptian Stage (*Geol.*). A division of the Cretaceous System lying between the Neocomian below and the Albian above; approximately equivalent to the English Lower Greensand.

apty'alism (*Med.*). Deficiency or absence of salivary secretion.

apy'rene (*Zool.*). Said of spermatozoa which develop without maturation divisions and have no nucleus, but possess a number of parallel filaments which are derived from the centrosome of the first spermatocyte; as in certain Gastropods.

apyrex'ia (*Med.*). Absence of fever.

aq (*Chem.*). A symbol representing a large volume of water.

aq'ua fortis (*Chem.*). Concentrated nitric acid.

aqua re'gia (*Chem.*). A mixture consisting of one volume of concentrated nitric acid to four volumes of concentrated hydrochloric acid.

Aquadag (*Chem.*). A proprietary colloidal dispersion of finely ground graphite in water; used for lubrication. See **Oildag**.

aquamarine (*Min.*). A variety of **beryl**, of attractive blue-green colour, used as a gemstone.

aquamotrice, —trēs' (*Civ. Eng.*). A dredging implement like the *bag-and-spoon dredger* (q.v.), but having, hinged to the handle in such a way that it can be turned over to release its contents, an iron scoop or bucket instead of the bag.

aquarium (*Cinema.*). Colloquialism for the booth or sound-proof enclosure in which, in sound-film production, mixing is executed.

Aquarius (*Astron.*). Water-carrier. Eleventh sign of the *Zodiac* (q.v.).

aquatint (*Photog.*). Same as gum-bichromate print, in which imbibition printing is effected on paper coated with gum arabic in which the pigment is dispersed.

aquatint (*Print.*). An intaglio printing process using a copper plate grained by coating with a resinous solution and etching. The varying tones are produced by further etching or by burnishing.

aqueduct (*Civ. Eng.*). An artificial conduit used to convey water, generally for long distances, for public supply purposes.

aqueduct (*Zool.*). A channel or passage filled with or conveying fluid; in higher Vertebrates, the reduced primitive ventricle of the mid-brain

aqueductus Sylvii (*Zool.*). In *Vertebrata*, the ventricle of the mid-brain.

aqueductus vestib'uli (*Zool.*). In certain Fish, the canal by which the otocysts retain their connexion with the exterior.

aqueous. Made by, or pertaining to, water.—(*Chem.*) Consisting largely of water.

aqueous humour (*Zool.*). In *Vertebrata*, the watery fluid filling the space between the lens and the cornea of the eye.

aqueous rocks (*Geol.*). A name, dating from the times of Werner and Hutton, to cover those rocks thought to have been precipitated from the primaeval ocean. Cf. *igneous rocks*.

aquiculture (*Zool.*). Augmentation of aquatic animals of economic importance by direct methods. cultivation of the resources of the sea and inland waters as distinct from their exploitation.

aquin'tocu'bitalism (*Zool.*). See **diastataxy.**

aquo-system (*Chem.*). An ionic system in water.

A.R. (*Chem.*). Abbrev. for *analytical reagent*, indicating a definite standard of purity of a chemical.

Ar (*Chem.*). (1) An alternative symbol for *argon*.—(2) A general symbol for an aryl, or aromatic, radical.

ar- (*Chem.*). An abbrev. indicating substitution in the aromatic nucleus.

arabesque, —bèsk' (*Build.*). An ornamental work used in decorative design for flat surfaces; consists usually of interlocked curves which may be painted, inlaid, or carved in low relief.

ar'abin process (*Photog.*). Same as *gum-bichromate process* (q.v.).

arab'inose (*Chem.*). *l*-Arabinose, $C_5H_{10}O_5$, is produced by boiling gum-arabic, cherry gum, or beetroot chips with dilute sulphuric acid; prisms soluble in water forming a dextro-rotatory solution. Arabinose is a mono-saccharose belonging to the pentose group. See **pentoses.**

arab'itol (*Chem.*). A pentahydric alcohol, $OH{\cdot}CH_2{\cdot}(CH{\cdot}OH)_3{\cdot}CH_2{\cdot}OH$. This is the alcohol corresponding to *arabinose* (q.v.).

ar'achis oil (*Chem.*). Peanut oil.

ar'achnac'tis (*Zool.*). In certain *Anthozoa*, a pelagic larval form.

Arach'nida (*Zool.*). A class of mainly terrestrial *Arthropoda* which breathe by gill-books, lung-books, or tracheae; the head is usually coalesced with the thorax and bears no antennae; the appendages are uniramous; there are four pairs of thoracic walking legs, a pair of pedipalps of variable form and usually a pair of chelicerae. King Crabs, Scorpions, Spiders, Mites, Ticks, etc.

arachnid'ium (*Zool.*). In Spiders, the spinnerets and silk glands.

arach'noid (*Bot.*, *Zool.*). Cobweb-like. Formed of entangled hairs or fibres; pertaining to or resembling the *Arachnida*; one of the three membranes which envelop the brain and spinal cord of Vertebrates, lying between the dura mater and the pia mater.

araeostyle, a-rē'ō-stil (*Build.*). A colonnade in which the space between the columns is equal to or greater than four times the lower diameter of the columns.

araeosys'tyle (*Build.*). A colonnade in which the distance between the columns is alternately wide and narrow.

ar'agonite (*Min.*). The relatively unstable, orthorhombic form of crystalline calcium carbonate, deposited from warm water, but prone to inversion into calcite. See also **flos ferri.**

Arago's rotations (*Elec. Eng.*). Experiments (conducted by Arago before the discovery of electromagnetic induction by Faraday) in which a rotating copper disc was made to cause rotation of a pivoted magnet.

Aran'eae (*Zool.*). An order of *Embolobranchiata* in which the prosoma is joined to the apparently unsegmented opisthosoma by a narrow waist; silk-glands occur opening by spinnerets on the opisthosoma; the chelicerae contain poison glands; the pedipalpi are leglike and tactile, but modified in connexion with fertilisation in the male; respiration is by lung-books, or tracheae, or both; predaceous cosmopolitan forms. Spiders.

ara'neous (*Zool.*). Cobweb-like.

arbor (*Horol.*). The axis or shaft upon which a rotatable part is mounted: the shaft upon which a wheel or pinion is mounted. See **barrel arbor, fusee arbor.**

Arbroath Sandstone (*Geol.*). A series of coarse red sandstones and red flags, some 1200 feet in thickness, occurring high up in the Lower Old Sandstone of the Midland Valley of Scotland. It splits into large, flat sandstones (*Arbroath Flags* or *Dundee Sandstone*) and is much used for paving, being hard and durable, and very impervious to moisture.

arbuscle (*Bot.*). (1) A dwarf tree or shrub of tree-like habit.—(2) A much-branched haustorium formed by some endophytic fungi, and later digested by the cells of the host.

ar'butin (*Chem.*). A glucoside obtained from the bear-berry.

arc. A portion of a circle, or of any other conic section such as a parabola, hyperbola, or ellipse.

arc (*Elec.*). A luminous discharge of electricity through an ionised gas. See **arc lamp, enclosed arc lamp,**

also **flame—** **open—**
iron— **rotary—**
mirror— **sun—**

arc absorber (*Auto. Teleph.*). See **absorber.**

arc balance (*Horol.*). See **balance (arc).**

arc-boutant, ar-boo-tahn^{g}' (*Build.*). See **flying buttress.**

arc-control device (*Elec. Eng.*). A device fitted to the contacts of a circuit-breaker in order to facilitate the extinction of the arc.

arc converter (*Radio*). The electrode system and associated cooling equipment, magnetic field, and hydrogen-atmosphere container of an arc-generator.

arc crater (*Elec. Eng.*). A depression formed in the electrodes between which an electric arc has been maintained. The term is frequently used in connexion with arc welding, in which case the depression occurs in the weld metal.

arc deflector (*Elec. Eng.*). A magnetic arrangement for controlling the position of the arc in an arc lamp. Also used to denote an arc shield.

arc duration (*Elec. Eng.*). A term used, in connexion with switches and circuit-breakers, to denote the period of time during which the arc exists between the contacts. In a.c. circuits it is usually measured in cycles, and may vary between half a cycle and 20 cycles or more.

arc furnace (*Elec. Eng.*). An electric furnace in which the heat is produced by means of an electric arc between carbon electrodes, or between a carbon electrode and the furnace charge.

See **direct—** **Héroult furnace**
indirect— **Stassano furnace.**
Girod furnace

arc generator (*Radio*). A high-frequency generator which depends for its action on the negative-slope resistance of an arc discharge.

arc lamp (*Illum., etc.*). A form of electric lamp which makes use of an electric arc between two carbon electrodes as the source of light. It has an extremely high intrinsic brilliance, and is therefore used for searchlights, spotlights, etc.

See **carbon—** **mirror—** **tungsten—**

arc-lamp carbon (*Illum.*). A cylindrical stick of carbon used as the electrode of a carbon arc lamp. The diameter is usually between about ¼ inch and 1 inch.

arc lighting (*Illum.*). Lighting by means of arc lamps, now almost obsolete except for theatre spot-lights, searchlights, and cinema-studio lighting

arc-lighting dynamo (*Elec. Eng.*). A special form of dynamo arranged to give a constant current; used for supplying a number of arc lamps in series.

arc modulation (*Television*). In a mechanical scanning system, modulation of the intensity of the light-source by variation of the current in an arc discharge.

arc of approach (*Eng.*). The arc on the pitch circle of a gear-wheel over which two teeth are in contact and approaching the pitch point.

arc of contact (*Eng.*). The arc on the pitch circle of a gear-wheel over which two teeth are in contact.

arc of recess (*Eng.*). The arc on the pitch circle of a gear-wheel over which two teeth are in contact while receding from the pitch point.

arc process (*Chem.*). The fixation of nitrogen by passing air or air and oxygen through an electric arc; the nitric oxide thus formed is cooled rapidly and allowed to oxidise to nitrogen dioxide, which is dissolved in water to form dilute nitric acid.

arc rectifier (*Elec. Eng.*). A rectifier in which an arc is maintained between two electrodes, the cathode being kept at incandescence by the passage of the rectified current. See **mercury-arc rectifier, tungar rectifier, atmospheric-arc rectifier.**

arc shield (*Elec. Eng.*). A shield of fireproof material, usually an asbestos compound, placed adjacent to the contacts of certain types of switchgear to confine the arc and prevent its spreading to adjacent metalwork. Also called ARC DEFLECTOR.

arc spectrum (*Light*). A spectrum originating in the non-ionised atoms of an element; usually capable of being excited by the application of a comparatively low stimulus, such as the electric arc. See **spark spectrum.**

arc stream voltage (*Elec. Eng.*). The voltage drop along the arc stream of an electric arc. It does not include the voltage drop at the anode and cathode.

arc suppression coil (*Elec. Eng.*). See **Petersen coil.**

arc suppressor (*Elec. Eng.*). A device for automatically earthing the neutral point of an insulated-neutral transmission or distribution line in the event of an arcing ground being set up. Also called ARCING-GROUND SUPPRESSOR.

arc system (*Radio*). A radio communication system employing an arc transmitter.

arc transmitter (*Radio*). A radio transmitter in which the source of the high-frequency current is an arc discharge.

arc voltage (*Elec. Eng.*). The total voltage across an electric arc, i.e. the sum of the arc stream voltage, the voltage drop at the anode and the voltage drop at the cathode. The term is frequently used in connexion with arc welding, and with the arc in a switch or circuit-breaker.

arc welding (*Elec. Eng.*). A process for the joining of metal parts by fusion in which the heat necessary for the fusion is produced by means of an electric arc struck between two electrodes or between an electrode and the metal. See **automatic— carbon— metal— quasi—**

arcade (*Build.*). (1) A series of arches, usually in the same plane, supported on columns, e.g. the nave arcades in churches. When filled in with masonry, it becomes a 'blind arcade.'—(2) An arched passage, especially one having shops on one or both sides.

arcade (*Zool.*). In higher Vertebrates, a bar of bone bounding one of the vacuities or fossae of the skull.

arch (*Civ. Eng.*). A form of structure having a curved shape, used to support loads or to resist pressures.

arch (*Zool.*). A curved or arch-shaped skeletal structure supporting, covering, or enclosing an organ or organs, as *zygomatic arch*, *haemal arch*, *neural arch* (qq.v.). See also **arcualia.**

arch bar (*Build.*). A flat bar of iron or steel used to support a flat arch in position.

arch brick (*Build.*). A brick having a wedge shape, especially one with a curved face suitable for wells and other circular work.

arch bridge (*Civ. Eng.*). A bridge that depends on the principle of the arch for its stability. See **rigid arch, two-hinged arch, three-hinged arch.**

arch buttress (*Build.*). See **flying buttress.**

arch stone (*Civ. Eng.*). A stone shaped like a wedge, and used as a constituent part in an arch. Also called VOUSSOIR.

Archaean rocks (*Geol.*). Rocks which are older than, and therefore lie beneath, the Cambrian System. Equivalent to *Pre-Cambrian*; sometimes restricted to the older, crystalline part of the Pre-Cambrian.

archaeo- (Greek *archaios*, ancient). A prefix used in the construction of compound terms; e.g. *archaeozoic*, pertaining to the age of the most primitive forms of life, i.e. the period of the formation of the *Archaean rocks* (q.v.).

ar'chaeocyte (*Zool.*). In *Porifera*, a granular cell occurring in the blastocoel, later becoming a wandering cell which may develop into a reproductive cell.

Archaeor'nithes (*Zool.*). A subclass of *Aves* which comprises only the extinct form *Archaeopteryx* and its allies; characterised by the possession of a long lizard-like tail, teeth in the jaw, and claws at the tips of the fingers. Cf. *Neornithes.*

archaeosto'matous (*Zool.*). Having a persistent blastopore, which gives rise to the mouth.

archam'phias'ter (*Cyt.*). The amphiaster which, during maturation divisions of the germ-cells, forms the first or second polar body.

arche- (Greek *archē*, beginning). A prefix used in the construction of compound terms; e.g. *archencephalon* (q.v.).

archecen'tra (*Zool.*). In *Vertebrata*, centra formed by the enlargement of the bases of the arch-elements which grow around the notocord outside its primary sheath; cf. *chordacentra.*—*adjs.* **archecen'trous, arcicen'trous, arcocen'trous.**

arched beam (*Carp.*). A beam formed into an arched shape in order to support a structure such as a roof.

arched buttress (*Build.*). See **flying buttress.**

archedic'tyon (*Zool.*). In Insects of generalised structure, an irregular network of veins found between the principal longitudinal veins of the wing, in which no definite cross veins are present.

Ar'chego'nia'tae (*Bot.*). One of the main divisions of the plant kingdom, including the *Bryophyta* and *Pteridophyta*, with a few thousand species. Characterised by the presence of the archegonium as the female organ, and by the regular alternation of gametophyte and sporophyte in the life-cycle.

archego'niophore, archego'nial receptacle (*Bot.*). A branch of the thallus-bearing archegonia.

archego'nium (*Bot.*). A sessile or stalked organ, bounded by a multicellular wall, and flask-shaped in general outline. It consists of a chimney-like neck containing an axial series of neck-canal cells, and a swollen venter below, containing a single egg and a ventral-canal cell. The archegonium is the female organ of *Bryophyta* and *Pteridophyta*, and, in a slightly simplified form, of most *Gymnospermae.*

ar'chenceph'alon (*Zool.*). In *Vertebrata*, the primitive forebrain; the cerebrum.

archen'teron (*Zool.*). In an embryo, the cavity formed during gastrulation which later gives rise to the gut, and in some cases also to the coelom.

archespor'ium (*Bot.*). Spore-producing tissue.

archi- (Greek *archi-*, first, chief). A prefix used in the construction of compound terms; e.g. *archicerebrum* (q.v.).

Archiannel'ida (*Zool.*). A class of *Annelida*, of small size and marine habit, which usually lack setae and parapodia and have part of the epidermis ciliated; the nervous system retains a close connexion with the epidermis; they resemble the *Polychaeta* in many of their characteristics.

archiben'thal, archiben'thic (*Zool.*). Pertaining to, or living on the steep slopes of, the continental shelf leading down into deep water, as the *archibenthal* fauna.

ar'chiblast (*Zool.*). The protoplasm of the ovum.

archiblas'tic (*Zool.*). Exhibiting total and equal segmentation: pertaining to the protoplasm of the egg: pertaining to an *archiblastula* (q.v.).

archiblas'tula (*Zool.*). A regular spherical blastula, having cells of approximately equal size.

ar'chicarp (*Bot.*). The female branch in *Ascomycetes*, or a derivative from it.

archicer'ebrum (*Zool.*). In *Invertebrata*, a median anterior ganglion forming part of the 'brain' but not associated with any particular somite: the ganglia of the first somite with the ganglia anterior to them: generally, the primitive brain.

Ar'chichlamyd'eae (*Bot.*). A large subdivision of Dicotyledons, including many thousands of species. The flowers are either without a perianth, or have a calyx only, or possess a corolla consisting of a number of distinct petals.

ar'chicoel, —sēl (*Zool.*). See **blastocoel.**

Archime'dean drill (*Eng.*). A drill in which to-and-fro axial movement of a nut on a helix causes an alternating rotary motion of the bit.

Archimedean screw (*Hyd. Eng.*). An ancient water-lifting contrivance—a hollow inclined screw (or a pipe wound in helix fashion around an inclined axis) which had its lower end in water so that, on rotation of the 'screw,' water rose to a higher level.

Archimedes' principle (*Phys.*). When a body is wholly or partly immersed in a fluid, it suffers a loss in weight equal to the weight of fluid which it displaces.

Archimyce'tes (*Bot.*). A group of fungi, with some hundreds of species, which contains the simplest fungi known. The species are mostly aquatic, often of the simplest organisation, and commonly multiply by means of zoospores.

archineph'ric (*Zool.*). In *Vertebrata*, pertaining to the archinephros (see **pronephros**): in *Invertebrata*, pertaining to the larval kidney or *archinephridium* (q.v.).

archinephrid'ium (*Zool.*). In *Invertebrata,* the larval excretory organ, usually a solenocyte.

archineph'ros (*Zool.*). See **pronephros.**

archipal'lium (*Zool.*). In *Vertebrata,* that part of the cerebral hemispheres not included in the olfactory lobes and corpora striata, and comprising the hippocampus and the olfactory tracts and associated olfactory matter: that part of the pallium excluding the neopallium.

archiplasm (*Zool.*). See **archoplasm.**

archipterygium, —ter-ij'i-um (*Zool.*). In *Vertebrata,* a biserial appendage having a jointed central axis and two rows of jointed rays, as the paired fins of *Ceratodus.*

architectural acoustics (*Acous.*). The study of the propagation of sound-waves in interiors, the results being applied to the design of studios and auditoriums for optimum audition.

archit'omy (*Zool.*). In *Annelida,* a form of reproduction by fission, in which regeneration takes place after separation. Cf. *paratomy.*

ar'chitrave (*Build.*). The lowest part of an entablature in immediate contact with the abacus on the capital of a column. Also called EPISTYLE.—(*Carp.*) The mouldings surrounding a door or window opening, including the lintel.

architrave block (*Carp.*). The block, placed at the foot of the side moulding around a door opening, into which the skirting fits.

architrave cornice (*Build.*). An entablature consisting of only two parts, the architrave or lower part and the cornice or upper projecting part.

architrave jambs (*Carp.*). The mouldings at the sides of a door or window opening.

ar'chitype (*Zool.*). A primitive type from which others may be derived.

ar'chivolt (*Build.*). An ornamental moulding carried around the face of an arch.

ar'choplasm, arcoplasm, archiplasm (*Cyt.*). In cell-division, the substance of the radiations surrounding the centrosome, consisting in part of hyaloplasm from the cell-body, and in part of achromatin from the nucleus: peculiarly modified cytoplasm found in connexion with the Golgi apparatus: idioplasm.

archoplasmic apparatus (*Cyt.*). In cell-division, the asters, and the spindle-shaped bundle of fibres between them.

arcicen'trous (*Zool.*). See **archecentra.**

arcif'erous (*Zool.*). Having the two halves of the pectoral girdle overlapping ventrally, and not firmly united. Cf. *firmisternous.*

arcing contact, ark-ing (*Elec. Eng.*). An auxiliary contact fitted to a switch or circuit-breaker, arranged so that it opens after and closes before the main contact, thereby bearing the brunt of any burning due to the arc which occurs when a circuit is interrupted. It is designed so that it can easily be replaced. Also called ARCING TIPS.

arcing ground (*Elec. Eng.*). A fault on a power-transmission system caused by an arc between a conductor and earth. Usually most severe in insulated-neutral systems.

arcing-ground suppressor (*Elec. Eng.*). See **arc suppressor.**

arcing horn (*Elec. Eng.*). Diverging projections pointing vertically upwards so that an arc struck between the lower extremities will travel, under the influence of natural electromagnetic forces, towards upper extremities and extinguish itself. See **insulator arcing horn.**

arcing ring (*Elec. Eng.*). A conductor in the form of a circular or oval ring placed concentrically with the insulators of a suspension insulator string for the purpose of deflecting an arc from the insulator surfaces.

arcing shield (*Elec. Eng.*). See **grading shield.**

arcing tips (*Elec. Eng.*). See **arcing contact.**

arcing voltage (*Elec. Eng.*). The voltage below which a voltage cannot be maintained between two electrodes.

arcocen'trous (*Zool.*). See **archecentra.**

arcoplasm (*Zool.*). See **archoplasm.**

Arctic Circle. The parallel of latitude 66° 33′ N., bounding the region of the earth surrounding the north terrestrial pole, this parallel being the locus of points where the sun touches the horizon but does not set at the summer solstice.

Arctic Ocean. The ocean surrounding the North Pole, within the Arctic Circle.

arcua'lia (*Zool.*). In developing vertebrae, cartilage elements derived in part from the sclerotomes, in part from the perichordal sheath of the notochord; they give rise by their fusion to the neural and haemal arches, and, in some cases, also to part of the centrum.

arc'uate (*Bot., Zool.*). Bent like a bow.

ar'culus (*Zool.*). A characteristic feature of the wing venation of certain Insects (as zygopterous *Odonata*); it consists of two thickened veins so joined as to form an arc.

arcus seni'lis (*Med.*). Fatty degeneration of the periphery of the cornea in old people.

Arden Sandstone (*Geol.*). A group of sandstones occurring in the English Midland counties high up in the Keuper Marl, and containing fossil fish and plant remains.

are (*Surv.*). The metric unit of area, equal to the area enclosed in a square of 10 metres side. 1 are = 119 6 sq. yds.

area (*Build.*). The sunken space around the basement of a building, providing access and natural lighting and ventilation.

area (*Surv.*). In plane surveying, area is the superficial content of a ground surface of definite extent, as projected on to a horizontal plane.

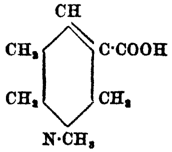
area opa'ca (*Zool.*). In developing Reptiles and Birds, a whitish peripheral zone of blastoderm, in contact with the yolk.

area pellu'cida (*Zool.*). In developing Reptiles and Birds, a central clear area of blastoderm, not in direct contact with the yolk.

area vasculo'sa (*Zool.*). In developing Reptiles and Birds, part of the extra-embryonic blastoderm, in which the blood-vessels develop.

areal velocity (*Astron., etc.*). The rate, constant in elliptic motion, at which the radius vector sweeps out unit area.

ar'ecaine (*Chem.*). Arecadeine, $C_7H_{11}O_2N \cdot H_2O$, an alkaloid of the pyridine group, obtained from the areca or betel-nut palm (*Areca catechu*); colourless four- or six-sided plates, m.p. 222°-223° C, soluble in water, insoluble in most organic solvents. It has the following constitution:



arena'ceous, arenic'olous (*Bot.*). Growing best in sandy soil.—(*Zool.*) Occurring in sand: composed of sand or similar particles, as the shells of some kinds of *Radiolaria.*

arenaceous rocks (*Geol.*). Sediments consisting essentially of sand grains, that is, of quartz and rock fragments down to 0·005 mm. in size. Conglomerates, sandstones, grits, and siltstones fall in this category.

Ar'enig Series (*Geol.*). The lowest (oldest) series of rocks in the Ordovician System, taking their name from Arenig mountain in N. Wales, where they were originally described by Adam Sedgwick.

areola, ar'e-ō'la *or* ar-ē'ol-a (*Bot.*). (1) A small space delimited by lines or cracks on the surface of a lichen.—(2) A small pit.—(*Zool.*) (1) One of the spaces between the cells and fibres in certain kinds of connective tissue.—(2) In the Vertebrate eye, that part of the iris bordering the pupil.—(3) In *Mammalia*, the dark-coloured area surrounding a nipple.—*pl.* **areolae.**

areolar, areolate (*Bot., Zool.*). (1) Divided into small areas or patches.—(2) Pitted.—(3) Pertaining to an areola.

areolar tissue (*Zool*). A type of connective tissue consisting of cells separated by a mucin matrix in which are embedded bundles of white and yellow fibres.

areolation (*Bot*). The net pattern formed by the boundaries of cells.

ar'eole (*Bot*). The area occupied by a group of spines or hairs on a cactus.

a'reopyknom'eter (*Chem.*). An instrument for the measurement of the specific gravity of viscous liquids.

Ar'gand burner (*Illum.*). A form of gas- or oil-burner in which air is admitted to the inside of a cylindrical wick, ensuring a large area of contact between the flame and the fuel.

Argand diagram (*Elec. Eng.*). The usual form of vector diagram employed for showing the magnitude and phase angle of a vector quantity with reference to some other vector quantity. *

ar'gentate (*Bot.*). Of silvery appearance.

argen'teum (*Zool.*) In Fish, a reflecting layer of the dermis containing iridocytes but no chromatophores.

argentic oxide (*Chem.*). Formula, AgO. An oxide of silver.

argentiferous galena (*Min.*) See **silver lead ore.**

argentiferous lead (*Chem.*). Lead which contains silver.

ar'gentite (*Min.*). An important ore of silver, having the composition Ag_2S (silver sulphide); occurs as cubic crystals. Also called SILVER GLANCE.

argentom'eter (*Photog.*). A special form of hydrometer for ascertaining the strength of silver nitrate solution.

argentous oxide (*Chem.*). Formula, Ag_2O. A lower oxide of silver.

argilla'ceous rocks (*Geol.*). Sedimentary rocks of the clay grade, i e. composed of minute mineral fragments and crystals less than 0·005 mm. in diameter, also much colloidal material. Apart from finely divided detrital matter, they consist essentially of the so-called clay minerals, such as montmorillonite, kaolinite, gibbsite, and diaspore.

argillico'lous (*Bot.*). Living on clayey soil.

ar'ginine (*Chem.*). $H_2N{\cdot}C(.NH)\ NH{\cdot}(CH_2)_3{\cdot}CH(NH_2){\cdot}COOH$, α-amino-δ-guanidine-valeric acid, the chief constituent of salmine, a simple protamine.

argol (*Chem*). Crude cream of tartar, $KH(C_4H_4O_6)$, which separates in wine-vats as a reddish-brown crystalline deposit during the fermentation of grape juice to wine.

argon (*Chem.*). Symbol, A. A zero-valent element, one of the rare gases. At. no. 18; at. wt. 39·944. A colourless, odourless, monatomic gas; m.p. −189·2° C.; b.p. −185·7° C.; density 1·7837 gms. per litre at N.T.P. Argon constitutes about 1% by volume of the atmosphere, from which it is obtained by the fractionation of liquid air. It is used in gas-filled electric lamps.

argument (*Maths.*). The angle between a vector and its reference axis.—(*Elec. Eng.*) See under **amplitude.**

Argyll-Robertson pupil (*Med.*). Small pupil which reacts to accommodation but not to light, usually as a result of syphilis of the brain.

argy'ria (*Med.*). Pigmentation of the skin and the tissues as a result of taking preparations of silver.

Aries, ar'i-ēz (*Astron.*). Ram. First sign of the *Zodiac* (q.v.).

Aries, First Point of (*Astron.*). The point in which the ecliptic intersects the celestial equator crossing it from south to north; the origin from which both right ascension and celestial longitude are measured; the beginning of the first sign of the Zodiac. See **equinoctial points.**

a'ril (*Bot.*). An outgrowth on a seed, formed from the stalk or from near the micropyle. It may be spongy or fleshy, or may be a tuft of hairs.

a'rillate (*Bot.*). Having an aril.

aris'ta (*Zool.*). In certain Flies, as *Brachycera*, a slender bristle borne, usually dorsally, by the terminal joint of the antenna.

ar'istate (*Bot.*). Bearing a beard or awn, or other bristle-like outgrowth.

aris'togen (*Photog.*). A concentrated hydroquinone developer for chloride prints.

Aristotle's lantern (*Zool.*). In *Echinoidea*, the framework of muscles and ossicles supporting the teeth, and enclosing the lower part of the oesophagus.

arithmetic. The science of numbers, including such processes as addition, subtraction, multiplication, division, and the extraction of roots.

arkose (*Geol.*). An arenaceous sedimentary rock, like sandstone in its general characters, but containing feldspar to the extent of at least 10%; formed by the disintegration of acid igneous rocks and gneisses.

arm (*Elec. Comm*). The part of an electrical filter between two terminals, or where circuits divide.

arm (*Elec. Eng.*). See **brush-holder arm, cross arm.**

arm (*Zool.*). In *Brachiopoda*, part of the lophophore: in *Echinodermata*, a prolongation of the body in the direction of a radius; in *Cephalopoda*, one of the tentacles surrounding the mouth: in *Pterobranchia*, a hollow, branched, ciliated protrusion of the collar: in bipedal *Mammalia*, one of the upper limbs.

arm of eccentricity (*Struct.*). The *eccentricity* (q.v.).

armature (*Elec.*). A moving part in a magnetic circuit to indicate the presence of electric current as the agent of actuation, as in all relays, electric bells, sounders, telephone receivers, and some loud-speaker mechanisms.—(*Teleph.*) See **isthmus armature** *. — (*Elec. Eng.*) (1) ARMATURE OF A MACHINE, that part of an electric machine in which, in the case of a generator, the e.m.f. is produced; or, in the case of a motor, the torque is produced. It includes the winding through which the main current of the machine passes and the portion of the magnetic circuit upon which the winding is mounted. It may be stationary or rotating. See **drum armature, ring armature.**—(2) ARMATURE OF A PERMANENT MAGNET, a piece of ferro-magnetic material placed across the poles of a permanent magnet in order to complete the magnetic circuit and reduce demagnetisation. Also called KEEPER.

armature bands (*Elec. Eng.*). Steel wire or bands placed round a rotating armature on an electric machine to prevent the conductors being forced out under the action of centrifugal force.

armature bars (*Elec. Eng.*). Rectangular copper bars forming the conductors on the armature in large electric machines having only a few conductors per slot.

armature coil (*Elec. Eng.*). An assembly of conductors ready for placing in the slots of the armature of an electric machine.

armature conductor (*Elec. Eng.*). One of the wires or bars on the armature of an electric machine.

armature core (*Elec. Eng.*). The assembly of laminations forming the magnetic circuit of the armature of an electric machine. The thickness of each lamination is usually of the order of 0·5 mm.

armature core disc (*Elec. Eng.*). A complete circular lamination ready for building up to form the armature core of an electric machine. See **segmental core disc.**

armature ducts (*Elec. Eng.*). Air passages built into the armature core of an electric machine to allow of the flow of cooling air.

armature end connexions (*Elec. Eng.*). The portion of the armature conductors which project beyond the end of the armature core, and which are used for making the connexions between the various conductors. Also called OVERHANG.

armature end-plate (*Elec. Eng.*). The end-plate of a laminated armature core. It is of sufficient mechanical strength to enable the laminations to be clamped together tightly to prevent vibration. Sometimes also called the ARMATURE HEAD.

armature head (*Elec. Eng.*). See **armature end-plate.**

armature reactance (*Elec. Eng.*). A reactance associated with the armature winding of a machine, caused by armature leakage flux, i.e. flux which does not follow the main magnetic circuit of the machine.

armature reaction (*Elec. Eng.*) The magnetomotive force produced in the magnetic circuit of an electric machine by the armature currents.

armature winding (*Elec. Eng.*). The complete assembly of conductors carried on the armature and connected to the commutator or to the terminals of the machine.

Armco iron (*Met.*). A soft iron manufactured by the American Rolling Mill Corporation, with less than 1% impurities. Resistivity 6·2 by volume and 5·4 by mass, compared with copper.

armed (*Bot.*). Provided with prickles or thorns.

armed lodestone (*Elec. Eng.*). A lodestone fitted with iron pole-pieces in order to concentrate the field.

armilla (*Bot.*). See **frill.**

arming press (*Bind.*). A form of blocking press now little used.

armor. The American spelling of *armour*.

Armor'ican (*Geol.*). In the time sense, the term implies an event dating from the interval between the Carboniferous and the Permian Periods. The Armorican mountain ranges were formed at this time, and the Armorican granites were intruded in a belt of country extending from S.W. England through the Channel Islands into Brittany and Normandy (Armorica).

armour (*Bot.*). A covering of old leaf-bases on the stems of cycads and some ferns.

armour (*Mil.*). (1) *Armour plate* (q.v.).—(2) A general term for armour-protected weapons, esp. tanks in land warfare.

armour-clad switchgear (*Elec. Eng.*). See **metal-clad switchgear.**

armour clamp (*Cables*). A fitting designed to grip the armouring of a cable where it enters a box. Also called ARMOUR GLAND and ARMOUR GRIP.

armour-piercing capped shell (*Ammunition*). A.P. shell fitted with caps to ease the impact and so prevent premature break-up of the shell.

armour-piercing shell (*Ammunition*). Shell designed to perforate armour and to burst effectively on the far side. They are of forged or cast steel, and have specially hardened heads. Abbrev. A.P. SHELL.

armour plate (*Met.*). Specially heavy alloy steel plate forged in hydraulic presses, hardened on the surface; used for the protection of warships. Approximate composition: C 0·2-0·4%, Cr 1·0-3·5%, Ni 1·5-3·5%, and Mo 0-0·5%. *

armouring (*Cables*). The steel wires woven on the outside of submarine cables to protect the more delicate insulation from rocks on the sea bottom and ship's anchors, and to take the strain when the cables are laid or raised. Armouring causes eddy current loss in single-core cables, so that 66kV cables are not armoured. See also **bedding.**

Armstrong circuit (*Radio*). A name usually applied to the super-regenerative receiving circuit, but sometimes also to the supersonic heterodyne circuit.

ar'mure (*Textiles*). (1) In silk weaving, small fancy patterns or interlacings distributed over a fabric.—(2) In worsted, an embossed appearance in a dress fabric, produced by a fancy warp-rib weave.

Arnold's test (*Chem.*). A test for diacetic acid in the urine, consisting in the appearance of a purple or violet colour on treatment with solutions containing *p*-aminoacetophenone and sodium nitrite, which are prepared in a special way.

Arnott valve (*Build.*). A flap-valve fitted near the ceiling in a room to permit the escape of hot vitiated air. The air passes away into an air-flue or chimney, while back-flow is automatically prevented by the closing of the flap.

aro'lium (*Zool.*). In *Insecta*, a pad borne by the distal joint of the tarsus.

aromatic acids (*Chem.*). Acids in which the carboxyl group is attached to an aryl radical.

aromatic alcohols (*Chem.*). Derivatives of the aromatic series in which a hydroxyl group has been introduced into the side chain by replacing a hydrogen atom in a CH, CH_2, or CH_3 group.

aromatic aldehydes (*Chem.*). Compounds of the aromatic series containing the group —CHO.

aromatic compounds (*Chem.*). Benzene derivatives.

aromatic hydrogenation (*Chem.*). Hydrogenation in the naphthalene series, of such nature that hydrogenation takes place only in the unsubstituted benzene ring.

aromatic properties (*Chem.*). The characteristic properties of aromatic compounds, viz. reaction with concentrated nitric acid, forming nitro derivatives, reaction with concentrated sulphuric acid, forming sulphonated derivatives. The homologues of benzene differ from paraffins with regard to oxidation by readily forming benzene carboxylic acids. There are many other distinguishing characteristics between aromatic hydrocarbons and paraffins.

aromatic vinegar (*Chem.*). Vinegar obtained by the distillation of copper diacetate. The aromatic odour is due to the presence of acetone.

Aron meter (*Elec. Eng.*). A kilowatt-hour meter in which two clock movements act on a differential gear connected to the counting train; current in the circuit, being metered, controls the swing of one pendulum; the difference between this and the swing of the other pendulum is a measure of the energy consumption, and is registered through the differential gear.

ar'querite (*Min.*). See **silver amalgam.**

arras'tre (*Mining*). A primitive form of grinding mill still used for ores in central America and for cement in Europe. Large pieces of rock are drawn round in a circular stone-lined pit.

array (*Radio*). See **antenna array.**

arrect (*Bot.*). Rigid and erect.

arrec'tores pilo'rum (*Zool.*). In *Mammalia*, unstriated muscles attached to the hair-follicles which cause the hair to stand on end by their contraction.

arrest muscle (*Zool.*). See **catch muscle.**

arrest points (*Met.*). Discontinuities on heating and cooling curves, due to absorption of heat during heating or evolution of heat during cooling, and indicating changes occurring in a metal or alloy.

arrested crushing (*Mining*). Comminution in unscreened machines, in which the crushing surfaces approach within a given distance of one another (called the 'set') but do not touch.

arrested failure (*Cables*). The taking of a cable off voltage and examination before failure is complete. This is very instructive in determining the mechanism of breakdown.

arrester (*Elec. Eng.*). See **lightning arrester.**

arrester, spray (*Elec. Eng.*). See **spray arrester.**

arrhe'nokar'yon (*Cyt.*). A nucleus having a single set of haploid chromosomes, as in dispermy, when the two pairs of centrosomes remain apart without forming a quadripolar figure.

arrhe'noto'ky (*Zool.*). Parthenogenetic production of males.

arrhi'zal, arrhi'zous (*Bot.*). Lacking roots.

arrhyth'mia, arhythmia (*Med.*). Abnormal rhythm of the heart beat.

arris (*Build.*). The (generally) sharp exterior angle formed at the intersection of two surfaces not in the same plane (e.g. the meeting of two sides of a stone block).

arris fillet (*Build.*). A small strip of wood of triangular cross-section packed beneath the lower courses of slates or tiles on a roof in order to throw off the water which might otherwise get under the flashing.

arris gutter (*Build.*). A V-shaped gutter, usually made of wood.

arris rail (*Carp.*). A rail, with triangular cross-section, secured to posts for fences in such a manner as to show the arris in front.

arris tiles (*Build.*). Specially bent tiles which may be used to cover the sharp external angles at hips and ridges in slated and tiled roofs.

arris-wise. A term used to describe (*Build.*) the laying of tiles or slates diagonally; (*Carp.*) the sawing of square timber diagonally.

arrival curve (*Teleg.*). The shape of the received signal, when a specified signal (e.g. a step) is sent over a long submarine cable.

arrow (*Surv.*). The steel pin, looped at one end and pointed at the other, used in surveying to mark in the field the end of a chain.

arrowroot. Starch derived from the roots of plants of the Maranta genus; it provides a nutritious and easily digested food.

ar'senic (*Chem.*). Symbol, As. At. wt. 74·91, at. no. 33, valencies 3, 5. An element which occurs free and combined in a large number of minerals. An impurity of several commercial metals. Described as grey or **γ-arsenic** to distinguish it from the other allotropic modifications. M.p. 814° C. (36 atm.), b.p. 615° C. (sublimes), sp. gr. 5·73 at 15° C. Used in alloys and in the manufacture of lead shot. See also **α-arsenic, β-arsenic, white arsenic.**

α-arsenic (*Chem.*). Yellow arsenic, an allotropic modification of arsenic. May be formed by the rapid condensation of arsenic vapour in an inert atmosphere. Sp. gr. 2·0 at 18° C.

β-arsenic (*Chem.*). Black arsenic, an allotropic modification of arsenic. May be formed by the slow condensation of arsenic vapour in an inert atmosphere. Sp. gr. 3·70.

arsenic halides (*Chem.*). Arsenic pentafluoride, AsF_5; arsenic trifluoride, AsF_3; arsenic trichloride, $AsCl_3$; arsenic tribromide, $AsBr_3$; arsenic triodide, AsI_3.

arse'nic acid (*Chem.*). Formula, H_3AsO_4. Formed by the action of hot dilute nitric acid upon arsenic, or by digesting arsenic trioxide with nitric acid. Arsenic acid is also formed when arsenic pentoxide is dissolved in water.

arse'nical (*Chem.*). Material containing arsenic in one form or another.

arsenical copper (*Met.*). Copper containing up to about 0·6% of arsenic. This element slightly increases the hardness and strength and raises the recrystallisation temperature. Used for fire-box stays, etc.

arsenical nickel (*Min.*). See **niccolite.**

arsenical pyrite or **arsenopyrite** (*Min.*). See **mispickel.**

ar'senide (*Chem.*). Arsenic unites with most metals to form *arsenides*; e.g. iron—$FeAs_2$. Arsenides are decomposed by water or dilute acids with the formation of *arsine* (q.v.).

arse'nious acid (*Chem.*). See **white arsenic.**

ar'senites (*Chem.*). Salts of arsenious acid.

arse'niuret'ted hydrogen (*Chem.*). See **arsine.**

arsen'olite (*Min.*). Arsenic trioxide, a decomposition product of arsenical ores; occurring commonly as a white incrustation, rarely as fibrous cubic crystals.

ar'sine (*Chem.*). Formula, AsH_3. Hydride of arsenic. Produced by the action of nascent hydrogen upon solutions of the element, or by the action of dilute sulphuric acid upon sodium or zinc arsenide. Very poisonous.

arsines (*Chem.*). Organic derivatives of AsH_3 in which one or more hydrogen atoms is replaced by an alkyl radical; other hydrogen atoms may also be replaced by halogen, etc.

art paper (*Paper*). Paper coated on one or both sides with a composition containing china clay. In the manufacture of *imitation art paper* the clay is added to the pulp.

ar'tefact. A man-made stone implement.

artefact (*Zool.*). Any apparent structure which does not represent part of the actual specimen, but is due to faulty preparation.

arterial drainage (*San. Eng.*). A system of drainage in which the flow from a number of branch drains is led into one main channel.

arterial ring (*Zool.*). In *Vertebrata*, a blood-vessel (formed by the splitting of the basilar artery) which surrounds the hypophysis.

arterial road (*Civ. Eng.*). A specially constructed motor road to carry traffic passing from one large town to another: a *trunk road* (q.v.).

arterial system (*Zool.*). That part of the vascular system which carries the blood from the heart to the body.

arte'riole (*Zool.*). A small artery.

arte'riosclero'sis (*Med.*). Hardening or stiffening of the arteries due to increase of muscular, elastic, or fibrous tissue in the middle coat of the vessel: loosely, any degenerative change in the arteries.

arteri'tis (*Med.*). Inflammation of an artery.

artery (*Zool.*). One of the vessels of the vascular system, that conveys the blood from the heart to the body.—*adj.* **arterial.**

Arte'sian well (*Civ. Eng.*). A well sunk into a permeable stratum which has impervious strata above and below it, and which outcrops at places higher than the place where the well is sunk, so that the hydrostatic pressure of the water in the permeable stratum is alone sufficient to force the water up out of the well. Named from Artois (France).

arthr-, arthro- (Greek *arthron*, a joint). A prefix used in the construction of compound terms; e.g. *arthrobranchiae* (q.v.).

arthrec'tomy (*Med.*). Excision of a joint.

arthrit'ic (*Zool.*). Pertaining to the joints: situated near a joint.

arthri'tis (*Med.*). Inflammation of a joint.

arthritis defor'mans (*Med.*). See **osteo-arthritis.**

arthrobran'chiae (*Zool.*). In *Arthropoda*, gills arising from the arthrodial membranes, at the junction of the limbs with the body.

arthrod'esis (*Surg.*). The surgical immobilisation of a joint by fusion of the joint surfaces.

arthro'dia (*Zool.*). A joint.

arthrodial membranes (*Zool.*). In *Arthropoda*, flexible membranes connecting adjacent body sclerites and adjacent limb-joints, and occurring also at the articulation of the appendages.

ar'throgen'ous (*Bot.*). Developed from portions separated off from the parent plant.

Arthrop'oda (*Zool.*). A phylum of metameric animals having jointed appendages (some of which are specialised for mastication) and a well-developed head; there is usually a hard chitinous exoskeleton; the coelom is restricted, the perivisceral cavity being haemocoelic. Centipedes, Millipedes, Insects, Crabs, Lobsters, Shrimps, Spiders, Scorpions, Mites, Ticks, etc.

arthrop'terous (*Zool.*). Having jointed fin-rays.

arth'rospore (*Bot.*). A spore formed by segmentation and separation from the parent cell.

arthros'tracous (*Zool.*). Having a segmented shell, as *Chiton*.

arthrot'omy (*Surg.*). Surgical incision into a joint.

article (*Bot.*). A joint of a stem or fruit, breaking apart at maturity.

artic'ulamen'tum (*Zool.*). In Amphineuran *Mollusca*, the porcellaneous compact lower layer of the shell. Cf. *tegumentum*.

artic'ular (*Anat.*, *Zool.*). Pertaining to, or situated at or near, a joint.

articular corpuscles (*Zool.*). In *Mammalia*, sensory nerve-endings resembling end-bulbs, occurring in the neighbourhood of joints.

articula're (*Zool.*). In *Vertebrata*, a small cartilage at the angle of the mandible, derived from the Meckelian, and articulating with the quadrate forming the lower half of the jaw hinge.—*pl.* **articula'ria.**

Articula'ta (*Zool.*). See **Testicardines.**

articulate, articulated (*Bot.*). Breaking up at maturity, without tearing, into two or more distinct portions.

articulated connecting-rod (*I.C. Engs.*). The auxiliary connecting-rods of a radial engine, which work on pins carried by the master-rod instead of on the main crank-pin. In America called LINK-ROD. See **articulation** (*Eng.*).

articulation (*Acous.*). The vowel, consonant, initial or final consonant, or syllable *articulation*, is the percentage of the specified speech-sounds which are received correctly when called over a circuit in the standard manner, using logatoms.

articulation (*Bot.*). A joint at which natural separation may occur in a fruit or stem.

articulation (*Elec. Comm.*). The measure of the clarity of speech-audition, as heard in an auditorium or over a telephone or other sound-reproducing system.

See **band—** **percentage—**
ideal— **sound—**

articulation (*Eng.*). The connexion of two parts in such a way (usually by a pin-joint) as to permit of the same relative movement.

articulation (*Zool.*). The movable or immovable connexion between two or more bones.

artificial ageing (*Met.*). See **temper hardening.**

artificial antenna (*Radio*). A combination of resistances, condensers, and inductances having the same characteristics as an antenna except that it does not radiate energy. Also called DUMMY ANTENNA.

artificial character (*Bot.*). A character chosen arbitrarily, without regard to the natural relationships of the plants.

artificial classification (*Bot.*, *Zool.*). A classification based on one or a few arbitrarily chosen characters, and giving no attention to the natural relationships of the organism; the old grouping of plants into trees, shrubs, and herbs was an *artificial classification*.

artificial community (*Bot.*). A plant community kept in existence by artificial means; e.g. a garden.

artificial daylight (*Illum*). Artificial light having approximately the same spectral distribution curve as daylight, i.e. having a colour temperature of about 4000 K.

artificial disintegration (*Phys.*). The transmutation of non-radioactive substances brought about by the bombardment of the nuclei of their atoms by high-velocity particles, such as alpha particles, protons, or neutrons.

artificial ear (*Acous.*, *Teleph.*). An acoustic device for testing telephone receivers. It has the same acoustic impedance as an average ear, so that the device to which it is applied operates into this acoustic impedance.

artificial earth (*Radio*). A system of conductors placed a short distance above the ground, and having a large capacitance thereto, so that their potential is substantially that of the ground. Used to reduce earth-current losses. Also called COUNTERPOISE EARTH.

artificial flags (*Civ. Eng.*). Paving flags made by mixing cement, ground destructor clinker, and sand with sufficient mortar to form a paste; the mixture is put into moulds, subjected to hydraulic pressure, and finally seasoned in the open air for six months before use.

artificial harbour (*Civ. Eng.*). A harbour formed by the construction of breakwaters.

artificial horizon (*Surv.*). An apparatus, consisting essentially of a shallow trough filled with mercury, used in order to observe altitudes of celestial bodies with a sextant on land, i.e. where there is no visible horizon. The reflection of the object in the artificial horizon is viewed directly and the object itself indirectly by reflection from the index glass of the sextant.

artificial lines (*Elec. Comm.*). Electrical networks of resistances and condensers used in laboratories for simulating the properties of actual transmission circuits, so obviating the use of the latter.

artificial rubber. See **synthetic rubber.**

artificial silk (*Textiles*). The name formerly applied to filaments produced from solutions of modified cellulose; now known as *rayon* (q.v.).

artificial stone (*Build.*). A special kind of concrete, resembling a natural stone, made by mixing chippings and dust of natural stone with Portland cement (coloured if necessary) and water. This mixture is pressed into moulds, later allowed to dry out, and finally is seasoned in the open air for some months before use.

artificial stones (*Jewel.*). Gemstones manufactured by man, not by nature. The term includes reconstructed stones made by fusing together small crystals or fragments; synthetic stones of composition and physical characters identical with those of the natural stones; and imitation stones (paste) resembling true minerals in superficial appearance only. Some experts restrict the term to the last-named category.

artificial sunlight (*Illum.*). Light from special lamps having a large proportion of ultra-violet (health-giving) rays.

Artigue's process, ar-tēg (*Photog.*). A direct method of carbon printing.

artiodac'tyl (*Zool.*). Possessing an even number of digits.

artotype (*Photog.*). Same as *collotype*.

Arun'del formation (*Geol.*). The middle division of the Comanchean in eastern U.S.A., consisting essentially of lignitic clays with iron ores, and containing plant and dinosaurian remains; it succeeds the Patuxent beds and is overlain by the Patapsco formation.

arundina'ceous (*Bot.*). Reed-like.

ar'yl (*Chem.*). A term for aromatic monovalent hydrocarbon radicals.

aryl amines (*Chem.*). Amino derivatives of the aromatic series.

ar'ylarsin'ic acids (*Chem.*). A group of acids of the formula $R{\cdot}AsO(OH)_2$, the derivatives of which have great importance on account of their therapeutic value.

arytae'noid (*Zool.*). (1) In *Vertebrata*, one of a pair of anterior lateral cartilages, forming part of the framework of the larynx.—(2) In general, pitcher-shaped.

As (*Chem.*). The symbol for *arsenic*.

A.S. (*Timber*). Abbrev. for *air-seasoned timber*.

as- (*Chem.*). An abbrev. for *asymmetrically substituted*.

asbes'tos (*Min.*) Two different mineral species are included under this term: (*a*) amphibole, ranging in composition from tremolite to actinolite; and (*b*) a form of serpentine. Both types of asbestos occur in veins as fibrous crystals, so extremely thin as to be elastic and capable, in some cases, of being woven into fabric. Withstands high temperatures without change, and hence used in making fireproof curtains, washers, etc.; also used, combined with other materials, in building materials and paints, to impart fire-resistant properties. Asbestos in the form of paper and millboard is used for low-voltage insulation, where high temperatures may occur, and for arc-resisting padding inside air-break circuit-breakers, etc. See **Sindanyo.**

asbestos cement sheeting (*Build.*). A fire-resisting, weather-proof building material, made from Portland cement and asbestos; it is rolled into various forms such as plain sheets, corrugated sheets, and tiles, which are available in a number of colours.

asbestos shingles (*Build.*). A fire-resisting roof-covering, consisting largely of asbestos, made into the form of shingles.

asbesto'sis (*Med.*). Disease of the lungs due to inhalation of asbestos particles.

as'bolane or **as'bolite** (*Min.*). A form of *wad*—soft, earthy manganese dioxide, containing up to about 25% of cobalt oxide.

Ascaroi'dea (*Zool.*) A class of *Nematoda* the members of which may be parasitic or free-living; they have normally one dorsal and two subventral lips.

ascending (*Bot.*). (1) Becoming vertical by means of an upward curve.—(2) Said of an ovule which arises obliquely from close to the base of the ovary.

ascending aestivation (*Bot.*). Aestivation in which each petal overlaps the edge of the petal posterior to it.

ascending letters (*Typog.*). Letters the top portions of which rise above the general level of the line; e.g. *b, d, f, h*.

Aschoff's nodes or **Aschoff's bodies** (*Med.*). Inflammatory nodules found in rheumatic inflammation of the heart.

Ascidia'cea (*Zool.*). A class of *Urochorda* in which the adult is tailless and sedentary, with a degenerate nervous system and a dorsal atriopore; the gill-clefts are divided by external longitudinal bars. Sea Squirts.

Ascid'ian tadpole (*Zool.*). In *Urochorda*, a larval form having a tail about four times the length of the trunk, containing the notochord and the hollow dorsal nerve cord.

ascid'iozo'oid (*Zool.*). In *Pyrosomatida*, one of four buds or blastozooids which arise on the stolon of the cyathozooid during development.

ascid'ium (*Bot.*). A pitcher-shaped leaf or part of a leaf.

ascif'erous, ascig'erous (*Bot.*). Bearing asci (see ascus).

asci'iform (*Bot.*). Shaped like a hatchet.

asci'tes (*Med.*). See **hydroperitoneum.**

as'cocarp (*Bot.*). The fructification of the *Ascomycetes*, containing asci and ascospores; it may be a cleistocarp, an apothecium, or a perithecium.

ascog'enous cell (*Bot.*). A cell which gives rise to an ascus.

ascogenous hypha (*Bot.*). A hypha from which one or more asci are formed.

ascogo'nium (*Bot.*). See **archicarp.**

As'colichenes, —li-kē'nēz (*Bot.*). The main group of lichens, with many hundreds of species, in which the fungal constituent is an Ascomycete.

Ascomycetes, —mī-sē'tēz (*Bot.*). One of the main groups of Fungi, including some 15,000 species; characterised by the production of asci and ascospores.

ascon grade (*Zool.*). In *Porifera*, a primitive type of water-vascular system, in which the choanocytes line the whole paragaster.

as'cospore (*Bot.*). A spore formed within an ascus.

Ascothoracica, —thor-as'ik-a (*Zool.*). An order of parasitic *Crustacea* which, as adults, usually live embedded in the tissue of their hosts; there is a free-swimming larval stage; the mantle contains diverticula of the gut; the trunk appendages are more or less reduced.

as'cus (*Bot.*). *Pl.* **asci, as'ī.** An enlarged cell in which spores are formed (commonly in groups of eight). It is the characteristic spore-forming organ of the Ascomycetes; usually elongated and club-shaped, but may be globose or filiform. Asci are often formed in large numbers in apothecia or perithecia.

asep'alous (*Bot.*). Devoid of sepals.

asep'sis (*Med.*). The exclusion of putrefying bacteria from the field of operation, by the use of sterilised dressings and instruments, and the wearing of sterilised gowns and gloves by the surgeon and nurses.

asep'tate (*Bot.*). Not divided into segments or cells by septa.

asexual (*Bot., Zool.*). Without sex: lacking, or apparently lacking, functional sexual organs: (with reference to reproduction) parthenogenetic, vegetative.

asexual generation (*Bot.*). The spore-bearing plant in mosses, ferns, and their relatives.

asexual reproduction (*Biol.*). Any form of reproduction not depending on a sexual process or on a modified sexual process.

ash can (*Cinema.*). A large overhead multiple arc-lamp.

ash handling plant (*Eng.*). The system of conveyors and storage bins for handling and storing the ash from the boiler furnaces of large steam-plants.

Ashgill Series or **Ashgillian** (*Geol.*). The highest series of the Ordovician System, comprising only one graptolite zone, and, together with the Caradocian, equivalent to the Bala Series of N. Wales.

ashlar (*Masonry*). (1) Masonry work in which the stones are accurately squared to given dimensions so as to make very good joints over the whole of the touching surfaces.—(2) A thin facing of squared stones or thin slabs laid in courses, with close-fitting joints, to cover brick or rubble walls.

ashlering (*Carp.*). The vertical timbers or quarterings, 2½ to 3 feet long, fixed in attics between floor-joists and rafters as supports for a partition wall, to cut off the sharp angle under the lower end of the rafter.

asi'phonate (*Zool.*). In *Insecta*, having respiratory tubes opening directly to the exterior; lacking siphons.

aspar'agine (*Chem.*). The monoamide of amino-succinic acid, $NH_2 \cdot CO \cdot CH_2 \cdot CH(NH_2) \cdot COOH$, forming rhombic prisms; found in young leaves, in asparagus, and in other vegetables.

asparagus stone (*Min.*). Apatite of a yellowish-green colour, thus resembling asparagus, especially specimens from the original locality, Marcia (Spain).

aspect (*Aero.*). See under **attitude.**

aspect (*Bot.*). (1) The degree of exposure to sun, wind, etc., of a plant habitat.—(2) The effect of seasonal changes on the appearance of vegetation.

aspect ratio (*Aero.*). The ratio *span/mean chord*, or more precisely the ratio *square of maximum span/total area*, of an aerofoil. Gives a general conception of length to breadth.

aspect society (*Bot.*). A plant community dominated at a given season by a given species or group of species.

as'perate, as'perous (*Bot.*). Having a rough surface due to short, upstanding stiff hairs.

aspergil'liform (*Bot.*). Brush-like, tufted.

asper'gillo'sis (*Vet.*). A contagious infection of the respiratory organs of birds due to moulds of the genus *Aspergillus*.

aspermia (*Med.*). Complete absence of semen.

asphalt. The name given to various bituminous substances which may be (1) of natural occurrence (see below), (2) a residue in petroleum distillation, (3) a mixture of asphaltic bitumen and granite chippings, sand, or powdered limestone. Asphalt is used extensively for paving, road-making, damp-proof courses, in the manufacture of roofing felt and paints, and as the raw material for certain moulded plastics. See **mastic asphalt, bitumens.**

asphalt (*Geol.*). A bituminous deposit formed in oil-bearing strata by the removal, usually through evaporation, of the volatiles. Occurs in the 'tar pools' of California and elsewhere and in the pitch lake in Trinidad, whence enormous quantities are exported.

asphalt blocks (*Civ. Eng.*). Road-surfacing blocks made from a mixture of 8-12% of asphaltic cement and 92-88% of crushed stone. The materials are mixed at a temperature of about 300° F., after which the mixture is placed in moulds and subjected to heavy pressure, the blocks finally being cooled suddenly by plunging them into cold water.

asphalt (or bitumen) process (*Photog.*). An imbibition process using bitumen as the surface, which, after exposure, is differentially hardened and therefore can be developed by the action of turpentine.

asphyxia (*Med.*). State of suspended animation as a result of deficiency of oxygen in the blood, whether from suffocation or other causes.

Aspidobran'chia (*Zool.*). An order of archaic *Streptoneura*, having a decentralised nervous system, paired auricles, and multiple central radula teeth; bipectinate ctenidia, which are free distally, usually occur; mainly marine forms. Limpets, Ear Shells, Top Shells, Ormers, and Abalones.

Aspidochirota, —ki-rō'ta (*Zool.*). An order of *Holothuroidea*, having shield-shaped buccal tentacles lacking retractor muscles, but possessing ampullae and respiratory trees; bottom-feeding forms, living on comparatively firm ground.

As'pidocotyl'ea (*Zool.*). An order of *Trematoda*, in which the ventral sucker covers most of the ventral surface of the body and is usually subdivided; the genital opening is median, ventral, and anterior; parasitic in the gut and gall-bladder of *Chelonia* and Fish, and in various organs of Molluscs.

aspidosper'mine (*Chem.*). $C_{22}H_{30}O_2N_2$, an alkaloid of unknown constitution, found in the *Aspidosperma* species, crystallising in needles, m.p. 208° C.; almost insoluble in water, soluble in most organic solvents.

aspiration (*Med.*). (1) The act of drawing in a breath.—(2) The removal of fluids or gases from the body by suction.

aspiration, ventilation by (*Build.*). A ventilation process in which vitiated air is drawn from a room, etc. by means of a suction fan, while fresh air is admitted at some other point.

aspirator (*Chem.*). A device for drawing a stream of air or liquid through an apparatus by suction.

Aspirigera, as-pī-rij'e-ra (*Zool.*). See **Holotricha.**

aspirin (*Chem.*). The common name for acetylsalicylic acid.

asplanch'nic (*Zool.*). Having no gut.

aspo'rocys'tid (*Zool.*). Said of *Sporozoa* in which the zygote divides to form sporozoites, without the formation of a sporocyst.

assay (*Chem.*). See **wet assay** and **dry assay.**

assay balance (*Chem.*). A balance specially made for weighing the small amounts of matter met with in assaying. See also **chemical balance.**

assayer (*Chem.*). A person who carries out the process of assay. See also **wet assay and dry assay.**

assimilate (*Bot.*). Any substance produced in the plant during the processes of food manufacture.

assimilation (*Bot.*). A general term for the whole of the metabolic processes by means of which food is built up and utilised by the plant. Often used as equivalent to *photosynthesis*.

assimilation (*Geol.*). The incorporation of extraneous material in *igneous magma* (q.v.).

assimilation (*Zool.*). (1) The conversion of food material into protoplasm, after it has been ingested, digested, and absorbed.—(2) The resemblance of an animal to its surrounding, not only by coloration, but also by configuration.

assimilation number (*Bot.*). The amount of carbon dioxide assimilated per hour by a portion of leaf substance containing one gram of chlorophyll.

assimilation quotient (*Bot.*). The ratio of the volume of carbon dioxide absorbed to that of oxygen set free, in a given time.

assimilative induction (*Zool.*). In early embryos, induced development of an organ or structure, by the introduction of material from a similar organ or structure in another embryo or from another part of the same embryo.

assize (*Masonry*). A cylindrical block of stone forming part of a column, or of a layer of stone in a building.

association (*Bot.*). A plant community usually occupying a wide area, consisting of a definite population of species, having a characteristic appearance and habitat, and stable in its duration.

association (*Psychol.*). The response to a stimulus idea by a reaction idea in the individual, following the Freudian law of *psychic determinism* (q.v.).

association (*Zool.*). In certain *Sporozoa*, adherence of individuals without fusion of nuclei: a characteristic set of animals, belonging to a particular habitat.

association fibres (*Zool.*). In the cerebrum of *Vertebrata*, axons passing from the pyramidal cells of the cortex to the grey matter of other parts of the same hemisphere.

association, molecular (*Chem.*). See **molecular association.**

association neurone (*Zool.*). A neurone lying entirely within the central nervous system and connecting a motor neurone with a sensory neurone; it is a constituent of all but the simplest reflexes, which it puts into communication with other regions of the C.N.S.

associative behaviour (*Zool.*). Behaviour governed by conditioned reflexes: behaviour in which the effect of the simultaneous application of two classes of stimuli may, on a subsequent occasion, enter into the result of the simple operation of one of them.

associes, a-sō'sēs (*Bot.*). A plant community which may be regarded as in process of development into an association, and is therefore not yet stabilised.

asta'sia aba'sia (*Med.*). Inability of an hysterical patient to stand or to walk.

astatic galvanometer (*Elec. Eng.*). A moving-magnet galvanometer in which the magnets form an astatic system.

astatic system (*Elec. Eng.*). An arrangement of two or more magnetic needles on a single suspension so that in a uniform magnetic field, such as the earth's field, there is no resultant torque on the suspension.

aste'lic (*Bot.*). Not having a stele.

aster (*Cyt.*). (1) A group of radiating fibrils formed of cytoplasmic granules surrounding the centrosome, seen immediately prior to and during cell-division, and usually more prominent in preparations of animal nuclei than in those of plant nuclei.—(2) During metaphase, the stellate arrangement of the chromosomes.

aster phase (*Zool.*). See **metaphase.**

aster'eogno'sis (*Med.*). Loss of ability to recognise, by the sense of touch, the nature of an object.

asteria (*Min.*). A precious stone which when cut *en cabochon* displays a six- or twelve-rayed star due to asterism. Star-sapphire and star-ruby display this character.

asterism (*Min.*). A light effect due to the presence of minute, almost ultramicroscopic, inclusions arranged in parallel series in some varieties of ruby, sapphire, and phlogopite mica. A point source of light viewed through a plate of this form of phlogopite appears as a light star.

aster'nal (*Zool.*). (Of certain ribs) not directly connected with the sternum.

asteroid (*Astron*). A small planetary body, alternatively called MINOR PLANET. Many hundreds of asteroids have their orbits about the sun, between those of Mars and Jupiter.

Asteroidea, —ō-id'ē-a (*Zool.*). A class of *Echinodermata*, having a dorsoventrally flattened body of pentagonal or stellate form; the arms merge into the disc; the tube-feet possess ampullae and lie in grooves on the lower surface of the arms; the anus and madreporite are aboral, and there is a well-developed skeleton; free-living carnivorous forms. Starfish.

as'terospon'dylous (*Zool.*). Showing partial calcification of cartilaginous vertebral centra, in the form of radiating plates.

asthenia (*Med.*). Loss of muscular strength.

asthe'nic type (*Psychol.*). One of Kretschmer's three types of individuals, characterised by tall thin men, with hands long in proportion to the trunk. The type shows schizoid character traits.

astheno'pia (*Med.*). Weakness of the eye muscles in neurasthenia: eye-strain due to errors of refraction.

asthma (*Med.*). A disorder in which there occur attacks of difficult breathing due to spasm of the bronchial muscles.

asti'chous (*Bot.*). Not arranged in rows.

astig'matism (*Light*). A defect in an optical system on account of which, instead of a point image being formed of a point object, two short line images (focal lines) are produced at slightly different distances from the system and at right angles to each other. Astigmatism is always present when light is incident obliquely on a simple lens or spherical mirror.—(*Med.*) Unequal curvature of the refracting surfaces of the eye, which prevents the focusing of light rays to a common point on the retina.—(*Photog.*) A defect in a lens, causing image blurring in particular directions.

asto'matous (*Bot., Zool.*). Without a mouth.

as'tragal (*Carp.*). A small convex moulding having a semicircular cross-section, sometimes plain and sometimes ornamented with carved work.

astragal (*Civ. Eng.*). A specially shaped bar used for connecting together glazing bars or sheets of glass in a window.

astragal plane (*Carp.*). A plane adapted for cutting astragal mouldings.

astragal tool (*Carp.*). A special tool, with a semicircular cutting edge, used in wood-turning for turning beads and astragals.

astrag'alus (*Zool.*). In land Vertebrates, one of the ankle bones: tibiale.

astrakhan (*Furs*). The dressed skins of very young lambs from the Astrakhan district (Russia); the wool is tightly curled and is usually dyed black.

astrakhan (*Textiles*). A pile fabric with a looped curly surface, the pile being formed either of lustre worsted or mohair yarn curled before weaving; or a pile of mohair weft which curls when the ground texture is shrunk, after weaving.

astral ray (*Bot.*). One of the fibrils in the cytoplasm which seem to play a part in the delimitation of ascospores.

astrin'gent (*Med.*). Having the power to constrict or contract organic tissues: an agent which does this.

as'trocentre (*Cyt.*). See **centrosome.**

as'trocyte (*Zool.*). A neuroglia cell.

ast'roid (*Cyt.*). In cell-division, the star-shaped figure formed by the looped chromosomes aggregated round the equator of the nuclear spindle.

as'trolabe (*Astron.*). An instrument (consisting of a disc of metal or wood provided with a rotatable diametral rule carrying sights) used for taking the altitudes of heavenly bodies from which time and latitude are graphically deducible.

astrology. The spurious science which alleges control over the individual destinies of men by the mere aspect of the relative positions of the principal heavenly bodies, which positions can be calculated, in principle, by astronomical processes over any past or future period of time.

astronomical clock (*Astron.*). A pendulum clock which reads sidereal time; in its most modern form electrically driven and controlled.

astronomical telescope (*Astron.*). The general name for a telescope designed for astronomical purposes; the principal forms are the *equatorial* (*refractor* and *reflector*) and the *meridian* (*transit*) *circle*. The reflector consists of a long-focus convex lens and a short-focus convex lens, mounted coaxially at a distance apart equal to the sum of their focal lengths. The lens of longer focus, which is directed towards the object to be observed, is known as the objective or object glass, the other lens being referred to as the eyepiece.

astronomical triangle (*Astron.*). A triangle on the celestial sphere whose sides are all arcs of great circles, two of which intersect at a heavenly body.

astronomical unit (*Astron.*). The mean distance of the earth from the sun, amounting to 92,900,000 miles; used as the principal measure of distance within the solar system.

astronomy. The science of the heavens in all its branches. It may be conveniently subdivided into three main divisions: (1) positional astronomy; (2) gravitational astronomy; (3) physical astronomy—in historical order of development. See also **descriptive astronomy.**

astrophysics. That branch of astronomy which deals with the material constitution of the stars, such as their temperature, chemical composition, and absolute luminosity.

astrosclereide, —skler'ēd (*Bot.*). A sclereide with radiating branches ending in points.

as'trosphere (*Cyt.*). See **attraction sphere.**

astyl'len (*Civ. Eng.*, *Mining*). A small dam built across an adit to restrict the flow of water.

asylum switch (*Elec. Eng.*). See **locked-cover switch.**

asym'meter (*Elec. Eng.*). An instrument having three movements so arranged that any lack of symmetry when these are connected to a 3-phase system can be observed by a single reading.

asymmet'ric (*Bot.*). Irregular in form: not divisible into halves about any longitudinal plane.

asymmetric carbon atom (*Chem.*). A carbon atom to which four different radicals are attached, resulting in *optical isomerism* (q.v.).

asymmetric conductor (*Elec. Eng.*). A conductor which has a different conductivity to currents flowing in different directions through it.

asymmetric reflector (*Illum.*). A reflector in which the beam of light produced is not symmetrical about a central axis.

asymmetric refractor (*Elec. Eng.*). A refractor in which the light is redirected, unsymmetrically, about a central axis.

asymmetric synthesis (*Chem.*). The synthesis of optically active compounds from racemic mixtures. This can be carried out in some cases by chemical methods in which one component is more reactive than the other one. In other cases asymmetric synthesis takes place in the presence of enzymes.

asymmetric system (*Crystal.*). See **triclinic system.**

asymmetrical effect (*Radio*). See **antenna effect.**

asym'metry. The condition of being *asymmetrical*.—(*Zool.*) The condition of the animal body in which no plane can be found which will divide the body into two similar halves; as in Snails and Whelks.

asymptotic breakdown voltage, a-sim-tot'ik (*Cables*). The voltage which, if applied for a very long time (hundreds of hours), will break down a cable.

asynchronous motor (*Elec. Eng.*). See **non-synchronous motor.**

asyner'gia, asyn'ergy (*Med.*). Lack of co-ordinated movement between muscles with opposing actions, due to a lesion in the nervous system.

a.t. or **A.T.** (*Elec. Eng.*). Abbrev. for *ampere-turn*.

atac'amite (*Min.*). A hydrated chloride of copper, widely distributed in S. America, Australia, India, etc.; occurring also at St. Just (Cornwall).

at'avism (*Gen.*). The phenomenon in which, by skipping a generation, a particular character in the offspring is unlike the corresponding character in the parents but resembles the corresponding one of grandparents: more generally, occurrence of a characteristic observed in more distant ancestors, but not in the more immediate ancestors. —*adj.* **atavis'tic.**

ataxia, ataxy (*Med.*). Inco-ordination of muscles, leading to irregular and uncontrolled movements; due to lesions in the nervous system.

atelec'tasis (*Med.*). Failure of the lungs, or part of the lungs, to expand at birth.

ateleio'sis (*Med.*). Dwarfism, with normal bodily proportions; due to disorder of the pituitary gland.

a'telomit'ic (*Cyt.*). Said of a chromosome having the spindle fibre attached somewhere along the side.

athero'ma, ath'erosclero'sis (*Med.*). Thickening of the intima of the arteries, due to fatty and calcareous deposits and proliferation of fibrous tissue.—*adj.* **athero'matous.**

atheto'sis (*Med.*). Slow, involuntary, spontaneous, repeated, writhing movements of the fingers and of the toes, due to a lesion in the brain.

athletic type (*Psychiatry*). One of Kretschmer's three types of individual, characterised by a well-developed skeletal musculature, in which the relation of limbs to trunk is well-proportioned. This type is seen very often in schizophrenia.

Atkinson cycle (*I.C. Engs.*). A working cycle for internal-combustion engines, in which the expansion ratio exceeds the compression ratio; more efficient than the Otto cycle, but mechanically impracticable.

Atlantic Ocean. An ocean lying between the east coast of the American continent and the west coast of Europe and Africa. It extends from the Arctic Circle to the Antarctic Circle. See **ocean depths,** etc.

Atlantic Province (*Geol.*). A general name for those regions bordering the Atlantic Ocean where Cambrian strata outcrop; characterised by a faunal assemblage different from that occurring in the Pacific Province.

atlas (*Paper*). A standard size of drawing paper, 26 × 34 in.

atlas (*Zool.*). The first cervical vertebra.

at'mograph (*Photog.*). A photographic image obtained by development with vapour or smoke.

atmol'ysis (*Chem., Phys.*). The method of separation of the components of a mixture of two gases which depends on their different rates of diffusion through a porous partition.

atmosphere (*Photog.*). Such qualities in a photograph which give a sense of depth and differentiation of receding planes. Due mainly to dispersion by dust in the atmosphere.

atmosphere, composition of (*Chem., etc.*). Dry atmospheric air contains the following gases in the proportions (by weight) indicated: nitrogen, 75 5; oxygen, 23·2; argon, 1·3; carbon dioxide, ·05-·4; krypton, ·028; xenon, ·005; neon, ·00086; helium, ·000056.

atmosphere, pressure of (*Phys.*). The pressure exerted by the atmosphere at the surface of the earth is due to the weight of the air. Its average value is $1{\cdot}013 \times 10^6$ dynes per square centimetre, or 14·7 lbs. per square inch. Variations in the atmospheric pressure are measured by means of the barometer. See **pressure (barometric).**

atmospheric absorption (*Acous.*). Diminution of intensity of a sound-wave in passing through the air, apart from normal inverse square relation, and arising from true absorption. This occurs appreciably for high audio frequencies only, in addition to apparent absorption by dispersion in aerial strata.

atmospheric arc-rectifier (*Elec. Eng.*). A form of high-power high-voltage rectifier consisting of an arc between electrodes in air, the arc being initiated in alternate half-cycles by means of a pilot spark and extinguished at the end of that half-cycle by rapid cooling. Also called MARX RECTIFIER, after the inventor.

atmospheric electricity (*Meteor.*). The electric charges which exist in the atmosphere.

atmospheric engine (*Eng.*). An early form of steam-engine, in which a partial vacuum created by steam condensation allowed atmospheric pressure to drive down the piston.

atmospheric line (*Eng.*). A datum line drawn on an indicator diagram by allowing atmospheric pressure to act on the indicator piston or diaphragm.

atmospherics (*Radio*). Interfering or disturbing signals of natural origin. Also called STRAYS, STATIC, X'S.

ato'cia (*Med.*). Sterility in the female.

ato'kous (*Zool.*). Having no offspring: sterile.

at'olls. Coral reefs, typically found in the Pacific; usually ring-like in shape, enclosing lagoons.

atom (*Chem.*). The smallest particle of an element which can take part in a chemical reaction. See **atomic structure, Dalton's atomic theory.**

at'omate (*Bot*.). Having small particles sprinkled over the surface.

atom'ic (*Chem.*). (1) Pertaining to an atom or atoms.—(2) Pertaining to a gram-atom.

atomic diameters (*Chem.*). These vary periodically among the elements, as do their chemical properties. The range of diameters is from 0·6 to $5{\cdot}4 \times 10^{-8}$ cm., the inert gases having the smallest diameter in each period and the alkali metals the biggest.

atomic heat (*Chem.*). The quantity of heat required to raise the temperature of one gram-atom of an element by 1° C.

atomic hydrogen (*Chem.*). See **active hydrogen.**

atomic-hydrogen welding (*Elec. Eng.*). A welding process in which an electric arc is drawn between tungsten electrodes placed in a jet of hydrogen. Also called ATOMIC ARC WELDING.

atomic mass (*Chem*.). The mass of an atom.

atomic number (*Chem.*). The number of an element when arranged with others in order of increasing atomic weight. It is equal to the total number of orbital electrons in an atom of the element. Atomic numbers were originally assigned by Moseley from observations on the characteristic X-ray spectra of the elements.

atomic refraction (*Chem.*). The contribution made by a gram-atom of an element to the molecular refraction of a compound.

atomic structure (*Chem.*). An atom consists of a small nucleus, of mass equal to the atomic mass and carrying a charge of positive electricity equal to the atomic number, surrounded at a relatively great distance by a number of electrons equal to the atomic number, the outer ones being largely responsible for the chemical properties of the element.

atomic theory (*Chem.*). See **Dalton's atomic theory.**

atomic volume (*Chem.*). The volume occupied by one gram-atom of an element.

atomic weight (*Chem.*). The relative weight of an atom of an element when the weight of an atom of oxygen is taken as 16 000.

atomicity (*Chem.*). The number of atoms contained in a molecule of an element.

at'omiser (*Eng.*). A nozzle through which oil fuel is sprayed into the combustion chamber of an oil engine or boiler furnace. Its function is to break up the fuel into a fine mist so as to ensure good dispersion and combustion.

atonal'ity (*Acous*.). Musical work in which there is no tonality and key; a semi-tone scale is used, a key being forced by the repetition of harmonically related notes

at'ony, ato'nia (*Med.*). Diminution or loss of muscular tone.

atony of the fore-stomachs (*Vet.*). A slowly developing loss of tone or power of contraction of the rumen, reticulum, or omasum of cattle, sheep, or goats.

Atox'yl (*Chem.*). The sodium salt of *p*-aminophenyl-arsinic acid (arsanilic acid); it has a therapeutical action against syphilis and sleeping-sickness. (Trade-name.)

atrabil'iary (*Med.*). Pertaining to black bile.

at'rate, at'ratous (*Bot.*). Blackened: blackening.

Atre'mata (*Zool.*). An order of primitive *Ecardines* having a thin horny shell with almost equal valves, and a long peduncle; they live in tubes of sand into which they can withdraw; found in Australian and Western Pacific waters.

atre'sia (*Med.*). Pathological narrowing of any channel of the body.—(*Zool.*) Disappearance by degeneration; as the follicles in the Mammalian ovary.—*adjs.* **atre'sic, atret'ic.**

a'trial (*Zool.*). Pertaining to the *atrium* (q.v.).

atrial siphon (*Zool.*). In *Urochorda*, the papilla at the apex of which is the atriopore.

at'ricolor (*Bot.*). Inky.

a'triopore (*Zool.*). The opening by which the atrial cavity communicates with the exterior.

a'trioventric'ular (*Zool.*). See **auriculoventricular.**

a'trium (*Zool.*). In *Platyhelminthes*, a space into which open the ducts from the male and female genital organs: in aquatic *Oligochaeta*, a space lined by the cells of the prostate gland into which the male ducts discharge: in pulmonate *Mollusca*, a cavity into which the vagina and the penis open and which itself opens to the exterior: in ectoproct *Polyzoa*, the cavity of the tentacle sheath: in *Cyphonautes* larvae, the space surrounded by the mantle: in developing entoproct *Polyzoa*, the central invagination the walls of which later give rise to the nervous system: in certain *Mollusca* larvae, the outer stomodaeum: in metamorphosing *Auriculariae*, the cavity into which the larval mouth opens: in *Prochordata*, the cavity surrounding the respiratory part of the pharynx: in *Vertebrata*, the anterior part of the nasal tract: in *Reptilia* and *Aves*, the cavity connecting the bronchus with the lung chambers: in the developing Vertebrate heart, the division between the sinus venosus and the ventricle, which will later give rise to the auricles.

atro'chal (*Zool.*). (Of trochophore larvae) possessing an apical tuft of cilia and a general ciliated covering, but lacking a prototroch.

atro'pamine (*Chem*.). $C_{17}H_{21}NO_2$, a *Solanum*-base alkaloid, identical with *apoatropine* (q.v.).

at'rophy (*Med.*). Wasting of a cell or of an organ of the body.—(*Zool.*) Degeneration, i.e., diminution in size, complexity, or function, through disuse.

at'ropine (*Chem.*). $C_{17}H_{23}O_3N$, an alkaloid of the tropane group, obtained from solanaceous plants in which it occurs in traces, or by treating crude hyoscyamine with dilute alkali, when it undergoes isomerisation to atropine. It crystallises in prisms, m p. 118° C., and sublimes when heated rapidly. It is soluble in alcohol or ether, slightly soluble in water. It causes dilatation of the pupil of the eye. Atropine constitutes the active principle of belladonna (obtained from *Atropa belladonna*, 'deadly nightshade'), which, besides eye dilatation, has numerous other medically valuable properties. Popular legend ascribes the name *belladonna* (=beautiful lady) to the use of the drug by Spanish beauties for purposes of eye dilatation.

at'ropous (*Bot.*). See **orthotropous.**

attached column (*Build.*). A column partially built into a wall, instead of standing detached.

attachment constriction (*Bot.*). A constriction in a chromosome to which the spindle fibre is attached.

attachment organ (*Bot.*). (1) A disc-like or branched outgrowth from the base of the thallus, attaching an alga to a solid object.—(2) A hooked hair or similar structure serving to attach a fruit to an animal, and assisting dispersal.

attachment screw (*Instruments*). A set-screw used to secure two parts of an instrument together in order to prevent relative movement.

attemperators (*Brew.*). Coils of pipe through which cold water circulates; used to regulate the temperature of beer whilst fermenting.

attenuate, attenuated (*Bot.*). Tapering off, and so narrowing gradually to a point.

attenuation (*Bot.*). The weakening or loss of virulence by parasitic bacteria and fungi in culture.

attenuation (*Elec. Comm.*). The diminution of current, voltage, or power in an electrical communicating channel, measured in *nepers* or *decibels*.—(*Radio*) See **absorption.**—See also **geometrical attenuation, frequency of infinite attenuation.**

attenuation compensation (*Elec. Comm.*). The use of networks to correct for varying attenuation; e.g. in transmission lines.

attenuation constant (*Elec. Comm.*). That part of the propagation constant which refers to the diminution of amplitude of an alternating current in passing along unit length (one mile) of transmission line.

attenuation correction (*Elec. Comm.*). Same as *attenuation compensation* (q.v.).

attenuation equaliser (*Elec. Comm.*). An *equalising network* (q.v.).

attenuator (*Elec. Comm.*). An arrangement of resistances in the form of an artificial line, which introduces a known quantity of attenuation into the circuit in which it is inserted. A variable attenuator provides for altering the resistances, so that the attenuation introduced is known and variable.

attenuator pad (*Elec. Comm.*). A single unit of attenuation, either for use in an attenuator, or for insertion in a transmission circuit to introduce a known loss or to change the impedance level without reflection.

attic (*Build.*). The highest storey in a house, usually within the roof space.

attitude (*Aero.*). The *attitude* or *aspect* of an aircraft in flight, or on the ground, is defined by the angles made by its axes with the relative wind, or with the ground, respectively.

attracted-disc electrometer (*Elec. Eng.*). An instrument in which potential is measured by the attraction between two oppositely charged discs.

attracted-iron motor (*Elec. Eng.*). A small motor suitable for operating instruments, etc. It consists of a soft iron core which is free to rotate and which is acted upon by magnetising coils. A laminated iron core is used for motors to operate off an a.c. supply.

attraction cone (*Embryol.*). A structure formed in the cytoplasm of the ovum during fertilisation, at the point of contact with the spermatozoon, facilitating the entry of the latter.

attraction particle (*Cyt.*). See **centriole.**

attraction sphere (*Cyt.*). In cell-division, the archoplasmic masses, and the striations radiating through them from the centrosomes.

attraction spindle (*Cyt.*). In cell-division, the terminal portions of the achromatic spindle.

attrition test (*Civ. Eng.*). A test for the determination of the wear-resisting properties of stone, particularly stone for roadmaking. Pieces of the stone are placed in a closed cylinder, which is then rotated for a given time, after which the loss of weight due to wear is found.

Attwood's formula (*Ship Constr.*). A formula for determining the moment of statical stability at large angles of heel of a ship. Terming angle of heel θ, and the weight of the ship W, moment

$$= W\left(\frac{v \times hh_1}{V} \pm BG \sin\theta\right) \text{ foot tons,}$$

where v = volume of emerged wedge; hh_1 = distance between C.G.'s of emerged and immersed wedges; V = volume of displacement; B = centre of transverse buoyancy; G = centre of gravity.

Au (*Chem.*). The symbol for gold (*aurum*).

Å.U., A.U. (*Phys.*). Abbrev. for *Ångström unit.*

audibility (*Acous.*). Ability to be heard; said of faint sounds in the presence of noise. The extreme range of audibility is 30 to 20,000 in frequency, depending on the applied intensity; and from 0·2 milli-dyne (r.m.s.) at 1000 cycles per second (the zero of the phon scale, selected as the average for good ears), and 120 decibels above this.

audible ringing tone or **audible signal** (*Teleph.*). The tone heard in the telephone receiver which indicates that the *called* subscriber's bell is being rung. The ringing current is allowed partially to leak back to the calling subscriber. Also, any similar signal which indicates the establishing of a telephone connexion.

audio frequency (*Elec. Comm.*). A frequency of oscillation which, when the oscillatory power is converted into a sound pressure, gives rise to aural perception; assumed to be approximately between 30 cycles per second and 15 kilo-cycles per second.

audio-frequency amplifier (*Teleph.*). An amplifier for frequencies within the audible range or some fraction of this.

audio-frequency transformer (*Elec. Comm.*). A transformer for insertion into a communication channel, so designed that it has a specified, normally uniform, response for currents of frequencies required for sound reproduction.

aud'iogram (*Acous.*). The curve, on recognised logarithmic scales, of the minimum intensity of sounds of different frequencies perceivable by an ear.

audiogram, noise (*Acous.*). See **noise audiogram.**

audiom'eter (*Acous.*). An electrical apparatus for measuring the minimum intensities of sounds perceivable by an ear, for specified frequencies. Used also for testing the power of hearing.

audiometer, gramophone (*Acous.*). See **gramophone audiometer.**

audiometer, noise (*Acous.*). See **noise audiometer.**

audion (*Radio*). The original name (now obsolete) given by Lee de Forest to the three-electrode thermionic tube.

audition, limits of (*Acous.*). See **limits of audition.**

audito'rium. The part occupied by the audience in a public building.—Specifically: (*Acous.*) The enclosure in which an audience gathers for hearing original or reproduced sounds. The architecture has to be designed with a view to good audition, respect being had to the type of performance and the size of the audience.

auditory, aural (*Zool.*). Pertaining to the sense of hearing or to the apparatus which subserves that sense: the eighth cranial nerve of Vertebrates, supplying the ear.

auditory perspective (*Acous.*). The faculty of the human pair of ears to appreciate relative distances and bearings of sources of sounds in combination in an auditorium. Shown to be reproducible with a three-channel reproducing system. Also called LOCALISATION.

auditory sensation area (*Acous.*). The area between the limits of maximum tolerable and minimum perceivable intensities appreciated by the normal ear as sound, when these are plotted on an audition diagram.

Auerbach's plexus, ow'er-bahh (*Zool.*). In the small intestine of *Vertebrata*, a close ganglionated plexus of amyelinate nerve fibres belonging to the sympathetic nervous system, and lying between the longitudinal and circular muscle coats; plexus myentericus.

augen-gneiss, ow'gen nis (*Geol.*). A coarsely crystalline rock of granitic composition, containing lenticular, eye-shaped masses of feldspar or quartz embedded in a finer matrix. A product of regional metamorphism.

aug'er (*Carp., Civ. Eng.*). A tool used for boring holes, especially in wood or in the earth. It consists of a long steel shank, having at one end a cutting edge and at the other a cross-piece for use as a handle with which to turn the auger by hand.

augite, aw′jīt (*Min.*). A complex aluminous silicate of calcium, iron, and magnesium, crystallising in the monoclinic system, and occurring in many igneous rocks, particularly those of basic composition; it is an essential constituent of basalt, dolerite, and gabbro.

augmentation of moon's semi-diameter (*Astron.*). The apparent increase in the angular radius of the moon, due to the observer's being nearer to that body when above the horizon than is the centre of the earth, the maximum difference in the distance being the earth's radius, 3963 miles approximately.

augmentative-trophic reaction (*Zool.*). In development, the quantitative effect of stimuli on the increase in size of organs or tissues already present.

augmentor (*Zool.*). In *Vertebrata,* a nerve arising from the sympathetic system and tending, when stimulated, to increase the rate of heart-beat: accelerator: more generally, any nerve which increases the rate-activity of an organ, as a gland or muscle.

aul′ophyte (*Bot.*). A plant inhabiting a cavity in the body of another plant, but not living as a parasite.

aulosto′matous (*Zool.*). Possessing a tubular mouth.

aura (*Med.*). A movement, or sensation, or mental disturbance, which precedes an epileptic convulsion.

aural (*Zool.*). See **auditory.**

aural masking (*Acous.*). See **masking.**

aur′amines (*Chem.*). Dyestuffs of the diphenylmethane series.

aurantia (*Photog.*). A reddish dye for sensitising emulsions and for making gelatine filters.

aur′eole (*Meteor.*). (1) The clear transparent space between the sun or moon and a *halo* (q.v) or corona.—(2) The bright indefinite ring round the sun in the absence of clouds.

auric acid, auric oxide (*Chem*). Formula, Au_2O_3 An acidic oxide of gold.

auricle (*Bot.*). A small ear-shaped lobe at the base of a leaf or other organ.

auricle, auric′ula (*Zool*). A chamber of the heart connecting the afferent blood-vessels with the ventricle: the external ear of *Vertebrata*: any lobed appendage resembling the external ear.—*adj.* **auricular.**

auricled, auriculate. Having auricles.

auric′ula (*Zool.*). In *Echinoidea*, one of the ossicles of Aristotle's lantern, a radially placed arch arising from the inside of the corona. See also **auricle.**

auricula′ria (*Zool.*). In *Holothuria*, a pelagic ciliated larva, having the cilia arranged in a single band, produced into a number of short processes.

auric′ulars (*Zool.*). See **tectrices.**

auric′uloventric′ular (*Zool.*). Pertaining to, or connecting, the auricle and ventricle of the heart; e.g., the *auriculoventricular connexion*, a bundle of muscle-fibres which transmits the wave of contraction from the auricle to the ventricle, in higher Vertebrates.

auriferous deposit (*Geol.*). A natural repository of gold, in the general sense including gold-bearing lodes and sediments such as sands and gravels, or their indurated equivalents, which contain gold in detrital grains or nuggets. See **banket, placers, lodes.**

auriferous pyrite (*Min.*). Iron sulphide in the form of pyrite, carrying gold, probably in solid solution.

aurine (*Chem.*). Pararosolic acid $(HO{\cdot}C_6H_4)_2{:}C{:}C_6H_4{:}O$, made from phenol, oxalic acid, and sulphuric acid. It is similar to rosolic acid in properties.

aurines (*Chem.*). A group of dyestuffs derived from aurine.

aurist (*Acous., etc.*). A medical man skilled in the treatment of defects of the ear, including the measurement of audition.

au′rophore (*Zool.*). In certain *Siphonophora*, a modified medusoid of obscure function, occurring at the side of, and traversed by a canal from, the pneumatophore.

Auro′ra Borea′lis (*Astron.*). A phenomenon of great beauty, believed to be caused by some kind of electric discharge from the sun, best seen in north latitudes about 70°. It consists of arcs or bands of light (often in complex and varied shapes), white, yellow, red, and green. Also called NORTHERN LIGHTS. The corresponding phenomenon in high south latitudes is called the **Aurora Australis.**

aurous (*Chem.*). Containing monovalent gold.

aurum (*Chem.*). Symbol, Au. See **gold.**

auscult′tion (*Med*). The act of listening to the sounds produced in the body.

Austen-Cohen formula (*Radio*). A semi-empirical formula for the field strength at a distance of *r* kilometres from a transmitting antenna of effective height *H* metres, and carrying a current of *I* amperes, the wavelength being λ kilometres. The field strength in microvolts per metre is approximately

$$377\frac{HI}{\lambda r}\epsilon\frac{-0{\cdot}0014r}{\sqrt{\lambda}}, \text{ for } \lambda \text{ greater than 1.}$$

austenite (*Met.*). Originally, a solid solution of carbon in γ-iron; now includes all solid solutions based on γ-iron.

austenitic steels (*Met.*). Steels containing sufficient amounts of nickel, nickel and chromium, or manganese to retain austenite at atmospheric temperature; e.g. *austenitic stainless steel* and *Hadfield's manganese steel.*

Austin Chalk (*Geol.*). A white limestone of Cretaceous age, varying in thickness from 1500 ft. on the Rio Grande to 600 ft. at the type-locality (Austin, Texas) and less than 100 ft. in Colorado. Passes laterally into the Benton Group.

Australasian region (*Zool.*). One of the primary faunal regions into which the land surface of the globe is divided; includes Australia, New Guinea, Tasmania, New Zealand, and the islands south and east of Wallace's line.

australites (*Min.*). See **tektites.**

Austrian cinnabar (*Chem.*). See **basic lead chromate.**

aut-. Prefix. See **auto-.**

aut′acoid, aut′ocoid (*Physiol.*). General name for an endocrine secretion; a specific organic substance formed by the cells of one organ, and passed by them into the circulating fluid, to produce effects upon other organs. *Hormones* (q.v.) are stimulatory and *chalones* are inhibitory or depressive.

autecol′ogy (*Bot., Zool.*). The study of the ecology of any individual species.

author's proof (*Typog.*). The proof returned to the printer by the author, showing his corrections.

auto-, aut- (Greek *autos*, self). A prefix used in the construction of compound terms; e.g. *autocatalysis, autoparthenogenesis* (qq.v.).

auto room (*Auto. Teleph.*). In an automatic telephone exchange, the room in which apparatus is collected in order, on racks.

autoal′logam′y (*Bot.*). The condition of a species in which some individual plants are capable of self-pollination, and others of cross-pollination.

Aut′obasid′iomyce′tes (*Bot.*). A group of about 12,000 species, including mushrooms, toadstools, and many related fungi, characterised by the possession of an *autobasidium* (q.v.).

autobasid′ium (*Bot.*). A basidium which does not become septate.

autobrecciation, —brech′i-ā′shun (*Geol.*). The production of a brecciated appearance by fracturing the consolidated 'roof' of a lava flow, the fragments sinking into the still fluid portion, which, on final consolidation, may differ slightly from the crust in physical characters.

auto-capacity coupling (*Radio*). The coupling of two circuits by a condenser included in series with a common branch.

aut'ocarp (*Bot.*). A fruit resulting from self-fertilisation.

autocatal'ysis (*Chem.*). The catalysis of a reaction by a product of that reaction.

autocatal'ysis (*Zool.*). Reaction or disintegration of a cell or tissue, due to the influence of one of its own products.

autochrome (*Photog.*). Lumière three-colour starch-grain mosaic colour photographic system.

autoclave (*Chem.*). A vessel, usually constructed of thick-walled steel, for carrying out chemical reactions under pressure and at high temperatures. Pressure gauge, safety valve, and thermometer pocket are provided for control.—(*Med.*) An apparatus for sterilisation by steam at high pressure.

auto-converter (*Elec. Eng.*). A special form of converter used with certain types of electric-battery vehicle; it is arranged to operate from a constant-voltage battery supply and give an output voltage inversely proportional to the current.

autoch'thonous (*Zool.*) In an aquatic community, said of food material produced within the community: more generally, indigenous, inherited, hereditary (e.g. *autochthonous* species, *autochthonous* characteristics). Cf. *allochthonous.*

aut'ocyst (*Zool.*). In *Neosporidia*, a thick membrane formed by the parasite, and separating it from the host tissues.

autodyne (*Radio*). Another name for *autoheterodyne.*

autoecious, autoxenous, aw-tē̆'si-us, —zē̆'nus (*Bot.*). A term applied to parasitic fungi which complete the whole of their development upon one species of host plant.

auto-emission (*Thermionics*). The emission of electrons from a conductor by virtue of high potential gradient at the surface. Also called COLD EMISSION.

auto-er'otism (*Psychol.*). A condition where sensual pleasure is sought and gratified in one's own person, without the aid of an external love-object; e.g. masturbation. See also **narcissism.**

auto-frettage (*Eng.*). A process of gun-tube manufacture by which a plain tube is initially stressed so as to simulate the desirable stress-distribution of a compound cylinder.

autog'amy (*Bot., Zool.*). (1) Self-fertilisation.—(2) The fusion of sister-cells, or of two sister-nuclei.

autogenesis, autogeny (*Bot., Zool.*). See **spontaneous generation.**

autogenic movement (*Bot*). See **autonomic movement.**

Autogi'ro (*Aero.*). A trade-name for a flying-machine whose chief support in flight is derived from the reaction of the air upon a system of freely revolving planes or rotors; a rotaplane.

autographic film (*Photog.*). Camera film which uses a transferable substance which is conveyed to the back of the base by writing with a stylus on the red paper backing, the written words appearing on the final positive.

autohet'erodyne, autodyne (*Radio*). A heterodyne receiving circuit in which the same valve is used for rectification and generation of local oscillations. Also called ENDODYNE, SELF-HETERODYNE.

autohetero'sis (*Zool.*). Independent modification of a merome, or meromes, without consequent modification of the other meromes in the same somite.

autoi'cous (*Bot.*). Having male and female inflorescences on the same plant.

auto-ignition (*I.C. Engs.*). The self-ignition or spontaneous combustion of a fuel when introduced into the heated air-charge in the cylinder of a compression-ignition engine. See **spontaneous ignition temperature.**

auto-inductive coupling (*Radio*). The coupling of two circuits by an inductance included in series with a common branch.

auto-infection (*Zool.*). Re-infection of a host by its own parasites.

auto-intoxication (*Med.*). Poisoning of the body by toxins produced within it.

autol'ysis, *or* —lī'sis (*Bot., Zool.*). The breakdown of the cell contents of a cell, or of an organ, by the action of enzymes produced in the cells concerned: self-digestion.—*adj.* **autolytic.**

auto-manual switchboard (*Teleph.*). The section of an automatic telephone exchange used by operators to obtain numbers in exchanges which are not automatic, and to handle trunk and toll calls, phonograms, and miscellaneous enquiries.

automatic alarm (*Radio*). See **automatic call device.**

automatic arc lamp (*Illum.*). An arc lamp in which the feeding of the carbons into the arc and the striking of the arc are done automatically, by electromagnetic or other means.

automatic arc welding (*Elec. Eng.*). Arc welding carried out in a machine which automatically moves the arc along the joint to be welded, feeds the electrode into the arc, and controls the length of the arc.

automatic bias (*Radio*). The provision of grid-bias by the inclusion of a resistance in the cathode circuit of a thermionic valve, the grid circuit being returned to the end of the resistance remote from the cathode.

automatic call device (*Radio*). A system of relays, responsive to a prearranged set of signals, connected to an unattended receiver, so that an alarm is sounded on operation. Frequently used on ships for detection of distress signals. Also called AUTOMATIC ALARM.

automatic camera (*Photog.*). A camera in which exposure and processing are carried out automatically, the finished photographs becoming available in a short time. See **Photomaton.**

automatic circuit-breaker (*Elec. Eng.*). A circuit-breaker which automatically opens the circuit as soon as certain predetermined conditions (e.g. an overload) occur.

automatic control (*Elec. Comm.*). Reduction or expansion of the difference between the maximum and minimum modulation levels in communication circuits by means of devices operated by the modulation currents themselves.

automatic cut-out (*Elec. Eng.*). A term frequently applied to a small automatic circuit-breaker suitable for dealing with currents of a few amperes.

automatic direction-finder (*Radio*). A direction-finding system in which servo motors, controlled by the incoming signal, cause the rotatable loop antenna or goniometer to hunt for the direction of maximum or minimum signal response.

automatic exchange (*Teleph.*). An exchange in which the normal connexions between subscribers, or from subscribers to other exchanges, are set up by switches operated by impulse trains and not by operators.

automatic flushing cistern (*San. Eng.*). A tank which discharges its contents, at regular intervals, by a siphonic action started when the water entering the tank rises to a certain level. Used for flushing urinals; also for drains having insufficient fall to ensure self-cleansing.

automatic frequency control (*Radio*). An arrangement sometimes used in superheterodyne receivers to hold the local oscillator at its correct frequency after the desired station has been tuned in. Usually abbreviated to **A.F.C.**

automatic gain control (*Radio*). An arrangement usually found in a radio-receiver for counteracting changes in the magnitude of a received radio signal due to variations in signal-strength, whether such variations arise from power or distance of the transmitter, or from rapid fading. The gain of the radio-frequency section of the receiver is made inversely dependent on the demodulated carrier. Erroneously termed *automatic volume control* (*A.V O.*), which should refer to control of contrast. See **control** (*Acous.*) and **compandor** (*Elec. Comm*). See also **delayed automatic volume control.**

automatic gate (door) (*Elec. Eng.*). A gate (or door) on a lift-car which is automatically opened by the action of the lift as it approaches a landing, and which automatically closes as the car leaves the landing.

automatic gate (door) lock (*Elec. Eng.*). A lock on the gate (or door) of a lift-car or landing, which is arranged so that it can only be released, and the gate or door opened, when the car is in a position of safety at the landing concerned.

automatic generating plant (*Elec. Eng.*). A small generating station, usually for private-house lighting, consisting of a petrol-engine-driven generator in conjunction with a battery; the engine is automatically started up when the battery voltage falls below a certain value and stopped when it is fully charged. The term is also applied to the plant in small unattended hydro-electric generating stations.

automatic ignition advance (*Automobiles, etc.*). A device, fitted to the ignition distributor of a petrol-engine, which adjusts the ignition-timing in accordance with engine-speed, induction-pipe depression, or both.

automatic loom (*Textiles*). A loom equipped with mechanism for automatically replenishing the weft: a warp stop motion: a warp let-off motion.

automatic pistol (*Small Arms*). A pistol which is reloaded by means of the energy produced by the discharge of the previous round.

automatic shutter (*Cinema.*). In a film projector, the shutter which cuts off the light from the arc if the film should stop (instead of maintaining intermittent motion); without this safeguard, the intense heat from the arc would ignite the film.

automatic signalling (*Elec. Eng.*). A system of railway signalling, usually with electric control, in which the signals behind a train are automatically put to 'danger' as soon as the train has passed, and held in that position until the train has attained the next section of line.

automatic starter (*Elec. Eng.*). A starter for an electric motor which automatically performs the various starting operations (e.g. cutting out steps of starting resistance) in the correct sequence, after being given an initial impulse by means of a push-button or other similar device.

automatic stoker (*Eng.*). See **mechanical stoker.**

automatic substation (*Elec. Eng.*). A substation containing rotating machinery (and therefore normally requiring the presence of an attendant), which, as occasion demands, is started and stopped automatically; e.g. by a voltage relay which operates when the voltage falls below or rises above a certain predetermined value.

automatic synchroniser (*Elec. Eng.*). A device which, by means of suitable relays, performs the process of synchronisation automatically.

automatic tandem working (*Auto. Teleph.*). The use of an intermediate exchange for routing calls between automatic and manual exchanges, thus facilitating connexions during conversion from manual to complete automatic working in an area.

automatic tap-changing equipment (*Elec. Eng*). A voltage-regulating device which automatically changes the tapping on the winding of a transformer in order to regulate the voltage in a desired manner.

automatic telegraphy (*Teleg.*). The use of a punched slip for operating telegraph machines, which transmit signals regularly and accurately.

automatic telephone (*Teleph.*). A telephone system in which the required subscriber is obtained by the calling subscriber setting up a train of impulses which route the call to the desired subscriber without the intervention of an operator.

automatic telephone exchange (*Auto. Teleph.*). The location of all the automatic switches and associated equipment required for the automatic routing of calls controlled by dialling to or from a specified telephonic area.

automatic train stop (*Elec. Eng.*). A catch, used in conjunction with an automatic signalling system, which engages a trip-cock on the train if the train passes a signal at danger.

automatic trolley reverser (*Elec. Eng.*). An arrangement of the overhead contact line of a tramway, located at terminal points, which ensures that the trolley collector is reversed when the direction of motion of the car is reversed.

automatic tuning (*Radio*). A system of tuning in which any of a number of predetermined frequencies may be selected by means of push-buttons or similar devices.

automatic voltage regulator (*Elec. Eng.*). A voltage regulator which automatically holds the voltage of a distribution circuit or an alternator constant within certain limits, or causes it to vary in a predetermined manner. See **automatic tap-changing equipment, moving-coil regulator, Tirrill regulator.**

automatic volume control (*Radio*). See **automatic gain control.**

autom'atism (*Psycho-path.*). An automatic act done without the full co-operation of the personality, which may even be totally unaware of its existence. Commonly seen in hysterical states, such as fugues and somnambulism, but may also be a local condition, as in automatic writing.

autometamor'phism (*Geol.*). Changes in the mineral composition of an igneous rock consequent upon the action of solutions and possibly of vapours derived from the same body of magma as the rock itself.

aut'omix'is (*Biol.*). The mingling of chromatin from the same source, as in self-fertilisation; hence self-fertilisation especially in lower plants.

automixte system (*Elec. Eng.*). A system of operation of petrol-electric vehicles in which a battery, connected in parallel with the generator, supplies current during starting and heavy-load periods, and is charged by the generator during light-load periods. Also called PIEPER SYSTEM.

automobile, —mō-bēl'. A common synonym for a *motor-car.*

automobile engine (*I.C. Engs.*). A multi-cylinder petrol or oil engine used for the propulsion of motor vehicles.

autonom'ic, auton'omous (*Bot., Zool.*). Independent: self-regulating: spontaneous.

autonomic (or **autogenic**) **movement** (*Bot.*). A movement of a plant, or of part of a plant, not stimulated by any external condition.

autonomic nervous system (*Zool.*). In Vertebrates, a system of motor nerve-fibres supplying the smooth muscles and glands of the body. See **sympathetic nervous system, parasympathetic nervous system.**

auton′omous (*Zool.*). Subject to the same laws, especially of growth and specialisation. Cf. *heteronomous*. See also **autonomic.**

autopal′atine (*Zool.*). In some Fish, an ossification at the extreme anterior end of the PPQ Bar.

autopar′asite (*Bot.*). A parasite which attacks another parasite.

autopar′thenogen′esis (*Zool.*). Artificially stimulated development of unfertilised eggs.

autoph′agous (*Zool.*). Capable of self-feeding from the moment of birth, as some Birds, which run about and feed as soon as they are hatched.

autoph′agy (*Zool.*). The eating of a part of the body, usually after its amputation.

Autophotic cell (*Photo-electronics*). The same as *Photronic cell.*

autophy′a (*Zool.*). Elements of the shell or skeleton secreted by the organism itself. Cf. *xenophya.*

aut′ophyte (*Bot.*). A plant which builds up its food substances from simple compounds.

autoplas′ma (*Zool.*). In tissue culture, a medium prepared with plasma from the same animal from which the tissue was taken; cf. *homoplasma, heteroplasma.*—*adj.* **autoplastic.**

autoplas′tic transplantation (*Zool.*). Re-insertion of a transplant or graft from a particular individual in the same individual. Cf. *heteroplastic, homoioplastic, xenoplastic.*

autopo′dium (*Zool.*). In *Vertebrata*, the hand or foot.

autopol′yploid (*Cyt.*). A polyploid having similar sets of chromosomes in its total chromosome content.

autopot′amous (*Ecol.*). Originating in rivers and streams.

aut′opsy. See **necropsy.**

auto-reclose circuit-breaker (*Elec. Eng.*). A circuit-breaker which, after tripping due to a fault, automatically recloses after a time interval which may be adjusted to have any value between a fraction of a second and one or two minutes.

autorhyth′mus (*Zool.*). In metameric animals, repetition of meromes within a somite.

autoset level (*Surv.*). A form of dumpy level for rapid operation, in which the essential features are a quick-levelling head, and an optical device which neutralises errors of levelling so that the bubbles need not be central while an observation is being made.

autoskel′eton (*Zool.*). A skeleton formed of autophya; usually an endoskeleton.

aut′osome (*Cyt.*). Any chromosome other than a sex-chromosome; a typical chromosome. See **allosome.**

autos′pasy (*Zool.*). The casting of a limb or part of the body when it is pulled by some outside agent, as when the Slow-worm casts its tail.

autosper′mathe′ca (*Zool.*). In *Oligochaeta*, a spermathecal sac, which is a reservoir for the animal's own spermatozoa, which are discharged on its own ova during the formation of the cocoon.

aut′ospore (*Bot.*). A daughter cell formed within an algal cell, and having all the characters of the parent in miniature before it is set free.

autostoper (*Mining*). An air-fed stoper; a form of light compressed-air rock-drill so mounted, on a long cylinder containing compressed air, that it is kept up against the rock face without manual effort or mechanical supports.

aut′osto′ses (*Zool.*). See **cartilage bones.**

aut′osty′ly (*Zool.*). A type of jaw suspension found in *Hexanchidae* (Comb-toothed Sharks), in which the upper jaw articulates directly with the cranium posteriorly, but is attached by a ligament or cartilaginous process anteriorly.—*adj.* **autosty′lic.**

autosuggestion (*Psychol.*). A condition of self-induced suggestion, brought about when the mind has lessened conscious direct effort and control, and is absorbed only with the suggested idea. In certain cases it may induce a state of light auto-hypnosis.

auto-synchronous motor (*Elec. Eng.*). A term frequently used to denote a *synchronous induction motor.*

autotet′raploid (*Cyt.*). A tetraploid with four similar sets of chromosomes in its nuclei.

autot′illy (*Zool.*). The removal of a limb or part of the body by the animal itself, as in certain Spiders.

autot′omy (*Zool.*). Voluntary separation of a part of the body (e.g. limb, tail), as in certain Worms, Arthropods, and Lizards; self-amputation.

auto-transformer (*Elec. Eng.*). A single-winding transformer in which the primary voltage is applied to the whole winding and the secondary voltage is taken from suitable tappings on the winding.

auto-transformer starter (*Elec. Eng.*). A starter for squirrel-cage induction motors, in which the voltage applied to the motor at starting is reduced by means of an auto-transformer.

autotransplantation (*Zool.*). See **autoplastic transplantation.**

autotroph′ic (*Bot.*). Able to build up food materials from simple substances.

autotrophic bacteria (*Bot.*). Bacteria which are able to utilise carbon-dioxide in assimilation.

autotro′pism (*Bot.*). The tendency to grow in a straight line.

aut′otype (*Photog.*). The printing of photographic images by the carbon or pigment process.

auto-valve arrester (*Elec. Eng.*). A form of arrester, consisting of a porous material, in which the discharge is confined to very narrow passages and therefore cannot assume the characteristics of an arc.

autoxidation (*Chem.*). (1) The slow oxidation of certain substances on exposure to air.—(2) Oxidation which is induced by the presence of a second substance. See **induced reaction.**

autox′idator (*Chem.*). An olefine-oxygen compound acting as a carrier or intermediate agent during oxidation, in particular during *autoxidation* (q.v.).

autozo′oid (*Zool.*). In *Anthozoa*, an ordinary typical zooid. Cf. *siphonozooid.*

autumn wood (*Bot.*). See **summer wood.**

autumnal equinox (*Astron.*). The instant at which the sun in its apparent annual motion reaches the First Point of Libra and crosses the celestial equator from north to south, the calendar date being September 23rd.

aut′unite (*Min.*). Hydrous phosphate of calcium and uranium, resembling torbernite, but yellow.

auxanom′eter (*Bot.*). An instrument which is used to measure the rate of elongation of a plant member.

auxe′sis (*Zool.*). Induction of cell-division, especially by the influence of a chemical agent.

auxe′tic (*Zool.*). Inducing or stimulating cell-division.

auxiliary attachment (*Horol.*). A special attachment to a compensation balance, for the purpose of reducing the *middle-temperature error* (q.v.).

auxiliary cell (*Bot.*). One of a group of cells which are not part of the sexual organs of red algae, but nevertheless play a part (probably nutritive) in the formation of the fruit.

auxiliary contact (*Elec. Eng.*). See **auxiliary switch.**

auxiliary electrode (*Elec. Eng.*). An additional electrode placed in an electrolytic cell for the purpose of making potential measurements.

auxiliary grid (*Thermionics*). In a pentode, the second grid, maintained at a high positive potential.

auxiliary lift-motor (*Elec. Eng.*). A small motor forming part of the driving equipment of an electric lift; used for operating the lift at reduced speeds.

auxiliary plant (*Elec. Eng.*). A term used in generating-station practice to cover the condenser pumps, mechanical stokers, feed-water pumps, and other equipment used in conjunction with the main boiler, turbine, and generator plant.

auxiliary pole (*Elec. Eng.*). See **compole.**

auxiliary spark gap (*Elec. Eng.*). A small spark gap for automobile ignition, placed in series with the main gap of a sparking-plug; it improves the quality and certainty of the spark.

auxiliary switch (*Elec. Eng.*). A small switch operated mechanically from a main switch or circuit-breaker; used for operating auxiliary devices such as alarm bells, indicators, etc. Also called AUXILIARY CONTACT.

auxiliary tanks (*Aero.*). See under **fuel tanks.**

auxiliary valency (*Chem.*). The valency remaining after saturation of the principal valency of an atom.

auxiliary winding (*Elec. Eng.*). A special winding on a machine or transformer, additional to the main winding; used for some special purposes. An example is the starting winding of a single-phase induction motor.

auxin (*Bot., Chem.*). $C_{18}H_{32}O_5$, a plant hormone from *Avena* or from maize germ, which causes elongation of individual cells in the growing tips of plants. Auxin is a monobasic trihydroxy-acid forming a lactone, $C_{18}H_{30}O_4$.

aux'ochromes (*Chem.*). Certain groups introduced into dyestuffs giving full effectiveness to the colouring properties. The principal auxochromes are Cl, Br, SO_3H, NO_2, NH_2, OH. Auxochromes may, furthermore, permit by their presence the formation of salts and the creation of a dyestuff.

aux'ocyte (*Cyt.*). Any cell in which meiosis is started: a spermatocyte or oöcyte, during the period of growth.

auxospi'reme (*Cyt.*). In meiosis, the spireme formed after syndesis.

aux'ospore (*Bot.*). A resting spore formed by diatoms after a sexual fusion.

auxoton'ic (*Zool.*). (Of muscle contraction) of or against increasing force.

availability, full (*Auto. Teleph.*). See **full availability.**

available water (*Bot.*). The total amount of water in the soil (at any given time) which can be drawn upon by plants.

avant-garde film, a-vahn^{g} gard (*Cinema.*). A film which purports to advance the technique of cinematograph film on the artistic side, as contrasted with those films made to take advantage of possible box-office returns.

avas'cular (*Med.*). Not having blood-vessels.

A.V.C. (*Radio*). Abbrev. for *automatic volume control*. See **automatic gain control.**

aven'turine feldspar (*Min.*). A variety of sodic plagioclase, near albite in composition, characterised by minute disseminated particles of red iron oxide which cause fire-like flashes of colour. Also called SUNSTONE.

aventurine glass (*Glass*). Glass containing 'spangles' of material, separated out from the main body. It may be produced from glasses containing excessive amounts of copper or chromium compounds, melted under special conditions.

aventurine quartz (*Min.*). A form of quartz charged, sometimes densely, with minute inclusions of either mica or iron oxide. Used in ornamental jewellery.

average current (*Elec. Eng.*). A term used in connexion with alternating currents to denote the average value of the current taken over half a cycle.

average haul distance (*Civ. Eng.*). The distance between the centre of gravity of a cutting and that of the embankment formed from material excavated from the cutting.

average speech power (*Acous.*). The average of the instantaneous acoustic powers of a speaker while speaking.

average speed. The average speed of a train between start and stop. Cf. *schedule speed*. See also **speed.**

averse (*Bot.*). Turned back.

aversion (*Bot.*). The tendency shown by elongating fungal hyphae to avoid coming into contact.

Avertin (*Chem.*). Tribromethyl alcohol, $CBr_3 \cdot CH_2OH$, white crystals, soluble in alcohol, ether, very slightly in water, used as an anaesthetic administered per rectum. (Trade-name.)

avian paratyphoid (*Vet.*). See **paratyphoid.**

avian spirochaetosis (*Vet.*). See **spirochaetosis.**

avian typhoid (*Vet.*). See **typhoid (avian).**

aviation spirit (*Aero.*). A motor fuel with a low initial boiling-point and complying with a certain specification, for use in aeroplanes.

avicula'rium (*Zool.*). In *Polyzoa*, a modified zooecium, having a movable mandible with powerful muscles acting against a fixed mandible, and capable of snapping movements; its function is mainly defensive.

avidity (*Chem.*). The relative strength of an acid (or base) in a mixture of acids (or bases), measured by the proportion of a base (or acid) neutralised by that acid (or base).

avitamino'sis (*Med.*). The condition of being deprived of vitamins: any deficiency disease caused by lack of vitamins. *

Avogad'ro constant (or **number**) (*Chem.*). The number of molecules in a gram-molecule, about $6{\cdot}1 \times 10^{23}$.

Avogadro's hypothesis (*Chem.*). Equal volumes of different gases at the same temperature and pressure contain the same number of molecules.

Avonian (*Geol.*). Synonymous with *Lower Carboniferous* and equivalent to the two stages, Dinantian and Visean, of the continental geologists. Named from the type-sections in the Avon Gorge, Bristol district.

avulsion (*Med.*). The tearing away of a part.

A.W. (*Chem.*). Abbrev. for *atomic weight*.

A.W. (*Timber*). (Of cut timber) an abbrev. signifying *all-widths*.

awl (*Carp.*). A small pointed tool for making holes which are to receive nails or screws.

awn (*Bot.*). (1) A long bristle borne on the glumes of some grasses and cereals; e.g. the beards of barley.—(2) A long thread-like outgrowth on certain fruits.

awning deck (*Ship Constr.*). A superstructure deck, as the name implies. In its simplest form, it is the top deck of a two-deck ship, and places the ship in a certain category for scantling and freeboard.

axe (*Tools*). (1) A tool for chopping wood, consisting of a steel blade attached to a wooden handle, the edge of the blade being in line with the handle.—(2) A pointed hammer used for dressing stone.

axed arch (*Build.*). An arch built from bricks cut to a wedge-shape.

axed work (*Masonry*). Hard building-stone dressed with the axe to leave a ribbed face.

axes. *Pl.* of *axis* (q.v.). See also **co-ordinate—*, oblique—*, rectangular—*.**

axes (*Crystal.*). Lines of reference intersecting at the centre of a crystal. Crystal (or morphological) axes, usually three in number, by their relative lengths and attitude, determine the system to which a crystal belongs. See **cubic system, tetragonal system, orthorhombic system,** etc.

axial (*Bot.*). Relating to the axis of a plant: of shoot nature.

axial ducts (*Elec. Eng.*). Ducts placed parallel with the shaft in the stator or rotor of an electrical machine, in order to facilitate the passage of cooling air.

axial filament (*Zool.*). An internal thread, running down a flagellum and entering the body of the cell, to join the basal granule or blepharoplast: the stiff central thread of a radiate pseudopodium.

axial girder (*Aero.*). The girder forming the actual axis of a rigid-airship frame. It connects the hull structure fore and aft with a central fitting of each braced transverse frame.

axial gradient (*Bot.*). The physiological gradient along the axis of a plant, activity being highest at one end and falling off towards the other.—(*Zool.*) A gradient of physiological activity, preceding the development of the axiate pattern.

axial organ (*Zool.*). In *Echinodermata*, a structure composed of connective and lacunar tissue, together with genital cells, lying near the axial sinus and stated to be contractile.

axial pitch (*Eng.*). (In a screw-thread or helix) the distance from a point on the helix, measured parallel with the axis, to the corresponding point after one complete turn.

axial response (*Acous.*). The response of a microphone or loudspeaker, measured with the sound-measuring device on the axis of the apparatus being tested.

axial sinus (*Zool.*). In *Echinodermata*, a vertical space, communicating at one end with the exterior or the coelom, via the madreporite, and at the other end with the inner perihaemal ring.

axial skeleton (*Zool.*). The skeleton of the head and trunk: in *Vertebrata*, the cranium and vertebral column, as opposed to the appendicular skeleton.

axiate pattern (*Zool.*). The morphological differentiation of the parts of an organism, with reference to a given axis.

axil (*Bot.*). The solid angle between a stem and the upper surface of a leaf base growing from it.

axile (*Bot.*). Coinciding with the longitudinal axis.

axile chloroplast (*Bot.*). A chloroplast lying in the axis of the containing cell.

axile placentation (*Bot.*). The condition when the ovules are attached to tissue lying in the axis of the ovary.

axile strand (*Bot.*). A simple condition of a vascular system, with conducting elements in the centre of the plant axis, giving off strands to the leaves; roughly equivalent to a protostele, but also includes the simple strands present in the larger mosses.

axilem'ma (*Zool.*). In medullated nerve-fibres, the whole of the medullary sheath.

axil'la (*Zool.*). The arm-pit: the angle between the fore-limb and the body.—*adj.* **axil'lary.**

axil'lant (*Bot.*). Subtending an angle.

axil'lary (*Bot.*). Situated in an axil; applied especially to buds, and to shoots developing from them.

axillary (*Zool.*). In Insects, one of the articular sclerites of the wing. See also **axilla.**

ax'inite (*Min.*). A complex borosilicate of calcium and aluminium, with small quantities of iron and manganese, produced by pneumatolysis and occurring as brown wedge-shaped triclinic crystals.

axis. A line, usually imaginary, which has a peculiar importance in relation to a particular problem or set of circumstances. Thus the *axis of symmetry* of a figure is a line which divides it symmetrically; the *axis of rotation* is the line about which a body rotates; the principal *axis of a lens* (q.v.) is the line joining the centres of curvature of its two faces.—Specifically: (*Bot.*). (1) The line passing through the middle of any organ.—(2) The main trunk of a root or shoot.—(3) The central stalk in a grass spikelet.—(4) Any plant part bearing lateral branches.—(*Crystal.*) See **axes.**—(*Zool.*) In the higher Vertebrates, the second cervical vertebra: the central line of symmetry of an organ or organism.—*pl.* **axes.**

axis cylinder (*Zool.*). The excitable core of a medullated nerve-fibre. See also **axon.**

axis of a lens (*Photog.*). The line of symmetry of the optical system; the line along which there is no refraction.

axle (*Eng., etc.*). The cross-shaft or beam which carries the wheels of a vehicle; they may be either attached to and driven by it, or freely mounted thereon.

axle-box (*Eng.*). The bearings used for the axles of railway rolling-stock, consisting of an upper half-bearing integral with a box-shaped housing which holds the lubricant.

axle pulley (*Join.*). A pulley set in a sash-frame so that the sash-cord connecting the window and its balancing weight may run over it.

Axminster carpet (*Textile*). A high-class machine-made carpet with a cut pile surface; named after Axminster (Devon), its place of origin.

axon (*Zool.*). The impulse-carrying process of a typical nerve-cell or neurocyte, usually giving rise either to a non-medullated nerve-fibre, or to the axis cylinder of a medullated nerve-fibre.

ax'oneme (*Zool.*). In certain *Ciliophora*, the central strand of the stalk: the axial filament of a flagellum.

ax'onost (*Zool.*). In Fish, the basal bone of a fin-ray: interspinal bone.

axopo'dium (*Zool.*). A pseudopodium, strengthened and stiffened by an axial rod, as in some *Heliozoa* and *Radiolaria*.

axosper'mous (*Bot.*). Having axile placentation

ax'ostyle (*Zool.*). In some *Protozoa*, a slender flexible skeletal rod of an organic nature.

Aymestry Limestone (*Geol.*). A subdivision of the Silurian System occurring between the Lower and Upper Ludlow beds; it takes its name from a locality in Shropshire, being typically exposed in the Ludlow-Wenlock country.

Ayrton shunt (*Elec. Eng.*). A relatively large resistance for connecting across a galvanometer; tappings on the resistance are taken at 1/10, 1/100, and 1/1000 of the whole.

Ayrton-Mather galvanometer (*Elec. Eng.*). A moving-coil galvanometer having no iron within the moving-coil.

azaline (*Photog.*). A dye mixture for sensitising ortho emulsions for red and yellow light.

a'zeotrop'ic mixtures (*Chem.*). Mixtures of two or more liquids distilling over without decomposition in a certain ratio at a constant boiling temperature; e.g. chlorhydrin and water form an *azeotropic mixture*, also *iso*propyl alcohol and water. The boiling-point of the azeotropic mixture is lower than that of its constituents.

a'zides (*Chem.*). (1) See **acid azides.**—(2) Salts of hydrazoic acid. The heavy metal azides are explosive. Used as a coating, which is subsequently reduced to metal, on the filaments of radio receiving valves, to improve electron emission.

azimi'no compounds (*Chem.*). Heterocyclic compounds containing three adjacent nitrogen atoms in one ring, very stable. They are prepared by the action of nitrous acid on *o*-diamines or 1.8-diamino-naphthalenes.

az'imuth (*Astron., Surv.*). The azimuth of a line or celestial body is the angle between the vertical plane containing the line or celestial body and the plane of the meridian, conventionally measured from North through East in astronomical computations, and from South through West in triangulation and precise traverse work.

azimuth compass (*Surv.*). A magnetic compass fitted with sights for taking bearings.

azimuthal angle (*Surv.*). An angle measured 'in azimuth' (see **azimuth**), that is, a horizontal angle.

a'zines (*Chem.*). Organic bases containing a heterocyclic hexagonal ring of four carbon and two nitrogen atoms, the nitrogen atoms being in the *para*-position with respect to one another.

a'zo group (*Chem.*). The group —N.N—, generally combined with two aromatic radicals. The azo group is a chromophore, and a whole class of dyestuffs is characterised by the presence of this group.

azo dyes (*Chem.*). Derivatives of azobenzene, obtained as the reaction products of diazonium salts with tertiary amines or phenols. They are usually coloured yellow, red, or brown, and have acidic or basic properties.

azoim'ide (*Chem.*). Hydrazoic acid, N_3H, a weak unstable acid, prepared by the action of nitrous acid on hydrazine; a colourless liquid, b.p. 37° C. The acid and its derivatives are explosives.

azomethane (*Chem.*). $CH_3{\cdot}N.N{\cdot}CH_3$, b.p. 1·5° C., a yellow liquid, obtained by the oxidation of *sym.* dimethyl-hydrazine with chromic acid.

azo'nium bases (*Chem*.). A group of bases including *azines* (q.v.) and *quinoxalines* (q.v.).

azoosper'mia, ă-zŏ-o— (*Path.*). Complete absence of spermatozoa in the semen.

azophenine (*Chem.*). 2.5-Dianilo-*p*-benzaquinone-diphenyldiimine, m.p. 246° C., an intermediate for induline dyes.

azoproteins (*Chem.*). Derivatives obtained by coupling diazotised aromatic amines with serum proteins. On injection into the blood stream they cause the production of antibodies which react with other azoproteins containing the same amine.

azotaemic (azotemic) nephritis (*Med.*). Nephritis in which there is retention of nitrogenous products in the blood.

azote' (*Chem.*). The French name for nitrogen, given to it by Lavoisier.

azotom'eter (*Chem.*). Analytical apparatus for measuring the volume of nitrogen evolved during the combustion of an organic compound by Dumas's method.

azotu'ria (*Vet.*). See **haemoglobinaemia (paralytic).**

azoxy compounds (*Chem.*). Mostly yellow or red crystalline substances obtained by the action of alcoholic potash upon the nitro compounds, or by the oxidation of azo compounds.

azure quartz (*Min.*). See **sapphire quartz.**

a'zurite (*Min.*). A basic carbonate of copper, occurring either as deep-blue monoclinic crystals or as kidney-like masses built of closely packed radiating fibres. Also called CHESSYLITE (from Chessy, in France).

azy'gobran'chiate (*Zool.*). Having ctenidia or branchiae developed on one side only.

azy'gomat'ous (*Zool*.). Lacking a zyomatic arch.

azy'gos, *or* az'i-gos (*Zool.*). An unpaired structure. —*adj.* **azygous.**

azy'gospore (*Bot.*). A structure resembling a zygospore in morphology, but not resulting from a previous sexual union of gametes or of gametangia.

B, β

b (*Elec. Eng.*). The symbol for susceptance in an a.c. circuit; measured by the negative of the reactive component of the admittance.

b-group (*Light*). A close group of Fraunhofer lines in the green of the solar spectrum, due to magnesium.

β- (*Chem.*). A symbol indicating: (1) Substitution on the carbon atom of a chain next but one to the functional group; (2) substitution on a carbon atom next but one to an atom common to two condensed aromatic nuclei; (3) substitution on the carbon atom next but one to the hetero-atom in a hetero-cyclic compound; (4) a stereo-isomer of a sugar.

β female (*Zool.*). See **beta female.**

βl or **beta-ell** (*Elec. Comm.*). The Continental expression for the total attenuation, in népers, of a line of length l and attenuation constant β per unit length.

β particle (*Phys.*). See **beta particle.**

β rays (*Phys.*). See **beta rays.**

B (*Chem.*). The symbol for *boron.*

B (*Elec.*). The symbol for flux density in a magnetic circuit; measured in 'lines per sq. cm.,' there being 4π 'lines' of flux emanating from the defined unit N-pole.

[B] (*Light*). A Fraunhofer line in the red of the solar spectrum, due to absorption by the earth's atmosphere. [B] is actually a close group of lines having a head at wavelength 6867·457 A.

B. and B.B. (*Met.*). Brand-marks signifying *Best* and *Best Best,* placed on wrought-iron to indicate the maker's opinion of its quality.

B-amplifier (*Elec. Comm.*). The amplifier following mixers or faders associated with microphone circuits in broadcasting studios, the faders and mixers following the A-amplifiers.

B. and S. Wire Gauge. Abbrev. for *Brown and Sharpe Wire Gauge.*

B-battery (*Elec. Comm.*). The battery or power supply required for the anode current of thermionic valves. Referred to as *High-Tension,* as contrasted with the relative *Low-Tension* A-battery.

B-layer (*Radio*). A weakly reflecting and scattering layer or region 10-30 km. above the earth's surface, possibly associated with water-vapour or ice in the stratosphere; postulated to explain short-period return signals when these are projected vertically.

B-operator (*Teleph.*). The operator in a manual exchange who completes a wanted call, by inserting the incoming junction cord plug into one of the required jacks in the multiple, on the instructions of a distant A-operator in another exchange.

B-position (*Teleph.*). In a manual telephone-exchange, the section of the switchboard allocated to a B-operator, who has access to all subscribers' lines connected to her exchange, which appear as jacks in the multiple.

B-position keysending (*Teleph.*). The provision of a set of plunger keys, by means of which a B-operator sets up trains of impulses for operating automatic switches in distant exchanges.

B-position keysending with cords (*Teleph.*). A keysending B-position which is provided with cords so that through-connexions can also be obtained.

B-service-area (*Radio*). The region surrounding a broadcasting transmitter where the field-strength is between 5 and 10 millivolts per metre.

B-side (*Teleg.*). In quadruplex telegraphy, the channel which uses single-currents for sending signals, in contrast with the *A-side,* which uses double-current signals.

B-wire (*Teleph.*). The wire of a subscriber's pair which is connected to the ring of the answering plug of a cord circuit, when it is inserted into the subscriber's line jack.

Ba (*Chem.*). The symbol for *barium.*

B.A. ohm (*Elec. Eng.*). A unit of resistance adopted by the British Association in 1865 and now superseded by the international ohm. The B.A. ohm is equal to 0·9866 of the international ohm.

B.A. thread (*Eng.*). See **British Association screw-thread.**

Babbitt's metal (*Met.*). A bearing alloy containing, originally, a high proportion of tin and equal parts of copper and antimony. The addition of lead greatly extends the range of service; proportions for general use: tin 40, copper 1·5, antimony 10, lead 48·5.

babble (*Teleph.*). The combination of a number of simultaneous cross-talks.

Babcock and Wilcox boiler (*Eng.*). A water-tube boiler consisting in its simplest form of a horizontal drum from which is suspended a pair of headers carrying between them an inclined bank of straight tubes.

Babinet's compensator, bab′ĕ-nă (*Light*). A device used, in conjunction with a Nicol prism, for the analysis of elliptically polarised light. It consists of two quartz wedges having their edges parallel and their optic axes at right-angles to each other.

Babinet's formula for altitude (*Phys.*).

$$\text{Altitude} = \frac{32(500+t_1+t_2)\,(B_1-B_2)}{B_1+B_2}\,\text{metres},$$

t_1 and t_2 being the temperatures in degrees Centigrade, and B_1 and B_2 the respective barometric heights at sea-level and at the station whose altitude is required.

Babinet's principle (*Light*). Similar diffraction patterns are produced by two complementary screens, the opaque portions of one corresponding to the transparent portions of the other.

bab′ingtonite (*Min.*). A silicate of iron, calcium, and manganese, belonging to the pyroxene group and crystallising in the triclinic system. The essential molecule is probably $FeSiO_3$, but the iron is replaced in varying degree by calcium and manganese. It occurs as a rare constituent of granite.

Babin′ski's reflex (*Neurol.*). Extension of big toe and fanning of other toes on stimulation of sole of foot; a sign of organic disease of the nervous system.

Babo's law (*Phys.*). The vapour pressure of a liquid is lowered when a non-volatile substance is dissolved in it, by an amount proportional to the concentration of the solution.

baby (*Cinema.*). A small incandescent spotlight, used in sound-film production.

bacca (*Bot.*). A berry formed from an inferior ovary: a berry in general.—*adjs.* **baccate.** Resembling a berry, pulpy; **bacciferous** (bak-sif′er-us). Bearing berries; **bacciform** (bak′sĕ-form). Resembling a berry in shape.

bacillae′mia, bacille′mia (*Med.*). Presence of bacilli in the blood.

bacil′lar (*Bot.*). Shaped like a rod.

Bacillar'iophy'ta (*Bot.*). A group of unicellular algae, distinguished by the heavily silicified cell wall (consisting of two halves, one fitting into the other like a box and its lid) and by the yellow or brown coloration. There are many hundreds of species inhabiting fresh and salt water, and less often occurring on or in the soil. They are often called DIATOMS.

bacillary white diarrhoea (*Vet.*). Salmonellosis. A contagious infection of young birds due to *Bacterium pullorum*.—Abbrev. **B.W.D.**

bacillu'ria (*Med.*). Presence of bacilli in the urine.

bacil'lus (*Bacteriol.*). A rod-shaped member of the Bacteria.—*pl.* **bacilli.**

back. A large vat used in various industries, such as dyeing, soap-making, brewing. Also BECK.

back (*Bind.*). See **spine.**

back (*Build., Carp.*). The upper part of a hand-rail, roof rafter, or dome rib. The *back* of a window is the part between the sill of the sash-frame and the floor.

back (*Elec. Eng.*). See **leaving edge.**

back (*Masonry, etc.*). (1) The part of a stone or ashlar opposite to its face.—(2) The extrados of an arch or vault.

backs (*Furs*). Skins after belly parts have been removed.

backs (*Quarrying*). A quarryman's term for one set of joints traversing rock, the other being known as *cutters*.

back ampere-turns (*Elec. Eng.*). That part of the armature ampere-turns which produces a direct demagnetising effect on the main poles. Also called DEMAGNETISING AMPERE-TURNS.

back band (*Build.*). The outside member of a door or window casing.

back boiler (*Plumb.*). A domestic boiler placed behind an open fire; usually made of cast-iron or copper.

back brusher (*Mining*) A man engaged in ripping or taking down the roof in roadways, some distance back from the working face in a mine.

backbye deputy (*Mining*). A man who timbers roads in a direction away from the working places.

back cavity (*Bot.*). The widened opening between the lower faces of the two guard cells of a stoma.

back centre (*Eng.*). In a lathe, a pointed spindle (carried by the loose headstock) on which the end of the work remote from the chuck is supported.

back cock (*Horol.*). In a clock, the bracket (on the back plate) from which the pendulum is suspended.

back contact (*Teleph.*). A contact in a relay assembly which is isolated when a moving contact separates from it on the operation of the relay.

back-coupling (*Radio*). Any form of coupling which permits the transfer of energy from the output circuit of an amplifier to its input circuit. Also called FEEDBACK, REACTION, REGENERATION.

back cross (*Gen.*). A cross between a hybrid and one of its parents.

back cutting (*Civ. Eng.*). Earth obtained for a railway or canal bank, when the excavated earth does not suffice for a regular cut and fill.

back edging (*Build.*). A method of cutting a tile or brick by chipping away the biscuit below the glazed face, the front itself being scribed.

back-e.m.f. (*Elec. Eng.*). An electromotive force which opposes the normal flow of current in a circuit. Sometimes called COUNTER-E.M.F.

back-e.m.f. cells (*Elec. Eng.*). Cells connected into an electric circuit in such a way that their e.m.f. opposes the flow of current in the circuit.

back-end man (*Mining*). A man who cleans the cuttings from behind the coal-cutting machine, sprags the overhang, and props the roof.

back-fire (*I.C. Engs.*). Premature ignition during the starting of an internal-combustion engine, resulting in an explosion before the end of the compression stroke, and consequent reversal of the direction of rotation.

back-flap (*Join.*). The part of a shutter which folds up behind; also known as the BACK-FOLD, or BACK-SHUTTER.

back-flap hinge (*Build.*). A hinge in two leaves, screwed to the face of a door which is too thin to permit of the use of a butt hinge.

back flow (*Hyd., San. Eng.*). Water or sewage flow in a direction contrary to normal.

back-fold (*Join.*). See **back-flap.**

back gauge (*Build.*). The distance from the centre of a rivet- or bolt-hole to the back edge of an angle cleat or channel.

back gear (*Eng.*). A speed-reducing gear fitted to the headstock of a belt-driven metal-turning lathe. It consists of a simple layshaft, which may be brought into gear with the coned pulley and mandrel when required.

back-geared motor (*Elec. Eng.*). An electric motor in which a geared countershaft is mounted as an integral part of the motor frame to provide speed reduction.

background (*Photog.*). The remote surround, either real or artificial, forming the completion of a picture of objects which form the foreground.

background noise (*Acous.*). The residuum of noise, with zero modulation, which is present in all forms of sound reproduction to a greater or less degree. It may arise from radio interference, grain in records, room noise in studios, or from minute arcing between carbon granules in microphones.

back hearth (*Build.*). In a stone or an iron hearth to a fireplace, the part under the grate.

back inlet gulley (*San. Eng.*). A trapped gulley in which the inlets discharge under the grating and above the level of the water in the trap, so that splashing and blocking of the grating are avoided.

back iron (*Carp.*). The stiffening plate screwed to the cutting iron of a jack plane. Also called CAP IRON, COVER IRON.

back joint (*Masonry*). The part of the back of a stone step which is dressed to fit into the rebate of the upper step.

back-kick (*I.C. Engs.*). Term applied to the violent reversal of an internal-combustion engine during starting, due to a *back-fire* (q.v.).

backlash (*Eng.*). The lost motion between two elements of a mechanism, i.e. the amount the first has to move, owing to imperfect connexion, before communicating its motion to the second.

backlash (*Radio*). The property of some regenerative or oscillator circuits by which oscillation is maintained with a smaller feedback than is required for inception.

back lining (*Join.*). (1) The part of a cased sash-frame next the wall, opposite the pulley-stile.—(2) The piece of framing which forms the back of a recess for boxing shutters.

back observation (*Surv.*). Any observation made with a surveying instrument in a direction opposite to the direction of progress of the survey. Cf. *fore observation.*

back-overman (*Mining*). An official who has charge of the back shift of workers in a coal-mine, i.e. the men away from the face.

back pages (*Typog.*). The pages bearing the even numbers in a book, i.e. the left-hand or the verso pages.

back painting (*Dec.*). Designs in colours or gold painted on the back of mirrors previous to silvering, or on glass sheets intended for panel glazing.

back pitch (*Elec. Eng.*). The winding pitch of the winding of an electrical machine, at the end remote from the commutator.

backplate lampholder (*Elec. Eng.*). A lampholder fitted with a support which enables it to be screwed on to a flat surface. Also called a BATTEN-LAMPHOLDER.

back pressure (*Eng.*). The pressure opposing the motion of the piston of an engine on its exhaust stroke: the exhaust pressure of a turbine.

back pressure (*Med.*). The pressure of blood held up in a chamber of the heart as a result of valvular disease.

back pressure (*Plumb.*). Air pressure in pipes when it exceeds atmospheric pressure.

back-pressure engine (*Eng.*). A steam-engine (for industrial heating purposes) in which the steam is exhausted at a pressure exceeding the normal terminal pressure.

back-pressure turbine (*Eng.*). A steam-turbine from which the whole of the exhaust steam, at a suitable pressure, is taken for heating purposes.

back projection (*Cinema.*). The use of a previously photographed background, projected on a glass or paper screen, to form a background when photographing action in the studio.

back putty (*Build.*). Putty put in sash rebates before fitting the glazing.

back rest (*Textiles*). The rod, roller, or oscillating bar at the back of a loom, over which the warp threads pass from beam to healds.

back saw (*Carp.*). A saw stiffened by a thickened back; e.g. a tenon saw.

backsetting (*Build.*). A stone with a boasted or broached face, but with a smooth border all round.

back shore (*Carp.*). One of the outer members of an arrangement of raking shores or props, for supporting temporarily the side of a building. The *back shore* supports the raking shore, or raker, which takes the thrust from the highest part of the building.

back shunt (*Rail.*). See **switchback.**

back-shutter (*Join.*). See **back-flap.**

back sight (*Surv.*). The levelling-staff reading, when taken back to a station which has been passed by the instrument. The first reading taken by the levelling instrument at any given set-up is invariably a *back sight.* See **fore sight, intermediate sight.**

back stay or **back rest** (*Eng.*). See **steady.**

back stop (*Teleg.*). The device which holds a telegraphist's key in the unoperated position.

back stops (*Textiles*). In cotton spinning, buffers which prevent the mule carriage from travelling beyond a fixed point on its inward run.

back stopes (*Mining*). Overhead stopes; stopes worked by putting in overhead holes and blasting down the ore.

back stripper (*Mining*). A man who breaks the large lumps of mined coal and fills the tubs at the coal face.

back-to-back houses (*Build.*). Houses built back-to-back, usually in rows, and without through-ventilation.

back-to-back test (*Elec. Eng.*). The arrangement, originated by Hopkinson, for testing two substantially similar electrical machines on full load, by coupling them mechanically and loading them by regulating the electrical circuit, the total power supply accounting for the total losses only; it has been extended to transformers and mechanical gearing.

backward shift, backward lead (*Elec. Eng.*). Movement of the brushes of a commutating machine around the commutator, from the neutral position, and in a direction opposite to that of the rotation of the commutator, so that the brushes short-circuit zero e.m.f. conductors when the load current, through armature reaction, results in a rotation of the neutral axis of the air-gap flux. Shifting the brushes in this way reduces sparking on the commutator.

back washer (*Textiles*). A machine consisting of washing-bowls, steam-heated cylinders, and a gill-box, for scouring, drying, and opening out carded slivers in worsted manufacture.

back washing (*Textiles*). A second scouring process used to free wool, in sliver or top form, from further impurities.

back-water (*Hyd. Eng.*). Water dammed back in a stream or reservoir by some obstruction. *

backwater curve (*Hyd. Eng.*). The longitudinal profile of the water surface in the case of non-uniform flow in an open channel, when the water surface is not parallel to the invert, owing to the depth of water having been increased by the placing of a weir across the flow.

backed cloth (*Textiles*). A woollen fabric which is made with two warps and one weft, or with two wefts and one warp, to increase the weight and to obtain a weave or colours different from that on the face.

backer (*Build.*). A narrow slate laid on the back of a broad, square-headed slate, at the place where a course of slates begins to diminish in width.

backing (*Bind.*). The process by which one half of the sections of a volume are bent over to the right and the other half to the left at the back. A projection is formed on each side, termed the joints, and to these the covers are hinged. Machine backing includes *rounding* (q.v.).

backing (*Carp.*). The operation of packing up a joist so that its upper surface shall be in line with those of deeper joists employed under the same floor.

backing (*Masonry*). The coursed masonry built upon and immediately in contact with the extrados of an arch.

backing (*Meteor.*). The changing of a wind into a counter-clockwise direction. Cf. *veering.*

backing (*Photog.*). The coating on the back of film base or glass plates to reduce halation, for which purpose it should attenuate light and have a refractive index the same as the support, to reduce reflection.

backings (*Join.*). Wooden battens, secured to rough walls, for the fixing of wood linings, etc.

backing boards (*Bind.*). Wedge-shaped wooden boards between which an unbound book is held in the lying-press, while the joints are being formed for attaching the cover.

backing-off (*Textiles*). The reversing of the spindles of the mule in cotton spinning, for unwinding the yarn between the cop and the spindle tip, after completion of twisting and drawing out.

backing-up (*Build.*). The use of inferior bricks for the inner face of a wall.

backing-up (*Print.*). Printing on the back of a printed page; e.g. *backed-up* illustrations.

bacterae′mia, bacte′remia (*Med.*). Bacteriaemia.

Bacteria (*Bacteriol.*). A large group of unicellular or filamentous organisms of simple organisation, lacking photosynthetic pigments, without a well-defined nucleus, and with the cells covered by a thin wall. They occur in air, water, soil, rotting organic material, animals and plants. Saprophytic forms are more numerous than parasites, but the latter include both animal and plant pathogens. See also **bacterium.**

bacteria beds (*Sewage*). Layers of a filtering medium such as broken stone or clinker, used in the final or oxidising stage in sewage treatment. See **contact bed, percolating filter.**

bacteriae'mia, bacterie'mia (*Med.*). Presence of bacteria in the blood.

bacte'ricides (*Chem.*). Substances preventing the growth of micro-organisms; e.g. toluene, xylene, etc.—*adj.* **bacterici'dal.**

bacte'riocyte (*Zool.*). A phagocytic cell which engulfs bacteria.

bacte'rioid, bac'teroid (*Bot.*). A swollen hypertrophied bacterium occurring in large numbers in swellings on roots of beans and other plants; the bacterioids are ultimately absorbed by the cells of the root tubercles.

bacteriology. The scientific study of bacteria — *n.* **bacteriologist.**

bacte'rioly'sin (*Chem*). Any of a group of immune bodies with a specific action against the bacterial species used in immunisation, causing digestion of the bacterial cells with the formation of soluble products. Specifically (*Med.*)., an antibody formed in the blood in response to infection by a bacterium and capable of destroying the latter.

bacteriol'ysis (*Med.*). The destruction of bacteria by antibodies formed in response to infection.—*adj.* **bacteriolyt'ic.**

bacte'riophage (*Bot.*). An agent of obscure nature, probably an enzyme, which destroys bacteria in cultures, as well as in the cells of some plants.

bacte'riorrhiza (*Bot.*). A symbiotic relationship between a root and bacteria.

bacterio'sis (*Bot.*). A disease caused by bacteria.

bacte'rium (*Bacteriol.*). A rod-shaped member of the Bacteria.—*pl.* **bacteria.**

bacteriu'ria (*Med.*). The presence of bacteria in the urine.

bac'teroid (*Bacteriol.*). Of bacterial nature. See also **bacterioid.**

bacteroids (*Zool.*). In *Oligochaeta*, rod-like bodies of unknown function occurring in the connective tissue.

bacu'liform (*Bot.*). (Of fungal spores) stick-shaped or rod-shaped.

bac'ulum (*Zool.*). See **os penis.**

bad colour (*Print*). An unsatisfactory impression, due to uneven distribution of the ink on a printing machine.

bad copy (*Typog.*). A compositor's term for MS. or copy that is difficult to read.

bad matter (*Typog.*). A term applied to type that has been used for printing and awaits distribution.

badger (*Build.*). An implement used to clear mortar from a drain after it has been laid.

badger plane (*Join.*). A plane having a skew mouth, with iron flush at one side, in order to facilitate close working to a corner in making a rebate, or for use in sinking.

badger (*Furs*). The dressed skin of the badger; the natural badger fur is brown near the skin, with longer outstanding grey hairs tipped with white.

badger softener (*Dec.*). A broad brush set with badger hair, used in grained work to produce light dragging effects.

badigeon, ba-dij'on (*Build.*). A mixture used for stopping holes in stone- or wood-work, in order to hide defects.

ba'dious (*Bot.*). Chestnut-brown.

Baeyer's tension (or **strain**) **theory,** bī'er (*Chem.*). This theory assumes that the four valencies of the tetravalent carbon atom are symmetrically distributed in space around the carbon atom. One may predict from this assumption the strain involved in the formation of a ring compound from a chain of carbon atoms, and also estimate the stability of a ring compound from the number of carbon atoms in the ring.

baffle (*Acous.*). A rigid structure for regulating the distribution of sound-waves from a reproducer; frequently in the form of a limited plane with the reproducing diaphragm mounted in the centre.

See **box— directional— exponential—**

baffle (*Cinema.*). Any portable surface for regulating the reflection of sound in a set, during sound-film production.

baffle blankets (*Cinema.*). Blankets temporarily placed about a set, to regulate the distribution of reflected sound during sound-film production.

baffle board (*Mining*). A board fitted across a compartment in an ore-washing machine, to retain the ore when lighter material flows away.

baffle loudspeaker (*Acous.*). An open-diaphragm loudspeaker, in which the radiation of sound power is enhanced by surrounding it with a large plane baffle, generally of wood.

baffle plate (*Eng., etc.*). A plate used to prevent the movement of a fluid in the direction which it would normally follow, and to direct it into the desired path.

baffle tube (*Met., etc.*). A pipe of sufficient length to lower the temperature of hot gases before they enter a furnace.

bafts (*Textiles*). Coarse cotton cloths, grey or coloured, used as loin cloths by African natives.

bag and spoon dredger (*Civ. Eng.*). An implement consisting of a leather bag laced to a steel hoop; it is suspended from a chain and guided by a long handle; used to dredge soft material.

bag, changing (*Photog.*). See **changing bag.**

bag hides (*Leather*). The upper, or grain, part of split ox- or cow-hides, tanned and dyed; used for portmanteaux, etc.

bag plug (*San. Eng.*). A drain plug consisting of a cylindrical canvas bag which is placed in the drain pipe and then inflated.

bag pump (*Hyd. Eng.*). A form of bellows pump, in which the valved disc taking the place of the bucket is connected to the base of the barrel by an elastic bag, distended at intervals by rings.

bagasse' (*Fuels*). Crushed sugar-cane from which the sugar has been extracted; used in sugar refineries for raising steam.

Baggy Beds (*Geol.*). A formation occurring in the Upper Devonian Series in North Devon, and comprising green shales and yellowish sandstones, which yield lamellibranchs, gastropods, and plant remains.

Bagshot Beds (*Geol.*). A formation of the British Eocene Series, following upon the London Clay in both the London and the Hampshire Basins. The beds comprise coarse current-bedded sands with interstratified beds of pipe-clay. The latter in Hants and Dorset yield abundant stems and leaves of plants, indicating a warm climate.

baguette, ba-get' (*Build.*). A small moulding similar to the *astragal* (q.v.).

baguio, bah'gē-o (*Meteor.*). A local name for the typhoon arising in the region of the Philippine Islands.

bailiff (*Mining*). See **overman** (1).

Baillarger's lines, bī-yar-zhă (*Histol.*). A tract of nerve-fibres in the cerebrum.

Baily furnace (*Elec. Eng.*). An electric-resistance furnace in which the resistance material is crushed coke placed between carbon electrodes; used for heating ingots and bars in rolling mills, for annealing, etc.

Baily's beads (*Astron.*). A phenomenon, first observed by Baily, in which, during the last seconds before a solar eclipse becomes total, the advancing dark limb of the moon appears to break up into a series of bright points.

baize (*Textiles*). A coarse woollen material with a long nap.

Bajo'cian Series (*Geol.*). Broadly, the lower division of the Middle Jurassic rocks, including, in Britain, various sands above the Lias, the Inferior Oölite, and the Dogger, Lower Estuarine Sands, and Millepore Oölite of Yorks.

bake-out (*Elec. Eng.*). The preliminary heating of the electrodes and container of a mercury-arc rectifier, to ensure freedom from the later release of gases.

baked (*Typog.*). Said of type which, having become stuck together, is difficult to distribute.

baked core (*Foundry*). A dry-sand core baked in the oven to render it hard and to fix its shape; opposite of *green core*. See **core sand.**

Bakelite (*Plastics*). Trade-name for synthetic resin (named after L. H. Baekeland), the product of the condensation of cresol or phenol with formaldehyde. First product is *Bakelite A*, a liquid; this is changed by heat into *Bakelite B*, which is a solid that is soft when hot and hard when cold and is thus suitable for moulding. The final product, *Bakelite C*, is obtained by heating *Bakelite B* under pressure. Bakelite is much used for insulating purposes and in the manufacture of plastic products, paints, varnishes, etc.

bakelite wood (*Diel.*). See **Permali.**

Baker's cyst (*Med.*). A cyst formed by the protrusion of the synovial membrane of a joint through its capsule, communication between the cyst and the joint being cut off.

baking (*Pot.*). The process of firing shaped clay articles in kilns, in order to give them permanent hardness.

baking soda (*Chem.*). Sodium bicarbonate.

Bala Series (*Geol.*). The topmost division of the Ordovician System in Britain, named from the type-locality around Lake Bala in N. Wales, where the beds comprise fossiliferous sandstones and a thin band of limestone.

balance. Equilibrium of the body; governed from the cerebellum, in response to stimuli from the eyes and extremities and especially from the *semicircular canals* (q.v.) of the ears.

balance (*Acous.*). The technique of arranging sources of sound, such as artists and instruments, so that the reproduction of the sounds made by them (e.g. in broadcasting or recording) appears to be the optimum from the artistic point of view.

balance (*Chem.*). See **chemical balance.**

balance (*Elec. Comm.*).

See **line— duplex— capacity— repeater—**

balance (*Elec. Eng.*). A term used in connexion with electrical bridge measurements. A balance is said to be obtained when the various impedances forming the arms of the bridge have been adjusted, so that no current flows through the galvanometer. See also **current weigher.**

balance (*Horol.*) The vibrating member of a watch, chronometer, or clock (with platform escapement). In conjunction with the balance-spring it forms the time-controlling element.

balance (*Photog.*). The harmonious use of masses and contrast in the composition of a photograph picture. See also **balancing.**

balance arc (*Horol.*). The portion of the vibration during which the balance is not detached from the escapement.

balance arm (*Horol.*). The portion of the balance connecting the rim to the staff.

balance bar (*Hyd. Eng.*). The heavy beam by which a canal-lock gate may be swung on its pintle, and which also partially balances the outer end of the gate.

balance bob (*Mining*). A counterbalance to take the excess weight of the pit work, or timber beams, in a shaft; used with the Cornish type of reciprocating pump.

balance box (*Eng.*). A box, filled with heavy material, used to counterbalance the weight of the jib and load of a crane of the cantilever type.

balance-bridge (*Civ. Eng*). See **bascule bridge.**

balance cock (*Horol.*). The detachable bracket which carries the upper pivot of the balance staff.

balance-crane (*Eng.*). A crane with two arms, one having counterpoise arrangements to balance the load taken by the other.

balance cylinder (*Eng.*). A small auxiliary steam-cylinder sometimes fitted to large vertical steam-engines. Steam is admitted to the underside of the balance piston, which is connected to the engine slide-valve in order to reduce the load on the valve gear.

balance gate (*Hyd. Eng.*). A flood-gate which revolves about a central vertical shaft, and which may be made self-opening or self-closing as the current sets in or out of a channel by giving a preponderating area to the inner leaves of the gate.

balance pipe (*Eng.*). A connecting pipe between two points at which it is desired to equalise the pressure.

balance piston (*Eng.*) See **dummy piston.**

balance point (*Civ. Eng.*). Any point where a *mass-haul curve* (q.v.) cuts the datum line, showing that up to this point all excavated material has been used up in embankment.

balance rim (*Horol.*). The circular rim of the balance. It may be mono-metallic or bi-metallic. See **compensation balance.**

balance spring (*Horol.*). A very fine metal ribbon, forming a flat spiral, cylindrical, or helical spring round the balance staff. It regulates the movement of the balance.

balance staff (*Horol.*). The staff which carries the balance, and the collet to which the balance spring is attached.

balance weight (*Eng.*). A weight used to counterbalance some part of a machine; e.g. the weights applied to a crankshaft to minimise or neutralise the inertia forces due to reciprocating and rotating masses of the engine. *

balanced-armature loudspeaker (*Acous.*). A driving mechanism for loudspeakers, in which the motion is obtained by a pivoting member which is twisted by varying magnetic fluxes across its ends.

balanced-armature pick-up (*Acous.*). A pick-up in which the reproducing needle is held by a screw in a magnetic arm, which is pivoted so that its motion diverts magnetic flux from one arm of a magnetic circuit to another, thereby inducing electromotive forces in coils on these arms.

balanced-beam relay (*Elec. Eng.*). A relay having two coils arranged to exert their forces on each end of a beam pivoted about its central point and acted on by solenoids at its extremities.

balanced circuit (*Elec. Comm*). A circuit in which the voltages on the two wires comprising the circuit are equal, but opposite in phase with respect to earth. Cf. *unbalanced circuit.*

balanced draught (*Eng.*). A system of air-supply to a boiler furnace in which one fan forces air through the grate, while a second, situated in the uptake, exhausts the flue gases. The pressure in the furnace is thus kept atmospheric, i.e. is *balanced.*

balanced load (*Elec. Eng.*). A load connected to a polyphase system, or to a single-phase or d.c. 3-wire system, in such a way that the currents taken from each phase, or from each side of the system, are equal and at equal power factors.

balanced modulator (*Radio*). A matched pair of valves, operated as modulators, with their anodes connected in push-pull. The carrier voltage is applied to the two grids in phase, and the modulating voltage in antiphase, so that the carrier components in the anode currents cancel out. Used in suppressed-carrier systems.

balanced network (*Elec. Comm.*). A network arranged for insertion into a *balanced circuit* (q.v.) and therefore symmetrical electrically about the midpoints of its input and output pairs of terminals.

balanced pedal (*Acous.*). In an organ console, the foot-operated plate, pivoted so that it stays in any position, for remote control of the shutter of the chambers in which ranks of organ pipes are situated ; it also serves for bringing in all the stops in a graded series. See **swell.**

balanced protective system (*Elec. Eng.*). A form of protective system for electric transmission lines and other apparatus, in which the current entering the line or apparatus is balanced against that leaving it ; so long as there is no fault on the line or apparatus this balance will be maintained, but an upsetting of the balance owing to a fault causes relays to trip the faulty circuit. Also called DIFFERENTIAL PROTECTIVE SYSTEM.

balanced reaction (*Chem.*). See **incomplete reaction.**

balanced sash (*Join.*). See **sliding sash.**

balanced solution (*Bot.*). A solution of two or more salts, in such proportions that the toxic effects of the individual salts are mutually eliminated ; sea water is a *balanced solution.*

balanced steps (*Join.*). See **dancing steps.**

balanced voltage (or **current**) (*Elec. Eng.*). A term used, in connexion with polyphase circuits, to denote voltages or currents which are equal in all the phases. Also applied to d.c. 3-wire systems.

balancer (*Elec. Eng.*). A device used on polyphase or 3-wire systems to equalise the voltages between the phases or the sides of the system, when unbalanced loads are being delivered.

See **a.c.—** **d.c.—** **static—**

balancer-booster (*Elec. Eng.*). A balancer set having boosters mounted on the same shaft, to compensate for the voltage drop in feeders.

balancer field rheostat (*Elec. Eng.*). A special form of shunt field rheostat, for controlling the field currents of a balancer set. Cutting the resistance out of one field puts a corresponding amount into the other field.

balancer transformer (*Elec. Eng.*). An autotransformer connected across the outer conductors of an a.c. 3-wire system, the neutral wire of which is connected to an intermediate tapping.

balancers (*Zool.*). See **halteres.**

balancing (*Photog.*). Control of the densities of the three printings in a three-colour subtractive system to get as near as possible to the theoretical requirements. Effected by matching grey tones.

balancing (*Radio*). See **neutralisation.**

balancing (*Surv.*). The process of adjusting a traverse, i.e. applying corrections to the different survey lines and bearings so as to eliminate the closing error.

balancing antenna (*Radio*). (1) An auxiliary reception antenna which responds to interfering but not to the wanted signals. The interfering signals thus picked up are then balanced against those picked up by the main antenna, leaving signals free from interference.—(2) See **counterpoise antenna.**

balancing capacitance (*Radio*). A capacitance connected between appropriate points in the grid and anode circuits of a valve amplifier to neutralise the effects of internal grid-anode capacitance. Also called NEUTRALISING CAPACITANCE, NEUTRODYNE CAPACITANCE.

balancing capacitance (*Teleph.*). A small capacitance added to conductors in telephone cables to perfect the capacitance balance between circuits or to earth.

balancing condenser (*Radio*). The same as *balancing capacitance.*

balancing, dynamic (*Acous.*). The technique of balancing the centrifugal forces in rotating machines so that there is no residual unbalance and consequent vibration to give rise to noise.

balancing flux (*Elec. Eng.*). Flux provided in an electric machine to compensate for the unbalanced magnetic pull.

balancing impedance (*Elec. Comm.*). See **line balance.**

balancing machine (*Eng.*). A machine for testing the extent by which a revolving part is out of balance, and to determine the weight and position of the masses to be added to obtain balance.

balancing network (*Elec. Comm.*). See **line balance.**

balancing ring (*Elec. Eng.*). See **equaliser ring.**

balancing speed (*Elec. Eng.*). See **free-running speed.**

balani'tis (*Med.*). Inflammation of the glans penis.

Bal'anoglos'sida (*Zool.*). A class of *Hemichorda* of worm-like form with a simple collar not modified to form tentacles ; solitary bottom-feeding forms of burrowing habit.

bal'anoposthi'tis (*Med.*). Inflammation of the glans penis and prepuce.

balanorrha'gia (*Med.*). Gonorrhoeal inflammation of the glans penis, with discharge of pus.

bala'nus (*Anat.*). The terminal bulbous portion of the penis ; the glans penis.

balas ruby (*Min.*). A rose-red variety of the mineral spinel (magnesium aluminate $MgO \cdot Al_2O_3$, crystallising in the cubic system). See **false ruby.**

bal'ata. The coagulated latex of the bullet tree of S. America. Similar in properties to gutta-percha, but softer and more ductile. Used extensively in the manufacture of golf balls, and for impregnating cotton duck belting.

balbuties, —bŭ'shi-ēz (*Med.*). Stammering, stuttering.

Balclatchie Beds (*Geol.*). A group of sandstones and shales in the Upper Ordovician (Ardmillan) Series of Southern Scotland.

balconet (*Build.*). A low ornamental railing to a door or window, projecting very little beyond the sill or threshold; mainly used in the Swiss style of architecture.

balcony (*Build.*). A projecting platform, either inside or outside a building, usually supported by pillars, but sometimes cantilevered and surrounded by a parapet.

baldachin, bal'da-kin (*Build.*). A canopy suspended above altars, tombs, etc., or supported in such position by columns. Also BALDACHINO (—kē'nō), BALDAQUIN (—kin).

bale breaker (*Textiles*). A machine that opens up the highly compressed cotton fibres taken from the bales and releases dust, which is extracted by a fan.

balection moulding (*Join.*). See **bolection moulding.**

baleen' (*Zool.*). In certain Whales, horny plates arising from the mucous membrane of the palate and acting as a food strainer.

baler (*Agric. Mach., etc.*). A machine for compressing loose bulky material such as hay or cotton and securing it in a form convenient for transport.

Balfour's rule (*Zool.*). The velocity of segmentation in any part of the ovum is, roughly speaking, proportional to the concentration of the protoplasm there ; and the size of the segments is inversely proportional to the concentration of the protoplasm.

balk (*Civ. Eng.*). The material between two excavations. Also BAULK.

balk back (*Textiles*). A woollen or worsted cloth with a fibrous back and a smart surface.

Balkan frame (*Med.*). A frame, with pulleys attached, for supporting the leg in the treatment of fractures.

balking (*Elec. Eng.*). See **crawling.**

ball or **bloom** (*Met., etc.*). (1) A rounded mass of spongy iron, prepared in a puddling furnace.—(2) A mass of tempered fireclay, used for forming the crucible in crucible-steel production.

ball or **bolus** (*Vet.*). A cylindrical-shaped mass of drugs for the curative treatment of horses.

ball-and-socket joint (*Anat.*). Enarthrosis. A joint in which the hemispherical end of one bone is received into the socket of another.

ball-and-socket joint (*Eng.*). A joint between two rods, permitting considerable relative angular movement in any plane. A ball formed on the end of one rod is embraced by a spherical cup on the other. Used in light control systems (e.g. in connecting a pair of bell-cranks which operate in planes at right-angles) and in the steering mechanism of motor vehicles.

ball-bearing (*Eng.*). A shaft bearing consisting of a number of hardened steel balls which roll between an inner race forced on to the shaft and an outer race carried in a housing. The races carry shallow spherical grooves (*ball-tracks*), and the balls are spaced by a light metal cage. Used to obtain a high load capacity in small compass, to combine the functions of a journal and thrust bearing, or to secure minimum friction. The same principle is applied to thrust bearings.

ball caster (*Furn.*). See **caster.**

ball catch (*Join.*). A door-fastening in which a spring-controlled ball, projecting through a smaller hole, engages with a striking plate.

ball centrosome (*Cyt.*). That centrosome of the spermatozoon which gives rise to the long axial fibre of tail.

ball clay (*Geol.*). Fine-textured and highly plastic detrital clay which, on firing, yields pale-coloured or white pottery. Mixed with kaolin, it imparts plasticity to the latter. Also called POTTERS' CLAY.

ball-cock (*Plumb., San. Eng.*). A self-regulating cistern-tap which, through a linkage system, is turned off and on by the rising and falling of a hollow ball floating on the surface of the liquid.

ball-ended magnet (*Elec. Eng.*). A permanent magnet, consisting of a steel wire with a steel ball attached to each end; this gives a close approximation to a unit pole.

ball flower (*Build.*). An ornament like a ball enclosed within three or four petals of a flower, often inserted in a hollow moulding.

ball joint (*Eng., etc.*). A connexion in which the end of one member is partly spherical and fits into a corresponding spherical cavity in the other, thus permitting relative angular movement.

ball lightning (*Meteor.*). A slowly-moving luminous ball, not more than a foot in diameter, which is occasionally seen during a thunderstorm.

ball-pane hammer (*Eng.*). A fitter's hammer the head of which has a flat face at one end, and a smaller hemispherical face or pane at the other; used chiefly in riveting.

ball race (*Eng.*). (1) The inner or outer steel ring forming one of the ball-tracks of a ball-bearing.—(2) Commonly, the complete *ball-bearing* (q.v.).

ballstone (*Geol.*). The name applied to masses of fine unstratified limestone, occurring chiefly in the Wenlock Limestone of Shropshire, and representing colonies of corals in position of growth.

ball-track (*Eng.*). See **ball-bearing.**

ball valve (*Eng.*). A simple non-return valve consisting of a ball resting on a cylindrical seating; used in small water- and air-pumps.

ball warping (*Textiles*). The preparation of cotton warp on a warping mill. The warp is wound on a frame in the form of untwisted rope and eventually made up as a ball (*balled warp*).

Ballagan Beds (*Geol.*). The lowest division of the Lower Carboniferous rocks of the Glasgow district, comprising sandstones, shales, and limestones.

ballast (*Civ. Eng., Rail., etc.*). (1) A layer of broken stone, gravel, or other material deposited above the formation level of road or railway; it serves as foundation for road-metal or permanent-way respectively.—(2) Sandy gravel employed as a coarse aggregate in making concrete.—(*Naut.*) Gravel, stone, or other material placed in the hold of a ship to increase her stability when floating without cargo or with insufficient cargo.

ballast car (or **wagon**) (*Civ. Eng.*). A truck used for the transport and dumping of ballast in road or rail construction.

ballast lamp (*Elec. Comm.*). An incandescent lamp used as a ballast resistance.

ballast resistance (*Elec. Comm.*). A resistance inserted in a circuit to swamp changes (e.g. those due to temperature) in the resistance of other parts of the circuit; or to neutralise the apparent negative resistance of an arc and so stabilise the arc circuit. Cf. *barretter*.—(*Elec. Eng.*) A term used in electric-railway signalling to denote the resistance between the two track rails across the ballast on which the track is laid.

ballast tube (*Elec. Comm.*). A *barretter* (q.v.).

balled warp (*Textiles*). See **ball warping.**

balling (*Met.*). (1) A process that occurs in the cementite constituent of steels on prolonged annealing at 650°-700° C.—(2) The operation of forming balls in a puddling furnace.

balling (*Textiles*). The preparation of balled warp, mechanically or by hand. See **ball warping.**

balling gun (*Vet.*). An instrument for the administration of balls to horses.

ballis'tics (*Mech.*). The science of projectiles.

ballistic circuit-breaker (*Elec. Eng.*). A very high-speed circuit-breaker, in which the pressure produced by the fusing of an enclosed wire causes interruption of the circuit.

ballistic fruit (*Bot.*). A fruit which discharges its seeds by means of some elastic means of propulsion.

ballistic galvanometer (*Elec. Eng.*). A galvanometer in which the time of swing is long compared with the duration of the transient which the instrument is intended to measure.

ballistic method (*Elec. Eng*). A method of high-grade testing used in electrical engineering, a ballistic galvanometer being used.

ballistic pendulum (*Mech., Phys.*). A heavy block suspended by strings so that its swings are restricted to one plane. If a bullet is fired into the block, the velocity of the bullet may be calculated from a measurement of the angle of swing of the pendulum.

ballonet' (*Aero.*). An air compartment in the envelope of an aerostat, used to adjust changes of volume in the filler gas.

balloon (*Aero.*). A general term for aircraft supported by buoyancy and not driven mechanically.

See **barrage—** **nurse—**
captive— **pilot—**
free— **sounding—**
kite—

balloon (*Build.*). A spherical ball or globe crowning a pillar, pier, etc.

balloon barrage (*Aero.*). An anti-aircraft device consisting of suitably disposed *barrage balloons* (q.v.).

balloon framing (*Carp.*). A cheap and rapid method of construction in which all timbers are of light scantling, and are held together entirely by nails and spikes, only the corner posts being tenoned: used in place of braced framing.

ballooning (*Textiles*). The name given to the form assumed by cotton yarn in ring spinning as it passes from the guide-eye to the bobbin.

ballott′ement (*Med.*). Method of diagnosing pregnancy by manual displacement of the foetus in the fluid which surrounds it in the uterus.

Balmer formula (*Light*). The formula which gives the wavelengths of the lines of the Balmer hydrogen series:

$$\lambda_m = 3646{\cdot}13\left(\frac{m^2}{m^2-4}\right),$$

taking successive integral values 3, 4, 5 . . . for *m*.

Balmer series (*Light*). The atomic spectrum of hydrogen in the visible and near ultraviolet regions of the spectrum.

balneol′ogy (*Med.*). The scientific study of baths and bathing, and of their application to disease.

bal′neother′apy (*Med.*). Treatment by baths and bathing.

balsa wood (*Acous.*, *Timber*). The wood of *Ochroma lagopus* ('West Indian corkwood'); it is a highly porous wood, and is valued for its lightness; used for vibration isolation.

balsam, Canada (*Chem.*). See **Canada balsam.**

balsam of fir (*Chem.*). See **Canada balsam.**

balsam of Peru (*Chem.*). An oleoresin containing esters of benzoic and cinnamic acids, obtained from a South American tree, *Myroxylon pereiroe.*

balsam of Tolu (*Chem.*). An oleoresin containing esters of benzoic and cinnamic acids, obtained from a South American evergreen tree, *Myroxylon toluiferum.*

balsamif′erous (*Bot.*). Yielding balsam.

baluster (*Build.*). A small pillar supporting the coping of a bridge parapet, or the handrail of a staircase.

balustrade (*Build.*). A coping or handrail with its supporting balusters.

Bamberger's naphthalene formula (*Chem.*). A centric formula for naphthalene, showing the valencies of the benzene rings pointing towards the centres. This formula does not assume any double bonds as in the Kekulé formula.

band (*Bot.*). A strand of thickened tissue in the thallus of a liverwort; it has strengthening functions.

band (*Build.*). A flat horizontal member, occasionally ornamented, separating a series of mouldings or dividing a wall surface.

bands (*Bind.*). The tapes, or cords, placed across the back of a book, to which the sections are attached by sewing. The ends of the bands are subsequently secured to the boards of the cover. See **flexible, raised bands.**

band-and-hook hinge (*Carp.*). See **strap hinge.**

band articulation (*Teleph.*). The percentage of speech-bands correctly received over a telephone system, with respect to the total bands transmitted. See **speech-bands.**

band brake (*Eng.*). A flexible band wrapped partially round the periphery of a wheel or drum. One end is anchored, and the braking force is applied to the other.

band chain (*Surv.*). A steel tape, graduated in feet or links, used for distance measurement when greater accuracy is desired than can be obtained with the ordinary chain. Brass handles, included in the measurement, are provided at each end.

band clutch (*Eng.*). A friction clutch in which a fabric-lined steel band is contracted on to the periphery of the driving member by means of engaging gear. See **friction clutch.**

band (or belt) conveyor (*Eng.*). An endless band passing over, and driven by, horizontal terminal drums, thus constituting a moving track which is used to convey loose material or small articles between two points.

band-elimination filter (*Elec. Comm.*). A filter which highly attenuates currents having frequencies within a specified nominal range and freely passes currents having frequencies outside this range. Also called BAND REJECTION FILTER, BAND STOP FILTER.

band film (*Cinema.*). See **cycle film.**

band, frequency (*Radio*). See **frequency band.**

band losses (*Elec. Eng.*). Energy losses due to currents induced in the armature bands of an electric machine.

band-pass filter (*Elec. Comm.*). A filter which freely passes currents having frequencies within specified nominal limits, and highly attenuates currents with frequencies outside these limits.

band-pass tuning (*Radio*). An arrangement of two coupled circuits, tuned to the same frequency and having the property of substantially uniform response to a range of frequencies, instead of the marked response to a single frequency which characterises a single-tuned circuit.

band relay (or **repeater**) (*Elec. Comm.*). The special name for a public-address system which is used in restaurants or pleasure-gardens, for relaying or repeating music through a microphone-amplifier-loudspeaker system.

bandsaw (*Eng.*). A narrow endless strip of saw-blading running over and driven by vertical pulleys, as a belt; used for cutting wood or metal to intricate shapes.

band spectrum (*Light*). A type of spectrum consisting of broad bands, each usually having one sharp edge. Under high dispersion a band is seen to consist of regularly spaced sharp lines very close together. Band spectra are of molecular origin.

band spreading (*Radio*). The use of a relatively large fixed condenser in parallel with a smaller variable condenser, to reduce the band of frequencies covered by variation of the latter.

band switching (*Radio*). A system of inductance or condenser switching, allowing a number of frequency bands to be covered by the same tuning dial.

banded column (*Build.*). A column having cinctures at intervals.

banded filter (*Photog.*). A two- or three-colour filter for colour photography, with the separate filters side by side.

banded precipitate (*Chem.*). See **Liesegang phenomenon.**

banded structure (*Geol.*). A structure developed in crystalline rocks, both igneous and metamorphic; due to the alternation of layers differing in texture, composition, or both.

ban′deler (*Build.*). A plain moulding.

bandelet (*Build.*). A small flat moulding encompassing a column.

banding plane (*Carp.*). A plane used for cutting out grooves and inlaying strings and bands in straight and circular work.

bandings (*Dec.*, *Furn.*). (1) Narrow inlays.—(2) Strips of wood to cover edges of plywood.

Bangor Series (*Geol.*). A group of Pre-Cambrian rocks in N. Wales, including granitoid and felsitic masses, together with a large thickness of grits, slates, and agglomerates.

Bang's bacillus (*Bacteriol.*). *Brucella abortus*; the cause of contagious abortion in animals and of undulant fever in man.

banister (*Arch.*, *Carp.*). Alternative term for *baluster* (q.v.).

banjo axle (*Automobiles*). The commonest form of rear-axle casing, in which the provision of the differential casing in the centre produces a resemblance to a banjo with two necks.

bank (*Auto. Teleph.*). An assemblage of contacts over which wipers pass in order to effect a specified connexion.

bank (*Civ. Eng.*). See **embankment.**

bank (*Eng., etc.*). A number of similar pieces of equipment grouped in line and connected; e.g. a *bank* of engine cylinders, a *bank* of coke-ovens, a *bank* of transformers.

bank (*Textiles*). A large frame for holding bobbins of yarn when the yarn is being transferred to a warper's beam.

bank (*Typog.*). A bench on which sheets are placed as printed, or on which standing type-matter rests.

bank-and-bond paper (*Paper*). Thin strong writing paper used for currency work; made in various qualities.

bank cable (*Auto. Teleph.*). The multiple cable connecting the switch (bank) contacts to the end terminals of a shelf of apparatus.

bank multiple (*Auto. Teleph.*). The multiple connecting the bank of contacts in selectors or uniselector switches in automatic telephone exchanges. The switches are usually detachable from the contacts and multiples for repair, without disturbing the large number of connexions in the multiple. See **slipped bank, straight bank.**

bank protector (*Hyd. Eng.*). Any device for minimising erosion of river banks by water; e.g. groins, pitching, etc.

bank wires (*Auto. Teleph.*). The wires connecting the corresponding contacts in the banks of a shelf of switches. See **slipped bank, straight bank.**

Banka tin (*Met.*). Tin of high purity (99·75% tin and upwards), produced in Banca, Dutch East Indies, and the Malay States. Also called STRAITS TIN.

banked fire (or **boiler**) (*Eng.*). A boiler furnace in which the rate of combustion is purposely reduced to a very low rate for some period during which the demand for steam has ceased. See **dead bank, floating bank, banking loss, banking-up.**

banker (*Build.*). A bench upon which bricklayers and stonemasons shape their materials.

banket (*Min.*). The term originally applied by the Dutch settlers to the gold-bearing conglomerates of the Witwatersrand. It is now used more widely for similar conglomerates and conglomeratic quartzites.

banking (*Aero.*). Angular displacement of the wings of an aeroplane about the longitudinal axis, to effect turning.

banking (*Mining*). The operations involved in removing full trucks, tubs, or wagons and replacing them by empty ones at the top of a shaft.

banking loss (*Eng.*). The fuel used in maintaining a *floating bank* (q.v.), or to maintain a *dead bank* (q.v.), and then raise the steam pressure to normal.

banking pins (*Horol.*). Vertical pins in the bottom plate of a watch which limit the motion of the lever. In the cylinder escapement, the action of the balance is limited by a single banking pin on the balance. In some watches part of the plate itself forms a solid banking.

banking-up (*Eng.*). Reducing the rate of combustion in a boiler furnace by covering the fire with slack or fine coal.

banner (*Bot.*). See **standard.**

Bannisdale Slates (*Geol.*). The topmost division of the Salopian Series of the Silurian System of Westmorland.

bannister harness (*Textiles*). A harness used for weaving wide patterns in fine reeds, with a jacquard loom.

Bannockburn tweed (*Textiles*). A Cheviot quality woollen cloth, originally produced at Bannockburn.

banquet, bahn^{g}-ket′ (*Build.*). A narrow window-seat in masonry, brickwork, or wood.

banquette, bahn^{g}-ket′ (*Civ. Eng.*). (1) A raised footway inside a bridge parapet.—(2) A ledge on the face of a cutting. See **berm.**

Banti's disease (*Med.*). See **splenic anaemia.**

bar (*Acous.*). The unit of alternating acoustic (sound or excess) pressure in a freely progressing wave or on a surface; equals one r.m.s. dyne per sq. cm.

bar (*Meteor.*). A unit of pressure, equal to a million dynes per sq. cm. This is equivalent to a pressure of 75·007 cm. of mercury (at 60° C. and in lat. 45°). The *millibar* (10^{-3} bar) is a more convenient unit for expressing atmospheric pressure.

bar (*Civ. Eng., etc.*). A deposit of sand, gravel, or other material in a river, or across the mouth of a river or harbour: a boom of logs, preventing or tending to prevent navigation.

bar (*Eng., etc.*). Material of uniform cross-section, which may be either rolled or extruded.

bar (*Elec. Eng.*). See **commutator bar, electrolytic wire bar.**

bar (*Horol.*). A narrow detachable plate.

bars (*Foundry*). Ribs placed across the top part of a box or flask to hold the sand.

bars (*Textiles*). In a lace machine, strips of flexible steel that stretch from one end of the machine to the dropper box at the jacquard end.

bar-and-yoke method (*Elec. Eng.*). A method of magnetic testing in which the sample under test is in the form of a bar, clamped into a yoke of relatively large cross-section, which forms a low-reluctance return path for the flux.

bar coal-cutting machine (*Mining*). A machine, mounted on skids and having a revolving bar, fitted with a pick, or a series of picks, which cuts through the coal.

bar keel (*Ship Constr.*). See under **keelson.**

bar lathe (*Eng.*). A small lathe of which the bed consists of a single bar of circular, triangular, or rectangular section.

bar magnet (*Elec. Eng.*). A straight bar-shaped permanent magnet, with poles at each end.

bar mill (*Met.*). A rolling mill with grooved rolls, for producing round, square, or other forms of bar iron of small section.

bar movement (*Horol.*). A watch movement in which the upper pivots are carried in bars.

bar of Sanio (*Bot.*). A horizontal rod or band of thickening, consisting of pectic materials or of cellulose, occurring between pits in the walls of tracheides and vessels.

bar solder (*Eng.*). Solder cast in small bars for convenience in use. See **solder.**

bar-suspension (*Elec. Eng.*). A method of mounting the motor on an electrically propelled vehicle. One side of the motor is supported on the driving axle, and the other side is supported from a spring-suspended bar lying transversely across the truck. Also called YOKE SUSPENSION.

bar timbering (*Mining*). A method of timbering with horizontal bars of wood, which are supported by side legs or walls.

bar tracery (*Build.*). Window-tracery characteristic of Gothic work, resembling more a bar of iron twisted into various forms than stone.

bar-type current transformer (*Elec. Eng.*). A current transformer in which the primary consists of a single conductor that passes centrally through the iron core upon which the secondary is wound.

bar warp machines (*Textiles*). Lace machines which make warp net from beams only.

bar winding (*Elec. Eng.*). An armature winding for an electric machine; in it the conductors are formed of copper bars.

bar-wound armature (*Elec. Eng.*). An armature with large sectioned conductors which are insulated and fixed in position and connected, in contrast with former-wound conductors which are sufficiently thin to be inserted, after shaping in a suitable jig.

baragno'sis (*Med.*). Loss of the ability to judge differences between the weights of objects.

Bárány's tests (*Med.*). Tests for gauging the efficiency of the balancing mechanism connected with the inner ear.

barathea (*Textiles*). (1) Botany worsted coating material of twilled mat weave.—(2) A dress fabric with a spun-silk warp and a Botany worsted weft.

barb (*Bot.*). A hooked or doubly-hooked hair.—(*Zool.*) Any hooked, bristle-like structure: in Birds, one of the lateral processes of the rachis of the feather which form the vane.

Barba'dos Earth (*Geol.*). A siliceous accumulation consisting of the remains of radiolaria, formed originally in deep water and later upraised above sea-level.

barbate (*Bot.*). Bearded: bearing tufts of long hairs.

barbel (*Zool.*). In some Fish, a finger-shaped tactile appendage arising from one of the jaws.

barber's rash (*Med.*). Infection of the beard region of the face with either a bacterium or a fungus.

bar'bicel (*Zool.*). In Birds, one of the minute hooked processes on the lower face of a barbule of a feather.

bar'bierite (*Min.*). A feldspar of the composition of *albite* (q.v.), but crystallising in the monoclinic system.

barbitu'ric acid (*Chem.*). Malonyl urea, CO$(NH{\cdot}CO)_2CH_2$, crystallising in large colourless crystals. The hydrogen atoms of the methylene group are reactive and can be replaced by halogen. Basis of important derivatives with therapeutic action.

barbo'ne (*Vet.*). An acute contagious septicaemia of buffaloes, due to *Pasteurella bovis*.

bar'botine (*Pot.*). A term applied to vases and other pieces decorated with flowers, leaves, etc., in high relief and coloured in different enamels.

barbule (*Bot.*). The inner row of peristome teeth in some mosses.

barbule (*Zool.*). In Birds, one of the processes borne on the barbs of a feather.

Barcoo rot (*Med.*). See **veldt sore.**

bare (*Eng., etc.*). A term signifying slightly smaller than the specified dimension. Cf. *full*.

bare carbon (*Illum.*). An arc lamp carbon which is not coated with a layer of copper to improve its conductivity.

bare conductor (*Elec. Eng.*). A conductor not continuously covered with insulation, but supported intermittently by insulators; e.g. bus-bars and overhead lines.

bare electrodes (*Elec. Eng.*). Electrodes used in welding that are not coated with a basic slag-forming substance.

bareface tenon (*Carp., Join.*). A tenon which has a shoulder on one face only; used when jointing a rail which is thinner than the stile.

Barfoed's test (*Chem.*). A specific test for monosaccharoses, based upon the reduction of cupric acetate to red cuprous oxide.

Bargate Beds (*Geol.*). A group of calcareous sandstones and conglomerates forming part of the Lower Greensand of Surrey.

barge board (*Build.*). A more or less ornamental board fixed under the gable end of a roof. It hides the ends of the horizontal timbers, and protects from the weather the underside of the *barge-course* (q.v.).

barge-couple (*Carp.*). A beam which is tenoned into another to add strength to a building.

barge-course (*Build.*). (1) That part of the roof of a house which projects slightly over the gable end, and is made up underneath with mortar to keep out rain, etc.—(2) A coping course of bricks laid edge-wise and transversely on a wall.

ba'rite (*Min.*). See **barytes.**

ba'rium (*Chem.*). Symbol, Ba. A heavy metallic element in the second group of the periodic system, an alkaline earth metal. At. no. 56, at. wt. 137·7.

barium carbonate (*Min.*). Witherite.

barium getter (*Thermionics*). A *getter* (q.v.) in which barium is used; the metal is supported in a nickel capsule until heated with eddy-current heating.

barium hydroxide (*Chem.*). $Ba(OH)_2$. See **barium oxide.**

barium meal (*Radiol.*). A mixture of barium sulphate used in radiology for outlining the alimentary tract.

barium oxide (*Chem.*). BaO. Also called BARYTA. When freshly obtained from the calcined carbonate it is even more reactive than calcium oxide with water and forms barium hydroxide.

barium plaster (*Build.*). A cement-sand plaster containing barium salts, used for lining hospital and experimental X-ray rooms in order to prevent the dangerous reflection of the rays.

barium sulphate (*Chem.*). $BaSO_4$. Formed as a heavy white precipitate when sulphuric acid is added to a solution of a barium salt. Its low solubility is used in analytical chemistry for the detection and estimation of both barium and sulphuric acid. Although of little pigmentary value, it is much used in paint manufacture and in the preparation of lake pigments. See **barytes.**

bark (*Bot.*). Strictly, all tissues external to the cork cambium; popularly, the corky and other material which can be peeled from a woody stem.

bark (*Chem.*). A term which is used in the white lead industry to indicate the waste tan from tanneries. Used in the manufacture of white lead by the stack process.

bark-bound (*Bot.*). An unhealthy condition in a tree when the bark resists splitting and compresses the growing tissues beneath it.

barkhan' (*Geol.*). An isolated crescentic sand-dune.

Barker's mill (*Hyd. Eng.*). A mechanical contrivance for producing rotary motion, in which water admitted to a central container passes out under pressure through side holes in hollow arms projecting radially from the central container. The excess of hydrostatic pressure on the sides of the arms opposite to the discharge causes rotation in a direction contrary to the direction of discharge.

Barkhausen effect, bark'how-zen (*Magn.*). Small discontinuities in the magnetisation curve of ferro-magnetic materials, which may occur when the magnetising force is being increased, and which are thought to be due to a reorientation of the components of the atoms.

Barkhausen oscillator (*Radio*). A generator of very high frequency oscillation (above 10^8 cps.), whose action depends on the transit time of the electrons from cathode to anode of a three-electrode valve.

Barkhausen-Kurz (koorts) **oscillations** (*Radio*). Oscillations of very high frequency generated in a triode valve with a positive grid, the anode potential being approximately the same as the cathode. The oscillations are those of electrons passing to and fro through the grid.

barkom'eter or **barktrom'eter** (*Tanning*). A hydrometer used for gauging the density of tanning liquors.

barley (*Mining*). See **birdseye.**

barley wine (*Brew.*). See **beer.**

Barlow's disease (*Med.*). Infantile scurvy caused by deficiency of vitamin C. See also **scurvy.**

Barlow's wheel (*Elec.*). A primitive electric motor formed from a pivoted starwheel, intermittently dipping into mercury, torque being obtained from interaction of the radial current and a perpendicular magnetic field supplied by a permanent magnet.

barm (*Baking*). The top-yeast used to make dough rise.

Barmen machine (*Textiles*). A circular table used in lace manufacture, the outer surface carrying the bobbin tracks.

Barmouth Grits (*Geol.*). A thick grit formation in the Lower Cambrian (Harlech) Series of N. Wales.

Barnach Stone (*Geol*). A famous building-stone forming part of the Lincolnshire Limestone (Middle Jurassic).

bar'ograph (*Meteor*). A recording barometer, usually of the aneroid type, in which variations of atmospheric pressure cause movement of a pen which traces a line on a clockwork-driven revolving drum.

barometer (*Meteor.*). An instrument used for the measurement of atmospheric pressure. The *mercury barometer* (q.v.) is preferable if the highest accuracy of readings is important, but where compactness has to be considered, the *aneroid barometer* (q v.) is often used.

barometer, altitudes by (*Phys.*). See **Babinet's formula for altitude.**

barometer corrections (*Meteor.*). Corrections to be applied to the reading of a mercury barometer on account of expansion of the scale and the mercury, variations of gravity with latitude and altitude, and capillarity.

barometer, photographic. See **photographic barometer.**

barometric error (*Horol.*). The error in the time of swing of a pendulum due to change of air pressure. The error is very small, but is avoided in precision clocks by causing the pendulum to swing in an atmosphere kept at a constant (low) pressure.

barophore'sis (*Chem.*). Diffusion of suspended particles at a speed dependent on extraneous forces.

baroque organ, bar-ok' (*Acous.*). A type of pipe organ in which low fundamentals are obtained by the subjective difference tones arising from pipes operating at the musical interval of the fifth.

baroque pearls (*Gems*). Pearls of irregular form, generally obtained from fresh-water mussels.

baroscope (*Meteor.*). An instrument giving rough indications of changes in atmospheric pressure.

barother'mograph (*Meteor.*). A self-recording instrument which automatically provides continuous records of atmospheric pressure and temperature; a meteorograph.

Barr Series (*Geol.*). The middle division of the Ordovician System of the Girvan district of Scotland. It includes shales, sandstones, conglomerates, and a notable limestone horizon.

barrage, ba-rahzh' *or* bar'ij (*Hyd. Eng.*). An artificial obstruction placed in a water-course in order to secure increased depth for irrigation, navigation, or some other purpose.

barrage balloon (*Aero.*). A small non-rigid kite balloon filled with hydrogen; used for holding up about a mile of steel wire, which acts as an obstruction to aircraft attack at low altitude.

barrage-fixe, —fēx (*Hyd. Eng.*). A permanent masonry dam.

barrage-mobile, —mō-bēl' (*Hyd. Eng.*). A dam provided with sluices controlling the flow of water.

barrel (*Elec. Comm.*). The length of pole route over which is effected a complete sequence of transposition without repetition.

barrel (*Horol.*). The cylindrical container for housing a mainspring.

See **fusee—** **going—** **pin—**

barrel arbor (*Horol.*). The arbor carrying the barrel; upon its centre portion is coiled the mainspring during winding. In a 'detachable barrel' the arbor and barrel can be withdrawn from between the plates without taking the plates apart.

barrel bolt (*Build.*). A bolt working in a barrel-like case. Also called a TOWER BOLT.

barrel cap (*Horol.*). The detachable cover of a barrel.

barrel cover (*Horol.*). The cap or cover which snaps into a grooved recess at one end of the barrel.

barrel distortion (*Light*). A type of distortion produced by a lens by which the image of a square appears with sides curved outwards, giving a sort of barrel shape. The defect arises when a stop is placed on the object side of a lens suffering from spherical aberration. See **pincushion distortion.**

barrel drain (*Build.*). A cylindrical drain.

barrel elevator (*Eng.*). This comprises parallel travelling chains with curved arms projecting. The chains pass over sprocket wheels at the top and bottom of the elevator, and lift barrels from a loading platform to a runway.

barrel hook (*Horol.*). The means by which the mainspring is attached to the barrel. The hook may be riveted or screwed into the barrel, or pressed out of the barrel itself.

barrel, lens (*Photog.*). See **lens barrel.**

barrel nipple (*Plumb., etc*). A nipple threaded at both ends and having a plain middle part.

barrel-plating (*Elec. Eng.*). A process of electroplating in which the articles to be plated are placed in a rotating container provided with suitable negative contacts.

barrel-type crankcase (*I.C. Engs.*). A petrol-engine crankcase so constructed that the crankshaft must be removed from one end; in more normal construction the crankcase is split. See **split crankcase.**

barrel vault (*Build.*). A vault of semicircular, or nearly semicircular, cross-section, and usually of length greater than the diameter. Also called WAGON VAULT, TUNNEL VAULT.

barrel winding (*Elec. Eng.*). See **drum winding.**

barren (*Bot.*). (1) Lacking pollen.—(2) Unable, for some reason, to produce seed; infertile.

barren (*Geol.*). Without fossils.

barret'ter (*Elec. Eng., Radio*). An iron wire resistance mounted in a glass bulb containing hydrogen, and having a temperature coefficient so arranged that the variation of resistance produced ensures that the current in the circuit to which it is connected remains constant over a wide range of voltage.

barrier (*Cinema.*). The thin black line which separates adjacent frames in the projection print of a film.

barrier (*Elec. Eng.*). (1) In transformers, the solid insulating material which provides the main insulation, apart from the oil.—(2) The refractory material intended to localise or direct any arc which may arise on the operation of a circuit-breaker.

barrier button (*Teleph.*). A form of transmitter capsule in which the current passes through the carbon granules perpendicularly to the applied alternating pressure.

barrier pillar (*Mining*). A pillar of solid coal left in position to protect a main road from subsidence, or as a division.

barrier reef (*Geol.*). A coral-reef developed parallel with the shore-line and enclosing a lagoon between itself and the land. It may be regarded as marking a stage intermediate between a fringing-reef and an atoll.

barring gear (*Elec. Eng.*). The arrangement for moving heavy electrical machines or transformers by man-power, using crowbars inserted in holes in wheels, thus obtaining a large mechanical advantage.

barring motor (*Elec. Eng.*). A small motor which can be temporarily connected, by a gear or clutch, to a large machine in order to turn it slowly for adjustment or inspection.

barrow pump (*Hyd.*). A combined suction and force pump mounted for ease of transport on a two-wheeled barrow; much used for agricultural purposes.

Bartholin's glands, bar'tō-lĕn (*Zool.*). In some female Mammals, glands (corresponding with Cowper's glands in the male) lying on either side of the upper end of the vagina.—BARTHOLIN'S DUCT, an excretory duct of the sublingual gland.

Bartonian Series (*Geol.*). The topmost division of the Eocene rocks in Britain; comprising in the type locality the Barton Clay, with its rich molluscan fauna, and the overlying Barton Sands. In the London Basin the whole series is sandy and poorly fossiliferous. The equivalent beds near Paris include the famous beds of gypsum.

bartrees or **warping woof** (*Textiles*). A wooden frame with pegs for supporting the warp threads, used in hand warping.

bary'ta (*Chem.*). See **barium oxide.**

baryta water (*Chem.*). A suspension of barium hydroxide in distilled water.

barytes (ba-rī'tēz) or **ba'rite** (*Min.*). *Barium sulphate* (q.v.), typically showing tabular orthorhombic crystals. It is a common veinstone in association with lead ores, and occurs also as nodules in limestone and in the Fuller's Earth beds of Surrey; also locally as a cement of sandstones. Also called HEAVY SPAR.

bary'tocal'cite (*Min.*). A double carbonate of calcium and barium, $CaCO_3 BaCO_3$, crystallising on the monoclinic system, and occurring typically in lead veins.

bas relief, bah— (*Arch.*). Sculpture or carved work in which the figures project less than their true proportions from the surface on which they are carved.

ba'sal (*Bot.*). (1) Situated at the base.—(2) Said of an ovule which springs from the base of the ovary.

basal anaesthesia (*Med.*). Anaesthesia which acts as a basis for further and deeper anaesthesia.

basal body (*Bot., Zool.*). In flagellate *Protozoa*, zoospores, or spermatozoids, a small, deeply staining granule lying at the base of the flagellum and believed to represent the centrosome. See also **blepharoplast.**

basal bone (*Zool.*). In *Gymnophiona*, a bone of the skull formed by the fusion of the exoccipitals and the pro-otics with the parasphenoid.

basal cell (*Bot.*). (1) An attaching cell.—(2) The lower cell of a crozier.—(3) A uninucleate cell which may be the oögonium in *Uredinales*.

basal corpuscle (*Bot., Zool.*). See **basal body.**

basal disc (*Zool.*). In Corals, the primary plate of the skeleton formed at the base of each coral polyp.

basal ganglia (*Zool.*). In Vertebrates, ganglia connecting the cerebrum with other nerve-centres.

basal granule (*Bot., Zool.*). See **basal body.**

basal metabolic rate (*Zool.*). The rate of oxygen consumption in a resting organ or organism.

basal placentation (*Bot.*). The condition when the placenta is at the base of the ovary.

basal planes (*Crystal.*). The name applied to the faces representing the terminating *pinacoid* (q.v.) in all the crystal systems exclusive of the cubic system. See also **pedion.**

basal plates (*Zool.*). In the developing Vertebrate skull, a plate of cartilage formed by the fusion of the parachordals: in *Crinoidea*, certain plates situated at or near the top of the stalk: in *Echinoidea*, certain plates forming part of the apical disc.

basal rim (*Zool.*). In some *Protozoa*, a row of basal granules of cilia forming an undulating membrane.

basal walls (*Bot.*). The walls which separate the hypobasal and epibasal halves of a fern embryo when this consists of eight cells.

basa'lar (*Zool.*). Said of certain small plates (sclerites) located below the articulation of the wings in some Insects.

basale, ba-sa'le (*Zool.*). In Fish, the proximal segment of a fin-ray.

bas'alt (*Geol.*). A fine-grained often porphyritic (see **porphyritic texture**), igneous rock of dark colour, composed essentially of basic plagioclase feldspar and pyroxene, with or without olivine. In the field, the term is generally applied only to lavas, but many minor intrusions of basic composition show identical characters, and therefore cannot be distinguished in the laboratory.

basalt glass (*Geol.*). See **tachylite.**

basalte (*Pot.*). Fine-grained black unglazed stoneware. Also called BLACK EGYPTIAN WARE.

bas'anite (*Geol.*). A basaltic rock containing plagioclase, augite, olivine, and a feldspathoid (nepheline, leucite, or analcite).

bascule bridge (*Civ. Eng.*). A counterpoise bridge which can be rotated in a vertical plane about axes at one or both ends. The roadway over the river rises while the counterpoise section descends into a pit. Also called BALANCE-BRIDGE.

base (*Bot.*). That end of a plant member nearest to the point of attachment to another member, usually of different kind.

base (*Build.*). The plinth and mouldings which form the slightly projecting part at the bottom of a wall or pillar.

base (*Chem.*). A substance which tends to gain a proton. A substance which dissolves in water with the formation of hydroxyl ions. A substance which reacts with an acid, without gas evolution, to form a salt.

base (*Masonry*). The lowest course of masonry in a building.

base (*Paint., etc.*). (1) A substance, generally a metallic oxide, which forms a paint when mixed with a suitable liquid.—(2) The chief ingredient of a dye. Sometimes called a PIGMENT.

base (*Photog.*). The material on which the photo-sensitive material is carried; e.g. glass, celluloid, or paper.

baseboard (*Build.*). See **skirting board.**

base bullion (*Met.*). Impure lead, produced by smelting ore in the blast furnace. Contains some silver which is recovered during the refining of the lead. Also called WORK LEAD.

base circle (*Eng.*). The circle used in setting out the profiles of gear-wheel teeth of involute form.

base-exchange (*Geol.*). A property by virtue of which certain minerals, notably the zeolites, can exchange atoms of, say, calcium for sodium, when in a suitable environment. See **Permutite.**

base frequencies (*Acous.*). See **bass frequencies.**

base line (*Surv.*). A survey line the length of which is very accurately measured by precise methods; used as a basis for subsequent triangulation.

base load (*Elec. Eng.*). That part of the total load on an electrical power system which is supplied, as far as possible, by the most efficient connected generating stations, the remaining *peak load* (q.v.) being supplied intermittently by the more expensive stations.

base metal (*Chem.*). A metal with a relatively negative electrode potential.—(*Met.*) In general metallurgy, the term is used of the metals copper, lead, zinc, and tin, as distinct from the precious metals gold and silver; they become oxidised when heated in air. In electrometallurgy, it means the metals at the end of the electrochemical series away from the *noble metals* (q.v.).

base moulding (*Build.*). Any moulding placed towards the base of a column, wall, etc.

base plate (*Eng.*). See **bed plate.**

Basedow's disease, ba′ze-dō (*Med.*). Exophthalmic goitre. A condition due to overactivity of the thyroid gland; manifested by enlargement of the thyroid gland, protrusion of the eyeballs, rapid pulse, tremors, and nervousness.

basement (*Build.*). The lower storey of a building, below or partly below ground-level.

basement membrane (*Histol.*). A thin homogeneous layer of connective tissue, intervening between an epithelium and adjacent tissues.

ba′seost (*Zool.*). In Fish, one of the distal elements of a fin-ray.

basi- (Greek and Latin *basis*, base). A prefix used in the construction of compound terms; e.g. *basicranial*, at the base of the skull.

basibran′chial (*Zool.*). In some Fish, a median ventral cartilage forming part of the branchial basket, and connecting the hypobranchials of the two sides.

basic dyes (*Chem.*). Mostly colour bases with hydrochloric acid, or double salts with zinc chloride; chiefly used for printing cotton with a tannin mordant, and in colour photography.

basic lavas (*Geol.*). The lavas poor in silica (less than 52%). The rocks are typically dark in colour and heavy, and are well represented by the familiar type basalt.

basic lead carbonate (*Chem.*). Approximate composition $2PbCO_3 \cdot Pb(OH)_2$. See **white lead.**

basic lead chromate (*Chem.*). $PbCrO_4 \cdot Pb(OH)_2$. Also known as AUSTRIAN CINNABAR and CHROME RED. Used as a pigment. Produced when lead chromate is boiled with aqueous ammonia or potassium hydroxide.

basic lead sulphate (*Chem.*). $2PbSO_4 \cdot PbO$. Obtained by roasting galena. The fine fume carried away by the gases from the roasting furnace is passed through chambers, where the basic lead sulphate settles out as a finely divided powder.

basic loading (*Elec. Eng.*). The limiting mechanical load, per unit length, on an overhead line conductor.

basic network (*Elec. Comm.*). The two-terminal network which is a first approximation, as a balancing network, to the impedance of a line over the working frequency range.

basic number (*Bot.*). The lowest haploid chromosome number in any member of a euploid series formed by the species of a genus.

basic process (*Met.*). A steel-making process, either Bessemer, open-hearth, or electric, in which the furnace is lined with a basic refractory, a slag rich in lime being formed and phosphorus removed.

basic refractory (*Met.*). A heat-resisting material rich in metallic oxides, used to line metallurgical and other furnaces; e.g. magnesite and dolomite.

basichro′matin (*Cyt.*). A form of chromatin which stains relatively deeply and contains a fairly high proportion of nucleic acid. Cf. *oxychromatin.*

basicity, bă-sis′— (*Chem.*). The number of hydrogen atoms of an acid replaceable by a metal atom.

basicon′ic (*Zool.*). (In Insects) said of certain subconical and immobile sensillae arising from the general surface of the cuticle.

basicra′nial (*Zool.*). Pertaining to, or situated at, the base of the skull.

ba′sicyte (*Zool.*). A form of ovoidal connective-tissue corpuscle, full of basiphil granules.

basid′ial (*Bot.*). Relating to a basidium.

basidial layer (*Bot.*). The hymenium in a Basidiomycete.

basid′iogenet′ic (*Bot.*). Produced upon a basidium.

Basid′iolichenes, —li-kē′nēz (*Bot.*). A small group of lichens, entirely tropical in occurrence, in which the fungus is a member of the *Basidiomycetes.*

Basidiomyce′tes (*Bot.*). A major group of fungi with about 14,000 species, world-wide in distribution. They have a septate mycelium, and in the higher forms develop complicated sporophores. The principal spores are basidiospores, produced on the outside of basidia, usually in groups of four. The *Basidiomycetes* include the *Ustilaginales*, the *Uredinales*, and many species placed in the *Autobasidiomycetes*, familiar as toadstools.

basid′iophore (*Bot.*). A fruit body bearing basidia.

basid′iospore (*Bot.*). The characteristic spore of the *Basidiomycetes*, formed on the outside of the basidium, usually in groups of four.

basid′ium (*Bot.*). (1) A row of cells, or more often a single rounded to club-shaped cell, which bears the basidiospores.—(2) A sterigma in some moulds (not a good use of the term).—*pl.* **basidia.**

ba′sidor′sal (*Zool.*). In developing vertebrae, one of a pair of small cartilages occurring laterodorsally on the notochord.

ba′sifixed (*Bot.*). Said of an anther which is attached by its base to the filament.

ba′sifu′gal (*Bot.*). Developing in order from the base upwards.

ba′sigam′ous, ba′sigam′ic (*Bot.*). Said of an embryo sac in which the synergidae and egg lie towards the base of the cavity, and not at the end nearest to the micropyle.

ba′sihy′al (*Zool.*). A broad median plate constituting the basal or median ventral portion of the hyoid arch.

basil (*Leath.*). Tanned sheepskin that has not been dyed; retanned and finished when intended for bookbinding and fancy-goods.

ba′silab′ium (*Zool.*). In Insects, a small sclerite formed by the fusion of the labiostipites.

ba′silar (*Bot., Zool.*). Situated near, pertaining to, or growing from the base.

basilar membrane (*Acous., Zool.*). In Mammals, a flat membrane forming part of the partition of the cochlea, containing the collection of auditory nerves in the inner ear which translate mechanical vibrations of differing frequencies into nerve impulses, which are passed to the brain.

basilin′gual (*Zool.*). In Amphibia and some Reptiles, a broad plate of cartilage forming the main part of the hyoid.

ba′simandib′ula (*Zool.*). In some Insects, a small sclerite at the base of the mandible.

ba′simaxil′la (*Zool.*). In some Insects, a small sclerite at the base of the maxilla.

basin (*Geol.*). A geological formation in which the strata dip towards the centre. See **syncline.**

basin (*Hyd. Eng.*). (1) Any hollow space containing water.—(2) A dock into which ships can be admitted at high tide.

ba′sinerved (*Bot.*). Having veins proceeding from the base.

basioccipital, bā-si-ok-sip′— (*Zool.*). In higher Vertebrates, a cartilage bone, occurring mid-ventrally in the occipital region of the skull.

ba′sion (*Anat.*). The mid-point of the anterior margin of the foramen magnum.

ba'siophthal'amite (*Zool.*). In *Crustacea*, the proximal joint of the eye-stalk.

basiot'ic (*Zool.*). See **mesotic.**

basip'etal (*Bot.*). With each new member of a series developing nearer to the base than the next oldest one.

basipetal sorus (*Bot.*). See **gradate sorus.**

ba'siphar'ynx (*Zool.*). In Insects, the fused epipharynx and hypopharynx.

ba'siphil (*Zool.*). Having a marked affinity for basic dyes. Also BASOPHIL(E).

basiphil cells (*Physiol.*). White blood cells, forming 0·1% of the granulocytes. The term is also applied to cells in the anterior lobe of the pituitary gland.

basiphilia (*Path.*). See **basophilia.**

basip'odite (*Zool.*). In the appendages of some *Crustacea*, the second or distal joint of the protopodite.

ba'sipo'dium (*Zool.*). The wrist or ankle.

ba'siprobos'cis (*Zool.*). In certain Insects with suctorial mouth-parts, that portion of the proboscis consisting of the mentum, submentum, cardines, and stipites.

ba'sipterygium, —ter-ij'i-um (*Zool.*). In Fish, a bone or cartilage in the pelvic fin, representing the fused basalia.

ba'sipter'ygoid (*Zool.*). In some Reptiles and Birds, a process of the basisphenoid.

basiscop'ic (*Bot.*). On the side towards the base.

ba'sisphenoid, —sfē'noid (*Zool.*). A cranial bone of some Vertebrates, extending forward from the base of the basioccipital to the presphenoid.

basitem'poral (*Zool.*). A cranial bone of Birds, formed by the fusion of the otic capsules and the basal plate.

basiton'ic (*Bot.*). Having the base of the anther against the rostellum.

basiven'tral (*Zool.*). In developing vertebrae, one of a pair of small cartilages occurring lateroventrally on the notochord.

basiver'tebral (*Zool.*). Situated on, pertaining to, or emerging from the posterior surface of a vertebra.

basket cells (*Zool.*). Nerve-cells showing extensive arborisation of their axis-cylinder processes.

basket coil (*Radio*). A self-supporting inductance coil, wound in the form of a spiral with the adjacent turns in criss-cross formation, to reduce self-capacity to a minimum.

basket-handled arch (*Build.*). A three-centred, low-crowned arch.

basket ware (*Pot.*). Articles formed of plaited or woven strips of clay, to represent straw or osiers.

basket weave (*Textiles*). Woollen fabrics of hopsack or mat-weave, with a basket effect.

basket winding (*Elec. Eng.*). See **chain winding.**

Baskett's reducer (*Photog.*). An abrasive reducer for local negative reduction, based on terebene.

ba'sophil(e). See **basiphil.**

basophil cells. See **basiphil cells.**

basophil'ia (*Med.*). An increase of basophil cells in the blood.—PUNCTATE BASOPHILIA, a degeneration of red blood cells found, for example, in lead-poisoning.

bass (or **base**) **frequencies** (*Acous.*). Those frequencies towards the lower end of the audible scale.

Bassan'i process (*Photog.*). A colour cinematographic system in which the gate of the camera moves as a whole, with the film in it, to take the three negatives corresponding to the three colours.

basswood (*Timber*). Timber from the American linden, much used for cheap furniture; easy to work.

bast (*Bot.*). (1) Flexible fibrous material obtained from the rind of some trees, and used as binding material; often known as RAFFIA.—(2) See **phloem.**

bast cylinder (*Bot.*). See **stereome cylinder.**

bast fibre (*Bot.*). An elongated, slender, thick-walled cell in the phloem; a strand of such fibres.

bast island (*Bot.*). See **phloem island.**

bastard ashlar (*Masonry*). (1) Stones, intended for ashlar work, which are merely rough-scabbled to the required size at the quarry.—(2) The face-stones of a rubble wall which are selected, squared, and dressed to resemble ashlar.

bastard cop (*Textiles*). A package of cotton yarn of intermediate size, larger than a pin cop and smaller than a twist cop.

bastard-cut (*Tools*). A term descriptive of file teeth of a medium degree of coarseness.

bastard flatting (*Dec.*). See **eggshell gloss.**

bastard fount (*Typog.*). Type with a larger body than is necessary for its face. It obviates the use of leads.

bastard freestone (*Build.*). A local name for a building-stone quarried from the Inferior Oölite of the Bath district; inferior in quality to the overlying Bath Oölite.

bastard size (*Paper*). Paper or board not of a standard size. Bastard sizes are listed and sold by inch measurement and not by standard names.

bastard stucco (*Build.*). The finishing coat of plaster when prepared for paint.

bastard thread (*Eng.*). A screw-thread which does not conform to any recognised standard dimensions.

bastard title (*Typog.*). The abbreviated title, or half-title, of a book, usually printed on the fly-leaf preceding the title page.

bastard tuck pointing (*Build.*). Pointing in which a slight projection is given to the stopping on each joint.

bastard wing (*Zool.*). In Birds, quill feathers, usually three in number, borne on the thumb or first digit of the wing.

Bastian lamp (*Illum.*). An old form of mercury-vapour lamp in which an electromagnetic tilting device is used to start the discharge.

Bastian meter (*Elec. Eng.*). An electrolytic supply meter, in which the ampere-hours which have passed through the circuit to which it is connected are measured by the amount of liquid that has been electrolysed. Now almost obsolete.

bastite (*Min.*). A variety of serpentine, essentially hydrated silicate of magnesium, resulting from the alteration of orthorhombic pyroxenes. It occurs in the serpentine of Baste in the Hartz mountains, also in the Cornish and other serpentines. Also known as SCHILLERSPAR.

bat (*Build.*). A half or other portion of a brick, large enough to be used in constructing a wall.

bat (*Pot.*). The slab—circular, oval, or rectangular, and of uniform thickness—of unfired clay, of fired refractory material, or of plaster, when used in firing.

batch (*Glass*). The mixture of raw materials from which glass is produced in the furnace. A proportion of cullet is either added to the mixture, or placed in the furnace previous to the charge.

batch distillation (*Chem.*). See under **continuous distillation.**

batch furnace (*Met.*). A furnace in which the charge is placed and heated to the requisite temperature, subsequently being withdrawn. The furnace may be maintained at the operating temperature, or heated and cooled with the charge. Distinguished from *continuous furnace.*

batching (*Textiles*). The addition of oil to textiles, to facilitate spinning.

bate (*Tanning*). A fermenting solution containing enzymes derived from the pancreas, or from synthetically prepared ferments; used for steeping light skins.

batea, ba-tē'a (*Mining*). A flat cone-shaped pan of wood or sheet iron, used mostly in South America for the examination and hand concentration of gold ores. See **pan.**

batement light (*Build.*). A window, or one division of a window, having vertical sides, but with the sill not horizontal, as where it follows the rake of a staircase.

Batesian mimicry, băt'si-an (*Zool.*). Convergent resemblance between two animals, advantageous in some way to one of them.

bath (*Photog.*). Any specified solution of a chemical in bulk which is not renewed for every photographic process for which it is used. See also **clearing bath.**

bath-brick. A brick made from river silt; used for scouring and, finely ground, for making liquid polishes.

bath lubrication (*Eng.*). A method of lubrication in which the part to be lubricated, such as a chain or gear-wheel, dips into an oil-bath.

Bath stone (*Build.*). A building-stone quarried from the Great Oölite near Bath. Also called BATH OÖLITE.

batho-, bathy- (Greek *bathys*, deep). Prefixes used in the construction of compound terms, esp. with relation to sea-depths; e.g. *bathophilous* (q.v.), *bathybic* (q.v.).

bath'ochrome (*Chem.*). A radical which shifts the absorption spectrum of a compound toward the red end of the spectrum.

batholith (*Geol.*). See **bathylith.**

bathom'eter or **bathym'eter** (*Ocean.*). An instrument used for deep-sea soundings; e.g. the *echo sounder* (q.v.).

Bathonian (*Geol.*). See **Bradfordian.**

bathoph'ilous (*Zool.*). Adapted to an aquatic life at great depths.

bathoton'ic (*Chem.*). Tending to diminish surface tension.

bath'yal zone (*Geol.*). The sea-floor between 600 and 3000 ft. below sea-level; characterised by muddy deposits and occasionally by organic oozes.

bath'ybic (*Biol.*). Relating to, or existing in, the deep sea; e.g. plankton floating well below the surface.

bath'ylimnet'ic (*Zool.*). Living in the depths of lakes and marshes.

bath'ylith or **bath'olith** (*Geol.*). A large body of intrusive igneous rock, frequently granite, with steeply plunging sides and no visible floor.

bathym'eter (*Ocean.*). See **bathometer.**

bathymet'ric (*Zool.*). Pertaining to the vertical distribution of animals in space.

bath'ypela'gic (*Zool.*). See **abyssopelagic.**

bathys'mal (*Zool.*). See **abyssal.**

bath'ysphere (*Ocean.*). A spherical diving-apparatus, made large enough to contain two men and instruments; capable of resisting tremendous pressure, and therefore of descending to great depths; it is used in oceanography for the investigation of deep-water faunas.

bating (*Leather*). The steeping of light skins in a fermenting solution, prior to tanning, to render them smooth and flexible.

batra'chian (*Zool.*). Relating to the *Salientia* (i.e. Frogs and Toads).

batten (*Carp.*). (1) A piece of square-sawn converted timber, between 2 and 4 inches in thickness and from 5 to 8 inches in width, used for flooring or as a support for laths. See also **slating and tiling battens.**—(2) A bar fastened across a door, or anything composed of parallel boards, to secure them and to add strength and/or reduce warping.

batten (*Illum.*). A fixed or hanging row of lamps used in stage lighting.

batten (*Textiles*). The swinging frame of a loom. It controls the reed, carries the shuttle race, and beats up each pick of weft to the fabric already formed.

batten door (*Carp.*). A door formed of battens placed side by side and secured by others fastened across them.

batten-lampholder (*Elec. Eng.*). See **back-plate lampholder.**

battened wall (*Build.*). See **strapped wall.**

batter (*Build., etc.*). Slope (e.g. of the face of a structure) from the vertical; cf. *rake.*

batter (*Typog.*). Broken or damaged type.

batter level (*Surv.*). A form of clinometer for finding the slope of cuttings and embankments.

batter pile (*Civ. Eng.*). A pile which is driven in at an angle to the vertical.

batter post (*Carp.*). One of the inclined side-timbers supporting the roof of a tunnel.

battery. A number of similar pieces of equipment grouped together; e.g. a *battery* of boilers.

battery (*Elec.*). A group of two or more primary cells or accumulators, electrically connected in series or in parallel; a single cell is not a battery.

See **A—**
anode—

grid-bias—
portable—
stationary—
storage—

battery (*Met.*). See **stamp battery.**

battery booster (*Elec. Eng.*). A motor-generator set used for giving an extra voltage, to enable a battery to be charged from a circuit of a voltage equal to the normal voltage of the battery.

battery-coil ignition (*Elec. Eng., etc.*). High-tension supply for sparking-plugs in automobiles, in which the interruption of a primary current from a battery induces a high secondary e.m.f. in another winding on the same magnetic circuit, the high potential being distributed in synchronism with the contact-breaker in the primary circuit and the engine.

battery coupling (*Radio*). An inter-stage coupling in amplifiers, which is required to transmit very low frequencies or direct currents; the grid of one stage is connected to the anode of the preceding stage by a battery of the requisite voltage, to maintain the grid at its correct operating potential.

battery cut-out (*Elec. Eng.*). An automatic switch for disconnecting a battery during its charge, if the voltage of the charging circuit falls below that of the battery.

battery dialling (*Auto. Teleph.*). Dialling with a battery at the dial end of a line, the interruptions of the current being formed over an earth-return circuit, with the two legs of the line in parallel.

battery, dry (*Elec. Eng.*). See **dry cell.**

battery eliminator (*Radio*). An arrangement for supplying electrical power from supply-mains to a radio receiver which has been designed to operate with batteries.

battery-lamp (*Illum.*). An electric filament-lamp, usually of 16 volts or under, for use in conjunction with a battery.

battery regulating switch (*Elec. Eng.*). A switch for regulating the number of cells connected in series in a battery.

battery room (*Teleph.*). In a telephone exchange or repeater station, the room for housing the accumulator batteries. It must be properly ventilated and kept apart from other apparatus, because of the emitted fumes.

battery spear (*Elec. Eng.*). A special form of spike used to connect a voltmeter for battery-testing to the plates of the accumulator cells.

battery traction (*Elec. Eng.*). An electric-traction system in which the current is obtained from batteries on the vehicles (*battery vehicles*).

battlement (*Build.*). An indented parapet at the top of a wall.

baud (*Teleg.*). The unit of speed of telegraphic code transmission; equal to twice the number of dots continuously sent per second.

Baudot code, bō-dō′ (*Teleg.*). The code consisting of impulses in the time-frame of five units, devised by J. M. Baudot for mechanical transmission of signals.

Baudot system (*Teleg*). A system of telegraphy in which the transmission line is allocated, by rotating switch-arms, to a number of channels in rapid succession, thereby loading up the lines.

Baudouin reaction, bō-dwin^{g}′ (*Chem.*). A test for certain vegetable oils which give with alcoholic furfural and concentrated HCl, or with $SnCl_2$ and HCl, a characteristic red colour.

baulk (*Civ. Eng.*). See **balk.**

baulk (*Timber*). A piece of timber square-sawn from the log to a size greater than 6 in. by 6 in.

Baumé hydrometer scale, bō-mā (*Chem., Phys., etc.*). The continental Baumé hydrometer has the rational scale proposed by Lunge, in which 0° is the point to which it sinks in water and 10° the point to which it sinks in a 10% solution of sodium chloride, both liquids being at 12·5° C.

bauxite, beauxite, bawk′zīt, bōk′— (*Min.*). A residual clay, consisting essentially of aluminium hydroxides, formed in tropical regions by the chemical weathering of basic igneous rocks. It is the most important ore of aluminium, represented in Britain by the Tertiary Interbasaltic Zone in Co. Antrim and the Millstone Grit Bauxite horizon in the western parts of the Midland Valley of Scotland. In U.S.A. bauxite of commercial value is restricted to Arkansas and the southern Appalachian states, e g., at Rock Run, Alabama. Extensive deposits occur in British and Dutch Guiana, northern France, and in many other localities. See also **Alundum** and **laterite.**

bay (*Build., etc.*). Any division or compartment of an arcade, roof, building, etc. Each space from column to column in a building is called a *bay*.

bay (*Elec. Comm.*). A row of racks on which is mounted a multiplicity of apparatus.

bay-stall (*Build.*). See **carol.**

bay window (*Build*). An internal recess formed when a wall projects outside the general wall-line, for the accommodation of a window.

Bay′er process (*Met*). A process for the purification of bauxite, as the first stage in the production of aluminium. Bauxite is digested with a caustic soda solution which dissolves the alumina and precipitates oxides of iron, silicon, titanium, etc. The solution is filtered and the aluminium precipitated as the hydroxide.

bayonet cap (*Illum.*). Commonly abbreviated to **B.C.** A type of cap fitted to an electric lamp, consisting of a cylindrical outer wall fitted with two pins for engaging in slots in a lampholder. Within the wall are two contacts connected to the filament, which make contact with two pins in the lampholder. The standard size of cap has a diameter of $\frac{7}{8}$ in. See **small bayonet cap, centre-contact cap.**

bayonet holder (*Illum.*). The form of lampholder used in Great Britain; designed for receiving lamps having bayonet caps; no live parts are exposed.

Bayston Group (*Geol.*). A group of red and grey grits, with conglomerates, forming part of the Wentnor or Western Longmyndian Series of the Pre-Cambrian rocks of Shropshire.

Bazin's disease (*Med.*). A condition in which ulcers, thought to be tuberculous, appear on the skin of the calves.

B.B. (*Met.*). See **B.**

B.C. (*Illum.*). See **bayonet cap.**

BC digit selector (*Auto. Teleg.*). The selector in the director which accepts the second and third trains of impulses forming the exchange coding.

Bdelloida, del′-ō-id-a (*Zool.*). An order of *Rotifera*, in which the adults swim freely and possess a telescopic forked tail; they can also move by creeping like a leech, the dorsal proboscis being used as a sucker.

BDV (*Cables*). The abbrev. for *breakdown voltage.*

Be (*Chem.*). The symbol for *beryllium.*

Beach's developer (*Photog.*). A photographic developer based on pyrogallol.

beacon (*Hyd. Eng.*). A small tower, generally built on a submerged reef, to warn shipping of minor shoals.

beacon (*Illum.*). A light visible at a considerable distance, serving as a guide to travellers or as a warning signal. See **airway beacon.**

beacon (*Radio*). A radio transmitter in which the radiation is concentrated in one or more narrow beams, so as to act as either a guide or marker to aircraft or shipping

bead (*Join.*). A small convex moulding formed on wood or other material.

bead (*Textiles*). A yarn with a bead fastened to it at intervals.

bead-and-batten work (*Carp.*). A rough style of work used for partitions, formed of battens with a bead along one of the longitudinal edges.

bead-and-quirk (*Join.*). A bead formed with a narrow groove separating it from the surface which it is decorating. Also called a QUIRK-BEAD.

bead-butt (*Join.*). Work framed in panels flush with the framing of a door, a bead being used on two sides only of the panel, and being carried up to or butted against the rails.

bead-butt and square-work (*Join.*). Door framing formed with bead-and-butt on one side and square on the other.

bead-flush (*Join.*). Work differing from bead-butt work in that a bead is formed on the framing itself instead of on the panel, and is carried around all the sides.

bead-jointed (*Join.*). Said of that form of jointing in which one of the butting edges has a bead along it.

bead-plane (*Carp.*). A special plane for cutting beads out of the solid, or for cutting grooves into which separate beading is to be fitted.

bead router (*Carp.*). A stock or body through which passes a beading gouge, used for cutting beads.

bead-sleeker (*Build.*). A special tool used to smooth the bead-shaped portion of a moulding.

bead-tool (*Wood-turning*). A specially shaped cutting-tool used in wood-turning for forming convex mouldings.

beak (*Carp.*). The crooked end of a bench holdfast.

beak (*Zool.*). See **rostrum.**

beak iron, beck iron, bick iron, bickern (*Eng.*). (1) The pointed, or horn-shaped, end of a blacksmith's anvil; used in forging rings, bends, etc.—(2) A T-shaped stake, similarly shaped, fitting in the hardy-hole of the anvil.

beaked (*Bot.*). Bearing a beak, i.e. a long, pointed prolongation.

beaking joint (*Carp.*). The joint formed when a number of adjacent heading joints occur in the same straight line.

beam (*Cotton, etc.*). (1) A flanged wooden roller or steel tube which carries the warp threads in the loom when they are in position.—(2) The beam on which the sheet of threads is wound in beam-warping.—(3) One of the hollow metal cylinders carrying the warp threads in lace manufacture.

beam (*Eng.*). A bar which is supported at its ends and loaded transversely.

beam (*Struct.*). A structural member, usually horizontal, which is subject to flexure, combined sometimes with tension or compression.

beam antenna (*Radio*). An antenna with very marked directional properties. Also called BEAM AERIAL.

beam array (*Radio*). A beam antenna composed of a number of spaced radiators, as distinct from one dependent upon reflectors for its directional properties.

beam compasses (*Instruments*). An instrument for describing large arcs. It consists of a beam of wood or metal carrying two beam heads, adjustable for position along the beam, and serving as the marking points of the compasses. Also called TRAMMELS.

beam current (*Cathode Ray Tubes*). That portion of the gun current (see **cathode ray tube**) which passes through the aperture in the anode and impinges on the fluorescent screen.

beam effect (*Acous.*). The differential focusing of high-frequency sound radiation from an open diaphragm (such as that in a loudspeaker), on account of the dimensions of the diaphragm being comparable with or greater than the wave-length of the sound produced.

beam-engine (*Eng.*). A form of construction used in early steam-engines, now obsolete. The inverted steam-cylinder acted at one end of a pivoted beam, the flywheel or pump-cylinder being connected to the other.

beam-filling (*Build.*). Brick, masonry, or concrete work used to fill in the spaces between the ends of beams or joists carried upon a wall.

beam-forming electrode (*Thermionics*). An electrode to which a potential is applied to concentrate the electron stream into one or more beams. Used in beam and cathode ray tubes.

beam grillage (*Struct.*). A *grillage foundation* (q.v.).

beam pentode (*Thermionics*). A four-electrode screened-grid valve in which the electrodes are arranged so as to cause a concentration of space-charge near the anode; it has characteristics similar to those of a pentode. Also called a SPACE-CHARGE PENTODE.

beam relay (*Elec. Eng.*). An electromagnetic relay in which the contacts are mounted on a balanced beam, with energising coils acting on each end and tending to tilt it one way or the other.

beam-splitter or **beam-splitting camera** (*Photog.*). A camera for colour photography, in which the beam of light from the object is separated into three components by means of a complicated prism. The components are allowed to fall on three separate negative films, each one of which registers one of the three primary colours, a suitable photographic filter being placed over each.

beam suppression (*Television*). The application of a large negative potential to the control electrode of a cathode-ray tube, so as to suppress the beam, during the 'flyback' period between successive scanning lines.

beam system (*Radio*). A point-to-point radio system in which highly directive transmitting and receiving antennae are used.

beam trap (*Thermionics*). A bucket-formed electrode mounted in a cathode ray tube, to catch the electron beam when it is not required to excite fluorescence on the screen.

beam tube (*Thermionics*). A thermionic vacuum tube in which the electrodes are arranged to concentrate the electrons emitted from the cathode into one or more narrow beams, so as to obtain desirable characteristics.

beam-warping (*Cotton*). The operation of winding threads, withdrawn from bobbins, side by side in sheet form on to a warper's or back beam.

beaming (*Cotton Weaving*). The winding of yarn on to a beam in the form of a sheet of threads. The term is sometimes used for *beam-warping*.

beaming (*Silk*). The preparation of the warp threads for weaving by spreading them, in the desired order for entering, over the cane or warp roller. Also called TURNING-ON.

bear (*Furs*). The dressed skin of various kinds of bear; e.g. the brown bear (*Ursus arctos*), black bear (*U. torquatus*), polar or white bear (*U. maritimus*); the hair is long and shaggy.

beard (*Acous.*). A short wooden rod placed across the aperture where an organ pipe is actuated by the blast of air. It modifies the timbre of the sound emitted by the pipe and permits a higher wind-pressure to be used (with consequent increase in sound output), without exciting the octave of the pipe as its fundamental pitch.

beard (*Carp.*). The sharp arris of a square-edged timber.

beard (*Typog.*). The space between the foot of a letter and the bottom edge of the type-body.

Beard protective system (*Elec. Eng.*). A form of balanced protective system in which the current entering the winding of an alternator is balanced against that leaving it by passing the conductor at the two ends round the core of a single-current transformer, in opposite directions, so that there is normally no flux in the transformer core.

Beard-Hunter protective system (*Elec. Eng.*). See **compensated pilot-wire protective system.**

bearded (*Bot.*). Having an awn; bearing long hairs like a beard.

bearded needle (*Hosiery*). See **spring needle.**

bearer (*Carp.*). Any member used in a construction to support a weight above it.

bearer cable (*Elec. Eng.*). See **messenger wire.**

bearing (*Build.*). The part of a beam or girder which actually rests on the supports.

bearing (*Radio*). The angle of direction, in degrees from true north, of an arriving radio-wave as determined by a direction-finding system. Said to be a *first-class*, *second-class*, or *third-class bearing*, according to the estimated accuracy, within ±2, 5, or 10 degrees respectively.

bearing (*Surv.*). The horizontal angle between any survey line and a given reference direction.

See **grid—** **true—**
magnetic— **whole-circle—**
reduced—

bearings (*Eng.*). Supports provided to hold a revolving shaft in its correct position.

bearing bar (*Build.*). A wrought-iron bar laid on a brick course, in place of a wooden wall-plate, to provide bearing for floor joists.

bearing distance (*Build.*). The unsupported length of a beam between its bearings.

bearing metals (*Eng.*). Metals (alloys) used for that part of a bearing which is in contact with the journal; e.g. bronze or whitemetal, used on account of their low coefficient of friction when used with a steel shaft.

bearing pile (*Civ. Eng.*). A column which is sunk into the ground to support a vertical load by transmitting it to a firm foundation lower down, or by consolidating the soil so that its bearing power is increased.

bearing surface (*Eng.*). That portion of a bearing in direct contact with the journal; the surface of the journal. See **brasses.**

bearing-up stops (*Mining*). Keps or catches used to support a cage at the end of a hoist during loading or unloading.

bearing wall (*Civ. Eng.*). The supporting or abutment wall of a bridge or arch.

beat (*Horol.*). The blow given by a tooth of the escape wheel as it strikes the pallets. An escapement is said to be *in beat* when this blow is uniform on both pallets.

beats (*Acous.*). The subjective difference tone when two sound-waves of nearly equal frequencies are simultaneously applied to one ear. It appears as a regular increase and decrease of the combined intensity.

beat frequency (*Radio*). Generally, the difference frequency produced by the intermodulation of two frequencies. Specifically, the supersonic frequency employed in a superheterodyne receiver.

beat pins (*Horol.*). The pins projecting from the ends of the gravity arms of the gravity escapement. These pins, one on either side of the pendulum rod, give impulse to the pendulum and enable the pendulum to raise the gravity arms for unlocking.

beat reception (*Radio*). Another name for *heterodyne reception.*

beat screws (*Horol.*). Screws which provide for the adjustment of the relative position of the crutch and pendulum, so that the escapement may be brought 'in beat.'

beater (*Cotton Spinning*). A revolving shaft fitted with blades which break up and loosen matted lumps of cotton in the processes of opening and scutching.

beater or **beater roll** (*Paper*). A trough containing a cylinder fitted with knives which work in conjunction with similar knives in the trough; used to reduce the pulp to the required consistency.

beating (*Woollen*). A supply of threads, conveniently placed on a loom, from which threads broken during weaving may be replaced.

beating engine (*Paper*). See **hollander.**

beating oscillator (*Radio*). In a heterodyne or supersonic heterodyne receiver, the oscillator which supplies the local signal, against which the incoming signal is heterodyned. Also called LOCAL OSCILLATOR.

beating-up (*Textiles*). In weaving, movement of the reed by which each thread of weft placed in the shed is pushed against the edge of the woven fabric.

Beatrice twill (*Textiles*). A twill cotton cloth, usually made with twist way weft; used for linings.

Beaufort notation (*Meteor.*). A code of letters used for indicating the state of the weather; for example, *b* indicates *blue sky, o* stands for *overcast, r* for *rain.*

Beaufort scale (*Meteor.*). A numerical scale of wind velocity ranging from 0, for a calm, to 12, for a hurricane. If V is the velocity in miles per hour, and B is the Beaufort number, then $V = 1{\cdot}87\sqrt{B^3}$.

beaumontage, bō-mon-tajh (*Build., Eng., etc.*). A mixture used as a stopping for holes or other defects in woodwork or metal work.

beauxite (*Min.*). See **bauxite.**

beaver (*Furs*). The dressed skin of the beaver, a rodent of aquatic habits, of which there are two well-known species, the European (*Castor fiber*) and American (*C. canadensis*); the fur is chestnut in colour, with lighter underfur.

beaver board (*Build.*). A building-board made of wood-fibre material.

beaver cloth (*Textiles*). A heavy-weight woollen fabric with a pile or dress-face finish; used for overcoatings.

beaver finish (*Textiles*). The mode of finish used on woollen fabrics to produce a dress-face surface.

beaverteen (*Textiles*). A heavy cotton fabric with a weft face; it has a coarse weft and is used chiefly for trouserings.

bec carcel, bek kar-sel′ (*Illum.*). A French standard of light intensity, consisting of an Argand colza lamp giving a light equal to 9·6 international candles.

beche, besh (*Civ. Eng.*). A tool used in the process of well-boring when a rod has broken in the bore, the tool being used to grab it and remove it.

beck. See **back.**

beck iron (*Eng.*). See **beak iron.**

Beck arc-lamp (*Illum.*). A special form of high-intensity arc-lamp, in which means are adopted for enabling particularly high-current densities to be used.

beckite (*Min.*). See **beekite.**

Beckmann apparatus (*Heat*). Apparatus originally designed by Beckmann to be used for measuring the freezing and boiling points of solutions.

Beckmann molecular transformation (*Chem.*). The transformation and rearrangement of ketoxime molecules into acid amides or anilides under the influence of certain reagents, such as acetyl chloride, hydrochloric, or sulphuric acid dissolved in glacial acetic acid, benzenesulphonic chloride, etc. An important reaction for determining the configuration of stereo-isomeric ketoximes.

Beckmann thermometer (*Heat*). A special form of mercury thermometer possessing, on account of its large bulb, great sensitivity but a small range. It is used to measure small changes of temperature with great precision. It contains a mercury reservoir by means of which mercury may be added to or removed from the indicating thread in order that the thermometer may be used at different temperatures.

Beckwith Series (*Geol.*). A thick series of red beds, partly of Upper Jurassic and partly of Lower Cretaceous (Comanchean) age, which lies above the Twin Creek beds of marine origin in Wyoming.

Becquerel cell, bek′er-el (*Photo-electronics*). A *photo-chemical cell* (q.v.).

Becquerel effect (*Photo-electronics*). The flow of current between two similar metallic electrodes immersed in an electrolyte which is produced when one of the electrodes is illuminated.

Becquerel rays (*Phys.*). A term once used to include the three types of rays emitted by radioactive substances. See **alpha rays, beta rays, gamma rays.**

bed (*Build., Masonry*). The upper or the lower surface of a building-stone or ashlar when it is built into a wall: the horizontal surface upon which a course of bricks is laid in mortar.

bed (*Geol.*). A term commonly used for *stratum.*

bed (*Typog.*). The heavy steel table of a machine or press on which the forme of type is placed for printing.

bed dowel (*Masonry*). A dowel placed in the centre of a stone bed.

bed joints (*Build.*). The horizontal joints in brickwork or masonry: the radiating joints of an arch.

bed-moulding (*Build.*). Any moulding used to fill up the bare space beneath a projecting cornice.

bed plate (*Eng.*). A cast-iron or fabricated steel base, to which the frame of an engine or other machine is attached.

bedding (*Cables*). A soft layer of jute, impregnated with bitumen, which prevents the steel-wire armouring from biting into the lead sheath of a cable.

bedding (*Geol.*). A term commonly used for *stratification*.—*adj*. **bedded,** stratified.

bedding course (*Civ. Eng.*). See **cushion course.**

bedding fault (*Acous.*). A fault in pressing a disc record; caused by material (stock) being forced under the stamper, with consequent irregular pressings.

bedding-in (*Eng.*). The process of accurately fitting a bearing to its shaft by scraping the former until contact occurs uniformly over the surface.

bedding-in (*Foundry*). The preparation of the lower half of a mould in the floor-sand of the foundry instead of in a box.

bedding-stone (*Build.*). The perfectly flat marble slab used by the bricklayer to test the face of a rubbed brick for flatness.

Bedford cord (*Textiles*). A cotton fabric with ribs or cords running lengthwise in the piece; lighter weights used for summer dresses, shirts, etc.; heavier weaves for riding-breeches.

Bedford limestone (*Build.*). A well-known American building-stone, of the finest quality; named from its shipping point, Bedford (Indiana).

beech (*Timber*). A very hard, yellowish-white wood, with a close and compact grain which makes it especially suitable for wood-turning. It is also used for the wooden parts of many tools.

beekite (*Min.*). A chemically precipitated form of silica, a chalcedonic chert, commonly occurring as an incrustation showing concentric markings on pebbles, notably of limestone, in the breccio-conglomerates of E. Devonshire. Also called BECKITE.

Beekmantown Limestone (*Geol.*). A magnesian limestone, some 1800 ft. in thickness and characterised by curved nautiloid cephalopods, occurring in the Canadian Series of N. America; of Arenig age; equivalent to part of the Durness Limestone of the N.W. Highlands of Scotland. See also **Deepkill Shales.**

beer (*Brew.*). An alcoholic beverage made by the fermentation of a cereal extract, flavoured with a suitable bitter substance. The materials used are water, malt, hops, sugar, and yeast, with certain accessories, such as finings. The percentage of alcohol present in beers ranges from 1½-8½ gms. per c.c. See **ale, porter, stout, malt, hops, yeast, finings, wort.**

beer stone (*Build.*). A non-oölitic limestone resembling a hard chalk; used for interior work.

beer (*Textiles*). A unit used for warp threads. In *linen manufacture* the unit is 40 threads. In *cotton weaving* the number varies, but it is usually a group of 20 dents. In *worsted manufacture* the term indicates a group of 40 threads, or a group of 20 dents, each dent carrying two threads. Cf. *porter*.

Beer's law (*Chem.*). The intensity of a ray of light is inversely proportional to the thickness of the absorbing medium through which it has passed.

beeswax (*Chem.*). A white or yellowish plastic substance, m.p. 63°-65° C. It consists chiefly of the myricyl ester of palmitic acid $C_{15}H_{31}\cdot COOC_{30}H_{61}$, free cerotic acid $C_{25}H_{51}COOH$, and other homologues.—(*Build., etc.*) Beeswax, dissolved in turpentine, is applied to wood surfaces, in order to produce a polish on them.

beetle (*Textiles*). A machine consisting of a row of wooden hammers which fall on a roll of cloth as it revolves. The operation closes the fabric and imparts a soft glossy finish.

beetle (*Tools*). A heavy mallet, or wooden hammer, used for driving wedges, consolidating earth, etc. Also called a MALL or MAUL.

beetle-head (*Civ. Eng.*). See **monkey.**

Beetle (*Plastics*). A proprietary thermosetting plastic of the urea-formaldehyde type; tensile strength 8000-10,000 lb. per sq. in.; important dielectric qualities.

beetle (*Zool.*). A member of the insectan order *Coleoptera*.

beetle-stones (*Min.*). Coprolitic nodules akin to septaria which, when broken open, give a fancied resemblance to a fossil beetle.

be'ga (*Elec. Eng.*). A prefix used to denote 10^9 times; e.g. a *begohm* is 10^9 ohms.

beha'viourism (*Psychol.*). A school of thought, founded by J. B. Watson, which bases its doctrine solely on objective observation and experiment, denying the validity of all subjective phenomena, such as sensation, emotion, mind, consciousness, will, imagery, etc.

Beilby layer (*Chem.*). A microcrystalline or amorphous layer formed on the surface of metals by polishing.

bel (*Elec. Comm.*). A unit ten times the size of the more frequently used *decibel* (q.v.).

bel'emnite (*Geol.*). An extinct Cephalopod, similar to an Octopus in appearance. The portion commonly found as a fossil, for example in the Lias, is the 'guard,' which has the shape and often the size of a rifle bullet.

Belemnite Marls (*Geol.*). Calcareous clays characterised by the occurrence of plentiful belemnites, occurring in the English Chalk. See **Plenus Marls.**

bel'emnoid (*Zool.*). Dart-shaped.

Belfast truss (*Carp.*). A timber bowstring truss having a double bow rafter and a double tie connected by a lattice of cross-members, with a bituminous felt or corrugated iron roof-covering.

belfry (*Build.*). A tower, either detached or forming part of a building, containing suspended bells.

Belgian block pavement (*Civ. Eng.*). A *block pavement* (q.v.) formed of stones about 3 × 6 × 10 in.

Belgian truss (*Eng.*). See **French truss.**

Belitzski's reducer (*Photog.*). A simple reducer of contrast, based on ferric oxalate.

bell. A sound-emitting metal device, operated by striking. The emitted sound is characterised by overtones which vary slightly during the decay of the sound and are not exact multiples of the lowest or hum tone.

See **alarm— night—**
electric— trembler—
magneto—

bell (*Met.*). See **cone.**

bell (*Plumb.*). See **socket.**

bell, air (*Photog.*). See **air bells.**

bell-and-spigot joint (*Civ. Eng.*). The American equivalent for *spigot-and-socket joint* (q.v.).

bell centre punch (*Eng.*). A centre punch whose point is automatically located centrally on the end of circular work by a sliding hollow bell-shaped guide.

bell chuck (*Eng.*). See **cup chuck.**

bell-crank lever (*Eng.*). A lever consisting of two arms, generally at right-angles, with a common fulcrum at their junction.

bell gable (*Build.*). A gable built above the roof in a church having no belfry, and pierced to accommodate a bell.

bell metal (*Met.*). High tin bronze, containing up to 30% tin and some zinc and lead. Used in casting bells.

bell-metal ore (*Min.*). See **stannite.**

bell-push (*Elec. Eng.*). A switch, in the form of a push-button, for operating an electric bell.

bell transformer (*Elec. Eng.*). A small transformer used for obtaining, from the public power-mains, low-voltage ringing current for house trembler-bells.

Bell receiver (*Teleph.*). The normal telephone receiver, invented by Alexander Graham Bell. Its action depends on the varying pull on a magnetic diaphragm when currents are passed through windings on the pole-tips of a permanent magnet.

Bell's law (*Zool.*). Motor nerve-fibres are without sensory function, while sensory nerve-fibres are equally unable to cause action in any peripheral part.

Bell's palsy (*Med.*). Paralysis of the muscles of the face, due to an affection of the peripheral part of the seventh cranial nerve.

belladonna (*Chem.*). See **atropine.**

Bellini's ducts, bel-ē'ni (*Zool.*). In the Vertebrate kidney, ducts formed by the union of the primary collecting tubules and opening into the base of the ureter at the pelvis of the kidney.

Bellini-To'si antenna (*Radio*). A directional antenna comprising two crossed loops. The direction of maximum reception is controlled by a goniometer, which varies the relative couplings of the receiver to the two loops.

bellows (*Photog.*). The flexible connexion between parts of a camera, necessarily light-tight, to permit delicate adjustments, usually of focusing. *

belly (*Leather*). The underside of a tanned skin or hide; used for shoe-linings, straps, purses, etc.

belly (*Typog.*). That side of a type-letter which bears the nick; placed uppermost in the setting-stick by the compositor.

belt (*Eng.*). An endless strip of leather or rubber-impregnated fabric, used to transmit rotary motion from one shaft to another by running over pulleys having flat or grooved rims.

belt or **belt course** (*Masonry*). A projecting course of stones or bricks.

belt conveyor (*Eng.*). See **band conveyor.**

belt creep (*Eng.*). A gradual movement of a belt relative to the face of the pulley on which it runs; caused by the change in the stretch of the belt as it passes from the tight to the slack side of the pulley.

belt dressing (*Eng.*). Substances used to prolong the life and improve the frictional grip of belting.

belt drive (*Eng.*). The transmission of power from one shaft to another by means of an endless belt passing around a pulley on each shaft.

belt fastener (*Eng.*). A connecting piece used to join together the ends of a driving belt.

belt fork or **belt striker** (*Eng.*). Two parallel prongs attached at right-angles to a sliding rod, used to slide a flat belt from a fast to a loose pulley, or vice versa.

belt leakage (*Elec. Eng.*). A leakage flux occurring in slip-ring induction motors when a primary phase group overlaps two secondary phase groups. The term is sometimes used to include the other forms of leakage, e.g. zig-zag leakage, occurring in the air-gap.

belt slip (*Eng.*). The slipping of a driving belt on the face of a pulley, due to insufficient frictional grip to overcome the resistance to motion offered by pulley or belt.

belt striker (*Eng.*). See **belt fork.**

belt transect (*Bot.*). A rectangular strip of ground marked out more or less permanently, so that its vegetation may be mapped and studied.

Belt (or Beltian) Series (*Geol.*). A great thickness (perhaps 40,000 ft.) of younger Pre-Cambrian rocks occurring in the Little Belt Mts., Montana, Idaho, and British Columbia. Argillaceous strata predominate, accompanied by algal limestones. Comparable with the Grand Canyon Series in Colorado and the Uinta Quartzite Series in the Uinta Mts.

Belt's corpuscle or **Beltian body** (*Bot.*). A small, orange-yellow, pear-shaped body, consisting of thin-walled cells filled with protein and oil, formed on leaflets of the bull's-horn thorn, and serving as food for ants.

belted-type cable (*Cables*). In this there are three conductors, each insulated with oil-impregnated paper. The triangular interstices are filled with paper packing, and a belt of paper surrounds the whole. A lead sheath surrounds the complete assembly. Used up to 11 kV.

belting (*Eng.*). A general term descriptive of materials from which driving belts are made; e.g. leather, cotton, balata, woven hair, etc.

bel'vedere (*Build.*). A room from which to view scenery; it is built for this purpose on the top of a house, the sides being either open or glazed.

Bembridge Beds (*Geol.*). A group of cream-coloured, fresh-water limestones (the Bembridge Limestone) and greenish clays and marls (the Bembridge Marls), also of fresh-water origin in the main, of Oligocene age, occurring in the Isle of Wight.

Bence-Jones protein (*Chem.*). A peculiar protein found occasionally in the urine. It has characteristic properties in respect of its solubility, precipitation, and coagulation.

bench (*Carp., etc.*). A table for the support of material in process of being worked.

bench (*Civ. Eng.*). See **berm.**

bench or **retort bench** (*Gas*). The name applied to a complete plant for the manufacture of coal-gas.

bench (*Mining*). In a metal mine, a long horizontal face or ledge of ore in a stope or working-place.

bench hook (*Carp.*). A flat piece of wood having a wooden block at the back edge of the top and a similar block fixed on the underside along the front edge, used to steady the work and prevent injury to the bench top.

bench mark (*Surv.*). A fixed point of reference for use in levelling, the reduced level of the point with respect to some assumed datum being known. See **Ordance Bench Mark.**

bench plane (*Join.*). A plane for use on flat surfaces. See **jack plane, smoothing plane, trying plane.**

bench screw (*Carp.*). The vice fixed at one end of a bench.

bench stop (*Carp.*). A metal stop, adjustable for height, set in the top of a bench, at one end; used to hold work while it is being planed.

bench work (*Carp., Eng.*). Work executed at the bench with hand tools or small machines, as distinct from that done at the machines.—(*Eng.*) Small moulds made on a bench in the foundry.

benched foundation (*Build., Civ. Eng.*). A foundation which is stepped at the base in order to safeguard against sliding on sloping sites.

benching (*Civ. Eng.*). Concrete sloped up from the concrete-bed foundation on which a pipe-line rests; it slopes up to the sides of the pipe, and gives support along the whole of its length, and to some extent laterally.

benching iron (*Surv.*). A small steel plate sometimes used to provide a solid support for the staff at a change point. It is formed usually of a triangular plate, with the corners turned down so that they may be driven into the ground surface to fix the plate in position, while the staff rests upon a raised central portion.

bend (*Eng., Elec. Eng.*). A short length of tubing or conduit used to connect the ends of two adjacent straight lengths which are at an angle to one another.

See **half-normal—** **sharp—**
normal—

bend (*Leather*). The half of a butt which has been divided longitudinally.

bending iron (or **pin**) (*Plumb.*). A tool for straightening or expanding lead pipe.

bending moment (*Eng.*). The *bending moment* at any imaginary transverse section of a beam is equal to the algebraic sum of the moments of all the forces to either side of the section.

bending of strata (*Geol.*). See **folding** (*Geol.*).

bending test (*Eng*). (1) A test made on a beam to determine its deflection under load.—(2) A forge test in which flat bars, etc. are bent through 180° as a test of ductility.

bends, the (*Med.*). See **caisson disease.**

benitoite, ben-ĕ'tō-īt (*Min*). A strongly dichroic mineral, varying in tint from sapphire blue to colourless, discovered in San Benito Co., California. Silicate of barium and titanium.

benk (*Mining*). The place underground where coal is being broken from the face of the coal seam. Cf. *stope* in ore mining. See **stall.**

Bennettita'les (*Bot.*). A small group of extinct plants, chiefly found in Mesozoic rocks. The plants had some points of likeness to Cycads, and may have been related to the ancestors of the Angiosperms.

Benson boiler (*Eng.*). A high-pressure boiler of the once-through type in which water is pumped successively through the various elements of the heating surface, firing being by gas, oil, or pulverised coal.

bent gouge (*Carp.*). A curved gouge for hollowing out concave work.

bent knees (*Vet.*). Flexion of the carpus of horses or dogs due to permanent contraction of the flexor tendons or to chronic arthritis.

bent-tail carrier (*Eng.*). A *lathe carrier* (q.v.) having a bent shank projecting into, and engaged by, a slot in the driving plate or chuck.

benthon, benthos (*Ecol.*). Collectively, the sedentary animal and plant life living on the sea bottom; cf. *nekton, plankton.*—*adj.* **benthic.**

ben'thopot'amous (*Ecol.*). Living on the bottoms of rivers and streams.

Benton Group (*Geol.*). A series of estuarine shales with an intercalation of marine limestones, the former containing abundant fish remains from which the oil stored in the porous members of the group was probably derived. Typically developed in Colorado, Texas, and Dakota; of Coloradoan (Turonian) age.

bentonite (*Geol.*). A valuable clay, similar in its properties to fuller's earth, formed by the decomposition of volcanic glass, under water. Consists largely of montmorillonite.

benzal chloride (*Chem.*). $C_6H_5{\cdot}CHCl_2$, b.p. 207° C. A chlorination product of toluene, intermediate for the production of benzaldehyde. Synonym, BENZYLIDENE CHLORIDE.

benzal'dehyde (*Chem.*). Oil of bitter almonds. $C_6H_5{\cdot}CHO$, m.p. 13° C., b.p. 179° C., sp. gr. 1·05, a colourless liquid, with the aromatic odour of bitter almond oil, soluble in alcohol, ether, slightly in water.

benzaldox'imes (*Chem.*). $C_6H_5{\cdot}CH{:}N{\cdot}OH$, formed from benzaldehyde and hydroxylamine; there are two stereo-isomeric forms. The *alpha* or *anti*-form, m.p. 35° C., can be transformed by means of acids into the *beta* or *syn*-form, m.p. 125° C.

benzam'ide (*Chem.*). $C_6H_5{\cdot}CO{\cdot}NH_2$, the amide of benzoic acid, obtainable from benzoyl chloride and ammonia or ammonium carbonate; lustrous plates, m.p. 130° C.

benzan'ilide (*Chem.*). $C_6H_5{\cdot}CO{\cdot}NHC_6H_5$, colourless plates, m.p. 158° C.; the anilide of benzoic acid, obtained from aniline and benzoic acid or benzoyl chloride.

benzene (*Chem.*). C_6H_6, m.p. 5° C., b.p. 80° C., sp. gr. 0·879; a colourless liquid, soluble in alcohol, ether, acetone, insoluble in water. Produced from coal-tar and coke-oven gas; can also be synthesised from open-chain hydrocarbons. Basis for benzene derivatives. A solvent for fats, resins, etc.; very inflammable. Benzene is the simplest member of the aromatic series of hydrocarbons. See **benzol.**

benzene carboxylic acids (*Chem.*). Aromatic acids originating from benzene.

benzene formula (*Chem.*). The generally recognised formula for benzene, which takes account of all its characteristics, has been established by Kekulé. It represents a closed chain of six carbon atoms, to each of which a hydrogen atom is attached, the carbon atoms being linked together alternately by single and by double bonds.

benzene hydrocarbons (*Chem.*). Homologues of benzene of the general formula C_nH_{2n-6}.

benzene nucleus (*Chem.*). The group of six carbon atoms which, with the hydrogen atoms, form the benzene ring. Substituent **alkyl radicals** are spoken of as *side chains* (q.v.).

benzene ring (*Chem.*). See **benzene formula.**

benzene-sulphonic acids (*Chem*). Aromatic acids formed from compounds of the benzene series by sulphonation. The acid characteristics are given by the group $-SO_3H$. Important intermediates for dyestuffs.

ben'zidine (*Chem.*). Di-*p*-diamino-diphenyl, $NH_2{\cdot}C_6H_4\,C_6H_4{\cdot}NH_2$, m.p. 127° C. White to pinkish crystals, soluble in alcohol, ether, insoluble in water. It is a diacid base and a derivative of *diphenyl* (q.v.). Important intermediate for azo-dyestuffs.

benzidine transformation (*Chem.*). The transformation of benzene-hydrazo-compounds into benzidine derivatives by the action of strong acids.

benzil (*Chem.*). $C_6H_5{\cdot}CO{\cdot}CO{\cdot}C_6H_5$, m.p. 95° C, large six-sided prisms, a diketone of the diphenyl group. Synonyms, DIBENZOYL or DIPHENYL-GLYOXAL.

benzine (*Chem.*). Petroleum hydrocarbons.

benzo'ic acid (*Chem.*). $C_6H_5{\cdot}COOH$, m p. 121° C, b.p. 250° C., colourless glistening plates or needles, sublimes readily, volatile in steam.

benzoin (*Chem.*). $C_6H_5{\cdot}CHOH{\cdot}CO{\cdot}C_6H_5$, m.p. 137° C., colourless prisms, a condensation product of benzaldehyde. It is both a secondary alcohol and a ketone and can react accordingly.

benzol, benzole (*Fuels*). The trade name for crude *benzene* (q.v.); used as a motor spirit, generally mixed with petrol, and valued for its anti-knock properties.

benzol scrubber (*Chem.*). A device for washing gases and absorbing the benzol contained therein by means of a high-boiling mineral oil.

benzonitrile (*Chem.*). $C_6H_5{\cdot}CN$, b.p. 191° C., the *nitrile* (q.v.) of benzoic acid.

benzophenone (*Chem.*). Diphenyl ketone, $C_6H_5{\cdot}CO{\cdot}C_6H_5$, m.p. 49° C., b.p. 307° C., colourless prisms, soluble in alcohol and ether. It is dimorphous, m.p. of the unstable modification 26° C.

benzoquinones (*Chem.*). $C_6H_4O_2$, homologues of the quinone group (see **quinones**). *p*-Benzoquinone, m.p. 116° C., yellow needles of pungent odour. *o*-Benzoquinone, isomer of the *para*-compound, an unstable compound.

benzoyl chloride (*Chem.*). C_6H_5COCl, a colourless liquid, of pungent odour, b.p. 198° C., obtained by the action of PCl_5 on benzoic acid, technically prepared by chlorinating benzaldehyde.

benzyl alcohol (*Chem.*). $C_6H_5{\cdot}CH_2{\cdot}OH$, a colourless liquid, b.p. 204° C., the simplest homologue of the aromatic alcohols.

benzyl'amine (*Chem.*). $C_6H_5{\cdot}CH_2{\cdot}NH_2$, colourless liquid, b.p. 183° C., a primary amine of the aromatic series.

benzyl chloride (*Chem.*). $C_6H_5{\cdot}CH_2Cl$, colourless liquid, b.p. 178° C., obtained by the action of chlorine on boiling toluene. Intermediate for benzyl derivatives.

benzyl'idene chloride (*Chem.*). *Benzal chloride* (q.v.).

ber'berine (*Chem.*). $C_{20}H_{17}O_4N,H_2O$, chief alkaloid present in *Hydrastis*, having no marked physiological properties. Also known as XANTHOPICRITE and JAMAICIN.

Bere'a Sandstone (*Geol.*). An irregularly distributed sandstone containing brine and oil, occurring as the basal member of the Mississippian in Ohio and Michigan; replaced southwards in Kentucky by the Chattanooga Shale.

Bergmann's law (*Zool.*). In warm-blooded animals, southern forms are smaller than closely-related northern forms.

ber'iber'i (*Med.*). A disease due to deficiency of vitamin B_1 in the diet; characterised by neuritis and by oedema of the heart.

Berkefeld filter (*San. Eng.*). An apparatus for the domestic filtering of water; the latter is passed through a special diatomaceous earth called kieselguhr.

Berlese's organ, bār-lā'ze (*Zool.*). In some *Hemiptera*, a small hollow rounded body opening by a longitudinal incision on the fourth sternum, and functioning as a copulatory pouch to receive spermatozoa discharged during coition.

Berlin blue (*Dec.*). Prussian Blue.

Berlin wool (*Woollen*). Soft bright-coloured yarns used for hand-knitting; generally made in 4- and 8-ply.

berm (*Civ. Eng.*). A horizontal ledge on the side of an embankment or cutting, to intercept earth rolling down the slopes, or to add strength to the construction. Also called a BENCH.

berm ditch (*Civ. Eng.*). A channel cut along a berm to drain off excess water.

Bernoulli's theorem, ber-noo'lē (*Phys.*). Along any one streamline in a moving fluid, the total energy per unit mass is constant, being made up of P, the potential energy, $\frac{p}{\rho}$, the pressure energy (p being the pressure and ρ the density), and $\frac{1}{2}v^2$, the kinetic energy (v being the velocity).

Beroidea, ber-ō-id'e-a (*Zool*). An order of *Nuda*, having a conical or ovoid body, compressed in the stomodaeal plane, and a large mouth and stomach.

berry (*Bot.*). A fleshy fruit, without a stone, usually containing many seeds embedded in pulp. It is called *bacca* when formed from an inferior ovary, *uva* when formed from a superior ovary.

berry (*Zool.*). (1) The eggs of Lobster, Crayfish, and other macruran *Crustacea*.—(2) Part of the bill in Swans.

Berry transformer (*Elec. Eng.*). A form of shell-type transformer, in which the iron core is designed in roughly cylindrical shape.

Berthelot's calorimeter, bert'lō (*Heat*). An instrument used by Berthelot for measuring the latent heat of vaporisation of liquids. The liquid was boiled in a vessel fitted with an outlet tube, which passed vertically down through the liquid and was connected to a condensing spiral immersed in water in the calorimeter.

bert'randite (*Min.*). A rare hydrated silicate of beryllium, described (from a locality near Nantes, France) by E. Bertrand.

Berycomor'phi (*Zool.*). An order of *Neopterygii* possessing spiny finrays, with the pelvic fins placed far forward on the body and provided with unusually numerous rays. Soldier-fish, Pine-cone-fish, etc.

beryl (*Min.*). A silicate of beryllium and aluminium, occurring in pegmatites as beautiful hexagonal crystals of blue, yellow, or pink colour. Used as gemstones.

beryl'lium or **glu'cinum** (*Chem.*). Symbol, Be. A light steely metallic element in the second group of the periodic system. At. no. 4, at. wt. 9·0, m.p. 1280°-1300°, Brinell hardness 55-60; the pure metal is difficult to prepare. Used as windows in X-ray tubes and in copper alloys where high elasticity and resistance to stresses are required.

beryllium bronze (*Met.*). A copper-base alloy containing 2·25% of beryllium. Develops great hardness (i.e. 300-400 Brinell) after quenching from 800° C. followed by heating to 300° C. (see **temper-hardening**).

beryl'lonite (*Min*). A rare mineral, found at Stoneham, Maine, in decomposed granite, occurring as orthorhombic crystals. Phosphate of beryllium and sodium.

B.E.S.A. Abbrev. for *British Engineering Standards Association*, now *British Standards Institution* (q.v).

Bessemer converter (*Met.*). A barrel-like steel vessel, lined with refractory material and fitted with tuyères through which air may be blown in at the bottom. Used in the Bessemer process.

Bessemer pig (*Met.*). Pig-iron suitable for manufacture of steel by the Bessemer process.

Bessemer process (*Met.*). A process of making steel by blowing air through molten pig-iron and thus oxidising the carbon, manganese, silicon, and phosphorus. See **Bessemer converter, acid process, basic process.**

Best and **Best Best** (*Met.*). See **B, B.B.**

best cokes (*Met.*). A grade of tinplates intermediate between 'coke' plates and common charcoal plates; more heavily tinned than 'coke' plates.

best selected copper (*Met.*). Metal of a lower purity than high-conductivity copper. Generally contains over 99·75% of copper.

beta brass (*Met.*). Copper-zinc alloys, containing 46-49% of zinc, which consist (at room-temperature) of the intermediate constituent (or intermetallic compound) known as β.

beta-ell (*Elec. Comm.*). See **βl.**

beta female (*Zool.*). An abnormal queen ant, with excessively long legs and antennae.

beta iron (*Met.*). A designation (now out of use) previously given to non-magnetic α-iron which exists between 768° and 906° C.

beta particle (*Phys.*). One of the products emitted from the atomic nuclei of radioactive substances during their spontaneous disintegration. β particles have been shown to be electrons moving with velocities up to 99% of the velocity of light.

beta rays (*Phys.*). Streams of beta particles.

be'tafite (*Min.*). A hydrous columbate, niobate, and titanate of uranium; a radioactive mineral, described from Betafo in Madagascar.

betaine, bē'ta-ēn (*Chem.*). Trimethyl-glycocoll, crystallises with 1 molecule of H_2O in large crystals; m.p. of the anhydrous betaine 293° C. with decomposition.

betaine formula (*Chem.*). The betaine formula of amino-acids signifies a cyclic ammonium salt in which the carboxyl of an amino-acid is attached to the trivalent nitrogen of the amino-group.

Bethell's process (*Build.*). A process for preserving timber, which is first dried, then subjected to a partial vacuum within a special cylinder, and finally impregnated with creosote under pressure.

Bethenod-Latour alternator (*Radio*). A high-frequency alternator in which alternating currents in the stator generate currents of higher frequency in the rotor. By repeating the process, frequencies of the order of one hundred kilocycles can be attained in a single machine.

béton, bā-ton^{g} (*Civ. Eng.*). A French term, originally applied to lime concrete, but now used for any kind of concrete.

Betts process (*Met.*). An electrolytic process for refining lead after drossing. The electrolyte is a solution of lead silica fluoride and hydrofluorsilicic acid. Impurities are all more noble than lead and remain on the anode. Gold and silver are recovered from anode sponge.

between perpendiculars (*Ship Constr.*). See **B.P.**

between race (*Bot.*). A race of plants which is intermediate in character between the typical species and one of its well-marked subspecies or varieties.

bevel (*Carp., Join., etc.*). The sloping surface formed when two surfaces meet at an angle which is not a right-angle. See **chamfer.**

bevel (*Elec. Eng.*). See **pole bevel.**

bevel (*Tools*). A light hardwood stock, slotted at one end to take the blade, which is fastened by a clamping screw passing through the stock and the slot in the blade, enabling the latter to be set at any desired angle to the former.

bevel gear (*Eng.*). A system of toothed wheels connecting shafts whose axes are at an angle to one another but in the same plane.

bevelled boards (*Bind.*). Boards intended for covers, with the edges at the head, foot, and fore-edge cut at an angle.

bevelled halving (*Carp.*). A halving joint in which the meeting surfaces are not cut parallel to the plane of the timbers but at an angle, so that when they are forced together, the timbers may not be pulled apart by a force in their own plane.

Beverage antenna (*Radio*). See **wave antenna.**

Bexoid (*Plastics*). A non-thermo-setting plastic of the cellulose acetate type. See **Celastoid.**

bez'el (*Jewel.*). (1) The crown of a finger ring.—(2) The engraved stone in a finger ring.—(*Horol.*) The grooved ring holding the glass of a watch.

bezel (*Tools*). The sloped cutting-edge of a chisel or other cutting tool.

bezoar' (*Vet.*). A ball of hair and vegetable fibre mixed with lime salts and mucus, formed in the stomach of animals; formerly esteemed as a medicine.

B/H curve (*Elec. Eng.*). See **magnetisation curve.**

B/H loop (*Elec. Eng.*). See **magnetic hysteresis loop.**

B.H.P. (*Eng.*). Abbrev. for *brake horse-power* (q.v.).

Bi (*Chem.*). The symbol for *bismuth.*

bi-, bis- (Latin *bis*, twice). A prefix used in the construction of compound terms; e.g. *bicarpellary, biflagellate.*

bi-band (*Teleph.*). A system of telephony using the normal telephone frequency band for transmission in one direction, the corresponding return speech being modulated up to occupy the band next above the normal band.

bi-cable (*Civ. Eng.*). The type of *aerial ropeway* (q.v.) in which there are one or more supporting ropes to carry the loads, and an endless hauling rope to move them.

biartic'ulate (*Bot.*). Having two nodes or joints.

bias (*Teleg.*). The adjustment of a telegraph relay so that it operates for currents greater than a given current (against which it is *biased*), or for a current of one polarity.

See **electrical—** **mechanical—**

bias voltage (*Thermionics*). Generally, the mean potential of any electrode in a thermionic tube, measured with respect to the cathode. Specially applied to that of the control grid.

biased protective system (*Elec. Eng.*). A modification of a balanced protective system, in which the amount of out-of-balance necessary to produce relay operation is increased as the current in the circuit being protected is increased.

biasing transformer (*Elec. Eng.*). A special form of transformer used in one form of biased protective system.

biax'ial crystal (*Crystal.*). A crystal having two optic axes. Minerals crystallising in the orthorhombic, monoclinic, and triclinic systems are *biaxial.* Cf. *uniaxial.*

bib-cock (*Eng.*). A draw-off tap for water-supply, consisting of a plug-cock having a downward curved extension for discharge.—(*Plumb.*) A cock fitted with a nozzle curving downwards, used as a draw-off tap.

bib-valve (*Eng., etc.*). A draw-off tap of the kind used for domestic water-supply; closed by screwing down a leather-washered disc on to a seating in the valve body.

bibrac'teate (*Bot.*). Bearing two bracts.

bical'carate (*Bot.*). Two-spurred.

bicap'sular (*Bot.*). Bearing a capsule consisting of two chambers.

bicar'bonates (*Chem.*). The acid salts of carbonic acid; their aqueous solutions presumably contain the ion HCO'_3.

bicarpel'lary, bicar'pellate (*Bot.*). Said of a gynaeceum made up of two carpels.

bi'ceps (*Zool.*). A muscle with two insertions.—*adj.* **bicip'ital.**

bichro'mate cell (*Elec. Eng.*). A primary cell with a zinc negative and one or more carbon positive electrodes; the electrolyte is dilute sulphuric acid, with potassium bichromate as a depolariser. See **bottle-battery.**

bichromate, potassium (*Chem.*). See **potassium dichromate.**

bichromated gelatine (*Photog.*). Gelatine sensitised with ammonium or potassium bichromate.

bicil'iate (*Bot.*). Bearing two flagella; a better term is *biflagellate.*

bicip'ital (*Zool.*). See **biceps.**

bickern, bick iron (*Eng.*). See **beak iron.**

Bicknell Sandstone (*Geol.*). A sandstone, varying from 500 to 1000 ft. in thickness, occurring in the marine Jurassic succession of the Cordilleran geosyncline; equivalent to the British Bajocian.

bicollat'eral (*Bot.*). Said of a vascular bundle with two strands of phloem, one internal to and one external to the single strand of xylem.

bicol'ligate (*Zool.*). (Of Birds) having the feet provided with two stretches of web.

bicon'ic (*Bot.*). Having the form of two cones placed base to base.

bicon'jugate (*Bot.*). Said of a compound leaf when each of the two main ribs bears a pair of leaflets.

bicre'nate (*Bot.*). Bearing two rounded teeth; not the same as *doubly crenate.*

bicus'pid, bicus'pidate (*Bot.*). Having two short horn-like points.—(*Zool.*) Having two cusps, as the premolar teeth of some Mammals.

Bidder's ganglion (*Zool.*). In some *Salientia*, a nerve-ganglion near the auriculo-ventricular groove.

Bidder's organ (*Zool.*). In some *Salientia*, an aggregation of immature ova, attached to the anterior end of the gonad.

bident'ate (*Bot.*). Having two teeth.

bien'nial (*Bot.*). A plant which arises from seed one year, lives to the next season, and then flowers, sets seed, and dies.

Bier's hyperaemia (*Med.*). Induction of venous congestion of a part by application of an elastic bandage above it.

bifa'cial (*Bot.*). Flattened, and having the upper and lower faces of different structure.

bifa'rious (*Bot.*). Arranged in two rows, one on each side of an axis.

bi'fid (*Bot., Zool.*). Divided half-way down into two lobes: forked.

bifi'lar pendulum (*Phys.*). See **bifilar suspension.**

bifilar suspension (*Phys.*). The suspension of a body by two parallel vertical wires or threads which give a considerable controlling torque. If the threads are of length *l* and are distance *d* apart, the period of torsional vibration of a suspended body of moment of inertia I and mass m is

$$T=4\pi\sqrt{\frac{Il}{mgd^2}}.$$

bifilar winding (*Elec. Eng.*). A form of winding used for making non-inductive resistances; in it two wires carrying current in opposite directions are wound together as a single wire.

biflagellate, bī-flaj′— (*Bot*). Bearing two flagella.

bifo′liate, bifo′liolate (*Bot.*). Said of a compound leaf with two leaflets.

bifur′cate (*Bot., Zool.*). Twice-forked: forked.—*v.* **bi′furcate.**—*n.* **bifurca′tion.**

bifurcated rivet (*Eng.*). A rivet with a split shank, used for holding together sheets of light material; it is closed by opening and tapping down the two halves of the shank.

bifurcating box (*Cables*). A box containing the joints between a twin-core or concentric cable and two single-core cables.

big-end bolts (*Eng.*). See **connecting-rod bolts.**

big head (*Vet.*). Osteomalacia affecting the skull of a horse.

bigem′inal pulse (*Med.*). A pulse in which the beats occur in pairs, each pair being separated from the other by an interval; due to a disturbed action of the heart.

bigem′inate (*Bot.*). In two pairs.

bigener′ic (*Zool.*). (Of hybrids) produced by crossing two distinct genera.

bight (*Naut.*). A loop formed in a rope or chain.

bi′grid valve (*Thermionics*). A four-electrode thermionic tube with two control grids, each having approximately the same control on the anode current. Used as a modulating or mixing valve, or as an amplifier operating with low anode-voltages. See also **space-charge grid.**

bigut′tulate (*Bot.*). Containing two vacuoles or two oil drops.

bila′biate (*Bot.*). With two lips.

bilabiate dehis′cence (*Bot.*). Opening by a transverse split across the top.

bilam′inar (*Zool.*). See **diploblastic.**

bilat′eral (*Med.*). Having, or pertaining to, two sides.

bilateral ′impedance (*Elec. Comm.*). Any electrical or electro-mechanical device in which power can be transmitted in both directions.

bilateral symmetry (*Biol.*). The condition when an organism is divisible into similar halves by one plane only.

bile (*Physiol.*). A viscous liquid produced by the liver. Human bile has an alkaline reaction and possesses a green or golden-yellow colour and a bitter taste. It consists of water, bile salts, mucin and pigments, cholesterol, fats and fatty acids, soaps, lecithin, and inorganic compounds.

bile-ducts (*Zool.*). The excretory ducts of the liver and gall-bladder.

bile pigments (*Physiol.*). The chief are bilirubin (reddish-yellow) and its oxidation product biliverdin (green). Produced by the breakdown of haemoglobin, they consist of an open chain of four substituted pyrrole nuclei joined by two methene ($=$CH—) and one methylene (—CH$_2$—) bridges.

bile salts (*Physiol.*). Sodium salts of the bile acids, a group of hydroxy steroid acids, some unsaturated, condensed with taurine or glycine; commonest are the salts of taurocholic and glycocholic acids; secreted in the bile; very important in aiding absorption of fats from intestine.

bilge (*Ship Constr.*). The space above the double bottom of a ship, into which waste water from the holds and engine-room is drained.

Bilgram valve diagram (*Eng.*). See **valve diagram.**

bilharzi′asis (*Med., Vet.*). Disease due to presence in the body of blood flukes of the family *Schistosomidae*. It affects man, horses, asses, camels, cattle, and sheep.

biliary fever (*Vet.*). A febrile infection of the red blood corpuscles of horses, due to the protozoa *Babesia equi* or *Nuttalia equi.*

bi′licy′anin (*Physiol.*). An oxidation product of bilirubin. It is of a blue colour.

bi′liru′bin (*Physiol.*). A reddish pigment occurring in bile; believed to be formed as a breakdown product of haemoglobin.

bi′liver′din (*Physiol.*). A green pigment occurring in bile. It is an oxidation product of bilirubin.

bill (*Typog.*). A detailed inventory of a fount of type made up to a specified weight, showing the proportionate weights of the letters.

bill of quantities (*Build., Civ. Eng.*). A list of items giving the quantities of material and brief descriptions of work comprised in an engineering or building works contract; it forms the basis for a comparison of tenders.

bill (*Zool.*). In Birds, the beak or rostrum.

billet (*Carp.*). A piece of timber which has three sides sawn and the fourth left round.

billet (*Met.*). An intermediate product in the rolling of steel. It is larger than a *bar* and smaller than a *bloom.* The term is also applied to non-ferrous metals; sometimes means ingots of certain shapes.

billet mills (*Met.*). The rolling-mills used in reducing steel ingots to billets.

billi-condenser (*Radio*). A variable condenser, having a maximum capacity of a few micro-microfarads, used for fine tuning adjustments.

billiard cloth (*Textiles*). Woollen cloth manufactured from finest quality Merino wool, with a special dress-face finish to render it perfectly smooth.

billing (*Build., Civ. Eng.*). The final process in drawing up a bill of quantities, the items abstracted (see **abstracting**) being entered on the *bill of quantities*, together with description.

billion. In America and France, a thousand million, or 10^9. Elsewhere, a million million, or 10^{12}.

bil′litonites (*Min.*). See **tektites.**

biloc′ular (*Bot.*). Consisting of two loculi or chambers.

bilo′phodont (*Zool.*). Having the two anterior and the two posterior cusps of the grinding teeth joined by ridges.

bi′manous (*Zool.*). Having the distal part of the two fore-limbs modified as hands, as in some Primates.

biman′ual (*Med.*). Performed with both hands; e.g. *bimanual* examination of the female genital organs.

bimas′tic (*Zool.*). Having two nipples.

bimetal-fuse (*Elec. Eng.*). A fuse element composed of two different metals; e.g. a copper wire coated with tin or lead.

bimetallic strip (*Elec. Eng., Heat*). A strip made up of two metals having different temperature coefficients, so arranged that the strip deflects when subjected to a change in temperature.

bimolec′ular reaction (*Chem.*). A reaction in which two molecules interact.

bi′morph (*Acous.*). A rigid combination of two Rochelle salt crystals, so arranged that they act as a mechanical transformer between the mechanical force accompanying electrostatic excitation and the lower mechanical impedances, such as telephone diaphragms and loudspeaker mechanisms, which are driven by the device.

bi′nary (*Astron.*). ECLIPSING BINARY, a *double star* (q.v.) whose orbital plane lies so nearly in the line of sight that the components pass in front of each other in the course of their mutual revolution.—SPECTROSCOPIC BINARY, a *double star* (q.v.) whose components are too close to be resolved visually, but which is detected by the mutual shift of their spectral lines owing to their varying velocity in the line of sight.—VISUAL BINARY, a *double star* (q.v.) whose two components may be seen as separate in a telescope of sufficient resolving power.

binary (*Chem.*). Consisting of two components, etc.

binary converter (*Elec. Eng.*). An a.c.-to-d.c. converter in which the stator carries both a 3-phase winding and a d c. exciting winding, while the rotor carries an ordinary commutator winding supplying the d c. terminals.

binary fission (*Biol*) Division of the nucleus into two daughter nuclei, followed by similar division of the cell-body.

binary stars (*Astron.*). See **double stars.**

binary system and **diagram** (*Met.*). The alloys formed by two metals constitute a *binary alloy system*, which is represented by the *binary constitutional diagram* for the system.

binary vapour-engine (*Eng.*). A heat-engine using two separate working fluids, generally mercury vapour and steam, for the high and low temperature portions of the cycle respectively, thus enabling a large temperature range to be used, with improved thermal efficiency.

bi'nate (*Bot.*). Occurring in pairs.

binaur'al (*Acous.*). Pertaining to the use of two ears instead of one. For perception of direction and acoustic perspective the use of two ears is essential, the faculties being lost in a monaural or single-channel system.—(*Med.*) Concerning or using both ears; e.g. *binaural* stethoscope.

binder (*Acous.*). See **binding agent.**

binder (*Agric. Mach.*). A horse-drawn or tractor machine which, in addition to cutting standing corn, gathers it, and forms it into sheaves, which it ties.

binder (*Carp.*). A timber or steel beam supporting the bridging joists in a double or framed floor. Also called a BINDING JOIST.

binder (*Textiles*). In silk-weaving, the tie or stitch used for long floating weft.

binding agent or **binder** (*Acous.*). The basic material of disc records, chiefly shellac, which causes the various materials to adhere together and form, after heating, a solid mass.

binding-beam (*Carp.*). A timber tie serving to bind together portions of a frame.

binding energy (*Chem.*). The energy required to separate the positively and negatively charged parts of an atom or molecule.

binding joist (*Carp.*). See **binder.**

binding screw (*Eng.*). The general name for a set-screw used for clamping two parts together.

binding wire (*Elec. Eng.*). See **tie wire.**

Binet's test, bē-nā (*Psychol.*). A method of testing a child's intelligence by asking standard questions adapted to the intelligence of normal children at various ages. More fully **Binet-Simon test.** (Named from its originators, Alfred Binet and Théodore Simon.) See also **intelligence quotient.**

binocular camera (*Photog.*). A camera with two matched lenses, for making stereoscopic images.

bi'node (*Thermionics*). A three-electrode thermionic tube having one cathode and two anodes. Used for full-wave rectification. Also called DOUBLE-DIODE.

bi'nograph (*Photog.*). The combination of two images in order to obtain an approximation of what the two eyes see together, so giving a pseudo-stereoscopic image.

binomial (or **binominal**) **nomenclature** (*Biol.*). The system (introduced by Linnaeus) of denoting an organism by two Latin words, the first the name of the genus, the second the specific epithet. The two words constitute the name of the species; e.g. *Homo sapiens*; *Bellis perennis*. See **species.**

bino'vular twins (*Med.*). Twins resulting from the fertilisation of two separate ova.

binu'cleolate (*Bot.*). Said of an ascospore containing two oil drops.

bio-aeration (*Sewage*). A system of sewage purification by oxidation; aeration of the crude sewage is effected by passing it through specially designed centrifugal pumps. See also **activated sludge, activation.**

bio-assay (*Pharmacol.*). Determination of the power of a drug or of a biological product by testing its effect on an animal of standard size and weight.

bi'oblast (*Bot.*). A chondriosome.

biocoenosis, —sē-nō'sis (*Ecol.*). The association of animals and plants together, especially in relation to any given feeding area.

biocoeno'sium (*Ecol.*). A community comprising both animals and plants, as in a pond.

biocoenotic, —sē-not'ik (*Ecol.*). Ecological; pertaining to the inter-relationship between the organisms in a community.

bi'ogen (*Bot.*). A hypothetical protein molecule of instable nature which is assumed to be primarily responsible for the phenomena of life.

biogenet'ic law (*Biol.*). The hypothesis that each individual, during its development (ontogeny), repeats in an abbreviated form the history of the development of its race (phylogeny).

bi'ogen'ous (*Bot*). Parasitic.

biological barrier (*Bot.*). Anything due to the activity of organisms which prevents the occupation of an area by plants. Plant communities already present may act as a biological barrier; town-building by man is an extreme example.

biological form, biologic form, biologic species (*Bot.*). A race of a parasitic fungus, quite normal in morphology, but restricted for some physiological reason to one species of host plant, or to a strain of that host plant, which then is also a biologic form of its species.

biological race (*Zool.*). A race occurring within a taxonomic species; distinguished from the rest of the species by slight or no morphological differences, but by evident differences of habitat, food-preference, or occupation.

biological spectrum (*Bot.*) A tabular statement of the percentage frequencies of the various life forms of plants in any given region.

biological type (*Bot.*). See **life form.**

bioluminesc'ence (*Biol.*). The production of light by living organisms, as glow-worms, some deep-sea fish, some bacteria, some fungi.

biom'eter (*Biol.*). An instrument for measuring the amount of life by assessing the respiration.

biom'etry (*Biol.*). Statistical methods applied to biological problems.

bi'on, bi'ont (*Bot.*). An individual plant, independent and capable of separate existence.

bionom'ic (*Biol.*). Relating to the environment; ecological.

bi'ophore (*Bot.*). A hypothetical particle of minute size, assumed to be capable of growth and reproduction.

bi'oplasm (*Biol.*). See **protoplasm.**

bi'opsy (*Med.*). Diagnostic examination of tissue (e.g. tumour) removed from the living body.

bi'os (*Chem.*). A group of substances which act as a growth promoter for yeast. Three components (bios I, IIA, and IIB) are known. See Supplement.

bioscope (*Cinema.*). The early name for *news-reel*, later applied to any film.

bi'ose'ries (*Bot.*, *Zool.*). In evolution, a historical sequence formed by the changes in any one single heritable character.

bio'ta (*Biol.*). The fauna and flora of a given region.

biot'ic (*Biol.*). Relating to life.

biotic adaptation (*Bot.*). A change in form or in habits, presumed to have arisen as a result of competition with other plants.

biotic climax (*Bot.*). A climax community maintained in a stable condition by some biotic factor, e.g. much grassland, which is prevented by grazing from passing into woodland.

biotic factor (*Bot.*). Any activity of living animals or plants which influences the occurrence of plants.

bi'otite (*Min.*). A form of black mica widely distributed in igneous rocks (particularly in granites) as lustrous black crystals, with a singularly perfect cleavage. In composition, it is a complex silicate, chiefly of iron and magnesium, together with potassium and hydroxyl.

biotron (*Radio*). A two-tube amplifying circuit, in which high amplification is obtained by the use of aperiodic regeneration.

bi'otype (*Biol.*). One individual of a population composed of organisms which are genotypically identical, i.e. alike in their inheritable characters.

bi'pack (*Photog*). Two adjacent films with adjacent emulsions, sensitive to different colours and intended to be exposed one through the other.

bip'arous (*Bot.*). Dichasial (see **dichasium**).—(*Zool.*) Giving birth to two young at a time.

bipar'tite (*Bot.*). Divided nearly to the base into two parts.

bipe'dal (*Zool.*). Employing only two limbs for walking.

bipen'niform (*Zool.*). Having the form of a feather of which the sides of the vane are equal in size.

bi-phase— (*Elec. Eng.*). See **two-phase—**.

bipinna'ria (*Zool.*). A pelagic larva of *Asteroidea*, having a ciliated band separated into pre-oral and post-oral loops, and possessing a large pre-oral lobe.

bipin'nate (*Bot.*). Said of a compound pinnate leaf with its main segments pinnately divided.

bipinnat'ifid (*Bot.*). Said of a pinnatifid leaf when its parts are themselves pinnatifid.

bipo'lar (*Zool.*). Having two poles: having an axon at each end, as some nerve cells.

bipolar electrode (*Elec. Eng.*). An electrode in an electro-plating bath which has no connexion to either the anode or cathode; sometimes called a SECONDARY ELECTRODE.

bipolar germination (*Bot.*). Germination of a spore by the formation of two germ tubes, one from each end.

bipp (*Med.*). A paste consisting of one part of bismuth subnitrate, two parts of iodoform, and paraffin; used for dressing wounds.

bi'prism (*Photog.*). A prism with a very obtuse angle, used for beam-splitting.

biprism, Fresnel's *Light*). See **Fresnel's biprism.**

bipyramid (*Crystal.*). A crystal form consisting of two pyramids on a common base, the one being the mirror-image of the other. Each pyramid is built of triangular faces, three, four, six, eight, or twelve in number. See **pyramid.**

bira'dial symmetry (*Zool.*). The condition in which part of the body shows radial, part bilateral symmetry; as in *Pleurobrachia* and other *Ctenophora.*

bira'mous (*Zool.*). Having two branches; forked, as some Crustacean limbs.

birch (*Timber*). A close-grained hard-wood from the birch tree. It takes a high polish, and is much favoured by cabinet-makers.

bird fever (*Vet.*) See **cholera (fowl, duck).**

bird pest (*Vet.*). See **fowl plague.**

birdseye (*Mining*). Mixed screened anthracite passing a half-inch, but retained on an eighth-inch screen. May be subdivided into *buckwheat*, *rice*, and *barley*.

bird's-eye grain (*Bot.*). The appearance when worked timber shows large numbers of small circular areas dotted about the wood; the rings are due to small almost dormant buds, which give rise to thin cylindrical strands of soft tissue lying almost horizontally in the trunk, appearing circular when cut across.

bird's-eye view (*Surv.*). An oblique *aerial photograph* (q.v.) taken for purposes of topographical survey or town-planning work.

bird's-mouth (*Carp.*). A re-entrant angle cut into the end of a timber, so as to allow it to rest over the arris of a cross timber.

bi'refrin'gence (*Min.*). Literally, the double bending of light by crystalline minerals, causing in extreme cases (e.g. calcite) two images of any object viewed through the mineral. The difference between the greatest and the least refractive index for light passing through a mineral is a measure of its birefringence.

Birkeland and Eyde furnace (*Elec. Eng.*). An electric-arc furnace used for the fixation of nitrogen; the arc, between water-cooled copper electrodes, is drawn out to a circular shape by an arrangement of electromagnets.

Birkhill Shales (*Geol.*). A division of the Moffat Shales, of Lower Silurian age; characterised by a fauna of graptolites. So named (by Prof. C. Lapworth) from a locality in the Southern Uplands of Scotland.

Birmingham Wire Gauge. A system of designating the diameters of rods and wires by numbers, ranging from 4/0 (0·454 in.) to 36 (0·004 in.).

birotation (*Chem.*). See **mutarotation.**

birth control (*Sociology*). The regulation of offspring by any of several methods, viz., abstinence from or incompletion of intercourse, mechanical or chemical contraception, sterilisation, abortion, exposure, infanticide, hormone control.

birth-mark (*Med.*). See **naevus.**

birth pore (*Zool.*). In some *Platyhelminthes*, the uterine opening when that is distinct from the vaginal opening: in rediae of *Trematoda*, the opening by which daughter rediae escape.

bi'sac'cate (*Bot.*). Having two sepals each with a small pouch at the base.

bis-azo dyes (*Chem.*). See **disazo dyes.**

Bischof process (*Chem.*). A process of making white lead by a quicker method than the stack process.

biscuit (*Acous.*). The unit size of record stock, which is heated and placed between two stampers in the pressing machine, two biscuits for a ten-inch record and three for a twelve-inch record.

biscuit (*Pot.*). The term applied to pottery, after firing in a biscuit-oven but before glazing.

biscuit-oven (*Pot.*). A kiln in which clay articles are baked before glazing.

bise, bēz (*Meteor.*). A dry winter wind blowing from the northern sector in the mountains of southern France.

bi'sect (*Bot.*). A drawing showing the profiles of the shoots and roots of plants growing in their natural positions.

bise'riate (*Bot.*). (1) In two rows.—(2) In a double series, as the ascospores in many asci.—(3) A vascular ray two cells wide.

bisex'ual (*Bot., Zool.*). Possessing both male and female sexual organs. See **hermaphrodite.**

Bismarck brown (*Chem.*). A brown dye stuff obtained by the action of nitrous acid on *m*-phenylenediamine. It contains triamino-azobenzene, $H_2N{\cdot}C_6H_4{\cdot}N{:}N{\cdot}C_6H_3(NH_2)_2$, and a more complex disazo compound, $C_6H_4{:}[N{:}N{\cdot}C_6H_3(NH_2)]_2$.—(*Paint.*) A mixture of six parts of black, one of orange and one of yellow.

bismite (*Min.*). See **bismuth ochre.**

bismuth (*Chem.*). Symbol, Bi. A grey-white metallic element in the fifth group of the periodic system. At. no. 83, at. wt. 209·0, sp. gr. 9·72-9·83, m.p. 271°. The metal is used as a component of fusible alloys with lead.

bismuth glance (*Min.*). See **bismuthinite.**

bismuth hydride (*Chem.*). BiH_3. Volatile, unstable compound. Also called BISMUTHINE.

bismuth ochre (*Min.*). Trioxide of bismuth, occurring as shapeless masses or as an earthy deposit. Also called BISMITE.

bismuth spiral (*Elec. Eng.*). A flat coil of bismuth wire used in magnetic flux measurements; the change of flux is measured by observing the change in resistance of the bismuth wire, which increases with increasing fields.

bismuth trichloride (*Chem.*). $BiCl_3$. Formed by the direct combination of chlorine and bismuth. Treated with an excess of water, it forms bismuth oxychloride, BiOCl, sometimes used as a pigment under the name of PEARL WHITE.

bismuth trioxide (*Chem.*). Bi_2O_3. Formed when bismuth is heated in air or when the hydroxide, carbonate, or nitrate is calcined. Forms three hydrates which have no acidic properties and do not combine with bases to form salts. It has marked basic properties.

bis'muthine (*Chem*). See **bismuth hydride.**

bismuth'inite (*Min.*). Sulphide of bismuth, rarely forming crystals, commonly occurring in shapeless lead-grey masses with a yellowish tarnish. Also called BISMUTH GLANCE.

bis'mutite (*Min.*). An amorphous form of bismuth carbonate, occurring as a rare natural mineral.

bi'sphe'noid (*Min.*). A crystal form consisting of four faces of triangular shape, two meeting at the top and two at the base in chisel-like edges, at right-angles to one another; hence the name, meaning 'double edged.'

bisporan'giate (*Bot.*). Said of a strobilus which consists of megasporophylls and microsporophylls, with megasporangia and microsporangia.

bisque oven, bisk (*Pot.*). The same as ***biscuit-oven.***

bis'sagen'ous (*Zool.*). Pertaining to, or occurring in, the byssus gland of Molluscs.

bis'tournage (*Vet.*). The castration of bulls by torsion of the spermatic cord.

bis'toury (*Med.*). A long, narrow surgical knife for cutting abscesses, etc.

bistre (*Dec.*). A pigment consisting of wood-soot ground in oil; or five parts of black, one of red, tinged with green.

bisul'cate (*Bot.*). Marked by two furrows.

bisul'phites (*Chem.*). Acid salts of sulphurous acid. Used as preservatives and as a source of sulphur dioxide. See also **sulphurous acid.**

bisymmet'ric (*Bot.*). Symmetrical in two planes at right-angles to one another.

bisyn'chronous motor (*Elec. Eng.*). A motor similar to an ordinary synchronous motor but capable of being made to run at twice synchronous speed.

bit (*Mining*). (1) In Britain, the cutting edge of a length of steel (the borer) used in rock drilling.—(2) In America, the entire length of the borer, including shank, steel, and bit.

bit (*Tools*). (1) A boring tool which fits into the socket of a brace, by which it is rotated.—(2) The cutting-iron of a plane.—(3) The copper head of a soldering iron.

bit gauge (*Tools*). See **bit stop.**

bit-stock (*Carp.*). See **brace.**

bit stop (*Tools*). An attachment to a bit which limits drilling or boring to a given depth. More correctly BIT GAUGE.

bitch (*Build., Carp., etc.*). A kind of *dog* (q.v.) in which the ends are bent so as to point in opposite directions.

biter'nate (*Bot.*). Divided into three parts, themselves divided ternately.

bitter almond oil (*Chem.*). *Benzaldehyde* (q.v.); also occurs naturally in *almond oil* (q.v.).

bitter spar (*Min.*). The name sometimes applied to the mineral dolomite, the carbonate of calcium and magnesium.

bittern (*Chem.*). The residual liquor remaining from the evaporation of sea water, after the removal of the salt crystals.

bitty (*Paint.*). Paint or varnish containing small pieces of skin, or lumpy, insufficiently ground material.

bit'umen (*Chem.*). The non-mineralised substances of coal, lignite, etc., and their distillation residues.

bitumen process (*Photog.*). See **asphalt process.**

bitumen varnishes (*Diel.*). These contain asphalts, driers, benzine.

bitu'minous carpeting (*Civ. Eng.*). A road surface formed of stone chippings bound together with bitumen.

bituminous coals (*Fuels*). Long-flame coals, containing a high proportion of volatile hydrocarbons; generally classed as *caking* and *non-caking.*

bituminous paint (*Paint.*). Paint in which the base is bitumen instead of the more common lead- or zinc-oxides.

bituminous plastics (*Plastics*). Compositions made from natural bitumens (e.g. Trinidad and gilsonite), petroleum pitches, or certain types of coal-tar pitch, along with a suitable filler; used for accumulator cases, where non-absorbent acid-resisting material is required, door furniture, and electrical accessories. Cold-moulded plastics are made by adding a drying oil, e.g. linseed oil.

bituminous shale (*Mining*). Shaly sandstone or *blaes* (q.v.).

bi'uret' (*Chem.*). $NH_2{\cdot}CO{\cdot}NH{\cdot}CO{\cdot}NH_2$, colourless needles, crystallises with 1 molecule of H_2O; m.p. of the anhydrous compound 190° C. It is formed from urea at 150°-170° C. with liberation of NH_3.

biuret reaction (*Chem.*). The alkaline solution of biuret gives a reddish-violet coloration on the addition of cupric sulphate. As biuret is readily formed from urea, this reaction serves to identify the latter.

biva'lent, bi— (*Cyt.*). One of the pairs of homologous chromosomes present during meiosis.

bivalent (*Chem.*). See **divalent.**

bi'valve (*Zool.*). Having the shell in the form of two plates, as *Pelecypoda.*

biva'riant (*Chem.*). Having two degrees of freedom.

biven'tral (*Zool.*). (Of muscles) having the ends broad and contractile and joined by a narrow tendon in the middle.

biv'ium (*Zool.*). In *Echinodermata,* the two rays between which the madreporite occurs.

bivol'tine (*Zool.*). Having two broods in each year.

B.L. guns (*Artillery*). Breech-loading guns. These may be either guns or howitzers. The propellant charge is usually contained in a bag of shalloon or silk cloth. See **Q.F. guns.**

black.

See **bone—** **ivory—**
carbon— **lamp—**
gas— **platinum—**

black (*Eng.*). Of parts of castings and forgings not finished by machining; it refers to the dark coating of iron-oxide retained by the surface.

black (*Photog.*). Incapable of reflecting light, and therefore not causing the perception of colour.

black (*Typog.*). A blemish on a printed sheet caused by a space or lead which has risen to the height of type.

black-band iron-ore (*Met., Min.*). A carbonaceous variety of clay-ironstone, the iron being present as carbonate, chalybite (or siderite); occurs in the English Coal Measures.

black body (*Phys.*). A body which, when raised to incandescence, emits a continuous spectrum of light rays, approximated to by carbon and tungsten.

black-body radiation (*Phys.*). The quality and quantity of the radiation, depending solely on its temperature, which is emitted by an ideal 'black body,' that is, one which has no reflecting power but an absorptive power of unity. Such radiation is also emitted from the inside of a cavity. See **Stefan-Boltzmann law, Wien's displacement law.**

black-body temperature (*Phys.*). The temperature at which a 'black body' would emit the same radiation as is emitted by a given radiator at a given temperature. The *black-body temperature* of a carbon-arc crater is about 3500° C., whereas its true temperature is about 4000° C.

black concentrate (*Mining*). The mixture of amalgam gold and magnetite obtained from behind the riffles in a gold sluice.

black copper (*Met.*) The product of the direct reduction of oxidised copper ores in the blast-furnace.

black damp (*Mining*). Carbon dioxide. Actually, air in which the oxygen has been replaced by carbon dioxide as the result of explosion or combustion. Invisible; causes suffocation. See **firedamp.**

black diamond (*Min.*). A variety of crystalline carbon, related to diamond, but showing no crystal form. Highly prized, on account of its hardness, as an abrasive. Occurs only in Brazil. Also called CARBONADO.

black Egyptian ware (*Pot.*). See **basalte.**

black fever (*Med.*). See **kala-azar, Rocky Mountain fever.**

black glass (*Photog.*). An opaque glass, the absorption being due to compounds of manganese and iron.

blackhead (*Vet.*). See **trichomoniasis.**

black-heart malleable cast-iron (*Met.*). See **malleable cast-iron.**

black jack (*Min.*). A popular name for the mineral sphalerite or zinc-blende. See **blende.**

black japan (*Dec.*). A semi-transparent, quick-drying black varnish.

black lava glass (*Min.*). Massive natural glass of volcanic origin occurring at Mt. Hecla, Iceland, Lipari Is., Yellowstone Park, and elsewhere. Jet-black in colour, and vitreous in lustre like glass.

black lead. A commercial form of *graphite* (q.v.).

blackleg (*Vet.*). An acute infection of cattle and sheep due to *Clostridium chauvei* or *Clostridium septique*; usually characterised by crepitant swelling in the muscles of the infected part.

black letter (*Typog.*) A term including Old English, Gothic, and **Tudor Black.**

black-level (*Television*). That percentage of the maximum amplitude possible in a television signal which corresponds to black in the transmitted picture, a less amplitude being concerned with synchronising. Usually between 30% and 40% in a positive video-signal.

black malt (*Brew.*). Malt that has been coloured by the special method of kilning; the colour of stout is due to the proportion of black malt forming the grist.

black mortar (*Build.*). Mortar containing smith's ashes in place of sand; used for pointing walls.

black opal (*Min.*). All opals of dark tint are termed *black opal*, although the colour is rarely black; the fine Australian blue opal, with flame-coloured flashes, is typical.

blackquarter (*Vet.*). See **blackleg.**

black sand (*Foundry*). A mixture of sand and powdered coal forming the floor of an iron foundry.

black tellurium (*Min.*). A rare grey metallic mineral, a sulpho-telluride of gold and lead with some antimony.

black tongue (*Vet.*). A nutritional disease of dogs, similar to human pellagra.

blackwater (*Vet.*). See **Texas fever.**

Black amplifier (*Elec. Comm.*). An amplifier (invented by Black) with reversed retroaction for degeneration.

Black's test (*Chem.*). A test for β-hydroxybutyric acid in urine, based upon the oxidation of this acid to diacetic acid, which can be recognised by the ferric chloride test.

Blackdown Beds (*Geol.*). Coarse sands, with concretions of sandstone, capping the Blackdown Hills to the south of Wellington, Somerset. They belong to the Upper Greensand and are famous for the beautifully preserved silicified fossils they contain.

blackening (*Illum.*). A phenomenon which occurs with electric filament lamps and results in a blackening of the inside of the bulb, owing to particles being shot off the filament as it disintegrates.

blacking (*Foundry*). Carbonaceous material applied as a powder or wash to the internal surface of a mould to protect the sand and improve the finish of the casting.

blacking (*Photog.*). The painting of all interior surfaces of photographic apparatus with dull black paint or varnish, to avoid spurious reflections of light.

blacking mill (*Foundry*). A small mill in which graphite or other carbonaceous material is ground for the preparation of blacking.

bladder (*Bot.*). A device which catches small aquatic animals; present in the bladderwort, and regarded as a modified leaf.

bladder (*Zool.*). Any membranous sac containing gas or fluid; especially the urinary sac of Mammals.

bladderworm (*Med., Zool.*). A form of larval tapeworm or metacestode. See **cysticercus.**

blade (*Bot.*). The flattened part of a leaf, sepal, or petal.

blade (*Elec. Eng.*). The moving part of a knife-switch which carries the current and makes contact with the fixed jaws.

blaes or **blaze** (*Mining*). A Scottish term for the poorly bituminous sandstone, shale, or fireclay in the Coal Measures.

Blagden's law (*Chem.*). For a given salt, the depression of freezing-point is proportional to the concentration of the solution.

Blake-sewn or **McKay-sewn** (*Boots and Shoes*). The name often applied to machine-sewn boots and shoes; after the chain-stitch sewing-machine invented by Lyman Blake *c.* 1850, and improved by McKay.

blanc de chine, blahn^g de shēn' (*Pot.*). A brilliant-white glaze, over a fine white porcelain body.

blanc fixe, blahn^g fēx (*Dec., etc.*). An artificial sulphate of barium.

Blanchard brush (*Photog.*). A smoothing device of calico fixed over glass, for spreading coatings on plates or paper.

blank (*Acous.*). The shaved wax ready for placing on a recording machine for making wax-records with a stylus.

blank (*Eng.*). A piece of metal, shaped roughly to the required size, on which finishing processes are carried out.

blank door (or **window**) (*Build.*). A bricked-up imitation door (or window), used for effect or for symmetry of design.

blank flange (*Eng.*). A disc, or solid flange, used to blank off the end of a pipe.

blank wall (*Build.*). A wall having no opening in it.

blanket (*Textiles*). A thick fabric with fibrous surfaces produced by milling and raising. *Woollen blankets* consist entirely of wool; *union blankets* have a cotton warp, with weft consisting of wool or shoddy, or of wool and cotton scribbled.

blanket (*Print.*). The material covering the impression surface on a rotary press.

blanket pile (*Textiles*). A fairly long nap or pile produced on cloths for bed-covers.

blanket strake (*Mining*). A shallow trough a little less than the width of the ordinary blanket with which it is completely lined. Used, as was Jason's fleece, for catching fine gold or platinum and their associated heavy minerals.

blast. The ignition or detonation of an explosive charge, especially one fired for disintegrating large masses of rock. *

blast (*Met.*). Air under pressure, blown into a furnace.

blast-furnace (*Met.*). A type of smelting furnace in which an air blast is used. Most frequently it means the furnace in which iron-ore is smelted to produce pig-iron, but similar furnaces are used in smelting copper, lead, antimony, tin, cobalt, and nickel ores.

blast-furnace gas (*Fuels*). A gas of low calorific value, a by-product in iron-smelting; used for pre-heating the blast, for steam raising, etc. It may contain up to 30% of carbon monoxide, and have a calorific value of about 90 C.H.V. per cubic foot.

blast main (*Eng*) The main blast air-pipe supplying air to a furnace.

blast pipe (*Eng.*). The exhaust steam pipe in the smokebox of a locomotive, which terminates in a nozzle to provide draught by entraining the flue gases in the steam-jet and exhausting them through the chimney. See **jumper-top blast pipe.**

blast-roasting (*Met.*). Roasting conducted in a Dwight-Lloyd machine, in which roasting is accompanied by sintering. The charge is placed in small boxes, ignited, and air drawn through to burn off sulphur.

blaste'ma (*Bot.*). The axial part of an embryo, but not the cotyledons.

blastema (*Zool.*). Anlage; the protoplasmic part of an egg as distinguished from the yolk.

blaste'niospore (*Bot.*). See **polarilocular spore.**

blast'ic action (*Bot.*). A catalytic action exerted by light on a plant, stimulating the division and enlargement of cells.

blasting (*Acous.*). A marked increase in amplitude distortion due to overloading the capacity of some part of a sound-reproducing system; e.g. attempt to exceed 100% depth of modulation in a radio transmitter, or break of continuity in carbon granules in a carbon transmitter.

blasting (*Civ. Eng., etc.*). The operation of disintegrating rock, etc. by boring a hole in it, filling with gunpowder or other explosive charge, and firing it.

blasting fuse (*Civ. Eng.*). A device consisting of a length of slow-burning composition which delays the firing of an explosive charge sufficiently to allow the person firing it time to get out of danger.

blasto- (Greek *blastos*, bud). A prefix used in the construction of compound terms; e.g. *blastogenesis*, reproduction by budding.

blast'ochyle, —kīl (*Zool.*). Fluid contained in the blastocoel.

blast'ocoel, —sēl (*Zool.*). The cavity formed within a segmenting ovum: cavity within a blastula: primary body cavity: segmentation cavity.

blast'ocyst (*Zool.*). In Mammalian development, a structure resulting from the cleavage of the ovum; it consists of an outer hollow sphere and an inner solid mass of cells; germinal vesicle.

blast'oderm (*Zool.*). In eggs with much yolk, the disc of cells formed on top of the yolk by cleavage.

blastodermic vesicle (*Zool.*). See **blastula.**

blast'odisc (*Zool.*). In a developing ovum, the germinal area.

blastogen'esis (*Gen.*). Transmission of inherited characters by means of germ-plasm only. See also **budding.**

blastogen'ic (*Biol.*). Occurring in, arising from, or pertaining to the germ-plasm: pertaining to hereditary characteristics due to the constitution of the germ-plasm.

blastoid (*Geol.*). An extinct echinoderm, somewhat resembling a crinoid, restricted to rocks of Devonian and Carboniferous age.

blast'okine'sis (*Zool.*). Migration of the embryo in heavily-yolked Insect eggs.

blast'omere (*Zool.*). One of the cells formed during the early stages of cleavage of the ovum.

blastomyco'sis (*Med.*). A term applied to a group of diseases due to infection with different species of blastomycoides.

blast'oparenchy'matous (*Bot.*). Said of an algal thallus which consists of filaments united side by side, and not recognisable as separate filaments.

blast'ophore (*Zool.*). In Birds, the anlage of a plumule: in *Oligochaeta*, central part of spermocyte mass which remains unchanged during the development of the spermatozoa.

blast'opore (*Zool.*). The aperture by which the cavity of the gastrula retains communication with the exterior.

blast'osphere (*Zool.*). See **blastula.**

blast'ostyle (*Zool.*). In *Hydrozoa*, a zooid bearing gonophores, and having the tentacles and mouth reduced or absent.

blastozo'ite (*Zool.*). See **blastozooid.**

blastozo'oid (*Zool.*). In *Urochorda*, a zooid which arises by budding. Cf. *oözooid*. See also **blastostyle.**

blast'ula (*Zool.*). A hollow sphere, the wall of which is composed of a single layer of cells, produced as a result of the cleavage of an ovum.

blastulation (*Zool.*). A form of cleavage resulting in the production of a blastula.

Blatt'haller loudspeaker (*Acous.*). A loudspeaking receiver using a zig-zag ribbon-drive behind a flat surface, which generates a sound-wave of high intensity.

Blat'tnerphone (*Acous.*). An immediate-reproducing recording system using modulation in the magnetisation of a steel tape, which is passed at high speed between pole tips carrying magnetising and reproducing coils. Also called STILLE MACHINE.

Blavier's text (*Elec. Eng.*). A method of locating a fault on an electric cable; resistance measurements are taken with the far end of the cable free, and again with it earthed.

blazing-off (*Eng.*). A rough workshop method of tempering hardened steel by dipping in oil, which on ignition heats the piece to the appropriate tempering temperature.

bleach-out process (*Photog.*). A system of colour printing involving the decolourising of dyes by exposing them through transparencies.

bleached cotton cloths (*Textiles*). Cloths which have been finished white by a bleaching process, the natural or grey colour being changed by oxidation.

bleaching (*Paper*). The use of chlorine gas or bleaching powder (chloride of lime) to bring raw materials to the desired whiteness.

bleaching (*Photog.*). The removal of reduced silver after development, so that the remaining silver halide, which has not been developed because of its insufficient exposure to light, can be further developed. The resulting image is a positive of the original object. See **reversal process.**

bleaching (*Textiles*). The process of removing impurities and the natural colour from fibres, yarns, and fabrics, by chloride of lime or bleaching powder, so as to render them white.

bleaching of the visual purple (*Optics*). The whitening of the visual purple of the retina when subjected to the incidence of strong light.

bleaching powder (*Chem.*). Commercial bleaching powder consists of calcium hydroxide saturated with chlorine. The commercial value depends on the amount of available chlorine.

bleb (*Med.*). A small blister or vesicle containing clear fluid.

bleed (*Typog.*). When illustrations are arranged in a page so that the outside edges are guillotined in binding, they are said to *bleed off*. In ordinary book-binding the term is used when margins are unintentionally overcut and the text mutilated.—*adj.* **bled.**

bleeder (*Med*). One afflicted with haemophilia.

bleeder resistance (*Elec. Comm.*). A resistance placed across the secondary of a transformer to regulate its response curve, especially when the transformer is not loaded with a proper terminating resistance.

bleeding (*Bot.*). The exudation of sap from wounds.

bleeding (*Civ. Eng.*). The oozing to the surface of the grouting medium used in some road surfacings to fill the interstices between the stones; it forms gummy patches in hot weather.

bleeding (*Eng.*). A method of improving the thermal efficiency of a steam plant by withdrawing a small part of the steam from the higher-pressure stages of a turbine in order to heat the feed-water.

bleeding (*Paint.*). A defect in a painted or varnished surface, resulting from an under coat of a different colour working through the upper coat, owing to the latter's having partially dissolved the under coat.

bleeding (*Photog.*). Diffusion of dye from an image.

bleeding (*Textiles*). In a yarn or fabric composed of two or more colours, a defect due to the running of the darker colours, and consequent staining of the lighter colours, during finishing or washing.

bleeding pressure (*Bot.*). See **root pressure.**

blemmat'ogen (*Bot.*). A layer of hyphae, usually with thickened walls, forming the outer covering of the button of an agaric.

blend (*Paint.*). (1) To mix two pigments in order to produce a desired shade.—(2) To spray, stipple, sponge, or otherwise apply paint so that one shade gradually passes into another.

blend (*Woollen*). A mixture consisting of different qualities or of different kinds of fibrous materials, either raw or partly processed.

blende or **zinc blende** (*Min.*). Zinc sulphide, the chief ore of zinc, occurring in metalliferous veins in association with galena, etc. Crystallises in cubic system. Also called BLACK JACK, SPHALERITE (esp. U.S.).

blended inheritance (*Gen.*). Inheritance in which the characters of two dissimilar parents appear to be blended in their offspring; e.g. skin colour in mulattoes.

blender (*Woollen*). The person responsible for the production of blends.

blennorrha'gia (*Med.*). Discharge of mucus, usually from the genital organs, due to gonorrhoea.

blennorrhoea, —rē'a (*Med.*). See **blennorrhagia.** —ACUTE BLENNORRHOEA, purulent conjunctivitis, due usually to infection with the gonococcus.

blephar-, blepharo- (Greek *blepharon*, eyelid). A prefix used in the construction of compound terms; e.g. *blepharoptosis*.

bleph'arism (*Med.*). Spasm of the eyelids.

blephari'tis (*Med.*). Chronic inflammation of the eyelids.

blepharochal'asis (*Med.*). Laxity of the skin of the eyelid.

blepharoconjunctivitis (*Med.*). Inflammation of the eyelids and of the conjunctiva.

blepharophimo'sis (*Med.*). Narrowing of the palpebral fissure.

bleph'aroplast (*Bot., Zool.*). A deeply staining granule, possibly a centrosome, having a direct connexion with the base of a locomotor organelle, usually a flagellum. See also **basal body.**

blepharople'gia (*Med.*). Paralysis of the muscles of the eyelid.

blepharopto'sis (*Med.*). Drooping of the upper eyelid, due to paralysis of its muscles.

bleph'arospasm (*Med.*). Spasm of the orbicular muscle of the eyelid.

blimp (*Aero.*). Colloquial for *non-rigid airship.*

blimp (*Cinema.*). A temporary cover for apparatus, such as cameras in sound-film studios, to mitigate the effect of noise.

blind (*Build.*). A shade for a window.

blinds (*Vet.*). Two leather or cloth fittings of the headstall, which are united across the eyes of horses as a means of restraint preceding operation.

blind apex (*Mining*). The upper edge of a vein reef or lode, near the surface but overlain by other formations; a 'sub-outcrop.'

blind arcade (*Build.*). See **arcade.**

blind arch (*Build., Civ. Eng.*). A closed arch which does not penetrate the structure; used for ornamentation, to make one face of a building harmonise with another in which there are actual arched openings.

blind area (*Build.*). A sunken space round the basement of a building, broken up into lengths by small cross-walls, which support the earth-retaining wall but restrict ventilation.

blind current, blind power or volt-amperes (*Elec. Eng.*). See **reactive current, reactive power or volt-amperes.**

blind drift (*Mining*). (1) A drift, heading, or level not connected with other workings.—(2) An inverted syphon for water in a mine.

blind-landing system (*Radio*). A system for indicating, by radio, to the pilot of an airplane his position relative to the ground, whilst landing. In one form, it consists of a short-wave directional transmitter, whose contours of constant field-strength lie along the glide paths.

blind lode, blind vein (*Mining*). A lode with a sub-outcrop, i.e. no outcrop to the surface.

blind monitoring (*Elec. Comm.*). The control of microphone outputs in broadcasting, particularly in outside broadcasts, when the operator is out of sight of the persons originating the transmission.

blind mortise (*Join.*). A mortise which does not pass right through the piece in which it is cut.

blind P (*Typog.*). The paragraph mark ¶. Sometimes used for decorative effect at the beginning of paragraphs. The sixth in order of the reference marks directing the reader's attention to a footnote.

blind spot (*Radio*). A point within the normal range of a transmitter, at which the field strength is abnormally small. Usually due to the interference pattern produced by surrounding objects.

blind spot (*Zool.*). In Vertebrates, an area of the retina where there are no visual cells (due to the exit of the optic nerve), and over which no external image is perceived.

blinding, blind tooling (*Bind.*). The operation of impressing on a book-cover design or lettering which is not to be gilt or otherwise filled in.

blinding (*Civ. Eng.*). The process of sprinkling small chippings of stone over a tar-dressed road surface.

blindness. See **colour blindness, nyctalopia.**

blink microscope (*Astron.*). An instrument in which two photographic plates of the same region are viewed simultaneously, one with each eye, any difference being detected by a device which alternately conceals each plate in rapid succession.

blister (*Acous.*). A defect in a gramophone record consequent on the release of gases (e.g. water vapour) during pressing.

blister (*Med.*). A thin-walled circumscribed swelling in the skin containing clear or blood-stained serum; caused by irritation.

blister (*Met.*). A raised area on the surface of solid metal produced by the formation of gas within the metal while it is hot and plastic.

blister (*Paint.*). See under **blistering.**

blister (*Photog.*). A defect in photography, arising from the detachment of the emulsion layer from the vehicle or support.

blister bar (*Met.*). Wrought-iron bars impregnated with carbon by heating in charcoal. Used in making crucible steel.

blister cloth (*Textiles*). A worsted fabric designed to present a raised and irregular surface, as in crepons and crimps.

blister copper (*Met.*). An intermediate product in the manufacture of copper. It is produced in a converter, contains 98·5-99·5% of copper, and is subsequently refined to give commercial varieties; e.g. *tough pitch, deoxidised,* and *O F.H.C.*

blister steel (*Met.*). Wrought-iron bars impregnated with carbon by heating in charcoal. Before 1740 this was the only steel available. Since then, most blister steel has been melted to give crucible steel, most of which is now made, however, from other materials.

blistering (*Paint.*). A paintwork defect arising when the painted surface is subjected to direct heating, and due to one of a number of different causes. The painted surface swells up locally to form *blisters.*

bloating (*Vet.*). Acute indigestion of ruminating animals resulting in the rapid dilatation of the rumen and reticulum with gas.

Blochmann's corpuscles (*Zool.*). Minute greenish bodies occurring in many Insect eggs, and representing independent organisms capable of cultivation in artificial media.

block (*Carp.*). A small piece of wood glued into the interior angle between two jointing pieces of board, in order to make the joint more rigid.

block (*Eng., etc.*). The housing holding the pulley or pulleys over which the rope or chain passes in a lifting tackle.

block (*Med.*). See **heart-block, nerve-block.**

block (*Mining*). A stop used at the top of an incline to prevent the return of wagons.

block (*Print.*). A term applied to any letterpress printing plate, usually of copper, zinc, or stereotype metal, brought to type height by mounting on wood. *Process blocks* (q.v.) may be classed as half-tone, line, or combined line and tone.

block brake (*Eng.*). A vehicle brake in which a block of cast-iron is forced against the rim of the revolving wheel, either by hand-power, electromagnetic mechanism, or fluid-pressure acting on a piston. See **air brake, electromagnetic brake.**

block clutch (*Eng.*). A friction clutch in which friction blocks or shoes are forced inwards into the grooved rim of the driving member, or expanded into contact with the internal surface of a drum. See **friction clutch.**

block coal (*Mining*). A special type of coal which breaks into cubical blocks.

block gauge (*Eng.*). A block of hardened steel having its opposite faces accurately ground flat and parallel and separated by a definite distance—the *gauge distance.* It is used for checking the accuracy of other gauges and measuring instruments.

block grease (*Lubricants*). See **greases.**

block-holing (*Mining*). The operation of bull-dozing, popping, or breaking up large boulders or pieces of rock by means of explosive.

block-in-course (*Masonry*). A type of masonry, used for heavy engineering construction, in which the stones are carefully squared and finished to make close joints, and the faces are hammer-dressed.

block lava (*Geol.*). See under **ropy lava.**

block pavement (*Civ. Eng.*). A road surfacing formed of blocks of stone or wood or other material quite or nearly rectangular in shape, as distinct from a *sheet pavement* (q.v.).

block plan (*Build.*). A plan of a building site, showing the outlines of existing and proposed buildings.

block plane (*Carp.*). A small plane about 6 in. long which has no cap iron and has the cutting-bevel reversed; used for planing end grain.

block prism (*Photog.*). A cube of glass, slit along its diagonal and half-silvered, for splitting the beam in a three-colour beam-splitting camera.

block tin (*Plumb.*). Pure tin.

blocked impedance (*Elec. Comm.*). The input electrical impedance of an electro-mechanical transducer, when the mechanical system is prevented from moving. See **motional impedance.**

blocked-out ore (*Mining*). Ore that has been exposed and sampled on four sides.

blocking (*Bind.*). The process of stamping a design on a book-cover by means of heated tools or a die.

blocking (*Carp.*). The operation of securing together two pieces of board by gluing blocks of wood in the interior angle.

blocking condensers (*Teleg.*). Large condensers placed in series with the ends of a submarine cable, to improve the definition of arriving signals. See **double block, single block.**

blocking course (*Masonry*). A course of stones laid on the top of a cornice.

blocking of heads (*Furs*). Shaping the damped head-skins on a model block.

blocking-out (*Photog.*). The use of Indian ink or other opaque pigment for covering parts of negatives so that they print white.

blocking press (*Bind.*). A press for impressing, by means of heated blocks, designs and lettering on book covers and cases; used chiefly for publishers' case work. A blocking machine carries out the process mechanically.

Blondel arc-lamp (*Illum.*). An enclosed-flame arc-lamp in which a special chamber is provided for the condensation of the fumes.

Blondel oscillograph (*Elec. Eng.*). The earliest form of moving-coil oscillograph, subsequently perfected by Duddell.

blondin (*Civ. Eng., etc.*). See **cable-way.**

blood (*Physiol.*). A fluid circulating through the tissues of the body, performing the functions of transporting oxygen, nutrients, and hormones and carrying waste products to the organs of excretion. It plays an important rôle in maintaining a uniform temperature in the body in warm-blooded organisms. Its specific gravity in Man is about 1·054-1·060, and it has an alkaline reaction. Its chief constituents are: water (77·5-79%), solids including proteins, lipins, nitrogenous and non-nitrogenous extractives, enzymes, hormones and immune bodies, blood sugar, vitamins, and inorganic substances (the chlorides of sodium, potassium, magnesium, calcium), organic and inorganic phosphoric acid, organic iron compounds, and gases (oxygen, carbon dioxide, nitrogen). See **blood groups***.

blood albumin (*Chem.*). An albuminous product prepared from blood serum; brown amorphous lumps, soluble in water and alcohol.

blood cell (*Physiol.*). See **haematoblast.**

blood corpuscle (*Physiol.*). A cell normally contained in suspension in the blood. See **erythrocyte, leucocyte.**

blood crystals (*Physiol.*). Crystals of haemoglobin, or one of its derivatives, which can be obtained by extracting blood with chloroform or ether, or by treating it with glacial acetic acid.

blood dust (*Physiol.*). Neutral fats carried by the blood-plasma in the form of very fine globules.

blood gills (*Zool.*). In some aquatic Insects, respiratory outgrowths of the body-wall containing blood, but not, as a rule, tracheae.

blood islands (*Zool.*). In developing Vertebrates, isolated syncytial accumulations of reddish mesoderm cells containing primitive erythroblasts, which give rise respectively to the walls of the blood-vessels and to the red corpuscles.

blood plasma (*Physiol.*). The fluid part of the blood, under normal conditions.

blood platelet (*Physiol.*). See **thrombocyte.**

blood serum (*Physiol.*). The fluid part of the blood remaining after the fibrin and the corpuscles have been removed.

blood stick (*Vet.*). A wooden instrument for striking a fleam during the operation of phlebotomy on horses or cattle.

bloodstone (*Min.*). Cryptocrystalline silica, a variety of chalcedony, coloured deep-green, with flecks of red jasper; often used in signet rings. Also called HELIOTROPE.

blood transfusion (*Med.*). See **transfusion.**

blood-vessel (*Physiol.*). An enclosed space, with well-defined walls, through which blood passes. See **artery, vein, capillary.**

bloom (*Bot.*). A covering of grains, short rods, or crusts of waxy material occurring on the surface of some leaves and fruits.

bloom (*Build.*). Efflorescence on a brick wall.

bloom (*Leather*). A deposit, of greyish colour, formed (by ellagic acid) on the fibres of leather during tanning.

bloom (*Met.*). An intermediate product in the rolling of steel. The term is correctly applied when the cross-section is more than 36 sq. in., smaller sizes being called *billets*, but the distinction is not always observed. See also **ball** (*Met.*), **billet** (*Met.*).

bloom (*Paint.*). See **blooming.**

bloom (*Photog.*). A film of moisture on the surface of a lens, film, or glass plate.

bloom side (*Leather*). The hair side of a hide.

bloomary or **bloomery** (*Met.*). The furnace used in the extraction of iron from its ores by the direct process. Now of historical interest.

blooming (*Paint.*). A varnishing defect in which a bloom or cloudy film appears on a newly varnished surface; due usually to a damp atmosphere.

blooming mills (*Met.*). The rolling mills used in reducing steel ingots to blooms. Called *cogging mills* in England, and not always distinguished from *billet* (or *slab*) *mills.*

bloop (*Cinema.*). A dull thud sometimes heard in sound-film reproduction; caused by joints made in the negative sound-track before printing the positive projection prints.

blooping patch (*Cinema.*). A black patch painted on the negative sound-track to give a gradual change in the exposure area and so prevent a bloop on projecting the positive print.

blotting-paper (*Paper*). Unsized absorbent rag paper. The cheaper grades are printings which have not been sized.

blow (*Mining*). (1) A sudden inrush of gas from a coal-seam or from a fissure in the strata.—(2) An improperly charged or fired hole in a rock face which fails to break its proper load; a *blow-out.*

blow-and-blow machines (*Glass*). Machines in which the glass is shaped in two stages, but each time by blowing, as opposed, for example, to pressing or sucking.

blow back (*I C. Engs.*). The return, at low speeds, of some of the induced mixture through the carburettor of a petrol-engine; due to late closing of the inlet valve during compression.

blow-by (*I.C. Engs.*). The gas which leaks past the piston of an internal-combustion engine during the period of maximum pressure.

blow-down plant (*Eng.*). An arrangement for the continuous *blowing-down* (q.v.) of a steam-boiler, as distinct from the intermittent use of a blow-down valve.

blow-down valve (*Eng.*). A valve fitted at the bottom of a boiler for the purpose of *blowing-down* (q.v.).

blow-hole (*Geol.*). An aperture near a cliff-top through which air, compressed in a sea-cave by breaking waves, is forcibly expelled.

blow-holes (*Met.*). Gas-filled cavities in solid metals. They are usually formed by the trapping of bubbles of gas evolved during solidification (see **gas evolution**), but may also be caused by steam generated at the mould surface, air entrapped by the incoming metal, or gas given off by inflammable mould dressings.

blowlamp (*Build.*). A portable apparatus for applying intense local heat, used by painters, electricians, and plumbers. Called in America a BLOWTORCH.

blow-out coil (*Elec. Eng.*). See **magnetic blow-out.**

blowpipe (*Chem.*). A small laboratory apparatus using a mixture of air under pressure and coal gas in order to give a hot localised flame. It is much used for laboratory glass blowing and glass bending and also in blowpipe analysis. See also **borax bead.**—(*Glass*) A metal tube, some 4-5 ft. long, with a bore of ¼-⅜ in. and a thickened nose which is dipped into molten glass and withdrawn from the furnace. The glass is subsequently manipulated on the end of the blowpipe and blown out to shape. Also called BLOWING-IRON.

blowtorch (*Build.*). See **blowlamp.**

blower (*Eng.*). A rotary air-compressor for supplying a relatively large volume of air at low pressure. See **air-compressor, supercharger.**

blower (*Locomotives*). A ring-shaped perforated pipe, encircling the top of the *blast-pipe* (q.v.) in the smokebox, to which steam is supplied while the engine is standing, the jets providing sufficient draught to keep the fire going. See **blast-pipe.**

blower (*Mining*). (1) A fissure or thin seam which discharges a quantity of coal-gas.—(2) An auxiliary ventilating appliance, e.g. a fan or venturi tube, for supplying air to subsidiary working places or to dead-ends.

blowing (*Build.*). A plastering defect in which a conical piece may be blown out of a finished plastered surface owing to moisture getting to an imperfectly slaked particle of quicklime in the work. Also called PITTING.

blowing current (*Elec. Eng.*). A term used in connexion with fuse links to denote the current (d.c. or r.m.s.) which will cause the link to melt.

blowing-down (*Eng.*). The operation of opening a valve in the lowest part of a steam-boiler in order to eject sludge.

blowing engine (*Eng.*). The combined steam- or gas-engine and large reciprocating air-blower for supplying air to a blast-furnace.

blowing-in (*Met.*). The operation of starting up a blast-furnace.

blowing-iron (*Glass*). See **blowpipe.**

blowing machines (*Glass*). Machines for forming molten glass into articles by the use of air under pressure.

blowing-out (*Met.*). The operation of stopping down a blast-furnace.

blowing room (*Textiles*). In a cotton-spinning mill, the room containing the bale breakers, openers, and scutchers, in which air currents are an important factor in removing dust and impurities.

blown (*I.C. Engs.*). A colloquial term applied to a supercharged petrol-engine. See **boost.**

blown casting (*Foundry*). A casting spoilt by the inclusion of blow-holes.

blown oil (*Eng.*). Oil of vegetable origin subjected to partial oxidation by blowing air through it, to increase its viscosity for purposes of lubrication.

blown sand (*Geol.*). Sand which has suffered transportation by wind, the grains in transit developing a perfectly spherical form (*millet-seed sand*); grain-size is dependent upon the wind velocity. See also **sand dunes.**

blub (*Build.*). A swelling on the surface of newly plastered work.

blubber (*Zool.*). In marine Mammals, a thick fatty layer of the dermis.

blubbering (*Leather*). The process of drumming seal and similar skins in warm water, after soaking, to liquefy the fat so that it may be expressed.

blue (*Paint.*). A primary colour. Blue pigments are obtained from vegetable, mineral, and artificial substances.

blue asbestos (*Min.*). A form of crocidolite, silicate of sodium and iron, occurring in the Asbestos Mountains (Griqualandwest, S. Africa) and (rarely) elsewhere.

blue billy (*Met.*). The residue left after burning off the sulphur from iron sulphide ores.

blue black (*Paint.*). An alternative name for *ivory black.*

blue bricks (*Build.*). Bricks (made chiefly in Staffordshire and North Wales) which are famous for their strength and durability, and form the best quality engineering bricks.

blue brittleness (*Eng.*, *Met.*). Lack of malleability in iron and steel between 200° and 400° C. The term is derived from the fact that in this range a blue oxide film forms on the surface.

blue disease (*Med.*). See **Rocky Mountain fever.**

blue-glow (*Thermionics*). The visible evidence of ionisation in a thermionic tube, due to the presence of gas.

blue-green algae (*Bot.*). See **Myxophyceae.**

blue ground (*Min.*). Decomposed agglomerate, occurring in volcanic pipes in S. Africa and Brazil; it contains a remarkable assemblage of ultra-basic plutonic rock-fragments (many of large size) and diamonds.

blue gum (*Timber*). A strong, brownish-coloured wood from Australia, used for piles, heavy framing, and wood paving blocks.

blue john (*Min.*). A massive, frequently banded, variety of the mineral fluorite, occurring typically in Derbyshire.

blue lead (*Chem.*). A name used in the industry for metallic lead, to distinguish it from other lead products such as white lead, orange lead, red lead, etc.

Blue Lias (*Geol.*). A formation of Lower Jurassic age, consisting essentially of interbedded bluish clays and thin limestones. Approximately the lower half of the Lower Lias is of this type.

blue metal (*Met.*). A powder, consisting of particles of zinc coated with oxide, which constitutes a portion of the product obtained in the extraction of zinc by distillation.

blue of the sky (*Meteor.*). Sunlight is 'scattered' by molecules of the gases in the atmosphere and by dust particles. Since this scattering is greater for short waves than for long waves, there is a predominance of the shorter waves of visible light (that is blue and violet) in the scattered light which we see as the blue of the sky.

blue-print paper (*Paper*). A paper made from pure rags, coated with a solution of ammonium chloride and white of egg. Sometimes used by blockmakers to supply a rough blue-on-white or white-on-blue proof before blocks are finished.

blue printing (*Photog.*). See **negative cyanotype.**

blue stain (*Timber*). A form of sapstain producing a bluish discoloration; caused by the growth of fungi which, however, do not greatly affect the strength of the wood.

blue-tongue (*Vet.*). See **malarial catarrhal fever of sheep.**

blue vitriol (*Min.*). A popular name for the hydrous sulphate of copper, which is a decomposition product of chalcopyrite. It occurs in solution in the waters issuing from copper mines; by reason of its presence, iron is dissolved, and copper is deposited. See **chalcanthite.**

blue water gas (*Fuels*). A mixture of approximately equal proportions of carbon monoxide and hydrogen made by passing steam over incandescent coke in special generators; calorific value per cu. ft. at 60° F., 300-310 B.Th.U. gross, 280-290 net. Usually converted into *carburetted water gas* (q.v.).

blueing (*Eng.*). The production of a blue oxide film on polished steel by heating in contact with saltpetre or wood ash; either to form a protective coating, or incidental to annealing.—(*Horol.*) For hands, screws, etc., it is used for the purpose of appearance, but for springs, where it is necessary to obtain the desired elastic properties, it must be produced by thermal treatment.

blueing (*Paint.*). White or light-blue patches appearing on surfaces covered with paint containing Prussian blue, or in varnish over Prussian blue or Brunswick green.

blueing (*Pot.*). A process for whitening yellow lead glazes by adding a small quantity of cobalt.

blueing (*Worsted*). The process of neutralising a yellowish tint in wool by tinting it with a pale-blue colour, in order to obtain a better white appearance.

blunger (*Pot.*). A cylindrical vessel containing a rotating shaft with fixed knives, used for amalgamating clay with water in making slips.

blur (*Acous.*). The introduction of alien frequencies into reproduced sound, so that the sounds are no longer distinct and easily recognisable.

blur factor (*Acous.*). The measure of acoustic blur. It is the root of the ratio of the power of the unwanted tones to the power of the wanted tones in the output of the system.

blur level (*Acous.*). The relative power level, in decibels, of the alien tones to the wanted tones, as a consequence of non-linear distortion in a sound-reproducing system.

blurb (*Print.*). A short note by the publisher recommending a book or its author. Usually printed on the dust-jacket or at the beginning of the preliminary matter.

blushing (*Paint.*). A condition in which a cloudy film appears on a newly lacquered surface; due usually to too rapid drying or to a damp atmosphere.

B.M. (*Surv.*). The common abbrev. for *bench mark.*

B.M.E.P. (*Eng.*). Abbrev. for *brake mean effective pressure.*

board (*Elec. Eng.*). See **control-board, distribution-board.**

board (*Timber*). Timber cut to a thickness of less than 2 in., and to any width from 4 in. upwards.

boards (*Bind.*). A general term for mill-boards, strawboards, etc. used for book-covers.

boards (*Paper*). Pasteboards or pulp boards in folio.

board-and-brace work (*Carp.*). Work consisting of boards grooved along both edges, alternating with thinner boards fitting into the grooves.

board, cordless (*Teleph.*). See **cordless board.**

board drop stamp (*Eng*). A stamping machine in which the frictional grip of opposed rollers on either side of a vertical board lifts a tup, which falls when the roller pressure is released.

board foot (*Build.*). The unit of measurement in the board-measure system, being a piece of timber of 1 in. thickness by 12 in. square. A *standard* contains 1980 board feet.

board-measure (*Timber*). A method of measuring timber in quantity, the unit being a piece 1 in. thick by 12 in. square, i.e. one-twelfth of a cubic foot. Cf. *surface-measure.*

board stretcher (*Furs*). A light-wood board on which skins, when being dried, are stretched by means of rivets.

Board of Trade panel (*Elec. Eng.*). This is the panel on a traction switchboard which contains the switches and instruments for ascertaining whether the Board of Trade requirements regarding earth-leakage currents, etc. are being carried out.

Board of Trade Unit (*Elec.*). The commercial unit of electrical energy, equal to one kilowatt-hour. Abbrev. **B.T.U.** (Abbrev. B.O.T. is obsolete.)

boarding (*Leather*). A process for accentuating the natural grain marks on tanned hides. See **graining.**

boarding joists (*Carp.*). Joists to which boards are fixed.

boardy feel (*Textiles*). A term used to indicate the feel or handle of a fabric that is exceptionally hard. This may be due to oversetting, or to a finishing process.

Boas' test (*Chem.*). A test for the detection of free hydrochloric acid in gastric juices, consisting in the formation of a carmine colour in the presence of an alcoholic solution of resorcinol and sucrose.

boasted ashlar (*Masonry*). See **chiselled ashlar.**

boasted joint surface (*Masonry*). The surface of a stone which has been worked over with a boasting chisel until it is covered with a series of small parallel grooves, thus forming a key for the mortar at the joint.

boasted work (*Masonry*). See **drove work.**

boaster (*Masonry*). A steel chisel having a cutting edge 2 in. wide; used by masons for dressing stone.

boasting (*Masonry*). The operation of dressing stone with a broad chisel and mallet.

boasting chisel (*Masonry*). . A steel chisel having a fine broad cutting edge; used by masons for preparing a stone surface prior to finish-dressing with a broad tool.

boat (*Illum.*). A structure, extended and suspended, containing a number of lights the illumination from which is diffused through glass panels.

boat deck (*Ship Constr.*). A deck provided on some ships for the sole purpose of housing life-boats, although it may be used for additional purposes when so provided.

boat scaffold (*Build.*). See **cradle scaffold.**

bob. The hanging weight at the end of a plumb-line.—Specifically (*Horol.*) the weighted mass at the end of a pendulum. For the ordinary pendulum-clock, with a lenticular bob, the length of the equivalent simple pendulum is approximately at the centre of the bob.

bob-weight (*Eng.*). A weight used to counter-balance some moving part of a machine. See **balance weight.**

bobbin (*Elec. Eng.*). A flanged structure intended for the winding of a coil. Also called a SPOOL.

bobbin (*Textiles*). In weaving, a wooden spool on which yarn is wound. Spools for holding warp yarn have flanges; those for holding weft are without flanges.

bobbin net (*Textiles*). A fine quality of machine-made lace, with a twisted and traversed mesh.

bobbin width (*Worsted*). The length of fabric that can be produced from a bobbin of weft.

bobbin winding (*Elec. Eng.*). A term used in connexion with the windings of transformers to denote a winding in which all the turns are arranged on a bobbin, as opposed to a winding in which the turns are in the form of a disc. It is generally used for the high-voltage windings of small transformers.

Bobrovs'ka garnet (*Min.*). See **Uralian emerald.**

B.O.D. (*San. Eng.*). Abbrev. for *bio-chemical oxygen demand.* The amount of oxygen absorbed in purifying trade wastes, sewage, etc.

bod (*Foundry*). A ball of clay used to close the tap-hole of a furnace or cupola.

Bode's law (*Astron.*). A purely empirical numerical relation, discovered by Bode, which expresses with fair approximation the relative mean distances of the planets from the sun, starting with Mercury. It is obtained by adding 4 to each of the series, 0, 3, 6, 12, 24, 48, 96, 192, giving the resulting sequence, 4, 7, 10, 16, 28, 52, 100, 196.

bodkin (*Typog*). A small steel spike set in a wooden handle. Used to raise individual type letters from the forme when correcting.

body (*Paint.*). The degree of opacity possessed by a pigment.

body (*Typog.*). (1) The measurement from top to bottom of a type, rule, etc. The unit is the *point,* 72 points amounting to one inch. Thus 12-point gives six lines to the inch.—(2) BODY OF A WORK, the text of a volume, distinguished from the preliminary matter, such as title and contents, and the appendices and indexes.

body cavity (*Zool.*). The perivisceral space, or cavity, in which the viscera lie; a vague term, sometimes used incorrectly to mean *coelom* (q.v.).

body cell (*Bot.*). A cell in a pollen grain of *Gymnospermae,* from which the male nuclei are set free.

body cell (*Zool.*). Somatic cell. Cf. *germ cells.*

body-central cubic structure (*Met., Min.*). In crystals, an arrangement of atoms which may be imitated by packing spheres; fairly common in metal crystals. The atomic centres are disposed in space in such a way that they may be supposed to be situated at the corners and centres of a set of cubic cells.

body-centred lattice (*Chem.*). One in which lattice-points are situated at the centres of unit cells.

body stalk (*Zool.*). In some Mammals, a band of mesoderm connecting the chorion with the embryo posteriorly, and representing the commencement of the allantois.

body wall (*Zool.*). The wall of the perivisceral cavity, comprising the skin and muscle layers.

B.O.E. sill (*Build.*). Abbrev. for *brick-on-edge sill* (q.v.).

Boettger's test, bĕt′ger *Chem.*). A test for the presence of saccharoses, based upon the reduction of bismuth subnitrate to metallic bismuth in alkaline solution.

Boffle (*Acous.*). A box baffle in which the loud-speaking diaphragm is mounted in the centre of one face of the box, the opposite side being open and the interior accommodating acoustic absorbing material. (Trade-name.)

bog iron-ore (*Min.*). Hydrated iron-oxide deposited in marshy places, perhaps by the action of iron bacteria.

bog spavin (*Vet.*). Dilatation of the capsule of the tibio-tarsal joint of the horse.

Boghead Coal (*Min*). A type of coal consisting largely of resins, waxes, wind-borne spores, and pollen cases. Originated in deeper, more open parts of the coal swamps than ordinary household coals. Essentially a spore-coal. See also **tasmanite.**

bogie or **bogie truck** (*Eng.*). A four- or six-wheel truck of short wheelbase, which forms a pivoted support at one or both ends of a long rigid vehicle such as a locomotive or coach.

Bohemian garnet (*Min.*). Yellowish-red crystals of the garnet *pyrope,* occurring in large numbers in the Mittelgebirge in Bohemia, and cut and sold at Bilin.

Bohemian ruby (*Min.*). Not ruby at all but the much less valuable mineral *rose quartz.*

Bohemian topaz (*Min.*). See **citrine.**

Bohr atom (*Phys.*). See **Bohr theory.**

Bohr theory (*Phys.*). A combination of the Rutherford conception of the atom as a central, positively-charged nucleus surrounded by planetary electrons, with the quantum theory, which restricts the permissible orbits in which the electrons can revolve. The jump of an electron to an orbit of smaller radius is accompanied by the emission of monochromatic radiation.

boil (*Acous.*). Extraneous sound accidentally added to the sounds recorded on a wax-blank, before processing.

boil (*Med.*). A deep-seated infection (with the *Staphylococcus aureus*) of a hair follicle, resulting in a painful, red swelling, which eventually suppurates.

boiled oil (*Paint.*). Linseed-oil raised to a temperature of from 400-600° F. and admixed with driers.

boiler (*Eng.*). A steam-generator consisting of water-drums and tubes which are exposed to the heat of a furnace and arranged so as to promote rapid circulation.

See **Cornish—**
flash—
forced-circulation—
Lancashire—
locomotive—
marine—
Scotch—
water-tube—

boiler capacity (*Eng.*). The weight of steam, usually expressed in pounds per hour, which a boiler can evaporate when steaming at full load output.

boiler compositions (*Eng.*). Chemicals introduced into boiler feed-water in order to inhibit scale-formation and corrosion, or to prevent priming or foaming. Examples are sodium compounds (such as soda ash), organic matter, and barium compounds.

boiler covering (*Eng.*). See **lagging.**

boiler cradles (*Ship Constr.*). See **keelson.**

boiler crown (*Eng.*). The upper rounded plates of a boiler of the shell type.

boiler efficiency (*Eng.*). The ratio of the heat actually supplied by a boiler in heating and evaporating the feed water to the heat supplied to the boiler in the fuel. It may vary from 60% to 90%.

boiler feed-water (*Eng.*). The water pumped into a boiler for conversion into steam, usually consisting of condensed exhaust steam and 'make-up' fresh water treated to remove air and impurities.

boiler fittings and mountings (*Eng.*). See **blow-down valve, feed check-valve, pressure gauge, safety valve, stop valve, water gauge.**

boilermaker's hammer (*Eng.*). One with ball or straight and cross panes; used for caulking, fullering, and scaling boilers.

boiler plate (*Eng.*). Mild steel plate, generally produced by the open-hearth process; used for the shells and drums of steam-boilers.

boiler pressure (*Eng.*). The pressure at which steam is generated in a boiler. It may vary from little over atmospheric pressure, for heating purposes, to 1500 lbs. per sq. in. and over for high-pressure turbines.

boiler scale (*Eng.*). A hard coating, chiefly calcium sulphate, deposited on the surfaces of plates and tubes in contact with the water in a steam-boiler. If excessive, it leads to overheating of the metal and ultimate failure.

boiler setting (*Eng.*). The supporting structure on which a boiler rests; usually of brick for land boilers and of steel for marine boilers.

boiler stays (*Eng.*). Screwed rods or tubes provided to support the flat surfaces of a boiler against the bursting effect of internal pressure.

boiler test (*Eng.*). (1) A hydraulic-pressure test applied to check water-tightness under pressure greater than the working pressure.—(2) An efficiency test carried out to determine evaporative capacity and the magnitude of losses.

boiler trial (*Eng.*). An efficiency test of a steam-boiler, in which the weight of feed-water and of fuel burnt are measured, and various sources of loss assessed.

boiler tubes (*Eng.*). Steel tubes forming part of the heating surface in a boiler. In water-tube boilers the hot gases surround the tubes; in locomotive and some marine boilers the gases pass through the tubes.

boiling (*Heat*). The very rapid conversion of a liquid into vapour by the violent evolution of bubbles; it occurs when the temperature reaches such a value that the saturated vapour pressure of the liquid equals the pressure of the atmosphere.

boiling-off (*Textiles*). The removal of the sericin, or natural gum, from silk yarn by a method of scouring. This adds to the lustre and softness of the silk but entails loss of weight. Silk lightly scoured is termed *souple* silk.

boiling plate (*Elec. Eng.*). An appliance fitted with electric heating elements for the purpose of boiling liquids or cooking food. See **open-type boiling plate.**

boiling-point (*Heat*). The temperature at which a liquid boils when exposed to the atmosphere. Since, at the boiling-point, the saturated vapour pressure of a liquid equals the pressure of the atmosphere, the boiling-point varies with pressure; it is usual, therefore, to state its value at the standard pressure of 76 cm. of mercury. Abbrev. **b.p.**

boiling-point elevation (*Chem.*). See **elevation of boiling-point.**

boiling table (*Elec. Eng.*). A table incorporating in its construction two or more boiling plates.

Bojanus' organ, bō-jā′nus, *Ger.* bō-ya′noos (*Zool.*). In *Pelecypoda,* the excretory organ or kidney.

bole (*Bind.*). A compact clay, a reddish variety of which is used in powdered form (with water and a small quantity of gilding size as a foundation) for gilt edges.

bole (*Bot.*). The trunk of a tree.

bolection (or **balection**) **moulding** (*Join.*). A moulding fixed round the edge of a panel and projecting beyond the surface of the framing in which the panel is held.

bo′lide (*Astron.*). A large *meteor* (q.v.), generally one that explodes: a fire-ball.

boll (*Bot.*). The fruit of the cotton plant.

boll weevil (*Cotton*). A weevil (***Anthonomus grandis***) that infests the flowers and the bolls of cotton plants.

boll worm (*Cotton*). The larva of a noctuid moth (*Heliothis armigera*) that feeds on the bolls of the cotton plant.

bollard (*Ships, etc.*). On a quay or vessel, a short upright post round which ropes are secured for purposes of mooring.

Bollman truss (*Struct.*). A braced girder consisting of a horizontal member *AB*, connected to two inclined members *BC* and *CA*, braced by a vertical connecting member *CD*; or of a number of such triangular units connected to the same horizontal member, the girder being supported at the ends.

bolom′eter (*Elec. Eng., Heat*). An instrument for measuring radiant energy. A fine wire or strip is exposed to the radiation and its change of resistance determined.—(*Radio*) An early form of detector consisting of a fine platinum wire enclosed in an evacuated bulb, and forming one arm of a Wheatstone bridge. The passage of high-frequency currents causes a change in resistance of the wire, and alters the balance of the bridge.

Bolsover Moor stone (*Build.*). A dolomite of a warm yellowish-brown colour, which is easily worked but is not particularly durable; employed as a building-stone; of Permian (Magnesian Limestone) age.

bolster (*Carp.*). (1) A short piece of timber capping a pillar or post and offering larger bearing to the supported beam. Also called a CORBEL-PIECE.—(2) A synonym for *lagging* (q.v.).—(*Civ. Eng*) The actual support for a truss-bridge, at its abutment.

bolster (*Eng.*). (1) A steel block which supports the lower part of the die in a pressing or punching machine.—(2) The rocking steel frame by which the bogie of a locomotive supports the load imposed by the weight of the engine.

bolt (*Eng., etc.*). A cylindrical, screwed metal bar provided with a head. In conjunction with a nut, it affords the commonest means of fastening two parts together.

bolts (*Bind.*). The folded edges at the head and fore-edge of a sheet in an uncut volume.

bolt-making machine (*Eng.*). A machine which forges bolts by forming a head on a round bar.

bolted sectional dock (*Civ. Eng.*). A form of *self-docking dock* (q.v.), usually built in three sections of approximately equal length, the two end sections being stepped so as to provide landings for use when carrying out a self-docking operation.

bolting-silk (*Ocean.*). A silk cloth of very fine and regular mesh, used in the construction of tow-nets for the smaller members of the surface fauna.

bolting-silk (or **cloth**) (*Photog.*). Fine-woven cloth for obtaining diffusion effects when stretched in front of a lens.

Boltzmann's constant (*Phys.*). The ratio of the mean total energy of a molecule to its absolute temperature. Its value is $1{\cdot}375 \times 10^{-16}$ ergs per degree. Symbol, **k.**

Boltzmann's law (*Phys.*). See **principle of the equipartition of energy.**

bolus (*Vet.*). See **ball.**

bomb (*Ammunition*). A high-explosive, smoke, or gas projectile which is fired by a smooth-bored weapon, thrown or deposited by hand, or dropped from an aeroplane. It may explode by percussion or by time mechanism.

bomb (*Geol.*). A spherical or ovoid mass of lava, in some cases hollow, formed by the disruption of molten lava by explosions in an active volcanic vent. See *also* **bread-crust bomb.**

bomb calorimeter (*Heat*). A form of apparatus used for determining the calorific values of fuels. The *bomb* consists of a thick-walled steel vessel in which a weighed quantity of the fuel is ignited in an atmosphere of compressed oxygen. The bomb is immersed in a known volume of water, from the rise of temperature of which the calorific value is calculated.

Bonawe granite, bon-aw′ (*Build.*). Fine-grained granite-porphyry quarried at Bonawe near Oban, Scotland. It is a hard, tough, and durable stone, much used for paving purposes.

bond (*Build.*). The system under which bricks or stones are laid in overlapping courses in a wall in such a way that vertical joints in any one course are not immediately above the vertical joints of an adjacent course.

bond (*Chem.*). See **chemical bond.**

bond (*Civ. Eng*). The adhesion between concrete and its reinforcing steel, due partly to the shrinkage of the concrete in setting and partly to the natural adhesion between the surface particles of steel and concrete. See **mechanical bond.**

bond (*Elec. Eng*).

See **conductor-rail—**
continuity—
cross—
impedance—
rail—
track-rail—

bondstone (*Masonry*). A long stone laid as a header through a wall. Also called a BONDER.

bond-timber (*Build.*). A horizontal large-section timber built into a brick wall and serving as a bond-course.

bonder (*Masonry*). See **bondstone.**

bonding (*Aero.*). Electrical connexion of all available metal on an aircraft, in order to give earth-capacity for wireless purposes.

bonding (*Cables*). An electrical connexion between adjacent lengths of armouring or lead sheath, or across a joint. See also **cross bonding.**

bonding clip (*Elec. Eng.*). A clip used in wiring systems to make connexion between the earthed metal sheath of different parts of the wiring, in order to ensure continuity of the sheath.

bone (*Zool.*). A variety of connective tissue in which the matrix is impregnated with salts of lime, chiefly phosphate and carbonate.

bone (*Mining*). Coal containing **ash** (*bone*) in very fine layers along the cleavage planes. Also called BONY COAL.

bone beds (*Geol.*). Strata, often sands, gravels, or their indurated equivalents, characterised by an extremely high content of fossil remains. Examples are the Ludlow Bone Bed and the Rhaetic Bone Bed, the former consisting largely of the fragmental remains of primitive fossil fishes, and the latter of reptilian bone-fragments. Such abnormal concentration of fossils is due to some sudden change in conditions adversely affecting the fauna, or to the washing together, by wave- or current-action, of scattered bones, shells, etc. into a back-water or sheltered region.

bone black (*Chem., Paint.*). A term for finely ground animal charcoal. Used as a pigment, and for the decolorisation and filtration of liquids and the absorption of gases.

bone conduction (*Med.*). The conduction of sound-waves from the bones of the skull to the inner ear, rather than through the ossicles from the outer ear.

bone oil (*Chem.*). See **Dippel's oil.**

bone porcelain (*Pot.*). A body formed of china-stone, china-clay, and bone ash.

bone-setter (*Med.*). A medically unqualified person who treats disorders of joints by manipulation.

bone turquoise (*Min.*). Fossil bone or tooth, coloured blue with phosphate of iron; widely used in the past and at present as a gemstone. It is not true turquoise, and loses its colour in the course of time. Also called ODONTOLITE.

Bonetti machine (*Elec. Eng.*). A type of influence machine somewhat similar to the Wimshurst machine but having no sectors and a larger number of brushes. It is not self-starting.

boning-in (*Surv.*). The process of locating and driving in pegs so that they are in line and have their tops also in line; carried out by sighting between a near and a far peg previously set in the gradient desired.

boning-rods (*Surv.*). T-shaped rods used, in sets of three, to facilitate the process of boning-in; two of the rods are held on the near and far pegs to establish a line of sight between them in the desired gradient, while the third is used to fix intermediate pegs in line.

bonnet (*Build.*). A wire-netting cowl covering the top of a ventilating pipe or a chimney.

bonnet (*Eng., etc.*). A movable protecting cover; e.g. (1) the cap of the valve-box of a pump; (2) the cover plate of a valve chamber, (3) the hood of a forge; (4) the cover over the engine of a motor vehicle.

bonnet (*Plumb.*). A cover serving as a guide for a valve spindle, and enclosing the valve.

bonnet tiles (*Build.*). Special rounded tiles used to cover the external angles at hips and ridges on tiled roofs. See **arris tiles.**

bony coal (*Mining*). See **bone.**

book gill (*Zool.*). See **gill book.**

book lung (*Zool.*). See **lung book.**

bookbinding. The art of arranging in consecutive order the sections, etc. forming a book, and of sewing them together and preparing them for casing-in and finishing. See **full-bound, half-bound, quarter-bound.**

booking (*Surv.*). A term used by surveyors to describe the operation of recording field observations.

boom (*Acous.*). Enhanced reverberation or resonance in an enclosed space at low frequencies, due to reduced acoustic absorption of the surfaces for low frequencies.

boom (*Eng., Ships, etc.*). Any long beam; more especially—(1) the upper or lower flange of a built-up girder; (2) the main spar of a lifting-tackle; (3) the spar holding the lower part of a fore-and-aft sail; (4) a spar attached to a yard to lengthen it; (5) a barrier of logs to prevent the passage of a vessel; (6) a line of floating timbers used to form a floating harbour; (7) a pole marking a channel.

boom (*Struct.*). A *chord* (q.v.).

boom, microphone (*Cinema.*). See **microphone boom.**

boost (*I.C. Engs.*). The amount by which the induction pressure of a supercharged internal-combustion engine exceeds atmospheric pressure; expressed in lbs. per sq. in.

boost gauge (*I.C. Engs.*). A sensitive pressure-gauge for indicating the degree of *boost* (q.v.) in the induction-pipe of a supercharged aero-engine.

booster (*Elec. Eng.*). A generator or transformer connected in series with a circuit in order to raise or lower the voltage of that circuit.

See **battery— negative—**
differential— transformer—
milking—

booster fan (*Eng.*). A fan for increasing the pressure of air or gas; used for restoring the pressure drop in transmission pipes, and for supplying air to furnaces.

booster pump (*Eng.*). A pump which is inserted in a closed-pipe system to increase the pressure of the liquid in some part of the circuit.

boot-boiler (*Build.*). An angle-shaped boiler with vertical and horizontal branches, fitted in a kitchener to supply the hot-water system.

booted (*Zool.*). Having the feet protected by horny scales, as some Birds.

booth (*Cinema.*). See **camera booth, monitoring booth.**

bora (*Meteor.*). A squally winter wind blowing down upon the northern shores of the Aegean and Adriatic seas.

boracic acid (*Chem.*). See **boric acid.**

bo'racite (*Min.*). The cubic, or pseudocubic, form of magnesium borate, together with magnesium chloride, found in beds of gypsum and anhydrite, e.g. at Stassfurt in Germany.

borates (*Chem.*). See **boric oxide.**

borax (*Min.*). A mineral deposited by evaporation of the waters of alkaline lakes, notably in California, Nevada, and Tibet. Borax, which is hydrated sodium borate, occurs as a surface efflorescence, or as monoclinic crystals embedded in the lacustrine mud.

borax bead (*Chem.*). Borax, when heated, fuses to a clear glass. Fused borax dissolves many colouring oxides giving glasses with a characteristic colour. The borax bead used in chemical analysis is based on this fact.

borboryg'mus (*Med.*). The noise made by gas in the bowels.

bord-and-pillar (*Mining*). A method of mining coal which consists in excavating a series of chambers, rooms, or stalls, leaving pillars of coal in between to support the roof.

bordroom-man (*Mining*). A man who removes debris and timbers the roof in old roadways when using the bord-and-pillar method of mining coal.

Bordeaux B (*Chem.*). An azo-dyestuff derived from α-naphthylamine coupled with *R-acid* (q.v.).

border-line case (*Psychol.*). An individual whose mental state is on the border-line between that of true organic insanity and functional nervous disorder, who is difficult to certify as insane, and therefore usually just manages to keep out of mental hospitals.

border parenchyma (*Bot.*). A sheath of one or more layers of parenchymatous cells surrounding a vascular bundle.

border-pile (*Civ. Eng.*). A pile driven to support the sides of a coffer-dam.

border plane (*Join.*). A plane for cutting rebates or grooves along the edge of a piece of timber.

border stone (*Build.*). A kerbstone for a road.

border tie (*Textiles*). A jacquard-loom harness used in cloth manufacture. The arrangement allows one section to weave the centre of the fabric and the other to weave the border or borders.

bordered pit (*Bot.*). A thin area in the wall between two vessels or tracheides, surrounded by overhanging rims of wall thickening.

bore (*Artillery*). The interior of a piece of ordnance or small-arm, including both the chamber and rifled portion. See **chamber.**

bore (*Eng.*). The circular hole along the axis of a pipe: the internal wall of an engine- or pump-cylinder.

borehole (*Civ. Eng.*). A sinking made in the ground by the process of *boring* (q.v.).

bore (*Hyd. Eng.*). A great tide-wave, with crested front, travelling rapidly up a river; it occurs on certain rivers having obstructed channels.

boric acid (*Chem.*). H_3BO_3. Boric acid is a tribasic acid. On heating it loses water and forms metaboric acid, $H_2B_2O_4$, and on further heating it forms tetraboric acid, or the so-called pyroboric acid, $H_2B_4O_7$. On heating at a still higher temperature it forms anhydrous boron trioxide, or boric oxide. It occurs as tabular triclinic crystals deposited in the neighbourhood of fumaroles, and known also in solution in the hot lagoons of Tuscany and elsewhere. Also called BORACIC ACID, SASSOLITE.

boric oxide (*Chem.*). B_2O_3. An 'intermediate oxide' like aluminium oxide, for it has feeble acidic and feeble basic properties. As a weak acid it forms a series of borates. See also **boric acid.**

boring (*Civ. Eng.*). The process of drilling holes into ground or rock for the insertion of blasting charges, or to obtain information as to thickness and position of strata.—(*Mining, etc.*) The drilling of deep holes for the exploitation or exploration of oil fields. The term *drilling* is used similarly in connexion with metalliferous deposits.

boring (*Eng.*). The process of machining a cylindrical hole, performed in a lathe or boring mill; for large holes, or when great accuracy is required, it is preferable to drilling.

boring bar (*Eng.*). A bar driven by the spindle of a boring machine, and carrying the boring tool. It is supported at the machine-table, so providing the requisite rigidity for boring long holes.

boring-bit (*Tools*). See **bit.**

boring machine (*Eng.*). A machine on which boring operations are performed, comprising a head, carrying a driving-spindle, and a table to support the work.

boring mill (*Eng.*). A vertical boring machine in which the boring bar is fixed, the work being carried by the rotating table.

boring tool (*Eng.*). The cutting tool used in boring operations, resembling a lathe tool used for internal turning. It is held in a boring bar.

Borna disease (*Vet.*). A contagious infection of horses, cattle, and sheep due to a filterable virus.

Borneo camphor (*Chem.*). *Borneol* (q.v.).

borneol (*Chem.*). $C_{10}H_{17}\cdot OH$, m.p. 203°, b.p. 212° C., crystallises in hexagonal plates; it has the character of a secondary alcohol, and yields on oxidation camphor; it forms with PCl_5 bornyl chloride, which is identical with pinene hydrochloride. Borneol occurs naturally in a *d*-, *l*-, and an inactive form.

bornite (*Min.*). A valuable copper ore, a sulphide of copper and iron, crystallising in the cubic system; occurs in Cornwall and many other localities. Also called ERUBESCITE, HORSE-FLESH ORE, PEACOCK ORE (q.v.), VARIEGATED COPPER ORE (q.v.).

bornite detector (*Radio*). A crystal detector consisting of a steel point in contact with a bornite crystal; it has marked rectifying properties.

bornyl chloride (*Chem.*). $C_{10}H_{17}Cl$, m.p. 148° C., white crystals, identical with pinene hydrochloride, obtained from *borneol* (q.v.) by treatment with PCl_5.

boroethane, bō-rō-eth′— (*Chem.*). See **hydroborons.**

borofluʹorides (*Chem.*). See **fluoboric acid.**

borʹolanite (*Geol.*). A basic igneous rock occurring near Loch Borolan, Assynt, in the N.W. Highlands; it consists essentially of feldspar, green mica, garnet, together with conspicuous rounded white aggregates thought to be pseudo-leucites.

boʹron (*Chem.*). Symbol, B. A non-metallic element in the third group of the periodic system. At. no. 5, at. wt. 10·82, valency 3. Metallic boron conducts electricity; its sp. gr. is 2·535; the amorphous form is a chestnut-brown powder, sp. gr. 2·45. M.p. 2300° C., b.p. 2550° C. It occurs in nature as boric acid and borax, and may be prepared by reducing the trioxide or chloride.

boron carbide (*Chem.*). B_4C. A new boron carbide obtained from B_2O_3 and coke at about 2500° C. Very hard material, and for this reason used as an abrasive in cutting tools where extreme hardness is required. Extremely resistant to chemical reagents at ordinary temperatures.

boron hydrides (*Chem.*). See **hydroborons.**

boron nitride (*Chem.*). BN. When heated in an atmosphere of nitrogen or ammonia, boron forms *boron nitride.*

boron trihalides (*Chem.*). All the four halogens unite with boron to form trihalides as follows:—BF_3, BCl_3, BBr_3, BI_3.

borrow pit (*Civ. Eng.*). When, on any given construction, there is a deficiency of cutting, extra material to serve as fill is taken from a site outside the works, this being known as a *borrow pit.*

bort (*Min.*). A finely crystalline form of carbon, occurring in small spherical bodies showing an internal radiating structure. Possessing the hardness of diamond, bort is exceedingly tough, and is used as the cutting agent in rock drills.

bosh (*Foundry*). A limp brush used for wetting moulds round the edges of patterns. Also called SWAB.

bosh or **boshes** (*Met.*). The tapering portion of a blast-furnace, between the largest diameter (at the bottom of the stack) and the smaller diameter (at the top of the hearth).

boss (*Eng.*). A projection, usually cylindrical, on a machine part in which a shaft or pin is to be supported; e.g. the thickened part at the end of a lever, provided to give a longer bearing to the pin.

boss (*Geol.*). An igneous intrusion of cylindrical form, less than 40 sq. m. in area; otherwise like a bathylith.

bossage (*Masonry*). Roughly dressed stones, such as quoins and corbels, which are built in so as to project, and are finish-dressed in position.

bosset (*Zool.*). In Deer, the rudiment of the horns in the first year.

bossing (*Plumb.*). The operation of shaping malleable metal, particularly sheet-lead, to make it conform to irregularities of the surface it is covering, the operation being accomplished by tapping with special mallets.

bossing mallet (*Plumb.*). A specially shaped mallet used in the operation of dressing sheet-lead to required form by 'bossing.'

bossing stick (*Plumb.*). A wooden tool used to shape sheet-lead into a lining for a tank.

bossing-up (*Eng.*). The process of forming a boss on a forging.

bosʹtonite (*Geol.*). A fine-grained intrusive igneous rock allied in composition to syenite; essentially feldspathic, and deficient in coloured silicates; type locality, Boston, Mass.

bosʹtryx (*Bot.*). A cymose inflorescence in which the lateral axes always arise on the same side of the parent axis.

bot (*Vet.*). The larva of flies of the genus *Gastrophilus*; bots parasitise the membrane of the stomach of horses, rarely of other animals.

B.O.T. ohm (*Elec. Eng.*). Board of Trade ohm; a term sometimes used to denote the international ohm.

Botall's duct (*Zool.*). In some Vertebrates, a small blood-vessel representing the sixth gill arch dorsal to the origin of the pulmonary arteries, and connecting the systemic with the pulmonary arch; important in the embryonic circulation of *Amniotes* and functional in some *Urodeles*, otherwise vestigial or absent.

Botany (*Worsted*). A term applied to the wool of the Merino sheep, and to fabrics made from such wool. See **quality terms.**

Botany twill (*Worsted*). A twilled cloth manufactured from Botany yarns; generally made in the grey state and piece-dyed.

bothridʹium (*Zool.*). In *Cestoda*, a thin folded flap projecting from the scolex and used as an organ of fixation. Also called PHYLLIDIUM.

bothʹrium (*Zool.*). In *Cestoda*, a groove-shaped sucker with loose weak musculature.

bothway (*Teleph.*). Said of a junction or trunk when traffic can be originated in both directions.

botryoi'dal (*Zool.*). Shaped like a bunch of grapes; in some *Hirudinea*, said of a tissue surrounding the gut and composed of branched canals, the walls of which are formed of large cells containing black pigment; of unknown function.

botryomyco'sis (*Vet.*). A chronic purulent inflammation of horses, characterised by excessive growth of fibrous tissue due to infection by *Staphylococci*. Also called SCIRRHUS CORD.

bot'ryose, bot'ryoid, botryt'ic (*Bot.*, *Zool*). Branched; like a bunch of grapes. See **racemose.**—(*Geol.*) Said of mineral aggregates resembling a bunch of grapes.

bottle (*Elec. Comm.*). A colloquialism for *thermionic valve.*

bottle-battery (*Elec. Eng.*). A term used to denote a bichromate cell when the electrodes and electrolyte are placed in a glass bottle-shaped container.

bottle glass (*Glass*). Glass used for the manufacture of common bottles, made from a batch comprising essentially sand, limestone, and alkali. A typical percentage glass composition may be taken as SiO_2 74·0, Al_2O_3 0·6, CaO 9·0, Na_2O 16 3.

bottle jack (*Eng.*). A screw-jack in which the lower part is shaped like a bottle.

bottle-making machines (*Glass*). These may operate in various ways, the bottle being formed in two stages, i.e. the parison and the finished bottle. Wide-mouth ware may be formed by pressing the parison and then blowing, narrow-mouth by blowing and blowing or sucking and blowing. In the last method, the glass is gathered by suction into the parison mould, in the other two it is dropped by hand or more probably by a mechanical-feeding device, hence the terms suction-fed and feeder-fed machines.

bottle-nose drip (*Plumb.*). The shaped edge formed in sheet-lead work at a step on a roof, when jointing the lead across the direction of fall.

bottle-nosed step (*Build*). A step which has the edge and ends rounded.

bottle-stone (*Min.*). A mineral of problematical origin, possessing the characters of ordinary bottle-glass, occurring in Bohemia and Moldavia. Used as a gemstone. Also called MOLDAVITE, WATER-CHRYSOLITE.

bottom (*Acous.*). A colloquialism for the lower range of audio-frequencies in sounds for recording, which contribute mainly to the loudness and fullness of these sounds.

bottom (*Mining*). The floor of the workings in a colliery.

bottoms (*Met.*). A term used in connexion with the Orford process for separating nickel and copper as sulphides. When the mixed sulphides are fused with sodium sulphide, the nickel sulphide separates to the bottom. Hence *bottoms* as distinct from *tops*.

bottom bars (*Lace*). Thin perforated steel strips which function in producing variations in the ground.

bottom bend (*Thermionics*). See **anode bend.**

bottom board (*Foundry*). A board placed on the underside of a mould during ramming.

bottom dead-centre (*Eng.*). See **outer dead-centre.**

bottom gate (*Foundry*). An *in-gate* (q.v.) leading from the runner into the bottom of a mould.

bottom plate (*Horol.*). In a watch, the plate to which the pillars are fixed, generally referred to as the *dial plate*.

bottom rail (*Carp.*, *Join.*). The lowest horizontal member in a door or other framing.

bottom-samplers (*Ocean.*). Various types of apparatus which, when lowered, are capable of piercing the sea-bottom and retaining a sample of the deposit. See **ocean depths,** etc.

bottom shore (*Carp.*). One of the members of an arrangement of raking shores to support temporarily the side of a building; it is the one nearest the wall face.

bottom-stock department (*Boots and Shoes*). The department in which the soles, inner soles, counters, and other small fittings are cut.

bottom yeast (*Bot.*). The yeast that collects at the bottom of a vessel in which alcoholic fermentation is proceeding.

bottoming (*Civ. Eng.*). The lowest layer of foundation material for a road.—(*Rail.*) Ballast in permanent-way.

bottoming tap (*Eng.*). See **plug tap.**

botu'liform (*Bot.*). Sausage-shaped.

bot'ulism (*Med.*, *Vet*). Poisoning due to eating flesh, carrion, or decaying vegetation which has been infected with *Bacillus botulinus* (*Clostridium botulinum*).

Boucherot circuit, boosh-er-ō (*Elec. Eng*). An arrangement of inductances and capacitances, whereby a constant-current supply may be obtained from an ordinary constant-voltage circuit.

Boucherot motor (*Elec. Eng.*). A name sometimes given to the double-cage induction motor.

bouchon, boosh'on^{g} (*Horol.*). A hollow plug, or bush, inserted in watch or clock plates to form the pivot holes. To repair a worn hole, the hole is enlarged and a bouchon pressed in. In certain cases the jewels are held in bouchons which are a press fit in the plates

bouchon wire (*Horol*). Hollow wire, generally of hard brass, which is cut off to the required lengths to form bouchons.

bouclé, book'lā (*Worsted*). A term applied to a fabric characterised by effects of a curled or looped nature.

bougie, boo'jē (*Med.*). A tube or a rod for dilating narrowed passages in the body.

bougie decimale or **decimal candle** (*Illum.*). The French legal unit of luminosity. It is defined as one-twentieth of the luminous intensity, viewed normally, of a sq. cm. of molten platinum at the temperature of solidification. Often abbreviated to **b.d.**

boulder (*Geol.*). The unit of largest size occurring in sediments and sedimentary rocks, the limit between pebble and boulder being placed at 100 mm., though some authorities recognise 'cobbles' between pebbles and boulders. Boulders may consist of any kind of rock, may be sub-angular or well rounded, may have originated in place or have been transported by running water or ice. Accumulations of boulders are *boulder beds*.

boulder clay (*Geol.*). The characteristic product of glaciation, consisting of stones to the size of boulders, sometimes facetted and striated, embedded in a clay matrix which is essentially rock powder produced by abrasion of the floor over which the glacier moved.

boulder paving (*Build.*). Paving constructed with rounded boulders laid on a gravel foundation.

boulder wall (*Build.*). A wall built of boulders or flints set in mortar.

boule (*Jewel.*, *Min.*). A small pear-shaped mass of synthetic sapphire, ruby, etc., produced by the fusion of alumina, suitably tinted, in a furnace of special design.

boulevard, bool'var. A broad street with rows of trees along the sides.

boulle (*Furn.*). A complicated form of inlay, gold, silver, or brass and pewter, ivory and mother-of-pearl in tortoiseshell, forming panels for furniture decoration. Also spelt BUHL—erroneously, since it is named from its originator Boulle.

bounce (*Cinema.*). A colloquial attribute of sound for recording, implying that reverberation is relatively high for high-frequency components.

bouncing-pin detonation meter (*Eng.*). An apparatus for determining quantitatively the degree of detonation occurring in the cylinder of a petrol-engine; used for fuel testing.

bound charge (*Elec. Eng.*). An induced electrostatic charge which is 'bound' by the presence of the charge of opposite polarity which induced it.

bound water (*Bot.*). Water held in organic substances by adsorptive or other physical forces.

boundary films (*Met.*). Films of one constituent of an alloy surrounding the crystals of another constituent.

boundary lubrication (*Eng., Phys.*). A state of partial lubrication which may exist between two surfaces in the absence of a fluid oil film, due to the existence of adsorbed mono-molecular layers of lubricant on the surfaces.

bouquet stage (*Biol.*). See **pachytene.**

Bourdon gauge (*Eng.*). See **pressure-gauge.**

bourette (*Textiles*). A heavy yarn made chiefly from waste silk but having tufts of wool twisted with it at intervals.

bourgeois, ber-jois' (*Typog.*). The old name of a size of type, now standardised as 9-point.

Bournemouth Beds (*Geol.*). A division of the Bracklesham Beds, of Eocene age, occurring in the Hampshire Basin; it comprises some 450 ft. of fresh-water beds with plant remains, together with shell-bearing marine beds at the top.

bour'nonite (*Min.*). See **wheel-ore.**

Bovey Tracey Beds or **Bovey Beds** (*Geol.*). A series of fresh-water clays, sands, and lignites, some 600 ft. in thickness, occupying a depression near Bovey Tracey in Devonshire; regarded as the site of a lake in Pliocene times, receiving detritus from the surrounding high ground, including Dartmoor.

bow, bō (*Elec. Eng.*). A sliding type of current collector, used on electric vehicles to collect the current from an overhead contact-wire. It consists of a bow-shaped contact strip, mounted on a hinged framework.

bow (*Horol.*). (1) The ring, generally circular, of a pocket-watch case, to which the watch or fob chain is attached.—(2) A flexible strip of whalebone or cane, the ends of which are drawn together to give tension to a thread or line which is given a single turn round a pulley of a pair of turns, drill, or mandrel. It is used as a sensitive drive for these tools, and by many it is considered to be the best way to produce very fine accurate pivots.

bows or **bow compasses** (*Instruments*). See **spring bows.**

bow drill (*Eng.*). A drill rotated by the frictional grip of a string wound round it and held at the requisite tension by a bow, which is given a sawing motion by the operator.

bow-saw (*Tools*). A thin-bladed saw which is kept taut by a bow or special frame.

bow stretcher (*Furs*). Strips of elastic wood, birch or hickory, bent in bow form, on which small skins are stretched.

bowstring bridge (*Civ. Eng.*). An arched bridge in which the horizontal thrust on the arch is taken by a horizontal tie joining the two ends of the arch.

bowstring girder (*Struct.*). A built-up girder having a horizontal lower boom, and a curved upper boom intercepting a segment of a circle and connected by lattice bars for added strength.

bowstring suspension (*Elec. Eng.*). A form of suspension for the overhead contact-wire of an electric-tramway system, in which the contact-wire is suspended from a short cross-wire attached to the bracket-arm of the pole.

bow strip (*Elec. Eng.*). See **contact strip.**

bow-window (*Build.*). An internal recess formed when a wall projects outside the general wall-line and has, or approximates to, the plan form of a segment.

bow sheaves, bow (*Elec. Comm.*). The sheaves at the bow of a cable-laying ship over which the cable passes when it is being laid in the sea or raised for repair.

Bow's notation (*Eng.*). A method of notation for forces acting at a point, the spaces between the forces being lettered in order, so that any force is described in terms of the letters referring to the two adjacent spaces. By this device the force polygon can be lettered correspondingly. Also called HENRICI'S NOTATION.

Bowden-Thomson protective system (*Elec. Eng.*). A form of protective system for feeders, in which special cables, with the cores surrounded by metallic sheaths, are employed; a fault causes current to flow in the sheath and operate a relay to trip the circuit.

Bowditch's rule (*Surv.*). A rule for the adjustment of closed compass traverses, in which it may reasonably be assumed that angles and sides are equally liable to error in measurement. According to this rule, the correction in latitude (or departure) of any line is:

$$\frac{\textit{Length of that line}}{\textit{Perimeter of traverse}} \times \textit{Total error in latitude (or departure)}.$$

bowed (*Furn.*). Said of cupboards, cabinets, etc., with curved front.

bowenite (*Min.*). A compact, finely granular, massive form of serpentine, formerly thought to be nephrite, and used for the same purposes.

bower anchor (*Ships*). One of the anchors carried at the bow of a ship; used for anchoring and mooring.

Bower-Barffing (*San. Eng.*). An anti-corrosion process applied to sanitary ironwork; this, when red-hot, has superheated steam passed over it in a closed space, so that a protective layer of black magnetic oxide is formed on the ironwork. See **Angus-Smith process.**

bowk (*Mining*). A large iron barrel used for men's tools and debris when sinking a shaft.

bow'lingite (*Min.*). See **saponite.**

Bowman's capsule (*Zool.*). In the Vertebrate kidney, the dilated commencement of a uriniferous tubule.

Bowman's glands (*Zool.*). In some Vertebrates, serous glands of the mucous membrane of the olfactory organs.

Bowman's membrane (*Zool.*). In Vertebrates, a lamina of homogenous connective tissue upon which rests the stratified epithelium of the cornea.

bows. See **spring bows.**

box (*Cables, Elec. Eng.*).

See **bifurcating—**
brush—
conduit—
connecting (or **connexion**)**—**
dividing—
junction—
sealing—
switch—
trifurcating—

See also **distribution board, draw-in system, feeder, joint.**

box (*Photog.*). See **changing— drying—**

box (*Timber*). See **boxwood.**

box annealing (*Met.*). See **close annealing.**

box baffle (*Acous.*). A baffle in the form of a box, with the reproducing diaphragm mounted in the centre of a face, the opposite face being open or closed, the effect being the same as a much larger plane baffle.

boxboard (*Paper*). Thin board used in the manufacture of cartons. Made from mechanical woodpulp and waste.

box calf (*Leather*). Calf skins which have been chrome-tanned, dyed black, and subjected to boarding to produce the box grain.

box car (*Rail.*). A closed car used for the transport of goods.

box chronometer (*Ships*). The marine chronometer. The chronometer is normally supported on gimbals, inside a wooden box with a hinged lid.

box cloth (*Textiles*). A woollen fabric, heavily milled and finished with a smooth surface like felt; manufactured from fine wools.

box column (*Build.*). A built-up hollow column of square or rectangular section.

box coupling (*Eng.*). See **muff coupling.**

box culvert (*Civ. Eng.*). A culvert having a rectangular opening.

box dam (*Civ. Eng.*). A coffer-dam built to surround an area in which works are to proceed.

box dock (*Civ. Eng.*). A double-sided floating-dock of channel section.

box drain (*San. Eng.*). A small rectangular section drain, usually built in brickwork or concrete.

box-frame motor (*Elec. Eng.*). A traction motor in which the frame is cast in one piece instead of being split.

box girder (*Struct.*). A cast-iron girder of hollow rectangular section. See **box plate girder.**

box grain (*Leather*). A small square produced on box calf by treatment while it is in a damp state.

box gutter (*Build.*). A wooden gutter, lined with sheet-lead, zinc, or asphalt, and having upright sides; used along roof valleys or parapets.

box-in (*Typog.*). To surround type with rule, the printed matter appearing in a rectangular frame.

box loom (*Textiles*). A loom provided with several shuttle boxes so that different colours, qualities, or types of material can be inserted in the material as weft.

box nut (*Eng.*). A nut whose outer end is closed, so protecting the end of the screw, and giving a neat appearance.

box of tricks (*Cotton Spinning*). The building motion of a fly frame. It regulates the speed of the bobbin, reverses the traverse of the lifting rail and reduces this as each layer of roving is laid on the bobbin. Also called ESCAPE MOTION.

box plate girder (*Struct.*). A built-up steel girder, similar to the plate girder, but having two web plates at a distance apart, so that flanges and webs enclose a rectangular space.

box sextant (*Surv.*). A compact form of the sextant, contained in a small metal box.

box slip (*Carp.*). A hard boxwood slip secured to the beechwood stock of a tonguing or grooving plane and forming a durable facing at the rubbing surface.

box spanner (*Eng.*). A hollow tubular spanner shaped at the end or ends to fit the nut, and turned by a tommy bar inserted through a transverse hole. It is used for nuts inaccessible to an ordinary spanner.

box-staple (*Carp.*). The part on a door-post into which the bolt of a lock engages.

Box Stone of East Anglia (*Geol.*). A thin stratum, of Older Pliocene age, consisting of derived material underlying the Crag where the latter rests on London Clay in Suffolk. It contains nodules of sandstone (*box-stones*) many of which contain molluscan casts.

box-type brush-holder (*Elec. Eng.*). See **brush box.**

box-type (or cage-type) negative plate (*Elec. Eng.*). A form of negative plate for an accumulator which is made up by riveting two lead grids together and placing the active material in the spaces between them.

boxed frame (*Join.*). A *cased frame* (q.v.).

boxed mullion (*Join.*). A hollow mullion in a sash window-frame, arranged to accommodate the counterweights connected to the vertically moving sashes.

boxing (*Join.*). The part of a window-frame which receives the folded shutter.

boxing (*Civ. Eng.*). A layer of small ballast packed between the sleepers of a railway track.

boxing shutters (*Join.*). Shutters at the interior side of a window, hung so as to fold back into a recess in the jambs. Also called FOLDING SHUTTERS.

boxwood (*Timber*). The pale-yellow, close-grained, hard and tough wood of the box tree, used for drawing scales, tool handles, etc.; it requires several years of seasoning.

Boyle's law (*Phys.*). The volume of a given mass of gas kept at one uniform temperature varies inversely as the pressure. There are deviations from this law at low and high pressures and according to the nature of the gas.

b.p. (*Chem.*). An abbrev. for *boiling-point.*

B.P. (*Chem.*). An abbrev. for *British Pharmacopoeia.*

B.P. (*Ship Constr.*). An abbreviation for *between perpendiculars*, i.e. the length between the forward perpendicular (the forward side of a ship's stem) and the after perpendicular (the after side of the stern-post).

Br (*Chem.*). The symbol for *bromine.*

braccate (*Zool.*). (Of Birds) having feathered legs or feet.

brace (*Carp., Eng., etc.*). A tool used to hold a bit and give it rotary motion. The bit is secured axially in a socket at one end, the other end (to which pressure is applied) being in line with it, while the middle part of the brace is cranked out so that the whole may be rotated. Also called a BIT-STOCK.

brace (*Eng., etc.*). A rod or bar connecting two parts of a structure for stiffening purposes; it is always subjected to a tensile force.

brace (*Typog.*). ⏞ Usually cast to a definite em measurement; sectional braces are built up to the required length; should point towards the lesser number of lines.

brace bit (*Tools*). The actual boring tool used in the socket of a brace.

brace jaws (*Tools*). The parts of the socket of a brace which clamp upon the shank of the brace bit to secure it while drilling.

braced girder (*Struct.*). A girder formed of two flanges connected by a web consisting of a number of bars dividing the girder into triangles or trapeziums and transmitting the horizontal forces from one flange to another.

brachely'trous (*Zool.*). Said of Insects having short truncate elytra which do not completely cover the abdomen.

brachi-, brachio- (Latin *brachium*, arm). A prefix used in the construction of compound terms; e.g. *brachiocephalic*, pertaining to the arm and head.

bra'chial (*Zool.*). See **brachium.**

brachial disc (*Zool.*). In certain *Discomedusae*, a horizontal disc formed by the union of the larval arms, and occupying the centre of the subumbrellar surface.

brachial ossicles (*Zool.*). In *Crinoidea*, the ossicles supporting the arms.

bra'chiate, brachif'erous (*Bot., Zool.*). Branched: having widely spreading branches: bearing arms.

brachiola'ria (*Zool.*). A larval stage of some *Asteroidea*, differing from the *Bipinnaria* (q.v.) in having three adhesive papillae, and a sucker developed on the pre-oral lobe.

Brachiop'oda (*Zool.*). A phylum of solitary non-metameric *Metazoa*, with a well-developed coelom; sessile marine forms, with a lophophore in the form of a double vertical spiral, and usually with a bivalve shell. Brachiopods range from early geological periods up to the present time; they occur in all seas, often at great depths.

bra'chium (*Zool.*). The proximal region of the fore-limb in land Vertebrates: a tract of nerve-fibres in the brain: more generally, any arm-like structure, as the rays of Starfishes.—*adj.* **brachial.**

brachy- (Greek *brachus*, short). A prefix used in the construction of compound terms; e.g. *brachydactylous*, having short digits.

brach'yblast (*Bot.*). A short branch of limited growth, bearing leaves and, sometimes, flowers and fruit; a *spur* (q.v.).

brach'ycephal'ic (*Anat.*). Short-headed; said of skulls whose breadth is at least four-fifths of the length.

brachycerous, —is'er-us (*Zool.*). Having short antennae, as some *Diptera*.

brach'ycla'dous (*Bot.*). Having very short branches.

brachydac'tyly, brachydacty'lia (*Med.*). Abnormal shortness of fingers or toes.

brach'yform (*Bot.*). A species of rust fungus in which the aecidium is omitted from the life history, or is replaced by a primary uredosorus.

brach'ymeio'sis (*Cyt.*). A simplified form of meiosis, completed in one division.

brach'yodont (*Zool.*). Said of Mammals having low-crowned grinding teeth in which the bases of the infoldings of the enamel are exposed: used also of the teeth. Also BRACHYDONT. Cf. *hypsodont*.

brachyp'terism (*Zool.*). In Insects, the condition of having the wings reduced in length.—*adj.* **brachypterous.**

brachysclereide, —skler'id (*Bot.*). See **stone cell.**

brachysto'matous (*Zool.*). (Of Insects) having the proboscis reduced in length.

brachyu'rous, brachyu'ral (*Zool.*). Said of decapodan *Crustacea*, in which the abdomen is reduced and bent forward underneath the thorax, by which it is completely hidden.

bracing (*Civ. Eng.*). The staying or supporting rods or ties which are used in the strengthening of a structure.

bracket (*Build.*). A projecting support for a shelf or other part.

bracket (*Typog.*). A mark of punctuation [ ] used to include comments, corrections, explanations, etc., not in the original work, but added by subsequent authors or editors. The term is often loosely used for *parentheses* (q.v.).

bracket arms (*Elec. Eng.*). The transverse projecting arms on the poles, for supporting the overhead contact wire equipment for a tramway or railway system.

bracket baluster (*Build.*). An iron baluster, bent at its foot and fixed into the side of the step, usually when the latter is made of stone or of concrete.

bracket clock (*Horol.*). A clock designed originally to stand on its own bracket secured to a wall. The term is now applied to moderate-sized clocks to stand on the mantelpiece or table.

bracket fungus (*Bot.*). One of a number of species belonging to the *Basidiomycetes*, occurring on tree stumps and trunks, and projecting in the form of a rounded bracket.

bracket scaffold (*Build.*). A scaffold supported on framed brackets carried by *grapplers* (q.v.).

bracketed step (*Join.*). A step supported by a *cut string* (q.v.) which is shaped on its lower edge to form an ornamental bracket.

bracketing (*Build.*). The shaped timber supports forming a basis for plasterwork and mouldings of ceilings and parts near ceilings.

Brackett series (*Light*). A series of lines in the hydrogen spectrum occurring in the far infra-red. The wave-numbers of the series are represented by the formula:

$$\nu = N\left(\frac{1}{4^2} - \frac{1}{n^2}\right).$$

Bracklesham Beds (*Geol.*). A series of variable sands and clays of Eocene age occurring above the Lower Bagshot Beds in the Hampshire Basin; of marine origin in the east, but fresh-water in the west.

bract (*Bot.*). The leaf which subtends an inflorescence or a flower.

bract (*Zool.*). In *Siphonophora*, a hydrophyllium: in some *Branchiopoda*, a lobe on the side of a trunk outer limb.

bract scale (*Bot.*). The small outer scale at the base of the large cone scale in conifers.

bract'eal leaf (*Bot.*). A general term for bracts and bracteoles.

bract'eate (*Bot.*). Having bracts.

bract'eody (*Bot.*). The replacement of other members of the flower by bracts.

bract'eole (*Bot.*). A leaf, generally very small, borne on the stalk of a flower.—*adj.* **bracteolate.**

bracteoma'nia (*Bot.*). An abnormal condition in which a plant forms an enormous number of bracts, and sometimes fails to form normal flowers.

bract'eose (*Bot.*). Having conspicuous bracts.

brad. A nail with a small head projecting on one side, or with the head flush with the sides.

brad (*Foundry*). See **sprig.**

bradawl (*Join.*). A small chisel-edged tool, used to make holes for the insertion of nails and screws.

brad setter (*Join.*). A tool for holding a brad by its head and driving it into position.

Bradford Clay (*Geol.*). A subdivision of the Middle Jurassic, lying between the Great Oölite and the Forest Marble; occurs typically at Bradford-on-Avon, Wilts.

Bradfordian (*Geol.*). A group of strata of Middle Jurassic age between the Vesulian below and the Callovian above, and including the Bradford Clay and its equivalents elsewhere. Also known as BATHONIAN.

bradsot (*Vet.*). See **braxy.**

brad'y- (Greek *bradys*, slow). A prefix used in the construction of compound terms; e.g. *bradyacousia*, slowness (dullness) of hearing.

bradyar'thria (*Med.*). Abnormally slow delivery of speech.

bradycar'dia (*Med.*). Slowness of the beating of the heart.

bradykine'sia (*Med.*). Abnormal slowness of the movements of the body.

bradyphre'nia (*Med.*). Slowness of mental processes.

brad'yspore (*Bot.*). A plant from which the seeds are liberated slowly.

Bragg method (*Min.*). A method of investigating crystal structure by means of X-rays, used successfully by Sir Wm. Bragg and latterly by many other workers.

Bragstad convertor (*Elec. Eng.*). See **motor convertor.**

braid (*Textiles*). A narrow ribbon used as a trimming for dress material and upholstery.

brain (*Zool.*). A term used loosely to describe the principal ganglionic mass of the central nervous system: in Invertebrates, the pre-oral ganglia: in Vertebrates, the expanded and specialised region at the anterior end of the spinal cord, developed from the three primary cerebral vesicles of the embryo.

brain-sand (*Zool.*). In higher Vertebrates, calcareous nodules occurring within the pineal gland, and in the pia mater and its extensions as age advances.

brain stem (*Zool.*). In Vertebrates, regions of the brain conforming to the organisation of the spinal cord, as distinct from such suprasegmental structures as the cerebral cortex and the cerebellum.

brake (*Eng., etc.*). A device for applying resistance to the motion of a body, either (1) in order to retard it, as with a vehicle brake, or (2) to absorb and measure the power developed by an engine or motor.

See **air—**
band—
block—
Froude—
hydraulic—
rope—
also **absorption dynamometer.**

brake drum (*Eng.*). A steel or cast-iron drum attached to a wheel or shaft so that its motion may be retarded by the application of an external band or internal brake shoes. See **band brake, internal expanding brake.**

brake field (*Thermionics*). See **retarding field.**

brake horse-power (*Eng.*). The effective or useful horse-power developed by a prime-mover or electric motor, as measured by a brake applied to the driving shaft. Abbrev. **B.H.P.**

brake incline (*Mining*). An incline in which the full trucks descend by gravity and pull up the empty ones.

brake lining (*Eng.*). Strips of asbestos-base friction fabric riveted to the shoes of internal expanding brakes in order to increase the friction between them and the drum and provide a renewable surface. See **brake shoe.**

brake magnet (*Elec. Eng*). A permanent magnet or electromagnet which produces a braking effect, either by inducing eddy currents in a moving conductor or by operating a mechanical brake by means of a solenoid.

brake mean effective pressure (*Eng.*). That part of the *indicated mean effective pressure* (q.v.) developed in an engine cylinder which would result in a cylinder output equal to the brake horse-power of the engine; the product of I.M E.P. and mechanical efficiency. Abbrev. **B.M.E.P.**

brake shoe (*Eng.*). The renewable rubbing surface of a block brake: the segmental member which is pressed against the inner surface of a brake drum.

brake thermal efficiency (*Eng.*). The efficiency of an engine reckoned in terms of the brake horse-power; given by the ratio of the heat equivalent of the brake output to the heat supplied to the engine in the fuel or steam.

brake-wheel arc lamp (*Illum.*). A form of arc lamp in which the carbons are automatically fed towards the arc, as the current through the arc drops, by the releasing of an electromagnetic brake.

braking (*Elec. Eng.*).

See **electric—**
magnetic—
regenerative—
rheostatic—

braking notches (*Elec. Eng.*). Positions of the handle of a drum-type controller which apply some form of electric braking.

Bramah's press (*Hyd.*). See **hydrostatic press.**

Bramley Fall stone (*Build.*). A durable dark-brown coarse-grained sandstone quarried from the Millstone Grit of Yorkshire; used for general building, paving, and stone steps, and also for heavy work such as foundations for machinery, piers, and bridges.

branch abscission (*Bot.*). The shedding of branches by plants, by means of an organised separation layer.

branch circuit (*Elec. Eng.*). A term commonly used in electric installation work to denote a circuit branched off a main circuit.

branch drain (*San. Eng.*). The communicating drain between a gulley, soil pipe, or sanitary fitting and the main drain.

branch exchange (*Teleph.*). See **private branch exchange.**

branch gap (*Bot.*). An interruption in the vascular cylinder at the point of origin of a branch; characteristic of stems containing pith.

branch pipe (*Plumb.*). A special pipe having one or more branches.

branch switch (*Elec. Eng.*). A term used in connexion with electrical installation work to denote a switch of any type for controlling the current in a branch circuit.

branch tendril (*Bot.*). A tendril formed from a modified branch.

branch trace (*Bot.*). The primary vascular supply to a lateral branch.

branchi-, branchio- (Greek *branchia,* gills). A prefix used in Zoology in the construction of compound terms; e.g. *branchiopallial,* pertaining to the gills and the mantle (in Molluscs).

bran'chia (*Zool.*). In aquatic animals, a respiratory organ consisting of a series of lamellar or filamentous outgrowths; a gill.—*adj.* **branchial.**

branchial arch (*Zool.*). In Vertebrates, one of a series of bony or cartilaginous structures lying in the pharyngeal wall posterior to the hyoid arch; it prevents the gill-slits from collapsing.

branchial basket (*Zool.*). (1) In *Cyclostomata* and cartilaginous Fish, the skeletal framework supporting the gills.—(2) In the larvae of certain Dragonflies (*Anisoptera*), an elaborate modification of the rectum associated with respiration.

branchial clefts (*Zool.*). See **gill-slits.**

branchial duct (*Zool.*). In some *Cyclostomata,* the ventral respiratory tube or bronchus.

branchial formula (*Zool.*). A table showing the number and arrangement of the gills.

branchial heart (*Zool.*). In Vertebrates, a heart such as that of Cyclostomes, in which all the blood entering the heart is deoxygenated and passes thence directly to the respiratory organs: in *Cephalopoda,* special muscular dilatations which pump blood through the capillaries of the ctenidia.

branchial rays (*Zool.*). Branches of the hyoid and branchial arches which support the gills and gill-septa.

branchic'olous (*Zool.*). Parasitic on the gills of Fish.

bran'chihy'al (*Zool.*). One of the skeletal elements composing a branchial arch.

branching jack (*Teleph.*). A jack without breaking contacts.

branchio-. Prefix. See **branchi-.**

bran'chiomere (*Zool.*). In metameric animals, a somite bearing branchiae.

branchiom'erism (*Zool.*). Serial repetition of gill-clefts or gills.

Branchiop'oda (*Zool.*). A subclass of *Crustacea,* the members of which are distinguished by the possession of numerous pairs of flattened, leaf-like, lobed swimming feet which also serve as respiratory organs; the mandible is without a palp in the adult; mainly fresh-water forms including the Fairy Shrimps, Brine Shrimps, Tadpole Shrimps, Clam Shrimps, and Water Fleas.

branchios'tegal (*Zool.*). Pertaining to the gill-covers.

branchiostegal membrane (*Zool.*). In Fish, the lower part of the opercular fold below the operculum.

branchiostegal rays (*Zool.*). Skeletal supporting structures of the branchiostegal membrane.

branchiostege, —os'teg-e (*Zool.*). See **branchiostegal membrane.**

branchios'tegite (*Zool.*). In some *Crustacea,* a lateral extension of the carapace covering the gill-chamber.

bran'chireme (*Zool.*). An appendage having both locomotor and respiratory functions, as in *Branchiopoda.*

Branchiu'ra (*Zool.*). An order of *Copepoda* in which paired compound eyes occur; the genital openings occur on the fifth trunk somite and the thoracic limbs sometimes possess a flagellum. Fish Lice.

brand fungi (*Bot.*). See **Ustilaginales.**

brand spore (*Bot*) The thick-walled resting spore of the brand fungi; it is black or brown, and forms sooty masses.

brandering (*Plast.*). The operation of nailing small fillets of wood to timber beams more than 8 in. wide, to take the plastering laths and provide a key for the plaster. Also called COUNTER-LATHING.

branding iron (*Civ. Eng.*). See **indenter.**

Branly coherer (*Radio*). One of the original forms of coherer, consisting of two electrodes immersed in iron filings contained in a glass tube.

brass (*Met.*). Primarily an alloy of copper and zinc, but other elements such as aluminium, iron, manganese, nickel, tin, and lead are frequently added. There are numerous varieties.

See **alpha—**
alpha-beta—
aluminium—
cartridge—
commercial—
delta—
high—
high-strength—
naval—
gilding metal
manganese bronze.

brass or **brasses** (*Mining*). A coal-miner's term for iron pyrites or 'Welsh gold'—a brassy-looking compound of iron and sulphur.

brasses (*Eng.*). Those parts of a bearing which provide a renewable wearing surface; they consist of a sleeve or bored block of brass split diametrally, the two halves being clamped into the bearing block by a cap.

brasses (*Lace*). Brass plates in the form of a parallelogram with rows of holes through which the warp threads pass.

brass bobbins (*Lace*). Two discs of thin brass, dished and riveted together so as to hold a supply of thread.

brass furnace. A small furnace, usually gas-fired, used by the brass-founder to melt brass for castings.

brass-winding (*Lace*). The operation of filling brass bobbins collectively from a jack of wood bobbins.

Brathay Flags (*Geol.*). These occur in the Lake District and are equivalent to the Wenlock Series of the Silurian System.

brattice or **brattice cloth** (*Mining*). A partition for diverting air, for the purpose of ventilation, into a particular working place or section of a mine.

bratticing, brattishing (*Build.*). See **cresting.**

Braun tube, brown (*Phys.*). An evacuated glass vessel fitted with electrodes for producing a narrow beam of cathode rays that form a bright spot on a fluorescent screen placed at the end of the tube. By measuring the deflection of this spot under the action of a known magnetic field the value of e/m for the electrons may be found. See **cathode ray oscillograph.**

braunite, brown'it (*Min.*). A massive, or occasionally well-crystallised, cubic ore of manganese, occurring in India, New South Wales, and several European localities. Composition $3Mn_2O_3 \cdot MnSiO_3$.

braxy (*Vet.*). An acute toxaemia of sheep due to infection by *Clostridium septique.*

brayer (*Typog.*). A hand ink-roller.

brasier (*Build.*). A portable iron container for a lighted fire, used to dry off building work in a room, or as a source of warmth for outside night-watchmen.

Brazil resistance (*Elec. Eng.*). See **carbon-dust resistance.**

Brazil wax (*Chem.*). *Carnauba wax* (q.v.).

Brazilian aquamarines (*Min.*). Fine large blue aquamarines obtained from Minas Novas in the state of Minas Geraes in Brazil.

Brazilian emerald (*Min.*). A pure-green, deeply coloured variety of tourmaline, occurring in Brazil; used as a gemstone.

Brazilian pebble (*Min.*). The name applied to Brazilian quartz or rock-crystal, used in the manufacture of spheres for crystal-gazing, lenses, etc.

Brazilian peridot (*Min.*). Green crystals from Brazil having the typical colour of peridot (olivine); they are probably specimens of chrysoberyl.

Brazilian ruby (*Min.*). Among the many coloured topaz crystals mined in Brazil some are pink (rose topaz), others deep red; these latter are termed *Brazilian ruby.*

Brazilian sapphire (*Min.*). A trade name for the beautiful clear blue variety of tourmaline mined in Brazil; used as a gemstone.

Brazilian topaz (*Min.*). True topaz varying in colour from pure white to blue and yellow; mined chiefly in the state of Minas Geraes, Brazil.

brazing (*Eng*). The process of joining two pieces of metal by fusing a layer of brass or spelter between the adjoining surfaces.

brazing solders (*Met.*). Alloys used for brazing. They include copper-zinc (50-55% copper), copper-zinc-silver (16-52% copper, 4-38% zinc, and 10-80% silver), also nickel-silver alloys.

B.R.C. fabric (*Build., Civ. Eng.*). A very open, electrically welded, wire mesh with apertures about 3 by 12 in., used as a reinforcing medium for concrete roads, floor slabs, etc. B.R.C.= *British Reinforced Concrete.*

bread-crust bomb (*Geol.*). A type of *bomb* (q.v.) having a compact outer crust and a spongy vesicular interior.

breadth (*Photog.*). The element in pictorial composition which describes elimination of detail.

breadths (*Lace*). Narrow lace, made in tubular form, the edges being held together by draw-threads which are afterwards withdrawn.

breadth coefficient (*Elec. Eng.*). See **distribution factor.**

breadth extreme (*Ship Constr.*). The maximum breadth of a ship, over the shell plating.

breadth factor (*Elec. Eng.*). See **distribution factor.**

breadth, moulded (*Ship Constr.*). The breadth over the frames of a ship, i.e. heel of frame to heel of frame. It is the breadth termed B by Lloyd's Register, and is the line faired in the moulding loft.

break (*Build.*). Any projection from, or recess into, the surface of a wall.

break (*Elec. Eng.*). The shortest distance between the contacts of a switch, circuit-breaker, or similar apparatus, when the contacts are in the fully open position.

break (*Mining*). A jointing plane in a coal-seam.

break (*Plast.*). To nail the laths so that the joints are staggered, i.e. not in the same vertical line. See also **break-joint** and **breaking joint** below.

break (*Teleph.*). The cessation of operation of a telephone relay, because of reduction or stoppage or reversal of current which has operated it.

breakaway (*Cinema.*). Any construction in sound-film production which is made so that it can fall to pieces easily. See **float.**

breakbone fever (*Med.*). See **dengue.**

break contact (*Teleph.*). The pair of contacts in a relay assembly which separate when the relay is operated and so interrupt a circuit.

breakdown (*Elec. Eng.*). A term used to signify the sudden passage of current through an insulating material, as soon as the voltage exceeds a certain definite value (the *breakdown voltage*, q.v.).

breakdown crane (*Eng.*). A portable jib crane carried on a railway truck or motor lorry, for rapid transit to the scene of an accident.

breakdown voltage (*Cables*). The voltage required to break down a cable or insulating material. It depends upon the time of application. See **VTB curve.**

break impulse (*Elec. Comm.*). An impulse formed by interrupting a current in a circuit; e.g. by dialling.

break iron (*Carp.*). The iron which is screwed to the cutting iron of a plane, to bend and break the shavings.

break jack (*Teleph.*). A jack with springs so arranged that, on the insertion of a plug, the apparatus terminated by the plug is inserted into the circuit which, normally, is kept continuous by the jack contacts.

break-joint (*Build.*). A term applied to the principle of locating adjacent parts in a structure so that joints shall not be in line.

break line (*Typog.*). A *club line* (q.v.).

break-out or **run-out** (*Foundry*). Rupture of a mould through insufficient weight or clamping, permitting metal to flow out at the joint.

break, stratigraphical (*Geol.*). The geological record is incomplete, the succession of strata being broken by unconformities and non-sequences, these representing longer or shorter periods of time during which no sediment was deposited in the area where such breaks occur.

breakwater (*Civ. Eng.*). A natural or artificial coastal barrier serving to break the force of the waves so as to provide safe harbourage behind; it differs from the bulwark in that it has the sea on both sides of it.

breakwater-glacis (*Civ. Eng.*). An inclined stone paving on piers and breakwaters, designed to take the force of impact of the waves.

breaker (*Elec. Eng.*). A term commonly used to denote a *circuit-breaker.*

breaker (*Paper*). Apparatus, comprising a washing roll fitted with knives, for reducing raw material, other than grasses and wood pulp, to fibres or 'half-stuff.'

breaking (*Bot.*). The development of striping in the flowers of tulip.

breaking capacity (*Elec. Eng.*). The capacity of a switch, circuit-breaker, or other similar device to break an electric circuit under certain specified conditions.

breaking current (*Elec. Eng.*). The maximum current which a switch, circuit-breaker, or other similar device will interrupt without damage to itself.

breaking-down (*Carp.*). The operation of sawing logs into small stuff.

breaking joint (*Build., Masonry*). The principle of laying bricks or building stones in such a manner that joints are not continuous.

breaking of meres (*Bot.*). The sudden development of large masses of blue-green algae in small bodies of fresh water.

breaking piece (*Eng.*). An easily replaceable member of a machine subject to sudden overloads; made weaker than the remainder, so that in breaking it protects the machine from extensive damage.

breaking stress (*Eng.*). The stress necessary to break a material, either in tension or compression. See **ultimate tensile stress.**

breast (*Agric. Mach.*). See **mouldboard.**

breast (*Anat.*). An accessory gland of the generative system, rudimentary in the male and secreting milk in the female. Extending from the third to the sixth rib in the front of the chest, it consists of fatty, fibrous, and glandular tissue, the ducts of which end in the nipple.

breast (*Build.*). The wall between a window and the floor. See also **chimney-breast.**

breast (*Carp.*). The underside of a handrail or rafter.

breast (*Join.*). A Scottish term for a stair *riser.*

breast (*Mining*). The working coal-face in a colliery.

breast beam (*Weaving*). A guide at the front of a loom, over which the fabric passes to the take-up roller.

breast bone (*Zool.*). In higher Vertebrates, the sternum: in the larvae of Gall Midges (*Cecidomyidae*), an elongate sclerite situated mid-ventrally on the thorax.

breast lining (*Join.*). Panelling between window board and skirting.

breast mouldings (*Carp.*). Mouldings on the part of the wall between a window and the floor.

breast wall (*Masonry*). A breast-high parapet or retaining wall.

breast wheel (*Eng.*). An obsolete type of water wheel in which the water entered buckets on the wheel rim at a point about level with the wheel centre.

breastwork (*Build.*). A parapet on a building.

breastsummer (*Build.*). See **bressummer.**

breather pipe (*Eng.*). A vent pipe from the crank-case of an internal-combustion engine, for the release of pressure resulting from blow-by.

breathing root (*Bot.*). A root produced by mangroves and other large plants growing in mud; it projects above the mud and water and provides a means by which air is conveyed into the roots below.

breccia, bretch'i-a (*Geol.*). A coarse-grained clastic rock consisting largely of angular fragments of pre-existing rocks. According to its mode of origin, a breccia may be a *fault-breccia*, a *crush-breccia*, an *intrusion breccia*, or a *flow-breccia.*

breech (*Textiles*). See **britch.**

breech-loading guns (*Artillery*). See **B.L. guns.**

breech mechanism (*Artillery*). The mechanism by which the breech of a gun is closed before firing.

breeches pipe (*Eng.*). A pipe junction piece in the shape of an inverted Y; used in locomotives to provide a common exhaust outlet from the two cylinders.

breeze (*Build.*). A general term for furnace ashes, or for *coke breeze*, *pan breeze*, and *furnace clinker* (qq.v.).

breeze concrete (*Build.*). A concrete made of 3 parts coke breeze, 1 of sand, and 1 of Portland cement. It is cheap and nails can be driven into it, but it has poor fire-resisting qualities.

breeze fixing brick (*Build.*). A brick made from cement and breeze, built into the surface of a wall to provide a substance to which joinery may be nailed.

breezing (*Cinema.*). Said of a projected cinematograph image which is not clear, because of inaccurate focusing in camera, printer, or projector, or uneven sprocket holes, or other defect in processing.

breg'ma (*Anat.*). The point of junction of the coronal and sagittal sutures of the skull.

Bréguet spring, brā-gā (*Horol.*). A special form of balance spring, in which the outer coil of the spring is raised above the plane of the spiral, the end of the spring being bent to a special form before it enters the stud.

Bréguet-sprung (*Horol.*). Said of a watch when it is fitted with a Bréguet spring with terminal curve.

Bremer arc lamp (*Illum.*). An early form of inclined-carbon flame arc lamp.

Brem'ograph (*Illum.*). An arc projection device for exhibiting moving patterns on a screen, particularly with superposed lettering, in a cinema.

Bren gun (*Small Arms*). The type of light machine-gun most commonly used in the British Army; it has detachable barrels.

breph′ic (*Zool.*). See **neanic.**

Bressay and Noss Series (*Geol.*). The highest division of the Middle Old Red Sandstone of the Shetland Isles.

bressummer (*Build.*). A beam or lintel spanning a wide opening in a wall with whose surface it is flush. Also called a BREASTSUMMER.

Breto′nian (*Geol.*). The name applied to the Upper Cambrian strata of the Atlantic seaboard of N. America (Cape Breton district); of the same age as the Croixian of central and western U.S.A

brevi- (Latin *brevis*, short). A prefix used in the construction of compound terms; e.g. *brevilingual*, having a short tongue.

brevier, bre-vēr′ (*Typog.*). The old name for a size of type now standardised as 8-point.

brevipen′nate (*Zool.*). Having short wings.

brewers' grains (*Brew.*). See **grains (brewers').**

brewing. The processes by which beer is made. See **beer**, **malt**, **hops**, **finings**, **grains**, **grist**, **grist case**, **mash**, **mash tun**, **wort**, **yeast.**

Brewster's bands (*Light*). Interference fringes which are visible when white light is viewed through two parallel and parallel-sided plates, whose thicknesses are in a simple ratio (1 : 1, 2 : 1, 1 : 3, etc.).

Brewster's law (*Light*). The *angle of polarisation* (q.v.) at the surface of a medium is the angle whose tangent is equal to the refractive index of the medium.

bribe (*Textiles*). A defective length removed from a piece of cloth.

brick. A shaped and burnt block of special clay, used for building purposes.

brick-and-a-half wall (*Build.*). A wall which is just over 13½ in. thick, a mortar joint having to be added in. Usually called a 14 IN. WALL.

brick-and-stud (*Build.*). See **bricknogging.**

brick-axe (*Build.*). The two-bladed axe used by bricklayers in dressing bricks to special shapes for arches, etc.

brick clay (*Geol.*). An impure clay, containing iron and other ingredients. In industry the term is applied to any clay, loam, or earth suitable for the manufacture of bricks or coarse pottery. See **brick earths.**

brick-core (*Build.*). Rough brickwork filling between a timber lintel and the soffit of a relieving arch.

brick drier. An oven for drying green bricks, so as to prepare them for burning.

brick earths (*Build.*). Earths used for the manufacture of ordinary bricks; they consist generally of clayey silt interstratified with the fluvio-glacial gravels of southern England, frequently exploited in brick manufacture. See **foul clay, loam, marl.**

bricklayer's hammer (*Tools*). A hammer having both a hammer-head and a sharpened peen; used for dressing bricks to special shapes.

bricklayer's scaffold (*Build.*). A form of scaffold used in the erection of brick buildings, a characteristic being that one end of the *putlogs* (q.v.) is supported in holes left in the wall.

bricknogging (*Build.*). The type of work used for walls or partitions which are built up of brickwork laid in spaces between timber. Also called BRICK-AND-STUD work.

brick-on-edge coping (*Build.*). A coping finish to the exposed top of a wall; formed of bricks built on edge in cement in courses 4½ instead of 3 in. high, so that the frogs are concealed and only a few joints are exposed to the weather.

brick-on-edge sill (*Build.*). An external sill to window or door, formed in the manner of the *brick-on-edge coping* (q.v.).

brick-trimmer (*Build.*). See **trimmer arch.**

brick trowel (*Build.*). A flat triangular-shaped tool used by bricklayers for picking up mortar and spreading it on the wall.

brick veneer (*Build.*). A brickwork facing applied to a structure.

brickwork (*Build.*). The art of bonding bricks together so as to form a wall or building.

bricking (*Build.*). Work on plastered or stuccoed surfaces, in imitation of brickwork.

bricking-up (*Foundry*). Building up the interior of a large mould with bricks in order to give extra strength.

bridge (*Bot.*). See **disjunctor.**

bridge (*Civ. Eng.*). A structure built over or under a road or railway, or over a river or canal, to provide a continuous roadway from one side to the other for transport purposes.

bridge (*Elec. Eng.*). An arrangement of impedances, used for the measurement of various electrical quantities. See **alternating-current—**, **Anderson—**, **Kelvin double—**, **Maxwell—**, **Owen—**, **Schering—**, **Wheatstone—**, **Wien—**

bridge (*Horol.*). A raised platform or support, generally with two feet.

bridge board (*Carp.*). See **notch board.**

bridge duplex (*Teleg.*). An arrangement of a submarine cable and its balance with two resistances in the form of a Wheatstone bridge, so that the high currents transmitted do not affect the receiving apparatus.

bridge engineer. An engineer who is chiefly concerned with the design, construction, and erection of bridges.

bridge fuse (*Elec. Eng.*). A fuse in which the fusible wire is carried in a holder, supported by spring contacts at its two ends; it is thus easily removable for renewing the fuse wire.

bridge gauge (*Eng.*). A measuring device for detecting the relative movement of two parts of a machine due to wear at bearings, etc.

bridge hanger (*Elec. Eng.*). A form of hanger of small vertical dimensions, for supporting the overhead contact-wire of a traction system under bridges or tunnels.

bridge-megger (*Elec. Eng.*). A portable instrument for measuring resistances on the Wheatstone-bridge principle. A megger forms a component part, and supplies the necessary source of e.m.f. and the instrument dial on which the balance is obtained.

bridge network (*Elec. Comm.*). The same as *lattice network.*

bridge neutralising (*Radio*). A method of overcoming the adverse effects of inter-electrode capacities in thermionic valve amplifiers. Two valves are connected in 'push-pull' and their respective anodes and grids are cross-connected through balancing condensers, the whole forming a balanced Wheatstone bridge.

bridge-over (*Build.*). A term applied to some parts of a structure to indicate that they lie across and bear upon others; e.g. a *bridge-over* joist.

bridge-pile (*Civ. Eng.*). A pile driven to afford a firm foundation for a bridge-pier.

bridge receiver (*Radio*). A form of radio receiver employed when two-way working is carried out on one wavelength. By the use of the Wheatstone-bridge principle it is rendered sensitive to the distant, but not to the local, transmitter.

bridge-set (*Elec. Comm.*). An arrangement of normal transformers which replaces the hybrid-coil, when the associated apparatus of a four-wire radio-link is joined to the two-wire exchange and subscribers' lines.

bridge stone (*Masonry*). A flat stone spanning a narrow area or gutter.

bridge transformer (*Elec. Comm.*). The same as *hybrid coil.*

bridge transition (*Elec. Eng.*). A method, employed in connexion with the series-parallel control of traction motors, in which the change from series to parallel is effected without interrupting the main circuit, and without any change in the current flowing in each of the motors.

bridge truss (*Struct.*). A structural framework capable of supporting a bridge roadway.

bridged-T filter (or **network**) (*Elec. Comm.*). A filter section consisting of a T-network, with a further arm bridging the two series arms; used for phase compensation.

bridging (*Carp.*). The principle of diminishing lateral distortion of adjacent floor-joists by connecting them together with short cross-pieces.

bridging amplifier (*Elec. Comm.*). An amplifier for monitoring or tapping a channel without abstracting appreciable power. Also called MONITORING AMPLIFIER.

bridging fibrils (*Zool.*). Protoplasmic strands connecting the deep cells of stratified epithelium with one another across the intercellular channels.

bridging floor (*Carp.*). A floor supported by bridging joists, without girders.

bridging host (*Bot.*). A temporary host of a parasitic fungus, by means of which it may pass from one species to another.

bridging joist (*Carp.*). A timber beam immediately supporting the floor-boards in a floor. Also called a COMMON JOIST.

bridging piece (*Carp.*). A short piece of timber connecting floor-joists in order to reduce lateral distortion.

bridle (*Carp.*). A Scottish term for *trimmer* (q.v.).

bridle (*Elec. Eng.*). A portion of an overhead contact-wire system. It extends longitudinally between supporting structures and is attached at intervals to the contact-wire, in order to retain the latter in its proper lateral position.

bridle (*Paint.*). Whipcord or wire fastened half-way up the bristle of new brushes, when it is too long or flexible.

bridle butts (or **backs**) (*Leather*). Pliable butts, free from defects; used for harness.

bridle joint (*Carp.*). The converse of the mortise-and-tenon joint. Instead of leaving the central part of the tenoned member projecting to fit into a mortise in the second member, the central part on the first member is cut away to leave two side tongues projecting, and the second member is cut away at the sides to receive these tongues.

brier tooth saw (*Tools*). See **gullet saw.**

bright annealing (*Met.*). The heating and slow cooling of steel or other alloys in a carefully controlled atmosphere, so that oxidation of the surface is reduced to a minimum and the metal surface retains its bright appearance.

bright emitter (*Thermionics*). A pure tungsten cathode which emits electrons when heated to about 2600 degrees absolute. Formerly used in all thermionic tubes, but now restricted mainly to high-power tubes.

bright plating (*Elec. Eng.*). The production of a fairly bright deposit from an electroplating plant. Such surfaces require little finishing.

Bright's disease (*Med.*). A general term for acute and chronic nephritis.

brightener (*Elec. Eng.*). An addition agent added to an electroplating solution to produce bright deposits.

brightness (*Light*) See **intrinsic brilliancy.**

brightness (*Photog.*). The brilliance of a source of light, or a surface reflecting light, i.e. that attribute of colour which can be matched with a grey and distinguished from hue and saturation.

brighton (*Textiles*). A cotton fabric of the honeycomb type.

Brighton system (*Elec. Eng.*). A name sometimes given to the maximum-demand method of charging for an electric supply; derived from the name of the town in which it was first used.

brilliance (*Acous.*). The presence of considerable numbers of high harmonics in musical tone, or the enhancement of these in sound reproduction.

brilliance, brilliancy (*Light*). See **intrinsic brilliancy.**

brilliance control (*Television*). Control of the average illumination over the whole of the screen of a television receiver.

brilliant (*Gems*). The name applied to a diamond when cut and polished for use as a gemstone in the form generally adopted; i.e. with a large face (known as the *table*) girdled by 33 facets in the crown, and having a further 25 facets in the *pavilion* (the part of the stone below the girdle).

brilliant (*Typog.*). The old name for a size of type, about 4-point.

brilliant view-finder (*Photog.*). A view-finder with an inclined reflector between two small lenses; used in a hand-camera for locating the image on the emulsion.

brilliantine (*Textiles*). A plain-weave lustre dress material, with a cotton warp and a worsted weft; the lustrous character is produced by the weft. Figured patterns are produced by floating the weft on a plain ground.

Brin's process (*Chem.*). A method of obtaining oxygen from barium dioxide by first oxidising barium oxide in air to barium dioxide and further heating the barium dioxide at a higher temperature, when the oxygen is given off leaving barium oxide. This process has now given way to the liquid-air process.

brindled bricks (*Build.*). Bricks which, owing to their chemical composition, show a striped surface; when they are otherwise satisfactory they are frequently used in cases where appearance is not an important consideration.

brine pump (*Eng.*). The pump used to circulate brine through the evaporator of a refrigerator, the working parts being of corrosion-resisting alloy.

Brinell' hardness test (*Met., etc.*). A method of measuring the hardness of a material by measuring the area of the indentation produced by a hard steel ball under standard conditions of loading.

briolet, brĕ′ŏ-let (*Jewel.*). A double rose-facetted precious stone, with triangular and long facets, forming a pear or drop shape.

briquettes (*Fuels*). Fuel made from finely divided carbonaceous matter in pressure moulds, the shape and size depending on requirements; usually made from low-grade coal or coke breeze, mixed with a binder such as pitch, tar, or asphaltum; brown coals briquette without a binder.

brisket (*Vet.*). The breast or anterior sternal region of an animal.

bristle (*Bot.*). (1) A very stiff, erect hair.—(2) A long hollow outgrowth of the cell wall in some algae.

Bristol board (*Paper*). A fine-quality cardboard made by pasting several sheets together.

Bristol diamonds (*Min.*). Small lustrous crystals of quartz, i.e. rock crystal, occurring in the Bristol district.

britch or **breech** (*Woollen*). A wool-sorter's term for wool obtained from the thighs and root of the tail, estimated as the lowest quality in a fleece.

British Association (B.A.) screw-thread (*Eng.*). A system of metric threads, confined to small sizes, used in instrument work, etc. It is designated by numbers from 0 to 25, ranging from 6 mm. to 0·25 mm. in diameter and from 1 mm. to 0 072 mm. pitch.

British Columbian pine (*Timber*). See **Oregon pine.**

British Engineering Standards Association. Now *British Standards Institution* (q.v).

British Standard beam (*Struct.*). A rolled-steel joist conforming to the standard dimensions laid down by the British Standards Institution.

British Standard brass thread (*Eng.*). A screw-thread of Whitworth profile used for thin-walled tubing; it has 26 threads per inch irrespective of diameter. See **British Standard Whitworth thread.**

British Standard candle (*Illum.*). The standard of luminous intensity formerly adopted in Great Britain; equivalent to 1·02 international candles; it is the light given by a sperm candle of specified make-up and dimensions.

British Standard channel (*Struct.*). A rolled-steel channel conforming to the standard dimensions laid down by the British Standards Institution.

British Standard fine (B.S.F.) thread. A screw-thread of Whitworth profile, but of finer pitch for a given diameter; largely used in automobile work.

British Standard pipe (B.S.P.) thread or **British Standard gas thread** (*Eng.*). A screw-thread of Whitworth profile, but designated by the bore of the pipe on which it is cut (e g. ⅜ in. Gas) and not by the full diameter, which is a decimal one, slightly smaller than that of the pipe. See **British Standard Whitworth thread.**

British Standard Whitworth (B.S.W.) thread (*Eng.*). The standard English screw-thread, having a profile angle of 55 degrees and a radius at root and crest of 0·1373 × pitch; ⅙ of the thread cut off. The pitch is standardised with respect to the diameter of the bar on which it is cut.

British Standard wire gauge (S.W.G.). An arbitrary series of numbers used for expressing the diameter of wires, ranging from 6 (0 192 in.) to 50 (0·001 in.).

British Standards Institution. A national organisation for the preparation and issue of standard specifications, based on rational principles, for use in the building, chemical, engineering, and textile industries.

British Thermal Unit (*Heat*). The amount of heat required to raise the temperature of one pound of water one Fahrenheit degree (usually taken as from 60°-61° F.). Abbrev. **B.Th.U.**

brittle micas (*Min.*). A group of minerals (the clintonite group) resembling the true micas in crystallographic characters, but having the cleavage flakes less elastic. Chemically, they are distinguished by containing calcium as an essential constituent.

brittle silver ore (*Min.*). A popular name for *stephanite* (q.v.).

brittleness (*Met*). The tendency to fracture without appreciable deformation and under low stress. It is indicated in tensile test by low ultimate tensile stress and very low elongation and reduction in area. The notched-bar test may, however, reveal brittleness in metals that give a high ultimate tensile stress. See **toughness.**

broach (*Build.*). The sloping timber or masonry pyramid at the projecting corner of the square tower from which springs a *broach spire* (q.v.).

broach (*Eng.*). A metal-cutting tool for machining holes; it consists of a tapered steel shaft carrying transverse cutting edges, which is driven or pulled through the roughly finished hole.

broach (*Join.*). The locating pin, within a lock, about which the barrel of the key passes.

broach-post (*Carp.*). See **king-post.**

broach spire (*Build.*). An octagonal spire springing from a square tower without a parapet, and having the triangular corners of the tower covered over by short sloping pyramids blending into the spire.

broached work (*Masonry*). The finish given to a building-stone by dressing it with a punch so that broad diagonal grooves are left.

broad (*Cinema.*). A set of Klieg incandescent flood-lights used in studio illumination. Also called BROADSIDE.

broad (*Tools*). A wood-turning tool, often consisting of a flat disc with sharpened edges fixed at right-angles to a stem; used for shaping the insides and bottoms of cylinders.

broad-axe (*Tools*). A broad-edged axe with crooked handle used for rough-dressing timber. The sharpening bevel on the blade, as in the case of a chisel, is on one side only.

broad-base tower (*Elec. Eng.*). A transmission line tower in which each leg is separately anchored.

broadcloth (*Textiles*). A woollen cloth for men's wear, woven plain and finished with a dress face; originally made two yards wide.

broad gauge (*Rail.*). A railway gauge in excess of the standard 4 ft. 8½ in. In particular, the gauge of 7 feet laid down by Brunel.

broad irrigation (*Sewage*). A process of sewage purification in which the effluent is distributed over a large area of carefully levelled land, and allowed to soak through it and drain away as ordinary subsoil water down the natural watercourses. Cf. *intermittent filtration.*

broad-leaved tree (*Bot.*). Any tree other than a member of the *Coniferae.*

broad ray (*Bot.*). A vascular ray many cells in width, consisting of cells which are rounded in transverse section.

broadside (*Cinema.*). See **broad.**

broadside (*Typog.*). A large sheet printed on one side, such as a poster.

broadstone (*Masonry*). An *ashlar* (q.v.).

broad tool (*Masonry*). A steel chisel having a cutting edge 3½ in. wide, used by the mason for finish-dressing stone.

broadcast (*Teleg.*). The paralleling of a number of outgoing channels so that the transmitted messages are received by all receiving stations together. See also **broadcasting.**

broadcast channel (*Elec. Comm.*). The frequency band used for interference-free and widespread reception from a single transmitting source.

broadcast receiver (*Radio*). A radio receiver whose tuning ranges cover those normally used for broadcast transmission.

broadcast sower (*Agric. Mach.*). A type of sowing machine in which seed is scattered from a container, through holes in the lower part, by revolving brushes or by other means.

broadcast transmitter (*Radio*). A radio-telephone transmitter specially designed for broadcasting. The requirements for faithful transmission are higher than those for an ordinary commercial transmitter.

broadcasting (*Radio*). Radio-telephonic transmission primarily intended for reception by the general public.

broadcasting amplifier (*Elec. Comm.*). An amplifier of adequate performance, for use in amplifying the programme currents in a broadcasting channel.

broadcasting repeater (*Elec. Comm.*). The same as *programme repeater*.

brob (*Carp.*). A pointed spike with a one-sided head, used to support one timber butting against another; a number are driven into the second timber so that their sides give support to the first.

Broca galvanometer (*Elec. Eng.*). An astatic galvanometer in which the moving element consists of two magnetised needles with consequent poles at their centres.

Broca's area (*Anat.*). The left inferior convolution of the frontal lobe of the brain; the 'speech centre.'

brocade' (*Textiles*). Figured fabric made of silk or cotton, etc.; often made with cotton warp and rayon weft, or of rayon throughout.

brocatelle' (*Textiles*). A silk-and-linen fabric of rich appearance, with a raised satin warp figure; linen weft stiffens the fabric but is not visible.

brochantite, brok'— (*Min*). A basic sulphate of copper occurring in fibrous masses, or as incrustations; formed by the decomposition of chalcopyrite.

broché, brō-shā (*Silk*). A term applied to decorative effects obtained by the use of fancy colours, imparting a brocade appearance to the fabric.

brochone'ma (*Cyt.*). In cell-division, the spireme thread when it has become arranged in the form of loops.

Brocken, Spectre of the (*Meteor.*). The shadow of an observer cast by the sun on to a bank of mist. The phenomenon, often seen from a hill-top, may present the illusion that the shadow is a gigantic form seen through the mist.

brockram (*Geol.*). A sedimentary rock occurring in the Permian strata west of the Pennines, consists of angular blocks which probably accumulated as scree material.

Brocot suspension, brok-ō (*Horol.*). A form of pendulum suspension in which adjustment to the length of the pendulum can be made from the front of the dial.

Brodie's abscess (*Med.*). A localised abscess in bone due to tuberculous or other infection.

Brodie's reaction (*Chem*). A method of identifying graphite, which also distinguishes it from amorphous carbon.

Broenner's acid (*Chem.*). See **Brönner's acid.**

brog (*Join.*). An awl.

broich (*Woollen*). The spindle which holds the yarn cop during warping.

broken crow twill (*Woollen*). The four-shaft sateen (or four-end broken twill) weave.

broken ends (*Textiles*). Warp threads which have broken during weaving owing to defects in the yarn or excessive weighting of the warp beam.

broken-over (*Bind.*). The term used to indicate that plates or other separate sheets to be inserted in a book have been given a narrow fold on the inner edge, so that they will lie flat and turn easily when fixed.

broken picks (*Textiles*). Defects in weaving due to breaking of the weft carried by the shuttle.

broken-space saw (*Carp., Join.*). A handsaw having usually six teeth to the inch.

broken twills (*Textiles*). Fabrics in which the diagonal line forming the 'twill' is broken, or broken and reversed in direction, at intervals.

broken wind (*Vet.*). A chronic emphysema of the lungs of horses.

brokes (*Textiles*). Short staples of wool that come from the neck and belly parts of a fleece.

broma'tium (*Zool.*). A fungal enlargement formed by ants; used by them for food.

bromides (*Chem.*). Bromides are salts of hydrobromic acid. Silver bromide is extensively used in photography, potassium bromide and, to a less extent sodium, ammonium, and lithium bromides, in medicine.

bromide pencil (*Photog.*). A pencil for retouching bromide prints.

bromide process (*Photog.*). The use of silver bromide emulsion, coated on paper, for printing from negatives or for enlarging.

bromidro'sis (*Med.*). Fetid perspiration, especially of the feet.

bromination (*Chem.*). The substitution of bromine in, or its addition to, organic compounds.

bromine (*Chem.*). Symbol, Br. A non-metallic element in the seventh group of the periodic system, one of the halogens. At. no. 35, at. wt. 79·916, valencies 1, 3, 5, 7. It is a dark-red liquid, giving off a poisonous vapour, Br_2, with an irritating smell; m p. −7·2° C., b.p. 58·78° C., sp. gr. 3 12. In combination with various metals it is widely but sparingly distributed. The chief sources are Stassfurt and Michigan, where it is manufactured by treating the 'bittern' with chlorine. Bromine is used extensively in synthetic organic chemistry.

bromine solidificatum (*Chem*). Kieselguhr saturated with bromine. Commercially used as a disinfectant.

bromoform (*Chem.*). $CHBr_3$, tribromomethane, m p. 5° C., b.p. 151° C., sp. gr. 2 9; a colourless liquid, of narcotic odour.

bromoil process (*Photog.*). The combination of oil pigmenting on a bromide print, so that the image is obtained in a permanent pigment.

bronch-, broncho- (Greek *bronchos*, windpipe). A prefix used in the construction of compound terms; e.g. *bronchopulmonary*, pertaining to, or connecting, the bronchi and the lungs.

bronchi (*Zool.*). See **bronchus.**

bron'chia (*Zool.*). The branches of the bronchi.—*adj.* **bronchial.**

bron'chiec'tasis (*Med.*). Pathological dilatation of the bronchi as a result of weakening of the bronchial wall—usually from infection.

bron'chiole (*Zool.*). One of the terminal subdivisions of the bronchia.

bron'chiolec'tasis (*Med.*). Pathological dilatation of the bronchioles.

bron'chioli'tis (*Med.*). Inflammation of the bronchioles.

bronchi'tis (*Med.*). Inflammation of the bronchi. —(*Vet.*) See **husk.**

bronchoph'ony (*Med.*). Increase of voice sounds heard through the stethoscope when placed over the lungs; indicative of consolidation of lung tissue, as in pneumonia.

bron'choscope (*Med.*). An instrument consisting of a hollow tube with mirrors and light arranged for inspecting the interior of the bronchi.

bronchus (*Zool.*). One of the two branches into which the trachea divides in higher Vertebrates and which lead to the lungs.—*pl.* **bronchi.**—*adj.* **bronchial.**

Brönner's acid (*Chem.*). 2,6-Naphthylaminemonosulphonic acid. Intermediate for dyestuffs.

Bronsil Shales (*Geol.*). Grey shales occurring in the Malvern Hills, England; equivalent to the Tremadoc Shales of N. Wales; of Upper Cambrian age.

bronze (*Met.*). Primarily an alloy of copper and tin, but the name is now applied to other alloys not containing tin; e.g. aluminium bronze, manganese bronze, and beryllium bronze. For varieties and uses of tin bronze, see **alpha-bronze, gun metal, phosphor-bronze, leaded bronze, bell metal.**

bronzed diabetes (*Med.*). See **haemochromatosis.**

bronzite (*Min.*). A form of orthopyroxene, near hypersthene in composition; characterised by a metallic sheen, due to the reflection of light from planes of minute metallic inclusions in the surface layers.

brood (*Zool.*). A set of offspring produced at the same birth or from the same batch of eggs.

brood bud (*Bot.*). (1) A small multicellular organ serving for vegetative propagation in some red algae.—(2) A bulbil in *Bryophyta.*—(3) See **soredium.**

brood cell (*Bot.*). A naked or walled cell, produced asexually, separating from the parent and giving rise to a new plant.

brood gemma (*Bot.*). A multicellular body, formed asexually, and separating from the parent, forming a new plant.

brood pouch (*Zool.*). Any cavity of the parent animal or colony in which developing eggs or embryos are placed.

brookite (*Min.*). A form of crystalline titanium dioxide, occurring in flat, red-brown, platy, orthorhombic crystals.

brooming (*Civ. Eng.*). The spreading of the fibres at the head of a timber pile, due to the impact of the monkey.

brow (*Mining*). The top of the shaft or 'pit'; hence also called PIT-BROW.

brown (*Paint.*). A pigment obtained either from natural sources (brown ochre, bitumen) or by mixing black with red, orange, or yellow.

brown (*Textiles*). A term applied by wool-sorters to wool usually sorted from the haunches.

brown algae (*Bot.*). See **Phaeophyta.**

brown body (*Zool.*). In ectoproct *Polyzoa*, a brown rounded mass representing a degenerate zooecium and an invagination from which a new zooecium will develop.

brown coal or **lignite** (*Fuels*). Intermediate between peat and true coals, with high moisture content, the calorific value per pound ranging from about 4000 to 5000 B.Th.U.; used for firing boilers; found almost exclusively in Germany. The hydrogenation of brown coal is of great importance for the production of synthetic fuel, lubricating oils, and motor spirit.

brown funnels (*Zool.*). In *Cephalochorda*, two tubes lined by pigmented epithelium and projecting into the dorsopharyngeal coelom; of unknown function.

brown haematite (*Min.*). A misnomer, for the mineral bearing this name is *limonite* (q.v.), a hydrous iron-oxide, whereas true haematite is anhydrous.

brown rot (*Bot.*). A disease of plums and other fruit caused by fungi.

brown tubes (*Zool.*). In *Sipunculoidea*, the nephridia.

Brown and Sharpe wire gauge. A system of designating, by numbers, the diameter of wires; it ranges from 4/0 (0·46 in.) to 48 (0·00124 in.).

Brown loudspeaker (*Acous.*). An early type of loudspeaker in which the sound power, generated by a reed-driven unit, is augmented by the provision of a metal horn.

Brown relay (*Radio*). An early form of audio-frequency amplifier, comprising a carbon microphone mechanically coupled to a telephone receiver movement; used as a note magnifier in a radio receiver.

Brownian movement (*Phys.*). A continuous agitation of the particles in a colloidal solution, caused by unbalanced impacts with molecules of the surrounding medium. The movement may be watched with a microscope if a strong beam of light is caused to traverse the solution across the line of sight. It has been used to determine Avogadro's number.

Brownstone Series (*Geol.*). A division of the Old Red Sandstone, unfossiliferous and undated, lying above the Dittonian Red Marl Stage in the South-Western Province of England.

Bruce Series (*Geol.*). The lower division of the Huronian, including the Mississagi Quartzite, 12,000 ft. thick, followed by conglomerates, limestone, banded cherty greywackes, and finally quartzites at the top. The series is followed by the Cobalt Series.

Bruch's membrane, broohh (*Zool.*). In some Vertebrates, a transparent membrane lining the inner surface of the choroid.

brucine (*Chem.*). $C_{23}H_{26}O_4N_2$, $4H_2O$, a strychnine base alkaloid, m.p. of the anhydrous compound 178° C.; it contains two methoxyl groups, and is a monoacidic tertiary base. Its physiological action is less than that of *strychnine* (q.v.).

brucite (*Min.*). Hydroxide of magnesium, occurring as fibrous masses in serpentines. See also **periclase.**

brucite-marble (*Geol.*). A product of dedolomitisation; a crystalline metamorphic rock formed by the action of intense heat on dolomitic (or magnesian) limestone.

Brückner cycle (*Meteor.*). A recurrence of periods of cold and damp alternating with warm and dry years, the period of a cycle being about 35 years.

bruise (*Med.*). Rupture of blood-vessels in a tissue, with more or less extravasation of blood, as a result of a blow which does not lacerate the tissue bruised.

bruit (*Med.*). A sound or murmur heard by auscultation over the lung or heart.

Brunner's glands (*Zool.*). Small racemose glands situated in the submucosa of the duodenum.

Brunswick black (*Paint.*). An opaque varnish with a basis of asphaltum.

Brunswick blue (*Paint.*). White paint stained with ferro-cyanide.

Brunswick green (*Paint.*). A compound of carbonate of copper and lime or chalk.

brush (*Elec. Eng.*). A conductor arranged to make electrical contact between a stationary and a moving surface.

brush (*Mining*). (1) In a coal-mine, a road through the goaf, gob, or worked-out area packed with waste.—(2) To clean up fine coal from the floor.

brush (*Photog.*). See **Blanchard— Buckle— Aerograph.**

brush arc-lighter (*Elec. Eng.*). An old type of open-coil d.c. generator, used for supplying arc lamps in series.

brush-box (*Elec. Eng.*). That portion of the brush-holder of an electrical machine in which the brush slides or in which it is clamped.

brush contact (*Elec. Eng.*). See **laminated contact.**

brush discharge (*Elec. Eng., etc.*). A discharge of electricity from a conductor which takes place when the potential difference between it and its surroundings exceeds a certain value but is not high enough to cause a spark or an arc. It is usually accompanied by a hissing noise. The phenomenon is also experienced by an aircraft traversing an *electric storm* (q.v.).

brush-dyeing (*Leather*). Another name for *staining*.

brush gear (*Elec. Eng.*). A general term used to denote all the equipment associated with the brushes of a commutating or slip-ring machine.

brush-holder (*Elec. Eng.*). The portion of an electrical machine or other piece of apparatus which holds a brush. See **box-type brush-holder.**

brush-holder arm (*Elec. Eng.*). The rod or arm supporting one or more brush-holders. Also called BRUSH SPINDLE, BRUSH STUD.

brush lead (*Elec. Eng.*). See **brush shift.**

brush-rocker (*Elec. Eng.*). A support for the brushes of an electrical machine which enables them to be moved bodily round the commutator. Also called a BRUSH-ROCKER RING.

brush shift (*Elec. Eng.*). The amount by which the brushes of a commutating machine are moved from the centre of the neutral zone. Also called BRUSH LEAD. See **backward shift, forward shift.**

brush spindle (*Elec. Eng.*). See **brush-holder arm.**

brush spring (*Elec. Eng.*). A spring in a brush-holder which presses the brush against the commutator or slip-ring surface.

brush stud (*Elec. Eng.*). See **brush-holder arm.**

brush yoke (*Elec. Eng.*). A special frame for supporting the brush-rocker or brushes of an electrical machine, when these are not supported from the main frame or the pedestal of the machine.

brushing and steaming mill (*Textiles*). A machine comprising a steam box, a revolving brush or brushes, and a folding motion; used in finishing woollen and worsted cloths.

brushing discharge (*Elec. Eng., etc.*). See **brush discharge.**

Brussels lace (*Textiles*). (1) BRUSSELS NET, a plain net originally made at Brussels.—(2) BRUSSELS PILLOW, a fine pillow lace, the patterns being joined by small loops at the edges.—(3) BRUSSELS POINT, a lace with an open pattern, made partly in open and partly in closed stitch. It has a shaded appearance.

Bry'ophy'ta (*Bot.*). The liverworts and mosses. One of the main divisions of the plant kingdom, with some thousands of species. The plants are small, rootless, and without organised vascular tissue. They show clear alternation of generations, with a small spore-bearing plant parasitic on the generation which bears the archegonia and antheridia.

B.S.B. (*Struct.*). Abbrev. for *British Standard beam* (q.v.).

B.S.C. (*Struct.*). Abbrev. for *British Standard channel* (q.v.).

B.S.F. thread (*Eng.*). Abbrev. for *British Standard fine thread* (q.v.).

B.S.I. Abbrev. for *British Standards Institution* (q.v.).

B.S.P. screw-thread (*Eng.*). Abbrev. for *British Standard pipe thread* (q.v.).

B.S.W. thread (*Eng.*). Abbrev. for *British Standard Whitworth thread* (q.v.).

B.T.U. Abbrev. for *Board of Trade Unit* (q.v.).

B.Th.U. (*Heat*). Abbrev. for *British Thermal Unit* (q.v.).

Bu (*Chem.*). A symbol for the butyl radical, C_4H_9—.

bubble (*Surv.*). The bubble of air and spirit vapour within a *level tube* (q.v.): loosely, the level tube itself.

bubble line (*Surv.*). The imaginary tangent at the centre of an undistorted bubble, which is said to be horizontal when the bubble is at the middle of its run.

bubble trier (*Surv.*). See **level trier.**

bubble tube (*Surv.*). A *level tube* (q.v.).

bubbles, pressure in (*Phys.*). A spherical bubble of radius r, formed in a liquid for which the surface tension is T, contains air (or some other gas or vapour) at a pressure which exceeds that in the liquid in its immediate vicinity by $\frac{2T}{r}$. The excess pressure within a soap bubble in air is $\frac{4T}{r}$ since the soap film has two surfaces.

bu'bo (*Med.*). An inflamed and swollen lymphatic gland, especially in the groin.

bubon'ic plague (*Med.*). A form of plague in which there is great swelling of the lymphatic glands, especially those in the groin. See **plague.**

bubon'ocele (*Med.*). A swelling in the groin due to an incomplete hernia.

bubulum oil (*Chem.*). *Neatsfoot oil* (q.v.).

buc'cal (*Zool.*). Pertaining to, or situated in or on, the cheek or the mouth. See **bucco-.**

buccal cavity (*Zool.*). The cavity within the mouth opening but prior to the commencement of the pharynx.

buccal mass (*Zool.*). In *Mollusca*, the region of the alimentary canal containing the odontophore.

buccal respiration (*Zool.*). See **buccopharyngeal respiration.**

buc'cinator (*Anat.*). A broad, thin muscle at the side of the face, between the upper and lower jaw.

bucco- (Latin *bucca*, cheek). A prefix used in the construction of compound terms; e.g. *buccolingual*, pertaining to the cheeks and tongue, or to the buccal cavity and the tongue.

buc'cophar'ynge'al respiration (*Zool.*). Breathing by means of the moist vascular lining of the mouth cavity or diverticula thereof, as in some *Amphibia* and certain Fish which have become adapted to existence on land.

Buchholtz relay, boohh'holts (*Elec. Eng.*). A protective relay for use with transformers or other oil-immersed apparatus; it embodies a float, which becomes displaced and operates the relay contacts if gas bubbles are generated by a fault within the equipment being protected.

buchite, boohh'it (*Geol.*). A glassy rock resulting from the fusion of clay or shale, following its incorporation in magma. Crystals and microlites are normally present.

Buchmann-Meyer effect, boohh'man mi'er (*Acous.*). The special type of reflection of light from the sound-track on a disc record whereby the lateral velocity of the track can be determined.

Buchner funnel, boohh'ner (*Chem.*). A stout porcelain funnel having at its base a fixed horizontal perforated plate to act as a support over which a piece of filter paper is placed, thus ensuring a large area of filtration.

buck saw (*Tools*). A large frame-saw having one bar of the frame extended to form a handle.

buck skins (*Furs*). The term applied to tough skins from old animals.

buckskin cloth (*Woollen*). A fabric made from fine quality yarns with a fine warp twill surface.

buckskin leather (*Leather*). Deerskin prepared by dressing with oil, after removal of the grain; used for breeches, sports shoes, etc.

bucket (*Eng.*). (1) The piston of a reciprocating pump.—(2) Any of the cup-shaped vanes attached to the periphery of a *Pelton wheel* (q.v.).

bucket (*Hyd. Eng.*). A dredging scoop, usually capable of being opened and shut for convenience in depositing and taking up a load.

bucket conveyor (*Eng.*). A conveyor or elevator consisting of a pair of endless chains running over toothed wheels, and carrying a series of buckets which are automatically tipped to discharge their contents at the delivery end.

bucket-ladder dredger (*Civ. Eng.*). A vessel of small draught having a series of buckets moving in a continuous chain reaching down into the material to be dredged, and lifting it for discharge into the vessel itself or into an attendant vessel.

bucket-ladder excavator (*Civ. Eng.*). A mechanical excavator working on the same principle as a *bucket-ladder dredger* (q.v.), but adapted for use on land.

bucket valve (*Eng.*). A non-return (delivery) valve fitted in the bucket or piston of some types of reciprocating pump.

bucking kier (*Linen*). A vessel in which linen cloth is boiled in lime water, preparatory to bleaching.

buckle (*Eng.*). (1) To twist or bend out of shape; said usually of plates or of the deformation of a structural member under compressive load.—(2) A metal strap —(3) A swelling on the surface of a mould due to steam generated below the surface.

Buckle brush (*Photog.*). A cotton-wool brush made by holding a small wad at the end of a glass tube by a silver wire passing through the tube.

buckling (*Cinema.*) The irregular motion of film in a camera or projector, causing a jam; due to a break in the sprocket holes or to incorrect threading.

buckling (*Elec. Eng*). A distortion of accumulator plates caused by uneven expansion, usually as a result of heavy discharges or other maltreatment.

buckram (*Textiles*). A strong fabric made of jute, linen, or cotton, and stiffened by size and glue.

buckwheat (*Mining*). See **birdseye.**

buckwheat rash (*Vet.*). See **fagopyrism.**

bud (*Bot.*). The undeveloped stage of a branch. It contains a very short shoot bearing undeveloped leaves, and may in addition contain one or more young flowers.

bud scale (*Bot.*). A simplified leaf or stipule present on the outside of a bud, forming part of a covering which protects the contents of the bud from desiccation and other injuries.

bud sport or **bud variation** (*Bot.*). The production of an abnormal branch, inflorescence, or flower, from a bud, as a result of mutation.

budding (*Bot*). (1) The production of daughter cells in the form of rounded outgrowths, characteristic of yeasts and similar fungi.—(2) The production of buds in general —(3) A means of artificial propagation, in which a bud taken from one plant is inserted under the bark of another, subsequently developing into a shoot.

budding (*Zool.*). A primitive method of asexual reproduction by growth and specialisation and separation by constriction of a part of the parent.

buddle (*Mining*). A shallow annular pit with either a concave or convex bottom for concentrating finely crushed, slimed, base-metal ores. See also **dumb buddle.**

Budleigh Salterton Beds (*Geol.*). Pebble beds, presumably low in the Bunter Series, exposed on the seacoast at Budleigh Salterton. The pebbles are chiefly of quartzite; some of them, containing fossils, have apparently been carried from Normandy.

buff (*Eng.*). A revolving disc composed of layers of cloth charged with abrasive powder; used for polishing metals.

buff leather (*Leather*). White leather from which the grain surface has been removed; used for army accoutrements.

buffalo disease (*Vet.*). See **barbone.**

buffer (*Artillery*). A mechanism which controls and finally absorbs the force of recoil, after a gun has been fired.

buffer (*Elec. Eng.*). See **buffer reagent.**

buffer (*Eng.*). A spring-loaded pad attached to the framework of railway rolling-stock to minimise the shock of collision: any resilient pad used for a similar purpose.

buffer action (*Chem.*). The action of certain solutions in opposing a change of composition, especially of hydrogen ion concentration.

buffer amplifier (*Elec. Comm.*). An amplifying stage introduced to prevent feed-back to an uncontrolled oscillator from its load; e.g. a master oscillator and modulator, when such feed-back cannot be conveniently reduced to zero by balancing circuits.

buffer battery (*Elec. Eng.*). A battery of accumulators arranged in parallel with a d.c. generator to equalise the load on the generator by supplying current at heavy-load periods and taking a charge during light-load periods.

buffer circuit (*Acous.*). The resistance-capacitor unit which determines the rate of rise and fall of the envelope of the wave-form of emitted sounds, when these are generated in electrostatic circuits in electronic organs.

buffer reagent (*Elec. Eng.*). A substance added to an electrolytic solution which prevents rapid changes in the concentration of a given ion. Also called BUFFER

buffer resistance (*Elec. Eng.*). See **discharge resistance.**

buffer solution (*Chem.*). A solution of certain salts, usually of a weakly ionised acid or base, whose acidity is not appreciably changed by additions of acid or alkali.

buffer spring (*Eng., Rail.*). The part lending resiliency to a buffer.

buffer stage (*Radio*). An amplifying stage coming between the master oscillator and the modulating stage of a radio transmitter. The object is to prevent the changing load of the modulated valves from affecting the frequency of the master drive.

buffer valve (*Radio*). A valve used in a buffer stage.

buffeting (*Aero.*). An irregular oscillation of any part of an aircraft, caused and maintained by an eddying wake from some other part; commonly, tail buffeting in the downwash of the main planes.

bug (*Cinema.*). Any insect which flies across the view during shooting and so spoils the shot.

bug key (*Teleg.*). A telegraphist's key that permits higher transmission speeds than a normal key. The moving lever, moved horizontally by the hand, makes dashes in one direction when held over. Dots are sent by a spring contact attached to the lever, when the lever is released from sending a dash.

buhl (*Furn.*). A wrong spelling of *boulle* (q.v.).

buhl saw (*Tools*). A kind of frame-saw in which the back of the frame is so spaced from the saw itself as to allow the latter to cut well into the work.

builder's level (*Build.*). (1) A spirit-level tube set in a long wooden straightedge, for testing and adjusting levels.—(2) A simple form of dumpy or tilting level, used on building works or for running the levels of drains.

builders' staging (*Build.*). A robust type of scaffold, formed of square timbers strongly braced together, capable of being used for the handling of heavy materials.

builders' tape (*Build.*). A linen or steel measuring-tape, usually 50 or 100 ft. long, contained in a circular leather case.

building board (*Build.*). Board manufactured from various materials and supplied with various finishes; used for lining walls and ceilings. Also called WALL-BOARD.

building certificates (*Build.*). Certificates made out by the architect during the progress, or after completion, of the works on a building contract, to enable the contractors to obtain payments on account or in settlement from the employer.

building line (*Build.*). The line beyond which a building may not be erected on any given plot.

building motion (*Cotton Spinning*). A mechanism in fly frames and spinning machines which guides the roving or yarn and builds it into a package.

building-out network (*Elec. Comm.*). A network which is connected to a basic network, to match more exactly the impedance of a line over the frequency range of interest.

built-in (*Furn.*). Said of fixture furniture built to fill a special position in a house.

built-up (*Struct.*). Said of a structural section composed of separate plates secured together.

bulb (*Bot.*). A large underground bud consisting of swollen leaf bases containing much reserve food material, arranged on a short conical stem.

bulb (*Illum.*). The glass container holding the filament of an electric filament lamp or the electrodes of an electric discharge lamp.

bulb (*Zool.*). Any bulb-shaped structure— *adj.* **bulbar.**

bulb bar (*Eng.*). A rolled bar of strip form in which the section is thickened along one edge.

bulb geophyte (*Bot.*). A geophyte which perennates by means of a bulb.

bulb-like (*Bot.*). Resembling a bulb in appearance, but solid and not consisting of tightly packed swollen leaf bases.

bulbif'erous (*Bot.*). Having, on the stem, bulbs or bulbils in place of ordinary buds.

bulbil (*Bot.*). (1) A modified bud consisting of swollen leaves containing food reserves, and able to give rise to a new plant when detached from the parent.—(2) Any rounded mass of vegetative cells, detachable from the parent and able to give rise to a new plant.—(3) A small sclerotium, usually of rather loose construction.

bulbil (*Zool.*) (1) A contractile dilatation of an artery.—(2) Any small bulb-like structure.

bulblet (*Bot.*). (1) A small bulb.—(2) See **gemma.**

bulbonu'clear (*Zool.*). Pertaining to the medulla oblongata and the nuclei of the cranial nerves.

bulbous (*Bot.*). (1) Having underground bulbs.—(2) Swollen like a bulb.

bulbous hair (*Bot.*). A hair having a swollen base.

bulbus (*Bot.*). An enlargement of the base of the stipe of an agaric.

bulbus (*Zool.*). See **bulb.**

bulbus arte'rio'sus (*Zool.*). In many Vertebrates, a strongly muscular region following the conus arteriosus.

bulbus oc'uli (*Zool.*). The eyeball of Vertebrates.

bulim'ia (*Med.*). An abnormal increase in the appetite.

bulk concrete (*Civ. Eng.*). See **mass concrete.**

bulk supply (*Elec. Eng.*). A supply of electricity purchased by a distribution company from a larger electricity supply company.

bulkhead (*Civ. Eng.*). A masonry or timber partition to retain earth, as in a tunnel or along a water-front.

bulkhead (*Ship Constr.*). A partition within a ship's hull or superstructure. It may be transverse or longitudinal, watertight, oiltight, gastight, or partially open. It may form part of the ship's subdivision for seaworthiness or otherwise.

bulkhead-fitting (*Illum.*). A robust form of electric-light fitting designed for attachment to bulkheads or other situations where space is restricted and where it may be subject to severe treatment.

bulking (*Build., Civ. Eng.*). See **moisture expansion.**

bulldog calf (*Vet.*). A lethal form of achondroplasia inherited by a proportion of the calves of Dexter-Kerry cattle.

Bullhead Bed (*Geol.*). The basal stratum of the Tertiary rocks of S.E. England, composed largely of green-coated flints.

bullhead tee (*Plumb.*). A tee having a branch which is longer than the run.

bull-headed rail (*Rail.*). A rail section having the shape roughly of a short dumb-bell in outline, but with unequal heads, the larger being the upper part in use.

bull header (*Build.*). A brick with one corner rounded, laid with the short face exposed, as a quoin or for sills, etc.

bull-holder (*Vet.*). Forceps for grasping the nasal septum of cattle as a means of restraint.

bull-nose (*Build.*). A purpose-made brick having a rounded corner; for use in positions where sharp arrises might be damaged.

bullnose (*Join.*). A small metal rebating plane having the mouth for the cutting iron near the front.

bull-nosed step (*Build.*). A step which, in plan, is half-round or quarter-round at the end.

bull-ring (*Elec. Eng.*). A metal ring used in the construction of overhead contact wire systems for electric traction schemes; it forms the junction of three or more straining wires.

bull roarer. A primitive magic device consisting of a serrated strip of wood on the end of a cord, which rotates when swung round, at the same time emitting a low musical note of considerable intensity.

bull stretcher (*Build.*). A brick with one corner rounded, laid, with the long face exposed, as a quoin.

bull wheel (*Mining*). The driving pulley for the camshaft of a stamp battery.

bull's-eye arch (*Build.*). A circular or oval window or opening.

bull's-eye lens (*Photog.*). A small thick lens, used for condensing light from a source.

bull's nose (*Carp.*). A name sometimes given to the salient angle at the intersection of two plane surfaces.

bulla (*Med.*). A blister or bleb. A circumscribed elevation above the skin, containing clear fluid; larger than a *vesicle*.

bulla (*Zool.*). In Vertebrates with a flask-shaped tympanic, the spherical part of that bone which usually forms a protrusion from the surface of the skull.

bullate (*Bot.*). (1) Having a blistered or puckered surface.—(2) Bubble-like.—(3) Bearing one or more small hemispherical outgrowths.

bullet amplifier (*Elec. Comm.*). A colloquialism for the amplifier mounted in a cylinder and associated with a condenser microphone hanging therefrom.

bullet catch (*Join.*). See **ball catch.**

bulliform cell (*Bot.*). See **motor cell.**

bulling (*Civ. Eng., Mining*). The operation of detaching a piece of loosened rock by exploding blasting charges inserted in the surrounding fissures.

bulling bar (*Civ. Eng., Mining*). An iron bar used to force clay into the crevices in the sides of a bore hole.

bullion (*Met.*). (1) Gold or silver in bulk, i.e. as produced at the refineries or not in the form of coin.—(2) The gold-silver alloy produced before the metals are separated.

bullion (*Textiles*). (1) A lace constructed of gold or silver threads.—(2) A heavy twisted cord fringe, covered with gold or silver wire.

bullion point (*Glass*). The centre piece of a sheet of glass made by the old method of spinning a hot glass vessel in a furnace until it opened out under centrifugal action to a circular sheet. The centre piece bears the mark of attachment to the rod used to spin the sheet. The method is obsolete now, but is revived for 'antique' effects.

bullock (or **horse**) **gear.** A device for producing mechanical power by means of a lever attached to gears, which is operated by an ox or horse walking in a circle.

bulwark (*Civ. Eng.*). A sea-wall built to withstand the force of the waves. See **breakwater.**

bumblefoot (*Vet.*). A cellulitis of the foot of birds due to infection by pus-forming organisms.

bump (*Mining*). A dull noise produced in a coal-mine by settlement in the floor or roof of a seam.

bumps (*Cinema.*). Low-frequency extraneous sounds during reproduction, arising from irregular motion of sound-track, either in recording or reproduction.

Buna (*Chem.*). An artificial rubber manufactured in Germany by the polymerisation of butadiene, either as an aqueous emulsion or with sodium. Processing and vulcanisation are carried out in the same way as with ordinary rubber. It has superior ageing properties, and is better than natural rubber in some respects.

bunch light (*Illum.*). A group of electric lamps in a portable fitting; used chiefly for stage lighting.

buncher (*Thermionics*). An arrangement in a thermionic valve which velocity-modulates and thereby introduces bunches in the electron space-current which is passed through it. See **catcher, debunching,** and **rhumbatron.**

bundle (*Anat.*). Fibres collected into a band in the nervous system or in the heart.

bundle (*Bot.*) See **vascular bundle.**

bundle (*Textiles*). The commercial unit of yarn or cloth: for *cotton hanks* 10 or 5 lbs.; for *linen bundles* 60,000 yards of yarn, the weight varying according to fineness.

bundle end (*Bot.*) The much simplified termination of a small vascular bundle in the mesophyll of a leaf.

bundle of His (*Zool.*) See **His's bundle.**

bundle sheath (*Bot.*). A sheath of one or more layers of parenchymatous or of sclerenchymatous cells, surrounding a vascular bundle.

bundling (*Furs*). The operation of grading skins into bundles.

bungalow (*Build.*). A one-storey house, often built with verandas.

bungalow (*Cinema.*) The same as *blimp.*

Büngner's strands (*Zool.*). Long protoplasmic strands formed in the peripheral part of a cut nerve fibre.

bunion (*Med.*). A bursa formed on the outer side of the big toe where it joins the foot, as a result of deformity of the toe and pressure of tight-fitting shoes or boots.

bunker (*Eng.*). A storage room for coal or oil fuel for use in steam-boilers.

bunker capacity (*Ship Constr.*). The capacity of a space in a ship used for carrying fuel (oil, coal, or other combustible material) It is calculated at a fixed rate of stowage per cubic foot, according to fuel; and allowances for obstructions are made in percentage.

bu'nodont (*Zool.*). Having grinding teeth with low conical cusps.

bu'noid (*Zool.*). Said of the cusps of cheek teeth when they are low and conical with a rounded apex.

bunolo'phodont (*Zool.*). Having cheek teeth with crescentic cusps connected by basal ridges.

bu'nosele'nodont (*Zool.*). Having cheek teeth with the internal cusps bunoid, the external cusps selenoid.

Bunsen burner (*Chem.*, *Illum.*). A gas burner consisting of a tube with a small gas jet at the lower end, and an adjustable air inlet by means of which the heat of the flame can be controlled; used as a source of heat for laboratory work and, in conjunction with an incandescent mantle, as the usual form of gas burner for illuminating purposes.

Bunsen cell (*Elec. Eng.*). A double-fluid primary cell yielding 1·9 volt. It consists of a zinc anode dipping into dilute sulphuric acid and a carbon cathode dipping into concentrated nitric acid.

Bunsen flame (*Chem.*). The flame produced when a mixture of coal-gas and air is ignited in air, as in a Bunsen burner. It consists of an inner cone, in which carbon monoxide is formed, and an outer one, in which it is burnt.

Bunsen ice calorimeter (*Heat*). An instrument used for determining the specific heats of substances by measuring the contraction due to the melting of ice when the hot specimen is introduced into it.

Bunsen photometer (*Illum.*). See **grease-spot photometer.**

bunt (*Aero.*). An aeroplane manœuvre consisting of, first, the half of a loop, and from the inverted position, a half roll, or a further half loop, in the opposite direction, which brings the machine back to normal flying position.

bunt (*Bot.*). A parasitic fungus (*Tilletia foetens*), a species of smut, which destroys the grain of wheat by converting the interior portion into a black powder. Mainly confined to Europe.

Bunter Series (*Geol.*). The lowest of the three series into which the rocks of the Triassic System are divided. Well exposed in the English Midlands, it comprises pebble beds with sandstone above and beneath.

buntons (*Mining*). Horizontal timbers in a circular shaft, used to carry the guides for the cage and any pipes. See **dividers.**

buoy (*Hyd. Eng.*). A floating vessel, capable of being illuminated at night, moored in estuaries and ship-canals to mark the position of minor shoals, and to show the limits of the navigable channel.

buoyancy (*Hyd.*, *Phys.*). The loss in weight of a body when immersed in a fluid, due to the resultant upward pressure exerted by the fluid on a body wholly or partly immersed in it. See **Archimedes' principle.**—(*Aero.*) The vertical thrust on an aircraft due to its immersion, either wholly or partially, in a fluid. Equal to the weight of air displaced by the gas-bags in the case of an airship; equal to the weight of water displaced by the immersed portions of the floats of a seaplane, or the body of a flying-boat. See also **reserve buoyancy.**

buoyancy, correction for (*Phys.*). In precision weighing, it is necessary to correct for the difference in the buoyancy of the air for the body being weighed and the weights. The correction to be added to the value, w, of the weights (in grams) is:

$$1{\cdot}2w\left(\frac{1}{D}-\frac{1}{\delta}\right) \text{ milligrams,}$$

where D and δ are the densities of the body and of the weights respectively.

buran, boo-rahn' (*Meteor.*). A frequent winter north-easterly wind in Central Asia and Russia.

burden (*Elec. Eng.*). A term used to signify the load on an instrument transformer. It is usually expressed as the normal rated load in volt-amperes, or as the impedance of the circuit fed by the secondary winding.

burden (*Eng.*). See **on-costs.**

burden (*Met.*). The material charged into a blast-furnace, i.e. coke, ore, and flux. A *heavy burden* means one with a high ratio of ore to coke; a *light burden* means one with a low ratio of ore to coke.

Burdiehouse Limestone (*Geol.*). A limestone of non-marine origin, containing fossil ostracods and plant-remains of Lower Carboniferous age, occurring in the eastern part of the Central Lowlands (Midland Valley) of Scotland.

Burdizzo pincers, boor-dēt'sō (*Vet.*). A castrating instrument which crushes the spermatic cord.

burdo (*Bot.*). A graft hybrid presumed to have arisen by the union of vegetative nuclei derived from the stock and the scion.

burette, bū-ret' (*Chem.*). A long glass tube with a ground-glass tap at one end and open at the other end; used in volumetric analysis. The tube is accurately calibrated along its length in tenths of a cubic centimetre, so that the amount or volume of the liquid allowed to run out through the tap can be accurately measured to one tenth of a cubic centimetre. There are several types, but all are based on the same principle. See also **volumetric analysis.**

burglar alarm (*Elec. Eng.*). An electrical device whereby a bell is rung by the opening of a window or by the treading of a person on a section of floor.

buried antenna (*Radio*). An antenna in which the wires are buried under the ground.

buried cable (*Elec. Comm.*). Lead-covered cable which contains a number of communication circuits and is buried in the ground. See **aerial cable.**

buried wiring (*Elec. Eng.*). Wiring for buildings, in which the conductors are buried beneath the surface of the plaster.

bu'rin (*Engraving*). A tool of tempered steel, with a square or lozenge-shaped point, used in engraving and in photography for retouching etched plates. Also called GRAVER.

burl dyeing (*Woollen*). The dyeing or colouring, by separate treatment, of the vegetable matter remaining in some woollen fabrics, in order to secure level colour.

burlap (*Dec.*). A coarse jute, hemp, or flax textile used as wall-covering, etc.

burling-irons (*Woollen*). A large type of forceps used for removing burrs and slubs from yarns, previous to scouring and finishing. The operation is termed *burling.*

Burlington Limestones (*Geol.*). Marine limestones of Lower Mississippian age which succeed the Kinderhook beds in the Mississippi valley; equivalent in part to the Carboniferous Limestone of England.

burmite (*Min.*). An amber-like mineral occurring in the upper Hukong Valley, Burma, differing from ordinary amber by containing no succinic acid.

burned-up (*Cinema.*). Over-exposed (film).

burner (*Ind. Heat*). See Supplement.

Burnett's fluid. A zinc chloride solution used to preserve timber from wood-boring insects or from dry-rot.

burning (*Jewel.*). Changing the colour of certain precious stones by exposing them to heat.

burning (*Met.*). The heating of an alloy to too high a temperature, causing local fusion or excessive penetration of oxide, and rendering the alloy weak and brittle.

burning-in (*Plumb.*). The operation of fixing the edge of a lead flashing into a stone wall by turning it into a dovetail groove cut in the stone, filling the groove with molten lead, and caulking.

burning-in kiln (*Glass*). A kiln in which stain or enamel colour painted on glass-ware or sheet-glass is fired to cause it to adhere more or less permanently; usually of muffle type.

burning-off (*Paint.*). Removing paint by softening it with a blowlamp flame and then scraping it off.

burning-on (*Foundry*). The process of adding a piece to an existing casting by making a mould round the point of juncture and pouring metal into it.

burnisher (*Engraving*). A polished steel tool used to soften or remove lines on engraved plates.

burnishing (*Bind.*). The operation of applying a brilliant finish to gilt or coloured edges by means of a burnishing tool, which is applied under great pressure from the shoulder.

burnishing (*Pot.*). The operation of polishing gilding, with bloodstone or agate, after the ware comes out of the enamel kiln.

Burnley printer (*Cotton Weaving*). See **printer.**

burnt ballast (*Build.*). Burnt clay used as an aggregate in the manufacture of concrete. It should never be used in making cement concrete.

burnt deposit (*Elec. Eng.*). A loose powdery deposit obtained in electroplating, if the rate of deposition is allowed to be too great.

burnt metal (*Eng.*, *Met.*). Metal which has become oxidised by overheating, and is so rendered useless for engineering purposes.

burnt ochre (*Paint.*). A red pigment obtained from calcined ochre.

burnt-out bearing. A white-metal or bronze bearing-bush which has been destroyed by heat and friction resulting from excessive tightness or improper lubrication.

burnt-out lace. Embroidery in which a material such as wool forms a temporary ground during production, and is subsequently removed by an alkaline solution, leaving the design in vegetable thread intact.

burnt sienna (*Paint.*). Sienna earth calcined and ground up as a pigment.

burnt skins (*Furs*) Skins either scorched or having hard corny parts, caused by bad dressing or by the use of acids.

burnt umber (*Paint.*). Calcined umber ground up and used as a pigment.

burr (*Acous.*). The rough edge which the gramophone record has when it is removed from the press. This is removed by spinning the record in a special type of lathe.

burr (*Eng.*). (1) A rough or sharp edge left on metal by a cutting tool.—(2) A blank punched from sheet-metal.—(3) A small milling cutter used for engraving and dental work.

burr (*Engraving*). A ridge raised on an engraved plate by a cutting tool. Also the tool for raising the burr.

burr (*Furn.*). An excrescence in tree growth which, when sliced, produces strong contrasts in the form and colour of markings.

burr (*Woollen*). A seed vessel found in wool which, before scouring, is removed either by burling or by chemical action.

burrs (*Build.*). Lumps of brick, often misshapen, which in the burning have fused together, and which are used for rough-walling, artificial rock-work, etc.

bursa (*Zool.*). Any sac-like cavity: more particularly, in Vertebrates, a sac of connective tissue containing a viscid, lubricating fluid, and interposed at points of friction between skin and bone and between muscle, ligament, and bone.

bursa copula'trix (*Zool.*). A special genital pouch of various animals acting generally as a female copulatory organ.

bursa Entia'na (*Zool.*). In some *Selachii*, a pouch of the gut representing the pyloric caeca.

bursa Fabricii, fa-brish'i-i (*Zool.*). In Birds, a pocket of unknown function developed from the dorsal part of the cloaca.

bursa inguina'lis (*Zool.*). The cavity of the scrotal sac in Mammals.

bursa omenta'lis (*Zool.*). In Mammals, a sac formed by the epiploon or great omentum.

bursa propulso'ria (*Zool.*). In some *Oligochaeta*, a muscular sac opening at the male pore, into which the prostate gland discharges.

bursat'tee or bursat'i (*Vet.*). A disease of the skin of horses in India and North America characterised by nodules which ulcerate and form deep sinuses. Also called CUTANEOUS HABRONEMIASIS.

bur'siform (*Bot.*). Resembling a bag or pouch.

bursi'tis (*Med.*). Inflammation of a bursa.

bus (*Elec. Eng.*). A commonly used abbrev. for *bus-bar.*

bus-bar (*Elec. Eng.*). (Abbreviated from *omnibus-bar.*) A short conductor forming a common junction between two or more electrical circuits.

bus-bar sectionalising switch (*Elec. Eng.*). A switch for separating a bus-bar into sections. Also called a BUS-SECTION SWITCH.

bus-coupler switch (*Elec. Eng.*). A switch or circuit-breaker serving to connect two sets of duplicate bus-bars.

bus-line (*Elec. Eng*). A cable, extending the whole length of an electric train, which connects all the collector shoes of like polarity. Sometimes called a POWER LINE.

bus-line couplers (*Elec. Eng*). Plug-and-socket connectors to join the bus-line of one coach of an electric train to that of the next.

bus-section switch (*Elec. Eng.*). See **bus-bar sectionalising switch.**

bus-wire coupler (*Elec. Eng.*). A flexible connexion between the coaches of an electric train for maintaining the continuity of any bus-wires which have to run throughout the train-length.

bush (*Bot*). A low woody plant forming a number of branches at ground-level.

bush (*Eng.*). A cylindrical sleeve, usually inserted in a machine part to form a bearing surface for a pin or shaft.

bush-hammering (*Civ. Eng.*). The operation of dressing the surface of stone with a special hammer having rows of projecting points on its striking face.

bush waxing (*Cables*). This occurs in conjunction with carbon. It consists frequently of a waxed area, with streamers at its edges. See **cable wax.**

bushing (*Elec. Eng*). An insulator which enables a live conductor to pass through an earthed wall or tank (e.g. the wall of a switch house or the tank of a transformer).

bushing (*Plumb.*). A reducing adapter or screwed piece for connecting together in the same line two pipes of different sizes.

bushing current transformer (*Elec. Eng.*). A current transformer built into a bushing.

busy (*Teleph.*). A term signifying *engaged.* A 'busy' is placed on a circuit during testing or adjustment so that it gives the engaged test or the busy-back tone to operators who attempt to use it.

busy back (*Teleph.*). The audible tone which is sent back from an engaged circuit when an attempt is made to connect to it.

busy hour (*Teleph.*). The selected hour during which more calls are handled by an exchange than in any other of the remaining 23 during the day, starting at any hour or half-hour.

busy tone (*Teleph.*). The same as *busy back.*

bu′tadiene, —dī′ēn′ (*Chem.*). Erythrene, CH_2:CH·CH:CH_2, a di-olefine with conjugate linking. An *isoprene* (q.v.) homologue, an important compound in the synthesis of rubber.

Bu′tagas (*Chem.*). A trade-name for compressed *butane* (q.v.).

butane (*Chem.*). C_4H_{10}, a paraffin hydrocarbon, b.p. 1° C., sp. gr. at 0° C. 0·600, contained in natural petroleum, obtained from casing head gases in petroleum distillation. Used commercially in compressed form, and supplied in steel cylinders for domestic purposes.

butanol (*Chem.*). A synonym for *n-butyl alcohol* (q.v.).

butenes (*Chem.*). *Butylenes* (q.v.).

butt (*Foundry*). The large flat, round, end of a rammer.

butt (*Leather*). The back part of a tanned hide; used for boot soles, belting, etc.

butt coupling (*Eng.*). See **muff coupling.**

butt hinge (*Join.*). A hinge formed by two leaves, which are secured to the door and door-frame in such a manner that when the door is shut the two leaves are folded into contact.

butt joint (*Carp., Join.*). A joint formed between the squared ends of the two jointing pieces, which come together but do not overlap.—(*Eng.*) A joint between two plates whose edges abut, and are covered by a narrow strip or 'strap' riveted or welded to them.

butt strap (*Eng.*). The cover plate which overlaps the main plates of a *butt joint* (q.v.).

butt-welded tube (*Met.*). Tube made by drawing mild steel strip through a bell, so that the strip is coiled into a tube, the edges being then pressed together and welded.

butt-welding (*Eng.*). The joining of two plates or surfaces by placing them together, edge to edge, and welding along the seam thus formed. See **welding.**

butte, būt (*Geol.*). A steep-sided flat-topped hill: a small mesa.

butter (*Chem.*). A fat emulsion containing in solution sugar, albumen, salts, whereas fats and casein are present in colloidal dispersion.

buttermilk. The aqueous liquid occluded in butter which is removed during the manufacturing process.

butterfly (*Cinema.*). A diffuser used to soften the light from the sun or from lamps; made from silk stretched on a frame.

butterfly flower (*Bot.*). A flower pollinated by butterflies.

butterfly nut (*Eng.*). See **wing nut.**

butterfly valve (*Eng.*). (1) A disc turning on a diametral axis inside a pipe; used as a throttle valve in petrol and gas engines.—(2) A valve consisting of a pair of semicircular plates hinged to a common diametral spindle in a pipe; by hinging axially, the plates permit flow in one direction only.

buttering (*Build.*). The operation of spreading mortar on the edges of a brick before laying it.

buttering trowel (*Build*). A flat tool similar to, but smaller than, the brick trowel; used for spreading mortar on a brick before placing it in position.

buttock planes (*Ship Constr.*). Longitudinal sectional planes drawn through a ship's form; used for laying-off in the moulding loft, and for calculation of volumes, etc.

button (*Bot.*). A young fruit body of an agaric, before the pileus has spread out and exposed the hymenium.

button (*Horol.*). The serrated knob by means of which a keyless watch or similar movement is wound.

button-headed screws (*Eng.*). Screws having hemispherical heads, slotted for a screwdriver; known also as HALF-ROUND SCREWS.

button switch (*Elec. Eng.*). See **pushbutton switch.**

buttoning (*Woollen*). The formation of small lumps or buttons of fibre in the warp yarns during weaving.

buttress (*Civ. Eng.*). A supporting pier built on the exterior of a wall to enable it to resist outward thrust.

buttress, flying (*Arch.*). See **flying buttress.**

buttress root (*Bot.*). A root, often adventitious, which assists in keeping the stem of the plant upright.

buttress screw-thread (*Eng.*). A screw-thread designed to withstand heavy axial thrust in one direction. The back of the thread slopes at 45°, while the front or thrust face is perpendicular to the axis.

butty (*Mining*). A working partner in a colliery.

bu′tyl group (*Chem.*). The aliphatic group C_4H_9— .

***n*-butyl acetate** (*Chem.*). $CH_3COOC_4H_9$; commercial product has a boiling range 124°-128° C., sp. gr. 0·885, a colourless liquid, of fruity odour, soluble in alcohol, ether, acetone, benzene, turpentine, slightly in water. A very important lacquer solvent.

butyl alcohols (*Chem.*). C_4H_9 OH. There are four isomers possible and known, viz.:
normal primary butyl alcohol $CH_3\cdot(CH_2)_3\cdot OH$, b.p. 117° C.;
normal secondary butyl alcohol $CH_3\cdot CH_2\cdot CH(OH)\cdot CH_3$, b.p. 110° C.;
iso-butyl alcohol $(CH_3)_2{:}CH\cdot CH_2\cdot OH$, b.p. 107° C.;
tertiary butyl alcohol $(CH_3)_3C\cdot OH$, b.p. 83° C.

butylenes (*Chem.*). C_4H_8, olefine hydrocarbons, the next higher homologues to propylene. Three isomers are possible and known, normally gaseous, b.p. between −6° C. and +3° C.

butyr'ic acids (*Chem.*). $C_3H_7\cdot COOH$, two isomers, viz. *normal* and *iso*-butyric acid. Only *n*-butyric acid is of importance, m.p. −8° C., b.p. 162° C.; it is a thick liquid of rancid odour.

butyric fermentation (*Chem.*). The fermentation of sugar and starch by fission ferments, e.g. *Bacillus butylicus*, resulting in the formation of butyric acid.

bu'tyryl (*Chem.*). The monovalent acyl radical $C_3H_7\cdot CO-$.

Buys Bal'lot's law, bis— (*Meteor.*). The law giving the direction of rotation of cyclones and anticyclones. In the northern hemisphere, with wind arriving from the rear, the pressure is lower on the left-hand side than on the right. The phenomenon is due to the rotation of the earth, and is therefore reversed in the southern hemisphere.

buzz track (*Cinema.*). A sound-track on a normal film on which is registered a constant note; the reproduction from this is used for the accurate adjustment of the optical parts of the light-scanning system.

buzzard (*Cinema.*). A take which is not good photographically.

buzzer (*Elec. Comm.*). A vibrating reed, actuated by self-interrupted direct current, used to generate a note to indicate the presence of actuating current.

buzzer wavemeter (*Radio*). A wavemeter in which oscillations of known frequency are generated in a resonant circuit connected across the vibrating contacts of a buzzer.

B.W.D. (*Vet.*). See **bacillary white diarrhoea.**

B.W.G. (*Eng.*). See **Birmingham Wire Gauge.**

by-pass (*Plumb.*). Any device for directing flow around a fixture, connexion, or pipe, instead of through it.

by-pass condenser (*Radio, etc.*). A condenser offering a very low impedance to currents of high frequencies but a high impedance to those of low frequencies. Connected in shunt across the output terminals of a rectifier, it effectively removes the high-frequency carrier components.

by-pass road (*Civ. Eng.*). A road specially constructed to serve as a diversion road for traffic which would otherwise pass through a town.

by-pass valve (*Eng.*). A valve by which the flow of fluid in a system may be directed past some part of the system through which it normally flows; e.g. an oil-filter in a lubrication system.

bye-channel (*Civ. Eng.*). A channel formed around the side of a reservoir past the end of the dam, to convey flood discharge from the stream above the reservoir into the stream below the dam. Also called BYE-WASH, DIVERSION CUT, SPILLWAY.

bye-pass. See **by-pass.**

bye-wash (*Civ. Eng.*). See **bye-channel.**

byewater (*Jewel.*). A term expressing off-colour in diamonds.

byre (*Build.*). A cowshed.

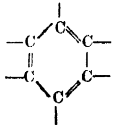
bys'malith (*Geol.*). A form of igneous intrusion bounded by a circular fault and having a dome-shaped top; described by Iddings from the Yellowstone Park.

byssa'ceous, bys'soid (*Bot.*). (1) Consisting of a mass of fine threads, and resembling cotton in appearance.—(2) Of delicate, filamentous structure.

bys'sus (*Zool.*). In *Pelecypoda*, a tuft of strong filaments secreted by a gland in the foot and used for attachment.—*adjs.* **byssogenous, byssal.**

bytownite (*Min.*). A variety of plagioclase feldspar, containing a high proportion of the anorthite molecule; occurs in basic igneous rocks.

Bz (*Chem.*). A symbol for (1) The benzoyl radical, $C_6H_5\cdot CO-$; (2) the benzene nucleus,



c (*Chem.*). A symbol for *concentration.*

c- (*Chem.*). Abbrev. for (1) *cyclo-*, i.e. containing an alicyclic ring.—(2) *cis-*, i.e. containing the two groups on the same side of the plane of the double bond or ring.

c (*Phys.*). The symbol used for the velocity of light *in vacuo*. Its value, according to the most accurate measurements made by Michelson, is $(2{\cdot}99796 \pm 0{\cdot}00004) \times 10^{10}$ cm. per second. This is also equal to the ratio of an electrical quantity, expressed in electrostatic units, to the same quantity expressed in electromagnetic units.

C (*Chem.*). The symbol for *carbon*.

C (*Chem.*). A symbol for (1) *concentration*.—(2) (With subscript) *molecular heat capacity*; C_p, at constant pressure; C_v, at constant volume.

C- (*Chem.*). Containing the radical attached to a carbon atom.

C (*Elec.*). Symbol for *capacitance*.

C (*Heat*). When used after a number of degrees thus: 45° C., the symbol indicates a temperature on the Centigrade scale.

[C] (*Light*). One of the Fraunhofer lines in the red of the solar spectrum. Its wavelength is 6563·045 A., and it is due to hydrogen.

C-amplifier (*Elec. Comm.*). The line or distribution amplifier following the B-amplifiers in broadcasting studios.

C-battery (*Elec. Comm.*). The battery or power supply required for the grid polarisation of thermionic valves, making the grid usually negative with respect to the cathode, and therefore supplying power only when the grid voltage becomes positive with respect to the cathode.

C-layer (*Radio*). A reflecting or scattering region between about 35 and 70 km., postulated to explain return signals sometimes obtained with vertically radiated waves.

C-service-area (*Radio*). The region surrounding a broadcasting transmitter where the field strength is between 2·5 and 5 millivolts per metre.

C-wire (*Teleph.*). The holding wire associated with the A and B wires of each subscriber connected to a telephone exchange, and connected to the sleeve on the plug which is inserted into the subscriber's line jack by the A-operator.

Ca (*Chem.*). The symbol for *calcium*.

cab (*Eng.*). The covered shelter for the driver of a locomotive or road-transport vehicle.

cab-tyre sheathing (*Cables*). A hard rubber cable-sheath. It may be used in house-wiring without a protecting steel tube.

cabane, ka-ban′ (*Aero.*). A system of struts in an aircraft arranged in the form of a pyramid or pylon.

cabin (*Build., Civ. Eng.*). The wooden hut used as an office by the clerk of works or general foreman, on or near a building works area.

cabin (*Mining*). A fireman's station underground in a coal-mine.

cabin hook (*Join.*). A hooked bar and eye, serving as a fastener for doors and casements.

cabinet (*Paper*). A standard size of cut card, 6½×4¼ in.

cabinet (*Photog.*). A standard size of photographic print, measuring approximately 6×4 in.

cabinet-file (*Tools*). A single-cut smooth file used by joiners and cabinet-makers.

cabinet projection (*Drawing*). A method of representation of a solid object in a drawing; one face of the object is drawn parallel to the plane of the paper, and faces perpendicular to this face are drawn at an angle of 45°, slant lengths being drawn to half scale.

cabinet-work (*Join.*). Fine joinery used in the construction of furniture and fixtures.

cable (*Eng., etc.*). A general term for rope or chain used for engineering purposes.—Specifically, a ship's anchor cable.

cable (*Elec. Comm.*). (1) An electrical circuit, comprising one or more conductors surrounded by dielectric and a sheath, suitable for laying on the bed of the ocean for carrying telegraphic signals.—(2) The collection of a number of circuits in a lead sheath, for burying in the ground.

cable buoy. A buoy attached to an anchor, and serving to mark its position.

cable code (*Teleg.*). The modification of the Morse code in which a dash becomes a dot reversed in polarity; used for telegraph transmission in submarine cables.

cable ducts (*Cables*). Earthenware, steel, or concrete pipes through which cables are drawn, and in which they lie underground.

cable form (*Elec. Comm.*). The normal scheme of cabling between units of apparatus. The bulk of the cable is made up on a board, using nails at the appropriate corners, each wire of the specified colour identification being stretched over its individual route with adequate skinner. When the cable is bound with twine and waxed, it is fitted to the apparatus on the racks and the skinners connected, by soldering, to the tag blocks.

cable grip (*Cables*). A flexible cone of wire which is put on the end of a cable. When the cone is pulled, it tightens and bites into the lead sheath of the cable, and can be used to pull the cable into a duct.

cable-laid rope. A rope formed of several strands laid together so that the twist of the rope is in the opposite direction to the twist of the strands.

cable-length. One-tenth of a nautical mile (6080 feet).

cable railway (*Civ. Eng.*). A means of transport sometimes used for short straight inclines, or other stretches, the motive power coming from a continuous cable, overhead or underground, to which the car may at any time be rigidly connected through a clutch device.

cable tramcars (*Civ. Eng.*). Tramcars deriving motive power from an underground cable, in the same manner as the cable railway.

cable wax (*Cables*). A solid wax formed by the ionic bombardment of the oil in a cable. It is a good insulator, and cables operate very successfully even when much wax is present. It is produced by a condensation process such as $C_6H_{14}+C_5H_{12} \rightarrow C_{10}H_{22}+CH_4$.

cable-way (*Civ. Eng., etc.*). A construction consisting of cables slung over and between two towers, so that a skip suspended from the cables may be raised and lowered and moved to any position along the cables. It is used for transport of spoil and materials. Also known as a BLONDIN.

cabling (*Arch.*). A round moulding used to decorate the lower parts of the flutes of columns.

cabling (*Cotton Spinning*). A method of producing folded yarns involving a double twisting operation, the product being known as *cabled* yarn.

cabling (*Elec. Comm.*). The collection of cables required for distributing the power supplies in a telephone exchange. The collection of cables for the telephone circuits is usually referred to as *trunking* (q.v.).

cabochon or **en cabochon,** ahn^g ka-bosh-on^g (*Jewel.*). Said of a precious stone cut with a domed face.

caboose (*Rail.*). A separate car at the end of a freight train, accommodating the guide and brakemen. [U.S.]

Cabot quilt (*Acous.*). An acoustic absorbing material made from dried eel grass, supported between sheets of canvas or paper.

cab′riole (*Furn.*). A chair- or table-leg having a double curve; originally in the shape of a goat's leg. (Latin *capreolus*, a wild-goat.)

cachexia, —kek′si-a (*Med.*). A combination of wasting, weakness, anaemia, and an 'earthy' complexion, characteristic of patients with cancer.

cac′odyl (*Chem.*). $As_2(CH_3)_4$, a colourless liquid; b.p. 170° C.; of horribly nauseous odour. It combines directly with oxygen, sulphur, chlorine, etc. Cacodyl and cacodyl oxide form the basis for other secondary arsines. Cacodyl derivatives are important as rubber accelerators.

cacos′mia (*Med.*). A bad smell.

cada′ver (*Anat.*). The dead human body.

cadav′erine (*Chem.*). $NH_2{\cdot}(CH_2)_5{\cdot}NH_2$, pentamethylenediamine, a colourless syrupy liquid; b.p. 178° C. Ring formation occurs by elimination of NH_3 with the formation of the heterocyclic base *piperidine* (q.v.).

cadence (*Teleg.*). The audible signal which is given to the operator of a Baudot transmitter to indicate the timing for pressing the keys forming the code.

caderas, mal de, ka-dā̆′ras (*Vet.*). A chronic infectious disease of horses in South America; due to *Trypanosoma equinum*, and characterised by weakness of the hind-quarters.

cadmium (*Met.*). A white metallic element. Chem. symbol, **Cd.** At. wt. 112 41, at. no. 48, sp. gr. at 20° C. 8·648, m.p. 321° C. Specific electrical resistivity 7·59 microhms per cm. cub. Used for coating small steel articles as a protection against corrosion. Added to overhead copper conductors to increase their strength, and is a common constituent of *fusible alloys* (q.v.).

cadmium cell (*Chem.*). See **Weston cell.**

cadmium cell (*Photo-electronics*). A vacuum photo-electric cell having a cadmium or cadmium-coated cathode, with maximum spectral sensitivity in the ultra-violet range.

cadmium copper (*Met.*). A variety of copper containing 0·7-1·0% of cadmium. Used for trolley, telephone, and telegraph wires because it gives high strength in cold-drawn condition, combined with good conductivity.

cadmium electrode (*Elec. Eng.*). A normal electrode made of cadmium; used in testing accumulator cells.

cadmium red line (*Light*). The source chosen (on account of the homogeneity of its radiation) for comparing optical wavelength with standards of length such as the standard metre and yard. The most recent accurate measurements are by Sears and Barrell, who have obtained the value $6438{\cdot}4708 \times 10^{-8}$ cm. as the wavelength of the red cadmium line.

cadmium yellow (*Dec.*). A sulphide of cadmium.

cad′ophore (*Zool.*). In some *Urochorda*, a postero-dorsal process to which the zooid buds become attached.

cadubran′chiate (*Zool.*). Possessing gills at one period of the life-cycle only.

cadu′cous (*Bot.*). Soon falling from the plant: lasting for a short time only.—(*Zool.*) ***Deciduate*** (q v.).

caecostomy, cecostomy, sē-kos′— (*Surg.*). The surgical formation of an artificial opening into the caecum.

caecum, sē′kum (*Bot.*). An outgrowth from the embryo sac into the endosperm in some plants.

caecum (*Zool.*). Any blind diverticulum or pouch, especially one arising from the alimentary canal.

Ca′en stone (*Build.*). A non-oölitic limestone from the Jurassic rocks of Normandy, very suitable for interior carving.

caenogen′esis, sē-no— (*Zool.*). A type of ontogeny in which the non-ancestral characters appear as a result of secondary adaptation of the young to peculiar environmental conditions.—Hence **caenogenet′ic,** of recent origin.

caeoma, sē-ō′ma (*Bot.*). A form of aecidium in which the spores are surrounded by a few sterile hyphae only, and not by a well-formed peridium.

Caesa′rean (or **Cesarean**) **section** (*Obstet.*). Artificial delivery of a foetus through the incised abdomen and uterus.

cae′sious (*Bot.*). Bearing a bluish-grey waxy covering (bloom).

cae′sium, cesium (*Chem.*). A metallic element in the first group of the periodic system, one of the alkali metals. At. no. 55, at. wt. 132·8. Symbol Cs.

caesium cell (*Photo-electronics*). A photo-electric cell having a cathode consisting of a thin layer of caesium deposited on minute globules of silver; it is particularly sensitive to infra-red radiation.

caesium oxygen cell (*Photo-electronics*). A caesium cell in which the vacuum is replaced by an atmosphere of oxygen at very low pressure. It is more sensitive to red light than the plain caesium cell.

cae′spitose (*Bot.*). Growing from the root in tufts, as many grasses.—*dim.* **caespit′ulose.**

caffeine, kaf′ē-in (*Chem.*). Theine; 1, 3, 7-trimethyl-2,6-dihydroxypurine; crystallises with 1 H_2O in silky needles and loses its water of crystallisation completely at 100° C.; m.p. of the anhydrous caffeine, 234° C. It has a very marked physiological action on the heart. Can be obtained by extracting tea-dust, or by synthesis from uric acid

cage (*Carp.*). Any timber construction serving to enclose another.

cage (*Civ. Eng.*). The platform on which goods are hoisted up or lowered down a vertical shaft.

cage (*Mining*). The platforms and framework for lowering and raising men and wagons in a shaft.

cage (*Skins*). See **cageing.**

cage antenna (*Radio*). An antenna comprising a number of wires connected in parallel, and arranged in the form of a cage, to reduce the copper losses and increase the effective capacity.

cage rotor (*Elec. Eng.*). A form of rotor, used for induction motors, having on it a cage winding. Also called SQUIRREL-CAGE ROTOR.

cage-type negative plate (*Elec. Eng.*). See **box-type negative plate.**

cage winding (*Elec. Eng.*). A type of winding used for rotors of some types of induction motors, and for the starting or damping windings of synchronous machines. It consists of a number of bars of copper or other conducting material, passing along slots in the core and welded to rings at each end. Also called a SQUIRREL-CAGE WINDING.

cageing (*Skins*). A method of freeing skins from the materials (sand, sawdust) with which they have been cleaned, by rotating them in a drum-shaped *cage*.

Cainozo'ic, Kainozo'ic (*Geol.*). The word signifies 'recent life,' and is applied to the fourth of the great geological eras. It is synonymous with Tertiary plus Quaternary.

cairngorm (*Min.*). Smoky-yellow or brown varieties of quartz, the colouring matter probably due to some organic compound; named from Cairngorm in the Scottish Grampians, the more attractively coloured varieties being used as semi-precious gemstones. Also called SMOKY QUARTZ.

cais'son (*Build.*). A deeply recessed sunk panel in a soffit or ceiling.

caisson (*Civ. Eng.*). A water-tight box used to surround the works involved in laying the foundations of a bridge or other structure below water.

caisson (*Hyd. Eng.*). (1) A water-tight air-receiver used to help float a sunken vessel, to which it is attached for this purpose.—(2) A floating structure which may be placed across the entrance to a basin, lock, or dry dock, thereby excluding water from it.

caisson disease (*Med.*). The bends; diver's palsy; diver's paralysis. Pains in the joints and paralysis, occurring in workers in compressed air who are too suddenly subjected to atmospheric pressure after compression; it is due to accumulation of bubbles of nitrogen in the nervous system.

Caithness Flags (*Geol.*). The local representative of the Old Red Sandstone in N.E. Scotland, but equivalent only to the Middle O.R.S. of other regions. The beds are rich in fish remains.

caking coal (*Mining*). Coal which cakes or forms coke when heated in the absence of air.

calamif'erous (*Bot.*). Having a hollow stem.

cal'amine (*Min.*). In England, smithsonite; in U.S.A., hemimorphite (*electric calamine*).

calamis'trum (*Zool.*). In some Spiders, a brush-like series of hairs on the metatarsus of the fourth leg, correlated with the presence of the cribellum.

cal'amus (*Zool.*). The proximal hollow part of the scapus of a feather; quill.—*pl.* **calami.**

cal'athide, —thēd (*Bot.*). (1) The involucre of a capitulum.—(2) The capitulum itself.

calca'neum (*Zool.*). In some Vertebrates, the fibulare, or large tarsal bone forming the heel; more generally, the heel itself: in Birds, a process of the metatarsus.

calcar (*Zool.*). In Insects, a tibial spine: in *Amphibia*, the prehallux: in Birds, a spur of the leg, or more occasionally, of the wing: in Bats, a bony or cartilaginous process of the calcaneum supporting the interfemoral part of the patagium.

cal'carate (*Bot.*). Bearing one or more spurs.

Calca'rea (*Zool.*). A class of *Porifera*, distinguished by the possession of a calcareous skeleton and large choanocytes.

calca'reous (*Bot.*). Coated with, or containing lime (as calcium carbonate).—(*Chem.*) Containing compounds of calcium, particularly minerals.

calcareous clay (*Geol., etc.*). See **marl.**

calcareous pan (*Bot.*). A hard layer of limy material, more or less impermeable to water, formed below the surface of the soil, and affecting the water supply of plants growing above it.

calcareous ring (*Zool.*). In *Holothuroidea*, a ring of ten calcareous ossicles surrounding the oesophagus.

calcareous rocks (*Geol.*). The sedimentary rocks containing appreciable quantities of calcium carbonate, or in many cases composed almost entirely of this substance. Amongst them are to be numbered all limestones, magnesian limestones, and dolomites, as well as chalk, and chemically precipitated material such as calc-tufa.

cal'cicole, calcic'olous (*Bot.*). Flourishing on soils or rocks rich in calcium carbonate.

calcico'sis (*Med.*). Lung disease caused by the inhalation of marble dust.

calcif'erous, calcigerous (*Zool.*). Producing or containing calcium salts.

Calciferous Sandstone (*Geol.*). The lowest group of the Lower Carboniferous rocks of Central Scotland, equivalent to part of the Carboniferous Limestone of England, and including the well-known oil-shales of the Lothians.

calcifica'tion (*Bot.*). The accumulation of calcium carbonate on or in cell walls.—(*Zool.*) The deposition of lime salts; e.g. in diseased or dead tissues such as the walls of arteries.—*adj.* **calcified.**

cal'cifuge, cal'ciphobe, calcipho'bous (*Bot.*) Terms applied to any species of plant which is intolerant of a limy soil.

calcigerous, kal-sij'— (*Zool.*). See **calciferous.**

calcigerous glands (*Zool.*). In some *Oligochaeta*, a pair of oesophageal glands producing a limy secretion to neutralise the acids in swallowed soil: in some *Amphibia*, the glands of Swammerdam, calcareous concretions lying on either side of the vertebrae, close to the points of exit of the spinal nerves.

cal'cimine (*Paint.*). A wash made up of whiting and glue with water, sometimes tinted for use on walls.

calcination (*Chem.*). The process of subjecting a material to the effect of prolonged heating at fairly high temperatures.—(*Met.*) The operation of heating ores to drive off water and carbon dioxide. Frequently it is not distinguished from roasting.

calcine (*Met.*). Ore or concentrate after treatment by calcination or roasting and ready for smelting.

calcining furnace (*Met.*). A furnace in which ores or metallurgical products are calcined.

cal'ciphile, calciphi'lous (*Bot.*). Terms applied to any species which occurs more or less exclusively on a limy soil.

cal'ciphobe, calcipho'bous (*Bot.*). See **calcifuge.**

cal'ciphyre (*Geol.*). A crystalline limestone, containing silicate minerals produced by metamorphism. The term is obsolete.

calcite or **calcspar** (*Min.*). The crystalline form of calcium carbonate, showing trigonal symmetry and a great variety of mineral habits. It is one of the commonest of minerals in association with both igneous and sedimentary rocks.

calcium (*Met.*). A silvery-white metallic element. Chemical symbol, Ca. At. wt. 40·08, at. no. 20, sp. gr. at 20° C. 1·55, m.p. 851° C., specific electrical resistivity 4·6 microhms per cm. cub. Used as a deoxidising agent for copper and some copper alloys, as a hardener in lead-base bearing alloys and lead cable-sheathing alloys, and for eliminating bismuth from lead. The metal is usually produced by the electrolysis of fused calcium chloride. It occurs in nature in the form of several compounds, although the form of carbonate predominates.

calcium carbide (*Chem.*). CaC_2. A compound of calcium and carbon usually prepared by fusing lime and hard coal in an electric furnace. See also **acetylene.**

calcium chloride (*Chem.*). $CaCl_2$. Formed by the action of hydrochloric acid on the metal and its common compounds. It absorbs moisture from the atmosphere, and for that reason is extensively used for drying gases. See **deliquescence.**

calcium chloride tubes (*Chem.*). Tubes filled with granular calcium chloride, used for the absorption of water vapour.

calcium fluoride (*Chem.*). CaF_2. In the form of *fluorspar* (q.v.) it is used for the manufacture of hydrofluoric acid. It is also an important constituent of opal glass.

calcium tube (*Photog.*). A dry container for photographic materials; it makes use of calcium carbide.

calcium tungstate screen (*Cathode Ray Tubes*). A fluorescent screen used in cathode ray tubes; it gives a blue and photo-actinic luminescence.

calco-uranite (*Min.*). See **autunite.**

calcspar (*Min.*). See **calcite.**

Cal′culagraph (*Teleph.*). A device for printing timing dials on a card. It indicates the time taken during a telephone connexion, particularly over a trunk circuit, in order that the proper charges may be made.

calculating machine. A machine which can perform one or more of the four fundamental operations of arithmetic when the figures with which the machine is to operate are set. Machines may be operated by hand (keyboard or barrel type) or they may be electrically driven.

cal′culus (*Maths*).

See **differential—** **integral—**

calculus (*Med.*). A concretion of mineral or of organic matter in certain organs of the body; e.g. the kidney, the gall-bladder.

caldera, kal-dā′ra (*Geol.*). A volcanic crater of large size, commonly produced by eruptions of great explosive force.

Caledonian (*Geol.*). Appertaining to the great mountain-building episode of late Silurian-early Devonian date.

Caledonoid′ direction (*Geol.*). The direction assumed by the Caledonian (Siluro-Devonian) mountainfolds and associated structures in Britain and Scandinavia. Commonly N.E.-S.W., but subject to considerable variations.

calendar. See **Gregorian—** **Julian—**

calendar month, calendar year (*Astron.*). A month or a year as defined in a calendar, particularly the *Gregorian calendar.* A calendar month differs from the synodic (or lunar) month. The terms are also used for periods equivalent to a month or year, e.g. from July 9 to August 9, or July 9 of one year to July 9 of the next.

calendar work (*Horol.*). The mechanism of a calendar watch or clock which indicates the progress of the calendar. In *simple calendar* work the mechanism requires to be adjusted at the end of a month having less than 31 days. In *perpetual calendar* work the mechanism automatically corrects for all months of less than 31 days, also for leap year.

calender (*Paper, Textiles, etc.*). A machine, generally consisting of a number of rollers, through which material is passed under pressure, to impart the desired finish, or to ensure uniform thickness.

calender rollers (*Woodworking*). Rollers for feeding timber into sawing or planing machines.

calendered paper (*Paper*). Paper which has been 'finished' in a calender. The varying degrees of gloss are distinguished thus: *low machine* (or *mill*) *finish* (usual printing paper), *high machine* (or *mill*) *finish* (intermediate), and *supercalendered* (highly glazed).

calf (*Bind.*). Calfskin with a smooth finish; used extensively for binding law books and account books.

Calgon (*Chem.*). Trade-name for sodium hexametaphosphate, used in water-softening because of its marked property of forming soluble double salts with calcium. Also used in the treatment of textiles and in laundry work.

caliber. See **calibre.**

calibration (*Phys., etc.*). The process of determining experimentally the absolute values corresponding to the graduations on an arbitrary or inaccurate scale on an instrument.

calibration error (*Radio*). An error in the bearings given by a ship's direction-finder, due to currents in the hull, masts, and rigging. The error is corrected in the initial calibration.

calibre, caliber. The internal diameter or bore of a pipe.

calibre (*Artillery*). The diameter of the piece measured between the lands of the rifling.

calibre (*Horol.*). The arrangement of the various components of a watch or clock.

caliche, ka-lē′chā (*Min.*). See **soda nitre.**

calico (*Textiles*). A plain grey cotton cloth, woven in different qualities.

calico weave (*Weaving*). See **plain weave.**

caliduct (*Build.*). A steam or hot-water pipe used for heating purposes.

Californian bees (*Bot.*). See **ginger-beer plant.**

Californian jade (*Min.*). A compact form of green vesuvianite (idocrase) obtained from California, and used as an ornamental stone and in jewellery. Also known as CALIFORNITE.

Californian onyx (*Min.*). A term wrongly applied to amber- or brown-tinted aragonite, a soft mineral unsuited for use as a cut stone. Cf. *onyx.*

califor′nite (*Min.*). See **Californian jade.**

caliper (*Horol.*). The size of a watch movement.

calipers. See **callipers.**

calked ends (*Build.*). The ends of built-in iron ties, split and splayed to provide more secure anchorage.

calking (*Civ. Eng.*). See **caulking.**

call (*Teleph.*). The request from a subscriber for connexion to another subscriber: the completion of that connexion.

See **direct—** **reverting—**
double-switch— **service—**
local— **single-switch—**
long-distance— **toll—**
préavis— **trunk—**
report— **unit-fee—**

call-counting meter (*Auto. Teleph.*). A meter which counts the total calls passing through a given group of trunks.

call-indicator (*Elec. Eng.*). An electric indicating device used in conjunction with a system of electric bells, or in a lift, to indicate the point from which a call has been made.

call-indicator (*Teleph.*). The device which indicates to a manual operator a required number which has been dialled. Both visual number plates and aural methods are in use.

call-indicator position (*Teleph.*). A B-operator's position which is equipped for call-indicator working from an automatic exchange.

call-indicator working (*Teleph.*). The use of aural or visual indication to the B-operator of the number of the called subscriber on a manual exchange, when the calling subscriber has dialled this number through his automatic exchange. See also **coded call indicator working.**

call office, public (*Teleph.*). See **public call office.**

Call and Exener bodies (*Histol.*). Groups of cells bordering the fluid-filled central cavity of the ovarian follicles in Mammals.

callain′ite (*Min.*). A very rare green phosphate of aluminium, resembling turquoise but translucent.

callaite (*Min.*). A little-used name for the mineral turquoise.

Callan cell (*Elec. Eng.*). A modification of the Bunsen type of primary cell, in which the positive electrode is of cast-iron instead of carbon.

Callaud cell, kal-ō (*Elec. Eng.*). A form of Daniell cell in which the lower part of the container is of copper and the upper part zinc; the zinc sulphate in the top part of the cell floats on the copper sulphate in the lower part, without any porous diaphragm between.

called-party release (*Auto. Teleph.*). The operation of automatic telephone switching circuits by which the connecting apparatus is released when the called party replaces his receiver and thereby opens his loop.

called subscriber (or **sub**) (*Teleph.*). The subscriber to whom connexion is desired by the calling subscriber.

calling dial (*Auto. Teleph.*). See **dial.**

calling-party release (*Auto. Teleph.*). The operation of automatic telephone switching circuits by which the connecting apparatus is released when the calling subscriber replaces his receiver on its hook and thereby opens his loop.

calling subscriber (or **sub**) (*Teleph.*). The subscriber who originates a call by passing a number to an exchange, either verbally or by dialling.

calling-subscriber release (*Auto. Teleph.*). The same as *calling-party release* (q.v.).

callipers. An instrument, consisting of a pair of hinged legs, used to measure external and internal dimensions.

calliper gauge (*Eng.*). A limit gauge having two pairs of jaws, marked 'Go' and 'Not Go' respectively, truly ground to specified distances apart, corresponding to the tolerance allowed on the dimension of the work. See **limit gauges.**

calliper splint (*Surg.*). A splint fitted to the broken leg so that the patient may walk without any pressure on the foot, the weight of the body being taken by the hip bone.

callipers, poising (*Horol.*). A form of callipers between the jaws of which a balance may be mounted and rotated, as a test for truth and poise.

cal'lose (*Bot.*). A carbohydrate, insoluble in cuprammonia, but soluble in the cold in 1% solutions of caustic alkalies. It occurs in the callus pads which form over sieve plates, and in calcified walls.

callos'ity (*Bot.*). See **callus** (3).

callosity (*Med.*). A thickening of the skin as a result of irritation or friction.

callous, callose (*Bot., Med., etc.*). Hardened, usually thickened, and often like horn in appearance.

cal'lus (*Bot.*). (1) A mass of parenchymatous cells formed by plants over or around a wound.—(2) A pad of callose formed over a sieve plate either as winter approaches or as the sieve tube ages and degenerates; also called CALLUS PLATE.—(3) A deposit of material inside the wall of a cell, around the entering germ tube of a parasitic fungus, which may prevent the parasite establishing itself in the cell; also called CALLOSITY.

callus (*Med.*). (1) Callosity.—(2) Newly formed bony tissue between the broken ends of a fractured bone.

callus (*Zool.*). In some Insects, a swelling of the mesonotum: in *Mollusca*, a proliferation of calcareous material within the umbilicus of the shell.

callus plate (*Bot.*). See **callus** (2).

Calmuc (*Textiles*). A coarse type of wool, from the Khirghiz district, Central Asia.

cal'omel (*Chem.*). Mercurous chloride, Hg_2Cl_2; found naturally in whitish or greyish masses, associated with cinnabar. From it can be obtained, by digesting in air with hydrochloric acid, mercuric chloride, the corrosive sublimate, used as an antiseptic and, in photography, for intensification processes.

calomel electrode (*Chem.*). See **standard calomel electrode.**

calores'cence (*Heat, Light*). The absorption of radiation of a certain wavelength by a body, and its re-emission as radiation of shorter wavelength. The effect is familiar in the emission of visible rays by a body which has been heated to redness by focusing infra-red heat rays on to it.

cal'orie (*Heat*). The unit quantity of heat in the c.g.s. system. The *gram-calorie*, or *small calorie*, is the quantity of heat required to raise the temperature of 1 gm. of water from 15° to 16° C. The *mean calorie* is $\frac{1}{100}$ part of the heat required to raise 1 gm. of water from 0° to 100° C. (Owing to slight variations of the specific heat of water, these are not exactly equal.) The *kilogram* (or *large*) *calorie* is equal to 1000 gram calories. See also **pound-calorie.**

calorif'ic value (*Heat*). The number of heat units obtained by the complete combustion of unit mass of a fuel. The numerical value obtained for the calorific value depends on the units used; e g. lb.-calories per lb. or British Thermal Units (B.Th.U.) per lb. for solid and liquid fuels, and per standard cubic foot for gaseous fuels.*

calor'ifier (*Heating*). An apparatus for heating water in a tank, the source of heat being a separate coil of heated pipes immersed in the water in the tank.

calorim'eter (*Heat*). The vessel containing the liquid used in calorimetry. The name is also applied to the complete apparatus used in measuring thermal quantities. See **Bunsen ice calorimeter.**

calorim'etry (*Heat*). The measurement of thermal constants, such as specific heat, latent heat, or calorific value. Such measurements usually necessitate the determination of a quantity of heat, by observing the rise of temperature it produces in a known quantity of water or other liquid.

calori'sing (*Met.*). A process of rendering the surface of steel or iron resistant to oxidation by spraying the surface with aluminium and heating to a temperature of 800° to 1000° C.

calotte (*Build.*). A small dome in the ceiling of a room, used to increase head room.

calotte (*Zool.*). In the larval stage of some *Polyzoa*, a retractile disc bearing motionless sensory cilia.

cal'otype (*Photog.*). An early wet-plate process, using silver iodide, invented by Talbot.

calving fever (*Vet.*). See **milk fever.**

calvities, —vish'i-ēz (*Med.*). Baldness, especially of the anterior and upper part of the head.

calx (*Anat.*). Calcaneum; os calcis; the heel.

cal'ycanthe'my (*Bot.*). An abnormal condition in which the calyx becomes coloured, resembling the corolla.

Calyciflo'rae (*Bot.*). A subclass of *Dicotyledones*, with a corolla usually consisting of distinct petals, and with the stamens perigynous or epigynous.

cal'ycine (*Bot.*). Relating to the calyx.

cal'ycle (*Zool.*). A synonym for *calyx* (senses 1-3).

cal'ycule, calyc'ulus (*Bot.*). (1) A group of small leaf-like organs placed close beneath the calyx.—*adj.* **calyculate.**—(2) Sometimes used to denote the *epicalyx.*

calym'ma (*Zool.*). In *Radiolaria*, a layer of jelly containing vacuoles and forming part of the outer layer of the body.

calym'nocytes (*Zool.*). In *Urochorda*, follicle cells of the ovary.

calyon (*Build.*). Flint or pebble stone used in wall construction.

calyp'ter (*Zool.*). See **calyptron.**

Calyp'toblaste'a (*Zool.*). An order of *Hydrozoa* in which the polyps are colonial and the skeleton of the colony shows both hydrothecae and gonothecae, in addition to the perisarc; the medusae, when set free, are *Leptomedusae* (q.v.).

calyp'toblas'tic (*Zool.*). Said of hydroid colonies, in which the blastostyles are protected by gonangia. Cf. *gymnoblastic.*

calyp'tobran'chiate (*Zool.*). Having the gills hidden by a gill-cover of some kind.

calyptop'sis (*Zool.*). In *Euphausiacea*, a larval form succeeding the metanauplius and resembling the zooea, from which it differs mainly in having the eyes covered by the carapace.

calyp'tra (*Bot.*). (1) A membranous covering over the young capsule of a moss or liverwort, derived from part of the archegonium wall.—(2) A thickened wall over a terminal cell of a filament in the *Myxophyceae*.—(3) The *root cap* (q v).

calyp'trate (*Zool.*). (Of *Diptera*) having the balancers covered by the antitegulae.

calyp'trogen (*Bot*). The group of meristematic cells from which the root cap is formed.

calyp'tron (*Zool*). In *Diptera*, the antitegula when it hides the balancer. Also called CALYPTER.

ca'lyx (*Bot*). The outer whorl of the flower, consisting of sepals. It is usually green, and protects the unopened flower-bud.

calyx (*Zool.*). (1) A pouch of an oviduct, in which eggs may be stored —(2) In some *Hydrozoa*, the cuplike exoskeletal structure surrounding a hydroid.—(3) In *Crinoidea*, the body as distinct from the stalk and the arms.—(4) In some Mammals, part of the pelvis of the kidney.

calyx tube (*Bot.*). The hollowed-out receptacle of a perigynous flower, from which the petals and stamens spring.

cam (*Eng.*). An eccentric projection on a revolving shaft, shaped so as to give some desired linear motion to a follower, which is usually returned by a spring.

cam (*Weaving*). See **wiper.**

cam profile (*Eng.*). The shape of a cam as determined by the form of the flanks and tip; in general, the cam outline.

camshaft (*Eng*). A shaft on which cams are keyed, or formed integrally; used to operate the valves of internal-combustion engines.

camshaft controller (*Elec. Eng*) A form of control equipment for electric motors (usually in locomotives), in which the contactors are operated mechanically by means of cams on a rotating shaft.

cam-type steering-gear (*Automobiles*). Steering gear in which the steering column carries a pair of opposed volute cams, which engage with a peg or roller carried by a short arm attached to the drop-arm spindle.

camaieu, kam-ī-yě' (*Dec.*). Painting in different shades of a single colour, giving the effects of a cameo.

camber (*Aero.*). The curvature of the surface of an aerofoil, relative to the chord line.

camber (*Build.*). A curvature, convex upwards, to allow for settlement of a structure, to facilitate run-off of water, or for some other purpose.

camber (*Eng.*). A convexity applied for some specific purpose; e g. to girders to allow for deflection under load, or to road surfaces for drainage.

camber (*Hyd. Eng.*). The recess in the side of the entrance to a basin, lock, or graving dock, accommodating the *sliding caisson* (q.v.).

camber (*Ship Constr.*). The convexity of a deck line in a transverse section, normally ¼ in. to each foot of breadth. Its purpose is to assist drainage and provide strength. Also called ROUND OF BEAM.

camber arch (*Build.*). An arch having a flat horizontal extrados and a cambered intrados, with a rise of about ⅛ in. per foot of span.

camber-beam (*Carp.*). A beam having an arched upper surface, or one sloping down towards each end, so as to form a support for roof covering on a flat roof.

camber-slip (*Build.*). A strip of wood having a slightly cambered upper surface, upon which the brickwork of a flat arch is laid, so that after settlement the soffit shall be straight.

cam'biform cell (*Bot.*). A parenchymatous cell occurring in the phloem; it is elongated, and pointed at both ends.

cambium (*Bot.*). A cylinder, strip, or layer of meristematic cells, which divide mostly in one plane and give rise to daughter cells from which permanent tissue is ultimately formed.

cambium initial (*Bot.*). One of the permanently meristematic cells of a cambium.

cambo'gia (*Chem.*). *Gamboge gum* (q.v.).

Cam'brian System (*Geol.*). The lowest division of the fossiliferous Palaeozoic rocks. The type area is Wales, where the rocks reach a thickness of 12,000 feet, but they have been recognised at widely separated localities all over the world. See also **Cambric.**

Cam'bric (*Geol.*). Equivalent to *Cambrian.* See **Acadian, Bretonian, Croixian, Etcheminian, Ozarkian,** and **Waucobian.**

cambric (*Textiles*). A fine linen cloth, used chiefly for handkerchiefs; the name is also applied to a fine quality cotton cloth.—(*Diel.*) Varnished cotton-cambric is much used for insulating bars in slots.

Cambridge Greensand (*Geol.*). A thin bed of clayey greensand occurring at the base of the Chalk in Bedfordshire, Cambridgeshire, etc.; it contains many phosphatised nodules and fossils, derived chiefly from the underlying Gault Clay.

came (*Build*). A bar of lead suitably grooved to hold and connect adjacent panes of glass in a window.

camel (*Hyd. Eng.*). A water-tight air-receiver, used to raise a vessel in the water in order to assist its passage in shallow waters. See also **caisson.**

camel hair (*Textiles*). A silky fibre from the haunch and underpart of the camel; used for dress fabrics, warm coverings, etc.

cam'eo. (1) Carving or modelling in relief.—(2) A striated shell or precious stone carved in relief so as to show different colours in the layers.

cam'eoid (*Dec.*). Moulded paper forming relief decoration.

camera (*Photog.*). The apparatus in which sensitised emulsions are exposed under controlled conditions.

See **automatic—**
beam-splitting—
binocular—
candid—
ciné—
cinematograph—
colour—
hand—

pinhole—*
reflex—
sound—
stereoscopic—
synchronous—
twin-lens—

camera angle (*Photog.*). The angle marked by the vertical or horizontal sight lines covered by the lens, when exposing a normal-sized area of emulsion in the camera.

camera booth (*Cinema.*). In sound-film studios, a portable enclosure for the accommodation of cameras, with optically worked glass windows to avoid distortion of the photographic image; usually provided with wheels.

camera crew (*Cinema.*). The same as *camera staff.*

camera lines (*Photog.*). Lines which delineate the area in which objects are in good focus during exposure.

camera lucida (*Optics*). A device for facilitating the drawing of an image seen in a microscope or other optical instrument. In its simplest form, it consists of a thin plate of unsilvered glass, placed above the eyepiece at an angle of 45° with the axis of the instrument, so as to reflect into the eye of the observer an image of the drawing surface, which is seen simultaneously with the microscope image.

camera man (*Cinema.*). The operator responsible for the photographic quality of the pictures in motion-picture production.

camera marker (*Cinema.*). The lamp used, in a cinematograph or sound camera, for fogging the edge of the film and so marking it for future synchronisation between the picture track (mute) and the sound track.

camera mount (*Cinema.*). Any structure (other than a tripod) for supporting a camera.

camera obscura (*Optics*). A darkened room in which an image of surrounding objects is cast on a screen by a long-focus convex lens.

camera staff (*Cinema.*). In motion-picture production, the operators of cameras acting under the direction of the camera man.

camouflage, kam′oo-flazh (*Mil.*). Any device used to deceive or mislead an enemy; e.g. use of branches to conceal guns, bizarre painted designs on ships, vehicles, aircraft, roofs, etc.—(*Zool*.) In animals, blending coloration or deceptive coloration, especially if it imitates that of the environment.

camp-ceiling (*Build.*). A ceiling having two opposite parts sloping in line with the rafters, the middle part being horizontal.

camp sheathing (*Civ. Eng.*). An earth-retaining wall formed of timber piles placed 6 to 10 ft. apart and connected by stout timber walings; often used to support river banks.

camp sheeting (*Build.*). Sheet piling used in foundation work to retain earth of a sandy character.

campan′iform (*Zool.*). Dome-shaped; as *campaniform sensillae* of certain Insects, which are sensory nerve-endings of unknown function occurring widely on the body.

campanile, —pan-ē′le (*Build.*). A bell tower, often detached from the main building.

campan′ula Hal′leri (*Zool.*). In the eyes of Fishes, a vascular expansion of the falciform process in contact with the lens, the whole structure probably acting as a means of accommodation in the absence of ciliary muscles.

campan′ulate (*Bot.*). Bell-shaped.

Campbell (or Mayo) twill (*Textiles*). A fancy twill, 8-end, used for worsted and woollen coatings.

Campbell's formula (*Elec. Comm.*). The formula which gives the effective attenuation of a coil-loaded transmission line in terms of the constants of the line and the magnitude of the loading.

Campbell-Stokes recorder (*Meteor.*). See **sunshine recorder.**

camphane (*Chem.*). $C_{10}H_{18}$, white crystals; m p. 154° C. It is a saturated terpene hydrocarbon, the parent substance of the camphor group (see **camphor**).

camphene (*Chem.*). $C_{10}H_{16}$, a white solid; m.p. 50° C. An unsaturated terpene hydrocarbon, occurring in various essential oils; it can be prepared from pinene hydrochloride. There are three modifications, viz. the *d*-, *l*-, and the optically inactive form.

camphor (*Chem.*). Common (or Japan) camphor, $C_{10}H_{16}O$, colourless transparent prisms of characteristic odour; m.p. 175° C., b.p. 209° C., sp. gr. 0·985. It can be sublimed readily, is dextro-rotatory in alcoholic solution, and is volatile in steam. Obtained from the camphor tree (*Laurus camphora*), or synthesised. Important solvent for celluloid and other plastics.

campode′iform (*Zool.*). Resembling the Thysanuran insect *Campodea*; the term is applied to a primitive type of active insect larva which, however, lacks the lateral abdominal appendages of *Campodea*.

camp′tonite (*Geol.*). An igneous rock occurring in minor intrusions, and belonging to the family of the lamprophyres. It consists essentially of plagioclase feldspar and brown hornblende.

camp′totrich′ia (*Zool.*). Jointed dermal fin-rays of fibrous substance, occurring in *Ceratodus* and some other primitive Fish.

cam′pylite (*Min.*). See **kampylite.**

campy′lotro′pous (*Bot.*). (Of an ovule) curved in such a way that the chalaza and micropyle do not lie in a straight line.

can (*Cinema.*). (1) Slang for the telephone receiver used for monitoring in sound-film production.—(2) The cylindrical container, usually of tin-plate, for holding a roll of film (e.g. 1000 feet) during transport.—(3) See **ash can.**

can coiler (*Worsted*). A revolving can in which slivers from the Noble comb are laid in a double spiral form to preserve the fibre arrangement.

Canada balsam (*Chem.*). Balsam of fir, or Canada turpentine A yellowish liquid, of pine-like odour, soluble in ether, chloroform, benzene; obtained from *Abies balsamica*. It is used for lacquers and varnishes, and as an adhesive for lenses, instruments, etc., its refractive index being approximately the same as that of most optical glasses.

Canadian asbestos (*Min.*). See **chrysotile.**

Canadian latch (*Join.*). See **Norfolk latch.**

Canadian Series (*Geol.*). The lowest of the three main divisions of the American Ordovician rocks, comprising the Beekmantown and Chazy formations.

Canadian Shield (*Geol.*). The name applied to the vast area of Pre-Cambrian rocks which cover two million square miles in eastern Canada. See

Algoman Granites
Animikie Series
Grenville Series
Huronian System
Keewatin Group
Keweenawan Series
Laurentian Granites
Loganian System
Timiskaming Group

canal (*Bot.*). An elongated intercellular space, often containing resins, oils, or other similar substances.

canal (*Hyd. Eng.*). An artificial water channel used for navigational or irrigational purposes or to convey water power.

canal cell (*Bot.*). One of the short-lived cells present in the central cavity of the neck of an archegonium.

canal rays (*Phys.*). See **positive rays.**

canal system (*Zool.*). See **water-vascular system.**

canalette blind (*Build*.). See **Italian blind.**

canalic′ular apparatus (*Zool.*). See **Golgi apparatus.**

canalic′ulate (*Bot.*). Marked longitudinally by a channel or groove.

canalic′ulus (*Zool.*). Any small channel: in the liver, an intercellular bile-channel: in bone, one of the ramified passages uniting the lacunae: in nerve-cells, a fine channel penetrating the cytoplasm of the cell-body.—*adj.* **canalicular.**

canalisation (*Hyd. Eng.*). The practice, sometimes applied to assist navigation, of dividing the bed of a river into a series of reaches separated by dams or weirs, provided with communicating locks.

canalisation (*Med.*). The formation of a new channel in a clot blocking the lumen of a blood-vessel.

canaries (*Cinema.*). Extraneous high-frequency noises in a sound-recording channel.

cancel (*Acous.*). The thumb or toe piston for shutting off groups of stops on a manual or pedals in an organ. See **ventil.**

cancel (*Auto. Teleph.*). The extra key provided on a key-strip to release, at any stage before completion, the apparatus (coder) which transmits coded impulses to operate selectors at a distant exchange. The coded impulses are set up by the plunger keys on the key-strip.

cancel (*Typog.*). A page, containing an error or errors, which is removed and replaced by another suitably amended. A *cancel title* is a new title-page, usually carrying alterations to the imprint.

can'cellate (*Bot.*). Lattice-like.

can'cellous, can'cellated (*Zool.*). Having a spongy structure, with obvious interstices.

cancer (*Med.*). See **carcinoma.**

Cancer (*Astron.*). Crab. Fourth sign of the *Zodiac* (q.v.).

Cancer, Tropic of (*Astron.*) See **Tropics.**

can'cerophobia (*Med.*). Morbid fear of contracting cancer.

can'cerous (*Med.*). Pertaining to cancer or carcinoma.

can'criso'cial (*Zool.*). Leading a commensal existence with a crab.

cancrum o'ris (*Med.*). Noma. A destructive ulceration of the cheek in debilitated children, usually during convalescence from an infectious disease.

candelilla wax, —lēl'ya (*Chem.*). A natural wax, of yellow or brown colour; sp. gr. 0·983, m.p. 67°-68° C., saponification value 65, iodine value 37.

candid camera (*Photog.*). A small unobtrusive camera for use by journalists, detectives, etc.

candle (*Illum.*). The name for various units of photometry.

See **British Standard— international—**
decimal— Jablochkoff—
Hefner— standard—

candle-fitting (*Illum.*). An electric-light fitting consisting of an opal glass tube with a lamp at the top designed to imitate an ordinary wax candle.

candle-foot (*Illum.*). An obsolescent variant of *foot-candle.*

candle-lamp (*Illum.*). An electric filament lamp shaped to imitate the flame of a wax candle; used in candle-fittings.

candle-metre (*Illum.*) An obsolescent variant of *metre-candle.*

candle-power (*Illum.*). The luminous flux emitted by a source of light per unit solid angle in a given direction. It is expressed in terms of the *international candle* (q.v.).

See **mean hemispherical— mean spherical—**
mean horizontal— mean zonal—

cane (*Textiles*). A term for *warp*; current in some silk-manufacturing districts.

cane-sugar (*Chem.*). A synonym for sucrose and saccharobiose; $C_{12}H_{22}O_{11}$, a carbohydrate; m.p. 160° C.; it crystallises in large monoclinic crystals, is optically active and occurs in beet, sugar-cane, and many other plants.

canes'cent (*Bot.*). Having a somewhat hoary appearance; due to a covering of short inconspicuous hairs.

canine (*Zool.*). Pertaining to, or resembling, a dog: in Mammals, a pointed tooth with a single cusp; it is adapted for tearing, and occurs between the incisors and the premolars: pertaining to a canine tooth: pertaining to a ridge or groove on the surface of the maxillary.

canker (*Bot.*). A name applied to various diseases of trees, caused by fungi; usually they have the form of localised patches of dead bark surrounded by swollen margins.

canker (*Vet.*). A chronic inflammation of the keratogenous membrane of the frog and sole of a horse's foot: a chronic eczema of the ear of dogs: an abscess or ulcer in the mouth, eyelids, ear, or cloaca of birds.

canned (*Acous.*). See **canning.**

cannel coal (*Fuels*). A dull variety of coal, breaking with a conchoidal fracture; it is rich in volatile constituents, and burns with a bright flame.

can'nelure (*Ammunition*). A groove in the driving-band of a projectile, into which the surplus copper is swaged.

can'nibalism (*Vet.*). A vice or depraved appetite of animals and birds due to deficiency of minerals or protein in the food, or to boredom in the case of confined birds and animals. The affected individual injures and eats portions of its own body or the bodies of other animals or birds.

canning, canned (*Acous.*). Colloquialisms applied respectively to the recording of sound and to the record thereof.

cannon bone (*Zool.*). In Mammals in which the digits are reduced in number, a bone formed by fusion of the persisting metacarpals or metatarsals (in which it supports the limb from hock to fetlock): in Birds, the tarsometatarsus.

cannon pinion (*Horol.*). A wheel in the motion work; the wheel or pinion with an extended pipe to which the minute hand is attached.

cannon-shot gravel (*Geol.*). A gravel associated with the glacial boulder-clays of East Anglia; it contains large numbers of almost perfectly spherical flint cobbles.

can'nula (*Med.*). A tube, usually fitted with a trocar, for insertion into the body for the injection or removal of fluids or gases.

cañon, kan'yon (*Geol.*). A deep, narrow, steep-sided valley.

canon (*Typog.*) The old name for a type-size (about 48-point).

canopy (*Aero.*). The fabric of a parachute which is extended by an up-current of air, the reaction between the air and the canopy forming a resistance which ensures a low terminal velocity to the man or supplies dropped from an aircraft.

canopy (*Bot.*). The layer of branches, twigs, and leaves formed by woody plants at some distance above the level of the ground.

canopy (*Build.*). An enriched roof-like part projecting from a wall or supported on pillars.

canopy switch (*Elec. Eng.*). A circuit-breaker placed under the canopy of a tramcar, so that the driver can cut off the current in an emergency.

cant. To tilt.

cant (*Build.*). A moulding having plane surfaces and angles instead of curves.

cant (*Surv.*). The transverse slope given to the surface of the rails on a railway curve, or to the road surface on a highway curve, as a result of applying superelevation. Also used synonymously with *superelevation.*

cant bay (*Build.*). A bay window having three sides, the outer two being splayed from the wall face.

cant board (*Carp.*). A board laid on each side of a valley gutter to support the sheet-lead.

cant brick (*Build.*). A *splay brick* (q.v.).

canted column (*Build.*). A column having faceted sides instead of curved flutes.

canted pillar (*Furn.*). A pillar of polygonal shape.

canted wall (*Build.*). A wall built at an angle to the face of another wall.

canthar'idin (*Chem.*). A pharmaceutical product obtained from the dried elytra of the Spanish Fly (species of *Lytta* and *Mylabris*).

cantilever (*Struct.*). A beam or girder fixed at one extremity and free at the other. Also called SEMI-BEAM, SEMI-GIRDER.

cantilever arm (*Civ. Eng.*). One of the projecting arms of a *cantilever bridge* (q.v.).

cantilever bridge (*Civ. Eng.*). A bridge composed of self-supporting projecting arms built inwards from the piers and meeting in the middle of the span, where they are connected together. See also **suspended span.**

cantilever crane (*Civ. Eng.*). A straight steel truss, resting on central supports, used for the transport of excavated materials from the bottom of a cutting to a spoil-bank at one side; for this purpose skips hang from the truss and may be moved along it.

cantilever deck (*Civ. Eng.*). A type of *cantilever bridge* (q.v.) in which the loads are carried by the upper chord.

cantilever spring (*Automobiles*). A laminated spring, anchored to the frame at its mid-point, and, at its ends, to shackles on the frame and the axle respectively; not a true cantilever. See **quarter-elliptic spring.**

cantilever-through (*Civ. Eng.*). A type of *cantilever bridge* (q.v.) in which the loads are carried by the lower chord.

canting (*Eng., etc.*). Tilting over from the proper position; as the canting of a piston in its cylinder under the oblique thrust of the connecting-rod

canting strip (*Build.*). A projecting sloping member fitted around a building to deflect rain water from the wall. Also called a WATER TABLE

cantling (*Build*). The lower of two courses of burnt brick enclosing a clamp for firing bricks.

canton (*Build*). A pilaster or quoin forming a salient corner, which projects from the wall-face.

canvas (*Textiles*). (1) An openwork cotton fabric, usually with an embroidered design, used for cushion covers, etc.—(2) A plain coarse cotton cloth with hard twisted yarns.—(3) A coarse linen cloth, frequently made from natural tow yarns; used for interlinings.

canyon (*Geol.*). A variant of *cañon*.

caoutchouc, kowt'shook. Raw *rubber* (q v.).

• **caoutchouc, mineral** (*Min.*). See **elaterite.**

cap (*Ammunition*). That part of a cartridge or shell which is filled with a detonating composition, and is fired by a percussion striker. It ignites the propellant charge in gun and small-arm ammunition. See **detonator, primer, propellant.**

cap (*Bot.*). (1) See **pileus.**—(2) The strand of sclerenchyma often present on the outside of a vascular bundle, and seen as a crescent-shaped mass in a cross-section.

cap (*Build*). (1) The upper member of a column.—(2) A wall coping.

cap (*Carp*). (1) A door or window lintel.—(2) A hand-rail supported on balusters.

cap (*Civ. Eng*). The horizontal beam connecting the heads of piles in a piled foundation.

cap (*Meteor.*). (1) The covering of cloud which congregates at the top of a mountain.—(2) The transient top of detached clouds above an increasing cumulus. Also PILEUS.

cap-and-pin type insulator (*Diel.*). A special form of the *suspension type insulator* (q.v.)

cap cell (*Bot.*). The cell which surmounts the antheridium of a fern, and is thrown off when the antheridium liberates the sperms.

cap iron (*Carp.*). See **back iron.**

cap jewel (*Horol.*). A jewel with endstone.

cap, lens (*Photog*). See **lens cap.**

cap spinning (*Textiles*). A method of spinning employed for Botany and fine cross-bred yarns; spun yarn is led on to a bobbin, rotating at high speed, by means of a cap on the top of the spindle.

capacitance (*Elec.*). The property of a body by virtue of which a quantity of electricity has to be imparted to it to raise its potential above that of the surroundings. The capacitance between two bodies is the ratio of the charge to the potential between them. Frequently written **C.** See **jar, micro-farad, micro-micro-farad, pico-farad**; also **capacity, stray capacitance.**

capacitance grading (*Cables*). Grading of the properties of a dielectric so that the variation of stress from conductor to sheath is reduced. The inner dielectric has the higher permittivity. Ideally, the grading is continuous and the permittivity varies as the reciprocal of the distance from the centre. See **condenser bushing.**

capacitive load (*Elec. Eng.*). See **leading load.**

capacitor (*Elec. Eng.*). A piece of electrical apparatus consisting of two conducting plates separated by a layer of insulating material. It will thus have an appreciable capacitance and each electrode carries a charge of electricity. If an alternating p.d. is applied to it, it will take a leading current. Previously called CONDENSER.

See **electrolytic—** **synchronous—**
series— **condenser.**

capacitor motor (*Elec. Eng*). A single-phase induction motor arranged to start as a two-phase motor by connecting a capacitor in series with an auxiliary starting winding. The capacitor may be automatically disconnected when the motor is up to speed (capacitor-start motor) or it may be left permanently in circuit for power-factor improvement (capacitor start-and-run motor).

capacity (*Elec. Eng.*). A term commonly used to denote the output of a piece of electrical apparatus; e.g. a generator may be said to have a *capacity* of 60,000 kW. In an accumulator (secondary) battery, it denotes the quantity of electricity, usually expressed in ampere-hours, that can be passed through it. In reference to a capacitor, the preferred term is CAPACITANCE.

See **breaking—** **current-carrying—**

capacity balance (*Teleph.*). The equality of capacitance between conductors and sheath in a telephone pair or quad

capacity (or **electrostatic**) **coupling** (*Elec. Comm*, *Radio*). Coupling between two circuits which is effected either by a condenser included in a common branch, or by a condenser connected between appropriate points in the two circuits.

capacity earth (*Radio*). Another name for *counterpoise antenna.*

capacity reactance (*Elec. Eng*) A reactance produced as a result of capacitance in an a.c. circuit.

capacity reaction (*Radio*). Reaction from the output to the input circuit of an amplifier, through a path which includes a condenser.

Cape asbestos or **Cape blue asbestos** (*Min*) A form of crocidolite, a silicate of sodium and iron, occurring in narrow interbedded veins traversing the Griqua Town series of banded jaspers and ironstones in Griqualand West, Union of S. Africa. It is extensively mined in the neighbourhood of Prieska northwards towards Mafeking, and is put to most of the uses of other forms of asbestos, being a particularly good heat insulator.

Cape diamond (*Min.*). A name used in grading diamonds to designate an off-colour stone of a yellowish tint.

Cape ruby (*Min.*). The fiery red garnet *pyrope* (q.v.), obtained in the diamond-mines in the Kimberley district, mostly from the rocks kimberlite and eclogite. See also **false ruby.**

capes (*Gloves*). Gloves made from bark-tanned leather dressed on the grain side; originally made from Cape Colony sheepskins.

capilla'ceous, capil'liform (*Bot.*). Hair-like.

capillari'asis (*Vet.*). Inflammation of the alimentary tract of animals or birds due to infection by nematode worms of the genus *Capillaria.*

capillarity (*Phys.*). A phenomenon associated with surface tension and angle of contact. The rise of liquids in capillary tubes and the action of blotting paper and wicks are examples of capillarity.

capil'lary (*Bot., Zool.*). Of very small diameter; slender, hair-like.—(*Zool.*) Any tiny, thin-walled vessel of small diameter, forming part of a network, which aids rapid exchange of substances between the contained fluid and the surrounding tissues; as *bile capillaries, blood capillaries, lymph capillaries.*

capillary activity (*Chem.*). See **surface activity.**

capillary bronchitis (*Med.*). Acute catarrhal bronchitis of the smaller bronchi and bronchioles.

capillary electrometer (*Chem.*). An instrument in which small electric currents are detected by the movement of a mercury meniscus in a capillary tube.

capillary pyrite (*Min.*). See **millerite.**

capillary soil water (*Bot.*). Water held between the particles of the soil by capillarity.

cap'illator (*Chem.*). An apparatus for the colorimetric determination of pH; it involves comparison of solutions in capillary tubes.

capillit'ium (*Bot.*). (1) A mass of threads.—(2) The whole assemblage of threads or tubes, found mingled with the spores in the fructifications of *Myxomycetes* and of *Gasteromycetes.*—*pl.* **capillitia.**

capital (*Build.*). The upper member of a column, pier, or pilaster.

capital (*Typog.*). The large capital letter; e.g. C; indicated in manuscript or proof by three lines under the letter. Cf. *small capital.*

capitalist (*Bot.*). A plant which has reserves of stored food.

cap'itate (*Bot.*) (1) Resembling a pin-head in appearance.—(2) Bearing a rounded swelling at the apex.—(3) Having flowers grouped in a capitulum or head.—(*Zool.*) Having an enlarged tip, as *capitate antennae.*

Capitellifor'mia (*Zool.*). An order of *Phanerocephala*, comprising a number of burrowing forms superficially resembling earthworms; they are of blood-red colour, and have small parapodia which lack cirri; the buccal region is eversible and the pharynx is unarmed; the prostomium is conical and lacks palps and tentacles but bears a pair of retractile ciliated organs; the peristomium is without setae or cirri; in the males there is a copulatory apparatus.

capitel'lum (*Zool*). An enlargement or boss at the end of a bone, for articulation with another bone.

capit'ulate (*Bot.*). Of the nature of a head.

capitu'liform (*Bot.*). Having the characters of a dense head of flowers.

capit'ulum (*Bot.*). A racemose inflorescence in which the sessile flowers are crowded on the concave, flat, or convex surface of the enlarged apex of the scape, the whole group being surrounded and covered in bud by an envelope of bracts forming an involucre; the whole group appears to be a single flower, as in the daisy.

capitulum (*Zool.*). In pedunculate *Cirripedia*, the whole of the body excluding the stalk: a terminal expansion, as that of some shaft bones, some tentacles, and some hairs.

caponising (*Vet*). Castration of a cock bird.

Cappagh brown, kap'a (*Dec.*). A bituminous earth pigment, stained with oxide of manganese and iron.

capped elbow (*Vet.*). A swelling of the olecranon bursa of animals.

capped hock (*Vet.*). A swelling over the point of the hock of animals.

capping (*Elec. Eng.*). The wooden strip used as a cover for the wood-casing system employed in electrical installation work.

capping (*Furn.*). A moulding or slab serving as a cap or permanent covering.

capping (*Mining*). The fixing of a shackle or a swivel to the end of a hoisting rope.

capping-brick (*Build.*). A *coping brick* (q.v.).

capping-plane (*Join.*). A plane for giving a slight rounding to the upper surface of a wooden hand-rail.

cap'reolate (*Bot.*). Having tendrils.

Capricorn, Tropic of. See **Tropics.**

Capricornus (*Astron.*). Goat. Tenth sign of the *Zodiac* (q.v.).

caprifica'tion (*Bot., Zool.*). The fertilisation of the flowers of fig-trees by the agency of Fig Insects, a family of Chalcids (*Agaonidae*): the process of hanging caprifigs in the female trees.

cap'rifier (*Zool.*). A Fig Insect. See under **caprification.**

cap'rifig (*Bot.*). A race of fig which does not produce edible fruits, but provides food for the wasps which pollinate the figs.

cap'riform (*Zool.*). Resembling a goat; as certain Fish.

Caprot'ti valve-gear (*Eng*). A locomotive valve-gear using two pairs of vertical double-beat *poppet valves* (q v.), cam operated, cut-off being adjustable by varying the angular position of the inlet cams.

caps and smalls (*Typog.*). Small capitals with the first letters in capitals. The first word of a chapter is often set in *caps and smalls.*

capstan (*Eng.*). A vertical drum or spindle on which rope is wound (e.g. for warping a ship alongside a wharf); it is rotated by man-power or by hydraulic or electric motor.

capstan-headed screw (*Eng*). A screw having a cylindrical head provided with radial holes in its circumference. It is tightened by a tommy bar inserted in these holes.

capstan lathe (*Eng*). A lathe in which the tools required for successive operations are mounted radially in a tool-holder resembling a capstan; by revolving this, each tool in turn may be brought into position in exact location.

capstan nut (*Eng.*). A nut which is tightened in the same way as a *capstan-headed screw* (q.v.).

cap'sule (*Bot.*). (1) The portion of the sporogonium of *Bryophyta* which contains the spores.—(2) A fruit formed from a syncarpous gynaeceum, not fleshy when ripe, and splitting at maturity, releasing the seeds —(3) A coating of mucilaginous material outside a bacterial cell.

capsule (*Med*). A soluble case of gelatine in which a dose of medicine may be enclosed.

capsule (*Zool.*). Any fibrous or membranous covering of a viscus; e.g. the kidney. The name is applied also to certain areas in the brain which are formed by nerve fibres.

capsulogenous, —oj'en-us (*Zool.*). Capsule-secreting: capsule-forming.

captac'ula (*Zool.*). In *Scaphopoda*, sensory and prehensile filaments with expanded adhesive tips, arising from the head.

caption (*Typog.*). The descriptive wording under an illustration. Often called a *legend* (q.v.).

captive balloon (*Aero*). A balloon anchored or towed by a line. Usually the term refers to spherical balloons only. Special shapes for stability, etc. are called *kite balloons.*

cap'ut (*Zool*). An abrupt swelling at the distal end of a structure.—*pl.* **cap'ita.**—*adj.* **cap'itate.**

caput medu'sae (*Med.*). Dilated subcutaneous veins round the umbilicus in cirrhosis of the liver.

car. (1) A vehicle running on three or more wheels, e.g. a tram car: specifically (Britain), a motor-car.—(2) In a lift or hoist, the moving part in which the goods or passengers are carried.

car (*Aero.*). In an airship, the part intended for the carrying of the load (crew, passengers, goods, engines, etc.). It may be suspended below, or may be actually inside, the hull or envelope.—CONTROL CAR, the car from which the controls of an airship are operated, and the navigation is carried out.—WING CAR, a car suspended from either side of the hull of an airship, i.e. not directly beneath the keel.

car-floor contact (*Elec. Eng.*). A contact attached to the false floor of an electrically controlled lift; it is usually arranged to prevent operation of the lift by anyone outside the car.

car-shed hanger (*Elec. Eng.*). A hanger of small vertical dimensions used for supporting the overhead contact wire of a traction system in car sheds.

caraate (*Med.*). See **pinta.**

caracal, caracul (*Furs*). The dressed skin of the Persian lynx; reddish-brown in colour and silky; sometimes dyed black.

caracole (*Carp*). A helical staircase.

Carado'cian (*Geol.*). A stage or series of the Ordovician System in Britain, well represented in the Caradoc region of Salop, Wales, the Lake District, etc. It is equivalent to the Lower Hartfell stage of Scotland.

caramel (*Chem.*). Sugar-dye; the brown dye formed when cane-sugar is heated above its melting point. Caramel is used for flavouring in cooking, and in photography for backing plates to reduce halation.

car'apace (*Zool*). An exoskeletal shield covering part or all of the dorsal surface of an animal; as the bony dorsal shield of a tortoise, the chitinous dorsal shield of some *Crustacea.*

carat or **karat.** (1) A standard of weight for precious stones. The *metric carat,* standardised in 1932, equals 200 mg. ($\frac{1}{5}$ of a gram).—(2) The standard of fineness for gold. The standard for pure gold is 24 carats; 22 carat gold has 2 parts of alloy; 18 carat gold 6 parts of alloy.

carbam'ic acid (*Chem.*). $NH_2{\cdot}CO{\cdot}OH$; is not known to occur free, being known only in the form of derivatives; e.g. the ammonium salt, $NH_2{\cdot}CO{\cdot}ONH_4$.

car'bamide (*Chem.*). *Urea* (q.v.).

car'bamyl chloride (*Chem*). $NH_2{\cdot}CO{\cdot}Cl$; colourless needles of pungent odour; m p. 50° C, b p. 61° C; formed by the action of hydrochloric acid (gaseous) upon cyanic acid; it serves for the synthesis of organic acids.

carban'ilide (*Chem.*). Diphenyl-urea, $CO(NHC_6H_5)_2$.

car'bazole (*Chem.*). $(C_6H_4)_2NH$; colourless plates; m.p. 238° C.; sublimes readily; contained in coal-tar and in crude anthracene oil. It is the imine (intramolecular) of diphenyl and is formed from diphenylamine by passing the vapour through red-hot tubes, or by distilling *o*-amino-diphenyl over lime at about 600° C.

carbide, calcium (*Chem.*). See **calcium carbide.**

carbides (*Met.*). Compounds of carbon with iron and other elements in steel; e.g. Fe_3C (cementite), Fe_4W_2C., Cr_4C_2, etc.

car'binol (*Chem.*). Methyl alcohol. The nomenclature of alcohols is often based upon their homologous relation to methyl alcohol; e.g. tertiary butyl alcohol, $(CH_3)_3C{\cdot}OH$, is termed *trimethyl carbinol.*

carbocy'clic (or **isocyclic**) **compounds** (*Chem*). These are closed-chain or ring compounds in which the closed ring or chain consists entirely of carbon atoms.

car'bograph (*Photog.*). A combined silver bromide and pigmented bichromated gelatine process for printing. On development, the reduced silver acts catalytically and reduces the bichromate, which in turn hardens the pigmented gelatine, the differential hardening yielding the image on soaking in water.

carbohy'drases (*Chem.*). A group of enzymes which induce digestion of polysaccharoses and hydrolyse glucosides and carbohydrates generally.

carbohy'drates (*Chem.*). A group of compounds represented by the general formula $C_x(H_2O)_y$, where x is 6 or a multiple of 6. Substances widely occurring in vegetables and animals; e.g. sugars, starch, cellulose. The carbohydrates also comprise other compounds of a different general formula but closely related to the above substances; e.g. rhamnose, $C_6H_{12}O_5$. Carbohydrates are divided into *monosaccharoses* (q.v.), *di-* and *trisaccharoses* (qq.v.), *polysaccharoses* (q.v.), or polyoses. The carbohydrate element in diet supplies energy, provided by the oxidation of the constituent elements.

carbolic acid (*Chem.*). *Phenol* (q.v.).

carbolic oils (*Chem.*). See **middle oils.**

Carbolineum (*Build.*). A timber preservative.

carbolu'ria (*Med.*). The presence of carbolic acid in the urine, due to carbolic-acid poisoning.

carbon (*Chem.*). A non-metallic element in the fourth group of the periodic system. Symbol, C. At. no. 6, at. wt. 12·01, m.p. above 3500° C., b p. 4200° C. Its allotropic modifications include diamond, graphite, charcoal, gas carbon, and coke. The assumption that the carbon atom is tetravalent, the bonds being directed towards the apexes of a regular tetrahedron, is the basis of all theoretical organic chemistry.

carbon (*Illum*). A term commonly used to denote the carbon electrode of an electric arc lamp.

See **copper-cored—**
coppered—
cored—
flame—
flame-cored—
impregnated—
solid—

carbon (*Mining*). A special quality of diamond used for setting in the crown of a diamond drill. See **black diamond.**

carbon anode (*Thermionics*). An anode constructed of carbon, usually in graphite form, to resist the high temperatures encountered under some conditions of operation.

carbon arc (*Elec. Eng.*). An arc between carbon electrodes; usually limited to pure carbon rather than flame carbon electrodes.—(*Cinema.*) See **high-intensity carbon arc.**

carbon arc lamp (*Illum.*). A lamp employing, as the light source, an arc between carbon electrodes.

carbon arc test (*Diel*). A test used on non-ignitable boards of insulating materials. A carbon arc is held just clear of the surface of the board.

carbon-arc welding (*Elec. Eng.*). Arc-welding carried out by means of an arc between a carbon electrode and the material to be welded, filler metal being added if required.

carbon assimilation (*Bot.*). See **photosynthesis.**

carbon bisulphide (*Chem.*). See **carbon disulphide.**

carbon black (*Chem.*). A trade name given to the finely divided carbon produced from burning hydrocarbons, such as mineral oils, in conditions where combustion is incomplete. Large quantities of carbon black are used in the rubber and leather-cloth industries, and the substance is a common filler for gramophone records. See also **gas black.**

carbon brush (*Elec. Eng.*). A small block of carbon used in electrical equipment for making contact with a moving surface.

carbon button (*Teleph.*). The same as *carbon capsule*; used in telephone transmitters.

carbon capsule (*Teleph.*). In a telephone transmitter or microphone, the unit containing the carbon granules, which rest between two insulated electrodes.

carbon compounds (*Chem.*). Compounds containing one or more carbon atoms in the molecule. They comprise all organic compounds and include also compounds, e.g. carbides, carbonates, carbon dioxide, etc., which are usually dealt with in inorganic chemistry. Carbon compounds are the basis of all living matter.

carbon contact (*Elec. Eng.*). In a switch, an auxiliary contact designed to break contact after and make contact before the main contact, in order to prevent burning of the latter; the auxiliary contact is of carbon and is made to be easily removable.

carbon core (*Cables*). A minute puncture of the first one or two insulating papers, near the conductor. Cores are carbonised, and their diameters lie between 0 05 and 0 2 mm.

carbon cycle (*Bot.*). The circulation of carbon in nature.

carbon dioxide (*Chem.*). CO_2. A colourless gas with slight smell; weight of 1 litre at 0°/760 mm., 1·965 gm., rather more than 1·5 that of air. Produced when carbon is burnt in air, when limestone and magnesite are burnt, and by the action of hydrochloric acid on calcium carbonate. It is also produced during the process of fermentation. CO_2 has a high heat of formation and is therefore a stable compound. Can be liquefied at 0° under a pressure of 34 atmospheres, and at 20° under 56 atmospheres. Used in this form for the production of carbon dioxide 'snow' and compressed carbon dioxide, employed for cooling and in certain types of fire extinguishers.

carbon disulphide (*Chem.*). CS_2. Sulphur vapour passed over heated charcoal combines with the carbon to form *carbon disulphide*. Used as a solvent for sulphur and rubber. The disagreeable smell associated with commercial carbon disulphide is due to impurities.

carbon-dust resistance (*Elec. Eng.*). A type of resistance made of carbon dust in zig-zag troughs; used as a neutral earthing resistance on account of the fact that its resistance decreases as the current increases. Also called a BRAZIL RESISTANCE.

carbon filament (*Illum.*). The fine conductor of a carbon-filament lamp, which is heated to incandescence to produce light; the filament is made by heating a thread of cellulose material to convert it to pure carbon.

carbon-filament lamp (*Illum.*). An incandescent electric lamp consisting of a fine thread of carbon heated to white heat inside an evacuated bulb. Often called simply a CARBON LAMP.

carbon gland (*Eng.*). A type of gland used in steam-turbines to prevent leakage along the shaft. It consists of carbon rings cut into segments and pressed into contact with the shaft by an encircling helical spring. See **garter spring.**

carbon granules (*Teleph.*). The specially prepared small particles of anthracite coal used in the capsules of telephone transmitters; their varying resistance results in speech modulation of a direct current.

carbon hydrides (*Chem.*). A synonym for *hydrocarbons.*

carbon lamp (*Illum.*). See **carbon-filament lamp.**

carbon microphone (*Acous.*). See **carbon transmitter.**

carbon monoxide (*Chem.*). CO. Formed when carbon is heated in a limited supply of air, when carbon dioxide is heated with an excess of carbon, or when carbon dioxide is passed over some hot metals. A product of incomplete combustion. Poisonous. Its properties as a reducing agent render it valuable in industrial processes. See also **carbonyls.**

carbon monoxide-haemoglobin (*Chem.*). Haemoglobin combines with carbon monoxide instantaneously, being deprived of its oxygen-exchanging properties; this leads to poisoning of the body and suffocation.

carbon-nitrogen ratio (*Bot.*). The relation between the carbon and nitrogen content of a plant.

carbon oxychloride (*Chem.*). *Phosgene* (q.v.).

carbon paper. Paper coated with waxes containing dyes or carbon black, used for making duplicate copies in typewriting, etc.

carbon pick-up (*Acous.*). A pick-up in which the tracking needle varies the pressure on a capsule of carbon granules, so that their contact resistance is varied and a direct current is modulated.

carbon printing (*Photog.*). The use of a relief made by the solvent action of warm water on an emulsion containing bichromate, which has been differentially hardened by exposure to light.

carbon process (*Photog.*). Printing on to a carbon tissue surface sensitised with a solution of potassium bichromate, with subsequent single or double transfer to a final support.

carbon rheostat (*Elec. Eng.*). A rheostat consisting of a number of carbon plates through which the current is passed; its resistance can be varied by altering the mechanical pressure on them by means of a screw.

carbon silicide (*Chem.*). See **silicon carbide.**

carbon steel (*Met.*). A steel whose properties are determined primarily by the percentage of carbon present. Besides iron and carbon, carbon steels contain manganese (up to 1%), silicon (up to 0·2%), sulphur and phosphorus (up to 0·1%), but no chromium, nickel, molybdenum, etc.

carbon suboxide (*Chem.*). Malonic anhydride, C_3O_2, O:C:C:C:O; a colourless liquid or gas; m.p. −107° C., b.p. +7° C.; formed by heating malonic acid to 140°-150° C.

carbon tetrachloride (*Chem.*). Tetrachloromethane, CCl_4; a colourless liquid, b.p. 76° C.; prepared from chloroform or carbon disulphide and chlorine. Solvent for fats and oils; widely used in fire extinguishers.

carbon tetrachloride fuse (*Elec. Eng.*). A fuse immersed in carbon tetrachloride; for use on high-voltage circuits.

carbon tissue (*Photog.*). Paper coated with a mixture of gelatine and a pigment (sometimes carbon powder).

carbon transmitter (or **microphone**) (*Acous.*). The acousti-electrical convertor which utilises the variation of the contact resistance of carbon granules with minute pressures, such as can be applied by a diaphragm that is subjected to acoustic pressures. The device is a current modulator.

carbona'ceous (*Bot.*). Hard, blackened, and appearing as if charred.

carbonaceous (*Chem.*). Said of material containing carbon as such or as organic (vegetable or animal) matter.

carbonaceous rocks (*Geol.*). Sedimentary deposits of which the chief constituent is carbon, derived from plant residues. Under this heading are included peat, lignite, or brown coal, and the several varieties of true coal (bituminous coals, anthracite, etc.).

carbona'do (*Min.*). See **black diamond.**

carbonate (*Chem.*). A compound containing the acid radical of carbonic acid (CO_3 group). Bases react with carbonic acid to form carbonates.

carbonated (*Chem.*). Said of a liquid saturated with carbon dioxide under pressure.

carbonation (*Chem.*). The process of saturating a liquid with carbon dioxide, or converting a compound to carbonate by means of carbon dioxide.

carbonator (*Chem.*). The vessel in which *carbonation* (q.v.) is carried out.

Carbonic (*Geol.*). Synonymous with *Pennsylvanian.* Compare Carboniferous System in Europe, which includes the representatives of both the Mississippian and the overlying Pennsylvanian.

carbonic acid (*Chem.*). H_2CO_3. A weak acid formed when carbon dioxide is dissolved in water. It has an acid reaction to litmus.

carbonic acid derivatives (*Chem.*). Carbonic acid forms both normal and acid salts. The esters, chlorides, and amides form two series, viz. normal compounds, in which both hydroxyl groups of the acid are substituted; and acid compounds, in which only one hydroxyl group is substituted. The acid compounds are unstable in the free state, but form stable salts.

carbonic acid esters (*Chem.*). These comprise the methyl, ethyl, and propyl esters of carbonic acid, and also the salts of the acid esters. See **carbonic acid derivatives.**

carbonic acid gas (*Chem.*). Carbon dioxide effervescing from liquids which have been saturated with carbon dioxide under pressure. The gas escapes when the pressure is withdrawn.

carbonic anhydride (*Chem.*). A synonym for *carbon dioxide*. See **carbonic acid.**

Carbonif'erous igneous rocks (*Geol.*). The igneous rocks of Carboniferous age in Britain include great masses of basic lavas and associated intrusions in Lowland Scotland, as well as the 'toadstones' of Derbyshire and various lavas in S.W. England.

Carboniferous System (*Geol.*). One of the chief of the Palaeozoic Systems, comprising, in Britain, the Carboniferous Limestone, the Millstone Grit, and the Coal Measures. See also **Carbonic.**

carbonisation (*Chem.*). The destructive distillation of organic substances out of contact with air, accompanied by the formation of carbon, in addition to liquid and gaseous products. Coal yields coke, while wood, sugar, etc. yield charcoal.

carbonisation (*Met.*). See **cementation.**

carbonisation (*Textiles*). The destruction of the vegetable matter in burry wool by steeping it in a weak solution of sulphuric acid. This reduces the burrs to carbon dust and facilitates removal.

carbonised anode (*Thermionics*). A metallic anode coated with carbon, in the form of lampblack, to assist in the radiation of heat and reduce the secondary emission of electrons.

carbonised cloth (*Elec. Eng.*). Cloth, carbonised in a vacuum, which can be used for making variable resistances by arranging for layers of the cloth to be subjected to a varying mechanical pressure.

car'bonyl (*Chem.*). When carbon monoxide acts as a radical, as it appears to do in many reactions, it is called the *carbonyl* group. Carbon monoxide combines with certain metals to form carbonyls, e.g. $Co(CO)_3$, $Ni(CO)_4$, $Fe(CO)_5$, $Mo(CO)_6$.

carbonyl chloride (*Chem.*). *Phosgene* (q.v.).

carbonyl platinous chlorides (*Chem.*). These are formed when carbon monoxide unites with platinous chloride.

Carborun'dum. A proprietary *silicon carbide* (q.v.).

Carborundum detector (*Radio*). A crystal detector consisting of a point contact between steel and a Carborundum crystal. It is most sensitive when a small steady voltage is maintained across the contact.

Carborundum furnace (*Elec. Eng.*). See **Acheson furnace.**

Carborundum wheel (*Eng.*). An abrasive or grinding wheel consisting of Carborundum grains held together and moulded into disc form by a bonding agent. See **grinding wheel.**

car'bostyr'il (*Chem.*). α-Hydroxyquinoline, the lactim of *o*-amino-cinnamic acid. It crystallises with 1 H_2O, the m.p. of the anhydrous compound being 201° C.

carboxy-haemoglobin (*Chem.*). See **carbon monoxide-haemoglobin.**

carboxy-haemoglobinaemia (*Med.*). A state of the blood in which carbon monoxide combines with haemoglobin to the exclusion of oxygen, occurring in carbon-monoxide poisoning.

carbox'yl group (*Chem.*). The acid group $-CO(OH)$.

carbox'ylase (*Chem.*). An enzyme which is capable of eliminating CO_2 from alpha-ketonic acids, with the formation of aldehydes.

carbro process (*Photog.*). The printing of an enlarged image by the carbon process, by enlarging the original image on bromide paper and, after sensitising the latter, bringing it into contact with the sensitised tissue.

carbuncle (*Med.*). A circumscribed staphylococcal infection of the subcutaneous tissues.

carbuncle (*Min.*). This is the precious garnet; it consists of an iron, aluminium silicate, which crystallises in the cubic system. It has a deep-red colour. See **almandine.**

carburation or **carburetion** (*Eng.*). The mixing of air with a volatile fuel to form a combustible mixture for use in an internal-combustion (petrol) engine.

carburetted (or **enriched**) **water-gas** (*Fuels, etc.*). Blue water-gas which has been enriched by passing it through a carburettor into which gas oil is sprayed; calorific value per cubic foot, at 60° F., about 490 B.Th.U. Usually mixed with coal-gas to form town gas.

carburettor or **carburetter** or **carburetor** (*Eng.*). A device for mixing air and a volatile fuel in correct proportions, in order to form a combustible mixture. It consists essentially of a jet, or jets, discharging the fuel into the air stream under the pressure difference created by the velocity of the air as it flows through a nozzle-shaped constriction (choke).

carburisation or **carbonisation** (*Met.*). See **cementation, case-hardening.**

carbylam'ines (*Chem.*). See ***iso*cyanides.**

carcase. A variant of *carcass.*

carcass (*Build.*). The shell of a house in construction, consisting of walls and roof only, without floors, plastering, or joiner's work.—(*Furn.*) The main part of a structure such as a cupboard, chest-of-drawers, etc.

carcass-saw (*Join.*). A saw like the dovetail saw, but of larger size and with fewer teeth per inch.

carcassing (*Build.*). The structural work involved in constructing the carcass of a building.—(*Gas Fittings*) The layout and installation of gas piping for a building.

carcassing timber (*Build.*). Timber for the framing of a building or other structure.

Carcel lamp (*Illum.*). A little-used French standard lamp, burning colza oil and giving a luminous intensity of 9·6 candles.

carceru'lus (*Bot.*). A fruit which splits at maturity into several one-seeded portions.

car'cinogen'esis (*Med.*). The production and development of cancer.

carcino'ma (*Med.*). A disorderly growth of epithelial cells which invade adjacent tissue and spread via lymphatics and blood-vessels to other parts of the body. See also **malignant disease.**

car'cinomato'sis, carcino'sis (*Med.*). Cancer widely spread throughout the body.

carcino'matous (*Med.*). Of the nature of cancer.

carcino'sis (*Med.*). See **carcinomatosis.**

card (*Surv.*). The graduated dial or face of a magnetic compass in which the card and needle are firmly connected.

cards (*Textiles*). Strips of cardboard that function in a jacquard machine in controlling the cords connecting with the harness mails, which lift or depress the threads to form the desired pattern of fabric.

cardboards (*Paper*). Made from a single layer of pulp (*pulp boards*); several layers (*triplex boards*); or sheets of paper pasted together (*pasteboards*). The term should be applied only to the finer qualities of boards. See also **box-boards, millboards, strawboards.**

card chase (*Typog.*). A small chase used for imposing small jobs such as cards.

card clothing (*Cotton Spinning*). Material consisting of a foundation of woven cotton and wool, generally covered with rubber, and filled with a number of wire teeth set closely together; used to cover the cylinder, doffer, and flats of carding engines.

card lacing (*Lace*). Thick twine, sufficiently pliable to permit the laced jacquard cards to assume a folded form easily.

card nippers (*Lace*). A hand tool used for punching holes in jacquard cards.

card puncher (*Lace*). A machine which punches jacquard cards by means of pins arranged according to the draft pattern.

card-weight pipe (*Plumb.*). Standard or full-weight pipe of Briggs' standard thickness.

Cardan joint (*Automobiles*). See **universal joint.**

Cardan shaft (*Automobiles*). See **propeller shaft.**

carded yarns (*Cotton Spinning*). Yarns made from sliver which passes directly from the carding engine to the draw frames, the usual method. Cf. *combed yarns.*

Cardew earthing device (*Elec. Eng.*). An apparatus for earthing a circuit in case of abnormal pressure; it consists of an earthed metal plate and an aluminium strip, which are electrostatically attracted to each other by the pressure.

Cardew voltmeter (*Elec. Eng.*). An early form of hot-wire voltmeter, utilising the expansion of a long platinum wire to operate the needle.

cardia, cardiac sphincter (*Med.*). The sphincter surrounding the opening of the oesophagus into the stomach.

cardiac. Pertaining to the heart.

cardiac aneurysm (*Med.*). See **aneurysm.**

cardiac muscle (*Histol.*). The contractile tissue forming the wall of the heart in Vertebrates; the fibres have no sarcolemma, show only faint transverse striations, frequently branch and anastomose, and have the nuclei in the thickness of the fibre. Cf *striated muscle.*

cardiac sphincter (*Med.*). See **cardia.**

car'diagraph (*Med.*). A recording device to exhibit a wave-form determined by heart electromotive forces. The most usual forms are those using either an Einthoven galvanometer or a cathode ray tube with long after-glow.

Cardice (*Chem.*). Trade-name for solid CO_2. See **carbon dioxide.**

cardigan rib (*Hosiery*). A variation of the one-and-one rib stitch, known as *half-cardigan* and *full cardigan*; used for the cardigan coat and for heavier makes for fishermen.

cardinal (*Zool.*). In *Insecta,* pertaining to the cardo: in *Pelecypoda* and *Brachiopoda,* pertaining to the hinge: more generally, primary, principal, as the *cardinal sinuses* or *veins,* being the principal channels for the return of blood to the heart in the lower Vertebrates.

cardinal planes (*Light*). In a lens, planes perpendicular to the principal axis, and passing through the cardinal points of the lens.

cardinal points (*Astron.*). The name given to the four principal points of the horizon—north, south, east, and west—corresponding to *azimuths* (q.v.) 0°, 180°, 90°, and 270° respectively.

cardinal points (*Light*). In a lens or in a system of lenses, these are the two principal foci, the two nodal points, and the two principal points. When the lens is used normally in air, the principal points coincide with the nodal points. For a lens of negligible thickness, the cardinal points coalesce into a single point, at the optical centre of the lens.

carding (*Textiles*). The process of preparing textile fibres for conversion into sliver; performed by a carding machine or carding engine.

carding engine (*Textiles*). A machine used in the cotton industry for combing and cleaning cotton fibres, for conversion into sliver. Finer materials are treated in the revolving flat-card type of engine, coarse materials in the roller- and clearer-card type.

car'dioblast (*Zool.*). A mesodermal cell in an embryo, destined to take part in the formation of the heart.

car'diocente'sis (*Med.*). Puncture of the heart with a needle.

cardioid diagram (*Radio*). The heart-shaped polar diagram characteristic of the combination of loop and vertical antennae used in direction-finding systems.

cardiol'ogy (*Med.*). That part of medical science concerned with the function and diseases of the heart.—*n.* **cardiol'ogist.**

cardiol'ysis (*Surg.*). Operative freeing of the heart from the chest wall when it is adherent to it in chronic adhesive pericarditis.

cardiomala'cia (*Med.*). Pathological softening of the heart muscle.

cardiorrhex'is (*Med.*). Rupture of the heart wall.

car'diospasm (*Med.*). Spasm of the cardia or cardiac sphincter of the stomach.

cardiovas'cular (*Med.*). Pertaining to the heart and the blood-vessels.

cardi'tis (*Med.*). Inflammation of the muscle and the coverings of the heart.

cardo (*Zool.*). The hinge of a bivalve shell: in *Insecta,* the proximal segment of the maxilla attached to the head.—*pl* **car'dines** (—din-ēz).

car'et (*Typog.*). A symbol (∧) used in proof correcting to indicate that something is to be inserted at that point.

Carey-Foster bridge (*Elec. Eng.*). A form of Wheatstone bridge incorporating a slide wire; used for comparing resistances of approximately equal value.

car'idoid facies, —fā'sēz (*Zool.*). A group of characters which must have been possessed by the ancestors of the *Malacostraca* before the present groups emerged.

ca'ries (*Med.*). (1) Pathological absorption of bone infected by the tubercle bacillus or by syphilis.—(2) Decay of teeth due, probably, to lack of calcium salts and of vitamin D.—*adj.* **ca'rious.**

cari'na (*Bot.*). The boat-shaped structure formed by the two lower petals in the flower of pea and similar plants; it encloses the stamens and carpel, and plays a part in pollination.

carina (*Zool.*). A median dorsal plate of the exoskeleton of some *Cirripedia*: a ridge of bone resembling the keel of a boat, as that of the sternum of flying Birds.

car'inate (*Bot., Zool.*). Shaped like a keel: having a projection like a keel.

ca'rious, ca'riose (*Bot., Med.*). Appearing as if decayed.

carmin'ative (*Med.*). Relieving gastric flatulence: medicine which does this.

carmine (*Dec.*). A red pigment made from cochineal (to be ground in water) or alizarin (ground in oil).

car'nallite (*Min.*). The hydrated chloride of potassium and magnesium, crystallising in the orthorhombic system; occurring in bedded masses with other saline deposits, as at Stassfurt. Such deposits arise from the desiccation of salt-lakes. It is used as a fertiliser.

Carnarvon arch (*Build.*). A lintel supported on corbels or shaped into shoulders at its ends.

carnas'sial (*Zool.*). In *Carnivora,* a large sectorial tooth derived from a cheek tooth, there being usually two in the upper and two in the lower jaw.

carnauba wax, —now'ba (*Chem.*). Also called BRAZIL WAX. Yellow or yellowish-green natural wax; m.p. 84°-86° C., sp. gr. 0·995, saponification value 88·3, acid value 2·9, iodine value 13·17; soluble in alkalis, ether, hot alcohol. It is obtained from the Brazilian wax palm. Carnauba wax is used, in gramophone-record manufacture, as basic material for the metallic soaps on which the original recordings are made; and in the oil of high-voltage cables to give viscosity at low temperatures.

carne'lian (*Min.*). A translucent red variety of chalcedony (silica).

car'neous (*Bot.*). Flesh-coloured.

Carniv'ora (*Zool.*). An order of carnivorous or omnivorous Mammals, terrestrial or aquatic; usually with three pairs of incisors in each jaw and large prominent canines; the last upper premolar and the first lower molar frequently modified as carnassial teeth; collar-bone reduced or absent; four or five unguiculate digits on each limb. Cats, Lions, Tigers, Panthers, Dogs, Wolves, Jackals, Bears, Raccoons, Skunks, Seals, Sea-Lions, and Walruses.

carniv'orous. Flesh-eating.

carnivorous plant (*Bot.*). A plant which catches and digests insects and other small animals.

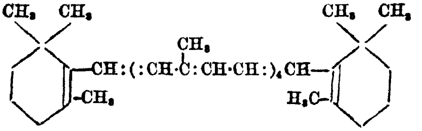
car'nose (*Bot.*). Fleshy in texture.

Carnot cycle, kar-nō (*Eng.*). A sequence of operations forming the working cycle of an ideal heat engine of maximum thermal efficiency. It consists of isothermal expansion, adiabatic expansion, isothermal compression, and adiabatic compression to the initial state.

car'notite (*Min.*). A vanadate of uranium and potassium, found (in Colorado) as a yellow impregnation in sandstones. It is an important source of radium.

carol or **caroll** (*Build.*). A seat built into the opening of a bay window. Also called BAY-STALL.

carotenes (*Chem.*). A group of orange-red, crystalline, highly unsaturated hydrocarbons, $C_{40}H_{56}$, to which various animal and vegetable substances owe their yellow colour (e.g. carrots, butter). They are present in the chromatophores of some *Phytomastigina* and in the chloroplasts of plants. They are precursors of vitamin A. All contain an unsubstituted β-ionine ring, and β-carotene has two such rings joined by a polyene bridge:



carpal, carpa'le (*Zool.*). One of the bones composing the *carpus* (q.v.) in Vertebrates.—*pls.* **carpals, carpalia.**

carpel (*Bot.*). The ovule-bearing structure, which, either singly or in association or combination with two or more other carpels, forms the gynaeceum of the flower. A carpel may be compared with a leaf, folded so that its edges come together, and bearing the ovules along the line of junction. A carpel consists of three parts: the *ovary*, a swollen basal portion containing the ovules, the *style*, a filamentous prolongation of the apex of the ovary, and the *stigma*, the specialised tip of the style, on which pollen lodges and germinates.

car'pellary scale (*Bot.*). See **bract scale.**

car'pelloid (*Bot.*). Said of some other member of a flower which is in part changed into a carpel.

carpentry. The craft of working timber, generally of a building or structural character.

carpet strip (*Carp.*). A strip of wood secured to the floor below a door.

carpeting, bituminous (*Civ. Eng.*). See **bituminous carpeting.**

carphol'ogy, carpholo'gia (*Med.*). Fitful movements of a delirious patient; e.g. plucking at the bedclothes, as in typhoid fever.

carpocerite, —pos'er-it (*Zool.*). In some *Crustacea*, the fifth antennal joint.

carpogo'nium (*Bot.*). (1) The female organ in *Rhodophyceae*.—(2) The early stage of the fructification in lichens and in *Ascomycetes*.

car'pometacar'pus (*Zool.*). In Birds, a bone of the wing skeleton, formed by the fusion of some of the carpals with the metacarpals.

car'pophore (*Bot.*). (1) An elongation of the receptacle of the flower between the insertion of the stamens and that of the carpels.—(2) The forked stalk from which the mericarps of the parsley and similar plants are suspended.—(3) A general term for the stalk of a fructification, especially in lower plants.

carpop'odite (*Zool.*). In some *Crustacea*, the third joint of the endopodite of the walking-legs or maxillipeds.

car'posporan'gium (*Bot.*) The sporangium in which one carpospore is formed, characteristic of the *Rhodophyceae.*

car'pospore (*Bot.*). A globose, uninucleate, non-motile spore, formed by *Rhodophyceae* after fertilisation and the subsequent development of a fructification containing groups of carposporangia, each yielding one carpospore.

carpotrop'ic movement (*Bot.*). A curvature of the fruit-stalk after fertilisation, bringing the fruit into a favourable position for ripening the seeds, or liberating them in a place where conditions will favour germination.

carpus (*Zool.*). In land Vertebrates, the basal podial region of the fore-limb; the wrist.

carr (*Bot.*). A community of woody plants growing on drying fenland.

carragheen, kar'a-gēn (*Chem.*). *Irish moss* (q.v.).

Carrar'a marble (*Geol.*). A well-known pure-white statuary marble, extensively quarried at Carrara; formed by contact metamorphism from ordinary limestone.

carriage (*Carp.*). A timber joist giving intermediate support, between the wall string and the outer string, to the treads of wide wooden staircases. Also called CARRIAGE-PIECE or ROUGH-STRING.

carriage (*Textiles*). The part of the mechanism of a lace machine that carries bobbin thread and swings in an arc on the combs containing the warp threads.

carriage clock (*Horol.*). A small portable clock with platform escapement, usually fitted in brass case with glass panels.

carriage gain (*Cotton Spinning*). The distance that the mule carriage travels in its outward run in excess of the delivery of roving. This slight stretching of the roving is known as *gain*.

carriage-piece (*Carp.*). See **carriage.**

carriage spring (*Eng.*). A spring used for the suspension of railway rolling-stock and other vehicles. It consists of a number of steel strips of varying length, curved to semi-elliptic form, held together so as to be capable of acting independently, and loaded as a beam. See **laminated spring.**

carriage-type switchgear (*Elec. Eng.*). See **truck-type switchgear.**

carriageway (*Civ. Eng.*). A road surface.

carrier (*Elec. Comm.*). A colloquial term for telephonic speech transmission in which the speech frequencies are modulated up into another frequency band for transmission with other bands, and modulated down for reception.

carrier (*Eng.*). A device for conveying the drive from the faceplate of a lathe to a piece of work which is being turned between centres. It is screwed to the work and driven by a pin projecting from the faceplate.

carrier (*Med.*). One who carries pathogenic bacteria without having the disease caused by the bacteria and who is thus infective to other people.—Similarly (*Bot.*) a plant showing no symptoms of disease, but containing a concealed virus which can be transmitted to other plants.

carrier (*Photog.*). A frame for holding a negative in an enlarger or lantern slides in a lantern.

carrier (*Radio*). The high-frequency current or voltage generated in a radio transmitter, which is varied in amplitude or frequency by the envelope of the signal to be transmitted. See **exhalted carrier***.

carriers (*Elec. Eng.*). The conductors fixed to the moving discs of an influence machine, which carry the charge to the main conductors.

carrier condition (*Elec. Comm.*). The condition of voltages and currents in an amplifier for a modulated signal when there is, at the time considered, no modulation.

carrier current (or **carrier wave) telegraphy** (*Teleg.*). The use of interrupted alternating currents of audio or super-audio frequency for conveying telegraphic signals over wires.

carrier current (or **carrier wave**) **telephony** (*Teleph.*). The use of modulated super-audio currents for transmitting speech frequencies over wires in parts of the frequency spectrum which are not normal for telephony.

carrier filter (*Elec. Comm.*). An electric wave filter suitable for discriminating between currents used in carrier telephony according to their frequency, particularly when they are combined with or separated from currents of normal telephonic frequency.

carrier frequency (*Elec. Comm.*). The steady frequency of current or voltage which is modulated by speech or telegraphic signals, resulting in no change in the carrier but the addition of side-frequencies.

carrier, fuse (*Elec. Eng., Teleph.*). See **fuse carrier.**

carrier metal (*Thermionics*). The metal, usually a thin film of silver, on which, after surface oxidation, molecular layers of caesium are deposited, when making photo-sensitive surfaces.

carrier power (*Radio*). The power radiated by a radio-telephone transmitter in the absence of modulation.

carrier telegraphy (*Teleg.*). The use of modulated frequencies, usually in the audio-frequency band, for telegraphic transmission; generally with the five-unit code transmitted by teleprinters.

carrier wave (*Radio*). That component of a modulated wave which is independent of the modulation, as distinguished from the *side waves* (q.v.).

carrier wave telegraphy (or **telephony**). See **carrier current telegraphy** (or **telephony**).

car'rollite (*Min.*). A sulphide of cobalt, with small amounts of copper, iron, and nickel; crystallises in the cubic system.

carrying capacity (*Elec., Cables*). See **current-carrying capacity.**

carrying-current (*Elec. Eng.*). See **instantaneous carrying-current.**

Carstone (*Geol.*). A ferruginous sandstone occurring at the top of the Lower Greensand, both in the Isle of Wight and in Norfolk, though possibly partly equivalent in age with the Gault. In Norfolk (Hunstanton) it is used as a building-stone.

carte-de-visite (*Paper*). A standard size of cut card, 2¼ × 4¼ in.—(*Photog.*) A standard size of photograph of this size.

Carter's coefficient (*Elec. Eng.*). A coefficient used in making calculations on the magnetic circuit of electric machines, in order to allow for the effect of the fringing of the flux in the air gap, due to open or semi-closed slots.

cartilage (*Histol.*). A form of connective tissue in which the cells are embedded in a stiff matrix of chondrin. See **hyaline, fibro-cartilage.**

cartilage bones (*Histol.*). Bones formed by the ossification of cartilage.

cartilaginous, —laj'in-us. Of the nature of cartilage: hard, tough, and pliable.

carting-boy (*Mining*). A boy who pushes or pulls carts of coal from the working face in thin coal-seams.

cartog'raphy (*Surv.*). The preparation and drawing of maps which show, generally, a considerable extent of the earth's surface.

carton (*Paper*). A folded card box.

cartoon (*Dec.*). A drawing or painting serving as a pattern for wall painting, mosaic, tapestry decoration, etc.

cartoon film (*Cinema.*). A film made by photographing frames step-by-step, the drawings being slightly modified between each frame, so that on projection an animated drawing is viewed. See also **animated cartoon.**

cartouch, cartouche, kar-toosh (*Build.*). (1) An ornamental block supporting the eave of a house. —(2) An ornamental scroll to receive an inscription or decoration.—(*Dec.*) A small scrolled panel or shield, in relief, or painted to represent relief: a modillion.

cartridge (*Ammunition*). For small arms or Q.F. guns firing fixed ammunition, the complete round is termed a *cartridge*; otherwise the cartridge is the propellant charge in its container. See **B.L. guns.**

cartridge (*Photog*). (1) The holder for roll films for daylight loading of cameras.—(2) A card-board tube for the carriage of a small quantity of chemical.

cartridge brass (*Met.*). Copper-zinc alloy containing approximately 30% zinc. Possesses high ductility; capable of being severely cold-worked without becoming brittle. Used for cartridges, tubes, etc.

cartridge case (*Ammunition*). A case, usually of brass, which contains the propellant charge of small-arm and Q.F.-gun ammunition, and which seals the chamber against the escape of gases.

cartridge fuse (*Elec. Eng.*). A fuse-link enclosed in a cylindrical tube of insulating material, which may or may not be filled with an arc-quenching medium. See **screw-plug cartridge fuse.**

cartridge paper (*Paper*). A hard, tough type of paper with a rough surface, used for drawing, wrapping, etc. See also **manilla paper.**

carun'cle (*Bot.*). An outgrowth from the neighbourhood of the micropyle of a seed. The seed is said to be *carunculate.*

caruncle (*Med.*). Any small fleshy excrescence: a small growth at the external orifice of the female urethra: (*pl.*) epithelial nodules found at the end of pregnancy on the placenta and the amnion.

caruncle (*Zool.*). Any fleshy outgrowth: in some *Polychaeta*, a fleshy dorsal sense-organ: in some *Acarina*, a tarsal sucker: in embryo chicks, a horny knob at the tip of the beak.

carun'cula lacrima'lis (*Med.*). The small reddish eminence situated at the inner angle of the eye.

carunculae myrtifor'mes (*Med.*). The small rounded elevations of hymen tissue which are the sole remains of this structure after parturition.

carun'culate (*Bot.*). Having a caruncle.

car'vacrol (*Chem.*). $C_{10}H_{14}O$, 1-methyl-4-isopropyl-2-hydroxy-benzene, an isomer of *thymol* (q.v.); m.p. 0° C., b.p. 236° C.; obtained from camphor by heating with iodine; present in *Origanum hirtum.*

carvene (*Chem.*). See **d-limonene.**

carvone (*Chem.*). Δ-6,8-Terpadiene-2-one, an unsaturated ketone of the terpene series, the principal constituent of carraway seed oil; m.p. 62° C., b.p. 228° C.; readily forms *carvacrol* (q.v.).

caryo-. Prefix. See **kary-, karyo-.** For terms not appearing below see under **k-.**

car′yoid (*Bot.*). A very small mass of protein of obscure significance, present in some algal cells.

car′yolytes (*Zool.*). In the histolysis which accompanies metamorphosis in some Insects, muscle-fragments containing nuclei.

caryop′sis (*Bot.*). A fruit, dry, indehiscent, and containing one seed, of which the testa is united closely to the fruit wall; a wheat grain is a *caryopsis*.

cascade (*Elec. Comm., etc.*). A number of devices connected in such a way that each operates the next one in turn.

cascade amplifier (*Radio*). A series of thermionic valve amplifiers so connected that the output of one stage is amplified by the succeeding stage.

cascade connexion (*Elec. Eng.*). A method of connecting two or more pieces of electrical apparatus so that the output of one forms the input to the next.

cascade control (*Elec. Eng.*). A method of obtaining two or more economical running speeds from two induction motors by connecting them in cascade, i.e. by supplying the stator of the first from the slip-rings of the second, the two being mechanically coupled.

cascade converter (*Elec. Eng.*). See **motor converter.**

cascade motor (*Elec. Eng.*). A single induction motor with a special arrangement of windings, which gives it the properties of two induction motors in cascade connexion.

cascading of insulators (*Elec. Eng.*). Flashover of a string of suspension insulators; initiated by the voltage across one unit exceeding its safe value and flashing over, thereby imposing additional stress across the other units, and resulting in a complete flashover of the string.

case (*Bind.*). The binding of a book when it is made as a separate unit from the book. A case consists of boards, cut to suitable size, and covered with cloth or other material. A cased book is described as *cloth boards* or *paper boards*, according to the covering material.

case (*Horol.*). The housing of a watch or clock.

case (*Masonry*). The external facings of a building when these are of better material than the backing.

case (*Met.*). The surface region of a steel component in which the properties and composition have been altered by carburising, nitriding, or cyaniding.

case (*Typog.*). A wooden tray divided into many compartments from which individual letters are taken. Usually in pairs, the *upper case* (q.v.) and *lower-case* (q.v.).

case bay (*Carp.*). The space between two binders under a floor.

case-hardening (*Met.*). The production of a hard surface layer on steel by heating in a carbonaceous medium to increase the carbon content, then quenching. See **cyanide hardening, pack hardening.**

case screws (*Horol.*). The screws that hold a watch movement in its case.

caseation, kās-e-ā′shon (*Med.*). The process of becoming cheese-like; e.g. in tissue infected with the tubercle bacillus the cells break down into an amorphous cheese-like mass.

cased frame (*Join.*). The wooden box-frame containing the sash-weights of a window.

casein, kā′se-in (*Chem.*). The principal albuminous constituent of milk, in which it is present as a calcium salt. Transformed into insoluble paracasein (cheese) by the action of enzymes. Casein is a raw material for plastic materials which are used extensively as insulators for low-tension systems, wireless panels, and for handles, buttons, etc. See **plastics.**

casein′ogen (*Chem.*). A phosphoprotein found in milk, yielding casein on acidification.

casemate (*Join.*). A small hollow moulding subtending about 60° to 90°. Also called a CASEMENT.—(*Mil.*) A heavily protected structure (e.g. on ships of war, in fortified lines) from which the defenders may fire upon the enemy.

casement (*Build.*). (1) A window hinged to open about one of its vertical edges.—(2) See **casemate.**

casement (*Textiles*). A plain woven cotton fabric used for curtains. Woven grey, and dyed or printed later.

ca′seoses (*Chem.*). Proteoses occurring in milk.

ca′seous (*Med.*). Cheese-like: having undergone *caseation* (q.v.).

casette′ (*Radiol.*). A holder for an X-ray plate or film.

cashmere (*Textiles*). Fabric made from wool which forms the under, winter coat of the Cashmere (Kashmir) goat. The term is also used for light-weight fabrics with a silk, cotton, or woollen warp and a fine Botany weft; and for material (shoddy) manufactured from merino rags.

casing (*Join.*). (1) The frame enclosing the sash-weights.—(2) The frame enclosing the steps in a staircase.—(3) The frame within which a door hangs.

casing (*Mining*). (1) The lining of a drill hole.—(2) The steel lining of a circular shaft.

casing (*Paper*). A standard size of brown paper, 36 × 46 in.

casinghead gasoline (*Fuels*). A very volatile product obtained by condensation of the low-boiling constituents of natural gas derived from oil-wells; blended with gasoline (petrol) to increase starting property.

Caspar′y's band, Caspa′rian strip (*Bot.*). The strip of material, impermeable to water, present in the radial walls of endodermal cells when these are in the primary condition. In transverse section, the strip appears as an elliptical swelling on the wall, and is then known as the *Casparian dot*.

Cassegrai′nian telescope (*Astron.*). A reflecting telescope with a hole in the principal mirror, the object being viewed through an eye-piece placed at its centre. Another mirror, placed normal to the main mirror and at the other end of the tube, brings back the doubly reflected rays to a focus in the optical plane of the eye-piece.

Cassel's yellow (*Chem.*). Commercial name for lead oxychloride made by heating lead oxide and ammonium chloride.

cassia oil (*Chem.*). An oil obtained from the bark of *Cinnamomum cassia*, a yellow or brown liquid, of cinnamon-like odour; b.p. 240°-260° C., sp. gr. 1·045-1·063.

cassie (*Paper*). The damaged tops and bottoms of a ream of paper.

cas′simere twill (*Textiles*). The 2-and-2 twill.

Cassini's division, ka-sē′nē (*Astron.*). A dark ring concentric with the ring of Saturn and dividing it into two parts; first observed by J. D. Cassini in 1675.

cassit′erite or **tin-stone** (*Min.*). Oxide of tin, crystallising in the tetragonal system; it constitutes the most important ore of this metal. It occurs in veins and impregnations associated with granitic rocks; also as 'stream-tin' in alluvial gravels.

Cassius, purple of (*Chem.*). See **purple of Cassius.**

cast (*Geol.*). A fossil organism, replaced by inorganic matter which has filled the original body cavity after the decay of the soft parts, and which may survive even the destruction of the enclosing skeletal structure. A cast shows the surface features of the organism but nothing of its internal structure.

cast (*Med.*). A mould of cellular or organic matter shed from tubular structures in the body (e.g. the bronchi or the tubules in the kidney).

cast (*Print.*). A stereotype or electrotype plate.

cast holes (*Foundry*). Holes made in cast objects by the use of cores, in order to reduce the time necessary for machining, and to avoid metal wastage.

cast-in-situ concrete piles (*Civ. Eng.*). A type of pile formed by driving a steel pipe into the ground and filling it with concrete, using the pipe as a mould. Also known as MOULDED-IN-PLACE CONCRETE PILES.

cast-iron (*Met.*). An iron-carbon alloy distinguished from steel by its containing substantial amounts of cementite or graphite, which make it unsuitable for working. Carbon content is usually above 2·5%. See **grey iron, white iron, mottled iron.**

cast-off (*Typog.*). An estimate of the number of pages or lines that copy will occupy when set up in type.

cast-steel (*Met.*). Steel as cast, i.e. not shaped by mechanical working. Originally applied to steel made by the crucible process as distinguished from that made by cementation of wrought-iron.

cast welded rail joint (*Rail.*). A joint between the ends of two adjacent rails in position; made by pouring molten metal between them.

casta'neous (*Bot.*). Chestnut brown.

caste (*Zool.*). In some social Insects, one of the types of polymorphic individuals composing the community.

castellated filament (*Illum.*). A form of electric lamp filament shaped like the battlements of a castle; used in some types of traction lamp.

caster (*Furn.*). A small swivelling roller attached to the feet of chairs, settees, tables, etc.—BALL CASTER, a hard metal ball kept in place by a metal holder.

caster action (*Automobiles*). The use of inclined king-pins by which the steerable front wheels of a motor vehicle are given fore-and-aft stability and a self-centring tendency after angular deflection by road shocks, on the principle of the domestic caster. See **trail.**

casting (*Cinema.*). The selection of artists to perform in the production of cinematographic films. See also **double casting.**

casting (*Met.*). (1) The operation of pouring molten metals into sand or metal moulds in which they solidify.—(2) A metallic article cast to the shape required, as distinct from one shaped by working.

casting (*Plastics*). A mixture of phenol, formaldehyde, plasticiser, lubricant, and dye is heated in a steam-jacketed kettle for about twenty-four hours; the viscous resin is then run into a ladle and transferred to a lead mould. The machining properties of the cast material are similar to those of brass or wood. When properly finished this forms the most beautiful of plastics.

casting (*Pot.*). A moulding process in which slip is used.

casting (*Typog.*). In Monotype work, the operation of passing the perforated spool (see **keying**) through a machine (*caster*), in which the individual characters are formed of molten lead, the matter being mechanically assembled in words, lines, and galleys.

casting (*Vet.*). (1) The process of throwing and securing an animal from the upright into the prone position.—(2) The pellet of undigested feathers, fur, or bones disgorged by a raptorial bird.

casting copper (*Met.*). Metal of a lower purity than *best selected copper* (q.v.). Generally contains about 99·4% of copper.

casting department (*Cinema.*). In a film-producing organisation, the unit responsible for selecting artists and testing their suitability for specified rôles.

casting ladle (*Foundry*). A steel ladle, lined with refractory material, in which molten metal is carried from the furnace to the mould in which the casting is to be made.

casting-on (*Foundry*). See **burning-on.**

castle nut (*Eng.*). A six-sided nut in the top of which six radial slots are cut. Two of these line up with a hole drilled in the bolt or screw, a split pin being inserted to prevent loosening.

Castner's process (*Chem.*). An electrolytic process for chlorine and alkaline hydroxides, incorporating the mercury diaphragm process to prevent the sodium hydroxide formed at the cathode from mixing with the chlorine discharged at the anode.

castor (*Furn.*). See **caster.**

castor oil (*Chem.*). Oil obtained from the seeds of *Ricinus communis*, a yellow or brown, syrupy, non-drying liquid; m.p. −10° C., sp. gr. 0·960-0·970, saponification value 178, iodine value 85, acid value 19·21.

castration (*Surg.*, *Vet.*). Removal or surgical destruction of the testicles.

castration-complex (*Psycho-an.*). The unconscious mental factor formed around the fear of the loss of the genital organs or their analogue; e.g. the experience of the withdrawal of the mother's breast in nursing. Later privation may become associated with the original experience, resulting in similar emotional reactions to the original fear-situation.

casual species (*Bot.*). An alien occurring in a plant community of which it is not a regular inhabitant.

C.A.T. (*Thermionics*). A trade abbreviation for *cooled-anode transmitting valve.*

cat (*Furs*). The fur of the common cat, widely used in certain countries for low-grade furs. The name is sometimes loosely used for the fur of *civet, genet,* and *lynx* (qq.v.).

catgut (*Surg.*). Sterilised strands of sheep's intestine used as ligatures.

cat'head or spider (*Eng.*). A lathe accessory consisting of a turned sleeve having four or more radial screws in each end; used for clamping on to rough work of small diameter and running in the *steady* (q.v.) while centring.

cat sapphire (*Min.*). Blackish- or greenish-blue oriental sapphire (i.e. true sapphire) of some value as a cut gemstone, but not of characteristic colour.

cat walk (*Cinema.*). A high bridge in a studio, for manipulating ropes and scenery.

cat's-eye (*Min.*). A variety of fibrous quartz which shows chatoyancy when suitably cut, as an ornamental stone. The term is also applied to crocidolite when infiltrated with silica (see **tiger's eye, hawk's eye**). A more valuable form is *chrysoberyl cat's-eye.* See **cymophane.**

cat's whisker (*Radio*). A colloquial term for the fine wire used to make contact with the crystal in some forms of crystal detector.

cata-. Prefix. See **kata-.**

cata- (*Chem.*). Containing a condensed double aromatic nucleus substituted in the 1.7 positions.

catab'olism (*Biol.*). See **katabolism.**

cataclas'tic structures (*Geol.*). See **kataklastic structures.**

catacorol'la (*Bot.*). A second corolla formed externally to the true one.

catad'romous (*Bot.*, *Zool.*). See **katadromous.**

cat'alase (*Chem.*). An enzyme present in animal and vegetable tissues, characterised by readiness to decompose hydrogen peroxide, while being slowly destroyed itself. It manifests maximum activity at *p*H 6·5-7.

cat'alepsy (*Med.*). The condition in which any posture of a limb may be maintained without movement for a period of time longer than normal; occurring in disease of the cerebellum and in hysteria, also in deep hypnotic states and in certain types of schizophrenia. Also used (*Zool.*) to indicate the action known as 'feigning death' which can be induced in some animals by any sudden disturbance.—*adj.* **catalep'tic.**

catal'ysis (*Chem.*). The acceleration or retardation of a chemical reaction by a substance which itself undergoes no permanent chemical change, or which may be recovered when the reaction is completed.

cat'alyst (*Chem.*). A substance which catalyses a chemical reaction. See **catalysis.**

catalytic poison (*Chem.*). A substance which inhibits the activity of a catalyst.

catamorphism (*Geol.*). See **katamorphism.**

cataphore'sis (*Chem.*). The migration of suspended particles under the influence of an electric field, especially towards the cathode.

cat'aphyll, cataphyl'lary leaf (*Bot.*). A simplified form of leaf, such as a cotyledon, a scale leaf on a rhizome, or a bud scale.

cat'aplasm (*Med.*). A medicated poultice or plaster.

cat'aplexy (*Med.*). Sudden attack of weakness, following some expression of emotion; the patient falls to the ground, immobile, speechless, but conscious.

catapult mechanism (*Bot.*). A means of seed dispersal, depending on sudden jerks due to the stiffness of the long stalk as the fruit sways in the wind.

cataract (*Med.*). Opacity of the lens of the eye as a result of degenerative changes in it.

catarrh, kat-ar' (*Med.*). Inflammation of a mucous membrane, with discharge of mucus.

catarrh, contagious (*Vet.*). An infection of birds due to *Haemophilus parainfluenzae.*

catarrh, equine contagious (*Vet.*). See **strangles.**

catarrhal fever, malignant (*Vet.*). An acute infection of cattle and buffalo, which is usually complicated by ulceration of the nostrils and severe nervous symptoms. See also **malarial catarrhal fever.**

catato'nia, catat'ony (*Med.*). See **catatonic schizophrenia.**

cataton'ic schizophrenia (*Psychiatry*). A type of schizophrenia characterised by states of motor activity and excitement, shown by echolalia and echopraxia, alternating with a state of stupor. Homicidal and suicidal tendencies are strong in the former phase, and are accompanied by delusions and hallucinations; in the stuporous phase all interest is withdrawn from the outside world, and the patient sits mute and idle and often has to be tube-fed. Flexibilitas cerea may be present, while a marked feature is negativism—a tendency to do the opposite of what is asked or expected.

catch (*Join.*). A spring bolt for securing doors when shut.

catch bar (*Textiles*). A long bar of steel forming part of a lace machine; it is faced with brass on the part which engages with the carriages.

catch-basin (*Civ. Eng.*). See **catch-pit.**

catch-bolt (*Join.*). A door-lock having a spring-loaded bolt which is always normally in the locking position (i.e. extended), but which is automatically and momentarily retracted in the process of shutting the door.

catch feeder (*Hyd. Eng.*). An irrigating ditch.

catch-line (*Typog.*). A temporary headline inserted on slip proofs, etc.

catch muscle (*Zool.*). A set of smooth muscle-fibres which form part of the adductor muscle in bivalve Molluscs, and are capable of keeping the valves closed by means of a sustained tonus: any set of smooth muscle fibres associated with striated muscle fibres for a similar purpose.

catch-net (*Elec. Eng.*). A wire netting placed under high-voltage transmission lines where they pass over public roadways, railways, etc., to prevent danger due to a broken live conductor.

catch-pit (*Civ. Eng.*). A small pit constructed at the entrance to a length of sewer or drain pipe in order to catch and retain matter which would not easily pass through the pipes. Also called a CATCH-BASIN.

catch plate (*Eng.*). The end flange of a lathe-head speed cone, or of an internal plate driven by the cone, through a hole in which a peg takes the drive to the lathe mandrel. The peg is withdrawn when the back gear is to be used.

catch props (*Mining*). In a coal-mine, props put in advance of the main timbering for safety; i.e. *watch props* or *safety props.*

catch-water drain (*Civ. Eng.*). A drain intercepting water flowing naturally from high land and conducting it in any desired direction.

catch-work (*Hyd. Eng.*). A system of water channels which may be used for flooding land.

catcher (*Thermionics*). The element in a thermionic valve which abstracts or catches the energy in a bunched electron stream as it passes through it. See **buncher.**

catchment area (or **basin**) (*Civ. Eng.*). The area from which water runs off to any given river valley.

cat'echol (*Chem.*). Pyrocatechin, $C_6H_4(OH)_2$ (1, 2); colourless crystals; m.p. 104° C., b.p. 240° C. It is *o*-dihydroxybenzene, a dihydric phenol. Occurs in fresh and fossil vegetable matter and in coal-tar. Important are its derivatives *guaiacol* (q.v.) and *adrenaline* (q.v.).

cat'echu (*Photog.*). A dark-brown extract of Indian plants, rich in tannin; used for toning platinum prints.

catena'rian arch (*Build.*). An arch having the shape of an inverted catenary, or hanging chain.

cat'enary, *or* ka-tēn'— (*Maths., etc.*). The curve assumed by a perfectly flexible, inextensible, infinitely slender cord, suspended at its ends. *Common catenary* is the curve assumed by a wire or a rope of uniform weight under the influence of gravity, when the forces are parallel and proportional to its length.

catenary construction (*Elec. Eng.*). A method of construction used for overhead contact wires of traction systems. A wire is suspended, in the form of a catenary, between two supports, and the contact wire is supported from this by means of droppers of different lengths arranged so that the contact wire is horizontal. See **compound catenary construction.**

cat'enate, caten'ulate (*Bot.*). (Of spores and similar structures) arranged in chains.

catenation (*Cyt.*). The arrangement of chromosomes in chains or in rings.

caterpillar (*Eng.*). A device for increasing the tractive effort and mobility of a tractor or other road vehicle. The road wheels are replaced by chain wheels, which carry and drive a pair of endless chains or articulated tracks of large flat steel plates, often provided with removable projecting pieces for increasing the adhesion on soft and irregular ground.

caterpillar (*Zool.*). A type of eruciform larva, found in *Lepidoptera* and *Tenthredinidae,* which typically possesses abdominal locomotor appendages (prolegs).

cathar'sis (*Psycho-an.*). The purging of the effects of a pent-up emotion by bringing them to the surface of consciousness: for example, the 'purging' of the mind obtained when a patient freely expresses himself to his physician.

cathartic (*Med*). Purgative. A drug which promotes evacuation of the bowel.

Catherine wheel (*Build.*). See **rose window.**

cath'eter (*Med.*). A rigid or flexible tube for admitting or removing gases or liquids through channels of the body, especially for removing urine from the bladder.

cathetom'eter (*Phys*, *etc.*). An instrument used for measuring vertical distances not exceeding a few centimetres It consists of a small telescope held horizontally in a cradle, which can move up and down a vertical pillar carrying a divided scale, the position of the cradle being read by means of a vernier. Images of the two points whose vertical separation is required are brought in succession to the cross-wires of the telescope eyepiece and the separation is obtained from the difference in the vernier readings. Also called a READING MICROSCOPE (or TELESCOPE)

cath'etron (*Elec. Eng*). A grid-controlled mercury-arc rectifier in which the control grid is placed outside the evacuated tube. Sometimes spelt KATHETRON.

cathex'is (*Psycho-an.*). A charge of mental energy attached to any particular idea or object.

cathode (*Chem*). The electrode at which an electric current leaves an electrolyte or gas — (*Thermionics*) The source of electrons in a thermionic or gas-discharge tube.

cathode copper (*Met*). The product of electrolytic refining. Before use the cathodes are melted, oxidised, poled, and cast into wire-bars, cakes, billets, etc.

cathode coupling (*Radio*). Coupling effected to or from a thermionic valve by means of an impedance connected between the cathode and the negative terminal of the high-tension supply.

cathode current (*Thermionics*). The total current from the cathode to all other electrodes in a thermionic tube.

cathode deposit (*Chem*). The substance, generally a metal, formed on the cathode during electrolysis.

cathode sputtering (*Thermionics*). See **sputtering.**

cathode rays (*Phys.*). Streams of negatively charged particles (electrons) emitted normally from the surface of the cathode during an electrical discharge in a rarefied gas. The velocity of the electrons is proportional to the square root of the potential difference through which they pass, and is equal to 595 km. per sec. for a p.d. of 1 volt.

cathode ray camera (*Cathode Ray Tubes*). A combination of cathode ray tube and moving-film camera. The photographic film may be internal or external to the vacuum chamber.

cathode ray direction-finder (*Radio*). An arrangement by which the direction of arrival of an incoming signal is shown by the inclination of a line on the calibrated screen of a cathode ray tube.

cathode ray furnace (*Phys.*). A device whereby a small specimen may be raised to a very high temperature by focusing on it an intense beam of cathode rays.

cathode ray indicator (*I.C. Engs.*). An engine indicator using a *cathode ray tube* (q.v.) for recording the diagram. The electron beam is deflected by voltages proportional to cylinder pressure and to time respectively, giving an indicator diagram on a time base; suitable for the highest speeds, since it is free from all inertia.

cathode ray oscillograph (*Phys.*). A Braun tube fitted with two pairs of parallel plates, for applying mutually perpendicular transverse electrical fields to the cathode ray beam. Since the deflections of the bright spot on the fluorescent screen due to these two fields are at right-angles to each other, it is possible to cause the spot to trace any desired curve by applying suitably varying potentials to the two sets of plates. The instrument plays an important part in television receivers.

cathode ray tube (*Radio, Television, Thermionics*). A device in which a narrow beam of electrons, emitted from an *electron gun* (q.v.), impinges on a fluorescent screen or photographic surface. The beam is subjected to transverse magnetic and/or electrostatic fields, whose intensities control the position of the luminous spot or photographic image. The device is much used in the delineation of wave-forms of electric currents and voltages, and in television.

cathode ray voltmeter (*Cathode Ray Tubes*). A cathode ray tube of known deflectional sensitivity, employed as a voltmeter. It indicates the crest values of the voltage applied to the deflector plates.

catho'dophone (*Acous.*). A microphone utilising the silent discharge between a heated oxide-coated filament in air and another electrode. This discharge is modulated directly by the motion of the air particles in a passing sound-wave.

cathog'raphy, cathodog'raphy (*Photog*). The practice of X-ray photography, i.e. the making of *skiagraphs* (q.v.).

cath'olyte (*Elec., etc.*). See **catolyte.**

cation, kat'ī-on (*Elec., etc.*). The ion in an electrolyte which carries the positive charge and which migrates towards the cathode under the influence of a potential difference.

catkin (*Bot.*). A somewhat specialised inflorescence, consisting of a number of sessile flowers of simple construction, arranged around a common stalk, and usually all staminate or all pistillate. The catkin falls as a unit when pollen has been shed or the seeds have been liberated.

cat'olyte, cath'olyte (*Elec., etc*). That portion of the electrolyte of an electrolytic cell which is in the immediate neighbourhood of the cathode.

catothe'cium (*Bot.*). An inverted perithecium in which the asci hang down from the base of the organ.

Catskill Beds (*Geol.*). An Old Red Sandstone phase in the Upper Devonian of N. America, typically exposed in the Catskill Mts., and reaching a thickness of 5000 ft. of non-marine red sandstones capped by white sandstones in Pennsylvania. See also **Chemung Group.**

cattle plague (*Vet.*). See **rinderpest.**

Cauchy's dispersion formula, kŏ-shĕ (*Light*).

$$\mu = A + \frac{B}{\lambda^2} + \frac{C}{\lambda^4} + \ldots$$

An empirical expression giving an approximate relation between the refractive index μ of a medium and the wavelength λ of the light; A, B, and C being constants for a given medium.

caud'a (*Zool.*). The tail, or region behind the anus: any tail-like appendage: the posterior part of an organ, as the *cauda equina*, a bundle of parallel nerves at the posterior end of the spinal cord in Vertebrates.—*adjs.* **caudal, caudate.**

caudad (*Zool.*). Situated near, facing towards, or passing to, the tail region.

Cauda'ta or **Urode'la** (*Zool.*). An order of *Amphibia* lacking scales, but possessing four pentadactyl limbs and a prominent tail in the adult state; gills or gill-slits may or may not be present. Newts, Salamanders, etc.

caudate (*Bot., Zool.*). Bearing a tail-like appendage.

caudicle (*Bot.*). The stalk composed of mucilaginous threads which attaches the pollen mass of an orchid to the rostellum.

Cauer filter, kow′er (*Elec. Comm.*). A filter which has sections designed from impedance considerations according to Cauer's filter theory.

cauking joint (*Join.*). A joint sometimes used to fix a tie-beam to a wall plate; it combines features of the dove-tail and tenon and mortise joints.

caul (*Furn.*). A curved form for pressing veneers.

caul (*Zool.*). In the higher Vertebrates, the amnion: more generally, any enclosing membrane

cauldron subsidence (*Geol.*). The subsidence of a cylindrical mass of the earth's crust, bounded by a circular fault up which lava has commonly risen to fill the cauldron. Good examples have been described from Scotland (Ben Nevis and the Western Isles).

caules′cent (*Bot.*). Having a stalk or a stem.

caul′icole, caulic′olous (*Bot.*). Growing on the stem (especially herbaceous stem) of another plant; usually refers to fungi.

cauliflor′y (*Bot.*). The production of flowers on old stems from dormant buds.

caul′ine (*Bot.*). (1) Growing from the stem, and not from the base of the plant.—(2) Appertaining to the stem.—(3) Formed from the internal tissues of the stem.

cauline bundle, cauline vascular bundle (*Bot.*). A vascular bundle formed entirely from the tissues of the stem. A set of such bundles forms the *cauline vascular system.*

caulking (*Carp.*). See **cogging.**

caulking (*Civ. Eng., etc.*). The operation of making a joint or seam tight to withstand pressure; performed by stopping the joint with tow or other filling material and ramming it home.

caulking or **calking** (*Eng.*). The process of closing the spaces between overlapping riveted plates by hammering the exposed edge of the upper plate into intimate contact with the lower plate.

caulking (or **calking**) **pieces** (*Eng.*). In some steam-turbines, distance pieces inserted between adjacent blades and secured by caulking.

caulking (or **calking**) **tool** (*Eng.*). A tool, similar in form to a cold chisel but having a blunt edge, for deforming the metal rather than cutting it; used in caulking riveted joints.

caulocar′pic (*Bot.*). Said of a plant which, after flowering, lives through the winter, and flowers again in the next or in a subsequent year.

caul′ome (*Bot.*). A general term denoting all organs belonging to the shoot.

causal′gia (*Med.*). Intense burning pain in the skin after injury to the nerve supplying it.

causeway (*Civ. Eng.*). A road carried by an embankment or a retaining wall across marshy land or water. A Scottish term for *sett paving* * (q.v.).

caustic (*Med., etc.*). Destructive or corrosive to living tissue: an agent which burns or destroys living tissue.

caustic curve (*Light*). A curve to which rays of light are tangential after reflection or refraction at another curve.

caustic lime (*Chem.*). The residue of calcium oxide, obtained from freshly calcined calcium carbonate; it reacts with water, evolving much heat, and producing slaked lime (calcium hydroxide, hydrate of lime, or hydrated lime). See also **lime.**

caustic potash (*Chem.*). A term used in chemistry for potassium hydroxide (KOH). The name *potash* is derived from 'ash' (meaning the ash from wood) and 'pot' from the pots in which the aqueous extract of the ash was formerly evaporated.

caustic soda (*Chem.*). Sodium hydroxide, NaOH, a deliquescent substance, with a soapy feel, whose solution in water is strongly alkaline; it is a common reagent in the laboratory. It is manufactured by treating quicklime with hot sodium carbonate solution; and its main industrial use is in the manufacture of soap.

caustic surface (*Light*). A surface to which rays of light are tangential after reflection or refraction at another surface.

cave breccias (*Geol.*). Breccias formed of fragments falling from the sides and roofs of caves.

cave earth (*Geol.*). A deposit formed of the finer-grained debris of cave walls and roofs, mixed in some cases with a certain amount of water-borne sediment.

Cavendish experiment (*Elec. Eng.*). An experiment to demonstrate that all charges reside on the surface of a conductor; first performed by Henry Cavendish (1731-1810).

Cavendish experiment (*Phys.*). An experiment carried out by Cavendish to determine the constant of gravitation. A form of torsion-balance was used to measure the very small forces of attraction between lead spheres.

cavern (*Geol.*). A chamber in a rock. Caverns are of varying size, and are due to several causes, the chief being solution of calcareous rocks by underground waters, and marine action.

cavernic′olous (*Ecol.*). Cave-living.

caverno′sus, cavernous (*Zool.*). Honeycombed: hollow: containing cavities, e.g. *corpora cavernosa.*

cavernous breathing (*Med.*). Low-pitched hollow sound produced in a cavity pathologically formed in the lung.

cavetto (*Arch.*). A hollow moulding, quarter round.

cav′il (*Masonry*). A small stone axe resembling a *jedding axe* (q.v.).

cavilling (*Mining*). The drawing of lots for working places (usually for three months) in the coal-mine.

cavings (*Agric. Mach.*). The short straw which is thrown out from a threshing-machine with the chaff.

cavitation (*Eng.*). The formation of a cavity between the downstream surface of a moving body and a liquid normally in contact with it, as, for example, behind the blades of a ship's propeller.

cavitation (*Med.*). The formation of cavities in any structure of the body, especially the lungs.

cavity effect (*Acous.*). The enhancement of response in a microphone due to acoustic resonance in a shallow cavity in front of the diaphragm.

cavity radiation (*Heat*). The radiation emerging from a small hole leading to a constant temperature enclosure. Such radiation is identical with *black-body radiation* (q.v.) at the same temperature, no matter what the nature of the inner surface of the enclosure.

cavity resonance (*Acous.*). The enhancement of air flow for certain frequencies, due to neutralisation of the mass (or inertia) reactance with the stiffness reactance of air in a partially enclosed space.

cavity walls (*Build.*). Hollow walls, normally built of two 4½ in. stretcher-bond walls with a 2 in. gap between, tied together with wall ties. Cavity walls increase the thermal resistance and prevent rain from driving through to the inner face.

ca′vum (*Zool.*). A hollow or cavity: a division of the concha.

cavus (*Med.*). See **pes cavus.**

Caxton (*Typog.*). A term applied to any book produced by William Caxton (1422-91).

Cb (*Chem.*). The symbol for *columbium.*

C.B. (*Elec. Comm.*). The abbrev. for *central* (or *common*) *battery* (q.v.).

C.B.S. (*Elec. Comm.*). The abbrev. for *central* (or *common*) *battery signalling* (q.v.)

c.c. The abbrev. for *cubic centimetre*, the unit of volume in the metric system.

C.C.I. (*Elec. Comm.*). The abbrev. for *Comité Consultatif International* (q.v.).

C.C.I.F. (*Elec. Comm.*). The abbrev. for *Comité Consultatif International Téléphonique* (*Fernsprech*).

C.C.I.R. (*Elec. Comm.*). The abbrev. for *Comité Consultatif International des Radiocommunications.*

C.C.I.T. (*Elec. Comm.*). The abbrev. for *Comité Consultatif International Télégraphique.*

Cd (*Chem.*). The symbol for *cadmium.*

C.D. (*Chem.*). An abbrev. for *current density.*

C.D.F. (*Elec. Comm.*). Abbrev. for *combined distribution frame* (q.v.).

Ce (*Chem.*). The symbol for *cerium.*

cecid'ium (*Bot*). See **gall.**

cedar-tree laccolith (*Geol.*). A multiple laccolith; i e. a series of laccoliths, one above the other, forming parts of a single mass of igneous rock.

ceiling (*Build.*). The upper surface of a room.

ceiling (*Aero.*). ABSOLUTE CEILING, the height at which the rate of climb of an aircraft, in standard atmosphere, would be zero. It is the maximum height attainable by an aircraft under standard conditions.—SERVICE CEILING, the height at which the rate of climb of an aircraft has fallen to a certain agreed amount (in British practice, 100 feet per minute).

ceiling fan (*Eng.*). A low-speed electric fan which has a wide sweep and is capable of displacing a large volume of air at low velocity; suspended from the ceiling in rooms where, for comfort, the rate of air change must be increased.

ceiling joist (*Build.*). A joist to which the plastering laths of a ceiling are fixed; it is nailed and notched to the binding joists of the floor above.

ceiling plate (*Elec. Eng.*). A metal plate for fixing to a ceiling, from which a pendant electric light fitting may be suspended. Arrangements are embodied in it to enable the flexible cord of the fitting to be connected to the wiring of the installation.

ceiling rose (*Elec. Eng.*). An enclosure of insulating material for attachment to the ceiling; it is equipped with terminals from which a flexible cord carrying an electric light fitting may be suspended. The terminals are also arranged for connexion to the wiring of the installation.

ceiling switch (*Elec. Eng*). A switch located in the ceiling but operated by a pull on a cord reaching down into the room. Also called a PULL SWITCH.

ceiling voltage (*Elec. Eng.*). A term used to denote the maximum voltage which a machine is capable of giving.

celadon (*Pot.*). (1) A sea-green colour. *Celadon fleuré* has raised decoration of this colour.—(2) Porcelain of pale or greyish-green colour.

Celastoid (*Plastics*). A proprietary thermoplastic made from cellulose acetate; sp. gr. 1·29-1·56, moulding temp. 267-305° F., breakdown value in volts per mm. 45,000.

-cele, -sēl (*Med.*). A suffix derived from the Greek *kēlē*, tumour, hernia.

celestial equator (*Astron.*). The great circle in which the plane of the earth's equator cuts the celestial sphere; the primary circle to which the co-ordinates right ascension and declination are referred.

celestial mechanics (*Astron.*). See **gravitational astronomy.**

celestial poles (*Astron.*). The two points in which the earth's axis, produced indefinitely, cuts the celestial sphere.

celestial sphere (*Astron.*). An imaginary sphere, of indeterminate radius, of which the observer is the centre. On the surface all stars, independently of their real distance, are points specified by two co-ordinates, referred to some chosen great circle of the sphere.

cel'estine (*Min.*). Strontium sulphate, crystallising in the orthorhombic system; occurs in association with rock-salt and gypsum; also in the sulphur deposits of Sicily, and in nodules in limestone The main supply for the world's markets is from residual clays.

cell (*Biol.*). One of the specialised units, consisting of nucleus and protoplasm, which compose the bodies of plants and animals; in the former usually surrounded by a non-living wall: in plants, the term is also used to denote the space occupied by the protoplasm with the wall around it

cell (*Bot.*) (1) The cavity containing pollen in an anther lobe.—(2) One chamber in an ovary.

cell (*Zool.*). One of the spaces into which the wing of an Insect is divided by the veins.

cell cavity (*Bot.*). See **lumen.**

cell division (*Cyt.*). The splitting of a cell into daughter cells. See **amitosis, meiosis, mitosis.**

cell inclusion (*Cyt.*). Any non-living material present in the cytoplasm, whether organic or inorganic.

cell lineage (*Zool*). The detailed sequence of events during the cleavage of the ovum, and the history and fate of each of the blastomeres.

cell organ (*Cyt.*). A specialised protoplasmic part of a cell having a particular function, as the Golgi apparatus.

cell plate (*Bot.*). A delicate membrane formed across the equator of the achromatic spindle as cell division proceeds; it provides the foundation of the wall which separates the daughter cells resulting from the division.

cell sap (*Cyt.*). The fluid constituents of a cell.

cell tissue (*Bot.*). A group of cells formed by division of one or a few original cells, remaining associated and functioning as a whole.

cell wall (*Cyt.*). The membrane or other autogenous structure confining the contents of a cell.

cell (*Elec.*). The unit of a battery, in which chemical action takes place between two electrodes, an anode and a cathode, both separately in contact with an electrolyte, with a resulting establishment of a potential difference between the electrodes. The electrodes are of different metals or of carbon. Sometimes there are two electrolytes, differing either in composition or concentration, and separated by a semipermeable membrane.

cell amplification (*Photo-electronics*). The increase in sensitivity in a gas-filled photo-electric cell, as compared with the corresponding high-vacuum cell, due to ionisation of the gas caused by the primary photo-electrons. Also called GAS AMPLIFICATION.

cell inspection lamp (*Elec. Eng.*). An electric filament lamp provided with narrow bulb so that it can be used for the examination of an accumulator by insertion between the plates.

cell, photo-electric. See **photo-electric cell, Photox cell.**

cell tester (*Elec. Eng.*). A portable voltmeter for checking voltage of accumulator cells.

cell, unit (*Chem.*). See **unit cell.**

cellase (*Chem.*). An enzyme, found in apricot kernels, which hydrolyses *cellobiose* (q.v.).

cellobi'ose or **cellose** (*Chem*). $C_{12}H_{22}O_{11}$, a disaccharose; obtained by the incomplete hydrolysis of cellulose.

Cel'lomold (*Plastics*). A proprietary cellulose-acetate plastic powder widely used for injection moulding.

Cel'lophane. Trade-name for transparent sheets of wrapping material made of *viscose* (q.v.).

cellose (*Chem.*). See **cellobiose.**

Cel'losolve (*Plastics*). Hydroxy-ether, glycol monoethyl ether, $C_2H_5O\,CH_2{\cdot}CH_2OH$, a colourless liquid used as a solvent in the plastics industry. It is miscible with water, alcohol, and ether, and boils at 135 3° C.

cel'lular. *Adj.* from *cell.*

cellular (*Textiles*). The name applied to an open texture obtained by the use of a gauze weave; used mainly as a shirting material.

cellular concrete (*Build.*). Concrete in the body of which bubbles of air are induced, either by chemical or by mechanical means, in the process of manufacture, thereby producing a concrete of low unit weight.

cellular horn (*Acous*). A horn for a high-frequency loudspeaker (tweeter), in which the path from the throat to the outer air is by a number of expanding channels of equal length, so that marked directivity, arising from the short wavelengths in relation to the width of the total opening, is not apparent.

cellular spore (*Bot.*). A multicellular body which is set free like a spore, and in which each cell is able to germinate separately by means of a germ tube and to give a new plant.

cellular structure (*Met.*). See **network structure.**

cellular tissue (*Bot*). A tissue composed of cells.

cellular-type switchboard (*Elec. Eng.*). A switchboard in which each switch with its associated apparatus is contained in a separate cell of fireproof material. Also called a CUBICLE-TYPE SWITCHBOARD.

cel'lulase (*Bot.*). See **cytase.**

cellulation (*Zool.*). The reformation of cells in injured tissue.

cel'lulin (*Bot.*). A refractive substance, probably resembling cellulose in composition, present in the hyphae of some aquatic fungi.

cel'lulith. A substitute for ebonite, produced by drying wood pulp which has been ground to a homogeneous mass.

celluli'tis (*Med.*). A spreading infection of the subcutaneous tissues with pyogenic bacteria.—For *pelvic cellulitis* see **parametritis.**

cel'luloid (*Plastics*). A well-known thermoplastic made from nitro-cellulose, camphor, and alcohol; sp. gr. 1·35-1·85, moulding temp. 85-120° F., breakdown value in volts per mm. 20,000-45,000. It is elastic and very strong, and can be produced in very thin sheets. Its uses are very numerous.

celluloid film (*Photog.*). The normal flexible photographic film, consisting of an emulsion coated on nitrate or cellulose *base* (q.v.).

cel'lulose (*Chem.*). $(C_6H_{10}O_5)_x$, the most complicated polyose, forming the walls of the cells in all plants. The chief source of cellulose is wood, cotton, and other fibrous materials (e.g. flax, hemp, nettle, etc.). Pure cellulose is obtained by removing all incrustations of lignin resins and other organic and inorganic matter by treatment with alkali, acids, sodium sulphite, etc. Cellulose is soluble in cuprammonium hydroxide (*Schweitzer's reagent*, q.v.), ammoniacal copper carbonate, a solution of zinc oxide in conc. hydrochloric acid. It is the raw material for the manufacture of paper, artificial silk, cellulose lacquers, films. Cellulose can undergo many chemical transformations; e.g., strong acids transform it into *amyloid* (q.v.); it can be hydrolysed and oxidised (cellulose hydrates, hydrocelluloses, oxycelluloses) and esterified (*cellulose acetate*, q.v.; *cellulose nitrate*, q.v.; benzyl-cellulose; *cellulose xanthate*, q.v.).

cellulose acetates (*Chem.*). Acetylcelluloses. These are acetic acid esters of cellulose, obtained by the action of glacial acetic acid, acetic anhydride, and sulphuric acid, upon cellulose. They are considerably less inflammable than cellulose nitrates, and are an important raw material for films, windscreens, gas-mask windows, artificial silk, lacquers, etc.

cellulose esters (*Chem.*). Cellulose derivatives obtained by esterification with nitric acid, acetic acid, etc.

cellulose hydrates (*Chem.*). Cellulose products closely resembling cellulose, extremely hygroscopic, but without reducing properties, obtained by the action of cold concentrated caustic soda on cellulose, e.g. cotton. The latter process, starting with cotton, is used for producing 'mercerised cotton.'

cellulose lacquers (*Chem.*). Lacquers prepared by dissolving nitro-cellulose or acetylcellulose in a mixture of suitable solvents, with the admixture of resins and plasticisers and, if required, of pigments or dyestuffs.

cellulose nitrates (*Chem.*). See **nitro-celluloses.**

cellulose trabecula (*Bot*). A strand of cellulose crossing the lumen of a cell.

cellulose xanthate (*Chem.*). $[C_6H_8O_3(ONa){\cdot}OCS_2Na]_n$, an acid salt of cellulose-dithiocarbonic acid, obtained by treating cellulose with concentrated caustic soda, with subsequent dissolution in carbon disulphide. The resulting product is called *viscose.*

Celotex (*Acous*). Artificial building-board used for acoustic absorption control; made from sugar-cane fibre (bagasse), compressed and baked.

Celsius scale (*Heat*). A synonym for *Centigrade scale.* The original Celsius scale of 1742 was marked zero at the boiling-point of water and 100 at the freezing-point, the scale being inverted by Christin in 1743.

Celtic twills (*Woollen*). A mat or hopsack weave with a twilled appearance. Also known as TWILLED MATS.

Celtic weave (*Textiles*). See **hopsack weave.**

cement (*Build., Civ. Eng., etc.*). A material for uniting other materials or articles. It is generally plastic at the time of application, but hardens when in place.

cement (*Zool*) In Mammalian teeth, a layer of lamellated bone covering the dentine beyond the enamel.

cement clay (*Geol.*). A clay rock containing a varying quantity of calcium carbonate, hence used for the manufacture of cement.

cement copper (*Met.*). Impure copper, obtained when the metal is precipitated by means of iron from solutions resulting from leaching.

cement fillet (*Build.*). A substitute for metal flashings in the angles between, say, a chimney stack and roof, weatherproofing being provided by running in a band of cement mortar. Also called a WEATHER FILLET.

cement grout (*Civ. Eng.*). A fluid cement mixture for filling crevices.

cement gun (*Civ. Eng.*). An apparatus for spraying fine concrete or cement mortar by pneumatic pressure.

cement joggle (*Build.*). A key formed between adjacent stones in parapets, etc. by running cement mortar into a square-section channel cut equally into each of the jointing faces, thereby preventing relative movement.

cement mortar (*Build., Civ. Eng*). A hydraulic mortar composed of Portland cement (or other siliceous cement) and sand.

Cementstone Group (*Geol.*). The lowest division of the Calciferous Sandstone Series of Scotland, comprising shales and sandstone, as well as compact earthy limestones (cementstones).

cementation. The setting of a plastic.

cementation (*Bot.*). The union of fungal hyphae by means of a sticky excretion.

cementation (*Civ. Eng.*). See **grouting.**

cementation (*Met.*). Usually, the process of raising the carbon content of steel by heating in a carbonaceous medium. (Also called CASE-HARDENING, CARBURISATION, CARBONISATION.) Generally, any process in which the surface of a metal is impregnated by another substance.

cemented (or **sintered**) **carbides** (*Met.*). Powdered carbides of tungsten, tantalum, or titanium cemented into solid masses by mixing with powdered cobalt or nickel, then compressing and sintering. Used instead of high-speed steel to form cutting tip of cutting-tools, and in parts subjected to heavy wear. See **sintered carbides*.**

cementing materials in rocks (*Geol*). The materials which bind any loose sediment into a coherent rock. The commonest cements are, respectively, ferruginous, calcareous, and siliceous.

cementite (*Met.*). The iron carbide (Fe_3C) constituent of steel and cast-iron (particularly white cast-iron). Very hard and brittle.

cen'chri (*Zool.*). Two pale-coloured membranous areas of unknown function, situated on the mesothorax of Saw-Flies (*Tenthredinidae*).

censer mechanism (*Bot*). A means of seed liberation in which the seeds are shaken out of the fruits as the stem of the plant sways in the wind.

censor, censorship (*Psycho-an.*). A powerful unconscious inhibitive mechanism in the mind, which prevents anything painful to the conscious aims of the individual from emerging into consciousness. It is responsible for the distortion, displacement, and condensation present in dreams. See also **superego.**

cent (*Acous.*). A unit of pitch or frequency difference for musical purposes; equal to one-hundredth of a semi-tone.

center, centering. Variants of **centre, centring**; used chiefly in America.

Centigrade scale (*Heat*). The most widely used method of graduating a thermometer. The fundamental interval of temperature between the freezing and boiling points of water is divided into 100 equal parts, each of which is a *Centigrade degree*, and the freezing point is made the zero of the scale. To convert a temperature on this scale to the Fahrenheit scale, multiply by $\frac{9}{5}$ and add 32. See also **Celsius scale.**

Centigrade heat unit (*Eng.*). The same as *pound-calorie* (q.v.).

centimetre candle (*Light*). See **phot.**

centimetre-gramme-second unit (*Elec. Eng., etc.*). See **c.g.s. unit.**

centimetre waves (*Radio*). Electromagnetic waves whose wavelength in free space is between 1 centimetre and 1 metre. Also called MICRO-WAVES.

cen'tonate (*Bot.*). Looking like patchwork, because of the presence of blotches of diverse colours.

central battery (*Elec. Comm.*). One large battery provided for power supply for telephone and telegraph circuits, instead of one small supply (e.g. wet batteries on subscribers' premises) for each circuit.

central battery signalling (*Teleph.*). The use of a large battery at the telephone exchange for signalling to the exchange, with a local battery for the subscriber's transmitter.

central body (*Bot.*). See **coenocentrum.**

central body (*Zool.*). In Insects, the median commissure connecting the protocerebral lobes of the brain.

central capsule (*Zool.*). In *Radiolaria*, a pseudochitinous structure of varying shape, enclosing the nucleus and some cytoplasm with oil bubbles.

central cell (*Bot.*). The cell at the base of the archegonium in the *Gymnospermae*, containing the egg and the ventral canal cell.

central cylinder (*Bot.*). See **stele.**

central heating (*Build.*). A system of heating a building, in which water is heated by a boiler in a central position, and hot water or steam is circulated throughout the building through pipes and radiators.

central nervous system (*Zool.*). The main ganglia of the nervous system with their associated nerve cords, consisting usually of a brain or cerebral ganglia and a dorsal or ventral nerve cord which may be double, together with associated ganglia.

central office (*Teleph.*). See **local exchange.**

central'e (*Zool.*). A centrally situated bone of the basipodium.—*pl.* **centra'lia.**

centre (*Civ. Eng.*). A timber frame built as a temporary support during the construction of an arch or dome.

centre (*Surv.*). To set up a surveying instrument vertically above a station point.

centre arbor (*Horol*). The arbor in the train of a watch or clock which is planted in the centre of the plates. Usually, this arbor makes one turn per hour.

centre-bit (*Tools*). A wood-boring tool having a projecting central point and two side wings, one of which scribes the boundary of the hole to be cut, while the other removes the material.

centre-contact cap (*Elec. Eng.*). A bayonet cap, fitted to an electric lamp, in which the outer wall forms one of the contacts, the other being a central projection.

centre-contact holder (*Elec. Eng.*). A lamp holder, with a centre spring contact, designed for receiving lamps with centre-contact caps.

centre drill (*Eng*). A small drill used for drilling the holes in the end of a bar to be mounted between centres in a machine tool; shaped so as to produce a countersunk hole.

centre flower (*Plast.*). A central ceiling ornament formed in plaster or cast metal. Also called CENTRE PIECE.

centre keelson (*Ship Constr.*). See under **keelson.**

centre nailing (*Build.*). A method of nailing slates on a roof; the nail is driven in any one slate just above the line of the head of the slate in the course below. Cf. *head nailing.*

centre of a lens (*Light*). A point on the principal axis of a lens, through which passes any ray whose incident and emergent directions are parallel.

centre of action (*Meteor.*). A position occupied, more or less permanently, by an anticyclone or a depression, which largely determines the weather conditions over a wide area. The climate of Europe is dependent on the Siberian anticyclone and the Icelandic depression.

centre of buoyancy (*Hyd.*). The centre of gravity of the liquid displaced by a floating body. In Ship Construction there are two centres of buoyancy: the *transverse centre of buoyancy*, which, in a vessel of two symmetrical halves, is on the centre line of the vessel, and the *longitudinal centre of buoyancy.*

centre of curvature. The point of intersection of normals drawn to a curve at two consecutive points. For a spherical surface, such as is encountered in mirrors and lenses in optics, the centre of curvature is the centre of the sphere of which the surface is a part.

centre of flotation (*Hyd.*). The centroid of the water plane area of a floating body.

centre of gravity (*Mech.*). That point in a body at which its weight may be taken to act, and at which the body may be supported in neutral equilibrium.

centre of mass (*Mech.*). The point in a body through which acts the resultant resisting force due to the body's inertia when it is accelerated. Coincident with the *centre of gravity.*

centre of oscillation (*Phys.*). A point in a compound pendulum which, when the pendulum is at rest, is vertically below the point of suspension at a distance equal to the length of the equivalent simple pendulum (that is, the simple pendulum having the same period). If the pendulum is suspended at the centre of oscillation, its period is the same as before.

centre of pressure (*Aero.*). The point at which the resultant of the aerodynamic forces (lift and drag) intersects the chord line of the aerofoil. Its distance behind the leading edge is usually given as a fraction of the chord length.

centre of pressure (*Hyd., Phys*). That point in a surface immersed in a fluid at which the resultant pressure over the immersed area may be taken to act.

centre of symmetry (*Crystal.*). A point within a crystal such that all straight lines that can be drawn through it pass through a pair of similar points, lying on opposite sides of the centre of symmetry and at the same distance from it. Thus, faces and edges of the crystal occur in parallel pairs, on opposite sides of a centre of symmetry.

centre piece (*Plast.*). See **centre flower.**

centre pinion (*Horol.*). The first pinion in a watch or clock train, driven by the great wheel.

centre-point steering (*Automobiles*). The relative positioning of the steered wheels and the swivel pins so as to obtain coincidence between the point of intersection of the swivel pin axis with the road and the plane of the wheel.

centre-pole suspension (*Elec. Eng.*). That method of supporting the overhead contact wire of a tramway system in which the supporting poles are placed between the two tracks.

centre pop (*Furn.*). A device used in dowelling work.

centre punch (*Eng.*). A punch with a conical point, used to mark or 'dot' the centres of holes to be drilled, etc.

centre-slot system (*Elec. Eng.*). A name sometimes given to the conduit system of electric traction, in which the slot of the conduit is placed centrally between the running rails.

centre spread (*Typog.*). A design occupying the area of two pages in the centre opening of a booklet or journal.

centre square (*Eng.*). A device for marking the centres of circular objects and bars. The bar is placed in the angle of the square, which is bisected by a blade that serves as a guide for scribing a diametral line.

centre stitching (*Woollen*). A method of stitching used in attaching the face and backing textures in double-cloth, when these are of different material or colour.

centre wheel (*Horol.*). The wheel mounted on the arbor of the centre pinion. It usually makes one turn per hour, so that any calculations relating to the train or number of vibrations made by the balance are taken from this wheel.

centre-zero instrument (*Elec. Eng.*). An indicating instrument which has the zero at the centre of the scale and can therefore read both positive and negative values of the quantity indicated.

centreless grinding (*Eng.*). A method of grinding cylindrical objects. The work is supported on a rest, between a pair of abrasive wheels revolving at different speeds in opposite directions, instead of between centres as in normal practice.

centric diatom (*Bot.*). A diatom in which the valves are built on a radial plan; these diatoms are mostly marine.

centric oosphere (*Bot.*). A fungal oösphere in which one or two layers of small globules of oil completely surround the central protoplasm.

centrif'ugal (*Zool.*). See **efferent.**

centrifugal brake (*Eng*). An automatic brake used on cranes, etc., in which excessive speed of the rope drum is checked by revolving brake shoes which are forced outwards into contact with a fixed brake drum by centrifugal force.

centrifugal casting (*Foundry*). The casting of large pipes, cylinder liners, etc., in a rotating mould of sand-lined or water-cooled steel. The metal is introduced by a long spout, the mould being traversed longitudinally, often by a hydraulic cylinder, during pouring. It results in dense, sound castings.

centrifugal clutch (*Eng.*). A type of clutch in which the friction surfaces are engaged automatically at a definite speed of the driving member, and thereafter maintained in contact, by the centrifugal force exerted by weighted levers.

centrifugal compressor (*Eng*). A form of pump for compressing gases; it imparts pressure energy through the agency of centrifugal force, in the same way as a *centrifugal pump* (q.v.).

centrifugal fan (*Eng.*). A fan with an impeller of paddle-wheel form, in which the air enters axially at the centre and is discharged radially by centrifugal force. Also called PADDLE-WHEEL FAN.

centrifugal force, centrip'etal force (*Mech.*). A body constrained to move along a curved path reacts against the constraint with a force directed away from the centre of curvature of its path. This force is called the *centrifugal force.* It is equal and opposite to the force directed towards the centre of curvature which is deviating the body from a straight path. This is the *centripetal force.* They are both equal to the product of the mass of the body and its *centripetal acceleration* (q.v).

centrifugal inflorescence (*Bot.*). See **cyme.**

centrifugal pump. A pump for increasing the pressure of a liquid through the agency of centrifugal force. The liquid is drawn into the centre of a rotating impeller, through which it flows radially under centrifugal force. Its kinetic energy is then converted into pressure energy in the casing or diffuser.

centrifugal starter (*Elec. Eng.*). A device used with small induction motors; it consists of a centrifugally operated switch on the rotor, which automatically cuts out starting-resistance or performs some other operation as the motor runs up to speed.

centrifugal tension (*Eng.*). The force per unit area of cross-section induced, in consequence of centrifugal force, in the material of a rotating rim, loop, or driving belt.

centrifugal thickening (*Bot.*). The deposition of layers of wall material on the outside of a cell wall, a process possible only when the cell lies free from its neighbours; the sculpturing on walls of pollen grains is formed by centrifugal thickening.

centrifugal xylem (*Bot.*). Xylem in which differentiation proceeds in succession towards the periphery of the stem or root.

cen'trifuge. Apparatus rotating at very high speed, designed to separate solids from liquids, or liquids from other liquids dispersed therein. It is essential that there should be a difference in the specific gravity of the substances to be separated. Examples of industrial uses: cream from milk, clarifying of lacquers.

centring or **centering** (*Civ. Eng.*). The general term applied to centres used in constructional work.

centring or **centering** (*Eng.*). (1) The marking of the centres of holes to be drilled in a piece of metal.—(2) The adjusting of work in a lathe so that its axis coincides with the lathe axis.

cen'triole (*Cyt.*). A central granule within the centrosome.

centrip'etal (*Zool.*). See **afferent.**

centripetal acceleration (*Mech.*). The acceleration, directed towards the centre of curvature of the path, which is possessed by a body moving along a curved path with constant speed. Its value is v^2/R, where v is the speed and R the radius of curvature.

centripetal force (*Mech.*). See under **centrifugal force.**

centripetal inflorescence (*Bot.*). See **raceme.**

centripetal thickening (*Bot.*). The deposition of layers of wall material on the inner side of the wall of a cell—the common process in a developing cell.

centripetal xylem (*Bot*). Xylem in which differentiation proceeds in succession towards the centre of the axis.

centrocli'nal dip (*Geol.*). A structure in which the rocks dip from all sides towards a central point, giving a basin-like arrangement.

centrodes'mose (*Cyt.*). A delicate thread of stainable material connecting the centrosomes at the time of nuclear division.

centrodes'mus (*Cyt.*). See **attraction spindle.**

centrodor'sal (*Zool.*). In stalkless *Crinoidea*, an ossicle situated in the middle of the aboral side and representing the stump of the stalk.

centrolecithal, —les'i-thal (*Zool.*). Having the yolk in the centre.

centron (*Zool.*). See **neuron.**

cen'troplasm (*Bot*). A mass of plasm of obscure nature lying in the centre of a cell of one of the *Myxophyceae.*

cen'trosome (*Cyt.*). A minute protoplasmic cell-inclusion associated with the nucleus and dividing with it. Centrosomes are of widespread occurrence in the cells of animals, but they appear to be confined to the *Thallophyta* among plants.

cen'trosphere (*Zool.*). See **attraction sphere.**

centrothe'ca (*Zool.*). See **idiozome.**

centrum (*Bot.*). A group of asci and nutritive cells associated with them, occurring in the perithecia of some *Pyrenomycetes.*

centrum (*Zool.*). The basal portion of a vertebra which partially or entirely replaces the notochord, and from which arise the neural and haemal arches, transverse processes, etc.

cepa'ceous (*Bot.*). Smelling or tasting like onion or garlic.

cephaeline, sef-ā'el-ēn (*Chem.*). $C_{28}H_{38}O_4N_2$, an alkaloid of unknown constitution, occurring in the roots of the Ipecacuanha species; colourless needles, m.p. 115°-116° C., soluble in alcohol or chloroform, insoluble in water. It resembles emetine in its physiological action, but it is more toxic.

cephal-, cephalo- (Greek *kephalē*, head). A prefix used in the construction of compound terms; e.g. *cephalothorax* (q.v.).

ceph'alad (*Zool.*). Situated near, facing towards, or passing to, the head region.

cephal'ic (*Zool.*). Pertaining to, or situated on or in, the head region.

ceph'alin (*Chem.*). A phosphatide found in the brain substance, miscible with water, from which it can be precipitated by acetone. Its constitution is still uncertain. On hydrolysis it yields glycerine, fatty acids, phosphoric acid, aminoethyl alcohol, and a nitrogenous base.

cephalisation (*Zool.*). The specialisation of the anterior end of a bilaterally symmetrical animal as the site of the mouth, the principal sense-organs, and the principal ganglia of the central nervous system: the formation of a head.

cephalobra'chial (*Cyt.*). Said of a chromosome which bears a small, rounded extension at one end.

ceph'alocele (*Med.*). Protrusion of the membranes of the brain, with or without the substance of the brain, through a hole in the skull.

Cephalochor'da (*Zool.*). A subphylum of *Chordata* having a persistent notochord, metameric muscles and gonads, a pharynx having a very large number of gill-slits and surrounded by an atrial cavity, and lacking paired fins, jaws, brain, and skeletal structures of bone or cartilage; there is an asymmetrical larval stage; marine sand-living forms. Lancelets.

cephalo'dium (*Bot.*). (1) An irregular outgrowth from the thallus of a lichen, usually containing blue-green algae.—(2) A group of algal cells different from those characteristic of the lichen, and lying as an intrusion within the thallus.

Cephalop'oda (*Zool*). A class of bilaterally symmetrical marine *Mollusca* in which the anterior part of the foot is modified into arms or tentacles, while the posterior part forms a funnel leading out from the mantle-cavity, the mantle is undivided, and the shell is a single internal plate, or an external spiral structure, or absent. Squids, Octopods, and Pearly Nautilus.

cephalotho'rax (*Zool.*). In some *Arthropoda*, a region of the body formed by the fusion of the head and the thorax.

Cepheid parallax, sef'ē-id (*Astron.*). See **period luminosity curve.**

Cepheid variables (*Astron.*). A class of variable star of short period, whose light curve is of a certain well-defined form, and of which the star δ Cephei is the prototype.

cera-, cerat-, cerato-. See **kera-, kerat-, kerato-.**

cera'ceous (*Bot*). Resembling crude beeswax in appearance or in colour.

ceram'ic insulator (*Elec. Eng.*). An insulator made of a ceramic material; e.g. porcelain. Such insulators are generally used for outdoor installations.

ceramics (*Pot.*). Fictile art, relating to the manufacture of any type of pottery or porcelain.

cer'anoid (*Bot.*). Bearing branches shaped like horns.

cerar'gyrite (*Min.*). Silver chloride, crystallising in the cubic system. It is usually the product of secondary action, and occurs commonly in massive or wax-like forms, associated with native silver or silver ores. Also CHLORARGYRITE, HORNSILVER.

cera'ta (*Zool.*). In nudibranch *Gastropoda*, respiratory papillae of the mantle.

ce'rate paste (*Photog.*). See **encaustic paste.**

ceratobran'chial (*Zool.*). An element of a branchial arch lying between the epibranchial and the hypobranchial.

ceratohy'al (*Zool.*). An element of the hyoid arch corresponding to the ceratobranchials of the branchial arches.

ceratotrich'ia (*Zool.*). Unjointed fibrous dermotrichia of horny consistency, occurring in Fish with a cartilaginous skeleton. Cf. *lepidotrichia.*

cer'cal (*Zool.*). Pertaining to the tail.

cerca'ria (*Zool.*). The final larval stage of *Trematoda* which develops directly into the adult; usually characterised by the possession of a round or oval body, bearing eye-spots and a sucker, and a propelling tail.

cercariaeum, —kăr′i-ē-um (*Zool.*). A cercaria in which the tail is lacking.

cercus (*Zool.*). In some *Arthropoda,* a multiarticulate appendage at the end of the abdomen.

cere, sĕr (*Zool.*). In Birds, the soft skin covering the base of the upper beak.—*adj.* **cerous.**

cerebel′lum (*Zool.*). A dorsal thickening of the hind-brain in Vertebrates.—*adj.* **cerebellar.**

cerebr-, cerebro- (Latin *cerebrum,* brain). A prefix used in the construction of compound terms; e.g. *cerebrospinal,* pertaining to the brain and spinal cord.

cere′bral (*Zool.*). Pertaining to the brain; pertaining to the *cerebrum.*

cerebral hemispheres (*Zool.*). See **cerebrum.**

cereb′riform (*Bot.*). Shaped somewhat like a brain.

cere′brogan′glion (*Zool.*). The 'brain' or supraoesophageal ganglia of metameric Invertebrates.

cer′ebrosides (*Chem.*). A group of substances, found in nervous tissue, which contain no phosphoric acid, but which on hydrolysis yield (among other substances) galactose. The two most important cerebrosides are *phrenosin* and *kerasin.*

cerebrospi′nal (*Zool.*). Pertaining to the brain and the spinal cord.

cerebrospinal fluid (*Physiol.*). The clear colourless fluid which bathes the surfaces of the brain and spinal cord. It is of alkaline reaction, sp. gr. about 1·006-1·008, and contains a small amount of dextrose, albumins, and inorganic salts, as well as traces of globulin.

cere′brum (*Zool.*). A pair of hollow vesicles forming part of the forebrain in Vertebrates.

cer′esine wax (*Diel., etc.*). Bleached or refined *ozokerite* (q.v.), obtained by heating the latter with charcoal and concentrated sulphuric acid. Used in cable compounds, joint boxes, and impregnating windings; also used, in gramophone-disc manufacture, in the composition of waxes on which the original recordings are made.

cerif′erous (*Bot., Zool.*). Wax-bearing, wax-producing.

ce′rin (*Bot.*). A substance occurring in bottle cork in the form of needle-shaped crystals.

ce′rium (*Met.*). A steel-grey metallic element, one of the 'rare earth' metals. Chem. symbol Ce, at. wt. 140·13, at. no. 58, sp. gr. at 20° C. 6·9, m.p. 635° C., specific electrical resistivity 78 microhms per cm. cub. An alloy with iron and several rare elements is used as the sparking component in automatic lighters and other ignition devices. It is also a constituent (0·15%) in the aluminium base alloy ceralumin. Compounds of cerium, particularly the oxide and fluoride, are being applied with success to increasing the luminosity of high current-density arc carbons.

cerium dioxide (*Chem.*). CeO_2. See **cerium.**

cerium fluoride (*Chem.*). See **cerium.**

cer′nuous (*Bot.*). Drooping, nodding.

cero′ma (*Zool.*). A synonym for *cere.*

ce′rous (*Zool.*). See **cere.**

certation (*Bot.*). Difference in rate of growth of pollen grains which differ in genetic constitution, resulting in competition when pollen of more than one type is placed at the same time on the same stigma.

ceru′men (*Zool.*). A dark-coloured substance formed by certain Bees (*Melipona, Trigona*), composed of wax mixed with resin or earth: in Mammals, a waxy substance secreted by the ceruminous glands.

ceru′minous glands (*Zool.*). Modified sweat glands occurring in the external auditory meatus of Mammals and producing a waxy secretion.

ce′russite (*Min.*). Lead carbonate, crystallising in the orthorhombic system; it occurs in association with other lead ores.

cervicec′tomy (*Surg.*). Surgical removal of the cervix uteri.

cervici′tis (*Med.*). Inflammation of the cervix uteri.

cer′vicum (*Zool.*). In Insects, the neck or flexible intersegmental region between the head and the pro-thorax: in higher Vertebrates, the neck or narrow flexible region between the head and the trunk.—*adj.* **cer′vical** (*or* ser-vī′kal). Pertaining to the neck or to the cervix uteri.

cervine (*Bot.*). Dark-tawny.

cer′vix u′teri (*Med.*). The neck of the uterus, situated partly above and partly in the vagina.

Cesa′rean section (*Obstet.*). See **Caesarean section.**

cesium (*Chem.*). See **caesium.**

cesspipe (*San. Eng.*). A discharge pipe for waste water, particularly from a cesspool.

cesspit (*Sewage*). See **cesspool.**

cesspool (*Plumb.*). A small square wooden box, lined with lead, which serves as a cistern in a parapet gutter at a point where roof water is discharged into a down pipe.

cesspool (*Sewage*). A brick-lined underground pit for the reception of sewage from houses not otherwise served in respect of means of sewage disposal. Also called a CESSPIT.

Cesto′da (*Zool.*). A class of *Platyhelminthes,* all the members of which are endoparasites; there is a tough cuticle; the alimentary canal is lacking; hooks and suckers for attachment occur at what is considered to be the anterior extremity; eye-spots never occur. Tape Worms.

Cestoidea, ses-to-id′e-a (*Zool.*). An order of *Tentaculata,* comprising a number of ribbon-like forms which have the body compressed in the stomodaeal plane, and in which tentacles are replaced by tentacular filaments. Venus' Girdles.

Ceta′cea (*Zool.*). An order of large aquatic carnivorous Mammals; the fore-limbs are fin-like, the hind-limbs lacking; there is a horizontally flattened tail-fin; the skin is thick with little hair, there are two inguinal mammae flanking the vulva, and the neck is very short. Whales, Dolphins, and Porpoises.

ce′tolith (*Ocean.*). A stony body, sometimes obtained during dredging in deep water, representing the fused otic bones of whales.

cet′yl alcohol (*Chem.*). *n*-Hexadecyl alcohol. The palmitic ester is the chief constituent of *spermaceti* (q.v.).

cev′adine (*Chem.*). $C_{32}H_{49}O_9N$, an alkaloid of unknown constitution, isolated from sabadilla seeds. It crystallises in rhombic prisms with two molecules of alcohol, which it loses at 130°-140° C.; m.p. (anhydrous) 205° C.

Ceylonese chrysolite (*Min.*). See **chrysolite.**

Ceylonese peridot (*Min.*). The trade name for a yellowish-green variety of the mineral tourmaline, approaching olivine in colour; used as a semi-precious gemstone.

Ceylonese ruby (*Min.*). True ruby does occur, rather rarely, in Ceylon, together with much commoner ruby-spinel. Much of the gemstone material sold under this name is spinel.

Ceylonese zircon (*Min.*). True zircon occurs in Ceylon, but frequently this is not differentiated from tourmaline of the same colour. *Ceylonian* (sic) *zircon* is the name given by jewellers to the fire-red, yellow, yellowish green, and grey zircons.

ceylonite (*Min.*). See **pleonaste.**

C.F.R. engine. A specially designed petrol engine, standardised by the Co-operative Fuel Research Committee, in which the knock-proneness or detonating tendency of volatile liquid fuels is determined under controlled conditions and specified as an *octane number*. See **detonation, octane number.**

c.g.s. unit (*Elec. Eng., Phys.*). An abbrev. for *centimetre-gramme-second unit*, a unit in a system based on the centimetre, the gramme, and the second, as *fundamental units* (q.v.). Commonly used in theoretical work in electrical engineering.

chabazite, kab'— (*Min.*). A hydrated silicate of aluminium, calcium, and potassium, crystallising in the trigonal system (rhombohedral habit) and belonging to the zeolite group.

chaeta, kē'ta (*Zool.*). In Invertebrates, a chitinous bristle, embedded in and secreted by an ectodermal pit.

chaeta sac (*Zool.*). The ectodermal pit which secretes a chaeta.

chaetif'erous, chaetoph'orous (*Zool.*). Bearing bristles.

Chaetog'natha (*Zool.*). A phylum of hermaphrodite *Coelomata*, having the body divided into three distinct regions—head, trunk, and tail; the head bears two groups of sickle-shaped setae; small, almost transparent forms, of carnivorous habit, occurring in the surface waters of the sea. Arrow Worms.

chaetoplank'ton (*Bot.*). Small aquatic organisms in which the power of floating is increased by the augmented surface provided by spinous outgrowths from the cells.

Chaetop'oda (*Zool.*). A group of *Annelida*, the members of which are distinguished by the possession of conspicuous setae; it includes the *Polychaeta* (q.v.) and the *Oligochaeta* (q.v.).

chae'totaxy (*Zool.*). The arrangement of bristles or chaetae.

chaffy (*Bot.*). Covered with tiny, membranous, non-green scales.

Cha'gas' disease (*Med.*). See **schizotrypanosomiasis.**

chain (*Chem.*). A series of atoms linked together, generally in an organic molecule. Chains may consist of one kind of atoms only (e.g. carbon chains), or of several kinds of atoms (e.g. carbon-nitrogen chains). There are open-chain and closed-chain compounds (ring or cyclic compounds).

chain (*Elec. Comm.*). See **electrical chain.**

chain (*Eng.*). A series of interconnected metal links forming a flexible cable, used for sustaining a tensile load. See **driving chain, roller chain, cable.**

chain (*Surv., etc.*). An instrument used for the measurement of length. It consists of 100 pieces of straight iron or steel wire, looped together end-to-end, and fitted with brass swivel handles at both ends, the overall length being one chain. See **Gunter's chain, engineer's chain, link.**

chain or **chaine** (*Woollen*). A name sometimes applied to warp, more particularly to warp made by hand.

chain barrel (*Eng.*). A cylindrical barrel, sometimes grooved, on which surplus chain is wound, as in certain types of crane.

chain-bond (*Build.*). The bonding together of a stone wall by means of a built-in chain or iron bar.

chain book (*Surv.*). See **field book.**

chain conveyor (*Eng.*). Any type of conveyor in which endless chains are used to support slats, apron, pans, or buckets, as distinct from the use of a simple band. See **apron conveyor, bucket conveyor.**

chain-coupling (*Rail.*). The connecting chain between two coaches, intended to come into use in case of disconnexion of the coupling proper.

chain grate stoker (*Eng.*). A mechanical stoker for boilers, in which the furnace grate consists of an endless chain built up from steel links.

chain harrow (*Agric. Mach.*). An implement resembling a flexible mat, formed by a mesh of strong wrought-iron links; flexible tined harrows are similar to chain harrows, but the ends of the links form straight tines. See **harrow.**

chain hook (*Horol.*). The hook at either end of a *fusee chain* (q.v.), by means of which the chain is hooked to the fusee and to the barrel.

chain insulator (*Elec. Eng.*). See **suspension insulator.**

chain lockers (*Ship Constr.*). The subdivisions within a ship's hull for the housing of the anchor cables. They are usually divided on the centre line to form separate compartments for port and starboard cables. They are fitted with cable clenches to hold fast the ends of the cable so as to prevent running out entirely.

chainman (*Surv.*). A man whose task it is to manipulate the chain in chaining operations.

chain of locks (*Hyd. Eng.*). A system of connected lock chambers, the communicating gates serving in each case as tail gates for the next higher, and as head gates for the next lower, lock-chamber.

chain pump (*Eng.*). A method of raising water through small lifts by means of discs attached to an endless chain which passes upwards through a tube; a chain alone may be used.

chain reaction (*Chem.*). A reaction in which a large number of molecules or atoms take part in succession.

chain riveting (*Eng.*). The arrangement of rivets in a plate joint in parallel rows so that rivets in adjacent rows are in line and not staggered.

chain screen (*Glass*). A screen made up of lengths of chain hanging close together from a bar; used for protection against furnace heat whilst bars and other tools are pushed through and manipulated during working on the inside of a furnace for pot-setting or repairs.

chain survey (*Surv., etc.*). A survey in which lengths only are measured (by means of a chain) and no angular measurements are made.

chain timbers (*Build.*). Strengthening timbers used in building brick walls circular in plan.

chain tongs (*Plumb.*). A pipe-turning appliance consisting of a bar having near one end sharp teeth, which are forced against the pipe by a chain wound round the pipe and secured to the bar.

chain warp (*Cotton Weaving*). A warp which, for convenience, has been converted into a five-strand link by a linking machine.

chain winding (*Elec. Eng.*). A winding used on a.c. machines, in which the coils are interlinked with each other like the links of a chain. Also called a BASKET WINDING.

chaine (*Woollen*). See **chain.**

chaining (*Surv., etc.*). The operation of measuring distances in surface surveys by means of a standard chain 22 yards long.

chair (*Glass*). (1) The 'chair' with long arms on which the glass-maker rolls his blowpipe whilst fashioning the ware.—(2) The set of men who work together in the hand process of fabrication.

chair (*Rail.*). The cast-iron support which is spiked to the sleeper and used to secure a bull-head rail in position.

chair rail (*Carp.*). A wooden rail fastened around the wall of a room at such a height as to afford protection against impact and rubbing from the backs of chairs.

chala'za (*Bot.*). The basal portion of the nucellus of an ovule.

chalaza (*Zool.*). One of two spirally-twisted spindle-like cords of dense albumen which connect the yolk to the shell membrane in a bird's egg.

chala'zogam'y (*Bot.*). The entry of the pollen tube through the chalaza of the ovule.

chalcan'thite (*Min.*). Hydrated copper sulphate, $CuSO_4 \cdot 5H_2O$, crystallising in the triclinic system; it occurs as an alteration product of copper pyrite and other copper ores. See **blue vitriol.**

chalced'ony (*Min.*). A cryptocrystalline variety of silica, possibly to be regarded as a mixture of crystalline and amorphous silica. It occurs filling cavities in lavas, or associated with flint.

chal'cocite (*Min.*). A greyish-black metallic sulphide of copper, Cu_2S, which crystallises in the orthorhombic system; it occurs in veins and beds with other copper ores, but is not very abundant. Also called COPPER GLANCE, REDRUTHITE.

chalcopy'rite or **copper pyrite** (*Min.*). Sulphide of copper and iron, crystallising in the tetragonal system; the commonest ore of copper, occurring in mineral veins. The crystals are brassy yellow, often showing superficial tarnish or iridescence.

chalcostib'ite or **wolfs'bergite** (*Min.*). Sulphide of copper and antimony, occurring in the orthorhombic system.

chalco'trichite (*Min.*). A red, semi-translucent variety of cuprite, characterised by its capillary habit.

chalet, shal'ā (*Build.*) A type of country house, distinguished by having a steeply pitched roof, outside balconies, galleries, and staircase; generally built of wood.

chal'ice (*Zool.*). A flask-shaped gland consisting of a single cell, especially numerous in the epithelia of mucous membranes.

chalk (*Geol.*). A fine-grained and relatively soft foraminiferal limestone of Cretaceous age.

chalk bag (*Furs*). A bag containing chalk, used in pouncing cutting lines.

chalk gland (*Bot.*). A secreting organ, present on some leaves, around which a deposit of calcium carbonate accumulates.

chalk line (*Build., Civ. Eng.*). A length of well-chalked string used to mark straight lines on work by holding it taut in position close to the work and plucking it.

Chalk Marl (*Geol.*). The lowest lithological division of the English Chalk, in which the calcareous matter is mixed with up to 30% of muddy sediment.

chalking (*Dec.*). Disintegration of a painted surface by powdering.

chalon'ic (*Zool.*). Inhibitory, depressor; used especially of certain internal secretions (*chalones*).

chalybeate waters, ka-lib'ē-āt (*Geol.*). Natural waters containing iron salts in solution.

chal'ybite (*Min.*). Iron carbonate, crystallising in the trigonal system (rhombohedral habit). It occurs in an impure form as beds and nodules (clay-ironstone), as well as in crystal aggregates in mineral veins. It is an ore of iron. Also called SIDERITE, SPATHIC IRON.

cham'aephyte (*Bot.*). A plant which, during the period of perennation, has its buds at or just above the surface of the soil.

chamber (*Artillery*). That part of the bore which houses the propellant charge. See **B.L. guns, cartridge.**

chamber (*Chem.*). A very large box-shaped compartment, lined with lead, in which take place the chemical reactions occurring during the manufacture of sulphuric acid.

chamber (*Hyd. Eng.*). The space between the upper and lower gates of a canal lock.

chamber acid (*Chem.*). Sulphuric acid of the concentration and condition in which it leaves the acid chambers.

chamber crystals (*Chem.*). Crystals of nitrososulphuric acid which condense on the walls of the sulphuric acid chamber under certain conditions of manufacture.

chamber process (*Chem.*). A process for the manufacture of sulphuric acid, in which the reactions between the air, sulphur dioxide, and nitric acid gases necessary to produce the sulphuric acid take place in large chambers.

chambered (*Bot.*). Said of an ovary which is not completely divided into separate compartments by the incomplete partitions projecting inwards from the walls.

chambered level tube (*Surv.*). A level tube fitted at one end with an air chamber. By tilting the tube, air may be added to or taken from the bubble, whose length (which tends to be shortened by rise of temperature) may thus be regulated to maintain the sensitivity of the instrument.

chamfer (*Carp., Join., etc.*). The surface produced by bevelling an edge or corner.

chamfer plane (*Carp.*). A plane fitted with adjustable guides to facilitate the cutting of any desired chamfer.

chamois leather, sham'i (*Leather*). The flesh split of a sheepskin, treated with cod liver oil, squeezed, and then washed and lightly bleached; used for cleaning and polishing, and in clothing. Also called WASH LEATHER.

chamosite, sham'— (*Min.*). A silicate of iron occurring in oölitic and other bedded iron ores.

Champlain'ian (*Geol.*). The general name for the strata of Middle Ordovician age in eastern N. America, the type area being Lake Champlain.

champlevé, shahn^{g}-le-vā (*Dec.*). Enamel formed with vitreous powders inlaid in channels cut in the metal base.

Chance glass (*Photog.*). Deep-blue glass for lenses which are required to transmit ultra-violet rays but to cut out other rays.

Chance's Euphon quilt, Chance's glass silk (*Acous.*). See **Euphon quilt.**

chancre, shan'ker (*Med.*). The hard swelling which constitutes the primary lesion in syphilis.

chanc'roid (*Med.*). Non-syphilitic ulceration of the genital organs due to venereally contracted infection.

change-coil instrument (*Elec. Eng.*). A moving-iron electric measuring instrument having two or more replaceable coils to give different ranges.

change face (*Surv.*). To rotate a theodolite telescope about its horizontal axis so as to change from 'face left' to 'face right,' or vice versa. See **transit.**

change of state (*Chem.*). A change from solid to liquid, solid to gas, liquid to gas, or vice versa.

change-over (*Cinema.*). The transference of projection from one machine to another at the end of one reel and the start of the next, without an apparent break in the sequence.

change-over contact (*Teleph.*). The group of contacts in a relay assembly, so arranged that, on operation, a moving contact separates from a back contact, is free during transit, and then makes contact with a front contact. See **make-before-break contact.**

change-over switch (*Elec. Eng.*). A switch for changing a circuit from one system of connexions to another.

change point (*Surv.*). A staff station to which two sights are taken, the first a foresight from one set-up of the level, the second a backsight from the next set-up of the level. Sometimes called a TURNING POINT.

change-pole motor (*Elec. Eng.*). An induction motor with a switch for changing the connexions of the stator winding to give two alternative numbers of poles, so that the motor can run at either of two speeds.

change-speed motor (*Elec. Eng.*). A motor which can be operated at two or more approximately constant speeds; e.g. a change-pole motor.

change wheels (*Eng.*). The gear-wheels through which the lead screw of a screw-cutting lathe is driven from the mandril, the reduction ratio being varied by changing the wheels. See **screw-cutting lathe.**

changing bag (*Photog.*). A light-tight bag to accommodate a camera and sensitive photographic material, so that the former can be loaded or unloaded with the latter in daylight.

changing box (*Photog.*). A camera attachment permitting plates or films to be successively exposed.

channel (*Elec. Comm.*). The electrical transmission circuit which permits the communication of information without interference from other channels, either from those passing in the opposite direction in the same frequency band, or in either direction in other frequency bands.

See **simplex—** **multi—**
duplex— **broadcast—**
single— **forked—**

channel (*Eng.*). A standard form of rolled steel section, consisting of three sides at right-angles, in channel form. See **rolled steel sections.**

channel (*Radio*). The range of frequencies occupied by a modulated transmission. With double sideband amplitude modulation, its width in cycles is twice the value of the highest modulating frequency.

channel gulley (*San. Eng.*). A trapped gulley fitted with a channel, about 18 in. long, through which sink wastes must pass before reaching the gulley proper In the process, grease in the wastes congeals on the sides of the channel and may be removed.

channel, open (*Hyd.*). See **open channel.**

channel pipe (*Build.*). An open drain of half or three-quarter circular section, used in inspection or intercepting chambers.

channelled (*Bot.*). Elongated and hollowed somewhat like a gutter, as many leaf stalks.

chantlate (*Build.*). A projecting strip of wood fixed to the rafters at the eaves and supporting the normal roof covering; it serves to carry the drip clear of the wall.

chapel (*Typog.*). An association of journeymen printers (and, in certain districts, apprentices), who elect a 'father' to watch their interests.

chaplash (*Timber*). A yellow-brown wood which seasons well and is durable. It is suitable for builders' and joiners' work.

chapters (*Horol.*). The Roman figures used on the dials of watches and clocks to mark the hours.

character (*Biol.*). (1) Any well-marked feature which helps to distinguish one species from another.—(2) In genetics, any one readily defined feature which is transmitted from parent to offspring.

character (*Psychol.*). The quality of the whole organised self, consisting of both sentiments and dispositions; concerned mainly with the moral side of man's nature and the more enduring traits of ethical and social significance.

character trait (*Psycho-an.*). A distinguishing behaviour pattern in an individual. Character traits may be classified into four groups: (1) physiological, e.g. cycloid behaviour pattern; (2) simple, e.g. inferiority when treated as inferior; (3) reactive, e.g. superiority as reaction against being treated as inferior; and (4) psychoneurotic, e.g. repressed inferiority coming out under certain conditions, evidenced, for example, by blushing.

characteristic impedance of an antenna (*Radio*). The impedance with which certain forms of antennae (e.g. wave and rhombic antennae) must be terminated to prevent the formation of standing waves.

characteristic impedance of a line (or **filter)** (*Elec. Comm.*). The apparent impedance of an infinitely long line at any point, or of an infinite number of filter sections. The same as the *image impedance*, when the line or filter is also terminated in its image impedance. Also called IMPEDANCE LEVEL. See **surge impedance.**

Charad'riifor'mes (*Zool.*). An order of *Alectoromorphae* adapted to a life in open country near water; some are marine forms; most are strong fliers; there are usually eleven primary remiges. Bustards, Plovers, Jacanas, Gulls, Terns, Auks, Sand-grouse, Pigeons, and Doves.

Chara'les, Char'ophy'ta (*Bot.*). A small group of aquatic plants, showing many algal characters, but of uncertain position. They have main shoots bearing many whorls of lateral branches on which the reproductive organs are developed, these being antheridia liberating motile sperms, and oögonia each with a single egg. The plants occur in fresh and in brackish water, and are often heavily calcified, a circumstance to which they owe the popular name of *stoneworts.*

charcoal (*Chem.*) The residue from the destructive distillation of wood or animal matter with exclusion of air; contains carbon and inorganic matter.

charcoal (*Tinplates*). Originally, tin plates made from wrought-iron produced in a charcoal furnace. Now, when mild steel is used, the term is applied to plates with a thicker tin coating. See **cokes.**

charcoal blacking (*Foundry*). *Blacking* (q v.) made from powdered charcoal, which is dusted over the surface of a mould to improve the smoothness of the casting.

charcoal iron (*Met., etc.*). Pig-iron made in a blast-furnace using charcoal instead of coke. Sometimes also wrought-iron made from this.

charge (*Elec. Comm.*). A colloquialism for *to make alive*, or switch on power, when none is taken.

charge (*Elec. Eng.*) The quantity of electricity on a body, i.e. the excess or deficiency of negative electrons. Also commonly used in connexion with accumulators to denote the quantity of electricity corresponding to the internal chemical change, the process being known as *charging the accumulator.* See **bound charge.**

charge-indicator (*Elec. Eng.*). See **potential-indicator.**

charging current (*Elec. Comm., Elec. Eng.*). (1) The current passing through an accumulator during the conversion of electrical energy into stored chemical energy.—(2) The impulse of current flowing into a condenser when a steady voltage is suddenly applied.—(3) The alternating current which flows into a condenser when an alternating voltage is applied.—(4) The alternating current which flows when an alternating voltage is applied to a transmission line.—(5) The impulse of current accompanying the alternating current when an alternating voltage is suddenly applied to a circuit which is not entirely resistive.

charging resistor (*Elec. Eng.*). A resistance inserted in series with a switch to limit the rate of rise of current when making the circuit.

charging voltage (*Elec. Eng.*). The voltage required to pass the correct charging current through an accumulator; it is usually about 2·5 volts per cell.

Charles's law (*Heat*). 'The volume of a given mass of any gas, kept at constant pressure, increases by $\frac{1}{273}$ of the volume at 0° C. for each degree rise of temperature.' This law, also known as GAY-LUSSAC'S LAW, is equivalent to saying that all gases have the same value for the coefficient of expansion at constant pressure. The law is not exactly followed.

Charlier's operation (*Vet.*). Ovariectomy of a cow through the vagina.

Charlton white (*Dec.*). A white paint compounded of 70% barium sulphate, 15% zinc sulphate, and 1·5% zinc oxide.

Charnian Series (*Geol.*). Rocks of sedimentary and pyroclastic type referred to the Pre-Cambrian; occurring in the Charnwood Forest district of Leicestershire.

char'nockite (*Geol.*). A coarse-grained granitic rock, consisting of perthitic feldspars, blue quartz, and orthopyroxene; it occurs typically in Madras and is named after the founder of Calcutta, Job Charnock.

Charnoid direction (*Geol.*). The direction assumed by the Charnian (Pre-Cambrian) folds and associated structures of England. It is typically N.W.-S E., though subject to variation. Later movements have followed this direction in many cases.

Charpy test (*Met.*). A notched-bar or impact test in which a notched specimen, fixed at both ends, is struck behind the notch by a striker carried on a pendulum. The energy absorbed in fracture is obtained from the height to which the pendulum rises.

chart-recording instrument (*Elec. Eng.*). See **graphic instrument.**

charta'ceous (*Bot.*). Papery in texture.

Chartered Civil Engineer (*Civ. Eng.*). A style or title which may be used by a member or an associate member of the Institution of Civil Engineers.

Chartered Electrical Engineer (*Elec. Eng.*) A style or title which may be used by a member or associate member of the Institution of Electrical Engineers.

Chartered Mechanical Engineer (*Eng.*). A style or title which may be used by a member or an associate member of the Institution of Mechanical Engineers.

Chartered Surveyor (*Build., Civ. Eng.*). A style or title which may be used by a fellow or professional associate of the Chartered Surveyors' Institution.

chartography (*Surv.*). See **cartography.**

chase (*Build.*). A trench dug to accommodate a drain-pipe.

chase (*Masonry*). A groove chiselled in the face of a wall to receive pipes, etc.

chase (*Typog.*). An iron frame into which type is locked by means of wooden wedges or metal quoins. The term *in chase* is applied to a book which is imposed ready for printing.

chase-mortising (*Carp., Join.*). A method adopted to frame a timber in between two others already fixed, a sloping chase being cut to the bottom of the mortise so that the cross-piece may be got into position.

chase wedge (*Plumb.*). A wooden wedge attached to a handle; used for bossing sheet-lead.

chaser (*Cinema.*). A low-grade film to induce audiences to leave the cinema and so permit entrance of others waiting.

chaser (*Eng.*). A lathe tool the cutting edge of which is serrated to the profile of a screw-thread; used to finish accurately screw-threads cut in the lathe.

chas'mocleis'togam'ous (*Bot.*). Producing both chasmogamous and cleistogamous flowers.

chas'mogam'ous (*Bot.*). Having large conspicuous flowers which open and are pollinated by the wind or by insects.

chas'mophyte (*Bot.*). A plant inhabiting rocky places, and rooting in a crevice containing a mixture of mineral and organic debris.

Chatauquan Division (*Geol.*). See **Chautauquan Division.**

chatoy'ancy (*Min.*). The characteristic optical effect shown by cat's-eye and certain other minerals, due to the reflection of light from minute aligned tubular channels, perhaps 25,000 to the square cm. When cut *en cabochon* such stones exhibit a narrow silvery band of light which changes its position as the gem is turned.

Chattanoo'ga Shale (*Geol.*). See **Berea Sandstone.**

chatter (*Eng.*). Vibration of a cutting tool or of the work in a machine; caused by insufficient rigidity of either, and results in noise and uneven finish.

Chatterton's compound (*Chem.*). An adhesive insulating substance consisting largely of gutta-percha; used as a cement or filling, especially in cable jointing.

Chautauquan (or **Chatauquan**) **Division,** shat-awk'wan (*Geol.*). The highest beds of the Upper Devonian, equivalent to the Chemung and Catskill Groups in the U.S.A.

cheating (*Cinema.*) The alteration of walls or furniture during shooting, in order to get good camera angles.

check (*Join.*). The Scottish equivalent of ***rebate.***

check-lock (*Join.*). A device for locking in position the bolt of a door lock.

check multiple (*Auto. Teleph.*). The multiple for reversed dialling by an operator, to check the number given to her by a subscriber; characterised by the omission of guarding on engagement of line.

check nut (*Eng., etc.*). See **lock nut.**

check rail (*Rail.*). A third rail laid on a curve alongside the inner rail and spaced a little from it, to safeguard rolling-stock against derailment due to excessive thrust on the outer rail. Also called GUARD RAIL, RAIL GUARD, SAFEGUARD, SAFETY RAIL, SIDE RAIL.

check receiver (*Radio*). See **monitoring receiver.**

check throat (*Join.*). A small groove cut in the face of a short step in the upper surface of a wooden window-sill, just behind the face of the sash. It serves to stop rain from driving up under the sash.

check valve (*Eng., etc.*). A non-return valve, closed automatically by fluid pressure; fitted in a pipe to prevent return flow of the fluid pumped through it. See **feed check valve, clack.**

checkweighman (*Mining*). A man who checks for the miners the amount of mineral mined by them.

checking (*Paint.*). A defect in a painted surface, characterised by the appearance of fissures in all directions.

checking motion (*Cotton Weaving*). Multiple movable boxes at one or both sides of a loom, for holding different colours of weft which may be brought into use as desired.

cheek (*Build.*). One of the sides of an opening.

cheek (*Carp.*). One of the solid parts on each side of a mortise.

cheek (*Hyd. Eng.*). The abutting surface of a mitre-sill.

cheek (*Zool.*). In Trilobites, the pleural portion of the head: in Mammals, the side of the face below the eye, the fleshy lateral wall of the buccal cavity.

cheek teeth (*Zool.*). See **grinding teeth.**

cheese (*Cables*). See **cable wax.**

cheese (*Woollen, etc.*). (1) Yarn wound on a cheese or split-driven winder.—(2) A small flanged warp beam used in worsted manufacture.

cheese-head screw (*Eng.*). A screw with a cylindrical head, similar in shape to a round cheese, slotted for a screw-driver.

cheilectro'pion (*Med.*). Turning outwards of the lip.

cheili'tis (*Med.*). Inflammation of the lip.

cheilog'nathus (*Med.*). See **harelip.**

cheiropom'pholyx (*Med.*). A skin disease in which vesicles filled with clear fluid suddenly appear on the hands, and (less rarely) on the feet.

cheiropterygium, —ter-ij′i-um (*Zool.*). A *pentadactyl* (q.v.) limb.

che′la (*Zool.*). In *Arthropoda*, any chelate appendage. —*adjs.* **chelif′erous, che′liform.**

che′late (*Zool.*). (Of *Arthropoda*) having the penultimate joint of an appendage enlarged and modified so that it can be opposed to the distal joint like the blades of a pair of scissors to form a prehensile organ. Cf. *subchelate.*

chelicerae, —is′er-ē (*Zool.*). In *Arachnida*, the only pair of pre-oral appendages, which are usually chelate.

Chelon′ethi (*Zool.*). An order of *Embolobranchiata* having a uniform prosoma and a segmented opisthosoma; there is no telson; the pedipalpi are large, chelate, and contain poison glands; respiration is by tracheae; the forelegs of the male are sometimes modified as sexual organs; small carnivorous forms found under stones, leaves, bark, and moss; they are distributed by flying insects, to which they cling by their pedipalps. False Scorpions.

Chelo′nia (*Zool.*). An order of *Reptilia* in which the body is encased in a horny capsule consisting of a dorsal carapace and a ventral plastron, the jaws are provided with horny beaks in place of teeth, and the lower temporal arcade alone is present. Tortoises and Turtles.

chemical affinity (*Chem.*). The force which binds atoms together in molecules. The affinity of a chemical reaction is measured by the maximum external work (change of free energy) obtainable from the reaction.

chemical analysis (*Chem.*). The splitting up of a material into its component parts or constituents by chemical methods, in order to determine the composition of the material.

chemical balance (*Chem.*). An instrument used in chemistry for weighing, to a high degree of accuracy, the small amounts of material dealt with.

chemical bond (*Chem.*). The unit of force joining two atoms together in a molecule. It generally consists of a pair of shared electrons.

chemical change (*Chem.*). A change involving the formation of a new substance.

chemical closet (*San. Eng.*). A suitably shaped container for use in conjunction with special deodorising and liquefying chemicals, when running water is not available.

chemical compound (*Chem.*). A substance composed of two or more elements in definite proportions by weight, which are independent of its mode of preparation. Thus the ratio of oxygen to carbon in pure carbon monoxide is the same whether the gas is obtained by the oxidation of carbon, the reduction of carbon dioxide, or by heating formic acid, oxalic acid or potassium ferrocyanide with concentrated sulphuric acid.

chemical constitution (*Chem.*). The number and arrangement of the atoms present in a molecule.

chemical elements. See *Table of Chemical Elements* in Appendix.

chemical energy (*Chem.*). The energy liberated in a chemical reaction.

chemical equation (*Chem.*). A symbolic representation of the changes occurring in a chemical reaction, based on the assumption that matter is neither created nor destroyed during the reaction.

chemical fade (*Cinema.*). A fade made by washing out the negative with a chemical (e.g. cyanide), so that, on printing, the effect of a normal fade is obtained.

chemical focus (*Photog.*). The point in an emulsion at which the lens provides a focus; it may differ from the point of visual focus with a lens insufficiently corrected for chromatic aberration.

chemical fog (*Photog.*). General reduction of a proportion of the silver halide in an emulsion, due to chemical decomposition or too vigorous development; it results in reduced contrast and elimination of complete transparency.

chemical hygrometer (*Phys.*). See **absorption hygrometer.**

chemical kinetics (*Chem.*). The study of the velocities of chemical reactions.

chemical lead (*Met.*). Lead of purity exceeding 99·9%; suitable for the lining of vessels used to hold sulphuric acid and other chemicals.

chemical precipitation (*Sewage*). The process of assisting settlement of the solid matters in sewage by adding chemicals (such as lime or alumino-ferric) before admitting the sewage to the sedimentation tanks.

chemical pulp (*Paper*). Pulp prepared by a chemical process, as distinguished from mechanical pulp, which is prepared by grinding.

chemical reaction (*Chem.*). A process in which one substance is changed into another.

chemical symbol (*Chem.*). A single capital letter, or a combination of a capital letter and a small one, which is used to represent either an atom or a gram-atom of a chemical element; thus the symbol for sodium is Na.

chemical toning (*Photog.*). The process of converting the silver image into, or replacing it by, a coloured substance by chemicals other than a dye.

chemical wood-pulp (*Paper*). Wood-pulp, obtained from wood by the sulphite, sulphate, or soda process.

chemically formed rocks (*Geol.*). Rocks formed by precipitation of materials from solution in water; e.g. calc-tufa, and various saline deposits.

chemilumines′cence (*Chem.*). The production of light without heat in certain chemical reactions.

chemise, she-mēz′ (*Masonry*). A wall built to line an earthbank.

chemisorption (*Chem.*). Irreversible adsorption in which the adsorbed substance is held on the surface by chemical forces.

chemistry (*Chem.*). The study of the composition of substances and of the changes of composition which they undergo. The main branches of the subject are *inorganic chemistry* (q.v.), *organic chemistry* (q.v.), and *physical chemistry* (q.v.).

chemonas′ty (*Bot.*). A change in the position or form of a plant organ in relation to a diffuse chemical stimulus.

chemorecep′tor (*Zool.*). A sensory nerve-ending, receiving chemical stimuli.

chemo′sis (*Med.*). Oedema of the conjunctiva.

chemosmo′sis (*Chem.*). The occurrence of chemical reactions through semi-permeable membranes.

chemosyn′thesis (*Bot.*). The formation of organic material by some bacteria by means of energy derived from chemical changes.

chemotax′is, chemotac′tism (*Bot., Zool.*). Movement of the whole organism in a definite direction in relation to a chemical stimulus.

chemotro′pism (*Bot., Zool.*). A growth movement or curvature of part of an organ in a definite direction owing to differential growth, due to the concentration of some chemical substance.

Chemung Group, shē-mung′ (*Geol.*). The highest division of the Upper Devonian in eastern N. America, consisting of marine shales and sandstones and equivalent to the Catskill beds to the east.

chenille, shen-ēl′ (*Textiles*). A special yarn with a rounded pile of worsted or silk; used for curtains, tablecloths, and millinery.

cheque paper (*Paper*). Paper chemically treated, so that it may show any tampering with documents printed on it.

chequer plate (*Eng.*). Steel plate used for flooring;

provided with a raised chequer pattern to give a secure foothold.

Chernetid'ea (*Zool.*). See **Chelonethi.**

chert (*Geol.*). A siliceous rock consisting of cryptocrystalline silica, and sometimes including the remains of siliceous organisms such as sponges or radiolaria. It occurs as bedded masses, as well as concretions, in limestone formations older than the Chalk.

Ches'apeake formation (*Geol.*). The most important division of the marine Miocene beds of the Atlantic coastal regions of N. America. It consists of sands and clays with an abundant molluscan fauna.

ches'sylite (*Min.*). See **azurite.**

chest saw (*Carp.*). A small handsaw without a back, and with six to twelve teeth to the inch.

Chester Group (*Geol.*). The general name for the strata of Upper Mississippian age developed in the Mississippi valley.

chestnut (*Timber*). A light- to dark-brown wood resembling oak; much used for fencing, posts, and rails.

cheval or **force de cheval,** she-val' (*Eng.*). The French unit of horse-power. It is equal to 4500 kilogramme-metres per minute or 32,549 ft.-lb. per minute, and is thus about 0·986 times the English unit.

chevaux de frise, she-vō' de frēz' (*Build.*). An iron or timber bar with projecting spikes, used as a defence precaution along the tops of walls and elsewhere.

Cheviot (*Textiles*). A quality term for yarns and fabrics manufactured from Cheviot or crossbred wools; also applied to the wool, demi-lustre, from Cheviot sheep.

chevron bones (*Zool.*). In some Vertebrates, V-shaped bones articulating with the ventral surfaces of the caudal vertebrae.

Cheyenne Sandstones, shī-en' (*Geol.*). Plant-bearing sandstones belonging to the Fredericksburg Series of the Comanchean in southern Kansas.

Cheyne-Stokes breathing (*Med.*). Alternating periods of apnoea and dyspnoea in disease of the heart, kidney, or brain, the dyspnoeic phase being gradual in onset and disappearance.

Chezy's formula (*Hyd.*). A formula for computing the velocity of flow in pipes and channels. This is given as proportional to the square root of the product of the hydraulic mean depth and the virtual slope.

chiaroscu'ro (*Photog.*). By analogy with sculpture, the disposition of light and shade in the pictorial composition of a photograph.

chias'ma (*Cyt.*). The exchange of material between paired chromosomes during nuclear division.

chiasma (*Zool.*). A structure in the central nervous system, formed by the crossing over of fibres from the right side to the left side and vice versa.

chiastobasid'ium (*Bot.*). A club-shaped basidium in which the spindles of the dividing nuclei lie at the same level across the basidium.

chias'tolite (*Min.*). A variety of andalusite occurring in metamorphic rocks; characterised by cruciform inclusions of carbonaceous matter.

chias'toneury, —nū'ri (*Zool.*). A condition, found in some Gastropods, in which the visceral nerve commissures are twisted into a figure of eight.

Chicago rail-bond (*Elec. Eng.*). See **crown rail-bond.**

chickenpox (*Med.*). Varicella. A common mild acute infectious disease in which papules, vesicles, and small pustules appear in successive crops, mainly on the trunk, face, upper arms, and thighs.

chickens (*Television*). Said of the signal corresponding to a line of scanning when the amplitude of the signal spuriously wanders towards black (with positive modulation); it arises from accumulation of charges on the mosaic of the electron camera.

chiffon, shif'on (*Textiles*). A very fine, soft silk dress material.

chigger or **chigoe,** chig'ō (*Vet.*). See **harvest mite.**

chila'ria (*Zool.*). In *Xiphosura*, a pair of small round plates of doubtful function, situated just behind the mouth, and possibly representing a seventh pair of appendages.

chilblains (*Med.*). See **erythema pernio.**

Chile nitre, Chile saltpetre (*Chem.*). A commercial name for sodium nitrate, $NaNO_3$.

chili, shē-lē (*Meteor.*). A sirocco-type hot and dry southerly wind blowing in Tunis.

Chilian mill (*Met.*). A type of ore-grinding machine in which crushing is done by heavy rollers running on a circular base plate or die ring.

chill (*Foundry*) An iron mould, or part of a mould, sometimes watercooled; used to accelerate cooling and give great hardness and density to the whole or part of a casting.

chill crystals (*Met.*). Small crystals formed by the rapid freezing of molten metal when it comes into contact with the surface of a cold metal mould.

chilled iron (*Met.*). Cast-iron cast in moulds constructed wholly or partly of metal, so that the surface of the casting is white and hard while the interior is grey.

chilling (*Paint.*). A deadening of the lustre of a freshly varnished surface, on exposure to a draught of cold air.

Chilognatha, kī-log'— (*Zool.*). An order of *Myriapoda* having the trunk composed of numerous double somites, each with two pairs of legs; the head bears a pair of uniflagellate antennae, a pair of mandibles, and a gnathocilarium representing a pair of partially fused maxillae; the genital opening is anterior; vegetarian animals of retiring habits. Millipedes.

Chilop'oda (*Zool.*) An order of *Myriapoda* having the trunk composed of numerous somites each bearing one pair of legs; the head bears a pair of uniflagellate antennae, a pair of mandibles, and two pairs of maxillae; the first body somite bears a pair of poison-claws; the genital opening is posterior; active carnivorous forms, some of considerable size and dangerous to Man; some are phosphorescent. Centipedes.

chimae'ra, chimera (*Bot.*). A plant in which there are at least two kinds of tissue differing in their genetic constitutions.
See **chromosomal—**
dichlamydeous—
diplochlamydeous—
haplochlamydeous—
mericlinal—
monochlamydeous—
periclinal—
polychlamydeous—
polyclinal—
sectorial—

chime (*Horol.*). A striking clock.

chimes (*Horol.*). The striking of rods, gongs, or tubes, to produce musical notes in a definite sequence.

chime barrel (*Horol.*). The cylinder on the periphery of which short vertical pins lift the hammers in a chiming clock, the pins being so arranged as to give the required sequence of notes.

chiming clock (*Horol.*). A clock which, in addition to striking the hours, chimes at the quarters.

chimney. A structure containing a passage for the conveyance of smoke or steam from a fire or engine.

chimney (*Bot.*). An upgrowth of epidermal cells above a stoma, forming a long pore.

chimney-back (*Build.*). The part of the wall at the back of a fireplace.

chimney bar (*Build.*). An iron bar supporting the arch over a fireplace opening.

chimney bond (*Build.*). The same as *stretching* *bond* (q.v.), which is generally used for the internal division-walls of domestic chimney-stacks, as well as for the outer walls (which, however, should be of 9 in. brickwork if possible).

chimney-breast (*Build.*). The part of the chimney between the flue and the room.

chimney can (*Build.*). A Scottish equivalent for *chimney pot.*

chimney jambs (*Build.*). The upright sides of a fireplace opening.

chimney lining (*Build.*). The tile flues within a chimney space.

chimney-piece (*Build.*). The ornamental dressings around a fireplace.

chimney pot (*Build.*). A metal or earthenware pipe fitted to the smoke outlet at the top of a flue. Cf. *cowl.*

chimney shaft (*Build.*). The part of a chimney projecting above a roof, or a chimney standing isolated like a factory chimney.

chimney stack (*Build.*). The unit containing a number of flues grouped together.

chim'onophi'lous (*Bot*). Growing chiefly during the winter.

chimopela'gic plankton (*Bot.*). Plankton occurring only during winter.

china (*Pot.*). The ceramic imitative of *porcelain.* Fine pottery having a hard, sonorous, semi-translucent body, made chiefly from kaolin, china stone and bone (bone ash).

china clay (*Geol.*). A hydrated silicate of aluminium, resulting from the decomposition of the feldspars in igneous rocks by pneumatolysis. It contains a high percentage of aluminium silicate—$Al_2O_3 \cdot 2SiO_2 \cdot 2H_2O$—and is of great value in ceramic industry. Also called KAOLIN, PORCELAIN CLAY. See also **porcelain.**

chinastone (*Geol.*). A kaolinitised granitic rock containing unaltered plagioclase. Also applied to certain limestones of exceptionally fine grain and smooth texture.

China wood oil (*Chem.*). *Tung oil* (q.v.).

chinchil'la (*Furs*). The dressed skin of a squirrel-like rodent (formerly found only at great altitudes in the Andes, but recently acclimatised in the Rocky Mountains). The fur, which is a variegated pale-grey, is of great commercial value.

chine (*Aero.*). The extreme outside longitudinal member of a flying-boat hull, or of a seaplane float. It runs approximately parallel to the keel.

chiné, shē-nā (*Textiles*). A fancy silk material in which the patterns are printed on the warp threads, before weaving.

Chinese cotton (*Textiles*). A cotton of short staple; of little value for spinning.

Chinese oil (*Chem.*). *Cassia oil* (q.v.).

Chinese red (*Paint.*). A basic chromate of lead pigment, also known as DERBY RED.

Chinese white (*Paint.*). Zinc oxide ground in water or oil.

chinook' (*Meteor.*). A föhn-like west wind blowing on the eastern side of the Rocky Mountains.

chip-axe (*Tools*). A small single-handed tool for chipping timber to rough size.

chip board (*Paper*). A board, usually made from waste paper, used in box-making.

Chippendale style (*Furn.*). Thomas Chippendale, English cabinet-maker, who flourished about the middle of the eighteenth century, had three styles: modified Gothic; rococo of Louis XV (characterised by cabriole legs, scrolled work, and riband designs); Chinese (fretwork and scrolls).

chipping (*Met.*). The removing of surface defects from semi-finished metal products by means of pneumatic chisels. Seams, laps, and rokes are thus eliminated.

chipping chisel (*Tools*). See **cold chisel.**

chirop'ody. The care and treatment of minor ailments of the feet.

Chirop'tera (*Zool.*). An order of aerial Mammals having the forelimbs specially modified for flight; mainly insectivorous or frugivorous nocturnal forms. Bats.

chiropteroph'ilous (*Bot.*). Pollinated by bats.

chisel (*Tools*). A steel tool for cutting wood, metal, or stone; it consists of a shank whose end is bevelled to a cutting edge. See **cold chisel.**

chiselled ashlar (*Masonry*). A random-tooled *ashlar* (q.v.) finished with a narrow chisel. Also called BOASTED ASHLAR.

chitin, ki'tin (*Zool.*). A skeletal material found in the majority of groups of *Invertebrata* but especially in *Arthropoda*. Its empirical formula is $C_{15}H_{26}O_{10}N_2$. On boiling with concentrated hydrochloric acid, it decomposes to glucosamine and acetic acid.

chitting (*Malting*). The appearance, during germination, of the white root sheath at the lower (germ) end of the barley corn, shortly before the rootlets become visible.

chlamyd'eous (*Bot.*) Having a perianth.

chlam'ydospore (*Bot.*). A thick-walled fungal spore, capable of a resting period, and often formed inside a hypha.—(*Zool.*) A protozoan spore which is enclosed in a spore-case. Cf. *gymnospore.*

chloan'thite, cloanthite (*Min.*). Arsenide of nickel occurring in the cubic system. This is a valuable nickel ore, often associated with smaltite.

chloas'ma (*Med*). The appearance of yellowish patches on the face and on the neck of pregnant women.

chlor'agen (or **chlorago'gen**) **cells** (*Zool.*). In *Chaetopoda*, yellowish flattened cells occurring on the outside of the alimentary canal, and concerned with nitrogenous excretion.

chloral (*Chem.*). Trichlor-acetaldehyde, $CCl_3 \cdot CHO$, b.p. 97° C., a viscous liquid, of characteristic odour, obtained by the action of chlorine upon alcohol and subsequent distillation over sulphuric acid. A powerful hypnotic.

chloral hydrate (*Chem*). $CCl_3 \cdot CH(OH)_2$, m.p. 57° C., b.p. (with decomposition) 97° C., large colourless crystals, soluble in water, a soporific and antiseptic. Obtained from *chloral* (q.v.) and water. One of the few compounds having two hydroxyl groups attached to the same carbon atom.

chlo'ramines (*Chem.*). Compounds obtained by the action of hypochlorite solutions on compounds containing the NH or NH_2 groups. Important as disinfectants. Chloramine T

$$CH_3 \cdot C_6H_4 \cdot SO_2 \cdot NClNa$$

is the active constituent of an ointment employed as an antidote against vesicant war gases.

chlo'ranil (*Chem.*) Tetrachloro-quinone, $C_6Cl_4O_2$.

chloran'thy (*Bot.*). An abnormal condition of a flower, in which all parts have been changed into leafy structures.

chlorar'gyrite (*Min.*). Cerargyrite.

chloras'trolite (*Min.*). A green mineral of fibrous habit resembling prehnite; it occurs in rounded geodes in basic igneous rocks near Lake Superior. When cut *en cabochon* it exhibits chatoyancy and is used as a semi-precious gemstone.

chlorates (*Chem.*). Salts of chloric acid. Powerful oxidising agents. Explosive when ground or detonated in contact with organic matter.

chlorenchy'ma (*Bot.*). Tissue containing chloroplasts.

chloric acid (*Chem.*). $HClO_3$. A monobasic acid forming a series of salts, chlorates—where ClO_3 acts as a univalent radical.

chlorides (*Chem.*). Salts of hydrochloric acid, obtained by the action of the acid on many metals. Many metals combine direct with chlorine to form chlorides.

chloride of lime (*Chem.*). See **bleaching powder.**

chloride of silver cell (*Elec. Eng.*). A primary cell having electrodes of zinc and silver and a depolariser of silver chloride.

chloridising roasting (*Met.*). The roasting of sulphide ores and concentrates, mixed with sodium chloride, to convert the sulphides to chlorides.

chlorination (*Chem.*). (1) The substitution or addition of chlorine in organic compounds.—(2) The sterilisation of water with chlorine, sodium hypochlorite, or bleaching powder.—(*Sewage*) The addition of chlorine to sewage in order to assist the processes of purification in the land treatment method.

chlorine (*Chem.*). Symbol, Cl. At. wt. 35·457, at. no. 17, valencies 1, 3, 5, 7, m.p. −101·6° C., b.p. −34·6° C., density 3·214 gms. per cc. at N.T.P. Chlorine is a greenish-yellow gas, Cl_2, usually obtained by the action of oxidising agents upon hydrochloric acid. In commercial conditions chlorine is now obtained by electrolytic processes using chlorides. It is a powerful oxidising agent and forms an essential constituent of bleaching powder. Used as a non-persistent cloud gas in warfare, it has a destructive effect on the respiratory tract, and is highly lethal.

chlorine monoxide (*Chem.*). Cl_2O. Like chlorine in colour and smell. Dissolves in water to form hypochlorous acid.

chlorites (*Min.*). A group of allied minerals which may be regarded as hydrated silicates of aluminium, iron, and magnesium. They crystallise in the monoclinic system, and are of green colour. They occur as alteration products of such minerals as biotite and hornblende, and also in schistose rocks.

chlorite schist (*Geol.*). A schist composed largely of the mineral chlorite, in association with quartz, epidote, etc. Formed from basic igneous rock by dynamothermal metamorphism.

chlorite-slate (*Geol.*). A slate containing large quantities of chlorite.

Chloritic Marl (*Geol.*). A thin bed of fossiliferous green marl, at the base of the English Chalk. The pigment is glauconitic, not chloritic.

chloritisation (*Geol.*). The replacement, by alteration, of ferro-magnesian minerals by chlorite.

chloro-acetic acids (*Chem.*). Monochlor-acetic acid, $CH_2Cl{\cdot}COOH$, m.p. 62° C., b.p. 186° C.; formed by chlorination of acetic acid in the presence of acetic anhydride, sulphur or phosphorus.—Dichlor-acetic acid, $CHCl_2{\cdot}COOH$, b.p. 191° C.; formed by heating chloral hydrate with potassium cyanide.—Trichlor-acetic acid, $CCl_3{\cdot}COOH$, m.p. 52° C., b.p. 195° C.; formed by oxidising chloral hydrate with nitric acid.

chloroaur'ic acid (*Chem.*). $HAuCl_4$. A complex acid formed when auric oxide (Au_2O_3) dissolves in hydrochloric acid. Forms a series of complex salts called chloroaurates.

chlorocru'orin (*Zool.*). A green respiratory pigment of certain *Polychaetes*. *

chlor'oform (*Chem.*). $CHCl_3$, b.p. 62° C., sp. gr. 1·5; a colourless liquid of a peculiar ethereal odour, an important anaesthetic, solvent for fats and oils, resins, rubber, and numerous other substances. It is prepared technically from alcohol and calcium hypochlorite.

chlorohy'drins (*Chem.*). A group of hydrochloric acid esters of glycols; e.g. *ethylene chlorohydrin* or *glycol chlorohydrin*, $CH_2Cl{\cdot}CH_2OH$.

chloro'ma (*Med.*). A greenish tumour in the bones, composed of cells resembling white blood cells; occurs in acute leukaemia.

Chlor'omonadi'na (*Zool.*). An order of *Phytomastigina*; forms generally passing much of the life-history in the palmella stage; green or colourless; sometimes of amoeboid form; with a gullet but without a transverse groove; having food reserves of oil; with a contractile vacuole.

chlor'ophae'ite (*Min.*). A mineral closely related to chlorite, dark-green when fresh, but rapidly changing to brown, hence the name (Greek *chloros*, yellowish-green, *phaios*, dun). Described from basic igneous rocks.

Chlorophy'ceae (*Bot.*). A large group of algae, inhabiting fresh water, salt water, and less often occurring on soil or objects out of the water. They are green, having a chlorophyll mixture of approximately the same character as that present in higher plants; they form starch as a storage product, and contain cellulose in their walls. The *Chlorophyceae* are often referred to as the *green algae*.

chlor'ophyll (*Bot.*). The mixture of two green and two yellow pigments, present in the chloroplasts of all plants which are able to synthesise carbohydrates from carbon dioxide and water, in some fashion enabling the plants to utilise energy derived from light in the synthesis of material. The two green pigments, which predominate in the mixture, are: *chlorophyll a* ($C_{55}H_{72}O_5N_4Mg$); and *chlorophyll b* ($C_{55}H_{70}O_6N_4Mg$); the yellow pigments are carotin ($C_{40}H_{56}$) and xanthophyll ($C_{40}H_{56}O_2$).

chlorophyll corpuscle (*Bot.*). See **chloroplast.**

chlorophyl'lase (*Bot.*) An enzyme occurring in association with chlorophyll in plants, and able to decompose it.

chlorophyl'logen (*Bot.*). A hypothetical forerunner of chlorophyll, formed independently of light, and giving rise to chlorophyll when exposed to light.

chlorophyl'lous, chlorophyl'lose (*Bot.*). Containing chlorophyll.

chlor'oplast (*Bot.*). A plastid containing chlorophyll, with or without other pigments, embedded singly or in considerable numbers in the cytoplasm of a plant cell.

chloroplat'inate, potassium (*Chem.*). See **potassium chloroplatinate.**

chloroplatin'ic acid (*Chem.*). $H_2PtCl_6{\cdot}6H_2O$. Formed when platinum is crystallised from a solution acidified with hydrochloric acid. Referred to commercially as *platinum chloride.*

chloro'sis (*Bot.*). An unhealthy condition due to deficiency in chlorophyll; shown by yellowing of the plant.

chlorosis (*Med.*). Green sickness. An anaemia in young girls readily cured by iron; formerly common, now rare.

chlorostat'olith (*Bot.*). A chloroplast containing starch which acts as a statolith.

chlorot'ic. *Adj.* from *chlorosis.*

choana, kō-ā'na (*Zool.*). A funnel-shaped aperture.—*pl.* **choanae,** the internal nares of Vertebrates.

choa'nocyte (*Zool.*). A flagellate cell, in which a collar surrounds the base of the flagellum.

choa'nosome (*Zool.*). In eurypylous *Porifera*, that part of the Sponge containing the flagellated chambers, as opposed to the *ectosome* (q.v.).

chocking (*Mining*). The supporting of undercut coal with short wedges or *chocks.*

chocolate (*Foods*). A food preparation made from cacao, sugar, and milk.

choice (*Textiles*). A term used by woolsorters to denote wool of third quality.

choke (*I.C. Engs.*). (1) The venturi or throat in the air-passage of a *carburettor* (q.v.).—(2) A butterfly valve in a carburettor intake, which reduces the air supply and so gives a rich mixture for starting purposes. Also called STRANGLER.

choke (*Radio*). An inductance coil designed to prevent the passage of high-frequency currents.

choke bore (*Artillery*). The gradual diminution in the calibre of a gun, due to various causes (e.g. the deposition of copper from the driving band). Also, the slight constriction made in the bore of the barrel of a sporting gun, near the muzzle end, in order to limit the spread of the shot.

choke control (*Radio*). A system of anode modulation in which the modulating and modulated valves are coupled by means of a high-inductance choke included in the common anode-voltage supply lead. Also called CHOKE MODULATION, CONSTANT CURRENT MODULATION.

choke coupling (*Radio*). A method of coupling the successive stages of a multi-stage amplifier in which the coupling impedance is a choke.

choke damp (*Mining*). A term sometimes used for *black damp* (carbon dioxide). More correctly, any mixture of gases which causes choking or suffocation.

choke feed (*Radio*). The provision of a high inductance path for the d.c. component of the anode current of a valve, the circuit for the a.c. components being completed through a condenser.

choke modulation (*Radio*). See **choke control.**

choked disc (*Med.*). See **papilloedema.**

choking coil (*Elec. Eng.*). See **inductor.**

chol-, chole-, cholo- (Greek *cholē*, bile). A prefix used (especially in Medicine) in the construction of compound terms; e.g. *cholangitis* (q.v.).

cholae'mia, chole'mia (*Med.*). Presence of bile pigments in the blood.

chol'agogue (*Med.*). Increasing evacuation of bile: a drug which does this.

cholangi'tis, cholangei'tis (*Med.*). Inflammation of the bile passages.

cholecystec'tomy (*Surg.*). Excision of the gall-bladder.

cholecystenteros'tomy (*Surg.*). An artificial opening made between the gall-bladder and the upper part of the small intestine.

cholecysti'tis (*Med.*). Inflammation of the gall-bladder.

cholecystog'raphy (*Radiol.*). The X-ray investigation of the gall-bladder previously filled with a substance opaque to X-rays.—CHOLECYS'TOGRAM, the X-ray photograph so obtained.

cholecystos'tomy (*Surg.*). The surgical formation of an opening in the wall of the gall-bladder.

choledo'chal (*Zool.*). Containing bile.

choledochi'tis (*Med.*). Inflammation of the common bile duct.

choledochot'omy (*Surg.*). Incision into one of the main bile ducts.

cholelithi'asis (*Med.*). The presence of stones in the gall-bladder and bile passages.

chol'era (*Med.*). An acute bacterial infection in Eastern countries; characterised by severe vomiting and diarrhoea, drying of the tissues, and painful cramps; spread by infected food and water.

cholera, fowl, duck (*Vet.*). A contagious septicaemia of birds due to *Pasteurella aviseptica.* Also called BIRD FEVER.

cholera, hog (*Vet.*). See **swine fever.**

cholesteatoma, —es'tē-a-tō'ma (*Med.*). A tumour in the brain, or in the middle ear, composed of cells and of crystals of cholesterol.

cholesterae'mia, cholestere'mia (*Med.*). See **cholesterolaemia.**

choles'terol (*Chem.*). $C_{27}H_{45}OH$, an alcohol of the alicyclic series, found in nerve tissues, gall stones, and in other tissues of the body. It is a white crystalline solid, m.p. 148·5° C., soluble in organic solvents and in fats. There are numerous stereoisomers known.

cholesterolae'mia, cholesterole'mia (*Med.*). Excess of cholesterol in the blood.

cholestero'sis (*Med.*). Diffuse deposits of cholesterol in the lining membrane of the gall-bladder.

cholet'elin (*Chem.*). A yellow oxidation product of bilirubin.

cho'lic acid (*Chem.*). $C_{23}H_{39}O_3{\cdot}COOH$, the product of hydrolysis of certain bile acids, is conjugated in the body forming glycocholic acid with glycine, and taurocholic acid with taurine.

choline (*Chem.*). Ethylol-trimethylammonium hydroxide, $OH{\cdot}CH_2{\cdot}CH_2{\cdot}NMe_3{\cdot}OH$, a strong base, present in the bile, brain, yolk of egg, etc., combined with fatty acids or with glyceryl-phosphoric acid (*lecithin*, q.v.). See **neurine.**

cholu'ria (*Med.*). The presence of bile pigments in the urine.

cho'mophyte (*Bot.*). A plant growing on rock ledges littered with detritus, or in fissures and crevices where root hold is obtainable.

chondr-, chondro- (Greek *chondros*, cartilage). A prefix used in the construction of compound terms; e.g. *chondrocranium* (q.v.).

chon'dral (*Histol.*). Pertaining to cartilage.

chondren'chyma (*Zool.*). A form of parenchyma, occurring in Sponges, which closely resembles hyaline cartilage, having the cells embedded in a stiff gelatinous matrix.

chondrification (*Histol.*). Strictly, the formation of chondrin; hence, the development of cartilage.

chon'drin (*Histol.*). A firm, elastic, translucent, bluish-white substance of a gelatinous nature, which forms the ground-substance of cartilage.

chon'drio- (Greek *chondros*, grain). A prefix used in the construction of compound terms.

chon'driocont, chondriokont (*Cyt.*). A chondriosome which has the form of a rod or thread.

chondriol'ysis (*Cyt.*). The dissolution of mitochondria.

chon'driome (*Cyt.*). The mitochondria of a cell, collectively.

chon'driomite (*Cyt.*). A chondriosome having the form of a chain of granules.

chondrioso'mal mantle (*Cyt.*). An accumulation of chondriosomes surrounding a dividing nucleus.

chon'driosomes (*Cyt.*). See **mitochondria.**

chon'drite (*Geol.*). A type of stony meteorite containing *chondrules*—nodule-like aggregates of minerals.

chondro-. Prefix. See **chondr-.**

chon'droblast (*Histol.*). A cartilage cell which builds up the chondrin matrix.

chon'droclast (*Histol.*). A cartilage cell which destroys the chondrin matrix.

chondrocra'nium (*Zool.*). The cartilaginous brain-case of lower Vertebrates and the embryos of higher Vertebrates, which usually also partly envelops the principal sense-organs.

chondrodystro'phia (*Med.*). See **achondroplasia.**

chondrogen'esis (*Histol.*). See **chondrification.**

chon'droid (*Bot.*). Said of the medulla of a lichen when it is hard and tough, consisting of thick-walled hyphae in very firm association.

chondroids (*Vet.*). Compact lumps of dried pus commonly found in the exudate of inflamed guttural pouches of the horse.

chondro'ma (*Med.*). A tumour composed of cartilage cells.

chondropro'teins (*Chem.*). A group of *glucoproteins* (q.v.). They are insoluble in water but soluble in dilute alkalis.

chondrosarco'ma (*Med.*). A malignant tumour composed of sarcoma cells and of cartilage.

chondroskel'eton (*Zool.*). The cartilaginous part of the Vertebrate skeleton.

chondros'teo'sis (*Histol.*). The transformation of cartilage into bone.

chon'drule (*Geol.*). See under **chondrite.**

Chonotrich'a (*Zool.*). An order of *Ciliata* the members of which are of permanently sessile habit; there is a spiral funnel, ciliated internally, leading to the mouth; other cilia are absent.

chop (*Carp.*). The movable wooden jaw of a carpenter's bench vice.

chops (*Horol.*). A clamp. The two flat pieces of metal, usually of brass, between which the end of a pendulum suspension spring is screwed or riveted.

chopped continuous waves (*Radio*). See **interrupted continuous waves.**

chopped wave (*Elec. Eng*). A travelling voltage wave which rises to a maximum and then rapidly falls to zero. Such a wave occurs on transmission lines when an ordinary voltage wave has caused an insulator flashover, thereby losing its tail

chopper (*Radio*). (1) An interrupter, generally in the form of a rotating commutator, used to break up the continuous oscillations generated by a valve oscillator into trains for transmission in interrupted continuous wave telegraphy. Also called TONE WHEEL.—(2) A similar interrupter used at the receiver, to render audible the rectified signals from a continuous wave telegraph transmitter without heterodyning. Also called a TICKER.

chord. A straight line drawn between two points on a curve.

chord or **chord length** (*Aero.*). The length of that part of the chord line intercepted by the extremities of the leading and trailing edges of an aerofoil section.

chord (*Struct.*). A flange of a large girder. Also called a BOOM.

chord line (*Aero.*). A straight line joining the centres of curvature of the leading and trailing edges of any aerofoil section. Historically, it was the common tangent to the curvatures on the lower surfaces, i.e. the line of a straight edge held against the underside of the plane, but with the development of planes with convex lower surfaces, this definition lacks precision.

chords, colour (*Photog.*). See **colour chords.**

chorda (*Zool*). Any string-like structure; as the *chordae tendinae*, tendinous cords attaching the valves of the heart: also, the notochord.

chordacen'tra (*Zool*). Vertebral centra formed mainly from the notochordal sheaths; cf. *archecentra.*—*adj.* **chordacen'trous.**

chorded winding (*Elec. Eng.*). An armature winding in which the span of the coils is less than a pole-pitch.

chordee (*Med.*). Painful distortion of the erect penis as a result of injury or disease, especially gonorrhoea.

chordo'ma (*Med.*). An invasive tumour arising from remains of the notochord in the skull and the spinal column.

chordot'omy (*Surg.*). The cutting of the nerve fibres in the spinal cord conveying the sensation of pain; done for the relief of severe and intractable pain.

chordoto'nal organs (*Zool.*). In Insects, auditory organs consisting of bundles of scolophores.

chore'a (*Med.*). Sydenham's chorea; St. Vitus dance. An infection of the brain manifested by uncontrollable, irregular, purposeless movements, closely related to rheumatism. See also **Huntington's chorea.**

chore'iform (*Med.*). Similar to chorea.

chor'ion (*Zool.*). In higher Vertebrates, one of the foetal membranes, being the outer layer of the amniotic fold: in Insects, the hardened eggshell lying outside the vitelline membrane.—*adj.* **chorion'ic.**

chorion-epithelioma (*Med.*). A malignant tumour of the uterus composed of cells derived from the foetal chorion; it appears during or after pregnancy.

chorioretini'tis (*Med.*). Inflammation of the choroid and retina.

choripet'alous (*Bot.*). Polypetalous.

chori'sis (*Bot.*). Fission into two or more lobes; often applied to abnormalities.

chor'oid (*Zool.*). The vascular tunic of the Vertebrate eye, lying between the retina and the sclera.—*adj.* **choroid'al.**

choroid plexus (*Anat.*). A vascular tuft, covered with epithelium, projecting into the cavities of the brain.

choroidi'tis (*Med.*). Inflammation of the choroid of the eye.

chre'sard (*Bot.*). The total amount of water in the soil which can be drawn upon by plants.

chrom-, chromo-, chromat-, chromato- (Greek *chrōma, chrōmatos*, colour). Prefixes used in the construction of compound terms; e.g. *chromogenic*, colour-forming.

chro'maffine, —fēn (*Zool.*). Having an infinity for chromic acid salts; as certain cells in Vertebrates which originate in the sympathetic nervous system, and migrate thence to various parts of the body, especially to the ductless glands.

chromaffino'ma (*Med*). See **paraganglioma.**

chro'masie (*Cyt*). Increase of chromatin.

chromat-, chromato-. Prefix. See under **chrom-.**

chromates (*Chem*). The salts corresponding to chromium trioxide. The normal chromates, M_2CrO_4, are isomorphous with sulphates and are generally yellow, while the dichromates, $M_2Cr_2O_7$, are isomorphous with pyrosulphates and are generally orange-red. Many chromates are used as pigments.

chromatics (*Optics*). The science of colours as affected by phenomena determined by their differing wavelengths.

chromatic aberration (*Light*). Non-coincidence of the component colour images formed by a lens owing to *dispersion* (q.v.) of the lens. See **achromatic lens.**

chromatic adaptation (*Bot.*). A variation in coloration in relation to the amount of light reaching a plant.

chromaticity (*Photog.*). The quality of a colour, comprising brilliance, hue, and saturation.

chro'matid (*Cyt.*). One of the four constituent parts of a *tetrad* (q.v.).

chro'matin (*Cyt.*). The deeply staining portion of the nucleoplasm.

chromatograph'ic analysis (*Chem.*). The analysis of a dye solution by selective adsorption on gelatin, alumina, etc.

chromatol'ysis (*Cyt*). The dissolution of chromatin in injured cells.

chromat'ophore, chro'moplast (*Bot.*). A plastid containing one or more pigments, not necessarily chlorophyll.

chromatophore (*Zool.*). A pigment cell; usually a connective-tissue corpuscle containing pigment granules, and capable of changing its shape under the influence of the sympathetic nervous system or of hormones.

chromatophores (*Zool.*). Cup- or plate-shaped masses of protoplasm, occurring in *Phytomastigina.*

chro'matoplasm (*Bot.*). The peripheral region of the protoplast in *Myxophyceae*, containing the pigments of the cell.

chromatosphe'rite (*Cyt.*). See **nucleolus.**

chrome alum (*Chem.*). Potassium chromium sulphate, $K_2SO_4{\cdot}Cr_2(SO_4)_3{\cdot}24H_2O$, purple octahedral crystals obtained by the reduction of potassium dichromate solution acidified with sulphuric acid. It is used in dyeing, calico-printing, and tanning.

chrome green (*Dec.*). See **Guignet's green.**

chrome iron ore (*Met.*). See **chromite.**

chrome leather (*Leather*). Leather that has been tanned with salts of chromium; boot uppers and belting leather are tanned by this method.

chrome red (*Chem.*). See **basic lead chromate.**

chrome spinel (*Min.*). Another name for the mineral *picotite*, a member of the spinel group. Cf. *chromite.*

chrome yellow (*Chem.*). See **lead chromate.**

chromic acid (*Chem.*). H_2CrO_4. An aqueous solution of chromic anhydride. See **chromium trioxide.**

chromic anhydride (*Chem.*). See **chromium trioxide.**

chromic oxide (*Chem.*). Chromium sesquioxide, Cr_2O_3, an amphoteric oxide corresponding to chromic salts, CrX_3, and to chromites, $M_2Cr_2O_4$.

chromic salts (*Chem.*). Salts in which chromium is trivalent. They are either green or violet, and are quite stable.

chromid'ia (*Cyt.*). Fragments of chromatin which lie free in the cytoplasm, and are not massed together to form a nucleus.

chromidium (*Bot.*). An algal cell in the thallus of a lichen.

chro'miole (*Cyt.*). One of the deeply staining granules of which chromatin is composed.

chromite (*Min.*). A double oxide of chromium and iron, used as a source of chromium and also as a refractory for resisting high temperatures. It has neutral chemical properties, and is resistant to attack by both acid and basic slags. Chromite occurs as an accessory in some basic and ultrabasic rocks, and crystallises in the cubic system as lustrous grey-black octahedra; also massive. Also called CHROME IRON ORE.

chromium (*Met.*). A metallic element. Chem. symbol, Cr. At. wt. 52·01, at. no. 24, sp. gr. at 20° C. 7·138, m.p. 1830° C., specific electrical resistivity at 20° C. 13·1 microhms per cub. cm. Obtained from chromite. Alloyed with nickel in heat-resisting alloys and with iron or iron and nickel in stainless and heat-resisting steels. Also used as a corrosion-resisting plating.

chromium plating (*Met.*). The production of a thin layer of chromium on the surface of another metal by electrodeposition, to protect it against corrosion. Thicker coatings are used to resist wear and abrasion. See **hard plating.**

chromium trioxide (*Chem.*). CrO_3. Produced by the action of concentrated sulphuric acid on a concentrated aqueous solution of potassium dichromate. It is deliquescent and a powerful oxidising agent.

chromo-. Prefix. See **chrom-.**

chromo paper (*Paper*). Paper which is more heavily coated than art paper; used for chromolithography.

chro'moblast (*Zool.*). An embryonic cell which will develop into a chromatophore.

chro'mocentre (*Cyt.*). Any accumulation of chromatin in the nuclear reticulum.

chromochon'dria (*Cyt.*). Mitochondria concerned in pigment formation.

chro'mogen (*Chem.*). A coloured compound containing a *chromophore* (q.v.).

chro'mogramme (*Photog.*). See **kromogram.**

chromoisom'erism (*Chem.*). The existence of substances having the same chemical composition but different colours.

chromolithog'raphy (*Print.*). The process of reproducing a coloured original by means of lithography. Drawings corresponding to the different colours of the original are executed in accurate register on separate stones or plates, printing being done as in ordinary lithography.

chro'momeres (*Cyt.*). The small granules of which chromatin is built up.

chromone'ma (*Cyt.*). The whole of the threads which make up the nuclear reticulum: one of the threads.

chromones (*Chem.*). Compounds having a condensed benzene and pyrone ring.

chro'mophil, chromophil'ic (*Biol.*). Staining heavily in certain microscopical techniques.

chro'mophobe, chromopho'bic (*Biol.*). Resisting stains, or staining with difficulty, in certain microscopical techniques.

chro'mophores (*Chem.*). Characteristic groups which, attached to hydrocarbon radicals in sufficient number, are responsible for the colour of dyestuffs. Such groups are: C·C, C:O, C·N, N:N, NO_2, N:O, and others.

chro'moplast (*Bot.*). See **chromatophore.**

chro'moscope (*Photog.*). A device for synthesising colour or coloured images.

chromoso'mal chimaera (*Bot.*). A chimaera in which the nuclei do not all contain the same number of chromosomes.

chro'mosome (*Cyt.*). One of the deeply staining rod-like bodies, constant in number for any given species, into which the chromatin of the nucleus becomes condensed during meiosis or mitosis.

chromosome arm (*Cyt.*). One of the two parts of a chromosome to which the spindle fibre is attached along the side.

chromosome complement (*Bot., Zool.*). The set of chromosomes characteristic of the nuclei of any one species of plant or animal.

chromosome cycle (*Cyt.*). The whole of the changes in the chromosomes during the complete life-cycle of an organism.

chromosome map (*Cyt.*). A diagram which purports to show the position of the genes in a chromosome.

chromosome matrix (*Cyt.*). A sheath of weakly staining material surrounding the more stainable substance of a chromosome.

chromosome set (*Cyt.*). The whole of the chromosomes present in the nucleus of an unfertilised female gamete, usually consisting of one each of the several kinds that may be present.

chromosphere (*Astron.*). The layer of the sun's atmosphere, just outside the photosphere, which is observed visually during total solar eclipses, and spectroscopically at other times.

chromot'ropy (*Chem.*). See **chromoisomerism.**

chromous salts (*Chem.*). Salts of divalent chromium; they yield blue solutions with water and are strong reducing agents.

chro'mule (*Bot.*). A general term for plant pigments.

chromyl (*Chem.*). The divalent radical CrO_2''.

chro'naxie (*Physiol.*). A time-constant in nervous excitation, equal to the smallest time required for excitation of a nerve when the stimulus is an electrical current of twice the threshold intensity required for excitation when the stimulus is indefinitely prolonged.

chronic (*Med.*). Said of a disease which is deep-seated or long-continued. Cf. *acute*.

chron'ispore (*Bot.*). A resting spore.

chron'ograph (*Horol.*). (1) A watch with a centre seconds hand which can be caused to start, stop, and fly back to zero by pressing the button or a push-piece on the side of the case. The chronograph mechanism is independent of the going train, so that the balance is not stopped when the centre seconds hand is stopped. See **stop watch.**—(2) Any type of mechanism which gives a record of time intervals; e.g. a *tape chronograph* in which a long paper tape is used, the time intervals being marked on the tape by pens actuated electromagnetically by a chronometer or other suitable time standard.

chronom'eter (*Horol.*). A precision timekeeper. In Great Britain and U.S.A. the term denotes the very accurate timekeeper kept on board ships for navigational purposes, and fitted with the spring detent escapement. On the Continent the term is also applied to any very accurate clock or watch which may be fitted with the spring detent or lever escapement.

chronometer clock (*Horol.*). A clock fitted with a chronometer escapement.

chronometer escapement (*Horol.*). The spring detent escapement. A highly detached escapement, capable of giving the most exacting performance. Impulse is given to the balance every alternate vibration. Locking is performed by a pallet on a spring detent, and unlocking by a discharging pallet carried on a roller on the balance staff.

chron'opher (*Teleg.*). The arrangement for automatically switching standard time signals from an observatory to telegraph lines.

chrys'alis (*Zool*). The pupa of some Insects, especially *Lepidoptera*: the pupa-case of *Lepidoptera*.

chrysan'iline (*Chem*). See **phosphine** (2).

chrys'oberyl (*Min*). Aluminate of beryllium, crystallising in the orthorhombic system. The crystals often have a stellate habit and are green to yellow in colour. In the gemstone trade yellow chrysoberyl is known as *chrysolite*.

chrysoberyl cat's eye (*Min.*). See **cymophane.**

chrysocol'la (*Min.*). A hydrated silicate of copper, often containing free silica and other impurities. It occurs in encrustations or thin seams, usually blue and amorphous.

chrysogonid'ium (*Bot.*). A yellow algal cell in a lichen.

chrysoi'dine (*Chem*). 2,4-Diamino-azobenzene hydrochloride, C_6H_5 N N $C_6H_3(NH_2)_2 \cdot HCl$, an orange-red azo-dyestuff for dyeing direct silk and wool.

chrys'olite (*Min.*). The mineralogical name for common *olivine* (q.v.), sometimes restricted to the pale-yellowish crystals of gemstone quality. The term is incorrectly applied to chrysoberyl of golden-yellow colour.—CEYLONESE CHRYSOLITE, the trade name for the fine golden-yellow chrysoberyl obtained in Ceylon and used as a gemstone.

Chrysomonadi'na (*Zool.*). An order of *Phytomastigina*, comprising forms with one or two flagella; yellow, brown, or colourless; often of amoeboid form; without a gullet or a transverse groove; having food-reserves of leucosin and oil, but not of starch; without a contractile vacuole.

chrys'oprase (*Min.*). An apple-green variety of chalcedony; the pigmentation is probably due to the oxide of nickel.

chrys'otile (*Min*). A fibrous variety of serpentine, occurring in small veins. It forms part of the asbestos of commerce. Also called CANADIAN ASBESTOS.

C.H.U. (*Eng.*). Abbrev. for *Centigrade heat unit*, the same as the *pound-calorie* (q.v.).

chuck (*Eng.*). A device attached to the spindle of a machine tool, for gripping the revolving work, cutting tool, or drill.

See **bell—**
combination—
cup—
independent—
magnetic—
scroll—
self-centring—
universal—

chucking machine (*Eng.*). A machine tool in which the work is held and driven by a chuck, not supported on centres.

chuffs (*Build.*). Bricks which have been rendered useless owing to the presence in them of cracks caused by rain falling on them while they were hot. Also called SHUFFS.

chumship (*Typog.*). The Scottish equivalent of *companionship* (q.v.).

churning loss (*Automobiles, etc.*). In a gear-box, the power wasted in fluid friction through the pumping action of the revolving gears in the oil.

chute (*Hyd.*). An inclined channel for conducting water to a water-wheel.

chute (*Mining*). (1) An inclined trough for the transference of broken coal or ore.—(2) An area of rich ore in an inclined vein or lode, generally of much greater vertical than lateral extent.

chute (*San. Eng.*). A special tapered outlet pipe from a deep inspection chamber, employed to make rodding easier.

Chvostek's sign (*Med.*). Twitching of the muscles of the face on tapping the facial nerve; a sign of tetany.

chyle, kil (*Zool.*). In Vertebrates, lymph containing the results of the digestive processes, and having a milky appearance due to the presence of emulsified fats.—*adjs.* **chyla'ceous, chylif'erous, chylif'ic.**

chylification, chylifaction (*Zool.*). Formation of *chyle* (q.v.).

chylocaul'ous (*Bot.*). Having a succulent stem.

chyloperitone'um (*Med.*). The presence of chyle in the peritoneal cavity as a result of obstruction of the abdominal lymphatics.

chylophyl'lous (*Bot.*). Having succulent leaves.

chylopoesis, —pō-ē'sis (*Zool*). See **chylification.**

chylotho'rax (*Med.*). The presence of chyle in the pleural cavity, due to injury to, or pressure on, the thoracic duct.

chylu'ria (*Med.*). The presence of chyle in the urine.

chyme, kīm (*Zool.*). In Vertebrates, the semi-fluid mass of partially digested food, entering the small intestine from the stomach.

chymification (*Zool.*). The formation of *chyme* (q.v.).

C.I. engine. See **compression-ignition engine.**

cicatricial. *Adj.* from *cicatrix.*

cic'atricle, cicatric'ula (*Zool.*). In heavily yolked eggs, the germinating area of blastoderm.

cicatrisation (*Bot., etc*). The formation of scar tissue.

cic'atrix (*Bot.*). A scar left on a plant where a member has been shed.—(*Med., Zool*) The scar left after the healing of a wound: one which marks the previous point of attachment of an organ or structure.

Cico'niifor'mes (*Zool*). An order of *Pelargomorphae* having a desmognathous palate and usually webbed feet; all are of aquatic habit, but some are wading Birds (e.g. Pelicans, Herons, Ibises, Spoonbills, and Flamingoes), some are powerful swimmers and divers (e.g. Gannets and Cormorants), while others are powerful fliers (Frigate Birds).

cil'ia (*Zool.*). In Mammals, the eyelashes: in Birds, the barbicels of a feather: in general, small lash-like processes of a cell which beat rhythmically and cause locomotion, or create a current of fluid.—*sing.* **cilium.**—*adjs.* **ciliated, ciliate.**

cil'iary (*Zool.*). In general, pertaining to or resembling cilia: in Vertebrates, used of certain structures in connexion with the eye, as the *ciliary ganglion, ciliary muscles, ciliary process.*

Cilia'ta (*Zool.*). A subclass of *Ciliophora*, the members of which possess cilia throughout life.

cil'iate, cil'iated (*Bot.*). (1) Having a fringe of long hairs on the margin.—(2) Having flagella.

cil'iograde (*Zool.*). Moving by the agency of cilia.

cil'iolate (*Bot.*). Fringed with very short, fine hairs.

Cilioph'ora (*Zool.*). A class of *Protozoa*, comprising forms which always possess cilia at some stage of the life-cycle, and usually have a meganucleus.

cil'iospore (*Zool.*). In *Protozoa*, a ciliated swarm-sphore.

cil'ium (*Bot.*). (1) A hair-like appendage to a spore.—(2) See **flagellum.**—*pl.* **cilia.**

cilium (*Zool.*). *Sing.* of *cilia* (q.v.).

Cimarron Series, sim-ar-ŏn' (*Geol.*). Red beds occurring above the salt deposits in the Permian of Kansas.

Ciment Fondu, se-mahn^g' fon^{g}dü' (*Civ. Eng.*). A rapid-hardening cement made by heating lime and alumina in an electric furnace to incipient fusion, and afterwards grinding to powder. Also known as ELECTRIC CEMENT.

cinching (*Cinema.*). Tightening a roll of film by holding the centre and pulling the edge.

cinchona bases, sin-kō'na (*Chem.*). Alkaloids present in cinchona bark, derivatives of quinoline.

cin'chonine (*Chem.*). $C_{19}H_{22}ON_2$, an alkaloid of the quinoline group, found in cinchona and cuprea barks; crystallises in rhombic prisms from alcohol, m.p. 264° C. It behaves as a diacidic base and gives two series of salts.

Cincinnat'ian (*Geol.*). Strata in N. America equivalent in age to the Upper Ordovician of N.W. Europe and including, among other formations, the *Utica Shales* and *Trenton Limestone* (qq.v.).

cincin'nus (*Bot.*). A cymose inflorescence in which the lateral axes arise on alternate sides of the relatively main axis.

cinclides, sin'kli-dēz (*Zool.*). In *Anthozoa*, perforations of the body-wall for the extrusion of acontia.—*sing.* **cinclis.**

cincture (*Arch.*). A plain ring or fillet round a column, generally placed at the top and bottom to separate the shaft from its capital and its base.

Cinder Bed (*Geol.*). A marine band in the freshwater Purbeck Series of Dorset, composed largely of fossil oyster shells.

cinder pig (*Met.*). Pig-iron made from a charge containing a considerable proportion of slag from puddling or reheating furnaces.

ciné camera, sin'ā (*Cinema.*). A motion-picture camera using film smaller in width than standard stock, usually 16 and 9·5 mm.; used mainly for amateur and scientific cinematography.

ciné film (*Cinema.*). The same as *sub-standard film.*

Cinecolor (*Photog.*). American two- and three-colour subtractive processes for colour cinematography.

cinemagazine (*Cinema.*). A film consisting of short sequences of matters of pictorial interest, other than sequences used in news-reels.

Cineop'tichrome (*Photog.*). A French additive colour cinematographic process.

cineaste, sin'e-ast (*Cinema.*). One who takes an advanced view of the artistic possibilities of motion pictures.

cinema (*Cinema.*). A location, usually indoors, where motion films are projected to audiences; arranged to afford optimum visual and aural reception to the maximum economic number of seats, with ambient comfort.

cinema organ. The same as *theatre organ.*

cinematic (*Cinema.*). Said of a literary work, of natural scenery, or of human occupations, when these are considered suitable subjects for effective presentation by motion pictures.

cinematograph camera (*Photog.*). A camera, with intermittent motion, in which frames are exposed successively, for subsequent projection after processing.

cinematograph film (*Cinema.*). A motion picture in which the appearance of motion is effected by the flashing, on a screen, of successive pictures, each slightly different, in sequence; e.g. at 24 per second. See **sound-film.**

cin'eole (*Chem.*). Eucalyptole, $C_{10}H_{18}O$, b.p. 176° C.; optically inactive; considered to be the internal anhydride or ether of terpin. It has no alcoholic or ketonic properties, but forms hydrochlorides, phosphates, arsenates, and additive compounds with phenols.

cine'reous (*Bot.*). Grey, like wood ashes.

cin'gulum (*Zool.*). Any girdle-shaped structure. In *Annelida*, the clitellum: in *Rotifera*, the outer post-oral circlet of cilia: in Mammals, a tract of fibres connecting the hippocampal and callosal convolutions of the brain: in Mammals, a ridge surrounding the base of the crown of a tooth and serving to protect the gums from the hard parts of food.

cin'nabar (*Min.*). Sulphide of mercury, HgS, occurring as red acicular crystals, or massive; the ore of mercury, worked extensively at Almadén, Spain, and elsewhere.

cin'nabarine (*Bot.*). Bright orange-red.

cinnam'ic acid (*Chem.*). $C_6H_5{\cdot}CH\,CH{\cdot}COOH$, m.p. 133° C., b.p. 300° C.; an unsaturated monobasic aromatic acid, technically prepared from benzal chloride by heating with sodium acetate. It exhibits a peculiar isomerism inasmuch as there are known a trans-form and three cis-forms—Liebermann's iso-cinnamic acid, m.p. 57° C.; Erlenmeyer's (sen.) iso-cinnamic acid, m.p. 38°-46° C.; Liebermann's allo-cinnamic acid, m.p. 68° C.—which, however, are not chemically isomeric, but represent a case of trimorphism.

cinnamic aldehyde (*Chem.*). $C_6H_5{\cdot}CH\,CH{\cdot}CHO$, b.p. 246° C.; an oil of aromatic odour; the chief constituent of cinnamon oil and of cassia oil.

cinnamon stone (*Min.*). See **hessonite.**

Cinophot (*Photog.*). A visual estimating device for determining stops or exposures; it is based on the threshold of visual sensitivity of the eye.

cinquefoil, sink'foil (*Arch.*). A five-leaved ornament used in panellings, etc.

cipher (*Acous.*). See under **ventil.**

cipher tunnel (*Build.*). A false chimney built on to a house for symmetrical effect.

cip'olin (*Build.*). A white marble with green streaks; used for decorative purposes.

Cipolletti weir, chē-pol-et'i (*Hyd.*). A weir in which the notch plate has a trapezoidal opening tapering down to the sill with side slopes of 1 (horizontal) in 4 (vertical).

C.I.P.W. (*Geol.*). A quantitative scheme of rock classification based on the comparison of norms; devised by four American petrologists, Cross, Iddings, Pirsson, and Washington.

cir'cinate (*Bot.*). Rolled inwards from the apex towards the base, resembling a crozier in form.—(*Med.*) Rounded, circular.

circle (*Geom.*). A plane curve which is the locus of a point which moves so that it is at a constant distance (the *radius*) from a fixed point (the *centre*). The length of the circumference of a circle is $2\pi r$, and its area πr^2, where r is the radius and π is equal to 3·141593 (to 6 places).

circle (*Lace*). The arc formed by the combs on which the carriages ride.

circle coefficient (*Elec. Eng.*). A term often used to denote the leakage factor of an induction motor.

circle diagram (*Elec. Eng.*). A vector diagram representing conditions in certain types of electric circuit; in the diagram the locus of the end of a current or voltage vector moves round a circle. Commonly used in connexion with induction motors, in which case the locus of the end of the stator current vector lies on a circle.

circle of confusion (or **diffusion**) (*Photog.*). The minimum area of a focused bright point of light, the size of which determines the maximum definition possible with a given lens arrangement and stop.

circle of curvature (*Geom.*). A circle which touches a curve at a given point and has its centre at the centre of curvature of the curve at that point.

circle of least confusion (*Photog.*). The image of a point source of light cannot be perfect, and the diameter of this image is a measure of the limit of definition. The maximum permissible diameter for sharp definition is taken to be 0·01 in.

circle on circle (*Carp., Join.*). Work which is shaped so as to present a curved outline both in plan and elevation.

circuit (*Cinema.*). A number of cinemas associated under a common control, to ensure exhibition of cinematograph films.

circuit (*Elec. Comm.*). The whole or part of the path of transmitted electrical energy in a communication channel.

circuit (*Elec. Eng.*). A number of conductors connected together for the purpose of carrying an electric current.

circuit-breaker (*Elec. Eng*). A switch for making and breaking an electric circuit under normal conditions, and also under abnormal conditions such as a short-circuit.

See **air-blast—**
air-break—
cross blast—
expansion—
oil—
oil-poor—
oil-less—

circuital magnetisation (*Elec. Eng.*). See **solenoidal magnetisation.**

circular error (*Horol*). The variation in the isochronism of a pendulum due to the path of the bob being that of a circular arc instead of a cycloid. For small amplitudes the error is small, and for precision clocks the amplitude is kept to about two degrees on either side of the line of suspension.

circular level (*Surv.*). A form of level employed on various surveying instruments; in it the liquid is contained in a box covered with a glass shaped to present to the liquid a concave surface which is a portion of a sphere, so that when the circular bubble is central the level is on a truly horizontal plane.

circular magnetisation (*Elec. Eng.*). Magnetisation of a cylindrical piece of magnetic material in such a way that the lines of force are circumferential.

circular measure (*Geom.*). The expression of an angle in *radians*, one radian being the angle subtended at the centre of a circle by an arc of length equal to the radius. There are thus 2π, or approximately 6·283, radians in one complete revolution. Generally, the angle between two lines meeting at the centre of a circle is equal to the ratio of the length of arc between the two lines to the radius of the circle.

circular mil (*Elec. Eng.*). A unit of area commonly used in America for denoting wire sizes; it is equal to the area of a wire one mil (0·001 in.) in diameter.

circular mitre (*Carp., Join.*). A mitre formed between a curved and a straight piece.

circular pitch (*Eng.*). The distance between corresponding points on adjacent teeth of a gear-wheel, measured along the *pitch circle* (q.v.).

circular plane (*Carp.*). A plane adapted (through the use of special irons) for producing curved surfaces, either convex or concave.

circular polarisation (*Light*). A type of polarisation produced when one of two equal, mutually perpendicular, plane-polarised components is retarded by a quarter of a period relative to the other. It may be produced by allowing plane-polarised light to pass through a quarter-wave plate, with its principal plane at 45° with the plane of polarisation.

circular polarisation (*Radio*). The state of polarisation of an electromagnetic wave when its electric and magnetic fields each contain two equal components, at right-angles in space and in phase quadrature.

circular saw (*Eng.*). A steel disc carrying teeth on its periphery, used for sawing wood, metal, or other materials; usually power-driven. See **cold saw, hot saw.**

circular scanning (*Television*). A system of scanning in which the spot follows a nearly circular (strictly, spiral) path.

circular stairs (*Build.*). Stairs in which all the steps are winders and which are enclosed within a staircase circular in plan.

circular time base (*Cathode Ray Tubes*). A device for causing the spot on the screen of a cathode ray tube to traverse a circular path at a constant angular velocity.

circulating current (*Elec. Comm.*). The current which flows round the loop of a complete circuit, as contrasted with *longitudinal current*, which flows along the two sides or legs of the same circuit, in parallel.—(*Elec. Eng.*) A current flowing round a closed circuit forming part of a larger electrical network.

circulating-current protective system (*Elec. Eng.*). A form of Merz-Price protective system in which the current transformers at the two ends of the circuit to be protected are arranged to circulate a current round the pilots, any difference in the currents from the two transformers passing through a relay.

circulating pump (*Eng.*). A pump, usually of centrifugal type, used to circulate cooling water through the condenser of a steam plant. See **centrifugal pump.**

circulation (*Bot.*). A rotatory movement of the protoplasm inside a cell.

circulation (*Elec. Eng.*). The line integral of a vector, representing, for example, an electric or magnetic field intensity, round a closed contour.

circulation (*Physiol*). The continuous movement of the blood through the heart, arteries, capillaries, and veins.

circulation (*Teleg.*). The section of a large telegraph centre in which there are sorting arrangements for routing the transmission of telegrams.

circulation of electrolyte (*Elec. Eng.*). Movement of the electrolyte in an electroplating bath in order to ensure an even deposit.

circulatory system (*Zool.*). A system of organs through which is maintained a constant flow of fluid, which facilitates the transport of materials between the different organs and parts of the body.

cir'culus (*Zool.*). An annular arrangement of blood-vessels, as the *circulus cephalicus* of Fish.

circum- (Latin *circum*, around). A prefix used in the construction of compound terms; e.g. *circumoesophageal*, surrounding the oesophagus.

circumcision (*Surg.*). Surgical removal of the prepuce or foreskin in the male or of the labia minora in the female.

circum'ferentor (*Surv., etc.*). (1) A compass provided with a graduated card and adjustable sighting-vanes to establish a line of sight. Much used in mine surveying.—(2) A graduated wheel, turning on an axle fixed in a handle, used to measure the circumference of a wheel. Also called a TYRE-MEASURER.

circumfil'i (*Zool.*). Conspicuous whorls of hair occurring on the antennae of certain Insects, as Gall Midges (*Cecidomyidae*).

circumflex accent (*Typog.*). An accent occurring mostly in words of French origin, as in *depôt*.

circumfluence (*Zool.*). See **circumvallation.**

circumnuta'tion (*Bot.*). The rotation of the tip of an elongating stem, so that it traces a helical curve in space.

circumpolar stars (*Astron.*). Those stars which, for a given locality on the earth, do not rise and set but revolve about the elevated celestial pole, always above the horizon. To be a circumpolar, a star's declination must exceed the co-latitude of the place in question.

circumscis'sile (*Bot.*). Splitting open by a circular tear.

circumscribe (*Drawing*). To draw one plane figure so as to enclose another.

circumvalla'tion (*Zool.*). The action of a phagocytic cell, or of a Sarcodine, in engulfing foreign bodies or food particles by the extrusion of pseudopodia.

cirque or **corrie** (*Geol.*). A semi-amphitheatre, or 'armchair-shaped' hollow, of large size, excavated in mountain country by, or under the influence of, ice.

cirrals, sir'alz (*Zool*). In *Crinoidea*, the hollow ossicles supporting the cirri.

cir'rate, cirrif'erous (*Bot., Zool.*). Bearing cirri.

cirrh-. Erroneously derived prefix sometimes used in terms relating to *cirrus*.

cirrho'sis (*Med.*). (1) A disease of the liver in which there are increase of fibrous tissue and destruction of liver cells.—(2) Diffuse increase of fibrous tissue in any organ. (Greek *kirros*, orange-tawny.)

Cirripe'dia (*Zool.*). A subclass of marine *Crustacea*, generally of sessile habit when adult; the young are always free-swimming; the adult possesses an indistinctly segmented body which is partially hidden by a mantle containing calcareous shell plates; there are six pairs of biramous thoracic legs; attachment is by the antennules; many species are parasitic. Barnacles.

cirro-cumulus (*Meteor.*). Small rounded masses or white flakes of cloud without shadows, arranged in groups and often in lines. They are composed of ice crystals and occur at heights above 25,000 ft. Also called MACKEREL SKY.

cirro-stratus (*Meteor.*). A thin sheet of whitish cloud; sometimes covering the sky completely and giving it a milky appearance (it is then called *cirro-nebula* or *cirrus haze*); at other times presenting more or less distinctly a fibrous structure like a tangled web. This type of cloud, being composed of ice crystals, often produces haloes of radius 22° around the sun and moon.

cir'rose (*Bot., Zool.*). Curly: like a waved hair.

cir'rus (*Bot.*). A *tendril* (q.v.).—(*Zool.*) In *Protozoa*, a stout conical vibratile process, formed by the union of cilia: in some *Platyhelminthes*, a copulatory organ formed by the protrusible terminal part of the vas deferens: in *Annelida*, a filamentous tactile and respiratory appendage: in *Cirripedia*, a ramus of a thoracic appendage: in *Insecta*, a hair-like structure on an appendage: in *Crinoidea*, a slender jointed filament arising from the stalk or from the centro-dorsal ossicle and used for temporary attachment: in Fish, a barbel.

cirrus (*Meteor.*). Detached clouds of delicate appearance, fibrous structure, and feather-like form; white in colour; composed of ice crystals; occur at heights between 25,000 and 35,000 ft.

cirsoid aneurysm (*Med.*). A mass of newly formed, tortuous, and dilated arteries.

***cis*-** (*Chem.*). A prefix indicating that geometrical isomer in which the two radicals are situated on the same side of the plane of a double bond or alicyclic ring.

cissing (*Paint.*). A defect in paint, enamel, or varnish work due to poor adhesion; characterised by the rising of blobs on the surface of the work.

cissoid (*Maths.*). The inverse of a parabola with respect to its vertex. It may be represented by the equation: $x(x^2+y^2)=by^2$.

cistern (*Build.*). A tank for storing up a supply of water which may later be drawn upon as required.

citral (*Chem.*). Geranial, $C_{10}H_{16}O$, an olefinic terpene of the formula CH_2:CMe·CH_2·CH_2·CH_2 CMe.CH·CHO; b.p. 110°-112° C. (12 mm.); it occurs in the oil of lemons and oranges and in lemon-grass oil.

citrates (*Chem.*). The salts of citric acid.

citrene (*Chem.*). See ***d*-limonene.**

citric acid (*Chem.*). HOOC CH_2·C(OH)(COOH)·CH_2·COOH, hydroxy-tricarballylic acid; large rhombic prisms, m.p. 153° C.; obtained from lemon juice, which contains 6-7% of the acid; it can be synthesised from *sym.* dichloracetone.

citriform (*Bot.*). Lemon-shaped.

citrine, citron-colour (*Bot.*). Lemon-coloured.

citrine or **quartz topaz** or **false topaz** (*Min.*) Not the true *topaz* (q.v.) of mineralogists, but a yellow variety of quartz, which closely resembles it in colour though not in other physical characters; it is of much less value than true topaz. It figures under a variety of geographical names; e.g. *Bohemian topaz*, *Indian topaz*, *Madagascar topaz*, *Madeira topaz*, and *Spanish topaz* (q.v.). See also **Scotch topaz, smoky quartz**; and cf. *Brazilian topaz*, which is the true mineral.

citron yellow (*Paint.*). See **zinc yellow.**

citronel'lal (*Chem.*). CH_2·CMe·CH_2·CH_2·CH_2·CHMe·CH_2·CHO, an olefinic terpene aldehyde, b.p. 205°-208° C.; present in citronella oil and in lemon-grass oil.

City solder (*Plumb.*). Solder which has been stamped by the Livery Guild of Plumbers of the City of London.

civery (*Arch.*). One bay of a vaulted ceiling. Also spelt SEVERY.

civil engineering. 'The art of directing the great sources of power in nature for the use and convenience of man.' It includes the design and construction of roads, railways, bridges, aqueducts, canals, docks, ports, harbours, moles, breakwaters, lighthouses, and drainage works. The term originated in the distinction of such engineering activities from those associated with military operations, e.g. fortifications, ordnance, etc.

Cl (*Chem.*). The symbol for *chlorine*.

clack or **clack valve** (*Eng.*). A check valve admitting water from a feed pump to the boiler of a locomotive. A ball valve is used, the name *clack* being derived from the characteristic sound of the ball striking its seat. See **feed check valve.**

clad-, clado- (Greek *klados*, a slip or shoot). A prefix used in the construction of compound terms; e.g. *cladocarpous* (q.v.).

cladautoi'cous (*Bot.*). Said of a moss which bears the antheridia on a separate branch.

cladocar'pous (*Bot.*). Having the fruit at the end of a lateral shoot.

Cladocera, —os'era (*Zool.*). An order of freshwater *Branchiopoda* having a bivalve carapace enclosing the body but not the head; the eyes are sessile and coalescent; the second antennae are biramous and natatory; the trunk limbs are few in number; the caudal furca are claw-like. Water Fleas.

Cladoco'pa (*Zool.*). An order of *Ostracoda*, in which the shell lacks an antennal notch; there are three pairs of postoral limbs and the caudal furca have lamellar rami armed with spines.

cladode (*Bot.*). A flattened branch, which looks like, and functions as, a leaf.

cladogen'ous (*Bot.*). Producing the inflorescences at the ends of branches.

cla'dophyll (*Bot.*). A cladode.

cladopto'sis (*Bot.*). The shedding of branches.

cladosiphon'ic (*Bot.*). A term applied to a siphonostele which has branch gaps, but not leaf gaps.

clagging (*Foundry*). The adhesion of blacking to a trowel or sleeker during smoothing of the surface of a mould.

clairecolle (*Dec.*). See **clearcole.**

Claisen condensation, klā′zen (*Chem.*). An important synthetic reaction involving condensation between esters, or between esters and ketones, in the presence of sodium ethoxide.

Claisen flask (*Chem.*). A distillation flask used for vacuum distillations; it consists of a glass bulb with a neck for a thermometer, to which another neck with outlet tube is attached.

Claisen reaction (*Chem.*). The elimination of water from an aliphatic and an aromatic aldehyde in the presence of caustic soda, an unsaturated aldehyde being formed; e g. cinnamic aldehyde is thus formed from acetaldehyde and benzaldehyde.

clam-forceps (*Vet.*). An instrument for closing wooden clams.

clams (*Vet*). Instruments, usually made of wood, for effecting compression; used commonly for castrating stallions and bulls.

clamp (*Build*). A stack of dried raw bricks built up for burning, together with cinders and coal, over a system of flues roughly formed with burnt bricks.

clamp (*Join*). A wooden frame consisting of two parallel bars connected by two tightening screws; used to hold parts together while a glued joint dries, or to secure work in process of being formed.

clamp bricks (*Build.*). Stock bricks burnt in a clamp.

clamp connexion (*Bot*). A short, backwardly directed hypha, present across the septa of hyphae of some *Basidiomycetes*, formed as the nuclei divide, and making possible the distribution of the daughter nuclei in the two segments formed from the terminal segment of the hypha.

clamping screw (*Elec. Eng.*). A screw for holding a conductor to a piece of apparatus used in electrical installation work (e.g. a ceiling rose or switch). Also called a TERMINAL SCREW.

clan (*Bot.*). A small clump formed of individuals of a single species, and developed either as a result of vegetative multiplication or from seed scattered over a small area.

clan (*Geol.*). A suite of igneous rock-types closely related in chemical composition but differing in mode of occurrence, texture, and possibly in mineral contents.

clap (*Acous.*). See **thunder.**

clap (*Med.*). *Gonorrhoea* (q.v.).

clap-board (*Carp.*). A form of weather-board which is tongued and rebated and frequently moulded, rather than being feather-edged.

clap-board gauge (*Carp.*). A gauge used in fixing clap-boarding, to ensure that each board is so set as to expose a parallel width.

clap post (*Join.*). The upright post against which the door of a cupboard ' claps ' in closing.

clap-sill (*Hyd. Eng.*). See **mitre-sill.**

clapper box (*Eng.*). A slotted tool head carried on the saddle of a planing machine. It carries a pivoted block to which the tool is clamped, thus allowing the tool to swing clear of the work on the return stroke of the table.

clappers (*Cinema.*). A device, usually consisting of two hinged pieces of board, which is closed sharply in front of a camera in sound-film production, thus providing synchronisation indication on the picture-track and the sound-track, the noise of the clappers resulting in a characteristic record on the latter.

clarain (*Coals*). A separable constituent of bright coal.

clarendon (*Typog.*). A heavy type-face: **Clarendon.**

Claret-Vuilleumier surface-contact system, klar-ā vwē-ėm′yā (*Elec. Eng.*). A system of surface-contact traction in which the supply to the studs is controlled by electromagnetic distributor switches at intervals along the track. Formerly used in Paris.

Clark cell (*Chem.*). A standard cell consisting of a zinc anode and a mercury cathode covered with mercurous sulphate paste, both dipping into a saturated solution of zinc sulphate.

Clark process (*Chem.*). A process for effecting the partial softening of water by the addition of sufficient limewater to convert all the acid carbonates of lime and magnesium into the normal carbonates.

clasmat′ocyte (*Zool.*). A large actively phagocytic cell occurring in areolar tissue and having a marked tendency to take up vital stains.

clasp nail (*Build.*). A square-section cut nail whose head has two pointed projections that sink into the wood.

clasp nut (*Eng.*). A nut split diametrally into halves, which may be closed so as to engage with a threaded shaft; used as a clutch between a lathe lead screw and the saddle.

claspers (*Zool.*). In Insects, an outer pair of gonapophyses: in male Selachian Fish, the inner narrow lobe of the pelvic fin, used in copulation: more generally, any organ used by the sexes for clasping one another during copulation.

class (*Bot., Zool.*). In biometry, a group of organisms all falling within the same range as indicated by the unit of measurement employed: in the plant kingdom, one of the larger subdivisions: in the animal kingdom, one of the groups into which a phylum is divided, ranking next above an *order* (q.v.).

class-A amplifier (*Elec. Comm.*). A thermionic amplifier in which the polarising voltages are adjusted for complete operation on the linear portion of the characteristic curves of the valve, without grid current.*

class-A oils (*Diel.*). See **oils.**

class-AB amplifier (*Elec. Comm.*). A thermionic amplifier in which the valve has its grid-bias so adjusted that the operation is intermediate between classes A and B, i.e., the anode current is shut off during part of the excitation cycle, but the quiescent anode current is not reduced to a small value.*

class-A, -B, -C, or -O insulating materials (*Elec. Eng.*). A classification of insulating materials according to the temperature which they will withstand; laid down in British Standard Specifications.

class-B amplifier (*Elec. Comm.*). A thermionic amplifier in which the grid-bias is adjusted to give the lower cut-off in anode current. Applied, colloquially, also to the combination of two such valves in one envelope, the two valves being designed to operate with grid current and substantially zero grid-bias, and in anti-phase.*

class-B oils (*Diel.*). See **oils.**

class-C amplifier (*Elec. Comm.*). A thermionic amplifier in which the grid-bias is greatly in excess of that in class B, and in which the anode output power becomes proportional to the anode voltage for a given grid excitation.*

class-room film (*Cinema.*). A documentary motion picture, usually without sound, for educational purposes (especially for exhibition in the class-room to children).

classification of the elements (*Chem.*). See **periodic system.**

classifier (*Met.*). A machine for separating the product of ore-crushing plant into two portions consisting of particles of different sizes. In general, the finer particles are carried off by a stream of water, while the larger settle. The fine portion is known as the *overflow* or *slime*, the coarse as the *underflow* or *sand*.

clastic rocks (*Geol.*). Rocks formed of fragments of pre-existing rocks. The term is broadly synonymous with *sedimentary*.

clathrate (*Bot.*). Like lattice-work.

Claude process (*Chem.*). A method of liquefying air in stages, the expanding gas being cooled by external work on pistons.

claudication (*Med.*). The action of limping. See **intermittent claudication.**

Claudius' cells (*Zool.*). In Mammals, cuboidal epithelium cells lying on the basilar membrane of the cochlea.

Claus' blue (*Chem.*). A name sometimes applied to the blue solution of rhodium trioxide in alkali hydroxide, considered to be an alkali rhodate.

Claus'ius - Clapeyron equation, klap-ā-ron$^{g'}$ (*Chem.*). This shows the influence of pressure on the temperature at which a change of state occurs, and the variation of vapour pressure with temperature.

$$q=T\cdot\Delta v\cdot\frac{dp}{dT},$$

where q is the heat absorbed (latent heat); T is the absolute temperature; Δv is the change of volume.

claustropho'bia (*Med.*). Abnormal fear of being in a confined space.

claustrum (*Zool.*) In *Ostariophysi*, one of the Weberian ossicles, but not forming part of the Weberian chain: in higher Vertebrates, a thin layer of grey matter in the cerebral hemispheres.

clav'a (*Bot.*). A club-shaped stroma formed by a fungus.—(*Zool.*) A gradual swelling at the distal end of a structure, resembling a club.

clavate. *Adj.* from *clava*: shaped like a club (e.g. *clavate* antennae).

clav'icle (*Zool.*). In Vertebrates, the collar-bone, an anterior membrane bone of the pectoral girdle.—*adj.* **clavic'ular.**

clav'icorn (*Zool.*). Having clavate antennae.

clavicula'rium (*Zool.*). See **epiplastron.**

clavo'la (*Zool.*). In Insects, the remainder of the antenna, excluding the scape and the pedicel.

clav'ula (*Zool.*). In *Spatangoidea*, a small ciliated spine occurring in a fasciole: in *Porifera*, a rod-shaped spicule bearing a discoidal expansion at one end.

clav'ulate (*Bot.*). Somewhat club-shaped, but not so distinctly as to be *clavate.*

cla'vus (*Zool.*). The narrow area of the hardened basal part of the hemelytron of *Hemiptera*, adjacent to the scutellum. Cf. *corium.*

clavus hyster'icus (*Med.*). Pain in and tenderness of the scalp, with the sensation as if a nail were being driven into the head; occurs in hysteria.

claw (*Bot.*). The narrow, elongated lower portion of a petal in some plants.

claw (*Carp.*). A small tool with a bent and split end, used for extracting tacks.

claw (*Zool.*). A curved, sharp-pointed process at the distal extremity of a limb: in *Vertebrata*, a nail which tapers to a sharp point.

claws (*Cinema.*). The means whereby the motion-picture film is intermittently fed forward through the picture gate, the claws operating on the sprocket holes.

claw bolt (*Carp.*). A wrought-iron bolt with a long head flattened in a direction parallel to the length of the bolt, and bent over at right-angles near the end.

claw chisel (*Build.*). A chisel, having a 2-in.-long serrated cutting edge, used for rough-dressing building stone.

claw coupling or **claw clutch** (*Eng.*). A shaft coupling in which flanges carried by each shaft engage through teeth cut in their opposing faces, one flange being slidable axially for disengaging the drive.

claw foot (*Med.*). See **pes cavus.**

claw-hammer (*Carp.*). A hammer having a bent and split peen which may be used for extracting a nail by giving leverage under its head.

claw hand (*Med.*). The claw-like position adopted by the hand when the muscles supplied by the ulnar nerve are paralysed.

clay (*Geol., etc.*). A fine-textured, sedimentary, or residual deposit. It consists of hydrated silicates of aluminium mixed with various impurities. The true clay substance is in part colloidal. Clay for use in the manufacture of pottery and bricks must be fine-grained and sufficiently plastic to be moulded when wet; it must retain its shape when dried, and sinter together, forming a hard coherent mass without losing its original shape, when heated to a sufficiently high temperature. *

clay ironstone (*Geol.*). Nodular beds of clay and iron compounds, often associated with the Coal Measure rocks.

clay press (*Pot.*). A press used to squeeze water out of slip, which is then dried and ground.

clay puddle (*Civ. Eng.*). A plastic material produced by thoroughly mixing clay with about one-fifth of its weight of water. It is used in engineering construction to prevent the passage of water; e.g. for cores for earthen reservoir dams.

clay slate (*Geol.*). A hard fissile metamorphic rock, derived from argillaceous material.

clay with flints (*Geol.*). A stiff clay, containing unworn flints, which occurs as a residual deposit in Chalk areas, but which is extensively mixed with other superficial deposits.

claying (*Civ. Eng.*). The operation of lining a blast-hole with clay to prevent the charge from getting damp.

cleading (*Eng.*). *Lagging* (q.v.).

cleading (*Hyd. Eng.*). The boarding of a coffer-dam or timber lock-gate.

clean (*Typog.*). Said of a proof sheet containing no corrections.

clean-up (*Elec. Eng.*). The improvement in the vacuum which occurs in an electric discharge tube or vacuum lamp consequent upon absorption of the residual gases by the glass.

cleaner (*Foundry*). A small brass tool used by a moulder to improve the finish of the surface of a mould. See **sleekers.**

cleaning eye (*San. Eng.*). See **access eye.**

cleaning-up (*Join.*). The operation of preparing the finished surface of joinery work.

clear (*Elec. Comm.*). A message is *in clear* when it is not coded.

clear (*Teleph.*). To take down all temporary connexions, in the form of plugs inserted into jacks, on the termination of a call.

clear lamp (*Illum.*). An electric filament lamp in which the bulb is made of clear glass.

clear span (*Build.*). The horizontal distance between the inner extremities of the two bearings at the ends of a beam.

clear-stuff (*Timber*). Timber which is free from knots, wane, shakes, doat, sapwood, and other blemishes.

clear water reservoir (*Hyd. Eng.*). See **service reservoir.**

clearance (*Eng.*). (1) The distance between two objects, or between a moving and stationary part of a machine.—(2) The angular backing-off given to a cutting tool in order that the heel shall clear the work.

clearance volume (*Eng.*). In a reciprocating engine or compressor, the volume enclosed by the piston and the adjacent end of the cylinder, when the crank is on the dead centre. See **compression ratio, cushion steam.**

clearcole (*Paint.*). A priming coat composed of size or glue with whiting and sometimes a little alum, used before applying limewashes or distemper, also as a foundation for gold-leaf. Also called CLERECOLE, CLAIRECOLLE.

clearing agent (*Biol.*). In microscopical technique, a liquid reagent which has the property of rendering objects immersed in it transparent and so capable of being examined by transmitted light.

clearing bath (*Photog.*). A bath specially used for clearing development or fixing stains from emulsions, before drying. The basis is generally chrome alum.

clearing foot (*Zool.*). In some *Phyllocarida*, a filamentous process of the second maxilla.

clearing hole (*Eng.*). A hole drilled slightly larger than the diameter of the bolt or screw which passes through it.

clearing signal (*Teleph.*). An indication, by means of a lamp, to a distant operator to disengage a circuit.

cleat (*Carp.*). A strip of wood fixed to another for strengthening purposes, or as a locating piece to ensure that another piece shall be in its correct position.

cleat wiring (*Elec. Eng.*). A system of wiring in which the wires are attached to the wall or other surface by cleats.

cleats (*Mining*). The main cleavage planes or joint planes in a seam of coal.

cleavage (*Bot., Zool.*). The series of mitotic divisions by which the fertilised ovum is transformed into a multicellular embryo.

cleavage (*Chem.*). (1) The splitting of a crystal along certain planes parallel to certain actual or possible crystal faces, when subjected to tension.—(2) The splitting up of a complex protein molecule into simpler molecules.

cleavage (*Geol.*). A property of rocks, such as slates, whereby they can be split into thin sheets. Cleavage is produced by intense pressures due to earth movement, and the cleavage planes are commonly highly inclined to the direction of the pressure which produced them.

cleavage-nucleus (*Zool.*). The nucleus of the fertilised ovum produced by the fusion of the male and female pronuclei: in parthenogenetic forms, the nucleus of the ovum.

cleaving-saw (*Tools*). See **pit-saw.**

cleft (*Bot.*). Deeply cut, but with the incisions not reaching to the midrib of the leaf.

cleft chestnut fencing (*Build.*). Fencing formed from cleft poles 2 in. to 6 in. apart, bound together with twisted wire, the fence being supported by posts about 7 ft. apart.

cleft palate (*Med.*). A gap in the roof of the mouth as a result of congenital maldevelopment, with or without hare-lip.

cleft timber (*Carp.*). Timber riven along the grain with an axe.

cleidot'omy (*Obstet.*). The cutting of the clavicles when the shoulders of the foetus prevent delivery in difficult labour.

cleis'tocarp (*Bot.*). An ascocarp in which the asci and ascospores form and ripen inside a completely closed outer wall, which breaks down, permitting the ultimate escape of the spores.

cleistocar'pous (*Bot.*). Said of a capsule which does not open by means of a lid.

cleis'togam'y (*Bot.*). The production of small flowers, often simplified and inconspicuous, which do not open, and in which self-pollination occurs. —*adjs.* **cleistogamic, cleistogamous.**

cleith'rum (*Zool.*). In some Fish, a bone of the pectoral girdle, situated lateral to each clavicle.

clench nailing (*Carp.*). A method of nailing pieces together in which the end of the nail, after passing right through the last piece, is bent back and driven into this piece, so that it may not be drawn out.

clep'sydra (*Horol.*). A water clock; the earliest known mechanism for indicating intervals of time. In its simplest form, water under a constant head flowed through an orifice into a cylinder, in which a float indicated the rise of the water level in the cylinder.

clerecole (*Paint.*). See **clearcole.**

clerk of works (*Build., Civ. Eng.*). The official appointed by the employer to watch over the progress of any given building works, and to see that contractors comply with requirements in connexion with materials and labour.

Cleveland Iron Ore (*Min.*). An ironstone consisting of iron carbonate, which occurs in the Middle Lias rocks of North Yorkshire near Middlesborough. The ironstone is oölitic and yields on the average 30% iron.

cliché, klē-shā (*Typog.*). A stereotype or electrotype plate. (French *clicher*, to stereotype.)

click (*Horol.*). A pawl or detainer used, in conjunction with a ratchet wheel, to permit rotation in one direction only.

clicks (*Radio*). Atmospheric disturbances of very short duration.

click method (*Radio*). A method of determining the resonant frequency of an oscillatory circuit, depending upon the click produced in the telephones of a heterodyne wavemeter when an oscillatory circuit coupled thereto is brought into resonance.

click spring (*Horol.*). The spring which holds the click in the teeth of the ratchet wheel.

clicker (*Typog.*). A compositor who receives copy and instructions from the overseer and distributes the work among his companions.

clicking department (*Boots and Shoes*). The department in which the uppers, linings, and various small fitments are cut out.

climate (*Meteor.*). The average weather conditions of a place. These comprise the mean daily temperature and the mean daily maximum and minimum temperature, the average humidity, amounts of cloud and sunshine and rainfall, direction and velocity of winds, all taken for each month and for the year. Climate depends on latitude, position with respect to oceans and continents, and upon local geographical conditions.

climatic climax (*Bot.*). A stable plant community maintained in any given area by the prevailing climatic conditions.

climatic community (*Bot.*). A plant community determined by the climate of the region in which it exists.

climatic factor (*Bot.*). A condition such as average rainfall, temperature, and so on, which plays a controlling part in determining the features of a plant community.

climatic zones (*Meteor.*). The earth may be divided into zones, approximating to zones of latitude, such that each zone possesses a distinct type of climate. Eight principal zones may be distinguished: a zone of tropical wet climate near the equator; two sub-tropical zones of steppe and desert climate; two zones of temperate rain climate; one incomplete zone of boreal climate with a great range of temperature in the northern hemisphere; and two polar caps of arctic snow climate.

climatology (*Meteor.*). The study of climate and its causes in relation to a particular region.

climax association (*Bot.*). The plant association which is stable under the influence of any given set of ecological factors.

climax community (*Bot.*). The stable type of vegetation which finally becomes established in any given habitat.

climax dominant (*Bot.*). A species which dominates a climax community.

climax species (*Bot.*). Any species of plant which is a characteristic member of a climax community.

climber (*Rail.*). The driving wheel of a rack-railway locomotive, meshing with the rack.

climbing form (*Civ. Eng.*). A type of form sometimes used in the construction of reinforced concrete walls for buildings. The wall is built in horizontal sections, the climbing form being raised, after the pouring of each section, into a position convenient for the pouring of the next higher section.

clinan'drium (*Bot.*). The part of the column in the flower of an orchid which bears or contains the anther.

clinch nailing (*Carp.*). See **clench nailing.**

clink (*Civ. Eng.*). A short pointed steel wedge used for excavation in hard gravel or road surfaces, for which purpose it is struck with a sledge hammer.

clink (*Plumb.*). A Scottish term for a welt joint in lead.

clinks (*Met.*). Internal cracks formed in steel by differential expansion of surface and interior during heating. The tendency for these to occur increases with the hardness and mass of the metal, and with the rate of heating.

clink-stone (*Geol.*). See **phonolite.**

clinker (*Eng.*). Incombustible residue, consisting of fused ash, raked out from coal- or coke-fired furnaces; used for road-making and as aggregate for concrete. See **breeze.**

clinkers (*Build.*). See **klinker brick.**

cli'nochlore (*Min.*). A variety of chlorite, occurring as tabular monoclinic crystals.

cli'nograph (*Drawing*). A form of adjustable set-square, the two sides forming the right-angle being fixed, while the third side is adjustable; it differs from the adjustable set-square in that no scale is provided to show the angular position of the third side in relation to the other two.

clinom'eter (*Surv.*). A hand instrument for the measurement of angles of slope.

clino-rhomboidal crystals (*Crystal.*). See **triclinic system.**

Clinton Limestones, Clinton Shales (*Geol.*). The Middle Niagara Series, well exposed in the Niagara Gorge section and locally including a bedded iron ore at the base, which supplies the iron works at Birmingham, Alabama.

clip screws (*Surv.*). The screws by which the two verniers of the vertical circle of a theodolite may be adjusted so as to eliminate index error. Also called ANTAGONISING SCREWS.

clipper (*Mining*). A man who attaches and detaches tubs to and from the rope of an endless rope haulage system.

clipping (*Acous.*). The loss of the initial or final speech-sounds in telephone transmission, due to the operation of voice-switching apparatus, which is required to prevent the circuit from singing. Obviated by the use of delay networks, so that the switching has time to operate the transmission circuits before the speech-currents pass their contacts.

Clipsham stone (*Build.*). An oölitic limestone, deep-cream or buff in colour, used as a building-stone; quarried from the Inferior Oölite at Clipsham, Oxfordshire.

clitel'lum (*Zool.*). A special glandular region of the epidermis of *Oligochaeta* which secretes the cocoon and the albuminoid material which nourishes the embryo.

clitoridec'tomy (*Surg.*). Surgical removal of the clitoris.

clitoridot'omy (*Surg.*). Circumcision of the female.

clit'oris (*Zool.*). In female Mammals, a small mass of erectile tissue, homologous with the glans penis of the male, situated just anterior to the vaginal aperture.

cloaca, klō-ā'ka (*San. Eng.*). A term for a sewer, arising from the names of those in ancient Rome.

cloaca (*Zool.*). Generally, a posterior invagination or chamber into which open the anus, the genital ducts, and the urinary ducts: in *Urochorda*, the median dorsal part of the atrium: in *Holothuroidea*, the wide posterior terminal part of the alimentary canal into which the respiratory trees open.

cloaci'tis (*Vet.*). Inflammation of the cloaca.

cloan'thite (*Min.*). See **chloanthite.**

clobbering (*Pot.*). A term applied to the decoration of Chinese blue and white china with flowers, etc., painted in enamel and fired.

clock (*Elec. Eng.*). See **counter.**

clock (*Horol.*). A timekeeper, other than a chronometer or watch. See **chiming clock, striking clock.**

clock meter (*Elec. Eng.*). An energy meter in which the current that passes causes a change in the rate of a clock. See **Aron meter.**

clock stars (*Astron.*). Those stars whose positions are taken as known, in determinations of time, longitude, and latitude by astronomical observations, and whose co-ordinates are tabulated in astronomical ephemerides such as the *Nautical Almanac*.

clock-watch (*Horol.*). A watch which strikes the hours.

clod (*Mining*). A hard earthy clay on the roof of a working place in a coal-seam, often a fireclay.

cloisonné, kloi-zon'ā (*Dec., etc.*). Enamel formed with vitreous powders placed in compartments made of wires, or thin strips of metal, soldered to the metal base.

clone (*Bot.*). The entire stock of plants obtained by budding, grafting, cuttings, or other means of vegetative multiplication from one original seedling: by extension, any stock of plants raised vegetatively from one original parent. In rubber cultivation, a tree which has been developed by grafting a bud from a high yielding rubber tree on to a seedling.

clone (*Zool.*). (1) The descendants of a single individual; a pure line.—(2) An asexually produced individual. a form of Sponge spicule.

clonus (*Zool.*). A series of muscular contractions in which the individual contractions are visible.

close annealing (*Met.*). The operation of annealing metal products (e.g. sheets, strip, and rod) in closed containers to avoid oxidation. Also called POT (or BOX) ANNEALING.

close-boarded fencing (*Build.*). Fencing formed of lapped feather-edged boarding posts bound together by two or three rails, the fence being supported by posts about 9 ft. apart, and having a gravel board along the bottom.

close-packed hexagonal structure (*Met.*). An arrangement of atoms in crystals which may be imitated by packing spheres; characteristic of a number of metals. The disposition of the atomic centres in space can be related to a system of hexagonal cells.

close plating (*Elec. Eng.*). The application of a thin sheet of metal by a process of soldering.

close shot (*Cinema.*). In motion-picture production, a shot that is not so close as a *close-up*; it may comprise, for example, two persons at a table. See **close-up.**

close string (*Carp.*). See **housed string.**

close-up (*Cinema.*). A shot in which one object, such as a face or hands, mainly fills the field of view.

close wall (*Build.*). A wall enclosing an area.

closed circuit (*Elec. Eng.*). An electrical circuit in which there is a complete path for the current to flow.

closed circuit (*Radio*). A circuit composed entirely of condensers, resistances, inductances, etc., of relatively small physical dimensions, as distinguished from an antenna circuit.

closed circuit (*Teleg.*). A circuit which is closed during both marking and spacing signals; if a spacing current is used, continuity is always indicated.

closed-coil winding (*Elec. Eng*). An armature winding in which the complete winding forms a closed circuit.

closed community (*Bot.*). A plant community which occupies the ground without leaving any spaces bare of vegetation.

closed-core transformer (*Elec. Eng.*). A transformer in which the magnetic circuit is entirely of iron, i.e. with no air gaps.

closed diaphragm (*Acous.*). A diaphragm which is not directly open to the air, but communicates with the latter through a horn, which serves to match the high mechanical-impedance of the diaphragm with the low radiation-impedance of the outer air.

closed magnetic circuit (*Elec. Eng.*). A magnetic circuit composed entirely of magnetic material; e g an iron ring.

closed pipe (*Acous*). A *stopped pipe* (q v.).

closed shed (*Textiles*). A term indicating that all warp threads in a loom are level or in the same plane.

closed slots (*Elec. Eng.*). In the rotor or stator of an electric machine, slots for receiving the armature winding which are completely closed at the surface and therefore in the form of a tunnel. Often called TUNNEL SLOTS.

closed stokehold (*Eng.*). A ship's boiler room closed in order that fans may maintain in it an air pressure slightly higher than atmospheric, so that forced draught may be provided to the furnaces. See **forced draught.**

closed traverse (*Surv*). A traverse in which the final line links up with the first line.

closed vascular bundle (*Bot.*). A vascular bundle which does not include any cambium, and cannot therefore increase in diameter.

closer (*Build.*). Any portion of a brick used, in constructing a wall, to close up the bond next to the end brick of a course. Also called a BAT.

closet (*Build.*). (1) A small chamber or side room; a recess, generally enclosed, for storing articles.—(2) A water-closet or privy.

closing department (*Boots and Shoes*). The department in which the sections forming the uppers are stitched together, the edges folded over, and the linings shaped to fit them.

closing error (*Surv.*). The distance, as computed from the field observations, between the final and the starting points in a closed traverse, these points being in fact coincident. Also called ERROR OF CLOSURE.

closing layer (*Bot.*). A sheet of closely packed cells lying across a lenticel, and preventing, more or less completely, the diffusion of gases and vapours through the lenticel.

closing membrane (*Bot.*). A thin portion of wall between the pits in adjacent cells, tracheides, or vessels.

closing-up (*Eng.*). In riveting, the process of forming the head on the projecting rivet shank.

clot (*Med.*). The semi-solid state of blood or of lymph when they coagulate.

cloth (*Textiles*). A fabric woven, felted, or knit from cotton, wool, silk, flax, ramie, jute, hemp, or hair, adapted for manufacture into wearing apparel or for other use.

cloth, focusing (*Photog.*). See **focusing cloth.**

clothing (*Struct.*). The covering (walls, roofing, etc.) applied to the structural framework of a steel-framed building.

clothing leather. Usually sheepskin, tanned, dyed, and treated with a cellulose finish to render it waterproof; used for sports clothing, etc.

clothing wool (*Textiles*). A wool of short fibre and good quality, suitable for the manufacture of woollen fabrics.

cloud (*Meteor.*). A mass of water droplets remaining more or less at a constant altitude. Cloud is usually formed by condensation brought about by warm moist air which has risen by convection into cooler regions and has been cooled thereby, and by expansion, below its dew point.

cloud (*Textiles*). Yarn made by twisting together two threads of different colours. The rate of delivery of the threads being twisted is not constant but is varied so that each colour in turn predominates.

cloud-burst (*Meteor.*). A popular but erroneous expression for an extremely heavy downpour of rain, leading to flooding if occurring in restricted land areas. It arises chiefly from the rapid cessation of rising air, as when a cloud is driven up over a mountain ridge.

cloud negative (*Photog.*). A negative taken of clouds, for subsequent use in adding skyscape to otherwise cloudless landscapes while printing.

cloud point (*Chem*). The temperature at which paraffin wax or other solid substances begin to crystallise out or separate from solution, when a petroleum oil is chilled under definite prescribed conditions.

clouded ware (*Pot.*). Pottery coloured with, usually, manganese, copper, cobalt, or antimony, the colour being put on with a sponge.

clouding (*Paint.*). *Blooming* (q.v.).

cloudy (*Textiles*). The term used to indicate uneven shade, due to faulty dyeing or finish.

cloudy swelling (*Med*). A mild degenerative change in cells in which the swollen cloudy appearance is due to the presence of small granules of protein.

cloudy web (*Cotton Spinning*). A web of fibres from the doffer of a carding engine uneven in density throughout.

clout nail (*Build.*). A nail having a large, thin, flat head.

clover disease (*Vet.*). A type of fagopyrism.

cloves oil (*Chem*). An oil obtained from the flowers of *Eugenia aromatica*. It is a pale-yellow, volatile liquid, of strong aromatic odour; b.p. 250°-260° C., sp. gr. 1·048-1·070.

club (*Zool.*). In Insects, the distal joints of the antenna, when they are enlarged.

club foot (*Med.*). Deformity of the foot. See **talipes.**

club line (*Typog.*). A term used for the last (short) line of a paragraph. In common practice in the upmaking of a book, the occurrence of a club line at the top of a page is to be avoided. Also called BREAK LINE.

club-tooth escapement (*Horol.*). The most widely used escapement for watches and platform escapements. See **escapement.**

clubbing (*Med.*). Thickening of the ends of the fingers which occurs in chronic disease of the lungs.

clump or clunch (*Mining*). (1) A bend in a roadway or passage in a coal-seam.—(2) A large fall of roof.—(3) A tough fireclay.

clumps (*Typog.*). Metal spacing material thicker than 6-pt. or nonpareil.

clunch (*Mining*). See **clump.**

cluster (*Bot.*). A general term for an inflorescence of small flowers closely crowded together.

cluster cup (*Bot.*). The popular name for an *aecidium.*

clustered column (*Build.*). A column formed of several shafts bunched together.

clutch (*Build., Civ. Eng.*). A connecting bar used between adjacent flanges of I-section steel sheet piles to retain them in position. In section it consists of a web part running between a pair of adjacent piles, with curved 'flanges' which slide over and secure the flanges of the piles.

clutch (*Eng.*). A device by which two shafts or rotating members may be connected or disconnected, either while at rest or in relative motion.

See **centrifugal—**
cone—
disc (or **plate**)**—**
dog—
friction—
magnetic—

clutch arc lamp (*Illum.*). A type of automatic arc lamp in which the carbons are fed forward by the electromagnetic release of a clutch, as a result of the current falling below a certain predetermined value.

clutch stop (*Automobiles*). A small brake arranged to act on the driven member of a clutch when it is fully withdrawn to facilitate an upward gear change.

clypeal. *Adj.* from *clypeus.*

Clypeastro'ida, klip-ĕ-as— (*Zool.*). An order of *Echinoidea* in which the periproct and anus are eccentric, and the dorsal parts of the ambulacra are petaloid; the body is usually flattened; sand-living forms. Cake Urchins.

clyp'eate (*Bot.*). Shield-shaped.

clyp'eus (*Bot.*). A stroma formed in the leaf of the host plant by some parasitic *Ascomycetes.*

clypeus (*Zool.*). A sclerite of the head in Insects, lying immediately anterior to the frons.

clyster (*Med.*). An *enema* (q v.).

C.N. (*Chem.*). Abbrev. for *co-ordination number.*

cnemid'ium, kn— (*Zool.*). In Birds, the lower part of the leg, bearing usually scales instead of feathers.

cne'mis (*Zool.*). The shin or tibia.

cni'da (*Zool.*). See **cnidoblast.**

Cnida'ria (*Zool.*). A sub-phylum of *Coelenterata* the members of which are distinguished by the possession of stinging-cells or *cnidoblasts* (q.v.), and usually show radial symmetry; locomotion is by muscular action.

cni'doblast (*Zool.*). A thread-cell or stinging-cell, containing a nematocyst; characteristic of the *Cnidaria.*

cni'docil (*Zool*). A short sensory process or trigger-hair developed from the external part of a cnidoblast, stimulation of which causes the discharge of the nematocyst.

cni'dosac (*Zool.*). In *Siphonophora,* a battery of cnidoblasts borne on a tentacle, where it gives rise to a coloured swelling.

Cnidosporid'ia (*Zool.*). An order of *Neosporidia,* in which the spores possess polar capsules.

C.N.S. (*Zool*). A common abbrev. for *central nervous system.*

CO_2 recorder (*Eng.*). An instrument which analyses automatically the flue gas leaving a furnace, and records the percentage of carbon dioxide (CO_2) on a chart. See **exhaust gas analyser.**

CO_2 refrigerator (*Eng.*). A refrigerator in which the working agent is carbon dioxide (CO_2); used where leakage of a more noxious or toxic agent, as ammonia, would be objectionable. See **refrigerator.**

Co (*Chem.*). The symbol for *cobalt.*

co- (Latin *cum,* with). Prefix, often signifying *together.*

coacervate, kō-as'— (*Bot.*). Massed in a small heap.

coacervation (*Chem.*). The reversible aggregation of particles of an emulsoid into liquid droplets preceding flocculation.

coach screw (*Eng.*). A large wood screw with a square head which is turned by a spanner; used in heavy timber work.

coaction (*Ecol.*). The mutual relations existing between plant and plant, and between plant and animal.

coadaptation (*Biol.*). Correlated adaptation or change in two mutually dependent organs or organisms.

coagel, kŏ'a-jel (*Chem.*). A gel formed by coagulation.

coagulation, kō-ag— (*Biol.*). The irreversible setting of protoplasm on exposure to heat or to poisons.

coagulation (*Chem.*). The precipitation of colloids from solutions, particularly of proteins.

coagulation (*Med.*). The process of clotting of blood as a result of the interaction of enzymes, calcium, and a protein in the blood, in the presence of tissue injury.

coag'ulum (*Med.*). A clot.

coak (*Carp.*). A projection on one of the mating surfaces of a scarfed joint, fitting into a corresponding recess in the other surface. Also called TABLE.

coal (*Geol.*). A general name for firm brittle carbonaceous rocks; derived from vegetable debris, but altered, particularly in respect of volatile constituents, by pressure, earth movements, and a variety of other chemical processes.

coal ball (*Bot.*). A calcareous nodule crowded with petrified plant remains; found in some seams of coal.

coal-cutting machinery (*Mining*). Machinery for removing, by means of chain, disc, or bar cutters, a thin slice from the bottom of a coal-seam to facilitate the extraction of coal.

coal-gas (*Fuels, etc.*). Gas made by the carbonisation of fusible bituminous coal in town gas-works, in coke ovens (high-temperature process), and by low-temperature carbonisation. Calorific value of the first, per cubic foot, at 60° F. ranges from 475 to 550 B.Th.U.; that of low-temperature gas is about 890. The approximate percentage composition by volume of purified coal-gas is: hydrogen 48, methane 35, carbon monoxide 6, nitrogen 6, olefines 2-4, carbon dioxide 1, with traces of benzene hydrocarbons and acetylene.

coal pusher (*Eng.*). A steam-operated ram used in the tenders of some express locomotives to deliver the coal to within easy reach of the fireman.

coal-tar (*Chem.*). The distillation products of the high- or low-temperature carbonisation of coal. Coal-tar consists of hydrocarbon oils (benzene, toluene, xylene and higher homologues), phenols (carbolic acid, cresols, xylenols, and higher homologues), and bases, such as pyridine, quinoline, pyrrole, and their derivatives.

coales'cent (*Bot., Zool.*). Grown together, especially by union of the walls.

coalite or **semi-coke** (*Fuels*). Trade name for a smokeless fuel produced by carbonising coal at a temperature of about 600° C.; used for domestic purposes, calorific value per pound about 13,000 B.Th.U.

coarc'tate (*Zool.*). Said of pupae in which the last larval skin is retained as a covering; pressed together: having thorax and abdomen connected by a constricted portion.

coarctation (*Med.*). A narrowing or constriction, especially of the aorta near its origin from the heart.

coarse aggregate (*Civ. Eng.*). Gravel or crushed stone (forming a constituent part of concrete) which when dry will be retained on a sieve having ¼-in. diameter holes. See **aggregate.**

coarse-grained (*Geol.*). See **grain-size classification,** and *Table of Igneous Rocks* in Appendix.

coarse screen (*Typog.*). A term applied to half-tones for use on rough paper. The *screen* (q.v.) may be up to 85 lines to the inch.

coarse silt (*Geol.*). See **silt grade.**

coarse stuff (*Plast.*). A mixture of lime mortar and hair used as a first coat for plastering internal walls.

coastal refraction (*Radio*). The refraction, towards the normal, of waves arriving from sea to land at their incidence with the shore-line. The result is an appreciable error in radio direction-finding when bearings making a small angle with the shore-line are being measured.

coasting (*Elec. Eng.*). A term used in connexion with electric traction to denote running with the supply to the motors cut off and the brakes not applied.

coat (*Bot.*). (1) See **integument** (ovule).—(2) See **testa** (seed-coat).

coat (*Paint., Plast.*). A layer of paint or plaster.

coating (*Elec. Eng*). The metallic sheets or films forming the plates of a condenser.

coating (*Paint, Plast*). See **coat.**

coating machine (*Paper*). A machine which deposits a layer of mineral on paper. Brushes distribute the coating evenly, and the paper is then dried and calendered.

co-axial cable (*Television*). A type of cable in which a central conductor is surrounded by an outer tubular conductor, the dielectric being mainly air, with a minimum of solid insulating material. Its low attenuation makes it suitable for the transmission of video-frequency currents in television.

co-axial carbons (*Illum.*). Carbons in an arc lamp so arranged as to be in the same straight line with each other.

co-axial tube feeder (*Radio*). See **concentric tube feeder.**

coazervation (*Chem*). The separation of a lyophilic colloidal sol into two liquid phases.

cob (*Build.*). An unburnt brick.

cob wall (*Build.*). A wall built of puddled clay and straw, or of a mixture of straw, lime, and earth, laid without shuttering.

co'balt (*Met*). A metallic element in the eighth group of the periodic system. Symbol, Co. It is magnetic below 1075° C., and can take a high polish. At. no. 27, at. wt. 58·94, valency 2 or 3, m.p. 1480° C., elec. resist. at 20° C. $6{\cdot}35 \times 10^{-6}$ ohms/cm^3. Tensile strength (commercial, containing carbon) 29 tons/sq. in. Similar in properties to iron, but harder; used extensively in alloys.

cobalt bloom (*Min.*). See **erythrite.**

cobalt glance (*Min.*). See **cobaltite.**

cobalt oxide (*Chem.*). CoO. Used to produce a deep-blue colour in glass, and in small quantity to counteract the green tinge in glass caused by the presence of iron.

Cobalt Series (*Geol.*). The upper of the two main divisions of the Huronian in the Canadian Shield. It comprises the Gowganda Boulder Bed, probably a fossil boulder clay, striped jaspers, and quartzites.

cobaltif'erous wad (*Min.*). An impure hydrated oxide of manganese containing up to 30% of cobalt.

co'baltite or **cobalt glance** (*Min.*). Sulphide and arsenide of cobalt, crystallising in the cubic system; usually found massive and compact with smaltite.

cobble (*Geol.*). See **boulder.**

cobblestone (*Civ. Eng.*). A smallish roughly squared stone used for paving purposes; largely superseded nowadays by setts.

cobbling (*Textiles*). Re-dyeing a fabric in order to perfect the shade.

cobwebby (*Bot.*). Covered with delicate, long, interlaced hairs.

cocaine (*Chem.*). A coca-base alkaloid, the methyl ester of benzoyl-*l*-ecgonine; m.p. 98° C. Used as a local anaesthetic.

Coccidiomor'pha, kok-sid'i-o— (*Zool.*). An order of *Telosporidia*, in which the adult trophozoite is an intracellular parasite, and in which schizogony alternates with sporogony.

coccidio'sis (*Vet.*). A contagious infection of animals and birds due to protozoa of the genera *Eimeria* and *Isospora.*

coccin (*Photog.*). A red dye for reducing or removing transparent parts of negatives.

coccin'eous (*Bot.*). Bright-red.

coccoid (*Bot.*). Unicellular, motionless in the vegetative condition, but liberating motile zoospores or gametes.

coc'colith (*Zool.*). In some *Mastigophora*, a small calcareous exoskeletal plate.

coccus (*Bot.*). (1) A one-seeded portion formed by the break-up of a dry fruit.—(2) A minute spherical bacterium.

coccydyn'ia, kok-si— (*Med.*). Severe pain in the coccyx.

coccygec'tomy (*Surg.*). Excision of the coccyx.

coccyge'omesenter'ic (*Zool.*). (In Birds) said of a vein which receives blood from the caudal vein and passes it into the hepatic portal vein; it lies in the mesentery supporting the intestine.

coccygodynia (*Med.*). See **coccydynia.**

coccyx, kok'siks (*Zool.*). A bony structure in *Primates* and *Amphibia*, formed by the fusion of the caudal vertebrae: urostyle.—*pl.* **coccy'ges.**—*adj.* **coccyg'eal.**

cochineal' (*Chem.*). The dried bodies of female insects of *Coccus cacti.* The colouring matter is carminic acid, $C_{17}H_{18}O_{10}$, soluble in water and alcohol.

cochlea, kok-lē'a *or* kok'-lēa (*Acous., Zool.*). In Mammals, the complex spirally coiled part of the inner ear which translates mechanical vibrations into nerve impulses.—(*Bot.*) A tightly coiled pod.

coch'lear. *Adj.* from *cochlea*: spoon-shaped.

cochlear'iform (*Bot., Zool.*). Rounded and concave, like a spoon.

cochleate (*Bot., Zool.*). Spirally twisted, like the shell of a snail: cochleariform.

cock (*Eng.*). See **plug cock.**

cock (*Horol.*). A carrier or bracket for a pivot.

cock (*Plumb.*). A type of water-valve in which flow passes through a hole in a plug which is located transversely across the direction of the pipe.

cock-bead or **cocked bead** (*Join.*). A bead projecting from the surface which it is decorating.

cockpit (*Aero.*). The opening in the fuselage or hull of an aircraft for the accommodation of the occupants of the machine, where a closed cabin is not provided.

cockspur fastener (*Build.*). A bronze or iron fastener for casement windows, used in conjunction with a stay bar and pin.

cock-up (*Typog.*). A large initial that extends above the first line and ranges at the foot.

cocket centring (*Civ. Eng.*). Arch centring which leaves some head-room above the springing line.

cocking (*Carp.*). See **cogging.**

cockle-stairs (*Carp*). Winding stairs.

cockled hair (*Furs*). Twisted hair, standing up.

cockling (*Textiles*). A defect in the surface of a fabric due to variable counts of yarn, variable yarn tension, or irregular shrinkage during finishing.

cockscomb (*Min.*). Aggregates of pyrite, formerly thought to be marcasite crystals, found in the Chalk.

coconut oil (*Chem.*). The oil obtained from the fruit of the coconut palm; a white waxy mass, m.p. 20°-28° C., sp. gr. 0·912, saponification value 250-258, iodine value 8·9, acid value 5-50.

cocoon (*Zool.*). In Insects, a special envelope constructed by the larva for protection during the pupal stage; it consists either of silk or of extraneous material bound together with silk.—Specifically (*Silk*), the envelope spun by the fully grown silkworm round itself as a protective covering when entering the chrysalid state. If intended for silk manufacture, the cocoon is submitted to a heat of 60 to 90 degrees for about three hours to destroy the pupa, and the thread is subsequently reeled.

cod liver oil (*Chem.*). Oil obtained from fresh livers of cod fish; a yellow or brown liquid, of characteristic odour, very rich in vitamins, sp. gr. 0 992-0·930, saponification value 182-189, iodine value 141-159, acid value 204-207.

Codd cell (*Elec. Eng.*). A single fluid cell with zinc and carbon as electrodes and picric chloride as a depolariser. The carbon electrode lies horizontally at the bottom of the cell and is covered with an inert powder.

codding (*Build.*). The Scottish equivalent for *template* (q.v.).

code (*Civ. Eng*). A collection of rules prepared as a basis for securing uniformity of practice and an adequate standard of workmanship in a particular type of work.

code (*Teleg.*). The list of impulse combinations corresponding to letters or figures, or other significant combinations, required to be transmitted telegraphically.

See **Baudot—**
cable—
five-unit—
Morse—

code selector (*Auto. Teleph.*). A selector which is operated by impulses corresponding to an exchange code, i.e. the first three trains of impulses in a director area, either for finding first numerical selectors, or routes to the required exchange.

coded call indicator (*Teleph.*). A *call indicator* (q.v.) system in which the dialled impulses are translated into a more rapid system of transmission than with normal trains; e.g. by marginal currents.

coded call indicator working (*Auto. Teleph.*). The use, in a call indicator system, of marginal currents instead of impulse trains, in order to transmit the required numerals for display more speedily.

co'deine (*Chem.*). $C_{18}H_{21}O_3N$, an alkaloid of the morphine group, the methyl derivative of *morphine* (q v.).

coder (*Auto. Teleph.*). The arrangement for translating digit-trains of impulses into marginal currents, for their more rapid transmission and subsequent operation of display panels.

co-dominant (*Bot.*). One of two or more species, which together dominate a plant community.

coefficient (*Phys., etc.*). A numerical constant prefixed as a multiplier to a variable quantity, in calculating the magnitude of a physical property. Thus, if the *coefficient of expansion* of brass is ·000018, the expansion of a brass rod of length l heated through t° would be $\cdot000018lt$.—(*Maths.*) See **binomial—*, differential—*, partial differential—*.**

coefficient of absorption. See **absorption coefficient, absorption factor.**

coefficient of amplification (*Thermionics*). *Amplification factor* (q.v.).

coefficient of apparent expansion (*Phys.*). See **apparent expansion (coefficient of).**

coefficient of compressibility (*Chem.*). A measure of deviation of a gas from Boyle's law.

coefficient of contraction (*Hyd.*). (Of an orifice from which fluid is discharged under pressure) the ratio of the area of the smallest section of the jet to the area of the orifice. See **vena contracta.**

coefficient of coupling (*Radio*). See **coupling coefficient.**

coefficient of detection (*Radio*). See **detector coefficient.**

coefficient of discharge (*Hyd.*). (Of an orifice from which fluid is discharged under pressure) the ratio of the actual discharge to the theoretical discharge; the product of the coefficient of velocity and contraction.

coefficient of dispersion (*Elec. Eng.*). See **dispersion coefficient.**

coefficient of elasticity (*Mech.*). See **elasticity.**

coefficient of equivalence (*Met.*). See **equivalence (coefficient of).**

coefficient of expansion (*Heat*). See **expansion (coefficient of).**

coefficient of fineness of water-plane (*Ship Constr.*). The area of a ship's load water-plane divided by the product of breadth (mld) and length (B.P.).

coefficient of friction (*Mech.*). See **friction.**

coefficient of mutual induction (*Elec. Eng.*). See **mutual inductance.**

coefficient of perception (*Illum.*). A term used in connexion with the effect of glare; equal to the reciprocal of Fechner's constant.

coefficient of performance (*Eng.*). A measure of the efficiency of a refrigerator. It is the ratio of the heat removed from the cold body to the heat equivalent of the work done by the machine.

coefficient of reflection (*Illum.*). See **reflection factor.**

coefficient of restitution (*Mech.*). See **impact.**

coefficient of rigidity (*Mech.*). See **rigidity (modulus of).**

coefficient of self-induction (*Elec. Eng.*). See **self-inductance.**

coefficient of utilisation (*Illum.*). A term used in lighting calculations to denote the ratio of the useful light to the total output of the installation.

coefficient of velocity (*Hyd.*). (Of an orifice discharging a fluid under pressure) the ratio of the actual velocity of discharge to the theoretical velocity.

coefficient of viscosity (*Phys.*). See **viscosity.**

-coele (*Zool.*). A suffix derived from the Greek *koilia*, large cavity (of the belly).

Coelentera'ta, sēl— (*Zool.*). A phylum of *Metazoa* comprising forms which are of aquatic habit; they show radial or biradial symmetry; possess a single cavity in the body, the enteron, which has a mouth but no anus; and generally have only two germinal layers, the ectoderm and the endoderm, from one of which the germ cells are always developed. Polyps, Corals, Sea-anemones, and Jelly-fish.

coelen'teron (*Zool.*). The digestive body cavity of *Coelenterata.*

coel'iac (*Zool.*). In Vertebrates, pertaining to the belly or abdomen.

coeliac disease (*Med.*). A wasting disease of childhood in which failure to absorb fat from the intestines is associated with an excess of this substance in the faeces.

coelocon'ic (*Zool.*). Said of papillae which lie in pits, from which the apex does not project; as the *coeloconic sensillae* of Insects.

coelom, sē'lom (*Zool.*). The secondary body cavity of animals, which is from its inception surrounded and separated from the primary body cavity by mesoderm.—*adjs.* **coelo'mic, coel'omate.**

Coeloma'ta (*Zool.*). A group of *Metazoa*, including all those animals which possess a *coelom* (q.v.) at some stage of their life-history.

coel'omere (*Zool.*). In metameric animals, the portion of coelom contained within one somite.

coelo'moduct (*Zool.*). A duct of mesodermal origin, opening at one end into the coelom, at the other end to the exterior.

coelo'mopores (*Zool.*). In living *Tetrabranchiata*, openings by which the pericardium communicates with the exterior.

coelo'mostome (*Zool.*). In Vertebrates, the ciliated funnel by which the nephrocoel opens into the splanchnocoel.

Coelomyce'tes (*Bot.*). A large group of *Fungi imperfecti*, which form their spores within a cavity in the matrix whereupon they grow.

coelosper'mous (*Bot.*). Having boat-shaped seeds.

coel'ostat (*Astron.*). An instrument consisting of a mirror (driven by clock-work) rotating about an axis in its own plane, and pointing to the pole of the heavens. It serves to reflect, continuously, the same region of the sky into the field of view of a fixed telescope.

coelozo'ic (*Zool.*). Extra-cellular: living within one of the cavities of the body.

coene'cium (*Zool.*). In colonial *Polyzoa*, the common body bearing the zooids.

coenen'chyma (*Zool.*). The hard matter filling up the spaces between adjacent polyps of a compound coral.

coeno'bium (*Bot.*). A group of algal cells, having a definite form and organisation, behaving as an individual, and giving rise to daughter coenobia of the same kind.

coenocen'trum or **central body** (*Bot.*). A globular mass of deeply staining material lying round or near the nucleus in the oögonia of some *Oömycetes*.

coenocy'tia (*Zool.*). Multinucleate syncytial tissues formed by the division of the nucleus without the division of the cell, as striated muscle fibres and the trophoblast of the placenta.

coenocyt'ic (*Bot.*). Containing a number of nuclei, but not divided into separate cells by walls.

coenogametan'gium (*Bot.*). A gametangium in which a coenogamete is formed.

coenogam'ete (*Bot.*). A multinucleate body which functions as a gamete.

coe'nosarc (*Zool.*). The tubular common stem uniting the individual polyps of a hydroid colony.

coenos'teum (*Zool.*). In *Corals* and *Hydrocorallinae*, the common calcareous skeleton of the whole colony.

coenozy'gote (*Bot.*). The body resulting from the fusion of two coenogametes.

coenuro'sis (*Vet.*). Infection of the brain of sheep by the 'bladderworm' or intermediate stage, *Multiceps multiceps* (syn. *Coenurus cerebralis*), of the tapeworm *Taenia multiceps* of Carnivora.

coenu'rus (*Zool.*). A bladderworm, possessing a well-developed bladder with many scolices.

co-enzyme (*Chem.*). An enzyme which can effect a chemical reaction, e.g. fermentation, only in conjunction with another enzyme.

coercive force (*Elec. Eng.*). The magnetising force which has to be applied to annul the residual magnetism of a substance. Also called COERCIVITY or COERCIVE INTENSITY.

coffer (*Build.*). A sunk panel in a ceiling or soffit.

coffer (*Furn.*). A plain form of chest or long-box.

coffer (*Hyd. Eng.*). A canal lock-chamber.

coffer-dam (*Civ. Eng.*). A temporary wall serving to exclude water from any site normally under water, so as to facilitate the laying of foundations or other similar work.

coffer work (*Masonry*). Rubble-work with stone facings.

coffering (*Civ. Eng.*, *Mining*). The operation involved in the construction of dams (see **coffer-dam**) for impounding water.

cog (*Build.*). See **nib.**

cog (*Carp.*). The solid middle part left between the two notches cut in the lower timber in a cogging joint.

cogs (*Eng.*). Separate wooden teeth, formerly used in gear-wheels.

cog-wheel ore (*Min.*). A miners' name for bournonite.

cogging (*Carp.*). A form of jointing used to connect one beam to another across which it is bearing. Notches as long as the top beam is wide are cut in the top surface of the lower beam opposite one another, so as to leave a solid middle part, and the upper beam has a small transverse groove cut in it, to fit over this solid middle part. Also called CAULKING, COCKING, CORKING.

cogging (*Met.*). The operation of rolling or forging an ingot to reduce it to a bloom or billet.

cognition (*Psychol.*). Intellectual perception, e.g. ideas and reasons. See **conation.**

coherent (*Bot.*). United, but so slightly that the coherent organs can be separated without very much tearing.

coherer (*Radio*). An early form of detector of electromagnetic waves, in which the resistance of an imperfect contact is abruptly reduced by the passage of high-frequency currents.

See **Branley—**
Lodge-Muirhead—
Marconi—

cohesion (*Bot.*). The union of plant members of the same kind, as when petals are joined in a sympetalous corolla.

cohesion (*Phys.*). The attraction between the molecules of a liquid which enables drops and thin films to be formed. In gases the molecules are too far apart for cohesion to be appreciable (but see **Joule-Thomson effect**).

cohesion mechanism (*Bot.*). Any mechanism in a plant, in particular one concerned with the dehiscence of a sporangium, which depends on the cohesive powers of water (i.e. that a mass of water resists disruption).

Cohnheim's areas (*Histol.*). In a transverse section of striated muscle, the small angular fields into which each fibre appears to be divided.

cohobation (*Chem.*). Successive re-distillation.

cohort (*Bot.*). A group of related families.

Coignet pile, kwon'yā (*Civ. Eng.*). A type of reinforced concrete pile, similar to the *Hennebique pile* (q.v.).

coil (*Elec. Comm.*). Any winding of conducting wire, with a core of air or of magnetic material, for providing inductance.

See **drainage—**
heat—
induction—
loading—
Pupin—
repeating—
retardation—
Ruhmkorff—
trip—

coil (*Elec. Eng.*). An arrangement of one or more convolutions of bare or insulated wire.

See **armature—**
blow-out—
choking—
compensating—

coil antenna (*Radio*). See **frame antenna.**

coil-drive (*Acous.*). The electrodynamic electromechanical transducer represented by a coil carrying an alternating current (e.g. speech current) moving in the air-gap of a magnet, the air-gap being generally circular.

coil heating (*Build.*). A form of *panel heating* (q.v.).

coil ignition (*Automobiles, etc.*). See **battery-coil ignition.**

coil-loaded cable (*Teleph.*). A cable containing conductors that are loaded with coil inductances at uniform intervals along the routes.

coil loading (*Elec. Comm.*). The added inductance, in the form of coils, inserted at intervals along an extended line. Cf. *continuous loading.*

coil-side (*Elec. Eng.*). That part of an armature coil lying in a single slot.

coil span (*Elec. Eng.*). A term used to denote the distance, measured round the armature periphery, between one side of an armature coil and the other; it is usually measured in electrical degrees or slots.

coil-span factor (*Elec. Eng.*). A factor introduced into the equation giving the e.m.f. of an electric machine, to allow for the fact that the coils have a fractional pitch and therefore do not embrace the whole flux.

coiled-coil filament (*Illum.*). A spiral filament for an electric lamp which is coiled into a further helix in order to reduce radiation losses and enable it to be run at a higher temperature.

coiled-coil lamp (*Illum.*). An electric filament lamp having a coiled-coil filament.

coiler (*Cotton Spinning*). The mechanism used with the carding engine and the draw frame to deliver the sliver in coils into the coiler cans.

coiler can (*Cotton Spinning*). A slowly rotating upright cylinder into which sliver from the carding engine and from the draw frame is delivered in coils.

coin box (*Teleph.*). A telephone station arranged for the collection of the charges for its use. The user places coins in slots in a box, and automatic indication of the money inserted is given to the operator.

coin box line (*Teleph.*). A line from a coin-box telephone station to an exchange, so arranged that by remote operation the operator can accept or reject the inserted fee and otherwise control the connexion.

coin-collector (*Elec. Eng.*). A mechanical device attached to energy meters, in order that the consumer may close a switch after the insertion of a given number of coins.

co'ition or **co'itus** (*Zool*). See **copulation.**

coke (*Fuels*). The solid residue from the carbonisation of coal after the volatile matter of the coal has been distilled off. Coke is used as a fuel, and in metallurgy as a reducing agent for metal oxides.—GAS COKE, solid fuel produced by the carbonisation of bituminous coal in a closed chamber known as a retort; the temperature of the charge ranging up to 1100° C.; the calorific value per pound is about 12,000 B.Th.U.—LOW TEMPERATURE COKE, this has a much higher percentage of volatile matter than gas and metallurgical cokes (10%) and a lower percentage of fixed carbon, about 83%.—METALLURGICAL COKE, a dense coke made from hard-caking bituminous coals, suitable for furnace and foundry use. It has a smaller percentage of volatile matter than gas coke (0·6% : 0·9-1·6%) and practically the same amount of fixed carbon.—SEMI-COKE, see **coalite.**

coke breeze (*Build.*). The smaller grades of coke from coke ovens or gasworks, used in the manufacture of breeze concrete.

coke mill (*Foundry*). A small mill for pulverising coke, used in the preparation of *blacking* (q.v.).

coke oven gas (*Fuels*). Gas produced in the manufacture of hard cokes from hard-caking bituminous coals; calorific value per cubic foot, at 60° F., about 520 B.Th.U.

coke ovens (*Fuels*). Large ovens in which hard-caking bituminous coal is subjected to a long process of carbonisation at high temperatures. See **coke (metallurgical).**

cokes (*Tinplates*). Originally, tin plates made from wrought-iron produced in a coke furnace. The term is now applied to plates with a thinner tin coating. See **charcoal.**

col (*Meteor.*). The region between two centres of high pressure, or anticyclones, so called by analogy with the *col* between neighbouring mountain peaks.

co-latitude (*Astron.*). The complement of the latitude, terrestrial or celestial, namely the angular distance (90°−latitude). On the celestial sphere it is, therefore, the angular distance between the celestial pole and the observer's zenith, and also the meridian altitude of the celestial equator above the observer's horizon.

Colby's bars (*Surv.*). Compensated bimetallic bars 10 ft. long, arranged to show an unvarying length despite temperature change; used for base-line measurement in the Ordnance Survey of the United Kingdom.

col'chicine (*Chem.*). $C_{22}H_{25}O_6N$, an alkaloid of unknown constitution, obtained from autumn crocus, *Colchicum autumnale*; pale yellow needles, m.p. 155°-157° C.

cold (*Med.*). Common cold. An acute infectious catarrh of the nasal mucous membrane thought to be due to a filter-passing organism.

cold bend (*Eng.*). A test of the ductility of a metal; it consists of bending a bar when cold through a certain specified angle.

cold-blooded (*Zool.*). (Of animals) having a bodily temperature which is dependent on the environmental temperature. Cf. *warm-blooded.*

cold cathode (*Thermionics*). An electrode from which electronic emission takes place by virtue of a high potential-gradient at the surface at normal temperatures.

cold-cathode discharge lamp (*Illum.*). An electric discharge lamp in which the cathode is not heated, the electron emission being produced by a high voltage gradient at the cathode surface.

cold-cathode rectifier (*Thermionics*). A rectifier for low-frequency alternating currents, comprising a convex cathode and a concave anode placed close together in a gas at low pressure.

cold chisel (*Eng*). A chisel for chipping or cutting away surplus metal; it is used with a hand hammer. Different forms of cutting edges (e.g. flat, cross-cut, half-round) are used for various purposes. See **cross-cut chisel, flat chisel.**

cold-drawing (*Eng.*). The process of producing bar or wire by drawing through a steel die without heating the material. See **wire-drawing.**

cold emission (*Thermionics*). See **auto-emission.**

cold front (*Meteor.*). The leading edge of an advancing mass of cold air, usually attended by line-squalls and heavy showers.

cold-heading (*Eng.*). The process of forming the heads of bolts or rivets by upsetting the end of the bar without heating the material.

cold moulding (*Plastics*). A bituminous moulding powder containing a drying oil or varnish and a large percentage of filler is pressed together cold. The moulded article is then baked in an oven to dry, shrink, and harden, after which it may be only slightly thermoplastic.

cold pressing (*Acous.*). A defect in gramophone-record pressing, due to the material not having reached a sufficiently high temperature for adequate flow and consequent definition of track. The indication is a lack of lustre on the black surface.

cold, production of (*Phys.*). See **refrigeration.**

cold riveting (*Eng.*). The process of closing a rivet without previous heating; confined to small rivets.

cold-rolled (*Met.*). Said of metal that has been rolled at a temperature close to atmospheric. The cold-rolling of metal sheets results in a smooth surface-finish.

cold-saw (*Eng.*). A metal-cutting circular saw for cutting steel bars to length. The teeth may be either integral with the disc or inserted.

cold sett (set or sate) (*Eng.*). A smith's tool similar to a short, stiff cold chisel; used for cutting bars, etc. without heating. It is supported by a metal handle and struck with a sledge-hammer.

cold short (*Met.*). Brittle at atmospheric temperature.

cold shut (*Foundry*). A casting imperfection due to metal entering the mould by different gates or sprues, cooling and failing to unite on meeting.

cold storage. See **refrigeration.**

cold-water test. See **hydraulic test.**

cold wave (*Meteor.*). The fall of temperature following the passage of a depression.

cold-working (*Met.*). The operation of shaping metals at or near atmospheric temperature by rolling, pressing, drawing, stamping, or spinning. See also **work-hardening.**

colec'tomy (*Surg.*). Excision of the colon.

colemanite (*Min.*). Hydrated calcium borate, crystallising in the monoclinic system; occurs as nodules in clay found in California and elsewhere.

co'leogen (*Bot.*). The layer of meristematic cells from which the endodermis is formed.

Coleop'tera (*Zool*). An order of *Endopterygota*, having the fore-wings or elytra thickened and chitinised, meeting in a straight line; the hind-wings, if present, are membranous; the mouth-parts are adapted for biting and the second maxillae are fused; the larvae are either sluggish and grub-like, or active and carnivorous. Beetles.

coleop'teroid (*Bot.*). Said of a seed or fruit which looks like a beetle.

coleop'tile (*Bot*). The first leaf to appear above ground in a seedling of a grass; it forms a sheath around the younger leaves within it, and contains little or no chlorophyll.

coleorhi'za or **coleorrhiza** (*Bot.*). A layer of protective cells on the tip of the radicle of the embryos of some flowering plants.

Coley's fluid (*Med.*). A mixture of cultures of streptococci and *B. prodigiosus*; used in the treatment of malignant tumours.

colibacillae'mia or **colibacillemia** (*Med.*). The presence of *B. coli* in the blood.

colibacillo'sis (*Vet*). Infection by *B. coli*. See also **pyosepticaemia.**

colibacillu'ria (*Med*). The presence of *B. coli* in the urine.

colic (*Med., Vet.*). Severe spasmodic pain in the belly due to affections of abdominal organs; e.g. kidney, gall-bladder, intestines.

coli'tis (*Med.*). Inflammation of the colon.

col'labent (*Bot.*). Collapsing, falling in, sunken in the middle.

col'lagen or **col'logen** (*Chem., Zool.*). A scleroprotein, occurring in the connective tissue, bone, and cartilage of animals, which is converted into gelatine on boiling with water: ossein.

collapse (*Med.*). Extreme prostration and depression of vital functions.

collapse of lung (*Med.*). An airless state of the lung, caused by obstruction of a bronchus, or occurring reflexly after abdominal operation.

collapse therapy (*Med.*). The treatment of lung disease by compression of the affected area; e.g. by injecting air between the layers of the pleura.

collapsing (*Bot.*). Falling together into a brush-like form.

collar (*Arch., Furn.*). A band, either flat or slightly concave, plain or decorated, around a column or around the leg of a chair or table.

collar or **collet** (*Bot.*). The junction between the stem and root of a plant, usually situated at soil level.

collar (*Eng.*). A ring of rectangular section secured to a shaft to provide axial location with respect to a bearing: a similar ring formed integral with the shaft.

collar (*Zool.*). The rim of a choanocyte: in *Hemichorda*, a collar-like ridge posterior to the proboscis: in *Gastropoda* with a spiral shell, the collar-like fleshy mantle edge protruding beyond the lip of the shell: more generally, any collar-like structure.

collars (*Met.*). In rolling mills, the sections of larger diameter separating the grooves in rolls used for the production of rectangular sections.

collar and clamp (*Civ. Eng.*). A form of dock-gate hinge, otherwise known as *anchor and collar* (q.v.).

collar beam (*Carp.*). The horizontal connecting beam of a collar-beam roof.

collar-beam roof (*Build.*). A roof composed of two rafters tied together by a horizontal beam connecting points about half-way up the rafters.

collar cell (*Zool.*). See **choanocyte.**

collar cloth (*Textiles*). A cotton fabric, generally formed from a face cloth and a back cloth bound together by a stitching warp, used for collars.

collar-headed screw (*Eng.*). A screw in which the head is provided with an integral collar; used where fluid leakage may occur past the threads.

collaring (*Met.*). The term used to indicate that metal passing through a rolling mill follows one of the rolls so as to encircle it.

collate (*Bind.*). To put the sections of a book into the right order, ready for binding. In modern practice, to check the sections after *gathering* (q.v.).

collateral (*Zool.*). (1) Running parallel or side by side.—(2) Having a common ancestor several generations back.

collateral bud (*Bot.*). A bud inserted by the side of an axillary bud.

collateral bundle (*Bot.*). A vascular bundle with a strand of xylem and a strand of phloem lying externally to it and on the same radius.

collateral siphon (*Zool.*). In *Echiuroidea*, a tube of unknown function which runs parallel to the intestine and opens into it at both ends.

collecting cell (*Bot.*). A thin-walled cell of the mesophyll of a leaf, lying below, and in intimate contact with, one or more cells of the palisade layer, from which it takes elaborated food material.

collecting electrode (*Elec. Eng.*). See **passive electrode.**

collecting lens (*Cinema.*). In a multiple condensing lens, the component lens which is nearest the light source.

collective drive (*Elec. Eng.*). A term used in connexion with electric locomotives to denote a drive in which all the driving wheels are coupled and driven by a single motor. Cf. *individual drive.*

collective fruit (*Bot*). A fruit derived from several flowers, as a mulberry.

collective unconscious (*Analytical Psychol.*). A term used by Jung to denote that part of the unconscious mind which is inherited, and which contains, therefore, the instinct and primitive patterns of thought, which are collective rather than personal.

collector (*Elec. Eng.*). (1) A set of slip rings on an electrical machine and their supporting structure.—(2) That part of an influence machine which collects the charge.

See **comb—** **current—**

collector rings (*Elec. Eng.*). See **slip rings.**

collector shoe (*Elec. Eng.*). A metal shoe used on the vehicles of an electric traction system to maintain contact with the conductor-rail.

collector strip (*Elec. Eng.*). See **contact strip.**

Collem'bola (*Zool.*). An order of *Apterygota* having not more than six abdominal somites; the antennae have few joints; anal cerci and abdominal appendages are lacking; there is a ventral adhesive apparatus associated with the first abdominal somite and a saltatorial appendage posteriorly; Malpighian tubules and a tracheal system are absent; usually found under stones and leaves. Spring Tails.

collen'chyma, *or* **—len-ki'ma** (*Bot.*). A mechanical tissue characteristic of petioles and of young stems. It usually lies close to the periphery, and consists of elongated cells with their walls strengthened by longitudinal strips of cellulose thickening material, so that the cell walls are not of uniform thickness.

collenchyma (*Zool.*). A form of parenchyma occurring in Sponges, having scattered stellate cells embedded in a gelatinous matrix.

col'lencyte (*Zool.*). In Sponges, one of the cells composing a collenchyma.

Colles's fracture (*Surg*). Fracture of the lower part of the forearm above the wrist.

collet (*Bot.*). See **collar**.

collet or **collet chuck** (*Eng.*). An externally coned sleeve, slotted along one side and arranged to be drawn into the internally coned nose of a lathe mandrel, for the purpose of gripping small circular work.

collet (*Horol.*). A circular flange or collar: the collar held friction-tight on a balance staff, to which the inner end of the balance spring is pinned.

col'leter (*Bot.*). A plant hair which secretes mucus, often present on the outside of bud scales, and on the petals of some flowers.

collete'rial (*Zool.*). Glue-producing; as the *colleterial glands* of some female Insects which produce an adhesive substance that later forms the oötheca.

collic'ulose (*Bot.*). Said of a surface covered with small rounded upgrowths.

collic'ulus (*Zool.*). A small prominence; as a small prominence of the surface of the optic lobe of the brain, a rounded process of the arytaenoid cartilage.

col'ligative properties (*Chem.*). Those properties of solutions which depend only on the concentration of dissolved particles, ions, and molecules, and not on their nature.

collimation. The process of aligning the various parts of an optical system. (The word is falsely derived from the Latin *collineare, -atum,* to bring together in a straight line.)

collimation error (*Surv.*). An error produced in levelling or in theodolite work when the line of collimation is out of its correct position; the latter, for the level, is parallel to the bubble line and perpendicular to the vertical axis of rotation of the instrument, and for the theodolite it is in addition perpendicular to the trunnion axis.

collimation, line of (*Surv.*). In a surveying telescope, the imaginary line passing through the optical centre of the object glass and the intersection of the cross-hairs in the diaphragm.

collimation, plane of (*Surv.*). The imaginary surface swept out by the *line of collimation* (see above) of a levelling instrument, when its telescope is rotated about its vertical axis.

collimation system (*Surv.*). A system of reduction of levels in which the staff reading at any point is subtracted from the corresponding height of the plane of collimation of the instrument to give the reduced level of the point. See **rise-and-fall system.**

col'limator (*Optics*). A device for obtaining a beam of parallel light. In a spectroscope, the collimator consists of a fine slit at the principal focus of a convex lens. Light from the illuminated slit is rendered parallel by the lens before falling on the prism or grating.

collineation. See **collimation.**

colliq'uative softening (*Med.*). The absorption of water by diseased tissue, which then disintegrates.

collision, ionisation by (*Phys.*). The removal of one or more electrons from an atom by its collision with another particle such as another electron or an α-particle. This process is very prominent in the electrical discharge through a rarefied gas.

col'loblast (*Zool.*). See **lasso-cell.**

collo'dio-chloride paper (*Photog.*). An early printing paper in which the medium, collodion, carried silver nitrate and lithium and strontium chlorides. Gold and platinum toning was usual with this type of emulsion.

collodion (*Chem.*). A cellulose tetranitrate, soluble in a mixture of alcohol and ether (1:7); the solution is used for coating materials and in medicine for treating wounds and burns.—(*Photog.*) In wet-plate processes, collodion is the medium in which the silver salts are held, after the alcohol and ether solution has been evaporated from the pyroxilin.

colloid (*Chem.*). A substance which readily assumes the colloidal state.

colloid equivalent (*Chem.*). The number of atoms sharing unit charge.

colloid goitre (*Med.*). Abnormal enlargement of the thyroid gland due to accumulation in it of the viscid iodine-containing colloid.

colloid rectifier (*Elec. Eng.*). A rectifier with a cathode of colloidal particles in suspension in a liquid which is not electrolysable.

colloid'al dye (*Photog*). A dye with particles of multimolecular dimensions.

colloidal electrolyte (*Chem.*). An electrolyte, such as a soap solution, in which the ions are of colloidal size.

colloidal filament (*Illum.*). A metal filament for electric filament lamps which is prepared by the use of colloidal substances.

colloidal fuel (*Eng.*). A mixture of fuel oil and finely pulverised coal, which remains homogeneous in storage; its calorific value is high, and it is used in oil-fired boilers as an efficient substitute for fuel oil alone.

colloidal movement (*Chem.*). See **Brownian movement.**

colloidal state (*Chem.*). A state of subdivision of matter in which the particle size varies from that of true 'molecular' solutions to that of coarse suspensions, the diameter of the particles lying between 10^{-7} and 10^{-5} cm.

col'lophore (*Zool.*). The ventral tube of *Collembola*, so called because it is believed by some to represent an adhesive organ.

collotype (*Print.*). A printing process in which a glass plate carries a bichromated gelatine surface on which the desired image is printed from a continuous-tone negative. The surface is developed with water and treated with glycerine, the hardened parts taking up the greasy printing ink, as in lithography. The hardened surface breaks into a very fine grain structure, proportionally to the amount of light action. Suitable for reproductions which require fine detail.

collum (*Zool*). Any collar-like structure.

colluvia'rium (*Civ. Eng.*). An access opening in an aqueduct for maintenance and ventilation.

Collyweston Slate (*Geol.*). A thin stratum of very fissile calcareous sandstone, occurring at the top of the Northampton Sands; used locally for roof-tiling purposes.

colo- (Greek *kolon*, colon). A prefix used, especially in Medicine, in the construction of compound terms; e.g. *colo-enteritis* (q.v.).

colobo'ma (*Med.*). Congenital defect of development, especially of the lens, the iris, or of the retina.

colo-enteritis (*Med.*). Inflammation of the colon and small intestine.

Cologne earth (*Paint.*). Lignite yielding a deep-brown transparent pigment.

Cologne yellow (*Paint.*). A compound of chromate and sulphate of lead with sulphate of lime.

colombier (*Paper*). A standard size of writing and drawing paper, 23½ × 34½ in. (U.S. 23 × 34 in.)

co'lon (*Typog.*). A mark of punctuation (:) now used mainly to introduce quotations or phrases grouped together. The em rule, or dash, after the colon is now usually omitted.

colon (*Zool.*). In Insects, the wide posterior part of the hind-gut: the large intestine of *Vertebrata*. —*adj.* **colic.**

colonisation (*Bot.*). The occupation of bare ground by seedlings and sporelings.

colonist (*Bot.*). A plant which occurs only on ground which is periodically disturbed by human agency.

colonnade (*Arch.*). A row of columns supporting an entablature.

colony (*Bot.*). (1) A group of individuals of one species which are invading new ground.—(2) A fungal mycelium grown from one spore.

colony (*Zool.*). A collection of individuals living together and in some degree interdependent, as a *colony* of polyps, a *colony* of social insects: strictly, the members of a colony are in organic connexion with one another.

col'opexy or **colopex'ia** (*Surg.*). The anchoring of part of the colon by sewing it to the abdominal wall.

col'ophon (*Typog.*). Originally, a device of the writer or printer, placed at the end of a book before title pages became customary. Replaced to-day by title page and imprint, although some publishers often append a colophon. In modern practice, a decorative device on the title-page or spine of a book.

coloph'ony, colopho'nium. See **rosin.**

colopto'sis (*Med.*). An abnormally low position of the colon in the abdominal cavity.

Colorado beetle. A black-and-yellow striped beetle (*Leptinotarsa decemlineata*), which feeds upon potato leaves, causing great destruction.

Colorado ruby (*Min.*). An incorrect name for the fiery-red garnet (pyrope) crystals obtained from Colorado and certain other parts of U.S.A.

Colorado topaz (*Min.*). True topaz of a brownish-yellow colour is obtained in Colorado, but quartz similarly coloured is sometimes sold under the same name.

Colora'doan Stage (*Geol.*). Synonymous with 'Lower Cretaceous' (Cenomanian to Senonian) in the American sense, comprising the basal Dakota Sandstone Group, the Benton Group, and the Niobrara Group.

colora'doite (*Min.*). Mercuric telluride, crystallising in the cubic system. It usually occurs in the massive state.

colorim'eter (*Light*). An instrument used for the precise measurement of the hue, purity, and brightness of a colour.

colorimet'ric analysis (*Chem.*). Analysis of a solution by comparison of the colour produced by a reagent with that produced in a standard solution.

colorimetric purity (*Photog.*). The ratio of the luminosity of a dominant hue to the total luminosity of a colour. See **saturation.**

colorim'etry (*Photog.*). The science of measuring the chromaticity of colours for photographic purposes.

colos'tomy (*Surg.*). A hole surgically made into the colon for the escape of faeces when the bowel below is obstructed.

colot'omy (*Surg.*). An incision into the colon: (loosely) colostomy.

colour (*Light*). Colour depends on the wavelength of the light. In viewing a continuous spectrum the normal eye perceives a graduation of colour from red at the long-wavelength end, through orange, yellow, green, blue, to violet at the short-wavelength limit. Any of these, or other colours, can be matched by suitably adjusting the stimulations from three primary colours, red, green, and blue-violet, the wavelengths of these (additive) primaries being selected so that a minimum amount of negative primary is required in matching.

See **common—** **secondary—**
complementary— **tertiary—**
primary—

colour analyser (*Photog.*). A colorimeter for separating the components of a complex colour into their respective wavelengths.

colour and weave effect (*Textiles*). A small pattern produced from two or more coloured yarns by a special combination of colours and weave.

colour atlas (*Photog.*). A series of charts giving the aesthetic combinations of colours in order.

colour balance (*Photog.*). See **balancing.**

colour bleeding (*Photog.*). See **bleeding of colour.**

colour blindness (*Med.*). The lack of one or more of the spectral colour sensations of the eye. The commonest form, Daltonism, consists in an inability to distinguish between red and green. Even persons of normal sight may be colour blind to the indigo of the spectrum. The Edridge-Green lamp, beads, and cards provide the standard means of testing. The advent of traffic-light signals has made colour blindness a question of considerable social importance.

colour camera (*Photog.*). A camera for dividing the light from an object into two or three colours for registration on negatives in order to obtain black-and-white images.

colour chords (*Photog.*). Combinations of colours in juxtaposition, according to rules of colour harmony.

colour contrast (*Photog.*). The ratio, or the logarithm, of the intensities of two colours.

colour developer (*Photog.*). A developer which colours a silver image, the reduction causing a coloured oxidation product.

colour disc (*Photog.*). An opaque or transparent disc having sectors coloured with primary or other specified colours.

colour distortion (*Photog.*). The departure from a correct exhibition of colours as they appear in the object photographed.

colour fatigue (*Optics*). Changes in the sensation produced by a given colour, when the eye is fatigued by another or by the same colour.

colour film (*Photog.*). A cinematographic film in which the retention of colour from the object is obtained by chemical means alone.

colour filter (*Photog.*). A partially transparent film or glass which alters the relative intensity of the component wavelengths of light passing through it.

colour fringes (*Photog.*). Alien colours introduced at the demarcation of colours because of non-coincidence of the images in the separate colours of the colour process. They may be due to space or time parallax or to shrinkage of the film.

colour guides (*Print.*). A term sometimes applied to *progressive proofs* (q.v.).

colour harmony (*Photog.*). The selection of colours in patterns, according to rules of aesthetics.

colour index (*Astron.*). The difference between the photographic and the visual magnitudes of a star, and hence an approximate measure of the ratio of blue to yellow light received.

colour index (*Geol.*). A number which represents the percentage of dark-coloured heavy silicates in an igneous rock, and is thus a measure of its leucocratic, mesocratic, or melanocratic character.

colour index (*Photog.*). The colours of all dyes available commercially, arranged in order.

colour index (*Physiol.*). An index of the amount of haemoglobin in the red cells of the blood; obtained by dividing the number of red cells per cent. of the normal into the percentage of haemoglobin.

colour-light signals (*Civ. Eng., etc.*). A method of signalling adapted to both railway and highway purposes, whereby traffic is controlled by light signals of different colours.

colour match (*Photog.*). The condition when two colours are adjusted so that they are indistinguishable by eye.

colour photographic sensitivity (*Photog.*). Sensitivity of an emulsion to a specified wavelength.

colour printing (*Print.*). The reproduction of an original subject comprising two or more colours. Colour printing is achieved by any of the normal printing processes; each colour is printed separately, in a predetermined order, the superimposed impressions, if accurately registered, building up an image corresponding in colour to the original subject. See **line colour, three-colour process, two-colour process, chromolithography.**

colour pyramid (*Photog.*). The arrangement of colours with the primaries at the corners, so that the location of a colour within automatically indicates its hue, saturation, and brightness.

colour saturation (*Photog.*). See **saturation.**

colour screen (*Photog*). Either a filter or a mosaic of the primary colours, used for colour photography.

colour sensitometer (*Photog.*). See **Abney colour sensitometer.**

colour separation (*Photog.*). In photo-engraving, the work carried out on the plates of line-colour blocks, to ensure the correct reproduction of the different colours. Also, in half-tone colour work, the operation involved in the use of *colour filters* (q.v.).

colour specification (*Photog.*). The description of a colour in a standard manner, so that it can be duplicated without comparison.

colour standards (*Photog.*). A standard range of colours for reference purposes in making dyes or filters, or for composing colour patterns for colour photography.

colour temperature (*Photog.*). The temperature of an incandescent black body which is a match for the given colour.

colour transparency (*Photog.*). A colour photograph to be viewed or projected with transmitted light.

colour triangle (*Photog.*). The arrangement of colours with the primaries at the corners, the location of a given colour indicating its hue and saturation.

colours of thin films (*Light*). When white light is reflected from a thin film, such as a soap bubble or a layer of oil on water, coloured effects are seen which are due to optical interference between light reflected from the upper surface and that from the lower. The colours are not bright unless the film is less than about 10^{-3} mm. thick.

colouring pigment (*Paint.*). See **stainer.**

colp-, colpo- (Greek *kolpos*, womb). A prefix used in the construction of compound terms; e.g. *colpospasm* (q.v.).

colpi'tis (*Med.*). Inflammation of the vagina.

Colpitts circuit (*Radio*). A thermionic-valve oscillator circuit formed essentially of negative reactance (capacitative) paths between the grid and cathode, and between the anode and cathode, and a positive reactance (inductive) path between the grid and anode of a triode.

col'pocele (*Med.*). A hernia into the vagina.

colpocysti'tis (*Med.*). Inflammation of the vagina and of the bladder.

colpocys'tocele (*Med.*). A hernia formed by protrusion of the bladder into the vagina.

colpocystot'omy (*Surg.*). Incision of the bladder through the wall of the vagina.

colpoperine'oplasty (*Surg.*). Repair of the vagina and perineum by plastic surgery.

colpoperineor'rhaphy (*Surg.*). Sewing up of the torn vagina and perineum.

colpopto'sis (*Surg.*). Prolapse of the vagina.

colpor'rhaphy (*Surg.*). The narrowing of the vagina by operation.

col'poscope (*Surg.*). An instrument for inspecting the vagina.

col'pospasm (*Med.*). Spasm of the vagina.

col'ulus (*Zool.*). A small pointed appendage just anterior to the spinnerets in some Spiders; of unknown function.

columba'rium (*Build.*). A recess left in the face of a wall to support the end of a timber.

colum'bite (*Min.*). The niobate and tantalate of iron and manganese, crystallising in the orthorhombic system. It occurs in granitoid rocks, and is the chief source of the tantalum used for the metallic filaments of electric lamps

columbium or **niobium** (*Met.*). A light-grey metallic element in the fifth group of the periodic system, occurring between arsenic and antimony. Chem. symbol Cb or Nb, at. wt. 92·91, at. no. 41, sp. gr. at 20° C. 8·57, m.p. 1950° C., specific electrical resistivity 20 microhms per cub. cm. Occurs in a number of rare minerals. Used in austenitic stainless steel to diminish susceptibility to inter-crystalline corrosion.

columel'la (*Bot.*). (1) A central column of sterile tissue in the sporangium of a moss or a liverwort.—(2) A dome-shaped wall in the middle of the sporangium of some moulds.—(3) A mass of sterile tissue at the base of the fruit bodies of some *Gasteromycetes*.—(4) The central part of a root cap, containing statoliths.

columella (*Zool*). In Mammals, the central pillar of the cochlea: in lower Vertebrates, the auditory ossicle connecting the tympanum with the inner ear: in some lower Tetrapods, the epipterygoid: in spirally coiled gastropod shells, the central pillar: in the skeleton of some Corals, the central pillar.—*adj.* **columellar.**

column (*Bot.*). The central portion of the flower of an orchid (probably an outgrowth of the receptacle of the flower), bearing the anther, or anthers, and the stigmas.

column (*Civ. Eng.*). A vertical shaft supporting an axial load.—(*Eng.*) A vertical pillar of cast-iron, forged steel, or steel plate in box section, used to support a compressive load. See also **strut.**

column (*Zool.*). In *Crinoidea*, the stalk: in Vertebrates, a bundle of nerve fibres running longitudinally in the spinal cord: the edge of the nasal septum: more generally, any columnar structure, as the spinal cord.

columnals (*Zool.*). In *Crinoidea*, the ossicles forming the stalk.

columnar crystals (*Met.*). Elongated crystals formed by growth taking place at right-angles to the surface of the mould. The extent to which they grow before solidification is completed, by the formation of equi-axed crystals in the interior, is important.

columnar epithelium (*Zool*). A variety of epithelium consisting of prismatic columnar cells set closely side by side on a basement membrane, generally in a single layer.

columnar structure (*Geol.*). A form of regular jointing, produced by contraction following crystallisation and cooling in igneous rocks, especially those of basic composition. The columns are generally roughly perpendicular to the cooling surface.

columnated window stairs (*Build.*). A staircase whose steps are supported on columns to allow of natural lighting on all sides.

colures, kō-lūrz' (*Astron.*). The great circles passing through (1) the poles of the celestial equator and ecliptic and through both solstitial points, and (2) the poles of the celestial equator and both equinoctial points, these two great circles being the solstitial and equinoctial colures respectively.

colustrum-corpuscles (*Zool.*). Large cells containing fat-particles, which appear in the secretion of the mammary glands at the commencement of lactation.

Colymbifor'mes (*Zool.*). An order of *Colymbomorphae*, possessing webbed feet and a flattened metatarsus; the tail feathers are short and the body is carried upright, the feet being situated far back; the palate is schizognathous; the young are born with a complete covering of down; the adults are of aquatic habit. Grebes and Divers.

Colymbomor'phae (*Zool.*). A legion of *Aves*, of aquatic habit, which includes the Divers and Grebes, the Penguins and the Petrels and Albatrosses. See **Colymbiformes, Sphenisciformes, Procellariformes.**

colza oil (*Oils*). An oil obtained from the seeds of *Brassica campestris*; pale-yellow after refinement by sulphuric acid treatment. Used extensively as an illuminant, also, when blown, as a lubricant, and for quenching steel.

coma (*Bot.*). (1) A tuft of hairs attached to the testa of a seed.—(2) A tuft of leaves—the *comal tuft*—at the tip of a moss stem.

coma (*Optics*). A defect in the image formed by a lens which, when present, appears towards the edges of the field, the images of points being drawn out into small pear-shaped blobs, with their narrow ends directed towards the centre of the field. See also **anisotropic coma.**

coma (*Med.*). A state of complete unconsciousness in which the patient is unable to respond to any external stimulation.

comagmat'ic assemblage (*Geol.*). A more correct term for *petrographic province.*

comal tuft (*Bot.*). A bunch of leaves at the end of a twig.

Coman'chean (*Geol.*). The general name for the Cretaceous strata up to the top of the Albian, as developed in N. America. Sometimes termed COMANCHIC. Most completely developed in Mexico. See also **Fredericksburg, Trinity,** and **Washita Series.**

co'mate, co'mose (*Bot.*). Shaggy, bearing a tuft of hairs at the end.

comate disseminule (*Bot.*). A fruit or seed bearing long silky hairs which aid in dispersal by the wind.

co'matose (*Med.*). Being in a state of coma.

comb (*Build.*). The ridge of a roof.

comb (*Paint.*). A flat, flexible, wire-toothed instrument used by the painter for graining surfaces.

comb (*Zool.*). In *Coelenterata*, a ctene: the framework of wax cells produced by social Bees to shelter the young or for storing food.

combs (*Textiles*). Strips of brass, cast in leads, forming an arc on which the carriages move in a lace machine. The back and front combs form a well for the warp.

comb bars (*Textiles*). Steel bars which extend across a lace machine and support the comb leads.

comb collector (*Elec. Eng.*). A conductor with a row of parallel projecting points, used for collecting the charge in an influence machine.

comb, frozen (*Vet.*). Dry gangrene affecting the comb or wattles of birds as a result of frostbite.

comb poles (*Elec. Eng.*). Poles for salient-pole electric machines, constructed of laminations and having the alternate laminations made shorter than the others, to improve the flux distribution.

comb-rib or **comb** (*Zool.*). See **ctene.**

comb, white (*Vet.*). See **favus (avian).**

Combe Martin Beds (*Geol.*). A division of the Middle Devonian rocks of North Devon, comprising shales and sandstones.

combed ware (*Pot.*). Decoration effected by means of a toothed tool drawn across slip, over a body of a different colour.

combed yarns (*Textiles*). Yarns prepared from fibres that have been mechanically straightened and from which neps and short fibres have been removed. See **combing**; and cf. *carded yarns.*

comber board (*Weaving*). A perforated board, or perforated slips of wood arranged in a frame, through which the cords of the jacquard machine pass to the mails.

combination (*Chem.*). The union of two or more elements to form a compound.

combination chuck (*Eng.*). A lathe chuck in which the jaws may be operated all together, as in a universal or self-centring chuck; or each jaw may be operated separately for holding work of irregular shape, as in an independent chuck. See **independent chuck, self-centring chuck.**

combination colours (*Zool.*). Colour effects produced by pigment in combination with *structural colours* (q.v.), as in certain Butterflies.

combination grate (*Build.*). A grate specially designed to supply heat for hot water and cooking, and for heating the room.

combination principle (*Light*). Ritz discovered that the addition or subtraction of the wave-numbers of two spectral lines frequently gave the value of the wave-number of another line in the same spectrum. This rule emerges naturally from the Bohr quantum theory of spectra.

combination printing (*Photog.*). Building up a positive by successive exposures, with masks, through several negatives.

combination tanned leather (*Leather*) Leather which has been tanned by two or more of the usual processes; e.g. vegetable tanning, mineral tanning, treatment with oils.

combination tones (*Acous.*). Additional tones subjectively perceived by the ear when more than one tone is applied, and having frequencies which are sums and differences of the frequencies of the applied tones. Combination tones arise because of amplitude distortion in the ear.

combination turbine (*Eng.*). See **disc-and-drum turbine.**

combine baler (*Agric. Mach.*). A machine which gathers hay from the windrows in a field and forms it into bales.

combined bath (*Photog.*). The use of chemicals for toning and fixing with the same solution.

combined carbon (*Met.*). In cast-iron, the carbon present as iron-carbide as distinct from that present as graphite. See **graphitic carbon.**

combined distribution frame (*Elec. Comm.*). The combination of main and intermediate distribution frames, when the number of circuits is insufficient to warrant the use of separate frames. Abbrev. C.D.F.

combined half-tone and line (*Print.*). A process block on which half-tone and line work are combined and etched.

combined-impulse turbine (*Eng.*). An *impulse turbine* (q.v.) in which the first stage consists of nozzles that direct the steam on to a wheel carrying two rows of moving blades, between which a row of fixed guide blades is interposed.

combined system (*Sewage*). A system of sewerage in which only one set of sewers is provided for the removal of both the sewage proper and also rain water. Cf, *separate system.*

combined twills (*Textiles*). Fabrics in which the regular twill weaves are combined to form a new weave.

combing (*Dec.*). The process of graining done with a flexible toothed metal plate.

combing (*Textiles*). A mechanical process used in preparing sliver for yarns of fine count in cotton spinning, and in the production of worsted top. The process removes short fibres and straightens those to be used.

combining weight (*Chem.*). See **equivalent weight.**

combustion chamber (*Eng.*). (1) In a boiler furnace, the space in which combustion of gaseous products from the fuel takes place.—(2) In an internal-combustion engine, the space, above the piston (when on its inner dead-centre), in which combustion occurs.

combustion control (*Eng.*). The control, either by an attendant or by automatic devices, of the rate of combustion in a boiler furnace, in order to adjust it to the demand on the boiler.

com'edo (*Med.*). A blackhead. A collection of cells, sebum, and bacteria, filling the dilated orifices of the sebaceous glands near hair follicles.

co'mes (*Zool*). A blood-vessel which runs parallel and close to a nerve.—*pl.* **comites** (kom'it-ēz).

comet (*Astron.*). A body of small mass, generally first seen as it approaches the vicinity of the sun, about which it has an orbit, hyperbolic, parabolic, or elliptic. It consists of a comparatively dense nucleus, and may, when close to the sun, develop a tail of exceedingly tenuous matter which points away from the sun.

Comité Consultatif International (*Elec. Comm.*). An international consultative body, comprising representatives from electrical communication administrations, which studies problems of international communication, allocates research work, and makes recommendations for improvement in international connexions, charges, routes, etc. The work is divided into three departments: **C.C.I.T.**, which deals with telegraphy; **C.C.I.R.**, which deals with radio communication; and **C.C.I.F.** (*Fernsprech*) which deals with telephony and land-line broadcasting.

Comley Sandstone (*Geol.*). A sandstone of Lower and Middle Cambrian age in South Shropshire.

comma (*Acous.*). The pitch error, not greater than 80 : 81·1, arising from tuning one note in various ways with natural ratios from a datum note.

comma (*Typog.*). A mark of punctuation (,). It is most often used to separate compound sentences, to divide a sequence of statements or terms, and to enclose parenthetical statements.

commen'salism (*Biol.*). An external, mutually beneficial partnership between two organisms (*commensals*).—*adj.* **commensal.**

commentary (*Elec. Comm.*). The verbal description of an event for instantaneous use, or for subsequent use as material for making up programmes for broadcasting by radio, or in sound-films.

commercial brass (*Met.*). A copper-zinc alloy (brass) containing 10% zinc; used for screws, wire, hardware, etc.

com'minator (*Zool.*). In *Echinoidea*, one of the muscles connecting adjacent jaws of the lantern of Aristotle.

comminuted (*Med.*). Reduced to small fragments; e.g. *comminuted fracture.*

comminution (*Mining*). Size-reduction by breaking, crushing, or grinding; e.g. in ore-dressing.

commissu'ral arch (*Bot.*). A loop of vascular tissue joining the ends of the veins of a leaf.

com'missure (*Bot.*). (1) A cleft or suture.—(2) A surface by which carpels are in union.—(3) The line where the antical and postical lobes of the leaf of a liverwort join.

commissure (*Masonry*). The joint between adjacent courses of stone.

commissure (*Zool.*). A joint: a line of junction between two organs or structures: a bundle of nerve-fibres connecting two nerve-centres.

commode (*Furn.*). An ornamental form of low chest-of-drawers.

commode step (*Build.*). A step having a riser curved to present a convex surface; used sometimes at and near the foot of a stair.

common ashlar (*Masonry*). A block of stone which is pick- or hammer-dressed.

common battery (*Elec. Comm.*). The same as *central battery.*

common bond (*Build., Masonry*). Like a stretching bond, but with a course of headers every fifth, sixth, or seventh course.

common bricks (*Build.*). A class of brick used in ordinary construction (especially in interior work) for filling in, and to make up the requisite thickness of heavy walls and piers. They usually have plain sides, are not neatly finished, and are much more absorbent and also much weaker than *engineering bricks* (q.v.).

common bundle (*Bot.*). A vascular bundle belonging in part to a stem and in part to a leaf.

common colours (*Paint.*). The primary, secondary, and ordinary tertiary colours as opposed to special or art shades.

common dovetail (*Join.*). An angle-joint between two members in which both show end grain.

common-frequency broadcasting (*Radio*). The use of the same carrier frequency by two or more broadcast transmitters, sufficiently separated for their useful service areas not to overlap. Also called SHARED-CHANNEL BROADCASTING.

common grounds (*Join.*). Unconnected strips of wood used as *grounds* (q.v.).

common joist (*Carp.*). See **bridging joist.**

common lead (*Met.*). Lead of lower purity than chemical or corroding lead (about 99·85%); suitable for ordinary uses.

common pointed capped shell (*Ammunition*). See **armour-piercing capped shell.**

common pointed shell (*Ammunition*). These are used for the attack on light armour, concrete, etc. See **armour-piercing shell, armour-piercing capped shell.**

common rafter (*Build., Civ. Eng.*). A subsidiary rafter carried on the purlins and supporting the roof covering. Also called an INTERMEDIATE RAFTER.

common-rail injection (*I.C. Engs.*). A fuel-injection system for multi-cylinder C.I. engines; an untimed pump maintains constant pressure in a pipe line (rail), from which branches deliver the oil to the mechanically operated injection valves.

common return (*Elec. Eng.*). A single conductor which forms the return circuit for two or more otherwise separate circuits.

common trunk (*Auto. Teleph.*). A trunk or outlet which is common to all groups in a grading scheme, and therefore offers a first choice to a group of selectors.

commo'tio cer'ebri (*Med.*). Concussion of the brain, in which there is bruising of brain tissue.

communal habitat (*Bot.*). The habitat of any plant community.

commu'nalism (*Zool.*). Social life, implying division of labour and sometimes physical differentiation, as in social Insects and Mankind.

community (*Bot.*). Any group of plants growing together under natural conditions, and forming a recognisable unit of vegetation; examples are woodland plants, heathland plants.—(*Zool.*) Collectively, the animals found inhabiting a given restricted area, as a field or a pond; such a community is not necessarily stable.

commutating field (*Elec. Eng.*). The magnetic field under the compoles of a d.c. machine; it induces, in the conductors undergoing commutation, an e.m.f. in a direction to assist in the commutation process.

commutating machine (*Elec. Eng.*). An electrical machine provided with a commutator.

commutating pole (*Elec. Eng.*). See **compole.**

commutator (*Elec. Eng.*). A part of an electric machine consisting of an assemblage of copper bars each connected to a coil of the winding but insulated from each other. Brushes slide on the surface of the bars and collect current from the winding. See also **reversing commutator.**

commutator (*Teleg.*). A rotating switch arm and contact, for distributing the line to a number of channels in a multiplex system.

commutator bar (*Elec. Eng.*). One of the copper bars forming part of a commutator. Also called a COMMUTATOR SEGMENT.

commutator bush (*Elec. Eng.*). See **commutator hub.**

commutator face (*Elec. Eng.*). See **commutator surface.**

commutator grinder (*Elec. Eng*). A portable electric grinding equipment which can be mounted on a commutator machine in order to grind the commutator surface without removing the armature from the machine.

commutator hub (*Elec. Eng.*). A metal structure used for supporting a commutator. Also called a COMMUTATOR SLEEVE, COMMUTATOR SHELL, COMMUTATOR BUSH.

commutator losses (*Elec. Eng.*). Losses occurring at the commutator of an electric machine; they include resistance loss in the segments, in the brushes, and at the contact surface, friction loss due to the brushes sliding on the commutator surface, loss due to sparking, and eddy current loss in the segments.

commutator lug (*Elec. Eng.*). A projecting piece of metal, connected to or integral with a commutator bar. Also called COMMUTATOR RISER, COMMUTATOR TAG.

commutator Micanite (*Diel.*). This is made from Muscovite and Phlogopite splittings, about ½ to 1½ mm. thick and area 1 to 3 sq. in.; bonded with less than 3% of high-grade shellac under great pressure.

commutator motor (*Elec. Eng.*). An electric motor which embodies a commutator in its construction.

commutator rectifier (*Elec. Eng.*). A device for rectifying alternating currents; it consists of a commutator which reverses the connexions of the circuit at the end of each half-cycle.

commutator ring (*Elec. Eng.*). A ring, usually of cast-iron, made to fit into a dovetail in the commutator segments in order to clamp them firmly in position. The term is also used to denote the insulating rings which have to be placed between the metal of the above ring and the commutator segments.

commutator ripple (*Elec. Eng.*). Small periodic variations in the voltage of a d.c. generator or rotary converter resulting from the fact that there can only be a finite number of commutator segments on the machine.

commutator riser (*Elec. Eng.*). See **commutator lug.**

commutator segment (*Elec. Eng.*). See **commutator bar.**

commutator shell (*Elec. Eng.*). See **commutator hub.**

commutator shrink-ring (*Elec. Eng.*). A steel ring shrunk round the cylindrical surface of commutators on very high speed commutator machines (e.g. d.c. turbo-generators) in order to hold the segments in position against the action of the centrifugal force. The ring must, of course, be insulated from the segments.

commutator sleeve (*Elec. Eng.*). See **commutator hub.**

commutator spider (*Elec. Eng.*). A spider mounted on the shaft of an electrical machine and used for supporting the commutator.

commutator surface (*Elec. Eng.*). The smooth portion of a commutator upon which the current-collecting brushes slide. Also called the COMMUTATOR FACE.

commutator tag (*Elec. Eng.*). See **commutator lug.**

commutator transformer (*Elec. Eng.*). A device for converting from a low-voltage d.c. to a high-voltage d.c. and vice versa. It consists of a motor-driven commutator which converts from d.c. to a.c., this being then supplied to a transformer and stepped up; another commutator then rectifies the high-voltage a.c. It is used chiefly for obtaining a high-voltage d.c. supply from a small battery.

compandor (*Teleph.*). The combination of the compressor and expandor, for the transmission of telephonic speech with reduced contrast.

companion cell (*Bot.*). A nucleated cell, associated with a segment of a sieve tube, and apparently playing some part in assisting the sieve tube to conduct food material. Companion cells occur only in *Angiospermae.*

companionship (*Typog.*). A number of compositors working together on adjacent portions of the same job. Called in Scotland CHUMSHIP.

compar′ator (*Phys.*). (1) A form of apparatus used for the accurate comparison of standards of length. It has also been used for measuring the coefficients of expansion of metal bars.—(2) A form of colorimeter.

comparison lamp (*Illum.*). A lamp used, when performing photometric tests, for making successive comparisons between the lamp under test and a standard lamp.

comparison prism (*Light*). A small right-angled prism placed in front of a portion of the slit of a spectroscope or spectrograph for the purpose of reflecting light from a second source of light into the collimator, so that two spectra may be viewed simultaneously. See **comparison spectrum.**

comparison spectrum (*Light*). A spectrum formed alongside the spectrum under investigation, for the purpose of measuring the wavelengths of unknown lines. It is desirable that the comparison spectrum should contain many standard lines of known wavelength. The spectrum of the iron arc is often used for this purpose. See **comparison prism.**

comparison surface (*Illum.*). A surface illuminated by a standard lamp or a comparison lamp; used in photometry.

compass (*Surv., etc.*). An instrument which provides a fixed line of reference from which angles can be measured as bearings; it depends on the property of its magnetic needle which constrains it to take up this direction. Specifically, an instrument for indicating the direction of North, South, and other bearings.

See **azimuth—**
earth inductor—
floating card—
gyro—
Kelvin—
magnetic—
marine—
prismatic—
radio—

compass (*Zool.*). One of five radially disposed, curved ossicles, bifid distally, which overlie the rotulae in the lantern of Aristotle.

compass board (*Textiles*). A comber board, the name now generally used.

compass brick (*Build.*). A brick which tapers in at least one direction so as to be specially useful for curved work, as in building arches, parts of furnaces, etc.

compass card (*Ships, etc.*). The pivoted disc carrying the magnetic needle of a magnetic mariners'-compass; the disc is marked with the bearings, i.e. North, South, etc.

compass errors (*Ships*). The various errors which arise in the indication of a compass when used on board ship and against which special precautions have to be taken.

compass plane (*Tools*). A plane with a curved sole, suitable for working convex or concave surfaces.

compass roof (*Build.*). A roof with rafters bent to the shape of an arc.

compass saw (*Carp.*). A handsaw with straight tapering blade, long and narrow; used for cutting in curves. Also called a FRET-SAW, LOCK-SAW, or KEYHOLE SAW.

compass window (*Build.*). A bay or oriel window.

compasses (*Instruments*). An instrument for describing arcs, taking or marking distances, etc ; it consists essentially of two limbs hinged together at one end.

compatibility (*Chem.*). The tolerance of one dissolved substance towards another dissolved substance; e.g. the tolerance of a nitrocellulose solution towards a solution of a resin, mixture of the two solutions not effecting precipitation of the nitrocellulose.

compatible (*Bot.*). Capable of self-fertilisation.

compensated induction motor (*Elec. Eng*). An induction motor with a commutator winding on the rotor, in addition to the ordinary primary and secondary windings; this winding is connected to the circuit in such a way that the motor operates at unity or at a leading power factor.

compensated pendulum (*Phys.*). A pendulum made of two materials which have different coefficients of expansion and are so chosen that the length of the pendulum remains constant when the temperature varies.

compensated pilot-wire (Beard-Hunter) protective system (*Elec. Eng.*). A modification of the Merz-Price opposed-voltage excess-current protective system, designed to avoid false operation due to capacity currents in the pilot-wires. The pilot-wires are each enclosed in a conducting sheath, and are so connected that any capacity current flows in the sheath and does not pass through the relays.

compensated repulsion motor (*Elec. Eng.*). A repulsion motor with an additional pair of brushes connected in series with the supply circuit and placed in quadrature with the short-circuited brushes, the object being to obtain an improved power-factor.

compensated series motor (*Elec. Eng.*). The usual type of a.c. series motor, in which a compensating winding is fitted to neutralise the effect of armature reaction and so give a good power-factor. Also called NEUTRALISED SERIES MOTOR.

compensated shunt box (*Elec. Eng.*). A shunt box for use with a galvanometer, arranged so that on each step a resistance is put in series with the galvanometer, and the total resistance of galvanometer and shunt is not altered.

compensated voltmeter (*Elec. Eng.*). A voltmeter arranged to indicate the voltage at the remote end of a feeder or other circuit, although connected at the sending end. A special winding compensates for the voltage drop in the feeder.

compensated wattmeter (*Elec. Eng.*). A wattmeter in which there is an additional winding, arranged to compensate for the effect of the current flowing in the pressure circuit.

compensating coil (*Elec. Eng.*). A coil used on instruments, meters, etc. to compensate for the effect of friction or some other factor which might cause error.

compensating collar (*Eng.*). A collar fitted on a revolving shaft, for the purpose of compensating for wear at some point that would otherwise cause axial displacement of the shaft.

compensating diaphragm (*Surv.*). A fitment for a tacheometer which, by an adjustment to the stadia interval determined by the vertical angle, enables the horizontal component of a sloping sight to be deduced directly from the staff intercept.

compensating digits (*Auto. Teleph.*). Extra trains sent out over certain junctions to operate relays, so that subsequent marginal currents operate in resistances which do not depart markedly from the average.

compensating errors. See **accidental errors.**

compensating field (*Elec. Eng.*). A term sometimes used to indicate the field produced by a compensating winding or, occasionally, by a compole.

compensating filter (*Photog.*). A filter used to alter the spectral emission of a light source, or the sensitivity of an emulsion, to a specified response to different wavelengths.

compensating jet (*I.C. Engs.*). An auxiliary petrol jet used in some carburettors, in order to supplement the discharge from the main jet at low rates of air flow, and to keep the mixture strength constant. See **carburettor.**

compensating pole (*Elec. Eng.*). See **compole.**

compensating winding (*Elec. Eng.*). A winding used on d.c. or a c. commutator machines to neutralise the effect of armature reaction.

compensation (*Elec. Comm.*).
See **attenuation—** **phase—**

compensation (*Med.*). The condition in which, in spite of the presence of heart disease, there is no heart-failure; the heart is then said to be *compensated.*

compensation balance (*Horol.*). A balance so constructed as to compensate for the changes of dimensions in the balance and the elastic properties of the balance spring, with changes of temperature. Actually, compensation cannot be complete over a range of temperature. A watch or chronometer adjusted for the extremes of the range will not be correct at the middle of the range. This gives rise to what is known as the ' middle temperature ' error.

compensation method (*Chem.*). See **Poggendorff compensation method.**

compensation pendulum (*Horol.*). A pendulum so constructed that the distance between the centre of oscillation and the point of suspension remains constant with changes of temperature. See **pendulum.**

compensation point (*Bot.*). The light intensity at which, at any given temperature, respiration and photosynthesis just balance in a green plant, so that there is neither liberation nor absorption of carbon dioxide and of oxygen.

compensation sac (*Zool.*). In some *Cheilostomata*, a membranous diverticulum of the ectoderm lying below the calcareous front surface of the zooecium, which fills with water when the tentacles are extruded.

compensation strand (*Bot.*). A strand of vascular tissue passing from an inner to an outer vascular ring in some ferns.

compensation theorem (*Elec. Comm.*). This states that the change in current produced in a network by a small change in any impedance Z carrying a current I is the result of an electromotive force equal to $-I\cdot\delta Z$.

compensation water (*Civ. Eng.*). The water which has to be passed downstream from a reservoir in order to supply users who, prior to the construction of the dam, took their water directly from the stream.

compensator (*Cinema.*). In a sound-film recording camera, an arrangement for making the speed of the film correspond with a stated number of sprocket holes per second; used because of slight variations in the length of the stated number of sprocket holes.

compensator (*Elec. Eng.*). See **auto-transformer.**

compensator (*Photog.*). A device for graduating the light passed through a wide-angle lens, such as an axial rotating star or a plano-convex lens of tinted glass, so that the image of an evenly illuminated surface is also evenly illuminated.

compensator, Gerlach (*Acous.*). See **Gerlach compensator.**

compensator starter (*Elec. Eng.*). See **auto-transformer starter.**

competition (*Bot.*). The struggle between plants for the necessities of life (water, light, etc.).

com'planate (*Bot.*). Flattened, compressed.

complement. The *complement* of an angle α is $(90°-\alpha)$.

complement (*Cyt.*). A group of chromosomes derived from one nucleus, and consisting of one, two, or more sets.

complemental males (*Zool.*). In some hermaphrodite species, as the Barnacle *Scalpellum*, certain small individuals, lacking ovaries, found living in close proximity to the normal hermaphrodite forms; believed to have the function of effecting cross-fertilisation.

complementary after-image (*Optics*). The subjective image, in complementary colours, that is experienced after visual fatigue induced by observation of a brightly coloured object.

complementary colours. If a circle shows subtractive primary and secondary colours around its circumference thus: *red, orange, yellow, green, blue, violet,* those colours found opposite each other are *complementary* and give greatest contrast.

complementary factor (*Gen.*). A factor in inheritance which, in conjunction with one or more similar factors, leads to the appearance of some character in the offspring.

complementary function (*Maths.*). If $y=u+v$ is a solution of a differential equation, where u is the particular integral and v contains the full number of arbitrary constants, v is called the *complementary function.*

complementary society (*Bot.*). A community of two or more species of plants occupying the same soil, but not coming into active competition since they vegetate at different times of the year or develop their roots at different levels in the soil.

complementary tissue (*Bot.*). A loose assemblage of thin-walled, unsuberised cells, fitting loosely together, lying in the cavity of a lenticel, and allowing gases and vapours to diffuse through them.

complete cycle (*Elec. Eng.*). See **cycle.**

complete flower (*Bot.*). A flower which has both calyx and corolla.

complete reaction (*Chem.*). A reaction which is irreversible and therefore proceeds until one of the reactants has disappeared.

complex (*Psychol.*). A term introduced by Jung to denote an emotionally toned constellation of mental factors formed by the attachment of instinctive emotions to objects or experiences in the environment, and always containing elements unacceptable to the self. It may be recognised in consciousness, but is usually repressed and unrecognised.

complex hyperbolic functions (*Elec. Comm.*). Hyperbolic functions, with complex quantities as variables, which facilitate calculations of electric waves along transmission lines.

complex ion (*Chem.*). An ion which dissociates to form simpler ions.

complex tissue (*Bot.*). A tissue made up of cells or elements of more than one kind.

complex tone (*Acous.*). Strictly, a musical note in which all the separate tones are exact multiples of a fundamental frequency, recognised as the pitch, even when the actual fundamental is absent, as in the lowest octave of a piano. Loosely applied to a mixed musical chord.

complex'us (*Zool.*). A complicated system of organs; e.g., in Primates, a compound muscle of the back.

compliance (*Acous.*). The reciprocal of stiffness, i.e. the displacement in cm. corresponding to the application of the force of one dyne.

complic'ant (*Zool.*). Folding one over another, as the wings of some Insects.

complicate (*Bot., Zool.*). Folded together.

compo (*Build.*). A cement mortar.

compo board (*Build.*). A building-board consisting of narrow strips of wood glued together into one sheet, both sides being faced with a heavy paper.

compo pipe (*Gas Fittings*). Pipe made from an alloy, as opposed to lead pipe.

compole (*Elec. Eng.*). An auxiliary pole, employed on commutator machines, which is placed between the main poles for the purposes of producing an auxiliary flux to assist commutation. Also called COMMUTATING POLE, COMPENSATING POLE, INTERPOLE.

component (*Elec. Eng.*). A term sometimes used to denote one of the component parts into which a vector representing voltage, current, or volt-amperes may be resolved; the component parts are usually in phase with, or in quadrature with, some reference vector.

See

active voltage	**reactive voltage**
active current	**reactive current**
active volt-amperes	**reactive volt-amperes.**

component (*Mech.*). The resolved part of a force in any particular direction. The component of a force F, along a line making an angle θ with the line of action of F, is $F\cos\theta$. See **forces (resolution of).**

components (*Chem.*). The minimum number of substances required for the establishment of equilibrium, physical or chemical, in a given system.

compose (*Typog.*). To assemble type matter for printing, either by hand or by type-setting machines.

composing frame (*Typog.*). A wooden or steel structure before which the compositor stands. The upper and lower case in use rest on the top, and the under portion is filled with cases containing various type faces and sizes.

composing machines (*Typog.*). The Monotype composes type matter in separate letters, which may be used for hand-setting or correcting; the Linotype composes in solid lines, or slugs, which must be corrected by resetting. Both machines have a keyboard resembling that of a typewriter. See also **Intertype** and **photo-composition.**

composing rule (*Typog.*). A piece of brass rule with a projecting nose piece, moved up as each line in the stick is completed by the compositor.

composing stick (*Typog.*). A wooden or metal three-sided boxlike receptacle in which the compositor sets his type letter by letter. The width or measure can be altered as desired.

composite balance (*Elec. Eng.*). A modification of the Kelvin balance; the moving coils are of high resistance, enabling the instrument to be used as a wattmeter.

composite block (*Typog.*). (1) *Combined half-tone and line* (q.v.) block.—(2) A block made up from two or more originals.

composite circuit (*Teleg.*). A telegraph circuit operating over a telephone circuit, without interfering with the latter.

composite conductor (*Elec. Eng.*). A conductor composed of more than one material; e.g. steel-cored aluminium cable.

composite deposits (*Elec. Eng.*). Deposits, consisting of two or more layers of different metals, formed by electroplating; the object being protection from corrosion or to obtain a smooth deposit of particular properties.

composite portraits (*Photog.*). The over-printing of a number of images (e.g. portraits) in order to obtain an idea of the average appearance.

composite sill (*Geol.*). A sill comprising successive injections of different igneous rocks.

composite truss (*Build.*). A roof truss formed of timber struts and steel or wrought-iron ties (apart from the main tie, which is usually of timber to simplify connexions).

composition (*Chem.*). The nature of the elements present in a substance and the proportions in which they occur.

composition (*Photog.*). The creative work in deciding the disposition of the pictorial elements in a photographic image.

composition nails (*Build.*). Roofing nails made of a cast 60-40 copper-zinc alloy.

composition of forces (*Mech.*). The process of finding the resultant of a number of forces, that is a single force which can replace the other forces and produce the same effect. See **parallelogram of forces.**

compositor (*Typog.*). A craftsman whose work consists of setting up type matter by hand, or correcting that set by machine. Skill and judgment in display work are part of his routine.

compound (*Bot.*). Formed of a number of parts which are nearly separate, and usually separate at maturity.

compound (*Chem.*). See **chemical compound.**

compound arch (*Build.*). An arch having an archivolt receding in steps, so as to give the appearance of a succession of receding arches of varying spans and rises.

compound brush (*Elec. Eng.*). A type of brush used for collecting current from the commutator of an electric machine; the brush has alternate layers of copper and carbon so that the conductivity is greater longitudinally (i.e. in the direction of the main current flow) than laterally.

compound-catenary construction (*Elec. Eng.*). A construction used for supporting the overhead contact wire of an electric traction system; the contact wire is supported from an auxiliary catenary which, in turn, is supported from a main catenary, all three wires lying in the same plane.

compound curve (*Surv.*). A curve composed of two arcs of different radii, having their centres on the same side of the curve, connecting two straights.

compound dredger (*Civ. Eng.*). A type of dredger combining the suction or suction cutter apparatus with a bucket ladder.

compound engine (*Eng.*). A steam-engine in which the expansion of the steam from boiler pressure to exhaust pressure is carried out in two stages, necessitating the use of high- and low-pressure cylinders in series.

compound fault (*Geol.*). A series of closely spaced parallel or sub-parallel faults.

compound-filled apparatus (*Elec. Eng.*). Electrical apparatus (e.g. bus-bars, potential transformers, switchgear) in which all live parts are enclosed in a metal casing filled with insulating compound.

compound fruit (*Bot.*). A fruit formed from several closely associated flowers.

compound generator (or **motor**) (*Elec. Eng.*). A d.c. generator (or motor) on which there are both a shunt and a series field winding. See **cumulatively compound machine, differentially compound-wound machine, flat-compounded, over-compounded generator** (or **motor**).

compound girder (*Struct.*). A rolled-steel joist strengthened by additional plates riveted or welded to the flanges.

compound harness (*Textiles*). An arrangement of cords in a jacquard machine, made in order to increase the figuring capacity of the machine.

compound-interest law (*Bot.*). The doctrine that the rate of growth of a plant at any time is proportional to the amount of plant material present at the time.

compound leaf (*Bot.*). A leaf the lamina of which consists of a number of quite distinct leaflets, being divided down to the midrib; the leaflets may fall independently of one another as the leaf dies.

compound lever (*Eng.*). A series of levers for obtaining a large mechanical advantage, the short arm of one being connected to the long arm of the next; used in large weighing and testing machines.

compound magnet (*Elec. Eng.*). A permanent magnet made up of several laminations.

compound microscope (*Light*). See **microscope.**

compound oil (*Oils*). (1) An oil blended from the products of crudes of different characteristics —(2) A blend of mineral and vegetable oils, used to combine certain desirable properties.

compound oösphere (*Bot.*). A multinucleate body occurring in an oögonium, probably composed of a number of female gametes which have not become individualised.

compound pendulum (*Phys.*). See **pendulum (compound).**

compound pier (*Build.*). A clustered column.

compound pillar (*Struct.*). A pillar formed of a rolled-steel joist or joists or channels strengthened by additional plates riveted or welded to the flanges.

compound pyrenoid (*Bot.*). A pyrenoid made up of two closely associated portions.

compound reflex (*Zool.*). A combination of several reflexes to form a definite co-ordination, either simultaneous or successive.

compound train (*Eng.*). A train of gear-wheels in which intermediate shafts carry both large and small wheels, in order to obtain a large speed ratio in a small space.

compound umbel (*Bot.*). A racemose inflorescence consisting of a number of secondary axes radiating obliquely upwards from the end of a main branch, and bearing in their turn a number of flower stalks similarly arranged. Each flower stalk bears one flower, and, generally, the whole assemblage of flowers forms a flat, circular group.

compounding (*Eng.*). The principle, or the use of the principle, of expanding steam in two or more stages, either in reciprocating engines or steam-turbines.

compressed (*Bot.*). Flattened laterally: pressed together.

compressed-air condenser (*Elec. Eng.*). An electric condenser in which air at several atmospheres' pressure is used as the dielectric, on account of its high dielectric strength at these pressures.

compressed-air disease (*Med.*). See **caisson disease.**

compressed-air lamp (*Illum.*). An electric lamp for use in fiery mines; it is supplied from a small compressed-air-driven generator incorporated in the lamp-holder.

compressed-air squeezer (*Moulding*). See **squeezer.**

compressed-air tools (*Eng.*). See **pneumatic tools.**

compressibility (*Mech.*, *Phys*). The reciprocal of the bulk modulus.

compressibility, coefficient of (*Chem.*). See **coefficient of compressibility.**

compression (*Eng*). In an internal-combustion engine, (1) the stroke during which the working agent is compressed; (2) the gas-tightness of the piston during the compression stroke.

compression flange (*Bot*). A group of turgescent parenchymatous cells on the convex side of a coiled tendril.

compression-ignition engine (*Eng.*). An internal-combustion engine in which ignition of the liquid fuel injected into the cylinder is performed by the heat of compression of the air charge. See **Diesel engine.**

compression moulding (*Plastics*). The material is placed in a hardened, ground, polished steel container and forced down by means of a plunger at a pressure of 3000-5000 lb. per sq. in. The disadvantages of the method are the damage done to the mould by the material travelling under a high pressure and the fact that more material than is necessary must be used.

compression ratio (*Eng.*). In an internal-combustion engine, the ratio of the total volume enclosed in the cylinder at the outer dead-centre to the volume at the end of compression; the ratio of swept volume, plus clearance volume, to clearance volume. See **clearance volume.**

compression rib (*Aero.*). See **rib (compression).**

compression test (*Eng*). A test for ductility and malleability of iron and steel bar, in which a specimen, of length 1·5 diameters, is compressed to half its length. No cracks should result.

compression wood (*Bot*). Wood of dense structure formed at the bases of some tree trunks, and on the undersides of branches.

compressor (*Eng.*). Any kind of reciprocating, rotary, or centrifugal pump for raising the pressure of a gas. See **air compressor, blower, centrifugal compressor.**

compressor (*Teleph.*). A thermionic amplifier designed to reduce the contrast in telephonic speech, for transmission at an average higher level in the presence of interference.

compressor (*Zool.*). A muscle which by its contraction serves to compress some organ or structure.

Compton effect (*Phys.*). When short homogeneous X-rays are scattered by light elements their wavelength is slightly increased, the scattered radiation containing usually both the original and the modified wavelengths. For an angle of scattering of 90°, the increase in wavelength is always 0·024 A.U., whatever the scattering element. The effect is due to the collision of a photon with an electron and the consequent decrease in the energy of the photon.

compulsion neurosis (*Psycho-an.*). See **obsessional neurosis.**

computing scale (*Surv.*). A special scale fitted with a sliding cursor, used for the computation of area on maps, etc.

cona'rium (*Zool.*). In *Vertebrata*, the pineal gland: in *Coelenterata*, the transparent deep-sea larva of *Vellella*.

conation (*Psychol.*). The conscious desire to act as a result of feelings conditioned in the individual by some cognitive process. This cognition leads to affect, which in turn leads to conation.

concat'enate (*Bot.*). Joined together, forming a chain of similar members.

concatenated connexion (*Elec. Eng.*). See **cascade connexion.**

concatenated motor (*Elec. Eng.*). See **cascade motor.**

Concato's disease (*Med.*). A chronic inflammation of serous membranes attended with effusion of fluid into serous sacs (e.g. peritoneal, pericardial, and pleural cavities).

concave brick (*Build.*). A compass brick.

concave grating (*Light*). A diffraction grating ruled on the surface of a concave spherical mirror, made usually of speculum metal or glass. Such a grating needs no lenses for collimating or focusing the light. Largely on this account it is the most useful means of producing spectra for precise measurement. See **Rowland circle.**

concave lens (*Light*). A *divergent lens* (q.v.).

concave mirror (*Light*). A curved surface—usually a portion of a sphere—the inner surface of which is a polished reflector. Such a mirror is capable of forming real and virtual images, their positions being given by the equation $\frac{2}{R}=\frac{1}{v}+\frac{1}{u}$, R being the radius of curvature of the mirror, u the distance of the object, and v the distance of the image from the mirror. See **convention of signs.**

concave plane (*Tools*). A compass plane adapted to work concave surfaces.

concave veins (*Zool.*). In Insects, veins which follow the furrows of the wing corrugations.

concealed heating (*Build*). See **panel heating.**

concen'trate (*Bot.*). Arranged around a common centre, or having a common centre.

con'centrate or **concentrates** (*Met*). The products of concentration operations in which a relatively high content of metal has been obtained and which are ready for treatment by chemical methods.

concentrated load (*Struct.*). A load which is regarded as acting through a point.

concentrated winding (*Elec. Eng.*). A winding in which all the conductors forming one group (e.g. one phase under one pole in an a.c. machine) are placed in one slot instead of being distributed over a number of slots.

concentrating reflector (*Illum.*). A type of reflector which concentrates a strong beam of light on a particular area; used in industrial work.

concentration (*Acous.*). See **acoustic concentration.**

concentration (*Chem.*). (1) Number of molecules or ions of a substance in a given volume, generally expressed as gram-molecules or gram-ions per litre.—(2) A process in which the *concentration* (see above) of a substance is increased; e.g. evaporation of the solvent from a solution.

concentration (*Met.*). Separation of the valuable (i.e. mineral) portion of an ore from the useless portion (i.e. the gangue) by methods which depend on physical differences between these materials.

concentration cell (*Elec. Eng.*). A primary cell containing electrodes of the same metal, immersed in solutions of the same salt but of different degrees of concentration. During the action of the cell the strengths of the two solutions equalise by the solution of one electrode and deposit on the other.

concentration plant, concentrator (*Met.*, *Mining*). Equipment for the recovering of valuable minerals from ores by physical means; e.g. by washing or flotation.

concentration polarisation (*Elec. Eng.*). A form of polarisation occurring in an electrolytic cell; due to changes in the concentration of the electrolyte surrounding the electrode.

concentrator (*Met.*). See **concentration plant,** and cf. *separator*.

concentric arch (*Build.*). An arch laid in several courses whose curves have a common centre.

concentric cable (*Cables*). A cable with two or more concentric conductors.

concentric chuck (*Eng.*). See **self-centring chuck.**

concentric coils (*Elec. Eng.*). Coils of an armature winding designed to have different spans so that, when placed in the slots, the end connexions shall not have to cross each other.

concentric plug-and-socket (*Elec. Eng.*). A type of plug-and-socket connexion in which one contact is a central pin and the other is a ring concentric with it.

concentric tube feeder (*Radio*). A type of transmission line in which the two conductors are concentric tubes. The absence of external fields and freedom from 'pick-up' make it specially suitable for use in conjunction with directional antenna systems. Also called CO-AXIAL TUBE FEEDER, CONCENTRIC TUBE TRANSMISSION LINE.

concentric vascular bundle (*Bot.*). A bundle in which a strand of xylem is completely surrounded by a sheath of phloem, or vice versa.

concentric winding (*Elec. Eng.*). An armature winding, used on a.c. machines, in which groups of concentric coils are employed. Also used to denote the type of winding, used on transformers, in which the high-voltage winding is arranged concentrically with the low-voltage winding.

concentric wiring (*Elec. Eng.*). An interior wiring system in which the conductor consists of an insulated central core surrounded by a flexible metal sheath which forms the return lead.

concep'tacle (*Bot.*). A flask-shaped cavity in a thallus, opening to the outside by a small pore, and containing reproductive structures.

conception (*Physiol.*). The fertilisation of an ovum with a spermatozoon.

concert pitch (*Acous.*). The recognised pitch, i.e. frequency of the generated sound-waves, to which musical instruments, organs, etc. are tuned, so that they can play together. The exact value has varied considerably during musical history, but it has recently been internationally standardised so that *A* (above middle-*C*) becomes 440 cycles per second. Dance-bands are normally a few cycles per second lower. Allowance must be made for the rise in temperature experienced in concert halls, which rise alters the pitch in ways peculiar to the different types of instrument.

concha, kong'ka (*Arch.*). The smooth concave surface of a vault.

concha (*Zool.*). In Vertebrates, the cavity of the outer ear: the outer or external ear: a shelf projecting inwards from the wall of the nasal cavity to increase the surface of the nasal epithelium.

con'chate or **con'chiform** (*Bot.*). Shaped like a sea shell.

conchiolin, —kĭ'ō-lin (*Zool.*). A horny substance forming the outer layer of the shell in *Mollusca*.

conchi'tis (*Med.*). Inflammation of a concha.

Conchos'traca (*Zool.*). An order of *Branchiopoda*, having a carapace, in the form of a bivalve shell, enclosing the head and body; the eyes are sessile and coalescent; the second antennae are biramous and natatory; there are numerous trunk limbs; the caudal furca are claw-like. Clam Shrimps.

con'color or **concol'orous, —kul-ur(-us)** (*Bot., Zool.*). Uniform in colour.

concol'orate (*Zool.*). Having both sides the same colour.

concres'cence (*Bot.*). Growing together to form a single structure.—*adj.* **concrescent.**

concrete (*Bot.*). (1) Grown together to form a solid body.—(2) Adhering closely to anything.

concrete (*Build., Civ. Eng., etc.*). A mixture of cement, sand, and gravel, with water in varying proportions according to the use which is to be made of it.

concrete blocks (*Civ. Eng., etc.*). Solid or hollow pre-cast blocks of concrete used in the construction of buildings.

concrete mixer (*Civ. Eng., etc.*). An appliance in which the constituents of concrete are mixed mechanically.

concretion (*Med.*). Collection of organic matter with or without lime salts, or of lime salts, in bodily organs.

concretionary structures (*Geol.*). Nodular or irregular concentrations of siliceous, calcareous, or other materials, formed by localised deposition from solution in sedimentary rocks.

concussion (*Med.*). A violent shaking or blow (especially of or to the head), or the condition resulting from it. See **commotio cerebri.**

condensance (*Elec. Eng.*). A term occasionally used to denote the reactance of a capacitor.

condensation (*Bot.*). Crowding in a vertical series, due to the absence or suppression of internodes.

condensation (*Chem.*). (1) The linking together of two or more molecules, resulting in the formation of long chain compounds.—(2) The union of two or more molecules with the elimination of a simpler group, such as H_2O, NH_3, etc.

condensation (*Meteor.*). The process of forming a liquid from its vapour. When moist air is cooled below its dew-point, water vapour condenses if there are extended surfaces or nuclei present. These nuclei may be dust particles or ions. Mist, fog, and cloud are formed by nuclear condensation.

condensation gutter (*Build.*). A small gutter provided at the curb of lantern lights to carry away condensed water formed on the interior surface of the glazing.

condensation sinking (*Join.*). A groove cut in the bottom rails of skylights to carry away condensed water formed on the interior surface of the glazing.

condensed (*Bot.*). Said of an inflorescence in which the flowers are crowded together and nearly or quite sessile.

condensed (*Typog.*). See **elongated.**

condensed nucleus (*Chem.*). A ring system in which two rings have one or more (generally two) atoms in common; e.g. naphthalene, phenanthrene, quinoline.

condensed system (*Chem.*). One in which there is no vapour phase. The effect of pressure is then practically negligible, and the Phase Rule may be written $P+F=C+1$.

condenser (*Chem.*). Apparatus used for condensing vapours obtained during distillation; it consists of a condenser tube, either freely exposed to air or contained in a jacket in which water circulates.

condenser (*Cotton Spinning*). A mechanism which, with a roller card, produces rovings from the material delivered by the carding engine.

condenser (*Elec. Eng., etc.*). A term previously used to denote a *capacitor*, the latter name being now preferred.

condenser (*Eng.*). A chamber into which the exhaust steam from a steam-engine or turbine is delivered, to be condensed by the circulation or the introduction of cooling water; in it a high degree of vacuum is maintained by an air-pump.

See **surface—**
jet—

condenser (*Light*). A large lens or mirror used in an optical projecting system to collect light, radiated from the source, over a large solid angle, and to direct this light on to the object or transparency which is to be focused at a distance by a projection lens. See **mirror arc.**

condenser bushing (*Elec. Eng.*). A type of bushing used for terminals of high voltage apparatus (e.g. transformers and switchgear) in which alternate layers of insulating material and metal foil form the insulation between the conductor and the outer casing; the metal foil serves to improve the voltage distribution. Sometimes called a CONDENSER TERMINAL.

condenser card (*Woollen*). The section of a set of cards (carding engines) which produces the condensed slivers for spinning.

condenser circulating pump (*Eng.*). See **circulating pump.**

condenser leathers (*Textiles*). See **rubbing leathers.**

condenser loudspeaker (*Acous.*). A loudspeaker in which the sound-radiating element forms one electrode of a large condenser, to which polarised modulation voltages are applied.

condenser microphone (*Acous.*). A microphone in which the applied voltage is modulated by the compression of electrodes effected by the applied sound pressures.—HIGH-FREQUENCY CONDENSER MICROPHONE, a condenser microphone in which the polarising voltage is alternating at a high radio-frequency, amplitude modulation of which is detected by a de-modulator and used for audio-frequency transmission.

condenser pick-up (*Acous.*). A pick-up in which the tracking needle moves one electrode of a condenser, thereby modulating a steady potential applied to the condenser through a high resistance.

condenser, reading or **shunted** (*Teleg.*). See **reading condenser.**

condenser terminal (*Elec. Eng.*). See **condenser bushing.**

condenser tissue (*Paper*). Thin rag paper used, in conjunction with aluminium foil, in making fixed electrical condensers.

condenser transmitter (*Acous.*). The same as *condenser microphone*, except that the latter term may be taken to include extra equipment, such as an amplifier, which is essential for the operation of the arrangement as a whole.

condenser-transmitter (or **microphone**) **amplifier** (*Elec. Comm.*). The amplifier immediately associated with a condenser microphone, on account of the low sensitivity and high impedance of the latter.

condenser tubes (*Eng.*). The tubes through which the cooling water is circulated in a *surface condenser* (q.v.), and on whose outer surfaces the steam is condensed.

condenser yarn (*Cotton Spinning*). Yarns of good quality spun from waste material; suitable for cotton blankets, low quality shirtings, etc.

condensing electroscope (*Elec. Eng.*). A gold-leaf electroscope combined with a small condenser which can have its upper plate removed in order to magnify the effect of a charge by decreasing the capacitance of the instrument.

condensing lens (*Photog.*). A simple lens which receives light flux from a source of light at the greatest solid angle possible and concentrates it evenly over the area of a gate, as in a film projector.

conditioned reflex (*Zool.*). A reflex response to a stimulus which depends upon the former experience of the individual.

conditioning (*Cotton Spinning*). The process of adding to yarn, after spinning, the percentage of moisture necessary to bring it up to average conditions; 100 parts of dry cotton will absorb 8½ parts of moisture.

conditioning, air (*Cinema.*). See **air conditioning.**

conditions of severity (*Elec. Eng.*). A term used in connexion with the testing of circuit-breakers to denote the conditions (e.g. power factor, rate of rise of restriking voltage, etc.) obtaining in the circuit when the test is carried out.

conductance (*Elec. Eng.*). The property of a material by virtue of which it allows current to flow through it when a potential difference is applied. It is the reciprocal of resistance.

conductance of a dielectric (*Diel.*). The ratio expressed by the conduction current divided by the voltage. Normally written **G.**

conductimet'ric analysis (*Chem.*). Volumetric analysis in which the end-point of a titration is determined by measurements of the conductance of the solution.

conducting strand (*Bot.*). See **vascular bundle.**

conduction (*Acous.*). See **air—** **bone—**

conduction of heat (*Heat*). The transfer of heat from one portion of a medium to another, without visible motion of the medium, the heat energy being passed from molecule to molecule. See **conductivity (thermal).**

conductivity (*Elec. Eng.*). The conductance, at a specified temperature, between the opposite faces of a cube of material having sides of unit length. It is the reciprocal of volume resistivity.

conductivity (*Zool.*). The ability to transmit stimuli—a characteristic property of nervous tissue.

conductivity bridge (*Elec. Eng.*). A form of Wheatstone bridge used for the comparison of low resistances.

conductivity test (*Elec. Eng.*). See **fall-of-potential test.**

conductivity, thermal (*Heat*). The coefficient of thermal conduction, or the specific thermal conductivity (k) of a substance is the quantity of heat which flows in one second across unit area of a slab of the substance of unit thickness when the temperatures of the faces of the slab differ by one degree. If Q is the quantity of heat conducted in t seconds across area A of a slab of thickness d, whose faces are at temperatures θ_1 and θ_2, then $\frac{Q}{t}=\frac{kA(\theta_1-\theta_2)}{d}$.

conductivity water (*Chem.*). Very pure water prepared for conductivity measurements; its specific conductivity is about 10^{-6} ohm^{-1}.

conductor (*Elec. Eng.*). (1) A material which offers a low resistance to the passage of an electric current.—(2) That part of an electric transmission, distribution, or wiring system which actually carries the current.—(3) One of the wires forming the windings of an electric machine.—(4) The metallic conductor in a cable; it is invariably of copper surrounded by an insulating dielectric.

See

armature—
composite—
steel-cored copper—
stranded—
shaped-conductor cable
solid-laid cable.

conductor (*Plumb.*). A pipe for the conveyance of rain water. Also called LEADER.

conductor-load (*Elec. Eng.*). The total mechanical load to which an overhead electric conductor may be subjected, because of its own weight and that of any adhering matter such as snow or ice.

conductor-rail (*Elec. Eng.*). In some electric traction systems, a bare rail laid alongside the running rails to conduct the current to or from the train. Also called CONTACT RAIL.

conductor-rail anchor (*Elec. Eng.*). A device for anchoring a conductor-rail in order to prevent the longitudinal movement which might be caused by the sliding of the collector-shoes along it.

conductor-rail bond (*Elec. Eng.*). A rail bond used for connecting adjacent lengths of conductor-rail at joints in order to preserve electrical continuity.

conductor-rail insulator (*Elec. Eng.*). An insulator used for supporting a conductor-rail and for insulating it from the earth.

conductor-rail ramp (*Elec. Eng.*). A sloping contact-surface at the beginning and end of a section of conductor-rail; it serves for leading the collector-shoe of the train smoothly on to and off the rail.

conductor-rail system (*Elec. Eng.*). A system of electric traction in which power is supplied to the vehicles by means of a conductor-rail laid alongside the track; current is collected from the conductor-rail by means of collector-shoes on the vehicle.

conduit, kon′dit *or* kun′— (*Elec. Eng.*). A trough or pipe for containing electric wires or cables, in order to protect them against damage from external causes.

See **bituminous—** **earthenware—**
closed— **plain—**

conduit (*Hyd. Eng.*). A pipe or channel, usually large, for the conveyance of water.

conduit box (*Elec. Eng.*). A box adapted for connexion to the metal conduit used in electric wiring schemes. The box forms a base to which fittings (e.g. switches or ceiling roses) may be attached, or it may take the place of bends, elbows, or tees, used in order to facilitate the installation of the wiring.

conduit fittings (*Elec. Eng*). A term applied to all the auxiliary items, such as boxes, elbows, etc., needed for the conduit system of wiring.

conduit system (*Elec. Eng.*). (1) A system of wiring, used for domestic and other premises, in which the conductors are contained in a steel conduit.—(2) A system of current collection used on some electric tramway systems; the conductor-rail is laid beneath the roadway, and connexion is made between it and the vehicle by means of a collector-shoe passing through a slot in the road surface.

condu′plicate (*Bot.*). (1) Folded longitudinally about the midrib, so that the two halves of the upper surface are brought together.—(2) Said of a cotyledon which is folded longitudinally about the radicle.

Condy's fluid (*Chem.*). A disinfectant, usually containing calcium permanganate, sodium permanganate, and possibly sodium nitrate.

con′dyle (*Zool.*). A smooth rounded protuberance, at the end of a bone, which fits into a socket on an adjacent bone, as the *condyle* of the lower jaw, the occipital *condyles*.—*adjs.* **condylar, condyloid.**

condylo′mata (*Med.*). Inflammatory wart-like papules on the skin round the anus and external genitalia, especially in syphilis.—*sing.* **condyloma.**

cone. A solid which may be generated by a straight line, one end of which remains fixed while the other end moves round a closed curve. If this curve is a circle whose plane is at right-angles to the line joining its centre to the fixed point, the cone is termed a *right circular cone*. This is the figure usually referred to when the term cone is used alone.

cone (*Bot.*). See **strobilus.**

cone (*Met.*). A device used on top of blast-furnaces, to enable charge to be put in without permitting gas to escape. Also called BELL.

cone (*Zool.*). A conical percipient structure borne on the outer end of certain visual cells of the retina: a *cone-cell* (q.v.).

cone bearing (*Eng.*). A shaft bearing consisting of a conical journal running in a correspondingly tapered bush, so acting as a combined journal and thrust bearing; used for some lathe spindles.

cone capacitor (*Elec. Eng.*). A capacitor consisting of two conducting cones, one inside the other, separated by insulating material. By moving one cone relative to the other a variable capacitance can be obtained.

cone-cell (*Zool.*). One of the photosensitive cells of the retina. See **cone.**

cone classifier (*Met.*). A general term for various types of machines of conical design used in classifying ores.

cone clutch (*Eng.*). A friction clutch in which the driving and driven members consist of conical frustra. The externally coned (driven) member may be moved axially in or out of the internally coned member for engaging and disengaging the drive. See **clutch, friction clutch.**

cone diaphragm (*Acous*). A diaphragm of doped or bakelised paper driven by an electro-magnetic mechanism at its apex, or electro-dynamically by a coil attached as an annulus; used for radiating sound in loudspeaking receivers

cone drawing (*Textiles*). A method of drawing wool so that the speed of the bobbin on which it is being wound decreases as the diameter of the bobbin and material enlarges.

cone drive or **cone gear** (*Eng.*). A belt drive between two similar coned or tapered pulleys. A variable speed ratio is obtained by lateral movement (by means of a striker) of the belt along the pulleys.

cone drums (*Cotton Spinning*). The driving drums used to vary the speed of delivery rollers or the speed of bobbin spindles.

cone gear (*Eng*). See **cone drive.**

cone loudspeaker (*Acous.*). A loudspeaker in which the main radiating element takes the form of a cone, generally driven at its apex, with the rim elastically suspended. See **surround.**

cone of origin (*Zool.*). The conical hyaline area of a nerve-cell body, at the point of origin of an axon.

cone pulley (*Eng.*). A belt pulley stepped to give two or more diameters; used in conjunction with a similar pulley to obtain different speed ratios. See also **cone drive.**

cone sheets (*Geol*). Minor intrusions which occur as inwardly inclined sheets of igneous rock, and have the form of segments of concentric cones.

Con′emaugh Series (*Geol.*). The lower Barren Coal Measures of the Pennsylvanian, which are succeeded by the productive Monongahela Series.

coney fur (*Furs*). The trade name for different kinds of dressed rabbit skins which are dyed and treated to imitate other furs.

conference system (*Teleph.*). A telephone system used for conference between groups of persons at a distance; high-grade microphones and radiating receivers are employed.

confer′void (*Bot.*). Consisting of delicate filaments.

configuration (*Chem.*). The spatial arrangement of atoms in a molecule, especially in one containing several asymmetric carbon atoms.

configuration (*Psychol.*). See **gestalt.**

conflict (*Cinema.*). In editing, the juxtaposition, in space or time, of photographic or acoustic elements which have a psychological antithesis and therefore interest for the observer.

confluent (*Bot.*). Said of two or more structures which, as they enlarge, grow together and unite.

confluent filter (*Elec. Comm.*). An electric wave-filter so designed that it has two pass or elimination bands two nominal cut-off frequencies of which are co-incident.

conformable strata (*Geol.*). An unbroken succession of strata. See also **unconformity, non-sequence.**

confusion (*Photog.*). See **circle of confusion, circle of least confusion.**

congé, kon^{g}′zhä (*Arch.*). A small circular moulding, either concave or convex, at the junction of a column with its base.

congener′ic (*Zool.*). Belonging to the same genus.

congenital (*Zool.*). Dating from birth.

congested (*Bot.*). Packed into a tight mass.

conges′tin (*Zool.*). A toxic substance produced by certain Sea Anemones.

congestion (*Med.*). Pathological accumulation of blood in a part of the body.

congestion call meter (*Auto. Teleph.*). A meter which counts the number of calls made over the last choice of outlet in a grading scheme.

congestion traffic-unit meter (*Auto. Teleph.*). A meter which registers the traffic flow over the last choice of outlets in a grading scheme.

conglo′bate (*Bot.*). Heaped together.—(*Zool.*) Ball-shaped.

conglomerate (*Bot.*). Clustered.

conglomerate (*Geol*). A cemented clastic rock containing rounded fragments, corresponding in their grade sizes to gravel or pebbles.

conglu′tinate (*Bot.*). United into a mass by a sticky substance.

Congo gum or **Congo copal** (*Chem.*). A natural gum, of yellow or brown colour; sp. gr. 1·059-1·080, saponification value 66-175, acid value 35-95. Soluble in benzene, turpentine, chloroform, ether. Used for varnishes and linoleum.

congregate (*Bot.*). Collected into a dense group.

conic section (*Geom*). A curve obtained by the intersection of a right circular cone by a plane. It may also be defined as the locus of a point which moves in a plane so that its distance from a fixed point, called the *focus*, is in a constant ratio (the *eccentricity*) to its distance from a fixed straight line known as the *directrix*. See **ellipse, hyperbola, parabola.**

conical horn (*Acous.*). A horn in the form of a cone, the apex being truncated to form the throat.

conical pivot (*Horol.*). (1) A pivot formed as a cone, which runs in a screw with a tapered hole, the angle of taper being greater than that of the conical pivot; used for the balance staff of alarm-clock movements, and for certain watches with pin-pallet escapement.—(2) A form of pivot, used in English watches, which has a conical shoulder, the pivot itself being parallel.

conid′ial (*Bot.*). (1) Referring to, or pertaining to, a conidium.—(2) Producing conidia.

conid′iole (*Bot.*). A small conidium, usually budded out from another conidium.

conid′iophore (*Bot.*). A simple or branched hypha bearing one or more conidia.

conid′ium (*Bot.*). An asexually formed spore, produced by many species of fungi. It develops at the end of a hypha, usually by a process of abstriction, and it is never enclosed in a sporangium.—*pl.* **conidia.**

Conif′erae (*Bot.*). The chief class of the *Gymnospermae*, with about 400 species, all woody, and mostly large evergreen trees, forming forests. The main stem usually persists, so that the tree has an elongated conical form. The reproductive organs are borne in cones, which are unisexual. Members of the group, such as pines and spruces, are important timber trees and are now widely used as sources of wood pulp.

conif′erin (*Chem.*). $C_{16}H_{22}O_8$, $2H_2O$, a glucoside contained in the cambium sap of the *Coniferae*, yielding glucose and coniferyl alcohol on hydrolysis; serves for the preparation of vanillin.

conif′erous (*Bot.*). Cone-bearing: relating to a cone-bearing plant.

coniine, kō′ni-ēn (*Chem.*). $C_5H_{10}N(C_3H_7)$, dextrorotatory *α-normal*-propyl-piperidine; b.p. 167° C.; a pyridine alkaloid found in *Conium maculatum*; it can be synthesised by reducing α-allyl-pyridine in alcoholic solution with sodium.

conjugate (*Bot.*). Occurring in pairs.

conjugate deviation (*Med*). The sustained deviation of the eyes in one direction as a result of a lesion in the brain.

conjugate division (*Bot.*). The simultaneous division of a pair of associated nuclei.

conjugate double bonds (*Chem.*). Di-olefinic compounds with an arrangement of alternate single and double bonds between the carbon atoms, viz. R·CH:CH·CH:CH·R. Peculiar additive reactions take place, inasmuch as atoms or radicals become attached to the two outside carbon atoms of the chain, thus creating a new ethylene linkage in the centre.

conjugate foci (*Light*). Two points such that rays of light diverging from either of them are brought to a focus at the other. For a simple convergent lens an object and its real image are at *conjugate foci.*

conjugate impedance (*Elec. Comm.*). Two impedances are conjugate when their resistance components are equal and their reactances are equal but opposite in sign.

conjugation (*Bot., Zool.*). The temporary or permanent union of two cells or individuals preparatory to the development of new individuals: more particularly, the union of isogametes: in *Infusoria*, a type of syngamy in which the participants remain separate and exchange nuclear material.

conjugation tube (*Bot*). A tubular outgrowth by means of which the contents of a male gametangium are conveyed into a female gametangium.

conjunction (*Astron.*). A term signifying that two heavenly bodies have the same celestial longitude or right ascension. Applied to the planets Venus and Mercury it is subdivided into *inferior conjunction* and *superior conjunction*, according as the planet is between the earth and sun, or the sun between the earth and planet, respectively.

conjuncti′va (*Zool.*). In Vertebrates, the modified epidermis of the front of the eye, covering the cornea externally and the inner side of the eyelid.

conjunctive parenchyma (*Bot.*). Parenchymatous tissue occupying the spaces between vascular strands or other specialised tissues.

conjunctivi′tis (*Med.*). Inflammation of the conjunctiva.

connation (*Bot.*). The union of parts of a plant as growth proceeds; applied especially to the union of like parts.—*adj.* **connate.**

connected load (*Elec. Eng.*). The sum of the rated inputs of all consumers' apparatus connected to an electric power supply system.

connecting-rod (*Eng.*). In a reciprocating engine or pump, the rod connecting the piston or crosshead to the crank.

connecting-rod bolts (*Eng.*). Bolts securing the outer half of a split big-end bearing of a connecting-rod to the rod itself. Sometimes known as BIG-END BOLTS.

connecting thread (*Bot.*). A delicate strand of protoplasm passing through a fine perforation in the cell wall, and uniting the protoplasts of contiguous cells.

connective (*Bot.*). (1) Sterile tissue in an anther, lying between the lobes, and usually a prolongation of the filament.—(2) See **disjunctor.**

connective (*Zool.*). A bundle of nerve fibres uniting two nerve centres.

connective tissue (*Zool.*). A group of animal tissues fulfilling mechanical functions, developed from the mesoderm and possessing a large quantity of non-living intercellular matrix, which usually contains fibres; as bone, cartilage, and areolar tissue.

connector-bar (*Elec. Eng.*). See **terminal-bar.**

connector neurone (*Zool.*). See **association neurone.**

connexion- (or **connecting-**) **box** (*Elec. Eng.*). A box containing terminals to which are brought a number of conductors of a wiring or distribution system, in order to facilitate the making of connexions between them.

conni'vent (*Bot.*). Converging and meeting at the tips.

consanguinity (*Geol.*). The term applied to rocks having a similarity or community of origin, which is revealed by common peculiarities of mineral and chemical composition and often also of texture.

consciousness (*Psychol.*). A comprehensive state of awareness of the mind to stimuli from the outside world, and to feelings, emotions, and thoughts from within the individual.

consen'sual (*Zool.*). Said of response to stimuli in which voluntary action and involuntary action are correlated.

consequent drainage (*Geol.*). A river system directly related to the geological structure of the area in which it occurs.

consequent pole (*Elec. Eng.*). A pole of a permanent magnet occurring at a point remote from either end. In an electromagnetic circuit, it refers to a pole occurring at a point between two magnetising coils having their m.m.f.'s in opposition.

consequent-pole generator (or **motor**) (*Elec. Eng*). A generator or motor in which alternate poles do not carry windings, and which are therefore consequent poles.

conservancy system (*San. Eng*). The system of disposing of waste matter from buildings by earth closets and privies, without the use of water to carry it away.

conservation of energy, law of (*Mech.*). 'In any isolated system, the total amount of energy is constant.'

conservation of matter (*Chem.*). See **law of the conservation of matter.**

conservation of momentum, law of (*Mech.*). 'The sum of all the momenta in a closed system (that is, one in which no influences act upon it from outside) is constant and is not affected by processes occurring within the system.'

conservation of movement of the centre of gravity, law of (*Mech.*). 'The state of rest or of motion of the centre of gravity of a system can never be altered by the action of internal forces within the system.'

conservative system (*Mech.*) A system such that, in any cycle of operations at the end of which the configuration of the system is the same as it was at the beginning, the work done is zero.

conservatory (*Build.*). A glazed building in which plants may be grown under controlled atmospheric conditions.

Considère pile, kon-se-dār' (*Civ. Eng.*). A type of reinforced-concrete pile having the main bars grouped symmetrically about the centre of the pile and bound together by a close-set spiral of steel wire or small-section steel rod.

consistom'eter (*Chem.*). An instrument for determining the consistency or hardness of semi-fluid and brittle materials.

consociation (*Bot.*). A subdivision of an association dominated by one of the co-dominants of the association.

consocies, kon-sō'sēz (*Bot.*). A developmental stage in the history of a consociation, before conditions have become stabilised.

console (*Acous.*). The location of the playing controls of an organ; the position where the organist plays the manuals and pedals, and registers his stops and couplers. The console may be integral with the pipe-work and action, as in old organs, but it is now generally detached. In electronic organs, the generators and action may be incorporated in the console or they may be remotely operated.

console (*Build., etc.*). (1) A bracket whose shelf is supported by volutes.—(2) A side or wall table.

consolidation (*Geol.*). (Of strata) the drying, compacting, and induration of rocks, as a result of pressures operating after deposition.

consolidation pile (*Civ. Eng.*). A pile driven (with others) into the ground in order to consolidate the soil and enable it to support heavier loads than would otherwise be possible.

consonant articulation (*Acous*). See **articulation.**

con'sortism (*Bot.*). See **symbiosis.**

consor'tium (*Bot.*). (1) The compound thallus of a lichen.—(2) The mutual relationships of the fungus and the alga in the lichen thallus.

constant (*Elec. Comm.*).

See **attenuation—**
distributed—
phase—
primary—
propagation—
time—
transfer—
wavelength—

constant-current generator (*Elec. Eng.*). A special type of electric generator which is designed to give a constant current at all loads, the voltage being varied to meet variations in the load.

constant-current modulation (*Radio*). See **choke control.**

constant-current motor (*Elec. Eng.*). An electric motor designed to operate at a constant current from a constant-current generator.

constant-current system (*Elec. Eng.*). A system of transmitting electric power in which all the equipment is connected in series and a constant current is passed round the circuit. Variations in power result in a variation of the voltage of the system, constant-current generators being used for the supply. See **series system.**

constant-current transformer (*Elec. Eng.*). A transformer designed to maintain a constant secondary current within a specified working range, for all values of secondary impedance and all values of primary voltage.

constant-frequency oscillator (*Radio*). An oscillator in which special precautions are taken to ensure that the frequency remains constant under varying conditions of load, supply voltage, etc.

constant-k filter (*Elec. Comm.*). An electric-wave filter in which the product of the shunt arm and the series arm is a constant, independent of frequency, the arms therefore being inverse.

constant level tube (*Surv.*). A special form of level tube in which the volume ratio of bubble to liquid is fixed at such a value that decrease in length of the bubble due to expansion of the liquid is exactly counterbalanced by increase in length of the bubble due to diminished surface tension, so that the length of the bubble—and thus the sensitivity of the level tube—remains unaltered by rise in temperature.

constant-mesh gear-box (*Automobiles*). A gear-box in which the pairs of wheels providing the various speed ratios are always in mesh, the ratio being determined by the particular wheel which is coupled to the mainshaft by sliding dogs working on splines.

constant-power generator (*Elec. Eng.*). An electric generator which, by variation of the generated voltage, gives a constant output at varying currents.

constant-pressure cycle (*I.C. Engs.*). See **Diesel cycle.**

constant proportions (*Chem.*). See **law of constant proportions.**

constant resistance network (*Elec. Comm.*). A transmission network in which image impedances are constant and resistive at all frequencies, so that reflection and interaction losses are avoidable.

constant time-lag (*Elec. Eng.*). See **definite time-lag.**

constant-velocity recording (*Acous.*). In gramophone disc recording, the technique whereby the lateral r.m.s. velocity of the sinuous track is made proportional to the root of the electrical power applied to the recorder, irrespective of the frequency. This criterion is necessary for minimum wear and surface noise on the finished record, but has to be modified to constant-amplitude recording below about 250 cycles per second, as a compromise with playing time.

constant-voltage generator (*Elec. Eng.*). The usual type of electric generator; the voltage is maintained approximately constant, the current being varied to meet variations in the load.

constant-voltage motor (*Elec. Eng.*). The usual type of electric motor, designed to operate from a constant-voltage system.

constant-voltage system (*Elec. Eng.*). The usual system of transmission of electric power, in which the voltage between the conductors is maintained approximately constant, and all apparatus is connected to the system in parallel across the conductors.

constant-volume cycle (*I.C. Engs.*). See **Otto cycle.**

constantan (*Elec. Eng.*). An alloy of about 40% nickel and 60% copper, having a high volume resistivity and almost negligible temperature coefficient; used as the resistance wire in resistance boxes, etc.

constellation (*Astron.*). A group of stars, not necessarily connected physically, to which have been given a pictorial configuration and a name (generally of Greek mythological origin) which persist in common use although of no scientific significance.

constipate (*Bot.*). Crowded together.

constipation (*Med.*). A condition in which the faeces are abnormally dry and hard: retention of faeces in the bowel: infrequent evacuation.

constituent (*Met.*). A component of a solid alloy. Four general types of constituents are recognised, viz. pure metals, primary solid solutions, intermediate constituents, and eutectics or eutectoids. See **constitution** (*Met.*).

constituents (*Chem.*). All the substances present in a system.

constitution (*Chem.*). See **chemical constitution.**

constitution (*Met.*). This term refers to the type of constituent or constituents present in a solid metal or alloy, and the proportions of each type concerned.

constitutional changes (*Met.*). Changes in solid alloys which involve the transformation of one constituent to another (as when pearlite is formed from austenite), or a change in the relative proportions of two constituents.

constitutional diagram (*Met.*). A diagram representing the limits of temperature and composition within which the different phases or constituents occurring in an alloy system are stable.

constitutional formula (*Chem.*). A formula which shows the arrangement of the atoms in a molecule.

constitutional water (*Chem.*). See **water of crystallisation.**

constraint, principle of least (*Mech.*). The motions of any number of interconnected masses under the action of forces deviate as little as possible from the motions of the same masses if disconnected and under the action of the same forces. The motions are such that the constraints are a minimum, the constraint being the sum of the products of each mass and the square of its deviation from the position it would occupy if free.

constricted (*Bot., Zool.*). (1) Narrowed suddenly.—(2) Narrowed at one or more points along the length, as if compressed by a thread tightened around the member.

constriction (*Bot.*). (1) Any sudden narrowing in a cylindrical member.—(2) (*Cyt.*) A narrowed localised region in a chromosome, usually difficult to stain.

constrictor (*Zool.*). A muscle which by its contraction constricts or compresses a structure or organ.

construction (*Photog.*). The creative arrangement of the main photographic lines in a picture.

construction way (*Rail.*). The temporary works employed for transport of men and materials during construction of the finished or permanent way.

consumer's terminals (*Elec. Eng.*). The terminals of a consumer's wiring installation which are connected to the supply authorities' service.

consumption (*Med.*). Wasting of the body; pulmonary tuberculosis.

contabes'cence (*Bot.*). Abortion in stamens and pollen.

contact (*Acous.*). The psychological acoustic contact between members of an orchestra, whereby they can play together with ease. This is largely affected if the reverberation is markedly reduced, but restored by local reflections.

contact (*Elec. Comm.*). The juxtaposition of parts, usually of platinum or silver, which, when brought into contact, provide for the passage of a current and, when withdrawn, cause its cessation. For the former, suitable minimum pressures and areas of contact are necessary; for the latter, a sufficiently low recovery voltage, and rapidity of withdrawal of the contacts from each other.

See **back—**
break—
change-over—
front—
make—
make-before-break—
mark—
moving—
space—

contact (*Elec. Eng.*). That part of either of two conductors which is made to touch the other when it is desired to pass current from one to the other, as in a switch.

See **arcing—**
auxiliary—
brush—
carbon—
finger-type—
floor—
inverted-brush—
laminated—

sparking—
wedge—

contact action (*Chem.*). See **catalysis.**

contact-bar (*Elec. Eng.*). The conductor of a resistance welding machine, which carries current to the part to be welded and also exerts the necessary mechanical pressure.

contact bed (*Sewage*). A tank filled with material such as broken clinker; used in the final or oxidising stage in sewage treatment, which consists in charging the filtering medium with the liquid sewage, allowing it to stand for a given time, draining it off, and finally keeping the tank empty for a given time. See **percolating filter.**

contact-breaker (*Elec. Eng.*). A device, usually electromagnetic, for repeatedly breaking and making an electric circuit, as in an electric bell or an induction coil.

contact drop (*Elec. Eng.*). The drop in voltage occurring when a current flows across a pair of contacts; it is due to the contact resistance between them.

contact e.m.f. (*Elec. Eng.*). The e.m.f. which sometimes occurs when two conductors of different materials are placed in contact with each other.

contact fingers (*Elec. Eng.*). Contacts pressed by springs against the moving contacts of a drum-type controller.

contact-jaw (*Elec. Eng.*). (1) The clamping device of a resistance welding machine, which secures the parts to be welded and also conducts the current to them.—(2) The fixed part of a switch, with which the moving blade makes contact in closing the circuit.

contact maker (*Elec. Eng.*). Any device used to make an electrical contact in a circuit, although it usually refers to a device arranged to make contact periodically, as required for the sparking-plugs of a petrol engine.

contact metal (*Elec. Comm.*). The metal used for the contacts on the springs of relays, generally silver or platinum or some substitute.

contact metamorphism (*Geol.*). The alteration of rocks caused by their contact with, or proximity to, a body of igneous rock.

contact-point (*Elec. Eng.*). The pointed part of the contact-bar of a resistance welding machine which actually makes contact with the part to be welded.

contact-point insert (*Elec. Eng.*). A metal tip inserted in the contact-point of a resistance welding machine to increase its durability.

contact potential (*Thermionics*). The difference between the electron affinities of the materials of the cathode and the other electrodes in a thermionic tube. The contact potential of the grid is particularly important in determining the cut-off point.

contact pressure (*Elec. Comm.*). The pressure between the contacts on relay springs, a minimum pressure being required for certain contact when the circuit is frequently broken.

contact print (*Photog.*). A positive print obtained by exposure through the negative, which is in contact with the photographic sensitive surface.

contact process (*Chem.*). A process for making sulphuric acid; the dry gases are passed over a catalytic agent to induce the conversion to sulphuric acid.

contact rail (*Elec. Eng.*). See **conductor-rail.**

contact resistance (*Elec. Eng.*). The resistance at the surface of contact between two conductors; e.g. between the brush and commutator of a d.c. machine.

contact roller (*Elec. Eng.*). A rotating disc used in a seam-welding machine to convey current to the parts to be welded and to exert the necessary mechanical pressure.

contact segment (*Elec. Eng.*). Contacts on certain types of motor starter, or other control equipment, which are segment-shaped, so that when in position they form a ring divided by radial gaps.

contact series (*Chem.*). See **electromotive series.**

contact shoe (*Elec. Eng.*). See **collector-shoe.**

contact skate (*Elec. Eng.*). The long conductor placed under an electric vehicle to make contact with the studs used in the surface-contact system of electric traction.

contact spring (*Elec. Comm.*). The flexible metal holder of the contact in a relay. The stiffness of the holder determines the pressure between contacts for a given displacement.

contact strip (*Elec. Eng.*). On a pantograph or bow type of current collector, the renewable strip of soft metal that actually makes contact with the overhead wire of an electric traction system. Also called a BOW STRIP, when used on a bow collector.

contact stud (*Elec. Eng.*). In the surface-contact system of electric traction, the studs in the roadway for making contact with the contact skate on an electric vehicle. The studs are only made alive when the car is actually passing over them.

contact vein (*Mining*). A vein occurring along the line of contact of two different rock formations, one of which may be an igneous intrusion.

contact wire (*Elec. Eng.*). The overhead conductor from which current is collected, by means of suitable forms of collector gear, for the vehicles of some electric traction systems.

contactor (*Elec. Eng.*). A power-operated switch suitable for frequently making and breaking an electric circuit. It may be operated electromagnetically, electro-pneumatically, or mechanically (e.g. by a cam).

contactor controller (*Elec. Eng.*). A controller in which the various circuits are made and broken by means of contactors.

contactor starter (*Elec. Eng.*). An electric motor starter in which the steps of resistance are cut out, or other operations are performed, by means of contactors.

contactor switching starter (*Elec. Eng.*). A switching starter in which the switching operations are carried out by means of contactors.

conta'gion (*Med.*). The communication of disease by direct contact between two persons, or between an infected object and a person.—*adj.* **conta'gious.**

contaminated rocks (*Geol.*). Igneous rocks whose composition has been modified by the incorporation of other rock material.

contemporaneous erosion (*Geol.*). The removal of sediments immediately after deposition or whilst sediments of identical age are being laid down in another area. See **non-sequence.**

conterminous (*Bot.*). Said of marginal ray cells when they form an uninterrupted row.

contiguous (*Bot.*). In contact but not in organic union.

continental conditions (*Geol.*). These obtain when portions of the earth's crust are elevated above sea-level in large land areas remote from the sea. Characteristics are low rainfall, scarcity of rivers, salt lakes. See also **continental deposition.**

continental deposition (*Geol.*). The laying down of rocks under sub-aerial conditions, or in temporary shallow water areas. See **aeolian rocks, glacial deposits, lacustrine deposits.**

continental drift (*Geol.*). The disruption and drifting apart of land masses in the manner postulated by Wegener. See **Gondwanaland.**

continental shelf (*Geol.*). The gently sloping off-shore zone, extending usually to about 100 fathoms.

Continental system of drawing (*Textiles*). See **porcupine system.**

continuity (*Cinema.*). The complete description of the sequences required in the production of a motion-picture: the person who is in charge of the same and who records what is actually shot.

continuity-bond (*Elec. Eng.*). A rail-bond used to maintain the continuity of the track- or conductor-rail circuit at junctions and crossings.

continuity-fitting (*Elec. Eng.*). A device used in electric wiring installations for ensuring a continuous electric circuit between adjacent lengths of conduit.

continuous (*Bot.*). (1) Without septa.—(2) With a smooth surface.—(3) Of even uninterrupted outline or contour.

continuous beam (*Eng., Struct.*). A beam supported at a number of points and continuous over the supports, as distinct from a series of simple independent beams.

continuous brake (*Eng.*). A brake system used on passenger trains, in which operation at one point applies the brakes throughout the train. See **air brake, pneumatic brake, vacuum brake.**

continuous current (*Elec. Eng.*). An obsolete term for *direct current.*

continuous development (*Photog.*). Development of cinematograph film in which the film passes continuously through the chemical and washing baths and drier, the whole process taking about an hour.

continuous-disc winding (*Elec. Eng.*). A type of winding used for transformers; the whole winding is made from one continuous length of conductor instead of being split up into a number of separate coils.

continuous distillation (*Chem.*). An arrangement by which a fresh distillation charge is continuously fed into the still in the same measure as the still charge is distilled off. The contrary process is known as *batch distillation.*

continuous electrode (*Elec. Eng*). A type of carbon electrode used in electric furnaces; the electrode is gradually fed forward as the lower part burns away, and the upper part is renewed by adding fresh material. The furnace can thus be worked continuously, without intervals for electrode renewal.

continuous electrophorus (*Elec. Eng*). The name given to some earlier forms of influence machine which operate on the principle of performing the functions of an electrophorus over and over again.

continuous extraction (*Chem.*). Extraction of solids or liquids by the same solvent, which circulates through the extracted substance, evaporates, and is condensed again, and continues the same cycle over again; or by exhaustive extraction with solvents in counter-current arrangement.

continuous filter (*Sewage*). See **percolating filter.**

continuous furnace (*Met.*). A furnace in which the charge enters at one end, moves through continuously, and is discharged at the other Many methods are used for moving the charge; they vary according to the weight, shape, and nature of the stock being treated.

continuous girder (*Eng.*, *Struct.*) See **continuous beam.**

continuous girder bridge (*Civ. Eng.*). A bridge the principal members of which are continuous girders.

continuous impost (*Build.*). An impost which does not project from the general surfaces of the pier and arch.

continuous (or Krarup) loading (*Elec. Comm.*). The addition of inductance uniformly along a cable by spinning magnetic wire over the conductor and beneath the insulation. Used only for submarine cables, to avoid the bulges if coil loading is used. High permeability material for weak magnetisations are used, such as Permalloy and Mumetal.

continuous mill (*Met.*). A rolling-mill consisting of a series of pairs of rolls in which the stock undergoes successive reductions as it passes from one end to the other end of the mill. See also **pull-over mill, reversing mill, three-high mill.**

continuous oscillations (*Radio*). Oscillations (such as those generated by an alternator, arc, or oscillating valve) which are not broken up into individually decaying groups, as opposed to the damped oscillations of a spark transmitter. Also called UNDAMPED OSCILLATIONS.

continuous printing (*Cinema.*). Contact printing which brings the positive and negative together for printing a cross-line, which progresses along the length of the film as it is drawn continuously by the mechanism.

continuous processing (*Cinema.*). The use of machines which pull exposed film through baths continuously, as contrasted with *frame development* (q.v.).

continuous programme (*Cinema.*). The nearly universal practice of projecting films in cinemas without definite times for the audience to arrive or leave, other than for opening and closing.

continuous projector (*Cinema.*). A cinematograph projector in which the picture is projected on to the screen by a number of lenses travelling without motion relative to the film, which moves continuously and not intermittently, as is normal.

continuous rating (*Elec. Eng.*). An electrical machine, or other piece of apparatus, is said to be *continuously rated* when it gives its rated output continuously without exceeding a certain specified temperature-rise or suffering any ill effects. Cf. *intermittent rating.*

continuous spectrum (*Light*). A spectrum in which, over a considerable range, all wavelengths are represented without any abrupt discontinuity in intensity. Such a spectrum is given by the light emitted from an incandescent solid or liquid or a gas under very high pressure. See **Wien's displacement law.**

continuous variation (*Bot.*, *Zool.*). Variation as shown by slight individual differences between a number of specimens belonging to the same lineage, so that one specimen may shade into another.

continuous vent (*Plumb.*). Extension of a vertical waste pipe above the point of entry of liquid wastes to a point above all windows, to provide ventilation.

continuous-wave telegraphy (*Radio*). Radiotelegraphy in which each signal consists of a train of continuous oscillations.

continuous waves (*Radio*). Radio waves which are radiated from an antenna in which there is a continuously alternating high-frequency current, the envelope of this undamped current forming the transmitted signals. Abbrev. **C.W.** An *interrupted continuous wave* implies low-frequency modulation (which can be perceived on telephones after demodulation or rectification) before being chopped by the transmitted signal. Abbrev. **I.C.W.**

continuously-loaded cable (*Teleg.*). A submarine cable in which the conductors are continuously loaded.

continuously rated (*Elec. Eng.*). A term applied to electrical equipment to denote that it will safely carry its rated load for an indefinite length of time.

Contorta Shales (*Geol.*). A series of black shales with *Avicula*, found in the Rhaetic stage of Britain.

contorted (*Bot.*). Twisted together.

contorted aestivation (*Bot.*). The arrangement of the perianth in the bud, when all the perianth segments overlap by their right-hand edges, or by their left-hand edges.

contortion (*Geol.*). (Of strata) the deformation of rocks by directed pressure or torsion.

contour (*Join.*). The profile of the face of a moulding.

contour (*Surv.*). The imaginary intersection line between the ground surface and any given level surface: a line connecting points on the ground surface which are at the same height above datum.

contour feathers (*Zool.*). See **plumae.**

contour gradient (*Surv.*). A line on the ground surface having a constant inclination to the horizontal.

contour interval (*Surv.*). The vertical distance between adjacent contours in any particular case.

contour recording (*Acous.*). Wax recording in which the mechanical cut is made perpendicular to the surface of the disc, as contrasted with the usual radial cut.

contraceptive (*Med.*). Any agent which prevents the fertilisation of the ovum with a spermatozoon.

contract-demand tariff (*Elec. Eng.*). A form of two-part tariff in which the fixed charge is made proportional to the maximum kilowatt demand likely to be made.

contract-rate tariff (*Elec. Eng.*). See **two-part tariff.**

contrac′tile root (*Bot.*). A somewhat fleshy root which, as it ages, develops transverse corrugations, whereby it is shortened and drags the plant deeper into the soil.

contractile tissue (*Zool.*). A group of animal tissues which possess the property of contractility; more commonly spoken of as muscle.

contractile vacuole (*Zool.*). In some *Protozoa*, a cavity filled with fluid which periodically collapses and expels its contents into the surrounding medium, so ridding the animal of surplus fluid and excreta in solution.

contractility (*Zool.*). The power of becoming reduced in length exhibited by some cells and tissues, as muscle; the power of changing shape.

contraction cavities (*Met.*). The bulk of the contraction that accompanies the solidification of metals is concentrated in the feeder heads and risers, from which molten metal flows to compensate for contraction in the casting or ingot proper. When, however, the supply of molten metal fails at certain points *contraction cavities* are formed.

contraction coefficient (*Elec. Eng.*). A coefficient used in making calculations on the magnetic circuit of an electric machine, to allow for the effect of the fringing of the flux in the air-gap due to open or semi-closed slots. The actual length of the gap is reduced by the coefficient to obtain an effective gap length, which is shorter than the actual value. Cf. *extension coefficient.*

contraction in area (*Met.*). The difference between the original cross-sectional area of a tensile test piece and the area at the point of fracture. Usually stated as a percentage of the original area.

contraction rule (*Pattern-making*). A measuring rule used by a pattern-maker which compensates for the shrinkage of castings; the dimensions shown are longer by about 0·1 inch per foot than the standard units of length.

contrac′ture (*Med.*). Distortion or shortening of a part due to spasm or paralysis of muscles, or to the presence of scar tissue.

contracture (*Zool.*). Muscular contraction which persists after the stimulus which caused it has ceased.

contradecid′uate (*Zool.*). Said of Mammals in which the placenta is largely absorbed by maternal leucocytes at parturition. Cf. *deciduate, indeciduate.*

contrast (*Acous.*). The relation, measured in decibels, between the maximum intensity level and the minimum useful intensity level in programme material such as speech or music.

contrast (*Photog.*). The conflict between light and shade, lines and curves, and other prominent elements in the composition of a photographic image. See also **colour contrast.**

contrast amplification (*Acous.*). Adjustment of a thermionic amplifier so that it increases the contrast between the maximum and minimum intensities in the programme material; this serves as an approximate compensation for the control exercised at the transmitting end in a broadcasting system, or by the recordist in making a record on wax or film.

contrast control (*Television*). Control of the ratio of illumination between the lightest and darkest parts of a reproduced television image.

contrast photometer (*Illum.*). A class of photometer in which measurement is made by comparing the illumination produced on two adjacent surfaces by the lamp under test and by a standard lamp.

contrate wheel (*Horol.*). (1) A toothed wheel the teeth of which are formed at right-angles to the plane of the wheel: a wheel that transmits motion between two arbors at right-angles.—(2) The fourth wheel in a watch with the verge escapement.

contre coup, contrecoup, kon^{g}-tr-koo (*Med.*). Injury at a point opposite to and remote from the point of the blow.

control (*Acous.*). The regulation of the contrast between the highest and lowest power levels in a sound-reproducing system, particularly in broadcasting, in which the possible tolerance of the modulation level with respect to the noise level is limited on reception. Automatic control has not been found artistically satisfactory.

control (*Elec. Comm.*).
See **automatic— volume—**
automatic gain (or **volume**)—

control-board (*Elec Eng.*). A switchboard on which are mounted the operating handles, push-buttons, or other devices for operating switchgear situated remotely from the board. The board usually has mounted on it indicating instruments, key diagrams, and other accessory apparatus connected with the circuits controlled.

control car (*Aero.*). See **car.**

control circuit (*Elec. Eng.*). The circuit which carries the current for operating contactors or other control devices.

control column (*Aero.*). The device by which the aileron and elevator controls of an aeroplane are operated; it may be a pillar, lever, or arch; sometimes carries a handwheel. Colloquially, JOYSTICK.

control electrode (*Thermionics*). An electrode whose primary function is to control the flow of current between two other electrodes, without necessarily carrying current itself.

control impedance (*Elec. Comm.*). A unilateral or control impedance is the electrical property of a device which controls power in one direction only, as a gas-filled relay.

control limit-switch (*Elec. Eng.*). A limit-switch connected in the control circuit of the motor whose operation is to be limited.

control-line (*Elec. Eng.*). A train-line used on multiple-unit trains for connecting master controllers or contactor gear on the different coaches.

control magnet (*Elec. Eng.*). A magnet used in electric indicating instruments to provide a force for controlling the movement of the moving system.

control panel (*Elec. Eng.*). See **panel.**

control room (*Elec. Eng.*). A room used by the engineers of an electric-power supply system for supervising the operation of the entire system. Instrument readings, switch positions, and other information is transmitted from various points on the system to the room, and switches at these points can be operated by remote control, or by telephonic communication between the room and substation attendants.—Similarly (*Radio*), the section of a broadcast transmission system where the outputs from the microphones are combined and adjusted to a suitable level, before being fed into the radio transmitter.

control system (*Radio*). (1) All the apparatus associated with the control room.—(2) The apparatus associated with the modulating process —more correctly called MODULATION SYSTEM.

control trailer (*Elec. Eng.*). A trailer coach for use in a multiple-unit electric train, fitted with a master controller so that the train can be operated from the coach if desired.

controller (*Elec. Eng.*). An assembly of equipment for controlling the operation of electric apparatus.
See **drum—**
faceplate—
liquid—

potentiometer-braking—
series-parallel—

con'uli (*Zool.*). In certain *Porifera*, conical projections of the surface.

co'nus (*Zool.*). Any cone-shaped structure or organ.

conus arterio'sus (*Zool.*). In some lower Vertebrates, a valvular region of the truncus arteriosus, adjacent to the heart.

conus medulla'ris (*Zool.*). The conical termination of the spinal cord.

convection of heat (*Heat*). The transfer of heat from one part of a fluid to another by flow of the fluid from the hotter parts to the colder. Thus if heat is applied to the bottom of a vessel containing a liquid, the hot liquid, being less dense than the cold, will rise, its place being taken by cold liquid moving down. There is thus set up a circulation of liquid (known as a *convection current*), which keeps the temperature more uniform than if the liquid were stagnant.

convector (*Heating*). A type of heater designed to warm the air of a room as it circulates over the heating elements (electric resistances or steam-heated coils), rather than by direct radiation.

convention of signs (*Light*). The convention usually adopted is that all distances shall be measured from the reflecting or refracting surface being considered, or from the principal planes in the case of a thick lens, and that distances measured in the direction in which the incident light is travelling are given a negative sign, and those in the opposite direction a positive sign.

conventional signs (*Civ. Eng.*, *Surv.*). Standard symbols, universally understood, used in the representation on maps and plans of features which would otherwise be difficult or impossible to represent.

convergence (*Meteor.*). An accumulation of air over a region caused by lack of uniformity of the winds. Convergence results in upward air-currents, causing cloud and rain.

convergence (*Zool.*). See **convergent evolution.**

convergence of meridians (*Surv*). The running together of meridians of longitude with approach towards a pole, due to the spheroidal shape of the earth.

convergent-divergent nozzle (*Eng.*). A steam-turbine or other steam nozzle in which the cross-section first decreases to a throat and then increases to the exit, such a form being necessary for efficient expansion of the steam.

convergent evolution (*Zool.*). The tendency of animals living in a simple and uniform environment to develop similar characteristics, whatever their ancestry, owing to the lack of opportunity for variety of habitat or habits.

convergent lens (*Light*). A lens which increases the convergence or decreases the divergence of a beam of light. A simple lens is convergent if it is double-convex, plano-convex, or concavo-convex with the radius of curvature of the concave face greater than that of the convex.

converging (*Bot.*). Having the tips gradually approaching.

conversion (*Timber*). The process of sawing or otherwise changing the shape of timber.

conversion conductance (*Radio*). The ratio of the component of current of intermediate frequency flowing in the output circuit of a conversion detector, when working into zero impedance, to the signal frequency input voltage. Generally expressed in milliamps per volt.

conversion detector (*Radio*). An arrangement for converting modulated currents of one carrier frequency to similarly modulated currents of another, and generally lower, carrier frequency (the latter is called the *intermediate frequency*, q.v.). An essential part of a super-heterodyne receiver. Also called FIRST DETECTOR.

conversion gain (*Radio*). The effective amplification of a conversion detector, measured as the ratio of the output voltage of intermediate frequency to the input voltage of signal frequency. Expressed in decibels, it is twenty times the logarithm of this ratio.

conversion hysteria (*Psycho-an.*). The type of hysteria in which the unconscious mental conflict comes to expression, with the partially repressed wish, by physical symptoms. Some manifestations of these are paralysis, blindness, deafness, and pains in various parts of the body. Accompanying this conversion is a relief from anxiety, giving this type of hysteria its characteristic feature of a calm and indifferent mental attitude. Called by Janet *la belle indifférence*.

conversion resistance (*Radio*). The reciprocal of conversion conductance.

converter (*Elec. Eng.*). A variant spelling of *convertor* (q.v.).

converter (*Met.*). See **Bessemer converter.**

convertible lens (*Photog.*). A compound lens the units of which can be used separately or in conjunction with other lenses.

converting (*Met.*). See **Bessemer process.**

converting station (*Elec. Eng.*). An electric power system substation containing one or more convertors.

convertor (*Elec. Eng.*). A machine, or other piece of electrical equipment, for converting single or polyphase current at one frequency to currents at another frequency (or d.c.) or another number of phases.
See **frequency—**
mercury-arc—
motor—
phase changer—
rotary—
synchronous—
motor-generator.

convex lens (*Light*). A *convergent lens* (q.v.).

convex mirror (*Light*). A portion of a sphere of which the outer face is a polished reflecting surface. Such a mirror forms diminished virtual images of all objects in front of it.

convex veins (*Zool.*). In Insects, veins which follow the ridges of the wing corrugations.

conveyor (*Eng.*). A device for the continuous transport of small articles or loose material over a short distance, as between two parts of a workshop, or different levels in a building.
See **apron—**
band—
bucket—
chain—
drag—
gravity—
pneumatic—
pneumatic-tube—
worm (or **screw**)**—**
elevator.

con'volute (*Bot.*). Coiled, folded, or rolled, so that one half is covered by the other.—(*Zool.*) Having one part twisted over or rolled over another part; twisted; as the cerebral lobes of the brain in higher Vertebrates, gastropod shells in which the outer whorls overlap the inner.—*n.* **convolution.**

convolute aestivation (*Bot.*). See **contorted aestivation.**

convolution (*Anat.*). Any elevation of the surface of the brain.

convulsion (*Med.*). Generalised involuntary spasm of the muscles normally under control of the will.

cooked (*Cinema.*). Said of an over-developed photographic image.

cooking-space (*Elec. Eng.*). That part of an electric oven or grill not taken up by the heating elements.

coolant (*Eng.*). (1) A mixture of water, soda, oil, and soft-soap, used to cool and lubricate the work and cutting tool in machining operations. See **cutting compound.**—(2) A fluid employed as the cooling medium in the jackets of liquid-cooled I.C. engines; e.g. water, ethylene glycol.

cooled-anode valve (*Thermionics*). A thermionic valve in which special provisions are made for dissipating the heat generated at the anode. Cooling is customarily effected by circulating water, oil, or air around the anode, or by radiation from its surface.

cooling curves (*Met.*). Curves obtained by plotting time against temperature for a metal cooling under constant conditions. The curves show the evolutions of heat which accompany solidification, polymorphic changes in pure metals, and various transformations in alloys.

cooling duct (*Elec. Eng.*). A passage for cooling air provided in the armature or field system of an electric machine or other apparatus.

cooling, Newton's law of (*Heat*). 'The rate of cooling (by convection and radiation) of a hot body is proportional to its excess temperature over its surroundings.' The law is empirical and is only approximate, but may be used for small excesses of temperature.

cooling plate (*Cinema.*). A metal screen to protect mechanisms from the heat from arcs in projectors.

cooling pond (*Eng.*). An open pond in which water, heated through use in an industrial process, or after circulation through a steam-condenser, is, before re-use, allowed to cool through evaporation.

cooling tower (*Eng.*). A tower of wood, concrete, etc., used to cool water after circulation through a condenser. The water is allowed to trickle down over wood slats, thus exposing a large surface to atmospheric cooling.

coombe rock (*Geol.*). Unstratified angular chalk rubble found over the plain tracts of southern England; believed to have been formed over a frozen subsoil.

coop (*Cinema.*). Abbrev. for *Cooper-Hewitt lamp.*

Cooper-Hewitt lamp (*Illum.*). An early form of mercury-vapour lamp, usually in the form of a long tube, tilted by hand for starting.

cooperite (*Min.*). Sulphide and arsenide of platinum, crystallising in the orthorhombic system. It occurs in minute and irregular grains in igneous rocks.

co-ordinating gap (*Elec. Eng.*). A spark-gap, used in power transmission schemes, so arranged that it will break down at a voltage bearing a definite relation to the breakdown voltage of other apparatus in the system, thereby enabling surge voltages to be safely discharged to earth.

co-ordination number (*Chem.*). The number of atoms or groups surrounding the central atom of a complex salt.

cop (*Cotton Spinning*). The yarn package, varying in size according to the type and the count of yarn, which is produced by the mule.

copai'ba balsam (*Chem.*). A light-yellow or brown liquid, of peculiar odour, sp. gr. 0·940-0·990, saponification value 88-100, acid value 75-100. It is an oleo-resin containing sesquiterpenes.

co'palite or co'paline (*Min.*). A pale-yellow waxy substance, found in the London Clay at Highgate. Also called HIGHGATE RESIN.

co'pals (*Paint.*). A class of natural resins of recent or recent-fossil origin, consisting of resin acids, resenes, and essential oils. They furnish raw material for the varnish and linoleum industries. Important copals are Congo, Dammar, Kauri, Zanzibar, amber, and others.

cope (*Foundry*). The upper half of a mould; the top half of a moulding box.

Copep'oda (*Zool.*). A class of *Crustacea*, generally of small size, many of which are parasitic; there is usually no carapace; the abdomen is without appendages, but the thorax bears several pairs of biramous oar-like swimming feet; the eggs are usually carried by the female in a pair of sacs formed of a hardened glutinous secretion.

Coper'nican System (*Astron.*). The heliocentric theory of planetary motion; called after Copernicus, who introduced it in 1543. It eventually superseded the geocentric, or Ptolemaic, System.

coping (*Build., Civ. Eng.*). A stone or brick covering to the top of a wall exposed to the weather; it is designed to throw off the water, and is preferably wider than the wall, with *drips* (q.v.) cut in its projecting under-surfaces.

coping (*Masonry*). The operation of splitting stone by driving wedges into it.

coping (*Vet.*). The operation of paring or cutting the beak or claws of a bird, particularly of hawks.

coping brick (*Build.*). Specially shaped brick used for capping the exposed top of a wall; used sometimes with a creasing and sometimes without, in which latter case the brick is wider than the wall and has drips under its lower edges.

co-planar grid valve (*Thermionics*). A four-electrode valve containing two control grids intermeshed with, but insulated from, each other, and exercising equal control effects on the anode current. Used as a detector and as a high output amplifier where the anode supply voltage is limited.

copper (*Met.*). A metallic element in the first group of the periodic system. Symbol, Cu. At. no. 29, at. wt. 63·6, specific electrical resistivity at 20° C. 1·682 microhms per cm^3. Native copper crystallises in the cubic system. It frequently occurs in thin sheets or plates, filling narrow cracks or fissures. Copper is ductile, with high electrical and thermal conductivity, good resistance to corrosion; it has many uses, notably as an electrical conductor. Basis of brass, bronze, aluminium bronze, and other alloys.

copper bit (*Plumb.*). A tool consisting of a pointed piece of copper fastened at the end of an iron rod held in a wooden handle. When the copper part is heated it may be used to melt solder. Also called SOLDERING IRON.

copper brushes (*Elec. Eng.*). Brushes occasionally used for electric commutator machines where high conductivity is required; they are made of copper strip, wire, or gauze.

copper circuit (*Elec. Comm.*). A circuit in which a direct current can flow; essential for television signals, which require the transmission of zero frequency.

copper-clad steel conductor (*Elec. Eng.*). See **steel-cored copper conductor.**

copper-cored carbon (*Illum.*). Arc-lamp carbon in which the solid core is covered with a coating of copper in order to improve the conductivity.

copper factor (*Elec. Eng.*). A term used in electric machine design to denote the ratio of the cross-sectional area of the copper in a winding to the total area of the winding, including insulating material and clearance space.

copper glance (*Min.*). A popular name for *chalcocite.*

copper glazing (*Build.*). Glazing formed of a number of individual panes separated by copper strips on the edges of which small flanges of copper have later been formed by deposition to retain the glass. Also called COPPERLITE GLAZING.

copper loss (*Elec. Eng.*). The loss occurring in electric machinery or other apparatus due to the current flowing in the windings; it is proportional to the product: $(\text{current})^2 \times$ resistance.—(*Radio*) The power dissipated as heat in an antenna, or other oscillatory circuit, due to Joule effect, including that due to eddy currents in the conductors and nearby metallic objects.

copper master (*Acous.*). See **master.**

copper nickel (*Min.*). See **niccolite.**

copper number (*Chem.*). The number of milligrams of copper obtained by the reduction of Fehling's solution by one gram of a carbohydrate.

copper-oxide rectifier (*Radio*). A rectifier element dependent on the unidirectional conducting properties of the junction of a layer of cuprous oxide formed on a copper plate. It may be used for the rectification of high-frequency signals if the dimensions are kept small.

copper pyrite (*Min.*). See **chalcopyrite.**

coppersmith's hammer (*Eng.*). A hammer having a long curved ball-pane head, used in dishing copper plates.

copper sulphate (*Chem.*). $CuSO_4$. A salt, soluble in water, used in copper-plating baths; formed by the action of sulphuric acid on copper; crystallises as hydrous copper sulphate, $CuSO_4 \cdot 5H_2O$, in deep-blue monoclinic crystals. See **blue vitriol, chalcanthite.**

copper (or **cupro-**) **uranite** (*Min.*). See **torbernite.**

copper voltameter (*Elec. Eng.*). An electrolytic cell consisting of two copper plates in a solution of copper sulphate; used to measure current, by weighing the amount of copper deposited on the cathode plate in a given time.

cop'peras (*Min.*). Iron sulphate, $FeSO_4 \cdot 7H_2O$. See **melanterite.**

copperas, white (*Min.*). Goslarite.

coppered carbons (*Illum.*). Arc-lamp carbons coated, by electroplating, with an external covering of copper to improve their conductivity.

Copperlite glazing (*Build.*). See **copper glazing.**

copping (or **shaper**) **rail** (*Cotton Spinning*). A rail of special shape which controls the movement of the yarn guide while yarn is being wound on the cop.

coprodae'um (*Zool.*). That part of the cloaca into which the anus opens.

coprola'lia (*Med.*). The utterance of filthy words by the insane.

cop'rolite (*Geol.*). Strictly applied to the fossilised excreta of animals, but now extended to other phosphatic nodules. Coprolite-rich beds are quarried and used as fertilisers.

cop'rolith (*Med.*). A hard concretion of faecal matter.

coproph'agous (*Zool.*). Dung-eating.

coprophil'ia (*Psycho-path.*). Pleasure or gratification obtained from any dealing with faeces.

coprophi'lous, coprophi'lic (*Bot.*). Growing on or in dung.

copros'terol (*Chem.*). $C_{27}H_{47}OH$, a constituent of the faeces, a reduction product of cholesterol.

coprozo'ic (*Zool.*). Living in dung, as some *Protozoa.*

copula (*Zool.*). A structure which bridges a gap or joins two other structures, as the series of unpaired cartilages which unite successive gill arches in lower Vertebrates.

copula'rium (*Zool.*). In certain *Gregarinidea*, a cyst formed round two associated gametocytes.

copulation (*Zool.*). In *Protozoa*, a type of syngamy in which the gametes fuse completely: in higher animals, union in sexual intercourse.

copulation path (*Zool.*). The path of the sperm nucleus in the ovum during fertilisation.

copulation tube (*Bot.*). See **conjugation tube.**

cop'ulatory spicules (*Zool.*). In male *Nematoda*, chitinous rods which arise from a dorsal pocket of the cloaca and assist the process of copulation.

copy (*Typog.*). Any matter which is to be reproduced in type.

copy or draft (*Paper*). A standard size of writing or drawing paper, 16 × 20 in.

copyholder (*Typog.*). (1) One who reads aloud from the copy as the proof-corrector follows the reading in his proof.—(2) A contrivance for holding up sheets of copy on typesetting machines.

copying (*Photog.*). The general description of processes for the precise reproduction of documents, paintings, etc., by photographic means.

copying machine (*Eng.*). A machine for producing numbers of similar objects by an engraving tool or end-cutter, which is guided automatically from a master pattern or template.

cor bovi'num (*Med.*). Gross enlargement of the heart due to hypertrophy of its muscle.

Coraciifor'mes (*Zool.*). An order of *Coracomorphae* most of which are short-legged arboreal forms, nesting in holes and having nidicolous young. King-fishers, Owls, Night-jars, Swifts, Humming-birds, Trogons, Jacamars, and Toucans

Coraciomor'phae (*Zool.*). A legion of *Aves* of very ancient origin, including the Cuckoos, Parrots, Kingfishers, Swifts, Swallows, Toucans, Owls, Perching and Singing Birds. See **Coraciiformes, Passeriformes, Opisthocomiformes.**

cor'acoid (*Zool.*). In Vertebrates, a paired posterior ventral bone of the pectoral girdle, or the cartilage which gives rise to it.

coracoid process (*Zool*). In Mammals, the reduced coracoid bone, which persists only as a small process fused to the ventral end of the scapula.

coral (*Zool.*). The massive calcareous skeleton formed by certain species of *Anthozoa* and some *Hydrozoa*: the colonies of polyps forming this skeleton.—*adjs.* **coralline, coralloid, coralliferous, corallaceous, coralliform.**

coral reef (*Geol*). A calcareous bank formed of the skeletons of corals which live in colonies. The various formations of coral reefs are known as *atolls, barrier reefs*, and *fringing reefs* (qq.v.).

Coral'lian (*Geol.*). A division of the Upper Jurassic rocks, comprising sandstones, shelly limestones, and clays, with coral reefs well developed, for example, at Steeple Ashton.

Cor'alline Crag (*Geol.*). A division of the Pliocene rocks of East Anglia, consisting of current-bedded sands containing broken fragments of shells and bryozoa.

Coralline Oölite (*Geol.*). A subdivision of the Upper Jurassic rocks. It is a limestone which usually consists of a mass of comminuted shells. This rock has been much quarried near Oxford for building purposes.

cor'allite (*Zool.*). The cup-like portion of a coral surrounding a single polyp.

cor'alloid (*Bot.*). Having a general appearance like that of a piece of much branched coral.

coral'lum (*Zool.*). The hard calcareous skeleton of coral polyps.

corbeille, kor-bī' (*Build.*). Carved work representing a basket, used as a form of decoration.

corbel (*Build.*). Bricks or stones, frequently moulded, projecting from a wall to support a load.

corbel-piece (*Carp.*). See **bolster.**

corbel-table (*Build.*). A cornice supported by corbels.

cor'belling (*Build.*). Projecting courses of brick or stone forming a ledge used to support a load.

corbic'ula (*Zool.*). The pollen basket of Bees, consisting of the dilated posterior tibia with its fringe of long hairs.

corbie step gable (*Build.*). A gable having a series of regular steps up each slope. Also called CROW-STEP GABLE.

cor'bula (*Zool.*). A phylactocarp having the costae well-developed and the hydrothecae suppressed.

cord (*Teleph.*). A flexible cable, usually containing covered tinsel conductors, for use in cord circuits and telephone leads. See also **patch cord.**

cord (*Textiles*). (1) A connexion between a jacquard hook and the mails controlling the warp threads.—(2) A rib effect in a fabric, produced according to plan.

cords (*Bind.*). Lengths of hemp across the back of a book, to which the sections are attached by sewing. See **bands.**

cord circuit (*Teleph.*). The temporary connexion circuit used by an operator to connect subscribers together, or subscribers to junction lines. In the usual central-battery systems, it provides current for the distant transmitters, supervisory relays and lamps, and means for the operator to speak to subscribers.

cord circuit repeater (*Teleph.*). A cord circuit containing a small-gain repeater, for insertion at trunk exchanges between subscribers' lines or junctions, which together introduce a loss which is greater than tolerable.

cord-de-chêne (*Textiles*). A light-weight worsted dress material with a slight longitudinal cord, made from a Botany warp and a silk weft.

cord (*Timber*). A timber measure, 128 cu. ft. (8 × 4 × 4 ft.).

cordate (*Bot.*). Said of a leaf base which has the form of the indented end of a conventional heart

corded way (*Build.*). A sloping path formed with deep sloping steps separated by timber or stone risers.

cor′dierite or **i′olite** (*Min.*). A silicate of aluminium, iron, and magnesium with water, which crystallises in the orthorhombic system; occurs chiefly in metamorphic rocks.

cord′iform (*Bot.*). Said of an ovate leaf with a pointed apex and a cordate base.

Cordite (*Ammunition*). A propellant consisting of a mixture of nitrocellulose, nitroglycerine, and a mineral jelly (100 : 60 : 10). Stable in hot climates and relatively smokeless. Used extensively in ammunition for the British Navy and Army.

cordless board (*Teleph.*). Small exchange boards, usually private, in which all the connexions between lines and subscribers are made with keys and not with flexible cords.

cor′duroy (*Textiles*). A fabric with a rounded cord or rib of weft pile running longitudinally; made entirely from cotton, or of cotton with a rayon pile.

core (*Bot.*). (1) See **centrum.**—(2) The plant material which forms the inner part of a periclinal chimaera.

core (*Build.*). The material removed from a mortise.

core (*Cables*). The assembly consisting of the conductor and surrounding insulation of a cable or part of a cable, but not including the protective covering. It constitutes the electrical circuit for communication.

core (*Cinema.*). The inner part of the positive arc carbon. This is impregnated with salts, principally cerium fluoride, to increase the brilliance of the crater formed at the termination of the arc.

core (*Civ. Eng.*). A watertight wall built within a dam or embankment as an absolute barrier to the passage of water.*

core (*Elec. Eng.*). That part of a magnetic circuit around which the winding is placed. In the case of a transformer it refers to the whole of the magnetic circuit.

See **armature—**
pole—
rotor—
slotted—
smooth—
stator—

core (*Foundry*). A solid mass of sand or loam placed in a mould to provide a hole or cavity in the casting.

core balance protective system (*Elec. Eng.*). An excess-current protective system for electric power systems, in which any leakage current to earth in a three-phase circuit is made to produce a resultant flux in a magnetic circuit surrounding all three phases; this flux produces a current in a secondary winding on the magnetic circuit, which operates a relay controlling the appropriate circuit-breakers.

core bar (*Foundry*). (1) An iron bar on which cylindrical loam cores are built up. The bar is supported horizontally and rotated while a loam board is pressed against the core.—(2) An iron rod for reinforcing a sand core.

core box (*Pattern-making*). A wooden box shaped internally for moulding sand cores in the foundry.

core disc (*Elec. Eng.*). See **armature core disc.**

core losses (*Elec. Eng.*). The losses occurring in electric machinery and equipment owing to hysteresis and eddy current losses set up in the iron of the magnetic circuit, which are due to an alternating or varying flux.

core of the atom (*Phys.*). In the atoms of the alkali metals, the nucleus, together with all but the outermost of the planetary electrons, may be considered to be a core, around which the valency electron revolves in a manner analogous to the revolution of the single electron in the hydrogen atom around the nucleus. In this manner the simple Bohr theory may be made to give an approximate representation of the alkali spectra.

core oven (*Foundry*). A foundry oven used for drying and baking cores before insertion in a mould.

core plate (*Elec. Eng.*). See **lamination.**

core plates (*Foundry*). Discs attached to a *core bar* (q.v.) in order to reinforce large cores.

core prints (*Pattern-making*). Projections attached to a pattern in order to provide recesses in the mould at points where cores are to be supported.

core register (*Foundry*). Corresponding flats or vees formed on cores and core prints, when correct angular location is necessary.

core sand (*Foundry*). Moulding sand to which a binding material such as linseed oil has been added in order to obtain good cohesion and porosity after drying.

core-type induction furnace (*Elec. Eng.*). An induction furnace in which there is an iron core to carry the magnetic flux.

core-type transformer (*Elec. Eng.*). A transformer in which the windings surround the iron core, the former usually being cylindrical in shape.

cored carbon (*Illum.*). An arc-lamp carbon which has a core of softer material than that used for the outer part and is designed to have certain special effects on the arc.

cored electrode (*Elec. Eng.*). A metal electrode provided with a core of flux or other material; used in arc welding.

cored hole (*Eng.*). A hole formed in a casting by the use of a core, as distinct from a drilled hole.

cored solid solution (*Met.*). See **coring.**

coreless armature (*Elec. Eng.*). An alternator armature having no iron core; employed in certain old types of machine.

coreless induction furnace (*Elec. Eng.*). A high-frequency induction furnace in which there is no iron magnetic circuit other than the charge in the furnace itself.

core′miform (*Bot.*). Forming a tight bundle of elongated elements.

core′mium (*Bot.*). (1) A rope-like strand of anastomosing hyphae.—(2) A tightly packed group of erect conidiophores, somewhat resembling a sheaf of corn.

corf (*Mining*). A basket with an iron loop used in early days for bringing coal to the surface.

coria'ceous, co'rious (*Bot., Zool.*). Firm and tough, like leather in texture.

coring (*Build.*). The process of keeping a core of rags, straw, or shavings in a flue in course of construction to catch falling mortar or bricks, and of finally passing it right through to clear obstructions.

coring (*Cables*). See **carbon core.**

coring or **cored solid solution** (*Met.*). A solid solution in which the non-uniform distribution of the constituent elements that occurs in each crystal, as a result of the process of solidification, has not been eliminated by annealing.

corium (*Zool.*). The broad area of the hardened basal part of the hemelytron of *Hemiptera*, distant from the scutellum: the dermis of *Vertebrata*.

cork (*Bot.*). A layer of dead cells on the outside of a stem or root, having suberised walls, and relatively impermeable to air and water. The cells are formed by a special cambium, the phellogen, and the cork protects the living cells inside against desiccation, mechanical injury, and the attacks of parasites.

cork cambium (*Bot.*). See **phellogen.**

cork crust (*Bot.*). A thick layer of corky cells, consisting mainly of large, soft-walled cells, with some intermingled narrow strips of flattened cells.

cork film (*Bot.*). A layer of corky cells, two or three cells thick, mostly flattened.

cork wart (*Bot.*). A small localised corky growth on the surface of a leaf.

cork wood (*Bot.*). Wood of very low specific gravity containing many large, thin-walled parenchymatous cells.

corking (*Carp.*). See **cogging.**

corkscrew staircase (*Build.*). A helical staircase built about a solid central newel.

corkscrew weave (*Weaving*). A type of twill weave giving a diagonal warp rib which runs across the fabric at a low angle.

Corliss valve (*Eng.*). A steam-engine admission and exhaust valve in the form of a ported cylinder which is given an oscillating rotary motion over the steam port by an eccentric-driven wrist-plate.

corm (*Bot.*). A rounded, swollen underground stem, resembling a bulb in general appearance, but solid, and not composed of overlapping, fleshy leaf bases.

corm (*Zool.*). In certain types of biramous crustacean limbs, an axis formed by the large endopodite with the protopodite, upon which the exopodite stands laterally.

cormid'ium (*Zool.*). In *Siphonophora*, an assemblage of individuals borne on the coenosarc.

cor'mophyte (*Bot.*). A plant of which the body is differentiated into roots, stems, and leaves.

cormus (*Bot.*). A plant body in which a definite shoot system is developed.

corn (*Bot.*). In Britain, *corn* means wheat chiefly, as well as other cereals; in America, it means maize.

Cornbrash (*Geol.*). A rather thin limestone occurring in the Jurassic rocks of Britain. It has an admixture of argillaceous and ferruginous material and yields a good soil for agriculture, as the name implies.

corn oil (*Chem.*). A pale yellow oil obtained from Indian corn; m.p. 17-23° C., sp. gr. 0·920-0·925, saponification value 188-193, iodine value 111-123, acid value 1·7-20·6. Also called MAIZE OIL.

cornstalk disease (*Vet.*). See **haemorrhagic septicaemia.**

cornstone (*Geol.*). An arenaceous or siliceous limestone, particularly characteristic of some of the Palaeozoic Red Sandstone formations.

corn (*Med.*). Localised overgrowth of the horny layer of the skin due to local irritation, the overgrowth being accentuated at the centre.—(*Vet.*) A local inflammation due to bruising or compression of the keratogenous membrane of the posterior portion of the horse's foot.—SEPTIC CORN, an abscess localised to the sole of a bird's foot.

corne'a (*Zool.*). In *Invertebrata*, a transparent area of the cuticle covering the eye, or each facet of the eye: in *Vertebrata*, the transparent part of the outer coat of the eyeball in front of the eye.—*adj.* **cor'neal.**

corne'agen layer (*Zool.*). In the compound eyes of *Arthropoda*, a layer of the hypodermis underlying the cornea, which it produces by secretion.

cornelian (*Min.*). A synonym for *carnelian.*

cor'neoscute (*Zool.*). One of the horny epidermal scales of Reptiles.

cor'neous (*Bot., Zool.*). Resembling horn in texture.

corner (*Bind.*). The piece of leather covering each of the outer corners of a half-bound volume.

cornerbead (*Build.*). An *angle-staff* (q.v.).

corner chisel (*Carp.*). A special chisel having two straight cutting edges meeting at right-angles; used for cutting the corners of mortises.

corner horn (*Acous.*). A horn for coupling a closed or open diaphragm with the outer air, so arranged that its position in a corner of a room utilises the side-walls as an approximate extension of its flare.

corner tool (*Foundry*). A sleeking tool for finishing off the internal corners of a mould.

cornice (*Build.*). A projecting moulding decorating the top of a building, window, etc.

cornice plane (*Join.*). A plane with shaped sole and iron; used for forming mouldings.

cornicles (*Zool.*). In certain *Hemiptera*, a pair of tubes which secrete a waxy substance as a protection against predaceous enemies.

cornic'ulate, cornute (*Bot., Zool.*). (1) Shaped like a horn.—(2) Bearing a horn or horn-like outgrowth.

cor'niform (*Bot.*). Shaped like a horn.

Cornish boiler (*Eng.*). A horizontal boiler with a cylindrical shell provided with a single longitudinal furnace tube or flue.

Cornish 'diamond' (*Min.*). Like other 'diamonds' prefixed by a place name, this is merely clear crystalline quartz.

Cornish granite (*Build., Civ. Eng.*). A coarse-grained granite, light-grey to whitish in colour, quarried in Cornwall; used for heavy construction.

Cornu prism (*Light*). A 60° quartz prism formed of two 30° prisms cemented together, one being of right-handed and the other of left-handed quartz, the optic axes of the two being parallel to the ray passing through the prism at minimum deviation, that is, parallel to the base. This device overcomes a defect due to double refraction.

Cornu spiral (*Light*). A spiral figure used for the graphical solution of diffraction problems.

Cornu-Hartman formula (*Light*). A formula of empirical type which expresses with some accuracy the relation between the deviation, D, produced by a prism and the wavelength, λ, of the light. The formula is

$$\lambda=\lambda_0+\frac{C}{D-D_0},$$

λ_0, C, and D_0 being constants for a particular case.

cor'nua (*Zool.*). Horn-like processes; as the posterior *cornua* of the hyoid.—*adjs.* **cornual, cornute.**

corol'la (*Bot.*). The general name for the whole of the petals of a flower; it is often brightly coloured, and then forms the most conspicuous part of the flower.

Corolliflo'rae (*Bot.*). See **Sympetalae.**

cor'olline (*Bot.*). Appertaining to the corolla.

coro'na (*Arch.*). The part of a cornice showing a broad projecting face and throated underneath to throw off the water.

corona (*Bot.*). (1) A trumpet-like outgrowth from the perianth, as in the daffodil.—(2) A ring of small leafy upgrowths from the petals, as in campion.—(3) A crown of small cells on the oögonium of *Charophyta.*

corona (*Diel.*). The phenomenon of air breakdown when the electric stress at the surface of a conductor exceeds a certain value. At higher values the stress results in a luminous discharge. See **critical voltage.**

corona (*Meteor.*). A system of coloured rings seen round the sun or moon when viewed through very thin haze. They are caused by diffraction by water droplets. The diameter of the corona is inversely proportional to the size of the droplets. See also **corona (solar).**

corona (*Zool.*). In *Echinoidea,* the shell or test: in *Crinoidea,* the disc and arms as opposed to the stalk: in *Rotifera,* the discoidal anterior end of the body: the head or upper surface of a structure or organ.—*adj.* **coro'nal.**

corona discharge (*Diel.*). See **corona.**

corona power loss (*Diel*). The value is $P=(390/\delta)(f+25)[\sqrt{(r/D)}](E-E_0)^2\ 10^{-5}$ kW per mile, where E is voltage to neutral, f frequency in cycles per second; for other quantities see **critical voltage (disruptive).**

corona radia'ta (*Zool.*). In some Mammals, a layer of cells surrounding an ovum.

corona, solar (*Astron.*). A halo, pearly white in colour, surrounding the sun; it is seen during a total solar eclipse, and is of irregular shape and size, but roughly circular, extending to about two solar diameters.

corona ve'neris (*Med.*). A syphilitic rash on the forehead round the margin of the hair.

corona voltmeter (*Elec. Eng*). An instrument for measuring high voltages by observing the conditions under which a corona discharge takes place on a specially designed wire.

coro'nal (*Jewel.*). A small crown: a head garland.

coronal (*Zool.*). See **frontal.**

coro'nary (*Zool.*). Crown-shaped: a small conical bone of the lower jaw in Reptiles.

coronary circulation (*Zool.*). In Vertebrates, the system of blood-vessels which supply the muscle of the heart-wall with blood.

coronary thrombosis (*Med.*). The formation of a clot in one of the arteries of the heart consequent upon disease of these arteries.

cor'onate (*Bot.*). Having a corona.

coronate (*Zool.*). (Of shells) having a row of bosses encircling the apex.

coronet (*Vet.*). The junction of the skin of the pastern with the horn of the hoof of a horse.

coronet (*Zool.*). The knob at the base of the antler in deer.

coro'nium (*Astron.*). A constituent, otherwise unknown, of the solar corona which emits the characteristic green coronal ray of wavelength 5303; first observed by Young in 1869.

cor'onoid (*Zool.*). (1) In some Vertebrates, a membrane bone on the upper side of the lower jaw.—(2) More generally, beak-shaped.

cor'pora. *Pl.* of Latin *corpus,* body. See also articles given in singular form below, viz. under **corpus.**

corpora alla'ta (*Zool.*). In Insects, a pair of oval whitish bodies lying close behind the supra-oesophageal ganglia; believed to be endocrine glands.

corpora amyla'cea (*Zool.*). See **brain-sand.**

corpora bigem'ina (*Zool.*). In Vertebrates, the optic lobes of the brain.

corpora caverno'sa (*Zool.*). In Mammals, a pair of masses of erectile tissue in the penis.

corpora genicula'ta (*Zool.*). In the Vertebrate brain, paired protuberances lying below and behind the thalamus.

corpora lu'tea (*Zool.*). In Mammals, yellowish glandular nodules which develop from the Graafian follicles, after the expulsion of the ova.

corpora quadrigem'ina (*Zool.*). The optic lobes of the Mammalian brain, which are transversely divided.

corporal (*Mining*). The leading man in a batch of men on a contract for mining coal.

corpus. Latin for *body.* See also articles given in plural form above, viz. under **corpora.**

corpus adipo'sum (*Zool.*). (*Pl.* **corpora adiposa.**) See **fat-body.**

corpus al'bicans (*Zool.*). (*Pl.* **corpora albican'tia.**) See **corpus mamillare.**

corpus callo'sum (*Zool.*). In the Vertebrate brain, a commissure connecting the cortical layers of the two lobes of the cerebrum.

corpus mamilla're (*Zool.*). In the brains of higher *Vertebrata,* a protuberance on the floor of the hypothalamic region in which the fornix terminates.

corpus spongio'sum (*Zool*). In Mammals, one of the masses of erectile tissue composing the penis.

corpus sterni (*Zool.*). See **gladiolus.**

corpus stria'tum (*Zool.*). In the Vertebrate brain, the basal ganglionic part of the wall of each cerebral hemisphere.

corpus subthalam'icum (*Zool.*). A lens-shaped mass of grey matter, lying in the subthalamus of the Vertebrate brain.

cor'puscle (*Bot.*). Any very minute particle in a cell.

corpuscle (*Zool.*). A cell which lies freely in a fluid or solid matrix and is not in continuous contact with other cells.

corpus'cular theory of light. The view, held by Newton, that the emission of light consisted of the emission of material particles at very high velocity. Although this theory was discredited by observations of interference and diffraction phenomena, which could only be explained on the wave theory, there has been, to some extent, a return to the corpuscular idea in the conception of the photon.

corrasion (*Geol.*). This is the work of vertical or lateral cutting performed by a river by virtue of the abrasive power of its load. See **rivers (geological work of).**

correcting signal (*Teleg.*). In a multiplex telegraph system, the signal which is sent to correct the synchronising between the sending and receiving distributors.

correction. The correction to a reading of an instrument, or of a measure on a scale, is the magnitude to be added to the perceived magnitude to obtain the true magnitude, i.e. the magnitude which would be observed with an instrument or scale of the highest precision. The use of a *standard* (q.v.) of measurement implies no possibility of correction. Correction is the negative of error.

correction (*Typog.*). An emendation or alteration made on a proof by author or proof corrector.

correction (*Elec. Comm.*).
See **attenuation— distortion—**

correction of angles (*Surv.*). The process of adjusting the observed angles in any triangle so that their sum shall equal 180°.

correction, phase (*Elec. Comm.*). See **phase compensation.**

correction signal (*Teleg.*). The signal sent to line between the working signals in a Baudot system to correct any deviation of the receiving distributor from keeping in step with the transmitting distributor.

corrector of the press (*Typog.*). A printer's reader; one whose work is primarily to compare proofs with the author's copy in order to ensure that the correct wording, etc. has been reproduced.

correlation (*Biol.*). Mutual relationship.

correlation (*Bot.*). The condition of balance existing between the various organs of a plant.

correlation (*Geol.*). The linking together of strata of the same age occurring in separate outcrops.

correlation (*Maths.*). The mathematical statement respecting the degree to which one variable is dependent on another variable, either by observation or experiment.*

correlation coefficient (*Maths.*). The ratio (nominally, theoretically, or ostensibly unity) between one variable and another which makes the sum of the squares of the deviations of the one variable from proportionality with the other a minimum. With exact proportionality, the coefficient is unity; if there is no relationship at all, the coefficient is zero. Complete inverse proportionality makes the coefficient −1.

correspondence principle (*Light*). For electron orbits remote from the nucleus of the atom there is agreement between the frequency of radiation calculated from the quantum theory and that given by classical methods. By assuming that this correspondence extends to other properties of the emitted light, Bohr was able to formulate valuable 'selection rules' for determining which of the possible electron transitions would actually occur. See **Bohr theory.**

corresponding states (*Phys.*). Substances are said to be in *corresponding states* when their pressures and temperatures are equal fractions of the critical values. A general form of van der Waals' equation may then be used which is applicable to all gases.

corridor (*Build.*). A passage-way within a building, giving access to rooms on one side or both.

corrie (*Geol.*). See **cirque.**

corroding lead (*Met.*). Lead of purity exceeding 99·94%, suitable for the production of white lead.

corrosion (*Chem.*). The slow wearing away of solids, especially metals, by chemical attack; in the latter case the mechanism is thought to be electrochemical. See also **direct oxidation.**

corrosion (*Geol.*). The modification of crystals formed early in the solidification of an igneous rock by the chemical action of the residual magma.

corrosion-fatigue (*Met.*). The phenomenon of the failure of metals when subjected to repeated cycles of stress while exposed to corrosive attack. Influenced by the same factors as fatigue, and also by time and by the corrosive effect of the environment.

corrosive sublimate (*Chem.*). Commercial name for *mercuric chloride.*

cor'rugate, corrugated (*Bot.*). Having a ridged or wrinkled surface.

corrugated furnace tube (*Eng.*). A steam-boiler furnace tube provided with circumferential corrugations to give greater resistance to collapse under external pressure.

corrugated iron (*Build.*). Sheet-iron formed with parallel corrugations to increase stiffness; used as a roof covering and for other temporary building purposes.

cor'rugator (*Zool.*). A muscle which by its contraction produces wrinkling.

cor'rugmeter (*Civ. Eng.*). See **roughness integrator.**

corsite (*Geol.*). A variety of coarse-grained basic igneous rock, exhibiting orbicular texture (orbicular gabbro), occurring in Corsica; consists essentially of bytownite and amphiboles. By some = napoleonite.

cortex (*Bot.*). (1) A cylinder of chiefly parenchymatous cells lying between the epidermis and the starch sheath (or the endodermis) in a young stem, and between the piliferous layer and the endodermis in a young root.—(2) A similar, but usually less conspicuous, cylinder in older stems and roots.—(3) A cellular coating on the outside of the thalli of some algae.—(4) The outer layers of the thallus in lichens, and in some fungi.—(*Zool.*) The superficial or outer layers of an organ, especially if they differ histologically from the central part; cf. *medulla.*

cortical (*Bot., Zool.*). (1) Relating to bark.—(2) Relating to the cortex.—(3) Living on bark.

cortical bundle (*Bot.*). A vascular bundle in the cortex of a stem or root.

corticate (*Bot.*). (1) Having a cortex.—(2) Covered with an unbroken sheet of interwoven hyphae.

cortication (*Bot.*). A covering of cells around the main threads of some algae.

cor'tico'lous (*Bot.*). Living on the surface of bark.

corti'na (*Bot.*). A cobwebby veil hanging from the margin of the pileus of some agarics.

cor'tinate (*Bot.*). Having a cortina.

cortinate (*Zool.*). See **craspedote.**

Corti's organ (*Zool.*). In Mammals, the modified epithelium forming the auditory apparatus of the ear.

Corti's rods (*Zool.*). In Mammals, stiff striated rod-like structures of the organ of Corti, forming a double row, with their upper ends in contact and their lower ends resting on the basilar membrane.

Corti's tunnel (*Zool.*). In the organ of Corti, the tube-like space enclosed by the basilar membrane and the rods of Corti.

corundum (*Min.*). Oxide of aluminium, crystallising in the trigonal system. It is next to diamond in hardness, and hence is used as an abrasive. See also **white sapphire.**

corve (*Mining*). A small tram for carrying minerals underground.

coryd'aline (*Chem.*). $C_{22}H_{27}O_4N$, an alkaloid of the isoquinoline group, obtained from the root of the *Corydalis* species. It crystallises in six-sided prisms; m.p. 135° C.

cor'ymb (*Bot.*). A racemose inflorescence in which the flower stalks become shorter and shorter as they arise closer to the top of the inflorescence axis. As a result, the flowers lie in a flat-topped cluster.—*adj.* **corymbose.**

cory'za (*Med.*). See **cold.**

coryza, gangrenous (*Vet.*). See **catarrhal fever (malignant).**

coryza, infectious (*Vet.*). See **catarrh (contagious).**

cos (*Maths.*). See **trigonometrical ratios.**

cos φ (*Elec. Eng.*). An expression often used to denote the power factor of a circuit, the power factor being equal to the cosine of the angle (ϕ) of the phase difference between the current and voltage in the circuit.

cosec, cosecant (*Maths.*). See **trigonometrical ratios.**

cosh (*Maths.*). See **hyperbolic functions.**

cosine (*Maths.*). See **trigonometrical ratios.**

cosine law (*Illum.*). A law used in illumination calculations. It states that the illumination on a surface produced by a light source, at a given distance from the surface, is proportional to the cosine of the angle of inclination between the axis of the light beam and the surface. See **Lambert's law.**

Coslettising (*Metal Protection*). The protection of steel against corrosion by boiling in a solution of phosphoric acid to produce a surface coating of phosphate. See **Parkerising.**

cosmic radiation (*Astrophysics*). The name given to a phenomenon, first studied by Millikan, in which extremely hard penetrating radiation, of wavelength shorter than γ-rays, is detected by an electroscope; it is thought to enter the earth's atmosphere from interstellar space.

cosmin (*Zool.*). The dentine-like substance forming the outer or middle layer of some Fish scales.

cosmog'ony (*Astron.*). The science of the origins of stars, planets, and satellites. It deals with the genesis of the galaxy and the solar system.

cosmology (*Astron.*). The branch of theoretical astronomy that deals with the known universe as a systematised whole. It comprises our knowledge of the structure, dimensions, and relative connexions of the Galaxy, star-clusters, nebulae, etc.

cosmoid scale (*Zool.*). In Fish, a type of scale consisting of an outer layer of cosmin and an inner layer of isopedin.

costa (*Bot.*). (1) A general term for a rib or vein.—(2) The midrib of the thallus of a liverwort.—(3) A rib on the valve of a diatom.

costa (*Zool.*). In Vertebrates, a rib: in *Plumulariidae*, one of a number of protective branches which form a basket-work enclosing the gonangia: in Insects, one of the primary veins of the wing: in *Ctenophora*, one of the meridional rows of ctenes: more generally, any rib-like structure.—*adjs.* **costal, costate.**

costal'gia (*Med.*). Pain in the ribs.

costa'lia (*Zool.*). In *Chelonia*, bony plates of the carapace representing modified ribs: in *Crinoidea*, the primary brachial series of ossicles.

costate (*Bot.*). Ribbed or veined, especially when the ribs are parallel.

costeaning (*Mining*). The removal of soil and subsoil by a rush of water, in order to expose rock formations in prospecting for reefs or lodes.

cot bar (*Join.*). A semicircular bar in a sash. Also called CRADLE BAR.

cot, cotangent (*Maths.*). See **trigonometrical ratios.**

coter'minous (*Zool.*). Having a similar distribution.

Cotham Beds (*Geol.*). A series of greenish-yellow marls and limestones occurring in the Rhaetic rocks of the south-west of England.

Cotham Marble (*Geol.*). A member of the Rhaetic rocks of England. It is an impure limestone characterised by arborescent or moss-like markings; a type of landscape marble.

cotter (*Eng.*). A tapered wedge, usually of rectangular section, passing through a slot in one member and bearing against the end of a second encircling member whose axial position is to be fixed or adjustable.

cotter pin (*Eng.*). A split-pin inserted in a hole in a cotter or other part, to prevent loosening under vibration.

cotter way (*Eng.*). The slot cut in a rod to receive a *cotter* (q.v.).

Cotteswold (or Cotswold) Sands (*Geol.*). A local subdivision of the Upper Lias, consisting of yellowish sands occurring beneath the oölites of the Cotteswold Hills. See also **Yeovil Sands.**

cotton. The downy fibre covering the seeds of the cotton plant (genus *Gossypium*, family *Malvaceae*); it is separated from the seed for textile purposes. The length of fibre ranges from ⅜ in. to 1¼ in., 1 in. being about the average. Besides textile uses, the fibre is much used for insulating wires; it is of special use when the wires are immersed in oil.

cotton blanket (*Textiles*). A heavy cotton fabric, usually grey or coloured, finished with a raised surface.

cotton bleaching (*Textiles*). The processes to which cotton, either in the loose state, as yarn, or fabric, is subjected in order to render it white. The processes include (1) steeping in a 1% hot solution of caustic soda or sodium carbonate; (2) rinsing; (3) steeping in a cold solution of a hypochlorite; (4) washing; (5) treating with cold dilute solution of a mineral acid, and (6) finally washing until free from acid. Cotton cloth is singed before being bleached.

cotton-covered wire (*Elec. Eng.*). An electrical conductor of copper or resistive alloy, insulated with one or more layers of cotton yarn; frequently used for electrical purposes. See **d.c.c.** and **s.c.c.**

cotton gin (*Cotton*). A machine used for separating cotton fibres, which form the seed coat, from the seed itself. The saw gin and the Macarthy gin are used in America, the latter for cotton of extra long staple.

cotton linters. Short fibres, from ⅛ in. to ¼ in. in length, which remain on the cotton seed after the removal of the longer fibres; they are removed by a linter, and are a source of paper, rayon, and cellulose plastics.

cottonseed oil (*Chem.*). Oil from the seeds of *Gossypium herbaceum*, a yellow, brown, or dark-red liquid, m.p. 34°-40° C., sp. gr. 0·922-0·930, saponification value 191-196, iodine value 105-114, acid value 0.

cotton spinning. The process by which cotton fibre, in the form of a roving, is transformed into a twisted thread by means of a ring spinning frame or by a mule.

cotton wool (*Med.*). Loose cotton which has been bleached and pressed into a sheet; used as an absorbent or as a protective agent. Medicated cotton wool sometimes has a distinguishing colour to indicate its special property.

cotton-wool patches (*Med.*). Areas of white exudate in the retina occurring in nephritis.

cottony (*Bot.*). See **tomentose.**

cotty wool (*Textiles*). A term applied to wool in a matted condition; usually due to sheep disease.

cotyle'don (*Bot.*). (1) One of the leaves of the embryo in flowering plants.—(2) The first leaf developed by a young fern plant.

cotyle'donary placentation (*Zool.*). Having the villi in patches, as Ruminants.

cotyl'iform (*Bot.*). Shaped like a dish or a wheel, and having a distinct upraised rim.

cot'yloid (*Zool.*). Cup-shaped; pertaining to the acetabular cavity.

co'type (*Zool.*). An additional type specimen, being a brother or sister of the same brood as the type specimen.

couch (*Paint.*). An undercoat serving as a base on which to apply colour.

couch (*Paper*). In hand paper-making, to deposit the web sheet on a felt for pressing and drying.

couch roll (*Paper*). A cylinder covered with felt, used to press out water from the damp web of paper, and to cause the fibres to felt more thoroughly.

couching (*Brew.*). The process of spreading the steeped grain (barley) to a depth of 12-14 in. on the cement floor of the malthouse, where germination takes place. See **steeping, flooring.**

couching (*Surg.*). Displacement of the lens in the treatment of cataract.

coudé, coudé mounting, koo-dā (*Astron.*). An equatorial telescope mounting, clock-driven in the usual way, in which the object is viewed after two reflections. The observer looks down one tube, which is always parallel to the polar axis. A second tube, in which the object glass is fixed, can be so adjusted in accordance with the declination of the object observed that the same field is kept continuously in view.

coulisse, koo-lēs' (*Carp.*). A grooved piece of timber in which usually another member slides. Also called CULLIS.

coulomb, koo-lom' (*Elec. Eng.*). The practical unit of quantity of electricity, being the amount of electricity passing in a circuit when 1 ampere flows for one second.

Coulomb's law (*Elec. Eng.*). A fundamental law of electrical engineering which states that the electrostatic attraction or repulsion between two charged bodies is proportional to the magnitudes of their charges and inversely proportional to the square of the distance between them.

coulometer (*Elec. Eng.*). See **voltameter.**

coulter (*Agric. Mach.*). A knife, or a steel disc, which, attached to a plough, makes the vertical cut in the ground to form the furrow slice. See **share.**

coumar'ic acids (*Chem.*). $HO{\cdot}C_6H_4{\cdot}CH{:}CH{\cdot}COOH$, hydroxy-cinnamic acids.

coumarin, koo'-- (*Chem.*). Odoriferous principle of tonquin beans and woodruff, $C_9H_6O_2$, b.p. 200° C.; used for scenting tobacco.

cou'marone (*Chem.*). The condensation product of a benzene nucleus with a furan ring. Coumarone is a very stable, inert compound, b.p. 169° C.; found in coal-tar. Strong acids effect polymerisation into para-coumarone and coumarone resins.

coumarone resins (*Plastics*). Condensation and polymerisation products obtained from *coumarone* (q.v.); used for varnishes, in printing ink, and as plasticisers for moulding powders. They are neutral and acid—and alkali-resisting.

count of yarn (*Textiles*). A number which designates the size of a yarn. Usually a count represents the number of units of length contained in a unit of weight, but in certain classes of yarn the count represents the number of units of weight in a unit of length. The units of length and weight vary in districts. WOOLLEN: The *Yorkshire skein*=256 yds.; unit of weight 1 lb. The *American run*=100 yds.; unit of weight 1 oz. WORSTEDS: The *British* and *American hank*=560 yds.; unit of weight 1 lb. COTTON: The *cotton hank*=840 yds.; unit of weight 1 lb. The count is the number of hanks of 840 yds. which weigh 1 lb. LINEN: The count is the number of leas of 300 yds. which weigh 1 lb. JUTE YARNS: The count is the number of lbs. in a spindle of 14,400 yards, the unit of length.

counter (*Eng.*). An instrument for recording the number of operations performed by a machine or the revolutions of a shaft.—(*Elec. Eng.*) The part of an integrating electricity meter which indicates the number of revolutions made by the spindle of the meter, this indication being proportional to the amount of energy which has passed through the circuit. Also occasionally called DIAL or CLOCK.

counter (*Boots and Shoes*). The stiffener for the part of a boot or shoe that encircles the heel.

counter (*Ship Constr.*). A description applied to a form of ship's stern, implying an overhung portion of deck, abaft the stern post; hence the term 'under the counter.'

counter-arched (*Civ. Eng.*). Said of a revetment having arches turned between the counterforts.

counterbalancing (*Eng.*). The system of neutralising the effect of a force by a counterweight which provides an opposite effect. See **balance box, balance weight.**

counterboring (*Eng.*). The operation of boring the end of a hole to a larger diameter.

counterbracing (*Eng., Struct.*). The provision of two diagonal tie-rods in the panels of a frame girder or other structure. Also called CROSS-BRACING.

counter-coupling (*Radio*). See **negative feedback.**

counter drain (*Civ. Eng.*). A drain running along the foot of an embankment, to carry off water.

counter-e.m.f. (*Elec. Eng.*). See **back e.m.f.**

counter-e.m.f. cells (*Elec. Eng.*). See **back-e.m.f. cells.**

counter-flap hinge (*Join.*). A hinge which is arranged, by the provision of separate centres of rotation for each leaf, so that it may fold back to back.

counter-floor (*Carp., Join.*). An inferior floor laid as a base for a better surface (e.g. parquet).

counterflow jet condenser (*Eng.*). A *jet condenser* (q.v.) in which the exhaust steam and air flow upwards to the airpump suction in the opposite direction to that of the descending spray of cooling water.

counterfort (*Civ. Eng.*). A buttress giving lateral support to a retaining wall, to which it is bonded.

counter-gauge (*Carp.*). See **mortise-gauge.**

counter-irritation (*Med.*). Therapeutic irritation for the relief of pain due to inflammation.

counterlathing (*Plast.*). See **brandering.**

counter-mure (*Masonry*). A wall-facing.

counter-plate (*Engraving*). A secondary engraved metal plate used in producing additions on an engraving.

counterpoise (*Elec. Eng.*). A buried wire connected to the towers of an overhead electric transmission line in order to reduce the impedance between the towers and earth, thereby reducing the probability of insulator flashovers due to lightning surges.

counterpoise antenna (*Radio*). A system of wires placed a short distance above the ground and insulated therefrom; used in place of the earth connexion in an antenna, to reduce losses in the ground. Also called BALANCING ANTENNA, CAPACITY EARTH.

counterpoise bridge (*Civ. Eng.*). A bridge, such as a bascule or lift bridge, in which the raising of the platform is assisted by counterpoise weights.

counterpoise earth (*Radio*). See **artificial earth.**

counter-proof (*Engraving, Print.*). A proof taken off another proof while the first is still wet, producing a reversed version.

countershaft (*Eng.*). An intermediate shaft interposed between driving and driven shafts in a belt drive, either to obtain a larger speed ratio or where direct connexion is impossible.

countersinking (*Eng.*). The provision of a conical enlargement at the end of a hole to receive the head of a screw or rivet. See **counterboring.** —(*Dec., etc.*) The driving of the head of a screw or nail below the surface so that it may be hidden by a plug.

counter-stern (*Ship Constr.*). A type of ship's stern construction. It is virtually an excrescence to the main hull, and is not waterborne.

counter-vault (*Civ. Eng.*). An inverted arch.

counterwedging (*Join.*). A method of bringing closely together the butting edges of thin surfaces, such as counter tops, by tightening up parallel wedges between a slot in a batten across the back of one of the surfaces and corresponding slots in two battens across the back of the other surface.

countess (*Build.*). A roofing slate, 20 by 10 in.

counting glass (*Textiles*). A magnifying-glass with a special base, often ¼, ½, or 1 in. square; used when counting the number of threads in a given space in a fabric.

country rock (*Mining*). The valueless rock forming the walls of a reef or lode.

coup, kowp (*Build.*). A Scottish term for a shooting of rubbish.

couple (*Build.*). A Scottish term for a rafter.

couple (*Mech.*). A pair of non-collinear equal parallel forces oppositely directed. The moment of a couple is equal to the product of the magnitude of one of the forces and the perpendicular distance between their lines of action.

couple-close roof (*Build.*). A roof-form derived from the couple roof by connecting the lower ends of the two rafters together with a tie, so as to prevent spreading of the roof under load.

couple roof (*Build.*). A roof composed of two rafters not braced together.

coupled-circuit effect (*Radio*). The property, exhibited by any two resonant circuits coupled by mutual reactance greater than a certain critical value, of showing maxima of response at two frequencies, neither of which coincides with the resonant frequencies of the separate resonant circuits.

coupled switches (*Elec. Eng.*). See **linked switches.**

coupled wheels (*Eng.*). The wheels of a locomotive which are connected by coupling rods in order to distribute the driving effort over more than one pair of wheels.

coupler (*Acous.*). A paralleling arrangement in an organ console for playing stops on one manual from the keys on another manual, or from pedals.

coupler (*Elec. Eng.*). A short length of tubing for making connexions between adjacent lengths of conduit in an electric wiring system. The term is also used to denote various devices for connecting electric circuits. See **bus-coupler switch, bus-wire coupler, plain coupler.**

coupler plug (*Elec. Eng.*). A plug on a jumper cable, such as that used for making connexion between the two coaches of an electric multiple-unit train.

coupler socket (*Elec. Eng.*). A socket for receiving a coupler plug.

couplet (*Gen.*). A pair of allelomorphs.

coupling (*Gen.*). The tendency for dominant characters to remain in association.

coupling (*Elec. Comm.*). An arrangement for transferring electrical energy from one circuit to another, in one or both directions.

See **capacity**
(or **electro-static**)—
direct (d.c.)—
inductive—
mutual—
parafeed—
paraphase—
resistance—
resistance-capacity—
transformer—
valve—

coupling (*Eng.*). (1) A device for connecting two vehicles, as railway coaches.—(2) A connexion between two co-axial shafts, conveying a drive from one to the other.

See **claw**—
flange—
flexible—
muff—

coupling (*Plumb.*). A short collar screwed internally at each end to receive the ends of two pipes which are to be joined together.

couplings (*Textiles*). The loops which connect the mails to the harness cords and lingoes of a jacquard harness.

coupling coefficient (*Radio*). The ratio of the total effective positive (or negative) reactance common to two resonant circuits to the geometric mean of the total positive (or negative) reactances of the two separate circuits.

coupling coil (*Radio*). A coil whose inductance is generally a small fraction of the total inductance of the circuit of which it forms a part; used for the inductive transfer of energy to or from the circuit.

coupling condenser (*Radio*). Any condenser used for coupling two circuits, but particularly that for coupling the antenna to a transmitter or receiver.

coupling factor (*Radio*). Another name for *coupling coefficient.*

coupling resistance (*Elec. Comm.*). A common resistance between two circuits for the transference of energy from one circuit to the other.

coupling system (*Radio*). The system of resonant circuits and transmission lines used for the transfer of energy from a transmitter to the antenna.

course (*Build.*). A horizontal layer of bricks or building-stones running throughout the length and breadth of a wall. See also **cushion course.**

course (*Hosiery*). The series of stitches in a knitted fabric, regarded horizontally.

course (*Surv.*). The known length and bearing of a survey line.

course (*Weaving*). (1) A series of heald eyes, one on each shaft.—(2) A series of mails, one row from back to front in a jacquard harness.—(3) One repeat of a pattern.

coursed masonry (*Civ. Eng.*). Work consisting of stone blocks laid on their beds in courses; e.g. in some breakwater construction.

coursing joint (*Build., Masonry*). The mortar joint between adjacent courses of brick or stone.

coussinet, koo-sē-nā (*Build.*). A *cushion* (q.v.).

Cou'tchiching' Group (*Geol.*). Intensely metamorphosed sedimentary rocks represented chiefly by mica-schists and paragneisses: the oldest sedimentary series known, occurring in the Canadian Shield, notably at Rainy Lake, the type-locality, and in Manitoba. See also **Loganian System.**

coutil (*Textiles*). A cotton fabric, usually a 2-and-1 twill with a 'herring-bone' effect; used for corsets.

co-valency (*Chem.*). The union of two atoms by the sharing of a pair of electrons.

co-valency, dative (*Chem.*). See **semi-polar bond.**

cove (*Join.*). A hollow cornice, usually large.

coved ceiling (*Build.*). A ceiling which is formed at the edges to give a hollow curve from wall to ceiling, instead of a sharp angle of intersection.

covel'lite (*Min.*). Sulphide of copper crystallising in the hexagonal system, usually occurring as thin plates. The colour is indigo-blue or darker. Also called INDIGO COPPER.

cover (*Build.*). In coursed work, the hidden or covered width of a slate or tile.

cover (*Civ. Eng.*). The thickness of concrete between the outer surface of any reinforcement and the nearest surface of the concrete. See **effective depth.**

cover flashing (*Plumb.*). A separate flashing fastened into the upright surface and overlapping the flashing in the angle between the surfaces.

cover glass (*Microscopy*). The thin slip of glass used for covering a specimen that is being observed under a microscope.—(*Photog.*) A transparent square of glass bound by the edges to a photographic transparency in the making of a lantern slide; its purpose is to protect the photographic image.

cover iron (*Carp.*). See **back iron.**

cover stones (*Build.*). Flat stones covering girders, etc., and serving as a foundation for walls above.

coverage or **covering power** (*Photog.*). The area over which a lens can give a sharply focused image.

covered electrode (*Elec. Eng.*). A metal electrode covered with a coating of flux; used in arc-welding.

covering power (*Paint.*). The area which a given quantity of paint will cover without thinning unduly.

covering strips (*Dec.*). Strips of wood, etc., to cover butted joints or mitres.

covert coating (*Textiles*). A wool or wool-and-cotton fabric of twill weave; generally shower-proof.

coverts (*Zool.*). See **tectrices.**

coving (*Build.*). The upright splayed side of a fireplace opening.

co-volume (*Chem.*). The volume actually occupied by the molecules of a gas (the symbol *b* in van der Waals' equation).

cow-hocked (*Vet.*). Said of horses whose hocks are abnormally close to each other.

cow-pox (*Med.*, *Vet.*). See **vaccinia.**

cow-pox, false (*Vet.*). See **impetigo (bovine).**

cow-tail (*Textiles*). An obsolete term formerly applied by woolsorters to coarse wool from the tail end of a low lustre fleece.

cowl (*Build.*). A cover, frequently louvred and either fixed or revolving, fitted to the top of a chimney to prevent down draught.

Cowles furnace (*Elec. Eng.*). An early form of electrolytic furnace used for the manufacture of aluminium alloys; it consisted of a long trough with carbon electrodes at the ends.

cowling (*Aero.*). A casing of sheet-metal placed round an air-cooled aero-engine to direct the cooling air on to the cylinders and reduce drag.

Cowper stoves (*Met.*). See **hot-blast stoves.**

Cowper's glands (*Zool.*). In Mammals, paired glandular masses lying on either side of the urinogenital canal.

coxa (*Zool.*). In Insects, the proximal joint of the leg.—*adj.* **coxal.**

coxa valga (*Med.*). A deformity of the hip in which the angle between the neck and the shaft of the femur exceeds 140°.

coxa vara (*Med.*). A deformity of the hip in which the angle between the neck and the shaft of the femur is less than 120°.

coxa vera (*Zool.*). In Insects in which the coxa is divided, the anterior portion.

coxal'gia (*Med.*). Pain in the hip.

coxop'odite (*Zool.*). The proximal joint of the protopodite.

C.P. (*Chem.*). An abbrev. for *chemically pure*, indicating the highest grade of purity of a reagent.

C.P. (*Surv.*). Abbrev. for *change point.*

C.P.S., cps., c/s. (*Elec. Comm.*). Abbrevs. for *cycles per second*, the usual measure of frequency.

Cr (*Chem.*). The symbol for *chromium.*

C.R.-law (*Elec. Comm.*). (1) When a condenser is charged by a potential applied to a resistance in series with it, the rate of rise of potential of the plates on the condenser depends only on the product of the resistance and the capacity.—(2) In a uniform submarine cable, the phenomenon of transmission depends on the product of total capacity and total resistance. The speed of signalling is inversely proportional to this product.—Formerly termed the K.R.-LAW.

crab (*Eng.*). The travelling lifting-gear of a gantry crane, mounted on a bogie and running on rails carried by the gantry.

crabbing (*Textiles*). A process applied to worsted fabrics, usually before scouring, in order to prevent cockling in the finishing stages.

crabbing machine (*Textiles*). A machine, consisting of a trough with a crabbing or boiling roller, tensioning brakes, etc., in which crabbing is carried out.

cracked ends (*Textiles*). Threads which have become broken in a lustre worsted fabric during manufacture.

cracked heels (*Vet.*). See **grease.**

cracking (*Oils*). A process of breaking up the heavier petroleum distillates in order to obtain a larger supply of lighter products, e.g. petrol. The process is carried out in a still, under pressure.

crackle (*Pot.*). A system of decorating in which the glaze is covered with small cracks during firing, the size and pattern of crackles being more or less controlled by choice of glaze and temperature.

cradi'na (*Bot.*). An enzyme able to break down proteins, present in the juice of the stem, leaves, and fruit of the fig.

cradle. Generally, any support which partially embraces the object mounted in it; e.g. a gun cradle (see next article). Specific senses are indicated in articles below.

cradle (*Artillery*). That part of the gun carriage which supports the recoiling parts.

cradle (*Dec.*). (1) A movable scaffold; see **cradle scaffold.**—(2) A frame of laths on which scrim is stretched to receive plaster in forming coved or other heavy cornices, etc.

cradle (*Elec. Eng.*). An earthed metal net placed below a high-voltage overhead transmission line where it crosses a public highway, railway, or telephone circuit; a conductor, if broken, falls on the net and is earthed without doing damage.

cradle (*Mining*). (1) The trough-shaped metal support for a mounted pneumatic drill.—(2) The means of supporting men and tools during shaft-sinking or repair.—(3) See **rocker.**

cradle (*Textiles*). Cam blocks which support the catch bar end trucks in a lace machine.

cradle (*Vet.*). A frame encircling the neck of a horse; used as a means of restraint.

cradle bar (*Join.*). See **cot bar.**

cradle scaffold (*Build.*). A form of suspended scaffolding consisting of a strong framework fitted with guard rails and boards for the working platform, and slung from two fixed points or from a wire rope secured between two jibs. Also called BOAT SCAFFOLD.

cradling (*Carp.*, *Join.*). (1) Rough timber work fastened around a beam as a basis for lathing.—(2) See **cradle** (*Dec.* 2).

cradling piece (*Carp.*). A short timber fixed at each side of a fireplace hearth, between chimney breast and trimmer, to support the ends of floor boards.

craft. (1) The skill employed by a worker doing a manual task.—(2) A trade or occupation.

Crag (*Geol.*). A local type of shelly and sandy rocks which have been deposited in relatively shallow water; found in the Pliocene rocks of East Anglia.

crag-and-tail (*Geol.*). A land form consisting partly of solid rock shaped by ice action, with a *tail* of morainic material banked against it on the lee-side.

Craigleith stone (*Build.*). A very hard and durable, whitish-grey sandstone quarried near Edinburgh; used for ashlar and building purposes generally.

Cramer's test (*Chem.*). A test for the presence of saccharoses, based upon the reduction of a mercuric salt to metallic mercury.

crammed stripe (*Textiles*). A fancy-stripe pattern produced by arranging a larger number of threads in one part of the pattern than in the ground texture.

cramming (*Plumb.*). The operation of temporarily plugging a pipe before making a joint or doing repairs.

cramp (*Join.*). A contrivance for holding parts of a frame in place during construction. It usually consists of a steel bar along which slide two brackets between which the work is fixed, one of the brackets being pegged into a hole in the bar while the other is adjustable for position by means of a screw.

cramp (*Masonry*). A locking bar of incorrodible metal used to bind together adjacent stones in a course, and having bent ends, one of which is fastened into each stone. Also called a CRAMP-IRON. See also **slate cramp, lead plug.**

cramp (*Med.*). Painful spasm of muscle.

cramps (*Med.*). Heat cramps. Painful contractions of muscles in those who work in high temperatures, due to excessive loss of salt in the sweat.

cramp-iron (*Masonry*). See **cramp.**

crampon or **crampoon** (*Build.*). An appliance for holding stones or other heavy objects which are to be hoisted by crane. It consists of a pair of bars hinged together like scissors, the points of which are bent inwards for gripping the load, while the handles are connected by short lengths of chain to a common hoist-ring.

Crampton's muscle (*Zool.*). In Birds, a muscle of the eye which by its contraction decreases the diameter of the eyeball and so aids the eye to focus objects near to it.

crane (*Eng.*). A machine for hoisting and lowering heavy weights.

See **balance**—
breakdown—
cantilever—
derricking jib—
floating—
jib—
level-luffing—
overhead travelling—
portal jib—
tower—

crane magnet (*Elec. Eng.*). A lifting magnet.

crane motor (*Elec. Eng.*). A motor specially designed for the operation of a crane or hoist. It should be very robust and have a high starting torque.

crane post (*Eng.*). The vertical member of a jib crane, to the top of which the jib is connected by a tie-rod.

crane rating (*Elec. Eng*). A term sometimes employed to denote a method of specifying the rating of a motor for intermittent load, such as that of a crane. The maximum power and the load factor are stated.

crane shot (*Cinema.*). In motion-picture production, a shot taken with the camera mounted on a crane-like structure, to get vertical panning or a combination of vertical and horizontal panning.

crane tower (*Build.*). See **king tower.**

cranial flexures (*Zool.*). Flexures of the brain in relation to the main axis of the spinal cord, transitory in lower Vertebrates, permanent in higher Vertebrates. See **primary flexure, nuchal flexure, pontal flexure.**

Crania'ta (*Zool.*). A subphylum of *Chordata* characterised by the possession of a distinct head marked by specialised sense-organs, brain, and skull.

cranio- (Greek *kranion*, skull). A prefix used in the construction of compound terms; e.g. *cranioclasis* (q.v.).

craniocla'sis (*Obstet.*). The instrumental crushing of the foetal skull in obstructed labour.

cra'nioclast (*Obstet.*). An instrument for gripping and crushing the foetal skull in obstructed labour.

craniosa'cral outflow (*Zool.*). See **parasympathetic nervous system.**

craniota'bes (*Med.*). Thinning of the bone of the skull in rickets or in congenital syphilis.

craniot'omy (*Obstet.*). Incision of the foetal skull and removal of its contents in obstructed labour.

cranium (*Zool.*). That part of the skull which encloses and protects the brain; the brain-case. —*adj.* **cranial.**

crank (*Eng.*). An arm attached to a shaft, carrying at its outer end a pin parallel to the shaft; used either to give reciprocating motion to a member attached to the pin, or to transform such motion into rotary motion of the shaft.

crank-brace (*Tools*). A brace having a bent handle by which it may be rotated.

crankcase (*Eng.*). A box-like casing, usually cast-iron or aluminium, which encloses the crankshaft and connecting-rods of some types of reciprocating engines, air-compressors, etc.

crank effort (*Eng.*). The effective force acting on the crank pin of an engine in a direction tangential to the circular path of the pin.

crank pin (*Eng.*). The pin which is fitted into the web or arm of a crank, and to which a reciprocating member or connecting-rod is attached.

crankshaft (*Eng.*). The main shaft of an engine or other machine which carries a crank or cranks for the attachment of connecting-rods.

crank throw (*Eng.*). (1) The radial distance from the mainshaft to the pin of a crank, equal to one half the stroke of a reciprocating member attached to the pin.—(2) The web or webs and pin of a crank.

crank web (*Eng.*). The arm of a crank, usually of flat rectangular section.

cranked (*Eng.*). Bent or shaped like a crank.

crash (*Textiles*). A linen cloth of coarse texture, used for towelling, etc.

crash helmet (*Aero., etc.*). A helmet with cushions of resilient material, intended to protect the head in case of accident.

crashes (*Radio*). Powerful atmospherics of relatively long duration.

cras'pedote (*Zool.*). Having a velum.

crater (*Geol.*). The orifice of a volcano, usually in the shape of an inverted cone, through which the lavas and gases are emitted during activity.

crater (*Illum.*). See **arc crater.**

crater'iform (*Bot., etc.*). Hollowed out; like a cup.

crawling (*Dec.*). A defect in paint or varnish work, characterised by the formation of wrinkles before drying. Also called CURTAINING.

crawling (*Elec. Eng.*). A phenomenon sometimes observed with induction motors, the motor running up to about only one-seventh of full speed on account of the presence of a pronounced seventh harmonic in the field form. The phenomenon is also observed with other harmonics. Also called BALKING.

craze or **crazing** (*Build*). The minute hair cracks which sometimes appear on the surface of precast concrete work or artificial stone.—(*Paint*) Fissuring of faulty coats of paint or varnish in irregular criss-cross cracks.—(*Pot.*) Hair-like cracks appearing in a glaze. *

cream-laid (*Paper*). White writing-paper made with a laid water-mark.

cream of tartar (*Chem.*). Commercial name for acid potassium tartrate.

cream separator (*Agric. Mach.*). A machine, either hand- or power-driven, in which cream is separated from whole milk by centrifugal force; cream, the lighter fraction, passes out of the machine at one outlet, and the heavier skim milk through another outlet.

cream-wove (*Paper*). White writing-paper, in the manufacture of which a wove dandy has been used.

creasing (*Build.*). See **tile creasing.**

cre'atine (*Chem.*). Methylguanido-acetic acid, methylglycocyamine, $HN{:}C(NH_2){\cdot}N(CH_3){\cdot}CH_2{\cdot}COOH$, a weakly basic, crystalline compound, soluble in water and present in muscle. It has been synthesised from cyanamide and methylamino-acetic acid.

creatinine, krē-at'— (*Chem.*). Methylglycocyamidine, formed from creatine in acid solution by the elimination of water between the amino and carboxyl groups. The white prisms decompose at 270° C., and are strongly basic. It occurs in muscle and urine.

creatinu'ria, krē-at'— (*Med.*). The presence of creatinine in the urine.

creatorrhoe'a, creatorrhe'a (*Med.*). The abnormal presence of muscle fibres in the faeces.

creel (*Textiles*). The frame which holds the supply bobbins at the spinning-frame, beam warper, or other machine.

creep (*Chem.*). (1) The rise of a precipitate on the wet walls of a vessel.—(2) The formation of crystals on the sides of a vessel above the surface of an evaporating liquid.

creep (*Eng.*). (1) A slow relative movement between two parts of a structure.—(2) The slow relative motion of a belt over the surface of a pulley, due to its continual extension and relaxation as it passes from tight to slack side.

creep (*Met.*). Continuous deformation of metals under steady load. Exhibited by iron, nickel, copper, and their alloys at elevated temperature, and by zinc, tin, lead, and their alloys at room temperature.

creep (*Mining*). Gradual rising of the floor in a coal-mine due to pressure in the strata. See **crush.**

creep limit (*Eng.*). The maximum tensile stress which can be applied to a material at a given temperature without resulting in measurable creep.

creep tests (*Met.*). Methods for measuring the resistance of metals to creep. Time-extension curves under constant loads are determined. The methods used vary with respect to the duration of the tests and the procedure adopted in estimating behaviour during long periods of time.

creeping (*Bot.*). Growing along the surface of the ground, and rooting at the nodes.

creeping (*Paint.*). Said of a new paint or varnish film which moves downwards. See also **crawling.**

cremas'ter (*Zool.*). In the pupae of *Lepidoptera*, an organ of attachment developed from the tenth abdominal somite: in Mammals, a muscle of the spermatic cord.

Cremnitz white (*Paint.*). See **Vienna white.**

cre'mocarp (*Bot.*). A fruit which splits into two or more one-seeded portions.

cren'ate (*Bot.*). Having a margin bearing rounded teeth all more or less of the same size; when the teeth are themselves crenate, the margin is *doubly crenate*.

cren'ulate (*Bot.*). Having small rounded teeth on the margin.

cre'osote oil (*Chem.*). A coal-tar fraction, boiling between 240° and 270° C. The crude creosote oil is used as raw material for producing tar acids, etc., or used direct as a germicide, insecticide, or disinfectant in various connexions (e.g. soaps, sheep dips, impregnation of railway sleepers, etc.).

creosoting cylinder (*Civ. Eng.*). A container in which timber may be impregnated with creosote under pressure. See **Bethell's process.**

crêpe, krep (*Textiles*). A dress material, worsted, silk, or cotton, with a specially produced rough surface.

crêpe-de-chine, —shēn (*Textiles*). A fabric with crêpe effect, usually made with Botany worsted yarns, warp, and weft; originally made with silk warp and Botany worsted weft.

crêpe weaves (*Textiles*). Weaves in which an irregular arrangement of the warp and weft produces a broken surface effect, without twill or rib lines.

crepitation, crepitus (*Med.*). (1) A crackling sensation felt by the observer on movement of a rheumatic joint.—(2) The fine crackling noise made when two ends of a broken bone are rubbed together.—CREPITATIONS, fine crackling sounds heard over the chest in disease of the pleura or of the lungs.

crepitation (*Zool.*). The explosive discharge of an acrid fluid by certain Beetles, which use this as a means of self-defence.

crep'oline, —lēn (*Worsted*). A light-weight dress material with a rib-crêpe appearance.

crepus'cular (*Zool.*). Active at twilight or in the hours preceding dawn.

crepuscular rays (*Meteor.*). The radiating and coloured rays from the sun below the horizon, broken up and made apparent by clouds or mountains: also, the apparently diverging rays from the sun passing through irregular spaces between clouds.

crescent (*Horol.*). The circular notch cut in the periphery of the roller of the lever escapement to allow the passing of the guard pin or safety finger. Also known as PASSING HOLLOW.

cre'sols (*Chem.*). A technical name for the hydroxytoluenes, $CH_3{\cdot}C_6H_4{\cdot}OH$, monohydric phenols. There are three isomers, viz.

o-cresol, m.p. 30° C., b.p. 191° C.
m-cresol, m.p. 4° C., b.p. 203° C.
p-cresol, m.p. 36° C., b.p. 202° C.

Only *meta-* and *para*-cresol form nitro-compounds with nitric acid, whereas the *ortho*-cresol is oxidised. Important raw materials for plastics, especially the *meta*-compound; also used for explosives, as intermediates for dyestuffs, and as antiseptics.

cresol resins (*Plastics*). Resins made from *meta-* and *para*-cresol and an aldehyde, similar in properties to the phenolics. The *ortho-* compound reacts but slowly, and is therefore likely to remain partly unchanged and act as a softener or plasticiser.

crest (*Build.*, *Civ. Eng.*, *etc.*). The top of a slope or parapet: the ridge of a roof.

crest (*Zool.*). A ridge or elongate eminence, especially on a bone.

crest factor (*Elec. Eng.*). See **peak factor.**

crest-tile (*Build.*). A purpose-made tile having a V-shape specially suiting it to location astride the ridge-line of a roof.

crest value (*Elec. Eng.*). See **peak value.**

crest voltmeter (*Elec. Eng.*) See **peak voltmeter.**

cresting (*Build.*). Ornamental work along a ridge, cornice, or coping of a building. Also called BRATTICING or BRATTISHING.

cresting (*Furn.*). An erect carved or pierced ornament used as edging to a chair or settee back.

cresyl'ic acids (*Chem.*). A mixture of the various cresol isomers, also containing higher homologues, e.g. xylenols.

Creta'ceous System (*Geol.*). The rocks which succeed the Jurassic and precede the Tertiary System. The most striking member of this system is the Chalk in Britain. See also **Cretacic.**

Creta'cic (*Geol.*). Equivalent to the Upper Cretaceous of Europe, the Lower Cretaceous constituting the *Comanchean* (q.v.) of American stratigraphers. For Cretacic see **Coloradoan, Laramian,** and **Montanan.**

cre'tinism (*Med.*). A congenital condition in which there is failure of mental and physical development, due to absence or insufficiency of the secretion of the thyroid gland.

cretonne' (*Textiles*). A cotton material, either printed or made from a printed warp; used for coverings and curtains.

crevasse' (*Geol.*). A fissure, often deep and wide, in a glacier or ice-sheet.

crevasse curve (*Radio*). A curve showing the sharpness of response of a piezo-electric crystal to changes of frequency. It is obtained by taking a resonance curve of a parallel resonant circuit across which the crystal is connected. A sharp 'crevasse' in the curve occurs at the resonant frequency of the crystal.

crew (*Teleph.*). A group of trained persons who perform intelligibility and articulation tests over telephone circuits or parts thereof.

crew, camera (*Cinema.*). See **camera crew.**

crew factor (*Teleph.*). The factor which is applied to the results of testing with a given crew so as to obtain the ideal articulation of the system tested, thus eliminating effects due to degree of training and physiological condition of the crew.

crib (*Mining*). (1) An interval from work underground for croust, bait, snack, downer, piece, chop, snap, bite, or tiffin.—(2) A job.—(3) A form of timber support.

cribwork (*Civ. Eng.*). Timber cribs or boxes, filled with concrete, which are sometimes sunk below water-level to carry the foundations of bridges.

cribbing (*Civ. Eng.*). An interior lining for a shaft, formed of framed timbers backed with boards; used to support the sides and keep back water.

cribel'lar glands (*Zool.*). The silk glands which open on the cribellum in certain Spiders.

cribel'lum (*Zool.*). In certain Spiders, a perforate oval plate, lying just in front of the anterior spinnerets, which produces a broad strip of silk composed of a number of threads.

crib'riform (*Zool.*). Perforate, sieve-like; as the **cribriform plate,** a perforate cartilaginous element of the developing Vertebrate skull, which later gives rise to the ectethmoid.

crib'rose (*Bot.*). Pierced with many holes: resembling a sieve.

cric'oid (*Zool.*). Ring-shaped; as one of the cartilages of the larynx.

Crimp and Bruges formula (*San. Eng.*). A formula giving the rate of discharge through sewers constructed of good brickwork, or of cast-iron pipes in good condition. It states that

$$v = 124\,m^{\frac{2}{3}}i^{\frac{1}{2}},$$

where v = velocity of flow in ft. per sec.; m = hydraulic mean depth; i = virtual slope.

crimp cloth (*Textiles*). A cotton fabric in which a stripe effect is produced by yarns at different tensions during weaving; or by printing plain cloth with stripes of caustic soda, which causes contraction of the parts printed.

crimper (*Civ. Eng.*). See **indenter.**

crimping (*Eng.*). The compressing of a thin metal ring or cap into corrugations so as to reduce its diameter.

crin'anite (*Geol.*). A basic igneous rock, consisting of intergrown crystals of feldspar, titanaugite, olivine, and analcite. Similar to *teschenite.*

Crinoi'dea (*Zool.*). Sea Lilies. A class of *Echinodermata,* having a flower-shaped body, with branching arms sharply differentiated from the disc; the tube-feet lack ampullae and occur on the upper surface; the anus and mouth are on the upper surface; the madreporite is internal; there is a well-developed skeleton; stalked sessile forms. Crinoids are found fossil in many limestones (crinoidal limestone).

cripple-timber (*Carp.*). See **jack-timber.**

crisis (*Glass*). An old term, not much used now, denoting the stage of melting when the firing could be reduced to allow the glass to cool off and the last traces of bubble to disappear.

crisis (*Med.*). (1) A painful paroxysm in tabes dorsalis.—(2) The rapid fall of temperature marking the end of a fever.

cris'pate, crisped (*Bot.*). Having a frizzled appearance.

criss-cross inheritance (*Gen.*). Occurs when the reciprocal cross of a female with an allelomorphic character X and a male with the corresponding character Y results in all males of the first filial generation having X and all the females Y.

crissum (*Zool.*). In Birds, the region surrounding the cloaca or the feathers situated on that area.—*adj.* **crissal.**

crista (*Zool.*). A ridge or ridge-like structure; as the projection of the transverse crests of lophodont molars.

crista acu'stica (*Zool.*). (1) A chordotonal apparatus forming part of the tympanal organ in *Tetigoniidae* and *Gryllidae.*—(2) An inwardly projecting ridge of the auditory ampullae in Vertebrates, marking the entrance of the nerve fibres.

cris'tate (*Bot.*). Bearing a crest.

cristo'balite (*Min.*). Silica which crystallises in white octahedrons. This is a high-temperature modification of quartz, being formed above 1470° C. It may have two varieties, one tetragonal and the other cubic.

crithid'ial (*Zool.*). Pertaining to, or resembling, the flagellate genus *Crithidia*; said of a stage in the life-cycle of some Trypanosomes.

critical angle (*Light*). The largest value which the angle of incidence may have for a ray of light passing from a denser to a less dense medium. If the angle of incidence exceeds the critical angle, the ray does not enter the less dense medium but is totally internally reflected back into the denser medium. The sine of the critical angle is equal to the refractive index from the denser medium to the less dense.

critical corona voltage (*Elec. Eng.*). The voltage at which a corona discharge just begins to take place around an electric conductor.

critical coupling (*Radio*). The maximum value of the coupling coefficient before the coupled circuit effect is evidenced.

critical damping (*Elec. Eng.*). Damping in an oscillatory electric circuit or in an oscillating mechanical system (such as the movement of an indicating instrument) which is just enough to prevent oscillations from actually taking place.

critical point (*Phys.*). The point on the *isothermal* (q.v.) for the critical temperature of a substance at which the pressure and volume have their critical values. At the critical point the densities (and other physical properties) of the liquid and gaseous states are identical.

critical points (*Met.*). See **arrest points.**

critical pressure (*Phys.*). The pressure at which a gas may just be liquefied at its critical temperature.

critical range (*Met.*). The range of temperature in which the reversible change from austenite (stable at high temperature) to ferrite, pearlite, and cementite (stable at low temperature) occurs. The upper limit varies with carbon content; the lower limit for slow heating and cooling is about 700° C.

critical rate (*Met.*). The rate of cooling required to prevent the formation of pearlite and to secure the formation of martensite in steel. With carbon steel this means cooling in cold water, but it is reduced by the addition of other elements, hence oil- and air-hardening steels.

critical reaction (*Radio*). The maximum degree of reaction in a regenerative system before self-oscillation commences.

critical solution temperature (*Chem.*). The temperature above which two liquids are miscible in all proportions.

critical speed (*Eng.*). The rotational speed of a shaft at which some periodic disturbing force coincides with the fundamental or some higher mode of the natural frequency of torsional or transverse vibration of the shaft and its attached masses.

critical state (*Phys.*). The condition of a gas at its critical point, when it appears to hover between the liquid and gaseous states.

critical temperature (*Elec. Eng.*). The temperature at which magnetic materials lose their magnetic properties; about 800° C. for iron and steel.—(*Met.*) The temperature at which some change occurs in a metal or alloy during heating or cooling; i.e. the temperature at which an arrest or critical point is shown on heating or cooling curves.—(*Phys.*) The temperature above which a given gas cannot be liquefied. See **gases (liquefaction of).**

critical velocity (*Hyd.*). The velocity at which the nature of a given fluid flow in a particular case changes from viscous to eddy flow or vice versa.

critical voltage, disruptive (*Diel.*). The value is $E_0 = 21{\cdot}1\ m\delta r \log_e (D/r)\ kV$ (r.m.s.) to neutral; where m is 1·0 for clean wires, 0·95 for weathered wires, and 0·84 for stranded wires; δ is $3{\cdot}92\ b/(273+T)$ where b is the barometric height in cm. and T the temperature in degrees C.; r is the radius of the wire in cm. and D is the spacing.

critical voltage, visual (*Diel.*). This requires an energy supply so that E_v is the disruptive critical voltage multiplied by $(1+0{\cdot}3/\sqrt{\delta r})$. See **critical voltage (disruptive)**.

critical volume (*Phys.*). The volume of unit mass of a substance under critical conditions of temperature and pressure.

crizzling (*Glass*). Fine cracks in the surface of the glass, occasioned by local chilling during manufacture.

crochet, krotch′et (*Zool.*). A hook which aids in locomotion, and is associated with the apex of the abdominal legs in Insect larvae.

crocidolite, krō-sid′— (*Min.*). A silicate of sodium and iron, crystallising in the monoclinic system and belonging to the amphibole group of rock-forming minerals. Usually considered to be a fibrous variety of riebeckite. See also **tiger's eye.**

crockery (*Pot.*). A term covering all kinds of domestic pottery.

crocodile truck (*Eng.*). A high-capacity railway truck consisting of a long open platform carried between two four-wheeled bogies. The low floor-level facilitates the loading of heavy and bulky freight.

Crocodil′ia (*Zool.*). See **Loricata.**

crocodiling (*Dec.*). A defect on a painted or varnished surface, characterised by the formation of ridges or cracks in irregular patches. Sometimes known as ALLIGATORING.

cro′coite, cro′coisite (*Min.*). Chromate of lead, crystallising in the monoclinic system; bright-red in colour.

croissant vitellogène, krwa-sahn^g′ vē-tel-ō-zhen′ (*Zool.*). In the developing oöcyte, a crescentic area surrounding the archoplasm, in which the mitochondria are grouped.

Croixian (*Geol.*). The rocks of Upper Cambrian age in the Pacific Province in N. America, so named from St. Croix (Minnesota), where they are typically developed. Cf. *Bretonian.*

Crookes dark space (*Phys.*). A dark region separating the cathode from the luminous 'negative glow' in an electrical discharge in a gas at low pressure. The thickness of the Crookes dark space increases as the pressure is reduced. For air it is about 0·6 cm. thick at 0·1 mm. pressure.

crook′esite (*Min.*). Selenide of copper and thallium, often with 1%-5% silver. It is massive and compact, and displays metallic lustre.

crop (*Geol.*). See **outcrop.**

crop (*Met.*). See **discard.**

crop (*Zool.*). See **proventriculus.**

crop bound (*Vet.*). A term applied to birds suffering from impaction of the crop or ingluvies.

cropped (*Bind.*) Said of the edges of a book which have been cut down to an extent that mars the appearance of the pages.

cropper (*Typog.*). A small platen printing machine.

cropping (*Met.*). The operation of cutting off the end or ends of an ingot to remove the pipe and other defects.

cropping (*Textiles*). *Cutting* (q.v.).

cropping (*Vet.*). The operation of amputating a part of the comb or wattles of birds, or of the ears of dogs.

cropping machine (*Linen*). A machine comprising spiral knives and a ledger plate, used to remove loose ends and knots from linen cloth.

cross (*Plumb.*). A special pipe-fitting having four branches mutually at right-angles; used as a junction at the intersection of two pipe lines.

cross (*Gen.*). An individual whose parents belong to different breeds or races.

cross-ampere-turns (*Elec. Eng.*). The component of the armature ampere-turns which tends to produce a field at right-angles to the main field.

cross arm (*Elec. Comm.*). The horizontal cross-member attached to telegraph poles, or power transmission line poles, for supporting the insulators which carry the conductors.

cross-axle (*Rail.*). A driving axle having cranks mutually at right-angles.

cross band (*Textiles*). A breadth of lace, such as flouncings, made across a Levers machine.

cross band, warp twist, left-hand twine (*Textiles*). Terms used in the woollen industry to indicate yarns with the twist from right to left; in the worsted trade the term is generally *left-hand twist.*

cross-bearing (*Surv.*). A check bearing taken between stations which are not adjacent to one another in the survey.

cross-blast explosion pot (*Elec. Eng.*). An explosion pot in which the pressure generated by the arc in the pot causes a stream of oil to be directed across the arc path at right-angles to it.

cross-blast oil circuit-breaker (*Elec. Eng.*). An oil circuit-breaker in which the pressure generated by the arc causes a stream of oil to be forced through ports placed opposite one pair of contacts, thereby cutting across the arc stream.

cross-bond (*Elec. Eng.*). A rail-bond for connecting together the two rails of a track or the rails of adjacent tracks.

cross-bonding (*Cables*). The sheath of Cable 1 is connected to that of Cable 2 and farther on to Cable 3. The total induced e.m.f. vanishes and there are no sheath-circuit eddies.

cross-bracing (*Eng.*, *Struct.*). See **counter-bracing.**

crossbred (*Textiles*). A term applied to wool obtained from sheep crossed in breed (long-wool lustre class and merino). The wool is coarser than merino, brighter in appearance, and crisp. Used for worsted serges, Cheviot quality woollens, and hosiery.

cross-connexion field (*Teleph.*). In a distribution frame, the space in which the flexible jumpers are accommodated.

cross-cut (*Mining*). In metal mining, a level or tunnel driven through the country rock, generally from a shaft, to intersect a vein or lode.

cross cuts (*Furs*). Cuts carried across skins.

cross-cut chisel (*Eng.*). A cold chisel having a narrow cutting edge carried by a stiff shank of rectangular section; used for heavy cuts. See **cold chisel.**

cross-cut file (*Eng.*). A file in which the cutting edges are formed by the intersection of two sets of teeth crossing each other.

cross-cutting saw (*Carp.*). A saw designed for cutting timber across the grain.

cross dyeing (*Textiles*). A method of dyeing a mixture cloth in which the warp and the weft yarns are acted on by different dyes, thus producing different shades.

cross fade (*Cinema.*). The same as *dissolve.*

cross-fertilisation (*Biol.*). The fertilisation of the female gametes of one individual by the male gametes of another individual.

cross field (*Elec. Eng.*). The component of the flux in an electric machine which is assumed to be produced by the cross ampere-turns.

cross fire (*Teleph.*). The impulse clicks in a telephone circuit, due to superposed telegraph channels.

cross-frogs (*Rail.*). See **crossings**.

cross front (*Photog.*). The sliding front carrying the lens in cameras; used to avoid the consequence of tilting the axis of a camera away from normality with an object.

cross garnet (*Join.*). A form of *strap hinge* (q.v.).

cross girders (*Eng.*). (1) Short girders acting as ties between two main girders.—(2) The members which transmit the weight of the roadway to the main girders of a bridge.

cross-grained float (*Plast.*). A float made of a piece of cross-grained wood; used in finishing corners and arrises formed in quick, hard-setting cements.

crosshair (*Surv.*). A spider's thread fixed across the diaphragm of a level or theodolite.

crosshead (*Eng.*). A reciprocating block, usually sliding between guides, forming the junction piece between the piston-rod and connecting-rod of an engine.

cross joint (*Build.*). The vertical mortar joint at the sides or back of a brick in position in a wall.

cross-lines (*Cinema.*). Lines cut on the surface of ground glass to facilitate accurate focusing of lens.

cross modulation (*Radio*). The impression of the envelope of one modulated carrier upon another carrier, due to non-linearity in the medium transmitting both carriers; may also occur in any other part of the channel.

cross-over (*Plumb.*). A special pipe-fitting with its middle length cranked out so that one pipe line may be laid across another when the two pipes are to be in the same plane.

cross-over (*Rail.*). A communicating track between two parallel lines, enabling rolling-stock to be transferred from one line to the other.

cross-overs (*Elec. Comm.*). The points at which the circuits on pole routes are changed over in transposing.

cross-over unit (*Gen.*). A 1% frequency of interchange between a pair of linked genes.

cross-pane hammer (*Tools*). A fitter's hammer the head of which has a flat striking face at one end and a blunt chisel-like edge, parallel with the shaft, at the other.

cross pollination (*Bot.*). The conveyance of pollen from an anther of one flower to the stigma of another, either on the same or on a different plant of the same species.

cross recording (*Cinema.*). The using of independently generated sounds for mixing with the primary sounds, in recording a complex shot in sound-film production.

cross seams (*Furs*). Seams carried across skins.

cross section. The section of a body (e.g. a girder or moulding) at right-angles to its length: a drawing showing such a section.

cross shake (*Timber*). A shake in cross-grained timber.

cross-sill (*Rail.*). See **sleeper**.

cross slide (*Eng.*). That part of a planing machine or lathe on which the toolholder is mounted, and across which it may be traversed at right-angles to the bed of the machine.

cross-springer (*Build.*). In a groined arch, the rib following the line of a groin.

cross staff (*Surv.*). An instrument for setting out right-angles in the field. It consists of a frame or box having two pairs of vertical slits, giving two lines of sight mutually at right-angles.

cross-stone (*Min.*). See **chiastolite**.

cross-talk (*Teleph.*). The interference caused by energy from one conversation invading another circuit by electrostatic or electromagnetic coupling. See **far-end cross-talk**, **near-end cross-talk**.—(*Radio*) Interference from an unwanted transmission.

cross-talk meter (*Teleph.*). An arrangement for measuring the attenuation between circuits which are liable to permit cross-talk.

cross-tie (*Rail.*). See **sleeper**.

cross-tie (*Weaving*). See **London tie**.

cross-ties (*Bot.*). Small veins in the leaf which run in a straight course between larger veins, giving a ladder-like appearance.

cross-tongue (*Join.*). A wooden tongue for a *ploughed and tongued joint* (q.v.), cut so that the grain is at right-angles to the grooves.

cross-tree (*Ship Constr.*). A lateral formation on a ship's mast; its uses are for rigging to top masts, hooks, tackle, etc. The term is derived from antique wooden ships.

cross weaving (*Silk*). See **gauze**.

crossed lens (*Light*). A simple lens the radii of curvature of which have been chosen to give minimum spherical aberration for parallel incident rays. For a refractive index of 1·5, the radii should be in the ratio 1 : 6, the surface of smaller radius facing the incident light.

crossed Nicols (*Light*). Two Nicol prisms arranged with their principal planes at right-angles, in which position the plane-polarised light emerging from one nicol is extinguished by the other.

crossed shed (*Weaving*). A type of shed made in gauze weaving, one thread being crossed over or under another.

crossette′ (*Build.*). A projection formed on the flank of a voussoir at the top, giving it a bearing upon the adjacent voussoir on the side towards the springing.

crossing end (*Weaving*). The end which, in gauze weaving, crosses under or over another.

crossing-over (*Cyt.*). Mutual exchanges between homologous pairs of chromosomes during maturation division.

crossings (*Rail.*). The notches made in rails to allow passage for the wheel-flanges at places where one line crosses another. Also CROSS-FROGS.

Crossopterygii, —rij′i-i (*Zool.*). A subclass of *Pisces* possessing lobate paired fins and cycloid scales. See **Dipnoi**. Some regard *Polypterus* and one or two other living forms as Crossopterygians.

crotchet (*Zool.*). A hooked or notched chaeta.

cro′tonal′dehyde (*Chem.*). $CH_3·CH:CH·CHO$, a liquid, of pungent odour, b.p. 105° C., an unsaturated aldehyde, obtained from acetaldehyde by heating with dilute hydrochloric acid or with a solution of sodium acetate. As an intermediate product *aldol* (q.v.) is formed.

croton′ic acid (*Chem.*). $CH_3·CH:CH·COOH$, an olefinic monocarboxylic acid. There are two stereoisomers, viz. crotonic acid, m.p. 71° C., b.p. 180° C.; and iso- or allo-crotonic acid, m.p. 15° C., b.p. 169° C. The first form is the *cis*-, the latter one the *trans*- form. The crotonic acids are also isomers of methacrylic acid and of vinylacetic acid.

croup (*Med.*). Inflammation of the larynx and trachea in children, associated with a peculiar ringing cough; present especially in diphtheria.

croupous inflammation (*Med.*). Inflammatory reaction characterised by an excess of fibrin in the exudate.

crowbar (*Tools*). A round iron bar, pointed at one end and flattened to a wedge shape at the other, used as a lever for moving heavy objects.

crow-step gable (*Build.*). See **corbie step gable**.

crow twill, swansdown twill (*Weaving*). Terms sometimes used to denote the 3-and-1 twill.

crown (*Bot.*). A very short rootstock.

crown (*Build., Civ. Eng.*). The highest part of an arch. Also called the VERTEX.

crown (*Paper*). A standard size of printing paper, 15×20 in. (U.S. 15×19 in.)

crown (*Zool.*). The part of a polyp bearing the mouth and tentacles: the distal part of a deer's horn: the grinding surface of a tooth: the disc and arms of a Crinoid: crest: head.

crown bar (*Civ. Eng.*). A heavy log, about 12 in. diameter and 15 ft. long, fixed along the top of a heading for a tunnel and supporting the poling boards with which the heading is lined. The crown bar is kept in position by props at each end.

crown-gate (*Hyd. Eng.*). A canal-lock head-gate.

crown glass (*Glass*). Glass of the alkali-lime-silica type, as opposed to lead glass (flint glass); used for electric-lamp bulbs. Also called SODA-LIME GLASS.

crown leather (*Leather*). A leather which is specially suited for belt laces, washers, etc. The method of manufacture somewhat resembles tawing. Also called HELVETIA LEATHER.

crown octavo (*Typog.*). A book size, 7½ × 5 in.

crown-post (*Carp.*). A *king-post* (q.v.).

crown rail-bond (*Elec. Eng.*). A rail-bond consisting of a flexible copper cable with solid terminals which are expanded into holes in the rail by means of drift pins.

crown-tile (*Build.*). An ordinary flat tile. Also called a PLANE-TILE.

crown wheel (*Eng.*). The larger wheel of a bevel reduction gear. See **bevel gearing.**

crowned (*Bot.*). (1) Bearing a terminal outgrowth such as a pappus.—(2) Having an appendage on the upper side of the leaf or petal.

croy (*Civ. Eng.*). A protective barrier built out into a stream to prevent erosion of the bank at a particular point.

crozier (*Bot.*). The young ascus when it is bent in the form of a hook.

crozzle (*Build.*). An excessively hard and misshapen brick which has been partially melted and overheated.

cruciate, cruciform (*Bot.*). Having the form of, or arranged like, a cross.

cruciate basidium (*Bot.*). A septate basidium in which the spindles of the dividing nuclei lie on a level across the basidium.

crucible (*Chem., Met.*). A refractory vessel or pot in which metals are melted. In chemical analysis, smaller crucibles, made of porcelain, nickel, or platinum, are used for igniting precipitates, fusing alkalies, etc.

crucible furnace (*Met.*). A furnace, fired with coal, coke, oil, or gas, in which metal contained in crucibles is melted.

crucible steel (*Met.*). Steel made by melting blister bar or wrought-iron, charcoal, and ferro-alloys in crucibles which hold about 100 lbs. This was the first process to produce steel in a molten condition, hence product called *cast-steel* (q.v.). Mainly used for the manufacture of tool steels, but now largely replaced by the electric-furnace process.

crucible tongs (*Chem., Met., etc.*). Tongs used for handling crucibles.

crude fibre (*Bot.*). The residues in the soil derived from the woody parts of plants.

crude oil. See **petroleum.**

cruiser stern (*Ship Constr.*). A type of ship's stern construction. It is integral with the main hull for strength and form, and is partially water-borne. It assists in manœuverability and wave formation, and provides underdeck roominess. See **counter.**

crump (*Mining*). A burst due to mechanical pressure of the ground.

crumpled (*Bot.*). See **corrugate.**

cru'or (*Zool.*). The coagulated blood of Vertebrates.

crup butt (*Leather*). Leather made from the back part of a horse hide; used for uppers of waterproof boots.

cru'ra (*Zool.*). See **crus.**

crura cer'ebri (*Zool.*). Two thick cylindrical masses of nervous matter, forming the floor of the mid-brain in Vertebrates.

crural (*Zool.*). Pertaining to or resembling a leg. See **crus.**

crure'us (*Zool.*). A leg muscle of higher Vertebrates.

crus (*Zool.*). The zeugopodium of the hind-limb in Vertebrates: the shank: any organ resembling a leg or shank.—*pl.* **crura.**—*adj.* **crural.**

crush (*Mining*). The broken condition of pillars of coal in a mine due to pressure of the strata. See **creep.**

crush breccia (*Geol.*). A rock consisting of angular fragments, often re-cemented, which has resulted from the faulting or folding of pre-existing rocks. See also **crush conglomerate, fault breccia.**

crush conglomerate (*Geol.*). A rock consisting of crushed and rolled fragments, often re-cemented; it has resulted from the folding or faulting of pre-existing rocks.

crusher gauge (*Artillery*). A steel cylinder with piston, used for measuring pressure in the bore of a gun.

crushing test (*Civ. Eng.*). A test of the suitability of stone to be used for roads or building purposes; a cylindrical specimen of the stone, 1 in. diameter and 1 in. long, is subjected to axial compression in a testing machine.

crust leather (*Leather*). The name for a light skin which, after tanning, has been shaved on the flesh side and lightly oiled on the grain side, preparatory to finishing.

crust of the earth (*Geol.*). See under **earth.**

crusta (*Zool.*). In the Vertebrate brain, a mass of nerve fibres lying on the ventral aspect of each half of the mesencephalon, lateral and ventral to the tegmentum: any hard coating.

crusta petro'sa (*Zool.*). A layer of lamellated bone covering the dentine of a tooth beyond the enamel.

Crusta'cea (*Zool.*). A subphylum of *Arthropoda* most of whose members are aquatic and breathe by gills; they possess biramous appendages; the head is not distinct from the thorax, and bears two pairs of antennae; the legs vary in number and are rarely all alike. Shrimps, Water Fleas, Barnacles, Fish Lice, Woodlice, Prawns, Lobsters, and Crabs, etc.

crustaceous (*Bot.*). (1) Forming a crust on the surface of anything.—(2) Thin, and brittle in texture.

crustose (*Bot.*). Forming a more or less interrupted crust.

crut (*Mining*). A short heading or tunnel into the face of a coal-seam.

crutch (*Horol.*). The lever or rod which transmits the impulse from the pallets to the pendulum rod. The end of the crutch may be in the form of a fork to embrace the pendulum rod, or else in the form of a pin which enters a slot in the pendulum rod.

crutching (*Vet.*). The operation of removing the wool from around the tail and quarters of sheep as a preventive of myiasis.

cry'olite or **Greenland spar** (*Min.*). Fluoride of aluminium and sodium, crystallising in the monoclinic system. It usually occurs as a vein in granite rocks, and is used in the manufacture of aluminium and white porcellanous glass.

cryoplank'ton (*Bot.*). Algae which live on the surface of snow and ice in polar regions and on high mountains.

cryoscop'ic method (*Chem.*). The determination of the molecular weight of a substance by observing the lowering of the freezing-point of a suitable solvent.

crypt (*Zool.*). A small cavity: a simple tubular gland.

cryptic coloration (*Zool.*). Protective or aggressive resemblance to some part of the environment or to another species.

crypto- (Greek *kryptos*, hidden). A prefix used in the construction of compound terms; e g. (*Zool.*) *cryptoneurous*, having a hidden nervous system, i.e. with no nervous system or with nervous system not apparent.

Cryptoceph'ala (*Zool*). A subclass of *Polychaeta* in which the body is divided into two regions, the thorax and the abdomen, distinguished by the form and arrangement of the setae; eyes and cirri are usually absent and the tentacles much reduced; the palps are much enlarged and branched, and the prostomium is hidden by the peristomium.

cryptocrystalline (*Crystal.*). Consisting of very minute crystals.

cryp'togam (*Bot.*). A plant without flowers, and often without distinct stems, leaves, and roots.—*adjs.* **cryptogam'ic, cryptogam'ous.**

cryp'tomere (*Gen.*). A genetic factor which is not seen.

cryp'tomer'ism (*Gen.*). The failure of characters to show in offspring, which nevertheless contain the corresponding hereditary *x* factors.

cryptom'eter (*Chem.*). An instrument used to determine the obliterating or hiding power, or the opacity, of paints and pigments.

cryptomito'sis (*Zool.*). A form of mitosis occurring in *Protozoa*, in which the chromatin concentrates on the equator of the spindle as a dense mass in which no chromosomes are visible.

Cryptomonadi'na (*Zool.*). An order of *Phytomastigina*, comprising forms generally with two flagella; green, yellow, brown, or colourless; rarely of amoeboid form; with a gullet or a longitudinal groove, but without a transverse groove; and having food-reserves generally of starch; without a contractile vacuole.

cryp'tophyte (*Bot.*). A plant which forms its resting buds beneath the surface of the soil.

cryp'toplasm (*Bot.*). The portion of the cytoplasm which appears to be devoid of granular contents.

cryp'torchid (*Zool.*). Said of testes which remain within the abdomen and do not descend into a scrotal sac.—(*Vet.*) An animal so affected.

cryptorhe'tic (*Zool.*). See **endocrine.**

cryptosto'ma (*Bot.*). A flask-shaped cavity in the thallus of some large brown seaweeds, containing hairs which secrete mucilage.

cryptozo'ic (*Zool.*). Living in dark places, as in holes, caves, or under stones and tree-trunks.

crystal. A body, generally solid, whose atoms are arranged in a definite pattern, the crystal faces being an outward expression of the regular arrangement of the atoms.

crystal (*Horol.*). The glass that covers the dial of a watch.

crystal boundaries (*Met.*). The surfaces of contact between adjacent crystals in a metal. Anything not soluble in the crystals tends to be situated at the crystal boundaries, but in the absence of this the boundary between two similar crystals is simply the region where the orientation changes.

crystal cell (*Television*). A form of Kerr cell using a quartz or other suitable crystal in place of the more usual nitro-benzine.

crystal control (*Radio*). Control of the frequency of a radio transmitter by means of an oscillating piezo-electric crystal, usually of quartz.

crystal detector (*Radio*). Another name for *crystal rectifier.*

crystal drive (*Radio*). A system in which oscillations of low power are generated in a crystal oscillator, being subsequently amplified up to the level requisite for transmission.

crystal face (*Crystal.*). One of the bounding surfaces of a crystal. In the case of small, undistorted crystals each face is an optically plane surface. A *cleavage face* is the smooth surface resulting from cleavage; in such minerals as mica, the cleavage face may be almost a plane surface, diverging only by the thickness of a molecule.

crystal filter (*Radio*). A band-pass filter in which the place of certain of the reactance elements is taken by piezo-electric crystals, in order to produce the very sharp frequency-discrimination characteristics necessary for short-wave single-sideband operation.

crystal gate receiver (*Radio*). A superheterodyne receiver in which one (or more) piezo-electric crystals is included in the intermediate-frequency circuits, so as to obtain a high degree of selectivity.

crystal glass (*Glass*). A glass of good quality and fine appearance, which may be 'lead crystal' or 'lime crystal.' (A somewhat misleading term since it denotes different things in different glass-making districts.)

crystal microphone (*Acous.*). The same as *piezo microphone.*

crystal nuclei (*Chem.*). The minute crystals whose formation is the beginning of crystallisation.

crystal oscillator (*Radio*). A thermionic valve oscillator in which the place of one of the resonant circuits or reactance elements is taken by a piezo-electric crystal. It is characterised by a high degree of frequency stability.

crystal oven (*Radio*). A chamber for containing a piezo-electric crystal; maintained at a very constant temperature to ensure constancy of the frequency of oscillation of the crystal.

crystal pattern (*Chem.*). See **crystallogram.**

crystal receiver (*Radio*). A simple form of radio receiver in which the incoming high-frequency currents are rectified by a crystal rectifier.

crystal rectifier (*Radio*). A point contact between a metal and a crystal (such as copper and galena), or between two crystals (such as zincite and bornite); it has marked unidirectional conductivity.

crystal sac (*Bot.*). A cell almost filled with crystals of calcium oxalate.

crystal structure. This consists of the whole assemblage of rows and patterns of atoms, which have a definite arrangement in each crystal.—(*Met.*) The arrangement in most pure metals may be imitated by packing spheres, and the same applies to many of the constituents of alloys. See **body-centred cubic structure, face-centred cubic structure, close-packed hexagonal structure.**

crystal systems (*Crystal.*). A classification of crystals based on the intercepts made on the crystallographic axes by certain planes.

crystal texture (*Crystal.*). The size and arrangement of the individual crystals in a crystalline mass.

crystal varnish (*Photog.*). A special gum varnish for protecting transparent photographic images.

crystal violet (*Chem.*). A dyestuff of the rosaniline series, hexamethylpararosaniline.

cryst'alline. Clear, transparent.—(*Bot.*) Having a shining appearance.

crystalline cone (*Zool.*). The outer refractive body of an ommatidium which is surrounded by the vitrellae.

crystalline form (*Crystal.*). The external geometrical shape of a crystal.

crystalline lens (*Zool.*). The transparent refractive body of the eye in *Vertebrata*, *Cephalopoda*, etc. It is compressible by muscles and focuses images of objects emitting light on to the retina.

crystalline liquids (*Chem.*). See **liquid crystals.**

crystalline overgrowth (*Crystal.*). The growth of one crystal round another, frequently observed with isomorphous substances. Cf. *cubic system.*

crystalline rocks (*Geol.*). These consist wholly, or chiefly, of mineral crystals. They are usually formed by the solidification of molten rock, by metamorphic action, or by precipitation from solution.

crystalline schists (*Geol.*). A group of rocks which have resulted from heat and pressure. Their structures are controlled by the prevalence of flaky crystals, like mica, and such rocks have a tendency to split in a direction parallel to these flat crystals. See **foliation, schistosity.**

crystalline solid (*Chem.*). A solid in which the atoms or molecules are arranged in a regular manner, the values of certain physical properties depending on the direction in which they are measured. When formed freely, a crystalline mass is bounded by plane surfaces (faces) intersecting at definite angles.

crystalline style (*Zool.*). In *Pelecypoda* and some *Gastropoda*, a transparent rod-shaped mass secreted by a diverticulum of the intestine; composed of protein with an adsorbed amylolytic ferment.

crystallisation (*Chem.*). The preparation of a solid, especially from solution, in the form of crystals.

crystallised (*Paint.*). Said of an enamelled or varnished surface which presents the appearance of galvanised iron.

cryst'allites (*Chem.*). Very small, imperfectly formed crystals.—(*Min.*) Minute bodies occurring in glassy igneous rocks, and marking a stage in incipient crystallisation.

crystalloblas'tic texture (*Geol.*). The description applied to metamorphic rocks which have recrystallised under conditions of directed pressure and high viscosity.

cryst'allogram (*Chem.*). A photograph of the X-ray diffraction pattern produced by a crystal.

crystallograph'ic axes (*Crystal.*). See **axes.**

crystallographic notation (*Min.*). A concise method of writing down the relation of any crystal face to certain axes of reference in the crystal.

crystallographic planes (*Met.*). Any set of parallel and equally spaced planes that may be supposed to pass through the centres of atoms in crystals. As every plane must pass through atomic centres and no centres must be situated between planes, the distance between successive planes in a set depends on their direction in relation to the arrangement of atomic centres.

crystallographic system. Any of the major units of crystal classification, embracing one or more symmetry classes.

crystallog'raphy. The study of the forms, properties, and structure of crystals.

cryst'alloid (*Bot.*). A crystal of protein, occurring in large numbers in the cells of seeds and other storage organs.

crystalloid (*Chem.*). An obsolescent term for a substance which dissolves to form a true solution.

crystallolumines'cence (*Chem.*). The emission of light during crystallisation.

crystall'otype (*Photog.*). The early name for photography on glass. See **hyalography.**

cryst'odyne (*Radio*). A type of crystal detector in which a d.c. voltage is maintained across the crystal contact.

crysto'leum (*Photog.*). A positive after it has been transferred to a glass support from its paper vehicle, and then coloured.

Cs (*Chem.*). The symbol for *caesium.*

c/s (*Elec. Comm.*). See **C.P.S.**

ctene, tēn (*Zool.*). One of the comb-plates or locomotor organs of *Ctenophora*, consisting of a row of strong cilia of which the bases are fused.

ctenidium, ten-id'i-um (*Zool.*). Generally, any comb-like structure: in aquatic *Invertebrata*, a type of gill consisting of a central axis bearing a row of filaments on either side: in *Insecta*, a row of spines resembling a comb.

cte'nocyst (*Zool.*). The aboral sense-organ of *Ctenophora.*

cten'oid (*Bot.*). Comb-like, pectinate.—(*Zool.*) Said of scales which have a comb-like free border.

Ctenophora, tē-nof'— (*Zool.*). A subphylum and class of *Coelenterata*, the members of which usually do not possess cnidoblasts, and generally show biradial symmetry; they have a system of gastrovascular canals and typically eight meridional rows of swimming plates or ctenes, composed of fused cilia. Sea Acorns, Comb-Bearers.

Cu (*Chem.*). The symbol for *copper.*

cube (*Civ. Eng.*). A paving block.

cubic system (*Crystal.*). The crystal system which has the highest degree of symmetry; it embraces such forms as the cube and octahedron.

cubical epithelium (*Zool.*). A form of columnar epithelium in which the cells are short.

cubicle-type switchboard (*Elec. Eng.*). See **cellular-type switchboard.**

cubing (*Build., etc.*). An approximate method for estimating costs of buildings. The volume of a building is multiplied by a figure known from experience to represent a fair average figure for the cost of unit volume of such building.

cu'bitals (*Zool.*). See **secondaries.**

cu'bitus (*Zool.*). In Insects, one of the primary veins of the wing.—*adj.* **cubital.**

cuboid (*Geom.*). A rectangular parallelepiped.—(*Bot.*) Cubical.

Cubomedu'sae (*Zool.*). An order of *Scyphozoa*, comprising active marine forms with four perradial tentaculocysts; there is a square manubrium, a broad pseudo-velum and other peculiar features; regular alternation of generations occurs.

cu'cullate (*Bot., Zool.*). Hood-shaped.

cu'cullus (*Zool.*). In *Ricinulei*, a wide, oval plate articulating with the anterior edge of the prosoma: in *Chelonethi*, that part of the carapace anterior to the eyes: any hood-shaped structure.—*adj.* **cucullate.**

cudbear (*Chem.*). A purplish-red powder, soluble in water, obtained from *Rochelle de Candolle* and other lichens. Used as a dye.

cue (*Cinema.*). An indication, visual or aural, for action or speech on the part of someone, during continuity.

cue light (*Cinema.*). A signal lamp, operated by a push-button (particularly by the director), for giving a cue to artists.

cue mark (*Cinema.*). The mark made by a marker light on the edge of cinematograph film as it passes through the camera, to indicate to the cutter a point of synchronisation between strips of film from different cameras and the sound camera.

cue signal (*Cinema.*). A buzzer or bell operated in a studio by the recordist; once for *get ready*, twice (*O.K.*) for *proceed*, thrice for *query*, and a long signal for stopping proceedings on account of serious error.

cuffing (*Med.*). The accumulation of white cells round a blood-vessel in certain infections of the nervous system.

cuiller, kwē-yā (*Zool.*). In some male Insecta, a spoon-like expansion at the end of a clasper.

cu'ing scale (*Acous.*). A graduated scale attached to gramophone-disc reproducers to enable the needle to be dropped into a selected groove with certainty.

cuir bouilli, cuir bouilly, kwĕr boo-yē (*Dec.*). Leather soaked in hot water and pressed into decorative moulds.

cul-de-sac (*Civ. Eng.*). A road which is stopped at one end.

cullet (*Glass*). Waste glass used with the 'batch' to improve the rate of melting and to save waste of materials.

cullet (*Jewel*). A faceted stone with small flat-top and broad base.

cullis (*Carp.*). See **coulisse.**

culm (*Bot.*). The stem of a grass or of a sedge.

culms (*Brew.*). The rootlets removed (by screening) from malt after it has been kilned; used as cattle food.

culm (*Geol.*). The name given to the rocks of Carboniferous age in the south-west of England, consisting of fine-grained sandstones and shales, with occasional thin bands of crushed coal or 'culm.'

culm (*Mining*). Anthracite dust; more accurately, anthracite which will pass through a screen with ⅛-in. holes.

culmen (*Zool.*). In Birds, the edge of the upper beak.

cul'micole (*Bot.*). Growing on stems of grasses.

culmination (*Astron.*). The highest or lowest altitude attained by a heavenly body as it crosses the meridian. *Upper culmination* indicates its meridian transit above the horizon, *lower culmination* its meridian transit below the horizon, or, in the case of a circumpolar, below the elevated pole.

cultel'lus (*Zool.*). In certain blood-sucking *Diptera*, a sword-shaped organ forming part of the mouth-parts.

cultivator (*Agric. Mach.*). A wheeled frame, horse- or tractor-drawn, fitted with two rows of strong curved teeth which enter the ploughed soil and pulverise it. The teeth are generally mounted on springs. See **grubber.**

cul'triform (*Bot.*). Shaped like a knife.

culture (*Bot., etc.*). An experimental preparation containing a micro-organism growing on a medium.

culvert (*Civ. Eng.*). Any construction providing for the free passage of water under a road or railway embankment, in cases where the latter has been laid over a ditch or stream which has not been stopped or diverted.*

Cuma'cea (*Zool.*). An order of *Peracarida*, in which the carapace is fused dorsally with the first three or four somites; the eyes are usually coalesced and sessile, and the uropods are styliform; small marine forms most of which burrow in mud.

cumarone (*Chem.*). See **coumarone.**

cumene (*Chem.*). *Iso*propyl-benzene, $C_6H_5{\cdot}CH(CH_3)_2$, b.p. 153° C.

cumulative errors (*Maths.*). See **systematic errors.**

cumulative grid rectifier (*Radio*). A thermionic valve rectifier in which the signals are applied to the grid of the valve through a condenser, shunted by a high-resistance leak. The flow of grid current which occurs each half-cycle results in a progressive depression of the mean grid potential, which in turn decreases the anode current.

cumulatively compound machine (*Elec. Eng.*). A compound-wound machine in which the series and shunt windings assist each other.

cu'mulo-nimbus (*Meteor.*). Great masses of cloud rising in the form of mountains or towers or anvils, generally having a veil or screen of fibrous texture at the top and a cloud mass similar to nimbus at the bottom. This is the type of cloud associated with thunderstorms. The top of such a cloud may reach a height of 30,000 ft.

cumulo-stratus (*Meteor.*). A cloud combination produced when a cumulus cloud spreads out on top to form a layer of strato-cumulus or alto-cumulus.

cu'mulus (*Meteor.*). Thick cloud the upper surface of which is well defined and dome-shaped and exhibits protuberances, while the base is generally horizontal.

cumulus (*Zool.*). See **corona radiata.**

cu'neate, cu'neal, cu'neiform (*Bot.*). Shaped like a wedge, and attached to something by its point.

cu'neus (*Zool.*). In some *Hemiptera*, a triangular apical portion of the corium.

cup (*Bot.*). An apothecium.

cup-and-ball (*Gas Fittings*). A universal joint of the ball-and-socket type, used in brackets and pendants.

cup chuck (*Eng.*). A lathe chuck in the form of a cup or bell screwed to the mandrel nose. The work is gripped by screws in the walls of the chuck. Also called BELL CHUCK.

cup-feed drill (*Agric. Mach.*). A drill consisting of a seed-box, mounted on a chassis, from which the seed falls by gravity into a series of chambers; it is conveyed by cups rotating on a spindle to the seed tubes, through which it drops into the shallow trenches formed by the coulters. The rate of feed can be regulated.

cup grease (*Lubricants*). See **greases.**

cup head (*Eng.*). A rivet or bolt head shaped like an inverted cup.

cup joint (*Plumb.*). A joint formed between two lead pipes in the same line by opening out the end of one pipe to receive the tapered end of the other.

cup leather (*Eng.*). A ring of leather moulded to U-section, used in hydraulic machinery to prevent leakage past plungers, etc.

cup shake (*Timber*). A shake between concentric layers. Also called RING SHAKE.

cupboard lock (*Join.*). A small lock, having a single key-operated bolt, screwed on the interior surface of a cupboard door.

cu'pel (*Met.*). A thick-bottomed shallow dish made of bone ash; used in the cupellation of lead beads containing gold and silver, in the assay of these metals.

cupellation (*Met.*). The operation employed in recovering gold and silver from lead. It involves the melting of the lead containing these metals and its oxidation by means of an air-blast.

cupid's darts (*Min.*). See **flèches d'amour.**

cu'pola (*Build.*). A *lantern* (q.v.) constructed on top of a dome.

cupola (*Geol.*). A dome-shaped offshoot rising from the top of a major intrusion.

cupola furnace (*Met.*). A shaft furnace used in melting pig-iron (with or without iron or steel scrap) for iron castings. The lining is firebrick. Metal, coke, and flux (if used) are charged at top, and air is blown in near the bottom.

cupped wire (*Met.*). Wire in which internal cavities have been formed during drawing.

cupping cell (*Bot.*). A swollen hyphal attachment formed by some fungi which parasitise other fungi; in it accumulates nutritive material derived from the host.

cuprammon'ia (*Chem.*). A solvent for cellulose, prepared by adding ammonium chloride and then excess of caustic soda to a solution of a copper salt, washing and pressing the resulting precipitate, and then dissolving it in strong ammonia.

cuprammonium (or **copper**) **rayon** (*Textiles*). Rayon made from bleached cotton linters by treatment with copper sulphate and ammonia. See **rayon.**

cupric (*Chem.*). Containing divalent copper. Cupric salts are blue or green when hydrated and are quite stable.

cuprif'erous pyrite (*Min.*). See **chalcopyrite.**

cuprite (*Min.*). Oxide of copper, crystallising in the cubic system. It is usually red in colour and often occurs associated with native copper; a common ore.

cupro-nickel (*Met.*). An alloy of copper and nickel; usually contains 15, 20, or 30% of nickel; is very ductile, and has high resistance to corrosion; used for condenser tubes, turbine blades, bullet envelopes.

cupro-uranite (*Min.*). See **torbernite.**

cuprous (*Chem.*). Containing monovalent copper. Cuprous salts generally form colourless solutions and are readily oxidised to the cupric state.

cu'pula (*Zool.*). Any dome-like structure; as the apex of the lungs, the apex of the cochlea: a small sucker.

cu'pular, cu'pulate (*Bot.*). Shaped like a little cup.

cu'pule (*Bot*). (1) A small cup-shaped outgrowth from the thallus of a liverwort, containing gemmae.—(2) A cup-shaped envelope more or less surrounding the fruit of some trees, especially obvious in the acorn.

curb (*Carp.*). A wall-plate carrying a dome at the springings.

curb (*Civ. Eng.*). A hollow timber or cast-iron cylinder used in sinking and lining a shaft or well, for which purpose it is laid over the site, and then, as earth is excavated from beneath it, the lining is built upon it and sinks with the curb. Also called CUTTING CURB, DRUM-CURB. See also **kerb.**

curb (*Mining*). A socket of wrought-iron or steel for attaching a ring hook or swivel to the end of a rope used for mine hoisting or haulage.

curb (*Vet.*). A thickening of the calcaneometatarsal ligament of the horse.

curb pins (*Horol.*). The two vertical pins attached to the index embracing the balance spring, near to the point of attachment of the outer coil. By moving the pins nearer to or farther away from the point of attachment a delicate regulation of the time of vibration of the balance is obtained.

curb-plate (*Build.*). The wall-plate supporting a dome.

curb roof (*Build.*). See **mansard roof.**

curb transmitter (*Teleg.*). A slip-operated telegraph transmitter for cable code, which reverses the sending polarity after an adjusted percentage of every signal.

curbing (*Teleg.*). In the transmission of cable-code signals over a submarine cable, the reversal of the sending polarity after a fraction of the signal period, to enhance the definition of the received signals.

curdling (*Paint.*). Thickening of varnish in the can.

cure (*Leather, etc.*). A dehydrating agent such as salt, or salts of arsenic, capable of arresting decomposition in skins and hides.

curet'tage (*Surg.*). The scraping of the walls of cavities (especially of the uterus) with a curette.

curette', curet (*Surg.*). A spoon-shaped instrument for scraping material out of cavities.

curine (*Chem.*). $C_{18}H_{19}O_3N$, an alkaloid of the quinoline group, found in curare extract obtained from various *Strychnos* species. It crystallises from benzene with one molecule of benzene, m.p. 161° C., m.p. (dry) 212° C., and forms four-sided prisms.

curing (*Chem.*). A term applied usually to a fermentation or ageing process of natural products; e.g. rubber, tobacco, etc.

curing (*Civ. Eng.*). A method of reducing the cracking of concrete on setting; the surface is kept covered for a time with damp sacks, or with damp sawdust or sand.

curing (*Leather, etc.*). The process of treating rawhides and skins with a *cure* (q.v.), to preserve them during transport or storage.

curing (*Plastics*). The chemical process undergone by a thermo-setting plastic by which the hot, liquid resin sets to a solid at the same temperature. Curing generally takes place during the moulding operation, and may require from 45 seconds to 30 minutes for its completion.

curl or **rotation** (*Elec. Eng.*). A vector of which the flux across a vanishingly small surface is equal to the *circulation* (q.v.) of the given vector round the contour of the surface.

curl yarn (*Textiles*). A yarn with curls or loops at intervals. Made by folding a fine and a coarse yarn, the coarse thread being folded slackly round the fine one. This two-fold thread is subsequently folded, in the reverse direction, with another fine thread.

curly grain (*Bot.*). A wavy pattern on the surface of worked timber due to the undulate course taken by the vessels and other elements of the wood.

current. A flow, e.g. of water, air, etc.; see senses below.

current (*Build*). The inclination at which a surface is laid in order that rain water may be carried off.

current (*Elec.*). The passage of electricity through a body by virtue of a drift of negatively charged electrons through it. Usually measured and expressed in *amperes.*

earth currents.

current balance (*Elec. Eng.*). See **current weigher.**

current bedding (*Geol.*). The steeply inclined bedding of rocks which have been deposited in shallow water and under strong current action.

current-carrying capacity (*Cables*). The current which a cable can carry before the temperature rise exceeds a permissible value (usually 40° C.). It depends on the size of the conductor, the thermal resistances of the cable, and surrounding medium.

current circuit (*Elec. Eng.*). The electrical circuit associated with the current coil of a measuring instrument or relay.

current coil (*Elec. Eng.*). A term frequently used in connexion with wattmeters, energy meters, or similar devices, to denote the coil connected in series with the circuit and therefore carrying the main current.

current-collector (*Elec. Eng.*). The device used on the vehicles of an electric traction system for making contact with the overhead contact wire or the conductor-rail.

See **bow—**
pantograph—
plough—
shoe—
trolley system—

current density (*Elec. Eng.*). The quantity of current flowing in unit cross-sectional area of a conductor; usually expressed in amperes per sq. cm. or amperes per sq. in. In electrochemistry it is the current per unit area of the electrode surface.

current-efficiency (*Elec. Eng.*). The ratio of the mass of substance liberated in an electrochemical process by a given current to that which should theoretically be liberated according to Faraday's law.

current-fender (*Hyd. Eng.*). A protective construction to deflect a current from a bank which might otherwise be undermined by it.

current limiter (*Elec. Eng.*). A relay connected in a circuit for the purpose of giving a visible or audible indication when the current in the circuit exceeds a predetermined value.

current-limiting reactor (*Elec. Eng.*). A reactor inserted in an electric circuit in order to limit the current to a predetermined value. Usually employed for limiting short-circuit currents.

current meter (*Hyd.*). An instrument for measuring the velocity of flow of running water; it consists of a wheel which rotates under the impact of the water, the rate of revolution being recorded; this constitutes a measure of the velocity, as the instrument has previously been calibrated.

current resonance (*Elec. Eng.*). The condition when the positive reactance of a circuit is balanced by the negative reactance, so that, for a given applied potential difference, the current increases to a maximum (at the resonant frequency) as the frequency is increased from a low to a high value.

current sensitivity (*Elec. Eng.*). The magnitude of the deflection of a current-measuring instrument produced by a given change in current. The term is usually applied to galvanometers, and is then generally expressed as the deflection in mm. produced by a current of 1 micro-ampere.

current-transformer (*Elec. Eng.*). An instrument transformer for producing in its secondary circuit a current proportional to the current in the primary, the primary being connected in series with the main circuit. Sometimes called a SERIES TRANSFORMER.

See **bar-type— bushing—**

current weigher (*Elec. Eng.*). An accurate current-measuring device in which the attraction between fixed and moving coils carrying the current to be measured is balanced against the gravitational force of weights.

currents, earth (*Elec. Comm.*). See **earth currents.**

currying (*Leather*). The process of treating leather with grease mixtures to make it pliable; applied to leather intended for boot uppers, belting, harness, etc.

cursor (*Instruments*). The adjustable fiducial part of a drawing or other instrument; e.g. the moving limb of beam-compasses, and the glass slide bearing the reference line and capable of movement along a slide-rule.

cursorial (*Zool.*). Adapted for running.

cur'tail step (*Build.*). A step which is not only the lowest step in a flight but is also shaped at its outer end to the form of a scroll in plan.

curtain (*Bot.*). See **cortina.**

curtain machine (*Textiles*). A machine for weaving lace curtains. It has three sets of yarn: (1) the main warp (or ground warp); (2) the spool warp, the function of which is similar to that of weft in a woven texture; (3) the brass-bobbin yarn, which acts as a binder between the main and spool warps.

curtain wall (*Build.*). A thin wall whose weight is carried directly by the structural frame of the building, not by the wall below.

curtaining (*Paint.*). See **crawling.**

curvature (*Bot.*). A change in the general direction of an elongated plant member, due to one side growing faster than the other, or to one side containing more water than the other.

curvature (*Maths.*). A measure of the departure of a line from the straight, or a surface from the plane. The curvature of a line is the reciprocal of its radius of curvature.

curvature (*Surv.*). The difference in height at any point between the horizontal and the level lines through some other point on the earth's surface.

curvature correction (*Civ. Eng.*). A correction employed in the calculation of quantities for earthworks following a curved line in plan; the quantities are taken out as if the line were straight, and a curvature correction made to account for the fact that it is not straight.

curvature correction (*Surv.*). A correction employed in the computation of levels when long sights are used. See **curvature.**

curvature of spectrum lines (*Light*). In a spectrum produced by a prism the lines are slightly convex towards the red end. Rays from the ends of the slit are inclined at a small angle to the plane at right-angles to the refracting edge of the prism, and so suffer a slightly greater deviation than rays from the centre of the slit, appearing bent towards the violet end of the spectrum.

curvature of the field (*Photog.*). The description of a camera lens defect in which the image of a rectangular body shows curvature.

curve (*Civ. Eng.*). A railway, highway, or canal bend.

curve (*Instruments*). An instrument used by the draughtsman for drawing curves other than circular arcs. It consists of a thin flat piece of wood, celluloid, or other material, having curved edges which are used as guides for the pencil.

curve of light distribution (*Illum.*). A graph showing the relation between the luminous intensity of a light source and the angle of emission.

curve ranging (*Surv.*). The operation of setting out on the ground points which lie on the line of a curve of given radius.

curvilin'ear distortion (*Photog.*). The non-linearity, in a camera image, of straight lines in the object.

cu.-sec. (*Hyd. Eng.*). A common abbrev. for *cubic feet per second*, a unit of volumetric rate of flow.

Cushing's syndrome (*Med.*). The concurrence of obesity, hairiness, linear atrophy of the skin, loss of sexual function, and curvature of the spine, due to a tumour in the pituitary gland.

cushion (*Bot.*). The central portion of the prothallus of a fern; it is several layers of cells in thickness, and bears rhizoids and archegonia.

cushion (*Build.*). The capping stone of a pier.

cushion course (*Civ. Eng.*). A layer of sand, or sand and dry Portland cement, or mortar, spread over the foundation of a road to receive a surface of special bricks. Also called BEDDING COURSE or SUB-CRUST (the preferable term).

cushion steam (*Eng.*). The steam shut in the cylinder of a steam-engine after the closing of the exhaust valve. See **cushioning** (*Eng.*).

cushioning (*Acous.*). The use of resilient material for isolating sensitive devices, such as microphones or recorders, from the influence of external vibrations.

cushioning (*Eng.*). The compression of a small quantity of steam in a steam-engine cylinder towards the end of the exhaust stroke to assist in bringing the piston to rest at the dead-centres and minimise inertia forces.

cusp (*Bot., Zool.*). A sharp-pointed prominence, as on teeth.—*adj.* **cus'pidate.**

cut (*Cinema.*). (1) The junction between one strip of continuous film of motion-picture and the next.—(2) The signal for cameras to stop; given to technicians by the director after he has decided that the artists have finished performing for a shot.

cut (*Civ. Eng.*). The material removed to make a *cutting* (q.v.).

cut (*Eng.*). The thickness of the metal shaving removed by a cutting tool.

cut (*Hyd. Eng.*). The water-way between the pontoons of a pontoon-bridge.

cut (*Textiles*). (1) A length of warp or cloth.—(2) An alternative term for a linen lea, a length of 300 yards.

cut (*Typog.*). A *block* (q.v.).

cut-and-cover (*Civ. Eng.*). A method often adopted in the construction of underground railways at only a moderate depth, when there are streets or very valuable property overhead. A cutting is first excavated to accommodate the railway; it is then covered over to original ground-level by arching supported on side walls.

cut-and-fill (*Civ. Eng.*). A term used to describe any cross-section of highway or railroad earthworks which is partly in cutting and partly in embankment.

cut-and-mitred string (*Carp.*). A *cut string* (q.v.) which is mitred at the vertical parts of the notches in the upper surface, so that the end grain of the risers may be concealed.

cut-and-mitred valley (*Build.*). A valley formed in a tiled roof by cutting one edge of the tiles on both sides of the valley so that they form a mitre, which is rendered watertight by lead soakers bonded in with the tiles.

cut backs (*Civ. Eng.*). Blends of asphaltic bitumen with various solvents, for use at comparatively low temperatures for road surfacing.

cut edge (*Bind.*). A book edge cut clean by guillotine, giving a flat surface.

cut-in notes (*Typog.*). Notes occupying a rectangular space, set into the text at the outer edge of a paragraph.

cut-off (*Eng.*). The per-cent. of the stroke at which the admission of steam to an engine cylinder is terminated by the closing of the valve.

cut-off frequency (*Elec. Comm.*). The frequency at which the attenuation of a communication system begins to increase markedly, in comparison with the attenuation of those frequencies which are freely transmitted and which are said to lie within the pass-range. In loss-free filters, the cut-off frequencies are precise, but in practical circuits, the cut-off frequency becomes indefinite.

cut-off voltage (*Thermionics*). The negative voltage which must be applied to the grid of a thermionic valve to reduce the anode current substantially to zero; approximately equal to the anode voltage divided by the amplification factor.

cut-out (*Elec. Eng.*). A term used to denote a device for automatically opening a circuit under abnormal conditions; its use is generally confined to small circuit-breakers and fuses.

See **automatic— battery— fusible—**

cut-over (*Acous.*). The cutting through of the plane surface from one spiral to the next, in cutting waxes for disc records.

cut-over (*Teleph.*). The rapid transfer of large numbers of subscribers' lines from one exchange to another, particularly from a manual to an automatic exchange.

cut pile (*Textiles*). See under **pile.**

cut-stone (*Masonry*). A stone hewn to shape with a chisel and mallet.

cut string (*Carp.*). A string whose upper surface is shaped to receive the treads and risers of the steps, while the lower surface is parallel to the slope of the stair. Also called an OPEN STRING.

cut-up trade (*Hosiery*). The section of the hosiery trade dealing with goods made as round webbing on a circular knitting-machine; the material is afterwards cut to shape, pieces being sewn together to form the final article.

cut-water (*Civ. Eng.*). The angular edge of a bridge-pier, shaped to lessen the resistance it offers to the flow of water.

cuta'neous (*Zool.*). Pertaining to the skin.

cutch. See **catechu.**

cu'ticle (*Bot.*). A deposit of waterproof, waxy material forming the external layer of the outer walls of epidermal cells.

cuticle (*Zool.*). The epidermis: the outer layers of the integument: a non-living pellicle overlying the epidermis.

cutic'ular diffusion (*Bot.*). The passage of oxygen and of carbon dioxide through the cuticle of a plant.

cuticular transpiration (*Bot.*). The loss of water vapour from a plant through the cuticle.

cutic'ularisa'tion (*Bot.*). The development of a cuticle.

cu'tin (*Bot.*). A mixture of fatty substances which is deposited on or in the outer layer of cell walls as cuticularisation proceeds.

cutinisation (*Bot., Zool.*). The impregnation of a cell wall or of part of a cell wall with fatty substances: the formation of cutin.

cu'tis (*Zool.*). The dermis or deeper layer of the Vertebrate skin.

cutter (*Acous.*). The sapphire or diamond point which removes the thread of wax in gramophone-disc recording or in a dictaphone.

cutter (*Cinema.*). The man, usually the editor, acting under the director, who does the actual cutting and selection of the strips of film to be used in the release prints.

cutter (*Eng.*). A rotary cutting tool with multiple cutting edges on the face or the periphery; used in milling operations. See **milling machine.**

cutters (*Build.*). Bricks which are made soft enough to be cut with a trowel to any shape required, and then rubbed to a smooth face and the correct shape. Also called RUBBERS.

cutters (*Geol.*). The joints in rocks which are parallel to the dip of the strata.

cutters (*Quarrying*). See **backs.**

cutter dredger (*Civ. Eng.*). A dredger of the sand-pump or suction type (see **sand-pump dredger**) adapted to the raising of stiff clay by the addition of rapidly rotating cutters around the bottom of the pipe.

cutting (*Bot.*). A portion of a plant, usually of a stem or root, which is cut off, induced to form roots, and so serves as a means of vegetative propagation.

cutting (*Cinema.*). The last creative operation in selecting the strips of motion-picture required in the final positive, the negatives being then cut to suit before release printing.

cutting (*Civ. Eng.*). An open excavation through a hill, for carrying a highway or railroad at a lower level than the surrounding ground.

cutting or **graining** (*Soap*). A term signifying the separation of soap from the aqueous fluids and glycerol during the process of manufacture.

cutting (*Textiles*). A term used to denote the production of tufts of pile on a cloth surface, long floating threads or loops being cut by special mechanism. In the finishing of woollen fabrics it refers to the removal of loose or projecting fibres in order to secure a clear-finished surface.

cutting compound (*Eng.*). A mixture of water, oil, and soft soap, etc. used for lubricating and cooling the cutting tool in machining operations. See **coolant.**

cutting curb (*Civ. Eng.*). See **curb.**

cutting edge (*Cinema.*). A colloquialism for the demarcation between the black and transparent parts of the sound-track in variable-area sound recording on film.

cutting-gauge (*Carp.*). A tool similar to the *marking-gauge* (q.v.) but having a cutting edge in place of the pin, enabling the tool to be used for cutting thin strips of wood along the grain.

cutting iron (*Carp.*). That part of a bench plane which actually shapes the work.

cutting list (*Furn., &c.*). A list giving dimensions—sometimes with diagrams of sections—of timber required for any given work.

cutting machines (*Textiles*). (1) Machines for cutting long floating threads in velveteen and corduroy fabrics in order to produce a pile surface.—(2) In woollen manufacture, machines for removing fibre from the cloth surface in order to secure a clear finish.

cutting-over (*Furs*). The cutting-up of skins for making up into larger skins or for removing damaged parts.

cutting plane (*Carp.*). A smoothing plane.

cutting room (*Cinema.*). The department in a film studio where the cutting is done under the direction of the director.

cutting speed (*Eng.*). The speed of the work relative to the cutting tool in machining operations; usually expressed in feet per minute.

cutting stylus (*Acous.*). See **stylus.**

cutting tools (*Eng.*). Steel tools used for the machining of metals.

See **broach**
cutter
lathe tools
milling cutter
planer tools
reamer
screwing die
shaper tools
slotting tools
tap
twist drill.

cutting-up (*Foundry*). The operation of roughening the surface of a mould at a part where fresh sand is to be added, in order to assist adhesion.

cuttling (*Textiles*). The operation of folding a fabric to make it convenient to handle.

Cuvier'ian ducts (*Zool.*). In lower Vertebrates, a pair of large venous trunks entering the heart from the sides.

Cuvierian organs (*Zool.*). In *Holothuroidea*, modified branches of the respiratory trees, covered with a viscous substance which can be extruded by rupture of the body-wall, and which give rise to sticky threads which entangle an enemy.

Cy (*Chem.*). A symbol for the cyanogen radical CN—.

cy'an-, cy'ano- (Greek *kyanos*, a dark-blue substance). A prefix used in the construction of compound terms; e.g. *cyanines*, *cyanosis* (qq.v.).

cyan'amide process (*Chem.*). The fixation of atmospheric nitrogen by heating calcium carbide in a stream of the gas. Calcium cyanamide, $CaCN_2$, is thus formed, and this, on treatment with water, a little soda, and steam under pressure, yields ammonia.

cy'anates (*Chem.*). Salts containing the monovalent acid radical CNO'.

cyanhy'drins (*Chem.*). A series of compounds formed by the addition of hydrogen cyanide to aldehydes and ketones. Their general formula is $R'\cdot C(OH)(CN)\cdot R''$ and they are useful for the preparation of α-hydroxy-acids.

cyanidation vat (*Met.*). A large tank, with a filter bottom, in which sands are treated with sodium cyanide solution to dissolve out gold.

cy'anides (*Chem.*). (1) Salts of hydrocyanic acid.—(2) See **nitriles.**

cyanide hardening (*Met.*). Case-hardening in which the carbon content of the surface of the steel is increased by heating in a bath of molten sodium cyanide.

cyaniding (*Met.*). The process of treating finely ground gold and silver ores with a weak solution of sodium cyanide, which readily dissolves these metals. The precious metals are obtained by precipitation from solution with zinc.

cy'anin (*Chem.*). The colouring matter of the cornflower and the rose. It is an anthocyanin, and on hydrolysis yields cyanidin and two molecules of glucose.

cyanines (*Chem.*). A group of strongly basic blue dyes obtained by treating a mixture of the iodo-alkyl derivatives of quinoline and quinaldine with alkali. They are used as sensitisers of photographic emulsions.

cyanite (*Min.*). See **kyanite.**

cyan'ogen (*Chem.*). A very poisonous, colourless gas with a smell of bitter almonds. It is soluble in 4 volumes of water, ammonium oxalate being formed on standing. Its formula is C_2N_2, or $(CN)_2$, and it somewhat resembles the halogens in its chemical behaviour.

Cyanophy'ceae (*Bot.*). See **Myxophyceae.**

cy'anoplast (*Bot.*). A minute pigmented granule present in the cytoplasm of cells of the *Myxophyceae.*

cyano'sis (*Med.*). Blueness of the skin and the mucous membranes due to insufficient oxygenation of the blood.

cy'anotype (*Photog.*). The ferroprussiate process, familiar as blue-printing; it depends on the light reduction of a ferric salt to a ferrous salt, with production of Prussian blue on development with water.

cyanu'ric acid (*Chem.*). A tribasic, heterocyclic acid, having the formula $H_3C_3N_3O_3$.

cya'thiform (*Bot.*). Deeply cup-shaped.

cya'thium (*Bot.*). The inflorescence characteristic of spurges. It consists of a number of bracts surrounding a group of staminate flowers each consisting of a single stamen, with a central pistillate flower of a stalked tricarpellary ovary. The whole simulates a flower of peculiar appearance.

cyathozo'oid (*Zool.*). In *Salpida* and *Pyrosomatida*, the primary zooid arising from an ovum, which gives rise, by budding, to the secondary zooids.

cyc-arc welding (*Elec. Eng.*). An arc-welding process for attaching studs, etc. to steel plates; an arc is drawn between the stud and the plate, and the two are then pressed together to complete the weld.

cyclanes (*Chem.*). A synonym for *cyclo*paraffins, or polymethylenes, hydrocarbons containing saturated carbon rings.

cycle. A series of occurrences in which conditions at the end of the series are the same as they were at the beginning. Usually, but not invariably, a cycle of events is recurrent.

cycle (*Acous.*). The complete variation of particle-motion or sound-pressure in a sound-wave of a single frequency or of a continuously repeated stable wave-form.

cycle (*Elec. Eng.*). The complete series of changes in a periodically varying quantity, e.g. an alternating current, during one period. Sometimes called a COMPLETE CYCLE.

cycle film (*Cinema.*). A short length of motion-picture, usually of a scientific and diagrammatic character, with the ends joined together so that projection produces a continuous cyclic presentation. Also called BAND FILM.

cycle of erosion (*Geol.*). The definite course of development followed in landscape evolution; it consists of the major stages of youth, maturity, and old age.

cycles per second (*Elec. Comm.*). The number of complete repetitions, in one second, of an alternating voltage or current in an electric circuit; the standard measure of frequency. See **KC.P.S., MC.P.S., hertz.**

cyclic (*Bot.*). Having the parts arranged in whorls, not in spirals.

cyclic compounds (*Chem.*). Closed-chain or ring compounds consisting either of carbon atoms only (carbocyclic compounds), or of carbon atoms linked with one or more other atoms (heterocyclic compounds).

cycli'tis (*Med.*). Inflammation of the ciliary body of the eye.

cy'clo- (Greek *kyklos*, circle). A prefix used in the construction of compound terms; e.g. *cyclocoelic* (q.v.).

cyclo- **(*Chem.*).** Containing a closed carbon chain or ring.

***cyclo*hexane** (*Chem.*). C_6H_{12}, m.p. 2° C., b.p. 81° C., sp. gr. 0·78, a colourless liquid, of mild ethereal odour.

***cyclo*hexanol** (*Chem.*). $C_6H_{11}\cdot OH$, m.p. 15° C., b.p. 160° C., sp. gr. 0·945, an oily, colourless liquid.

***cyclo*hexanone** (*Chem.*). Keto-hexamethylene, b.p. 154°-156° C., sp. gr. 0 945, a colourless liquid, of acetone-like odour, solvent for cellulose lacquers.

***cyclo*paraffins** (*Chem.*). See **cyclanes.**

***cyclo*pentane** (*Chem.*). See **pentamethylene.**

cyclocoe'lic (*Zool.*). Having a spirally coiled intestine.

cyclogram (*Elec. Eng.*). The figure produced on the screen of a cyclograph.

cyclograph (*Elec. Eng*). An instrument in which a beam of light or cathode rays is made to move under the action of two controlling forces at right-angles to each other, thereby producing a closed figure (cyclogram) on the screen.

cyclogyro (*Aero.*). An aircraft depending for its support in the air on the air reaction of rotors power-driven on horizontal axes.

cycloid. The curved path traced out by a point on the circumference of a circle which rolls along a straight line.

cycloid (*Psychiatry*). A periodic state of alternating moods, swinging from depression to exhilaration; accompanied by a social extraverted type of personality. It occurs in the *pyknic* (q.v.) type of individual and is a normal disposition; in its extreme form this state may develop into a manic depressive psychosis, or insanity.

cycloid (*Zool.*). Evenly curved; said of scales which have an evenly curved free border.

cycloidal teeth (*Eng.*). Gear-wheel teeth whose flank profiles consist of cycloidal curves. See **cycloid.**

cyclom'eter. A revolution counter calibrated in miles or kilometres, driven by the wheel of a pedal bicycle to record the distance travelled.

Cyclomya'ria (*Zool.*). See **Doliolida.**

cyclone (*Meteor.*). A depression of small area but considerable pressure gradient, in which the winds attain hurricane force and often do much damage. Cyclones occur, principally towards the end of hot seasons, round the western borders of the great oceans.

cyclone (*Mining*). (1) A conical dry-air classifier for air-sizing finely powdered material.—(2) A dust extractor.

cyclope'an (*Build.*). A name given to ancient dry-masonry works in which the stones are colossal and are irregular in size.

cyclople'gia (*Med.*). Paralysis of the ciliary muscle.

cy'clopoid larva (*Zool.*). A larval type of certain *Hymenoptera* which bears a superficial resemblance to the nauplius larva of *Crustacea.*

cycloram'a (*Cinema.*). The portion of dome, usually plastered white, which is erected at the back of a stage in a theatre, and on which light effects, such as clouds, are projected.

cyclo'sis (*Biol.*). The circulation of protoplasm within a cell.

cyclosper'mous (*Bot.*). Having the embryo coiled round the endosperm.

cyclospon'dylous (*Zool.*). Showing partial calcification of cartilaginous vertebral centra in the form of concentric rings.

cyclothy'mia (*Med.*). See **manic-depressive psychosis.**

cy'clotron (*Thermionics*). An arrangement of two dees in the field of a powerful magnet, in which a beam of electrons is constrained to move in a spiral and is also continuously accelerated by the alternating high-frequency potential applied to the dees.

Cydippid'ea (*Zool.*). An order of *Tentaculata* the members of which are spherical or cylindrical in form, and possess two tentacles, retractile into sheaths.

cye'sis (*Obstet.*). Pregnancy.

cylinder. A solid of uniform cross-section which may be generated by a straight line moving round a closed curve and remaining parallel to a given direction (the *axis*). What is usually understood by the word is a right circular cylinder for which the closed curve is a circle whose plane is perpendicular to the axis of the cylinder.

cylinder (*Eng.*). The tubular chamber in which the piston of an engine or pump reciprocates; the internal diameter is called the *bore,* and the piston-travel the *stroke.*

cylinder barrel (*Eng.*). The wall of an engine cylinder, as distinct from the cylinder itself, which term includes the head or covers.

cylinder bit (*Carp.*). A steel drill with helical cutting edge, used for precise boring.

cylinder bore (*Eng.*). See **cylinder** (*Eng.*).

cylinder caisson (*Civ. Eng.*). A caisson formed of hollow cylindrical cast-iron sections arranged one on top of another, so that there is always one above water-level, while the bottom one is a special cutting section. As excavation proceeds within the cylinder, the loaded sections sink, and when they have reached a sufficient depth, the cylinder is filled with concrete.

cylinder cover (*Eng.*). The end cover of the cylinder of a reciprocating engine or compressor.

cylinder-dried (*Paper*). Paper which has been dried by being passed over heated cylinders.

cylinder escapement (*Horol.*). A frictional-rest escapement in which the balance is mounted on a hollow cylinder, and a tooth of the escape wheel gives impulse to the balance by pressing against the lips of the cylinder, the action being that of a wedge. The escape wheel is locked by the tip of the tooth pressing against the outside or inside of the cylinder. The teeth of the escape wheel are mounted on 'stalks' and stand at right-angles to the plane of the wheel. To admit the entry of the teeth into the cylinder, about one-half of the cylinder is cut away where the teeth enter. Also known as HORIZONTAL ESCAPEMENT.

cylinder head (*Eng.*). The closed end of the cylinder of an internal-combustion engine; it may be either integral with the barrel or detachable, and sometimes carries the valves.

cylinder oils (*Lubricants*). Dark or red oils with high viscosity, suitable for use in steam and internal-combustion engine cylinders. See **machinery oils, lubricants.**

cylinder press (*Typog.*). (1) A proofing press in which pressure is applied by means of a rolling cylinder.—(2) A general term used to distinguish cylinder printing machines from hand presses and rotary machines.

cylinder top (*Furn.*). A semicircular cover to a desk, etc., sliding in a groove.

cylinder wrench (*Plumb.*). See **pipe wrench.**

cylindrical. Elongated, and circular in cross-section.

cylindrical gauge (*Eng.*). A length gauge of cylindrical form whose length and diameter are made to some standard size. See **gauge.**

cylindrical grinding (*Eng.*). The operation of accurately finishing cylindrical work by a high-speed abrasive wheel. The work is rotated by the headstock of the machine and the wheel is automatically traversed along it under a copious flow of coolant.

cylindrical lens (*Photog.*). A lens cut in the shape of a segment of a cylinder, i.e. a shape generated by a straight line moving parallel to itself and tracing an arc of a circle on a normal plane. Used to obtain a line image, as in sound recording on film or in reproducing from a sound track.

cylindrical record (*Acous.*). The Edison-type of gramophone record, in which the reproducing needle traverses a spiral (helical) record on its surface.

cylindrical rotor (*Elec. Eng.*). A rotor of an electric machine in which the windings are placed in slots around the periphery, so that the surface is cylindrical.

cylindrical winding (*Elec. Eng.*). A type of winding used for core-type transformers; it consists of a single coil of one or more layers wound concentrically with the iron core; it is usually long compared with its diameter.

cylin'drite (*Min.*). A complex sulphide of lead, tin, antimony, which has a cylindrical habit. The crystal system is not known for certain.

cylin'droscope (*Photog.*). A cylindrical apparatus for viewing naturally panoramic photographs taken with a rotating camera.

cy'ma (*Arch.*). A much-used moulding showing a reverse curve in profile. Also called an OGEE.

cyma recta (*Arch.*). A cyma which is concave at the top and convex at the bottom.

cyma reversa (or **inversa**) (*Arch.*). A cyma which is convex at the top and concave at the bottom.

cym'biform (*Bot.*). Shaped like a boat.

cymbium (*Zool.*). In some male Spiders, the cup-shaped tarsus of the pedipalpus, containing the palpal organ.

cyme (*Bot.*). An inflorescence in which the main axis ends in a flower, and in which subsequent flowers are produced at the ends of lateral axes or of successive branches from these.—*adj.* **cymose.**

cy'mene (*Chem.*). $CH_3{\cdot}C_6H_4{\cdot}CH(CH_3)_2$, *iso*propyl-*p*-methylbenzene, b.p. 175° C.

cymom'eter (*Radio*). An early form of wavemeter, comprising a helix surrounded by an adjustable tube. Resonance is indicated by the glowing of a neon lamp connected to the helix.

cy'mophane (*Min.*). A variety of the gem-mineral *chrysoberyl* which exhibits chatoyancy; sometimes known as CHRYSOBERYL CAT'S EYE or ORIENTAL CAT'S EYE.

cy'moscope (*Radio*). An obsolete term for any detector of electric oscillations.

cynop'odous (*Zool.*). Having non-retractile claws; as dogs.

cyphel'la (*Bot.*). A small cup-shaped hollow in the under surface of the thallus of some lichens.

cyphonau'tes (*Zool.*). A ciliated pelagic larval form of ectoproct *Polyzoa*, possessing a bivalve shell.

cypress knee (*Bot.*). A vertical upgrowth from the roots of the swamp cypress. It is very loose in structure, and acts as a pneumatophore.

cyp'sela (*Bot.*). A one-seeded fruit, formed from a syncarpous, inferior ovary.

cyst-, cysto- (Greek *kystis*, bladder). A prefix used in the construction of compound terms; e.g. *cysticolous* (q.v.).

cyst (*Zool.*). A non-living membrane enclosing a cell or cells: any bladder-like structure, as the gall-bladder or the urinary bladder of Vertebrates: a sac containing the products of inflammation.—*adjs.* **cystic, cystoid, cystiform.**

cysteine, sis'te-ēn (*Chem.*). $HS{\cdot}H_2C{\cdot}CH(NH_2){\cdot}COOH$, an amino-acid containing sulphur. Cysteine is a thio-serine, the disulphide of which is cystine.

cysten'chyma (*Zool.*). A form of parenchyma occurring in Sponges, characterised by vesicular vacuolate cells, closely packed or embedded in a gelatinous matrix.

cys'tencyte (*Zool.*). One of the cells composing a cystenchyma in Sponges.

cystic (*Zool.*). Pertaining to the gall-bladder: pertaining to the urinary bladder.

cystic adenoma (*Med.*). An adenoma containing numerous cysts.

cysticer'coid (*Zool.*). A bladderworm of which the bladder is but slightly developed and may possess a tail-like appendage.

cysticerco'sis (*Med.*). Infection with cysticerci, a form of larval tapeworm.

cysticer'cus (*Zool.*). A bladderworm possessing a well-developed bladder, with one scolex.

cystic'olous (*Zool.*). Cyst-inhabiting.

cystid'ium (*Bot.*). A swollen, elongated, sterile hypha, occurring among the basidia of the hymenium of some *Hymenomycetae*, and usually projecting beyond the general surface of that hymenium.

cysti'tis (*Med.*). Inflammation of the bladder.

cystoa'rian (*Zool.*). Said of gonads (such as those of most *Neopterygii*) which are enclosed within coelomic sacs. Cf. *gymnoarian.*

cys'tocarp (*Bot.*). The body which forms after fertilisation in the red algae.

cys'tocele (*Med.*). Hernia of the bladder.

cys'tocyte (*Zool.*). See **cystencyte.**

cysto'genous (*Zool.*). Cyst-forming: cyst-secreting.

cysto'lith (*Bot.*). A stalked mass of calcium carbonate and organic material, present in some plant cells.

cyston (*Zool.*). A dactylozooid specialised for excretion.

cys'toscope (*Surg.*). An instrument for inspecting the interior of the bladder.

cystos'copy (*Surg.*). The inspection of the interior of the bladder with a cystoscope.

cystoso'rus (*Bot.*). A group of sporangia formed after the division of a single protoplast.

cys'tospore (*Bot.*). An encysted zoospore.

cystos'tomy (*Surg.*). Surgical formation of an opening in the bladder.

cystot'omy (*Surg.*). Incision into the bladder.

cystova'rian (*Zool.*). Having the ovaries enclosed in coelomic pouches, and therefore in the form of hollow sacs; e.g. in teleostean Fish.

cystozooid, —zō'id (*Zool.*). In *Cestoda*, the bladder or tail portion of a bladderworm. Cf. *acanthozooid.*

cyt-, cyto- (Greek *kytos*, hollow, cell). A prefix used in the construction of compound terms; e.g. *cytolymph* (q.v.).

cy'tarme (*Zool.*). In experimental embryology, flattening of cells against one another.

cy'tase (*Bot., Zool.*). A general term for an enzyme able to break down cellulose.

cytas'ter (*Cyt.*). An *aster* (q.v.) which lies distant from the nucleus in the cytoplasm.

cyt'isine (*Chem.*). $C_{11}H_{14}ON_2$, an alkaloid of unknown constitution, obtained from the seeds of *Cytisus laburnum.* It crystallises in large rhombic prisms, m.p. 153° C., b.p. 218° C. (2 mm.); soluble in water, alcohol, chloroform, insoluble in ether or benzene. Cytisine is extremely poisonous for human beings, causing nausea, convulsions, and death by asphyxiation.

cyto-architecton'ic (*Med.*). Pertaining to the disposition of cells in a tissue.

cytochoris'mus (*Zool.*). In experimental embryology, partial separation of cells after one division and prior to the next division.

cy'tochrome (*Chem.*). A group of *haemochromogens** (q.v.) very widely distributed in living cells and of great importance in cell oxidations, acting as intermediate hydrogen carriers.

cy'tode (*Biol.*). A mass of protoplasm without a nucleus.

cytodiae'resis (*Cyt.*). See **mitosis.**

cytog'amy (*Cyt.*). Conjugation or union of cells. See **conjugation.**

cytogen'esis (*Cyt.*). The formation and development of cells.

cyto'genous (*Biol.*). Cell-forming, cell-producing; as certain kinds of lymphatic tissue.

cytokine'sis (*Cyt.*). Cell-division.

cytolis'thesis (*Zool.*). In experimental embryology, sliding or rotary movement of cells over one another.

cytol'ogy (*Biol.*). The study of the structure, functions, and reproduction of cells.

cy'tolymph (*Cyt.*). The fluid part of cytoplasm; cell-sap.

cytol'ysin (*Cyt.*). Any substance which will cause *cytolysis* (q.v.).

cytol'ysis (*Cyt.*). Dissolution of cells.

cy'tome (*Cyt.*). The whole of the chondriosomes present in a cell.

cytomi'crosomes (*Cyt.*). See **mitochondria.**

cytomorpho'sis (*Cyt.*). The series of changes accompanying the development and specialisation of an individual cell and its subsequent decline, or the comparable series of changes in successive generations of cells in the same line of descent.

cy'ton (*Zool.*). The cell-body of a neurocyte. Cf. *axon.*

cytophar'ynx (*Zool.*). In some *Ciliophora*, an oespohagus-like tube leading from the cytostome into the endoplasm.

cy'toplasm (*Cyt.*). The protoplasm of a cell, apart from that of the nucleus. Cf. *nucleoplasm.*

cytoplas'mic inheritance (*Gen.*). The transmission of hereditary characters by means of the cytoplasm, instead of by the nucleus.

cytoplasmic stain (*Biol.*). A stain which shows up the cytoplasm and cytoplasmic structures of a cell, as opposed to the nucleus.

cy'toproct (*Zool.*). In unicellular or non-cellular animals, an opening or weak spot in the ectoplasm and pellicle, by which indigestible residues are discharged; a potential anus.

cy'topyge, —pīj (*Zool.*). In *Ciliophora*, the potential anus, a pore or weak spot in the cuticle through which indigestible residues are defecated.

cy'tosine (*Chem.*). 2-One-6-aminopyrimidine, obtained by the hydrolysis of certain nucleic acids.

cy'tosome (*Cyt.*). The whole of the cytoplasm of a cell.

cy'tostome (*Zool.*). In some *Ciliophora*, the cell-mouth, an aperture in the ectoplasm which opens into the cytopharynx.

cytotax'is (*Cyt.*). Rearrangement of cells as a result of stimulation.

cytotaxon'omy (*Bot.*). A scheme of classification based on information gained by a study of cell structure.

cytotro'phoblast (*Zool.*). The inner layer of the trophoblast.

cytotro'pism (*Cyt.*). Reaction or response to the stimulus of mutual attraction between two cells.

cytozo'ic (*Zool.*). Intra-cellular, living within a cell.

cyt'ula (*Zool.*). A fertilised ovum.

D, Δ, δ

d- (*Chem.*). Abbrev. for *dextro-rotatory*.

[**d**] (*Light*). A line in the blue of the solar spectrum, having a wavelength of 4378·720 A.; due to iron.

D (*Chem.*). The symbol for *deuterium*, heavy hydrogen, ^{2}H.

[**D**] (*Light*). A group of three Fraunhofer lines in the yellow of the solar spectrum. [D_1] and [D_2], wavelengths 5896·357 and 5890·186 A , are due to sodium, and [D_3], wavelength 5875·618 A , to helium.

D and P (*Photog*) Mass-production development and printing of photographs for amateur photographers.

D-layer (*Radio*). A layer or region of absorbing ionisation considered to exist as a consequence of particle radiation from hydrogen bursts from the sun, bringing about complete inhibition of short-wave communication but some improvement in long-wave communication. See **Dellinger fade-out.**

D lines (*Light*). See [**D**].

D slide-valve (*Eng.*). A simple form of slide-valve, in section like a letter D, sliding on a flat face in which ports are cut. See **slide-valve.**

δ- (*Chem.*). Substituted on the fourth carbon atom of a chain.

Δ- (*Chem.*). A prefixed symbol which signifies a double bond beginning on the carbon atom indicated.

Δ connexion (*Elec. Eng.*). See **delta connexion.**

dabbers, gaggers, prods (*Foundry*). Projections cast into the surface of a *loam plate* (q.v.) to hold and reinforce the mould.

dabbing (*Masonry*). See **daubing.**

dabrey (*Rubber*). A small shallow tray in which latex exuding from the balata tree is collected.

dac'ryo- (Greek *dakryon*, tear). A prefix used in the construction of compound terms; e.g. *dacryo-adenitis* (q.v.).

dacryo-adenitis, dacry-adenitis (*Med.*). Inflammation of the lacrimal gland.

dacryocysti'tis (*Med.*). Inflammation of the lacrimal sac.

dac'ryops (*Med.*). A cystic swelling at the place where the upper lid meets the eyeball, due to blockage of a lacrimal duct.

dactyl (*Zool.*). A digit.—*adj.* **dac'tylar.**—*prefix* **dactylo-.**

dac'tyline, dac'tyloid (*Bot.*). Spreading like outstretched fingers.

dactyli'tis (*Med.*). Inflammation of a finger or of a toe.

dactylop'odite (*Zool.*). In some *Crustacea*, the fifth or distal joint of the endopodite of the walking-legs or maxillipeds.

dac'tylopore (*Zool.*). In *Hydrocorallinae*, an opening in the common skeleton through which a dactylozooid protrudes.

dactylop'terous (*Zool.*). Having the anterior rays of the pectoral fins free and unattached by membrane to the rest of the fin, as in the Gurnards.

dactylozo'oid (*Zool.*). In colonial *Hydrozoa*, a hydroid person specialised for catching prey and for defence of the colony; usually with one or more long tentacles richly provided with stinging-cells, and no mouth. Also called PALPON.

dadding (*Mining*). The utilisation or circulation of the ventilating current so as to dilute and render harmless any inflammable and noxious gases which are found in the mine.

da'do (*Arch.*). One of the faces of the solid block forming the body of a pedestal.—(*Join.*) A border around the lower part of the wall of a room.

dado capping (*Join.*). The name given to the dado rail when the dado occupies as much as two-thirds of the height of the room.

dado rail (*Join*). The moulding capping the dado in a room and separating it from the upper part of the walls. Also called SURBASE.

daeda'leous (*Bot.*). A term applied to an irregularly wrinkled, plaited surface.

dagger (*Typog.*). The second in order of the reference marks (†). Placed before a person's name it signifies 'died' or 'dead.'

daggings or **dags** (*Textiles*). Wool that has formed in clots through adhesion of soil and dung.

daguerreotype, da-ger'o-tip (*Photog.*). The mercury-vapour development of silver iodide and bromide supported on a copper plate, the resulting amalgam being fixable with cyanide or hypo.

D.A.H. (*Med.*). Abbrev. for *disordered action of the heart*. See **effort syndrome.**

dailies. The same as *rushes* (q.v.).

Dailygraph (*Acous.*). A magnetic recording and reproducing machine, for attachment to telephones.

da'is (*Build.*). A raised platform at one end of a room or hall.

Dakota Sandstone (*Geol.*). A widespread continental sandstone, largely of Cenomanian age, which marks the retreat of the sea from parts of the U.S.A. at the end of Comanchean times.

Dalra'dian Series (*Geol.*). A very thick and variable succession of sedimentary and volcanic rocks which have suffered regional metamorphism, occurring in the Scottish Highlands approximately between the Great Glen and the Highland Boundary fault. Referred to the Pre-Cambrian System, and commonly placed between the Moinian below and the Torridonian above, though the evidence of relative age is not entirely convincing.

Dalton's atomic theory (*Chem.*). States that matter consists ultimately of indivisible, discrete particles (atoms), and atoms of the same element are identical; chemical action takes place as a result of attraction between these atoms, which combine in simple proportions. It has since been found that atoms of the same element may have different weights. See **isotopes.**

Dalton's law (*Chem.*). See **law of multiple proportions.**

Dalton's law of partial pressures (*Chem., Phys.*). The pressure of a gas in a mixture is equal to the pressure which it would exert if it occupied the same volume alone at the same temperature.

Daltonism (*Med.*). See **colour blindness.**

dam (*Civ. Eng.*). An embankment or other construction made across the current of a stream.—(*Mining*) (1) A retaining wall or bank for water.—(2) An air-tight barrier to isolate underground workings which are on fire.

dam'ask (*Textiles*). (1) A silken material, of satin and sateen weaves, in which background and figure have a contrasting effect; used mainly for furnishings.—(2) A linen cloth of damask texture, used for tablecloths and towellings; also a cotton cloth of like character, used for tablecloths; both fabrics are reversible.

dam'askeen. Inlay of metal, or ivory and mother-of-pearl, on metal.

dammar (*Chem.*). A copal or gum produced by 'dammar' trees: white dammar by *Vateria Indica*; black dammar by *Dammara officinalis*; kauri gum by *Dammara Australis*. Used, *inter alia*, for making special varnishes in photographic work.

damp (*Mining*). A general term for gases, other than air, found in coal-mines.

See **after—**
black—
choke—
fire—
stink—
white—

damp-proof course (*Build.*). A layer of impervious material, such as slate or bituminous sheeting, built into a wall 6 in. to 9 in. above ground-level, so as to prevent moisture from the foundations rising in the walls by capillary attraction. Vertical damp courses are also used in suitable cases.

damp-proofing (*Build.*). The process of coating a wall with a special preparation to prevent moisture from getting through.

damped oscillation (*Elec. Comm.*). An electrical or mechanical oscillation in which there is an appreciable diminution of oscillation amplitude during successive cycles, e.g. oscillations produced in an oscillatory circuit by a spark discharge.

damped waves (*Radio*). Electromagnetic waves radiated from a damped oscillatory circuit.

damper (*Acous.*). A vibration-absorbing pad for reduction of the transmission of vibrational energy from a disturbing source.

damper (*Elec. Eng.*). A mass of metal, or a short-circuited winding, placed on a machine in such a way as to tend to oppose any changes in the angular velocity, i.e. to prevent hunting. It is also sometimes used on the moving part of an indicating instrument. Also called AMORTISSEUR, DAMPER WINDING, DAMPING GRID, DAMPING WINDING.

damper (*Eng.*). (1) An adjustable iron plate or shutter fitted across a boiler flue to regulate the draught.—(2) A device for damping out torsional vibration in an engine crankshaft, the energy of vibration being dissipated frictionally within the damper. See **vibration dampers.**

damper weight (*Eng.*). A counterweight used to balance the weight of a damper in a boiler flue.

damper winding (*Elec. Eng.*). See **damper.**

damping (*Elec. Comm., etc.*). The extent of reduction of amplitude of oscillation in an oscillatory system, due to energy dissipation; e.g. friction and viscosity in a mechanical system, and resistance in an electrical system. With no supply of energy, the oscillation dies away at a rate depending on the degree of damping. The effect of damping is to increase slightly the period of the vibrations. It also diminishes the sharpness of resonance for frequencies in the neighbourhood of the natural frequency of the vibrator. See **logarithmic decrement.**

See also **critical—**
magnetic—
specific—

damping (*Paper*). Paper is sometimes subjected to *damping* by contact with a wet cylinder to enable it to take a smoother finish.

damping, degree of (*Elec. Comm.*). See **degree of damping.**

damping down (*Eng.*). The retarding of the rate of combustion in a boiler furnace by covering the fire with fine coal sprinkled with water.—(*Met.*) The temporary stopping of a blast-furnace, by closing all apertures by which air could enter.

damping factor (*Elec. Comm., etc.*). Same as *decay factor* (q.v.).

damping grid (*Elec. Eng.*). See **damper.**

damping magnet (*Elec. Eng.*). A permanent magnet used to produce damping by inducing eddy currents in a metal disc or other body; sometimes employed on indicating instruments.

damping-off (*Bot.*). A disease which attacks and kills seedlings growing crowded together under wet conditions, the seedlings falling over and rotting. It is usually caused by species of the oömycetous fungus *Pythium*.

damping-up (*Furs*). The operation of damping skins prior to stretching on shapes.

damping winding (*Elec. Eng.*). See **damper.**

dan (*Mining*). (1) A tub or barrel for conveying water from a dip place (not reached by a pumping arrangement) for discharge into a pump lodge or a pit sump.—(2) A small box or sledge sometimes used in thin seams to convey coals from distant points to the trains or tubs in the roadway.

dan'burite (*Min.*). A rare accessory mineral, occurring in pegmatites as yellow orthorhombic crystals. Chemically, danburite is a calcium borosilicate, $CaB_2Si_2O_8$.

dancing step (*Build.*). A step intermediate between a flier and a winder, having its outer end narrower in plan than its inner end. Also called BALANCED STEP.

dandy roll (*Paper*). A wire-gauze cylinder which comes in contact with paper when in the web stage. It impresses the ribs in laid paper, also any watermark required.

dangerous structure (*Build.*). A structure certified by a local authority to be in a dangerous condition.

Daniell cell (*Elec. Eng.*). A primary cell consisting of a zinc anode dipping into zinc sulphate solution, and a copper cathode dipping into copper sulphate solution. The electrolytes are kept apart by a porous pot. See also **Callaud cell.**

Daniell hygrometer (*Phys., etc.*). A form of dew-point *hygrometer* (q.v.), now obsolete, in which dew is formed on the surface of a bulb containing ether which is cooled by evaporation into another bulb, itself cooled by the evaporation of ether on its outer surface.

dant (*Mining*). Soft sooty coal found in face and back slips or cleats: fine slack coal.

danty (*Mining*). Broken coal.

dapping (*Carp.*). The operation of cutting notches in the construction of timber bridges.

darby (*Plast.*). A *derby float* (q v.).

darg (*Mining*). (1) A specified day's work.—(2) A task, or a fixed quantity of coal, agreed to be produced per shift for a certain price.

Darimont cell (*Elec. Eng.*). A double-fluid primary cell with zinc and carbon electrodes, an electrolyte of calcium carbonate and sodium chloride, and a depolariser of ferric chloride.

dark current (*Photo-electric Cells*). The current which flows in a photo-electric cell when not illuminated.

dark oils (*Lubricants*). The term applied to oils intended for rough lubrication; e.g. colliery tram oils; usually residues of crude oils.

dark resistance (*Photo-electric Cells*). The resistance of a selenium or other photo-resistance cell in the dark.

dark room (*Photog.*). The enclosure for handling photo-sensitive materials so that they may not become fogged. Complete darkness is not usually necessary, provided indirect illumination, not actinic to the emulsions, is used during the time they are exposed.

dark seed (*Bot.*). A seed which will germinate only if kept in the dark at the time when other conditions make germination possible.

dark slide (*Photog.*). The carrier for plates to be exposed in cameras, loaded in the dark room and uncovered, after attachment to the camera, by withdrawing a slide.

darks (*Furs*). The term applied to skins with dark-coloured hair.

Darley Dale stone (*Build.*). A yellowish-brown sandstone containing mica flakes, quarried at Darley Dale in Derbyshire; used for general building work.

D'Arsonval galvanometer (*Elec. Eng.*). A galvanometer having a suspended current-carrying coil in a permanent magnetic field.

dart (*Horol.*). See **safety finger.**

dart (*Zool.*). Any dart-like structure; e.g. in certain Snails, a small pointed calcareous rod which is used as an incentive to copulation: in certain *Nematoda*, a pointed weapon used to obtain entrance to the host.

dart sac (*Zool.*). In some *Gastropoda*, a saccular gland, surrounded by muscles, which opens into the vagina and secretes the *dart* (q.v.).

Dartmoor granite (*Build.*). A grey porphyritic granite used in heavy construction. In the geological sense, *Dartmoor granite* comprehends the Armorican granitic complex of Dartmoor, Devon; only a part is porphyritic.

Dartmouth Slates (*Geol.*). A thick series of purple and green slates, typically developed in S. Devon and referred to the local base of the Devonian System.

Darwinian theory (*Biol.*). See **natural selection.**

dash (*Typog.*). See **em rule.**

dash pot (*Eng.*). A device for damping out vibration; it consists of a piston attached to the part to be damped, fitting loosely in a cylinder of oil. Vibrational energy is absorbed in fluid friction.

dasypae'des (*Zool.*). Birds which when hatched have a complete covering of down. Cf. *altrices.*

dasyphyl'lous (*Bot*). (1) Having crowded leaves.—(2) Having thick leaves.—(3) Having leaves bearing a thick coat of woolly hairs.

date line (*Geog*). An imaginary line on the earth's surface for the purpose of fixing the change of date, without ambiguity, for all travellers; it runs approximately along the meridian of longitude 180° from Greenwich, deviating round certain groups of islands for local convenience.

dative bond (*Chem.*). See **semi-polar bond.**

dat'olite (*Min.*). A hydrated silicate of boron and calcium occurring as a secondary product in amygdales and veins, usually as distinct prismatic monoclinic crystals.

da'tum (*Surv.*). An assumed level surface used as a reference surface for the measurement of reduced levels. See **ordnance datum.**

daubing (*Masonry*). The operation of dressing a stone surface with a special hammer so as to cover it with small holes.—(*Plast.*) A rough-stone finish given to a wall by throwing a rough coating of plaster upon it. See **rough-cast.**

daughter (*Biol.*). Offspring belonging to the first generation, whether male or female; as *daughter-cell, daughter-nucleus, daughter-chromosome.*

D.A.V.C. (*Elec. Comm.*). Abbrev. for *delayed automatic volume control* (q.v.).

davenport (*Furn.*). A pedestal desk with sloping top.

Davis apparatus. A respiratory apparatus specially designed to permit escape from a pressure equalising chamber in a submarine. Oxygen is breathed from a chamber which, embracing the wearer, gives him buoyancy and assists his rise to the surface.

davy (*Mining*). The name of the safety lamp invented by Sir Humphry Davy in 1815.

day (*Astron.*). APPARENT SOLAR DAY, the interval, not constant owing to the earth's elliptic orbit, between two successive transits of the true sun over the meridian.—MEAN SOLAR DAY, the interval, perfectly constant, between two successive transits of the mean sun across the meridian.—SIDEREAL DAY, the interval between two successive transits of the 1st Point of Aries over the meridian; also, neglecting the very small effect of precession, the interval between two successive transits of the same fixed star; the period of the earth's rotation on its axis.

day (*Build.*). The distance between successive mullions in a window.

day (*Mining*). In mining, generally a period of eight hours for work on the three-shift system, or twenty-four hours if referring to the output or to machinery.

day bed (*Furn.*). A low lounge with sloping head rest.

daylight (*Photog.*). The average colour of sky and sun at noon, corresponding to a colour temperature of 6500 K.

daylight, artificial (*Illum.*). See **artificial daylight.**

daylight factor (*Illum.*). The ratio of the illumination measured on a horizontal surface inside a building to that which obtains at the same time outside the building, due to an unobstructed hemisphere of sky. Occasionally called WINDOW EFFICIENCY RATIO.

daylight lamp (*Illum.*). A lamp giving light having a spectral distribution curve similar to that of ordinary daylight.

daylight mantle (*Illum.*). A gas mantle impregnated with special material so that the light emitted approximates to daylight.

day position (*Bot.*). The posture of the leaves during the day in plants which change the position of their leaves as night comes on.

day sleep (*Bot.*). The folding together of the leaflets of a compound leaf when exposed to bright light, bringing together the surfaces which bear most of the stomata, and doubtless imposing a check on the rate of loss of water from the plant.

daywork (*Civ. Eng.*). A method of valuing work on the basis of the time spent by the workmen, the materials used, and the plant employed.

dazzle, acoustic. See **acoustic dazzle.**

DB., db. (*Elec. Comm*). The abbrev. for *decibel* (q v.).

d.c., D.C. (*Elec. Eng.*). A commonly used abbrev. for *direct current.*

d.c. amplifier (*Elec. Comm.*). A thermionic amplifier which amplifies frequencies efficiently, including zero frequency.

d.c. balancer (*Elec. Eng.*). An assembly of one or more direct-current machines, used to equalise the voltages between the sides of a multi-wire d.c. distribution system.

d.c. coupling (*Elec. Comm.*). Intervalve coupling which permits full amplification of direct currents. See **direct (d.c.) coupling.**

d.c. electrolytic condenser (*Elec. Comm.*). An electrolytic condenser which has oxide films formed on both aluminium electrodes, so that it has a large effective capacity for either polarity. So called because it is used in d.c. mains radio-receivers which might have the wrong polarity applied to their supply circuit.

d.c. electromagnetic generator (*Elec. Eng.*). A generator for producing direct currents. Also called a DYNAMO.

d.c. motor (*Elec. Eng.*). An electric motor for operation by direct current.

d.c. resistance (*Elec. Eng.*). The resistance which a circuit offers to the flow of a direct current. Also called TRUE (or OHMIC) RESISTANCE.

d.c. testing of cables (*Cables*). The application of a d.c. voltage of five times the r.m.s. of the working a.c. voltage. Cables which have considerable tracking and are likely to break down in service are broken down by the d.c.; healthy cables are not affected.

d.c. (*Typog.*). An abbrev. for (1) *double column*; (2) *double crown*; (3) *double cap* (i.e. double foolscap).

d.c.c. (*Elec. Eng.*). A commonly used abbrev. for *double-cotton covered.*

D.C.F. (*Carp.*). Abbrev. for *deal-cased frame.*

ddt. (*Civ. Eng., etc.*). Abbrev. for *deduct.*

deactivation (*Chem.*). The return of an activated atom, molecule, or substance to the normal state. See **activation** (*Chem.*).

dead (*Acous.*). An enclosure which has a period of reverberation much smaller than usual for its size and audition requirements. Applied to sets in motion-picture production.

dead (*Build.*). Said of materials which have deteriorated.

dead (*Elec. Eng.*). Said of electric circuits which are not connected to any source of supply.

deads (*Mining*). Valueless broken ground which has to be removed in the course of underground work in a mine.

dead angle (*Eng.*). That period of crank angle of a steam-engine during which the engine will not start when the stop-valve is opened; due to the ports being closed by the slide-valve.

dead axle (*Eng.*). An axle which does not rotate with the wheels carried by it. Cf. *live axle*.

dead bank (*Eng*). A stoker-fired boiler furnace from which the coal feed is shut off, the fire being allowed to burn back as far as possible without going out entirely.

dead-beat (*Elec. Eng.*). A term applied to an instrument or other oscillating system when it is critically damped, i.e. when, after receiving some disturbing impulse, it takes up its final position without any oscillations and in the minimum time.

dead-beat escapement (*Horol.*). An escapement in which there is no 'recoil' to the escape wheel. The dead-beat action is obtained by making the locking faces of the pallets arcs of circles, struck from the pallet staff as centre. This escapement is the one used for regulators, and is capable of giving very accurate results.

dead-centre (*Eng*). (1) Either of the two points in the crankpin path of an engine at which the crank and connecting-rod are in line and the piston exerts no turning effort on the crank. See **inner** (or **top**) **dead-centre, outer** (or **bottom**) **dead-centre.**—(2) A lathe centre. See **tail-stock.**

dead-centre lathe (*Eng.*). A small lathe (used in instrument-making) in which both centres are fixed, the work being revolved by a small pulley mounted on it.

dead coil (*Elec. Eng.*). A coil in the winding of a machine which does not contribute any e.m.f. to the external circuit, because it is short-circuited or disconnected from the rest of the winding. See also **dummy coil.**

dead colouring (*Paint.*). The first coat of colour, on which finishing coats are later to be applied.

dead door (or **window**) (*Build.*). The same as *blank door* (or *window*) (q.v.).

dead earth (*Elec. Eng.*). A connexion between a normally live conductor and earth by means of a path of very low resistance.

dead end (*Plumb.*). The length of pipe between a closed end and the nearest connexion to it, forming a 'dead' pocket in which there is no circulation.

dead end (*Radio*). The unused portion of an inductance coil in an oscillatory circuit.

dead-end effect (*Radio*). The increase in effective resistance of an inductance coil due to currents circulating in the unused end-turns shunted by their self-capacity.

dead-end switch (*Radio*). A multi-point switch arranged to short-circuit the unused end-turns of an inductance coil.

dead-end tower (*Elec. Eng.*). See **terminal tower.**

dead-ended feeder (*Elec. Eng.*). See **independent feeder.**

dead eye (*Naut., etc.*). (1) A sheaveless block used in setting up rigging.—(2) A light type of bearing for supporting a spindle; it may consist merely of a hole in a sheet of metal or other material.

dead finish (*Paint.*). See **flat finish.**

dead floor (or **wall**) (*Build.*). A floor (or wall) which absorbs sound.

dead flue (*Build.*). A flue which is bricked in at the bottom.

deadground (*Mining*). Ground devoid of values: ground not containing veins or lodes of valuable mineral: a barren portion of a coal-seam.

dead head (*Eng*). (1) A projecting shank on a casting, formed by the metal which filled the pouring hole or riser.—(2) The fixed headstock of a machine tool.

dead knot (*Timber*). A knot which is partially or wholly separated from the surrounding wood.

dead level (*Build.*). A strong term for *absolutely level*.

dead load (or **weight**) (*Struct.*). The permanent loading on a structure, imposing definite fixed strains upon it; it consists of the weight of the structure itself and the fixed loading carried by it. Cf. *live load*.

dead-load safety-valve (*Eng., etc.*). See **dead-weight safety-valve.**

dead lock (*Join.*). A lock the bolt of which is key-operated from one side and handle-operated from the other.

dead-man's handle (*Elec. Eng.*). A form of handle commonly used on the controllers of electric vehicles; designed so that if the driver releases his pressure on the handle, owing to sudden illness or other causes, the current is cut off and the brakes applied.

dead matter (*Typog*). Type which has been used and is awaiting distribution.

deadmen (*Civ. Eng*). The concrete, plate, or other anchorage for land ties.

dead points (*Eng.*). See **dead-centre.**

dead roasting (*Met.*). Roasting carried out under conditions designed to reduce the sulphur content to the lowest possible value. Distinguished from *partial roasting* and *sulphating roasting*.

dead segment (*Elec. Eng.*). A commutator segment which is not connected, either for accidental reasons or for a definite purpose, to the armature winding associated with the commutator.

dead shore (*Carp.*). A vertical timber post used to prop up temporarily any part of a building.

dead short (*Elec. Eng.*). A commonly used expression to denote an electrical short-circuit of very low resistance.

dead-smooth file (*Eng.*). The smoothest grade of file ordinarily used, having 70 to 80 teeth to the inch for files of average length; used for finishing surfaces.

dead sounding (*Build.*). *Pugging* (q.v.).

dead spots (*Acous.*). Locations in an enclosure where the sound-wave intensity is relatively low because of interference, or because the sound-waves are focused by curved surfaces at other locations.

dead water (*Eng.*). (In a boiler or other plant) water not in proper circulation.

dead weight (*Ship Constr.*). The difference, in tons, between a ship's displacement at load draught and light draught. It comprises cargo, bunkers, stores, fresh water, etc.

dead weight (*Struct.*). See **dead-load.**

dead-weight pressure-gauge (*Eng.*). A device in which fluid pressure is measured by its application to the bottom of a vertical piston, the resulting upward force being then balanced by applying weights to the upper end; used for calibrating Bourdon gauges.

dead-weight safety-valve (*Eng., etc.*). A safety-valve in which the valve itself is loaded by a heavy metal weight; used for small valves and low pressures. See **safety-valve.**

dead-well (*Civ. Eng.*). An *absorbing well* (q.v.).

deadening (*Build.*). (1) The operation of roughening a surface, so as to give it a dead finish.—(2) *Pugging* (q.v.).

de-aerator (*Eng.*). A vessel in which boiler feed water is heated under reduced pressure in order to remove dissolved air.

deaf aid (*Acous.*). A device used by a deaf person to improve audition of external sounds; either in the form of an acoustic amplifier (collector), such as a small trumpet, or in the form of a microphone-receiver combination, with or without amplifier.

deaf-mute. A person who can neither speak nor hear, the former incapacity usually arising from the latter.

deafening (*Build.*). *Pugging* (q.v.).

deafness (*Acous.*). Lack of sensitivity of hearing in one or both ears, with consequent increase in the threshold of minimum audibility, measurement of which is useful in diagnosis.

deal (*Timber*). A piece of timber of width from 9 to 11 in., and thickness from 2 to 4 in.

deal frame (*Carp.*). A reciprocating sawing machine having several parallel saws moving together in a frame; used for cutting deals into thinner boards.

dealbate, dē-al′bāt (*Bot.*). Whitened, usually by a coating of hairs.

Dean and Stark apparatus (*Chem.*). An apparatus for determining the water content of oils. It consists of a distillation flask, a reflux condenser, and a graduated tube attached to the condenser, in which the water is collected and prevented from running back into the distillation flask.

deassimila′tion, dē-a— (*Bot.*). The utilisation of food by the plant.

death (*Biol.*). In a cell or an organism, complete and permanent cessation of the characteristic activities of living matter.

death point (*Biol.*). The lethal maximum or minimum limit of any particular factor in the external or internal environment beyond which an organism or cell cannot live; as the temperature above which an organism will die.

death ray. A type of radiation which, it is supposed, would kill human beings when projected from a distance.

debacle, débâcle, dā-bak′l′ (*Meteor.*). The breaking up of the surface ice of great rivers in spring.

débridement, dā-brēd-mahn^g (*Surg.*). The removal of foreign matter and excision of infected and lacerated tissue from a wound.

De Broglie waves, —brol′yē (*Phys.*). Waves in the ether associated with moving electrons. Their wavelength is given by the equation $\lambda = \sqrt{\frac{150}{u}} \times 10^{-8}$ cm., where u is the electron velocity expressed in volts. See **electron diffraction.**

debunching (*Thermionics*). The tendency for dispersion in a beam of electrons, or in a velocity-modulated beam of electrons, because of their mutual repulsion. In the gas cathode ray tube the maintenance of focus arises from relatively static positive ions in the path of the beam counteracting debunching. See **buncher** and **bunching.**

Debye and Sherrer method, de-bī′ (*Crystal.*). A method of X-ray crystal analysis applicable to powders of crystalline substances or aggregates of crystals.

Debye-Hückel theory (*Chem.*). A theory of electrolytic conduction which assumes complete ionisation and attributes deviations from ideal behaviour to inter-ionic attraction.

decade. The time period of ten years. Cf. *dekad.*

decahy′dro-naphthalene (*Chem.*). $C_{10}H_{18}$, b.p. 190° C. (770 mm.), product of the complete hydrogenation of naphthalene under pressure and in the presence of a catalyst.

decalage, dek-a-lazh′ (*Aero.*). The angle between the two chords of the upper and lower wings in the plane parallel to that containing the longitudinal and vertical axes of an aeroplane.

decalcification (*Med.*). The process of absorption of lime salts from bone.

decales′cence (*Met.*). The absorption of heat that occurs when iron or steel is heated through the critical points. See **recalescence.**

dec′androus (*Bot.*). Having ten stamens.

dec′aploid (*Cyt.*). Having ten times the haploid number of chromosomes.

Decapo′da (*Zool.*). (1) An order of *Eucarida* in which the first three thoracic appendages are modified as maxillipedes; they show immense variety of external form and structure; nearly all are free-living marine forms, but a few occur on land and in fresh waters. Shrimps, Prawns, Lobsters, Crayfishes, Hermit Crabs, True Crabs.—(2) An order of *Dibranchia* having eight normal arms and two longer partially retractile arms; the suckers are pedunculate, there is a well-developed internal shell, and lateral fins are present; actively swimming forms, usually carnivorous. Squids and Cuttlefish.

decapsulation (*Surg.*). Surgical removal of the capsule or covering of an organ, especially of the kidney.

decarbonising (*I.C. Engs.*). The process of removing the solid carbon deposited on the internal surfaces of the combustion chamber and the piston crown of an internal-combustion engine.

decarburisation (*Met.*). Removal of carbon from the surface of steel by heating in an atmosphere in which the concentration of decarburising gases exceeds a certain value.

dec′astyle (*Arch.*). A portico having ten columns.

decatising (*Textiles*). A process for giving a permanent finish to worsted and woollen fabrics by forcing steam through them while under tension.

decay (*Timber*). A decomposition of timber by fungi and/or other agents.

decay constant (*Phys.*). The ratio of the rate of disintegration of a radioactive substance to the amount of the substance left unchanged. If λ is the decay constant, N_0 the original amount of substance, and N the amount left after time t, then $N = N_0\epsilon^{-\lambda t}$.

decay factor (*Elec. Comm., etc.*). The factor expressing the rate of decay of oscillations in a damped oscillatory system, given by the natural logarithm of the ratio of two successive amplitude maxima divided by the time interval between them. Calculated from the ratio of the resistance coefficient to twice the mass in a mechanical system, and the ratio of the resistance to twice the inductance in an electrical system. Also called DAMPING FACTOR. See **logarithmic decrement.**

decay period (*Phys.*). See **half-life.**

deceleration (*Mech.*). The rate of diminution in the speed of a vehicle or moving part; measured in feet per sec. per sec.

decem- (Latin *decem*, ten). A prefix used in the construction of compound terms; e.g. *decemfid*, cut into ten parts or segments.

decer′ebrate (*Zool.*). Having had the cerebral hemispheres removed: lacking a cerebrum.

decerebrate tonus (*Zool.*). A state of reflex tonic contraction of certain skeletal muscles following upon the separation of the cerebral hemispheres from the lower centres.

dech′enite (*Min.*). A rare mineral usually occurring in nodular aggregates; chemically, vanadate of lead.

deci-ampere balance (*Elec. Eng.*). An ampere-balance having a range from 0·1 to 10 amperes.

decibel (*Elec. Comm.*). The unit of power-level difference, measured by $10 \log_{10} W_2/W_1$, where W_2 is a power controlled by W_1. Used as a measure of response in all types of electrical communication circuits. See **bel.**

decibel meter (*Elec. Comm.*). A meter which has a scale calibrated approximately uniformly in logarithmic steps and labelled with decibel units; used for determining the relative power-levels in communication circuits.

decid'ua (*Zool.*). In Mammals, the modified mucous membrane lining the uterus, at the point of contact with the placenta, which is torn away at parturition and subsequently ejected; the afterbirth; the maternal part of the placenta.

decidua reflexa (*Zool.*). In certain Mammals, as the Hedgehog, a capsule surrounding the embryo formed by the maternal mucous membrane.

decid'uate (*Zool.*). Said of Mammals in which the maternal part of the placenta comes away at birth. Cf. *indeciduate.*

deciduo'ma malig'num (*Med.*). See **chorion-epithelioma.**

decid'uous (*Bot.*). Falling off, usually after a lengthy season of growth and functioning, generally before cold or drought sets in.—(*Med.*) Falling off; said of the teeth of the first dentition.

decimal. The name for a system of units of which each unit is ten times the next smaller one, as in *decimal coinage, decimal weights.*

decimal candle (*Light*). See **bougie décimale.**

decimal fraction. A fraction having a power of ten as denominator. The denominator is not usually written but is indicated by the decimal point, a dot placed between the unit figure and the numerator. The number of figures after the decimal point is equal to the power of 10 of the denominator. Thus 42·017 is equal to $42\frac{17}{1000}$.

decimetre waves (*Radio*). A term sometimes applied to electromagnetic radiation having a wavelength of the order of ten centimetres. See also **centimetre waves, microwaves.**

decimo octavo (*Print.*). See **eighteenmo.**

decimo sexto (*Print.*). A sheet of paper folded into sixteen leaves, usually called 'sixteenmo.'

deci-neper (*Elec. Comm.*). The unit of voltage and current attenuation in lines and amplifiers, of magnitude one-tenth of the *neper* (q.v.).

decinormal calomel electrode (*Chem.*). A calomel electrode containing decinormal potassium chloride solution.

decinormal solution (*Chem.*). A standard solution which is one-tenth as concentrated as a normal solution. See **normal solution.**

deck (*Ship Constr.*). A platform which forms the ceiling of one horizontal division of a ship and the floor of that immediately above.

See **awning—**
boat—
hurricane—
lower—
main—
orlop—
promenade—
shelter—
upper—

deck beam (*Ship Constr.*). A stiffening member of a deck, which may be either transverse or longitudinal. It is supported at extremities by knee connexions to frames or bulkheads or by supporting girders.

deck bridge (*Civ. Eng.*). A bridge in which the track is carried by the upper stringer. Cf. *through bridge.*

deck crane (*Ships*). A crane consisting usually of one of a series of derricks attached to a mast and worked by a winch; used for loading and unloading.

deck forge (*Ships*). A portable forge used by riveters and smiths on board ship.

deck stringer (*Ship Constr.*). The main strength portion of a ship's deck, being that portion, on both sides, adjacent and attached to the shell plating. It comprises the stringer strake of plating and the stringer angle section forming such attachment.

deck watch (*Horol.*). A precision watch for use on board ship. It is carried in a box, or may be worn in the pocket.

decking (*Build.*). The platform supporting the derrick on a derrick tower gantry.

deckle edge (*Paper*). The feathery edge of hand-made paper due to the 'deckle' or mould frame. In machine-made paper it can be formed by artificial means.

deckle straps (*Paper*). Rubber straps, at the sides of a paper-making machine, which form a deckle edge on the paper.

declared efficiency (*Elec. Eng.*). The efficiency which the manufacturers of an electric machine or transformer declare it to have, under certain specified conditions.

dec'linate (*Bot.*). Descending in the form of a curve.

declination (*Astron.*). The angular distance of a heavenly body from the celestial equator measured, positively northwards, as an arc of the great circle perpendicular to the celestial equator and passing through the body and the celestial poles.

declination (*Surv., etc.*). The angular deviation of a magnetic compass, uninfluenced by local causes, from the true north and south. The declination varies at different points on the earth's surface and at different times of the year. Also called MAGNETIC DECLINATION, MAGNETIC VARIATION.

declination circle (*Astron.*). (1) The great circle passing through the celestial poles and through a heavenly body and cutting the celestial equator at right-angles.—(2) The graduated circle of an equatorial telescope on which declinations are read.

declining (*Bot.*). Straight, and pointing downwards.

declinom'eter (*Elec. Eng.*). An instrument for making accurate measurements of the angle between the magnetic and geographic meridians.

decoction (*Med.*). A medicine prepared by boiling.

decohe'rer (*Radio*). A device for restoring a *coherer* (q.v.) to its sensitive, non-conducting condition after the arrival of a signal. Also called ANTI-COHERER. See also **tapper.**

decolla'tion (*Zool.*). The dropping off of the upper whorls of a gastropod shell, when the animal has ceased to occupy them.

décollement, dā-kol-mahn^{g} (*Surg.*). The separation of an organ from tissue to which it adheres.

decolorate, decoloured (*Bot.*). Without colour.

decolorisers (*Glass*). Materials added for the express purpose of improving the appearance of the glass by hiding the yellow-green colour due to iron impurities. Actually they increase the total absorption of light by the glass and cannot be satisfactorily employed if more than a certain amount of iron is present.

decompensation (*Med.*). Failure of a diseased heart which has previously maintained its strength although diseased.

decomposed (*Bot.*). The condition of the cortex of a lichen when composed of gelatinous hyphae.

decomposed (*Zool.*). Not touching; as the barbs of a feather when they are not in contact.

decomposition (*Chem.*). The more or less permanent breaking down of a molecule into simpler molecules or atoms.

decomposition voltage (*Elec. Eng.*). The minimum voltage which will cause continuous electrolysis in an electrolytic cell.

decompound (*Bot.*). A term applied to a compound leaf having leaflets made up of several distinct parts.

decompounding winding (*Elec. Eng.*). A series winding on a compound-wound d.c. generator, connected in such a way that the m.m.f. produced by it is in opposition to that of the shunt winding. Also called a DIFFERENTIAL WINDING.

decompression (*Surg.*). Any procedure for the relief of pressure or of the effects of pressure.

deconjugation (*Cyt.*). The separation of the chromosomes before the end of the prophase of meiosis.

decorative lighting (*Illum.*). Lighting used for decorative effect rather than for providing useful illumination.

decor'ticated (*Bot.*). Deprived of bark: devoid of cortex.

decortication of the lung (*Surg.*). Operative removal from the lung of pleura thickened as a result of chronic inflammation.

de-coupling (*Elec. Comm.*). Reduction of common impedance between the input and output circuits of a source of gain (such as a thermionic valve), so that a tendency for oscillation or a distortion of the response curve of the circuit is obviated. See **stopper.**

dec'rement (*Radio*). Abbrev. for *logarithmic decrement* (q.v.).

decrem'eter (*Radio*). An instrument for measuring decrement. It consists essentially of a resonant circuit whose response to a damped impressed e.m.f. has been previously calibrated in terms of the decrement.

decu'bitus (*Med.*). The posture of a patient lying in bed.

decumbent (*Bot.*). Lying flat, except for the tip, which ascends.

decurrent (*Bot.*). (1) (Of a leaf) having the base prolonged down the stem as two wings.—(2) (Of the gills of an agaric) running for some distance down the stipe.

decurved (*Bot.*). Bent downwards.

decus'sate (*Bot.*). With leaves in pairs, each pair being at right-angles to the pair above and below

decussa'tion (*Zool.*). Crossing over of nerve-tracts with interchange of fibres.

deden'dum (*Eng.*). The radial distance from the pitch circle of a gear-wheel to the bottom of the spaces between teeth.

dedifferentiation (*Biol.*). Retrogressive changes in a differentiated tissue, leading to the reduction of all types of cells to a common indifferent form.

dedol'omitisa'tion (*Geol.*). The recrystallisation of a dolomite rock or dolomitic limestone consequent on contact metamorphism; essentially involving the breaking down of the dolomite into its two components, $CaCO_3$ and $MgCO_3$. The former merely recrystallises into a coarse calcite mosaic; but the latter breaks down further into MgO and CO_2. The magnesium oxide may occur in the rock as periclase, more commonly as brucite, while in the presence of silica magnesium silicates such as forsterite are formed. See **forsterite marble.**

deductive reasoning. The mental process whereby an unobserved fact is inferred from relevant observations of other facts.

dee (*Thermionics*). The half-hollow cylinder employed in the cyclotron, in which a spiral beam of electrons is continuously accelerated, thereby increasing their energy.

deep bead (*Join.*). A piece of timber covering the lower 3 inches or so of movement of the bottom sash in a window, so as to permit of ventilation at the meeting rail while keeping the bottom of the window to all intents and purposes shut.

deep drawing (*Met.*). The process of cold-working or drawing sheet or strip metal by means of dies into shapes involving considerable plastic distortion of the metal; e.g. automobile mud-guards, electrical fittings, etc.

deep-sea deposits (*Geol.*). Those sediments which accumulate out of reach of ordinary land-derived material; they fall into two categories—(1) organic oozes, (2) various muds and clays. In the shallower parts of the oceans the oozes are composed of the hard parts of planktonic organisms embedded in a powder arising from their disintegration. In the deeper parts the remains of siliceous organic remains are dominant. Information regarding the nature and distribution of these oozes and the red clay of the ocean deeps has been obtained during the explorations by the *Challenger* and other vessels. See **red clay, diatom ooze, pteropod ooze, globigerina ooze, radiolarian ooze.**

deep-sea lead (*Surv.*). A lead used for attachment to a lead-line measuring beyond 100 fathoms.

deep well (*Civ. Eng.*). A shaft sunk through an upper impermeable stratum into a lower permeable one, from which a supply of water may be obtained.

deep-well pump (*Eng.*). A centrifugal pump, generally electrical-driven by a submerged motor built integrally with it, placed at the bottom of a deep bore hole for raising water.

Deepkill Shales (*Geol.*). The graptolite-shale facies of the Beekmantown Group in the Hudson River valley, equivalent to the Arenig Series of Britain.

deeps (*Surv.*). The intervening unmarked fathoms on a lead-line carrying *marks* (q.v.) at irregular intervals; e.g. at 2, 3, 5, 7, 10 fathoms, etc.

deer-fly fever (*Vet.*). See **tularaemia.**

defaecation, defecation. The ejection of faeces from the body.

defenders (*Acous.*). See **ear defenders.**

def'erent (*Astron.*). See **epicycle.**

deferves'cence (*Med.*). The fall of temperature during the abatement of a fever: the period when this takes place.

defibrination (*Med.*). Removal of fibrin, e.g. from the blood.

deficiency (*Cyt*). The loss of a portion of a chromosome.

deficiency disease (*Med.*). Any disease resulting from the deprivation of food substances (e.g. vitamins) necessary to good health.

deficient (*Struct.*). See **unstable.**

definite (*Bot.*). (1) Ending in a flower and ceasing to elongate.—(2) Said of an inflorescence with all its branches of limited growth; the same as *cymose*.—(3) Always of the same number in any one species.

definite proportions (*Chem.*). See **law of constant (or definite) proportions.**

definite time-lag (*Elec. Eng.*). A time-lag fitted to relays or circuit-breakers to delay their operation; it is quite independent of the magnitude of the current causing that operation. Also called CONSTANT TIME-LAG, FIXED TIME-LAG, INDEPENDENT TIME-LAG.

definite variation (*Bot.*). A change taking place in a definite direction in the history of a race.

definition (*Acous.*). The clarity of perception of speech sounds, particularly the transient sounds. Acoustic definition depends largely on the ratio of the direct intensity to the reverberant intensity, when an enclosure is considered.

definition (*Photog.*). See **depth of definition.**

definition (*Television*). The extent to which a television or photo-telegraphic system is capable of reproducing the detail of the transmitted image. Generally defined as the number of picture elements, or the number of scanning lines, into which the picture is divided.

definitive (*Zool.*). Final, complete: fully developed: defining or limiting.

def′lagrating spoon (*Chem.*). A small spoon-shaped instrument used in chemical laboratories for handling materials which are liable to take fire when exposed to air.

deflagra′tion (*Chem.*). Sudden combustion, generally accompanied by a flame and a crackling sound.

deflection (*Eng., Struct.*). (1) The amount of bending or twisting of a structure or machine part under load.—(2) The movement of the hand of any recording instrument.

deflection angle (*Surv.*). The angle between one survey line and the prolongation of another survey line which meets it. See also **intersection angle.**

deflectional sensitivity (*Cathode Ray Tubes*). The linear displacement of the fluorescent spot produced by a P.D. of one volt between the deflector plates, or by a current of one ampere in the deflector coils in the case of magnetic deflection.

deflectom′eter (*Eng.*). A device for measuring the amount of bending suffered by a beam during a transverse test.

deflector (*Elec. Eng.*). See **arc deflector.**

deflector coil (*Cathode Ray Tubes*). A coil so arranged that a current passing through it produces a magnetic field which deflects the beam in a cathode ray tube employing magnetic deflection.

deflector plates (*Cathode Ray Tubes*). Electrodes so arranged in a cathode ray tube that the electrostatic field produced by a difference of potential between them deflects the beam. See also **electrostatic deflection.**

deflexed (*Bot.*). Bent outwards and downwards.

defor′meter (*Struct.*). An instrument used, in the mechanical determination of stresses, to impose a known distortion upon a model of a structure.

degassing (*Thermionics*). The final stage in the evacuation process in the manufacture of thermionic valves. The electrodes are raised to a temperature higher than that which they will meet in use, to drive off occluded gases, which are then removed by the pump.

degaussing (*Elec. Eng.*). Neutralisation of the magnetisation of a mass of magnetic material, e.g. a ship, by an encircling current-carrying conductor.

degeneration (*Bot.*). The loss of morphological or physiological characters by a fungus kept in culture for a long time.

degeneration (*Biol.*). Evolutionary retrogression; the process of returning from a higher or more complex state to a lower or simpler state.

degeneration (*Radio*). See **negative feed-back.**

degenerative amplifier (*Elec. Comm.*). A thermionic amplifier for wide frequency bands and minimised amplitude distortion, these results being obtained by reversed or negative retroaction.

deglutit′ion (*Zool.*). The act of swallowing.

deglutition pneumonia (*Med.*). Pneumonia induced as a result of aspiration into the lungs of food or drink, or of matter from the nose or throat.

degradation (*Chem.*). (1) The conversion of a complex alkaloid molecule into simpler, easily recognisable fragments.—(2) The conversion of a saccharose into one with one less carbon atom in the molecule.

degrains (*Gloves*). These are made from the skins of sheep, gazelles, reindeer, or mocha, dressed on the grain side after the grain has been removed.

deg′ras or moellen (*Oils*). (1) A semi-oxidised fat expressed from sheep skins after the oiling process and forming a by-product in the manufacture of chamois leather; from it, when purified, *lanolin* (q.v.) is obtained.—(2) A similar manufactured substance, commonly known as *sod oil.*

degreasing (*Metal Finishing*). Removal of grease, usually by an organic solvent, from the surface of metals before electroplating, enamelling, etc.

degree (*Heat*). The unit of temperature difference. It is usually defined as a certain fraction of the fundamental interval, which for most thermometers is the difference in temperature between the freezing and boiling points of water. See **Centigrade scale, Fahrenheit scale.**

degree of a curve (*Surv.*). The angle subtended at the centre of a curve by a standard chord length of 100 ft.

degree of damping (*Elec. Comm.*). The extent of the damping in an oscillatory system, expressed as a fraction or percentage of that which makes the system critically damped.

degree of dissociation (*Chem.*). The fraction of the total number of molecules which are dissociated.

degrees of freedom (*Chem.*). (1) The number of variables defining the state of a system (e.g. pressure, temperature, composition) which may be fixed at will.—(2) The number of independent capacities of a molecule for holding energy, translational, rotational, and vibrational.

degree of ionisation (*Chem.*). The proportion of the molecules of a dissolved substance which are dissociated into charged particles or ions.

degressive (*Bot.*). A change towards simplification or degeneration.

de-gumming (*Silk*). A term synonymous with *boiling-off.*

dehis′cence (*Bot.*) The spontaneous opening at maturity of a fruit, anther, sporangium, or other reproductive body.

dehiscence (*Zool.*) In general, the act of splitting open: more particularly, in *Porifera,* the splitting of the outer layer of cells of certain types of larva to permit of the passage, to the exterior, of the cells primarily occupying the interior; see also **diapedesis.**—*adj.* **dehiscent.**

dehumid′ified air (*Mining*). Air dried artificially by compression and re-expansion, to increase its cooling power in ventilating hot mines.

dehumidifier (*Air Conditioning*). The washing screen of fine water which cools the air extracted by the air-conditioning plant from an auditorium and, under certain conditions, reduces the water content of the output air while adjusting its dew point.

dehydration (*Chem.*). (1) The splitting off of H_2O from a molecule by the action of heat, often in the presence of a catalyst, or by the action of a dehydrating agent, e.g. concentrated sulphuric acid.—(2) The removal of water from crystals, tars, oils, etc. by heating, distillation, or by chemical action.—(*Med.*) Excessive loss of water from the tissues of the body.

dehy′drogenase, dehy′drase (*Bot.*). A plant enzyme which induces the reduction of substances.

de-icer (*Aero.*). See **anticer.**

deion circuit-breaker, dē-ī-on (*Elec. Eng.*). A circuit-breaker fitted with an arc-control device in which the arc takes place within a slot in a stack of insulated plates. The plates contain iron inserts or a magnet coil, so that the arc is blown magnetically towards the closed end of the slot, thereby coming into contact with cool oil which has a deionising action and extinguishes the arc.

deionisation (*Elec. Eng.*). The process whereby an ionised gas returns to its normal neutral condition.

deionisation time (*Thermionics*). The period necessary for the substantially complete re-combination of the electrons and positive ions in a gas after the removal of the ionising agent.

Deiter's cells, dī′ter (*Zool.*). In Mammals, supporting cells of the sensory epithelium of the organ of Corti.

deka-ampere balance (*Elec. Eng.*). An ampere-balance having a current range from 1 to 100 amperes.

dekad'. The interval of ten days.

delaine (*Textiles*). A light plain-weave dress fabric manufactured from Botany worsted yarn.

delamination (*Zool.*). The division of cells in a tissue, leading to the formation of layers.

De la Rue cell (*Elec. Eng.*). See **chloride of silver cell.**

delay (*Elec. Comm.*). The time taken for a signal to travel from one end of an electrical communication system to the other, or along a part of such system.

See **acoustic—**
envelope—
group—
magnetic—
phase—

delay action (*Photog.*). An arrangement on the shutter of a camera whereby it is released at a definite time later than when actuated.

delay cable (*Elec. Eng.*) A cable used in the investigation of uncontrolled surge phenomena; the surge, after arrival at the point under investigation, travels along the delay cable to delay its arrival at the recording apparatus (cathode ray oscillograph) until the operation of this apparatus has been initiated.

delay network (*Elec. Comm.*) An artificial line of electrical networks, specially designed to provide a specified delay in the transmission of currents over a frequency band represented by speech, in order that time may be allowed for switches or relays to be operated by the speech.

delay period (*Eng.*). The time or crank-angle interval between the passage of the spark and the resulting pressure rise in a petrol or gas engine, or between fuel injection and pressure rise in an oil engine.

delay working (*Teleph.*). In trunk operations, when the lines are in such full operation that subscribers have to wait for connexions, their requirements are noted by a trunk-record operator, who routes this to the relevant trunk operator, who in turn calls back the subscriber when a line is about to be free. See **demand working.**

delayed action (*Elec. Eng.*). Any arrangement which imposes an arbitrary delay in operation; e.g. in a switch or circuit-breaker. See **time-lag device.**

delayed automatic volume control (*Elec. Comm.*). The partial use of automatic gain control, in which the signal applied to the demodulator does not affect the gain of the previous amplifier, unless it exceeds a predetermined value.

dele, dē'le (*Typog.*). *Imperative sing.* of Latin *delere*, to destroy, to 'delete.' See next article.

delete (*Typog.*). Remove, or strike out. In proof-correcting, the unwanted letter or word is crossed through and a *delete mark* (₰) inserted in the margin.

deletion (*Cyt.*). The loss of a portion of a chromosome.

delf (*Mining*). A thin layer or seam of coal or ironstone.

delft (*Pot.*). A close-grained buff earthenware, with opaque stanniferous glaze to receive painting, which is then covered with transparent glaze.

Delhi boil (*Med.*). Tropical sore; Baghdad boil. Oriental sore resulting from infection of the skin with a protozoal parasite.

delignifica'tion (*Bot.*). The destruction of lignin in plant material by the action of a fungus.

deliming (*Leather*). The process of removing lime salts from skins and hides, previous to tanning.

delinquent (*Psychol.*). An individual, generally a child or adolescent, who shows definite lack of moral and social sense, without evidence of impairment of intellect; in particular, one who commits a social or criminal offence.

deliques'cence (*Bot.*). Gelatinisation and liquefaction of cell walls, sporangium membranes, etc, at maturity.

deliquescence (*Chem.*). The change undergone by certain substances which become damp and finally liquefy when exposed to the air, owing to the very low vapour pressure of their saturated solutions.

deliquescent. *Adj.* from *deliquescence.*

delirium (*Med.*). A profound disturbance of consciousness occurring in febrile and toxic states; characterised by restlessness, incoherent speech, excitement, delusions, illusions, and hallucinations.

delirium tre'mens (*Med.*). An acute delirium in chronic alcoholism, characterised by insomnia, restlessness, terrifying hallucinations and illusions, and loss of orientation to time and place.

delivery (*Eng.*). (1) The discharge from a pump or compressor.—(2) The withdrawal of a pattern from a mould.

delivery (*Obstet.*). The birth of a child.

Dellinger fade-out (*Radio*). A complete fade-out and inhibition of short-wave radio-communication because of the formation of a highly absorbing D-layer, lower than the regular E- and F-layers of the ionosphere, on the occasion of a burst of hydrogen particles from an eruption associated with a sun-spot. See **D-layer.**

Delobranchia'ta (*Zool.*). A group of *Arachnida*, possessing gills; of aquatic habit.

Delon rectifier (*Elec. Eng.*). A high-voltage rectifier for dealing with small currents; it consists of a system of condensers in conjunction with a rotating switch.

delph (*Hyd. Eng.*). A drain behind a sea embankment, on the land side.

delphs (*Mining*). A term used in Yorkshire to denote the working places in ironstone quarries.

del'phinin (*Chem.*). An anthocyanin responsible for the colour of the flowers of the delphinium On hydrolysis it decomposes into two molecules of glucose, two of *p*-hydroxybenzoic acid, and one of delphinidin.

del'phinine (*Chem.*). $C_{31}H_{49}O_9N$ or $C_{34}H_{47}O_9N$, an alkaloid of unknown constitution, obtained from the seeds of *Delphinium staphisagria.* It crystallises in rhombs, begins to decompose at 120° C., m p. 192° C., insoluble in water, soluble in most organic solvents. It is intensely toxic, resembling aconitine in its action.

delta (*Geol.*). The more or less triangular area of river-borne sediment deposited at the mouth of rivers heavily charged with detritus. A delta is formed on a low-lying coastline, particularly in areas of relative uplift. By contrast, where the land tends to sink, rivers enter the sea through drowned valleys and estuaries. The Nile Delta is a good example.

delta connexion (*Elec. Eng.*). A method of connexion used for the three windings of a piece of three-phase electrical equipment; the windings are connected in series, the three-phase supply being taken from or supplied to the junctions. The vector diagram of the current or voltage in the windings is in the form of a triangle and the symbol Δ *connexion* is therefore often used.

delta iron (*Met.*). The polymorphic form of iron stable between 1403° C. and the melting point (about 1532° C.). The space lattice is the same as that of α-iron and different from that of γ-iron.

delta metal (*Met.*). Originally a high-strength alpha-beta brass containing iron. Now applied to alloys which also contain manganese and aluminium. See **high-strength brass.**

delta network (*Elec. Comm.*). Network formed from three impedances in series, i.e. the same as a three-sided mesh, or an unbalanced π.

delta voltage (*Elec. Eng.*). Normally synonymous with *mesh voltage*, but the term is also used to denote the voltage between alternate terminals or lines of a symmetrical 6-phase system.

delta'ic deposits (*Geol.*). The accumulations of sand and clay, with remains of brackish water organisms, drifted plant debris, and animal remains, washed in from the land. Current-bedding is characteristic, with well developed fore-set and top-set beds. The Millstone Grit is a good example of a 'fossil delta.'

delthy'rium (*Zool.*). In *Brachiopoda*, the aperture in the ventral valve, or between the beak and the hinge, for the passage of the peduncle.

deltid'ium (*Zool.*). A small calcareous plate covering the delthyrium in certain species of Brachiopods.

deltoid (*Bot., Zool.*). Having the form of an equilateral triangle: any triangular structure, as the deltoid muscle of the shoulder.

delusion (*Psychiatry*). A belief in events for which there is no objective evidence; a false belief peculiar to the believer.

demagnetisation (*Elec. Eng.*). The process whereby a magnetised body has its degree of magnetisation reduced. This may be done by applying a magnetising force which opposes that producing the original magnetising force. With a permanent magnet the process may occur naturally, and may be accelerated by rough treatment, e.g. by dropping or by heating to a red heat.

demagnetising ampere-turns (*Elec. Eng.*). See **back ampere-turns.**

demand (*Elec. Eng.*). See **maximum demand.**

demand factor (*Elec. Eng.*). Ratio of the maximum demand on a supply system to the total connected load.

demand indicator (*Elec. Eng.*). See **maximum-demand indicator.**

demand limiter (*Elec. Eng.*). See **current limiter.**

demand working (*Teleph.*). The operation of trunk circuits in such a way that the subscriber's requirements can be met without his waiting an unreasonable time or having to be recalled. See **delay working.**

deman'toid (*Min.*). Bright-green cubic crystals of the garnet andradite, essentially silicate of lime and iron.

dementia (*Psychol.*). Any form of insanity characterised by the failure or loss of mental powers: the organic deterioration of intelligence, memory, and orientation.

dementia praecox (*Psychol.*). A form of insanity, occurring usually in adolescence, in which introversion and disconnexion between thoughts, feelings, and actions are marked features. Kraepelin originally introduced this term to denote the group of organic mental disorders (psychoses) which he later renamed schizophrenia. The group comprises the paranoid, catatonic, hebephrenic, and the above simple type.

De Meritens alternator (*Elec. Eng.*). An old form of alternator in which the exciting field is produced by a series of rotating permanent magnets. Used until recently in some lighthouse equipments.

demer'sal (*Zool.*). Found in deep water or on the sea bottom; as Fish eggs which sink to the bottom, and 'wet' or midwater and bottom-living Fish as opposed to surface Fish (e.g. Herring) and Shellfish. Cf. *pelagic.*

demi- (Latin *dimidius*, half). A prefix used in the construction of compound terms; e.g. *demiplate.*

demifacet, —fas'et (*Zool.*). One of the two half-facets formed when the articular surface for the reception of the capitular head of the rib is divided between the centra of two adjacent vertebrae.

demi-hunter or **half-hunter** (*Horol.*). A form of watch case in which the glass occupies one-half of its hinged cover.

demilune cells (*Zool.*). See **Gianuzzi's crescents.**

demi-lustre (*Worsted*). A term applied to a class of wools to differentiate them from lustre (the highest quality) and mountain wools.

demisheath (*Zool.*). In some *Insecta*, one of two chitinous sheaths protecting the ovipositor.

demodulation (*Elec. Comm.*). The inverse of modulation. Generally effected by passing the modulated carrier, or the high-frequency signal with an added carrier, through a non-linear system, so that the output currents or voltages contain difference-frequencies between the carrier and side-frequencies which can be extracted and reformed into the original modulating signal. Previously denoted by *detection.* Also previously applied to the reduction of the depth of modulation in a carrier when the latter is partially rectified in a high-frequency amplifier, with or without the presence of a relatively strong alien carrier.

demodulator (*Radio*). See **detector.**

demography. The study of population statistics and the estimation of their variation with time.

Demospongiae, —spun'ji-ē (*Zool.*). A class of *Porifera* usually distinguished by the possession of a skeleton composed of siliceous spicules, or of spongin, or both; triaxial spicules are lacking; the flagellated chambers are small and rounded; the choanocytes are small.

dempy (*Mining*). A pit, or a portion of the workings in a pit, in which there are frequent outbursts and accumulations of noxious gases.

demul'cent (*Med.*). Soothing, allaying irritation.

demulsification number (*Lubricants*). The resistance to emulsification by a lubricant when steam is passed through it; indicated in minutes and half minutes required for the separation of a given volume of oil after emulsification.

demy, dem-ī' (*Paper*). A standard size of (*a*) printing paper, 17½ × 22½ in.; (*b*) writing paper, 15½ × 20 in., U.S. 16 × 21 in.

demy octavo (*Typog.*). A book size, 8¾ × 5⅝ in.

dena'tured alcohol (*Chem.*). Alcohol which according to law has been made unfit for human consumption by the admixture of nauseating or poisonous substances, e.g. methyl alcohol, pyridine, benzene, etc.

dendrite (*Crystal.*). A tree-like crystal formation.—(*Met.*) Metal crystals grow in the first instance by branches developing in certain directions from the nuclei. Secondary branches are later thrown out at periodic intervals by the primary ones and in this way a skeleton crystal, or *dendrite*, is formed. The interstices between the branches are finally filled with solid which in a pure metal is indistinguishable from the skeleton. In many alloys, however, the final structure consists of skeletons of one composition in a matrix of another.

dendrite (*Zool.*). A nerve-cell process which branches almost from the point at which it leaves the cell-body, as opposed to an axon: one of the terminal twigs into which an afferent axon breaks up at a synapse. Cf. *telodendra.*

dendrit'ic (*Bot.*). (1) Bearing markings which are tree-like or moss-like.—(2) Much branched.

dendritic figure (*Zool.*). In experimental embryology, an appearance produced by poisoning an egg under certain conditions; several pseudasters and isolated asters are produced, united by streaks of protoplasm.

dendritic markings (*Geol.*). Tree-like markings, usually quite superficial, occurring on joint-faces and other fractures in rocks, frequently consisting of oxide of manganese or of iron. Less frequently the appearance is due to the inclusion of a mineral of dendritic habit in another mineral or rock; e.g. chlorite in silica as in 'moss agate.' See also **Cotham Marble, landscape marble.**

dendritic ulcer (*Med.*). A branching ulcer of the cornea, due to herpes of the cornea.

Dendrochirota, —ki-rō′ta (*Zool.*). An order of *Holuthuroidea* having long branched buccal tentacles covered with slime and lacking ampullae, but possessing retractor muscles; with respiratory trees; they feed on floating organisms.

den′drograph (*Bot.*). An instrument which is used to measure the periodical swelling and shrinkage of tree trunks.

dendroid (*Bot.*). (1) Tall, with an erect main trunk, as tree-ferns.—(2) Freely branched.

dendron (*Zool.*). See **dendrite.**

dendrophy′sis (*Bot.*). A paraphysis-like structure bearing simple or branched spines.

dener′vated (*Med.*). Deprived of nerve supply.

dengue (*Med.*). A tropical disease in which the infecting agent is transmitted by mosquito to man; characterised by severe pains in the joints and a rash.

denier system, de-nēr′ (*Textiles*). The system used in the 'counting' of silk and rayon yarns; designated by the weight in grams of 9000 metres of yarn, the unit of length.

denig′rate (*Bot.*). Blackened.

den′im (*Textiles*). A strong cotton cloth, chiefly in blue, black, or brown colours, used extensively for overalls. The weave is usually 3-and-1 twill.

denitrification (*Bot.*). The liberation of elementary nitrogen, by denitrifying bacteria, from nitrogenous compounds in the soil, in particular from nitrites and nitrates.

denizen (*Bot*). A species which maintains its footing as a wild plant, though probably introduced by man.

dens (*Zool.*). Any tooth-like process, as the distal arms of the furcula in *Collembola.*—*pl.* **den′tes.**

dens epistrophei, —trŏ′fē-ī (*Zool.*). See **odontoid process.**

densimeter (*Diel.*). See **Gurley densimeter.**

densi-tensim′eter (*Chem*). An apparatus for determining both the pressure and the density of a vapour.

densitom′eter (*Photog.*). An instrument for measuring the densities of exposed and developed film, particularly in photographic sound-recording. The illumination, due to light passing through the film, is attenuated until it matches a standard attenuated illumination.

density (*Elec. Eng.*).

See **current—** **magnetic flux—**
electric flux—

density (*Photog.*). The logarithm of the opacity, which is the reciprocal of the transmission or transparency, that is the ratio of the transmitted intensity to the incident intensity, on a film or plate.

See **diffuse—** **specular—**

density (*Phys., etc.*). The mass of unit volume of a substance, expressed in such units as grams per cubic centimetre or lbs. per cubic foot. See **specific gravity.**

density bottle (*Chem.*). A thin glass bottle, accurately calibrated, used for the determination of the density or specific gravity of a liquid.

density, energy (*Acous.*). See **energy density of sound.**

density function (*Astron.*). A formula expressing the total number of stars per unit volume chosen, say, one million cubic parsecs. In statistical investigations into the structure of the universe this function is found for different regions of space and the results are combined.

dent (*Weaving*). A term applied to one of the wires forming a reed; also to the space between two wires, through which warp threads are drawn.

dental. Pertaining to the teeth.

dental formula (*Zool.*). A formula used in describing the dentition of a Mammal to show the number and distribution of the different kinds of teeth in the jaws; thus a Bear has in the upper jaw three pairs of incisors, one pair of canines, four pairs of premolars, and two pairs of molars; and in the lower jaw three pairs of incisors, one pair of canines, four pairs of premolars, and three pairs of molars. This is expressed by the formula $\frac{3}{3}\frac{1}{1}\frac{4}{4}\frac{2}{3}$.

dental surgery. See **dentistry.**

dental′e (*Zool.*). A bone of the lower jaw in some Fish.

dentary (*Zool.*). In Vertebrates, a membrane bone of the lower jaw which usually bears teeth.

dentate (*Bot.*). Having a toothed margin; if each tooth bears a subsidiary tooth, the margin is *doubly dentate.*

dentation (*Bot.*). (1) A general name for the toothing of a margin, i.e. when it bears small blunt or pointed outgrowths.—(2) The collective name for the ridges of thickened wall material projecting into the lumina of ray tracheides in the wood of pines.

dentelle (*Bind.*). A style of decoration of a tooth-like or lace-like character; used in covers.—(*Textiles*) A lace edging in the form of a series of small teeth.

denticles (*Zool.*). Any small tooth-like structures: the placoid scales of *Selachii.*

dentic′ulate (*Bot.*). Said of a margin bearing small teeth.

denticulated (*Build.*). A term applied to mouldings decorated with dentils.

dentigerous cyst, —tij′er-us (*Vet.*). A cyst containing teeth; usually a teratomatrous cyst on the malar bone of a horse.

dentil (*Build.*). A projecting rectangular block forming one of a row of such blocks under the corona of a cornice.

dentine (*Zool.*). A hard calcareous substance, allied to bone, of which teeth and placoid scales are mainly composed.—*adj.* **den′tinal.**

dentiros′tral (*Zool.*). Having a toothed or notched beak.

dentistry or **dental surgery.** The treatment of diseases and irregularities of the teeth (and often of associated tissues), including conservation, extraction (*exodontia*), and artificial replacement (*dental prosthesis*) of teeth, and rectification of abnormalities in the dentition (*orthodontia*).

dentition (*Zool.*). The kind, arrangement, and number of the teeth: the formation and growth of the teeth: a set of teeth, as the milk dentition.

denu′date, denuded (*Bot.*). Having a worn or stripped appearance.

denudation (*Geol.*). The laying bare (Latin *nudus*, naked) of the rocks by chemical and mechanical disintegration and the transportation of the resulting rock debris by wind or running water. Ultimately denudation results in the degradation of the hills to the existing base-level. The process is complementary to sedimentation, the amount of which in any given period is a measure of the denudation. See also **marine denudation.**

denuded quadrat (*Bot.*). A square piece of ground, marked out permanently and cleared of all its vegetation, so that a study may be made of the manner in which the area is re-occupied by plants.

deob′struent (*Med.*). Removing obstruction by opening natural passages of the body: medicine which removes obstruction in this way.

deo′dorant, deo′doriser (*San. Eng.*). A substance by the use of which bad smells may be eliminated or minimised.

deoper′culate (*Bot.*). (1) Lacking an operculum.—(2) Having an operculum which does not come away spontaneously.

deoxidation (*Met.*). The process of elimination of oxygen from molten metal before casting by adding elements with a high oxygen affinity, which form oxides that tend to rise to the surface.

deoxidised copper (*Met.*). Copper from which the oxygen remaining after poling has been removed by the addition of a *deoxidiser* (q.v.), usually phosphorus. The deoxidiser that remains in solution lowers the conductivity below that of tough-pitch copper, but the product is more suitable for working operations.

deoxidiser (*Met.*). A substance which will remove or eliminate the effect of the presence of oxygen, particularly in metals.

departure (*Surv.*). The projected length of a survey line upon a line at right-angles to the reference meridian.

depaup′erate (*Bot.*). Having a starved, undeveloped appearance.

dependent (*Bot.*). Hanging down.

depersonalisation (*Psycho-path.*). A condition in which an individual experiences a wide range of unreality feelings in relation to the self, to the body, or to other people, even extending to the feeling of being dead.

dep′eter (*Plast.*). Plasterwork finished in imitation of tooled stone, small stones being pressed in with a board before the plaster sets. Also called DEPRETER.

dephleg′mator (*Chem.*). A *fractionating column* (q.v.).

dephlogis′ticated air (*Chem.*). The name given by Priestley to oxygen. The term is of historic interest only.

dephosphorisation (*Met.*). Elimination of phosphorus from steel, in basic steel-making processes. Accomplished by forming a slag rich in lime. See **acid process, basic process, Bessemer process, open-hearth process.**

depickling (*Leather*). A process, prior to tanning, for removing from sheepskins the acid and salt-pickle used to preserve them during transport.

dep′ilate (*Med.*). To remove the hair from.

depilation (*Bot.*). The natural loss of a hairy covering from the parts of plants as they mature.

depil′atories (*Chem.*). Compounds for removing or destroying hair; usually sulphide preparations.

deplan′ate (*Bot.*). Flattened, or expanded in a flat surface.

deplasmol′ysis (*Biol.*). The process of recovery of a cell from a plasmolysed condition by re-acquisition of water.

depolarisation (*Elec. Eng.*). Prevention of the back e.m.f., due to polarisation, which occurs in some primary cells. It is usually effected by providing an oxidising agent, such as manganese dioxide, which acts upon the hydrogen as fast as it is produced at the positive electrode; such an agent is known as a *depolariser*.

See also **electrolytic— mechanical—**

depo′lariser (*Elec. Eng.*). See under **depolarisation.**

depol′ymer′isa′tion (*Chem.*). The change of a large molecule into simpler ones having the same empirical formula.

deposit (*Elec. Eng.*). (1) The coating of metal deposited electrolytically upon any material.—(2) The sediment which is sometimes found at the bottom of an accumulator cell owing to gradual disintegration of the electrode material.

See **burnt— composite— reguline—**

deposit (*Geol.*). See under **deposition.**

deposition (*Geol.*). The laying down or placing into position of sheets of sediment (often referred to as *deposits*) or of mineral veins and lodes. Synonymous with *sedimentation* in the former sense.

deposition, electro- (*Elec. Eng.*). See **electro-deposition.**

depreciation factor (*Illum.*). A term commonly used in the design of floodlighting and similar installations to denote the ratio of the light output when the lighting equipment is clean to that when it is dirty (i.e. after having been in service for some time).

depres′sant (*Mining*). A chemical which causes a finely powdered sulphide mineral to sink through a froth, in froth flotation. The mineral so sunk is said to be *depressed*.

depressant (*Med.*). Lowering functional activity: a medicine which lowers functional activity of the body.

depressed (*Bot.*). (1) Flattened; said especially of the apex of a solid plant member.—(2) Somewhat sunken in a concave form.

depressed conductor-rail (*Elec. Eng.*). A section of conductor-rail depressed below normal level where it is desired that it shall not make contact with the shoes.

depression (*Meteor.*). The name for that distribution of atmospheric pressure in which the pressure decreases to a minimum at the centre. In the northern hemisphere, the winds circulate in a counter-clockwise direction in such a system; in the southern hemisphere, in a clockwise direction. A depression usually brings stormy unsettled weather.

depression (*Psychol.*). A state of dejection, often combined with feelings of sadness, irritability, or anxiety; usually accompanied by a lowering of psycho-physical activity. It can be (1) a normal depression, as a reaction to an unfavourable external event, or (2) pathological, which may be (*a*) endogenous, e.g. melancholia, due to still unknown internal physical changes, or (*b*) reactive, either in relation to external situations or events, or in relation to an internal phantasy-situation. The pathological reaction, in every case, is exaggerated in duration and intensity.

depression (*Zool.*). An unhealthy condition of *Protozoa* which have been prevented from conjugating for many generations; characterised by degeneration of the cell-organs and retardation of division.

depression of freezing-point (*Heat*). A solution freezes at a lower temperature than the pure solvent, the amount of the depression of the freezing-point being proportional to the concentration of the solution, provided this is not too great. The depression produced by a 1% solution is called the *specific depression*, and is inversely proportional to the molecular weight of the solute. Hence the depression is proportional to the number of gram-molecules dissolved in unit weight of the solvent and is independent of the particular solute used.

depression of land (*Geol.*). Depression relative to sea-level may be caused either by the outward migration of deep-seated magma, or by the cooling and contraction of the same. Such changes are believed to follow a cyclic rhythm. Depression of the land leads to marine transgressions. A false impression of such depression may be caused by eustatic changes in sea-level. See **drowned valleys.**

depres′somo′tor (*Zool.*). A depressor nerve.

depressor (*Zool.*). A muscle which by its action lowers a part or organ: a motor nerve which when stimulated checks the activity of the part to which it leads: a reagent which when introduced into a metabolic system slows down the rate of metabolism.

dep′reter (*Plast.*). See **depeter.**

Deprez-D'Arsonval galvanometer, de-prā— (*Elec. Eng.*). A name sometimes used for the D'Arsonval galvanometer.

dep′side (*Bot., Chem.*). A product formed from hydroxy-aromatic acids by the condensation of the carboxyl group of one molecule with the phenol group of a second molecule. Depsides are probably concerned with the oxidation of fats and proteins inside plant cells.

depth (*Horol.*). The amount by which the teeth of a wheel intersect the teeth of the mating wheel or pinion.

depth charge (*Ammunition*). A bomb which can be set to detonate at a given depth below the surface of the sea. Used mainly as an anti-submarine device.

depth gauge (*Eng*) A gauge used for measuring the depth of a hole; it consists of a narrow rule sliding through a cross-piece.

depth localisation (*Acous.*). The same as *auditory perspective*.

depth, moulded (*Ship Constr*). The depth of a ship from the top of keel to the top of beam at side; referred to as *Lloyds D*.

depth of definition (*Photog.*). The same as *depth of focus* (q v.).

depth of focus (*Photog.*). The distance between the nearer and farther planes, in the area photographed, over which the image is in reasonably sharp focus, depending on the type of lens and the stop.

depth of modulation (*Radio*). A factor expressing the extent to which an amplitude-modulated wave is modulated. It is given by the difference between the 'peak' and 'trough' values of the wave, divided by their sum. Expressed as a percentage, this ratio is also called the PERCENTAGE MODULATION.

depth of penetration (*Radio*). In a solid conductor carrying a high-frequency current, the current tends to concentrate near the surface, with consequent increase in resistance. The *depth of penetration* is defined as that thickness of hollow conductor of the same dimensions which, if the current were uniformly distributed throughout its cross-section, would have the same resistance as the solid conductor.

depth psychology (*Psycho-an.*). The psychology of the unconscious.

depthing tool (*Horol.*). An instrument by means of which two wheels, or a wheel and pinion, can be mounted and their depth adjusted until it is correct, after which the distance apart of their centres can be transferred to the plates for the drilling of the pivot holes.

deputy (*Mining*). (1) The local representative of the owner.—(2) In Northumberland and Durham, a man who timbers or props the working places in a coal-mine.—(3) An official who holds a certificate under the Coal Mines Act, and is responsible for the working of a district. See **fireman.**

derailment (*Rail.*). The action of removing a train or part of a train from the rails.

derby float (*Plast.*). A large trowel consisting of a flat board with two handles on the back.

Derby red (*Paint.*). See **Chinese red.**

Derbyshire neck (*Med*). Chronic enlargement of the thyroid gland, without signs of overactivity of the gland.

Derbyshire spar (*Min.*). A popular name for the mineral *fluorspar*.

Dercum's disease (*Med.*). See **adiposis dolorosa.**

Deri motor (*Elec. Eng.*). A modification of the ordinary repulsion motor, in which speed control is effected by moving two sets of brushes in opposite directions round the commutator. The angular brush movement to produce a given speed change is twice as great as for the ordinary motor, so that finer control is possible.

Deri winding (*Elec. Eng.*). A form of compensating winding used to neutralise armature reaction; sometimes employed on d.c. turbo-generators.

derivative hybrid (*Gen.*). A hybrid obtained by crossing two hybrids, or by crossing a hybrid with one of its parents.

derived circuit (*Elec. Eng.*). See **shunt circuit.**

derived fossils (*Geol.*). These are the remains of organisms entombed in a stratum younger than the fossils themselves. The bed lying above a break in the stratigraphical succession (such as an unconformity) frequently contains fragments of durable rocks (and fossils derived from them) which were laid under contribution during its formation. The Cambridge Greensand is a stratum rich in derived fossils.

derived units (*Elec. Eng.*). Units which are derived from the three fundamental units of mass, length, and time,

derm-, derma-, dermo- (Greek *derma*, skin). A prefix used in the construction of compound terms; e.g. *dermatitis* (q.v.).

derm (*Zool.*). See **dermis.**

dermal (*Bot.*). Appertaining to the epidermis or other superficial layer of a plant member.

dermal, dermic (*Zool.*). Pertaining to the skin: more strictly, pertaining to the dermis.

dermal appendage (*Bot.*). Any outgrowth from the epidermis.

dermal branchiae (*Zool.*). See **papulae.**

dermarticular'e (*Zool.*). See **antarticulare.**

dermat-, der'mato-. Prefix derived from *dermatos*, the genitive of the Greek *derma* (see **derm-**).

dermati'tis (*Med.*). Inflammation of the surface of the skin or epidermis. See also **Dühring's disease, Ritter's disease.**

dermat'ogen (*Bot.*). A hollow sheet of meristematic cells, one layer thick, covering an apical growing point and giving rise to the epidermis.

dermatograph'ia, dermograph'ia (*Med.*). A sensitive condition of the skin in which pressure with, for example, a pencil point will produce a reddish weal.

dermatol'ogy (*Med.*). That branch of medical science which deals with the skin and its diseases.

dermatomy'osi'tis (*Med.*). A disease, progressive and usually fatal, which is characterised by acute or subacute inflammation of muscles, dermatitis, oedema over the affected muscles, sweating, and enlargement of the spleen.

dermat'ophyte (*Bot.*). A parasitic fungus which causes a skin disease in animals.

dermatop'sy (*Zool.*). The condition of having a light-sensitive integument.

dermatosclerosis (*Med.*). See **scleredermia.**

dermato'sis (*Med.*). An affection or inflammation of the deeper layers of the skin.

dermat'osome (*Bot.*). One of the minute portions into which a cell wall can be resolved by prolonged treatment with dilute hydrochloric acid, followed by heating for some time at 50°-60° C.

dermentoglos'sum (*Zool*). In some Fish, a skeletal plate of the tongue covering the entoglossum and arising from the fusion of the dentinal bases.

dermeth'moid (*Zool.*). See **suprethmoid.**

dermis or **derm** (*Zool.*). The inner layers of the integument lying below the epidermis.—*adjs.* **dermal, dermic.**

dermocalyp'trogen (*Bot.*). A meristematic layer present in the apex of the root of many Dicotyledons; it gives rise to the root cap and to the dermatogen.

dermoccip'ital (*Zool.*). In lower Vertebrates and embryonic stages of higher Vertebrates, a pair of membrane bones occupying the place of the interparietal.

dermoid (*Med.*). A cyst of congenital origin containing such structures as hair, skin, and teeth; occurs usually in the ovary.

dermopharynge'al (*Zool.*). A plate of membrane bone supporting the upper or lower pharyngeal teeth in some Fish.

dermoskel'eton (*Zool.*). See **exoskeleton.**

dermotrich'ia (*Zool.*). The horny rays supporting the unpaired fins of Fish.

derrick (*Build.*, *Civ. Eng.*). An arrangement for hoisting materials, distinguished by having a boom stayed from a central post, which in turn is usually stayed in position by guys.

derrick barrel (*Eng.*). The winding drum on which the rope used in derricking or luffing operations in a jib crane is wound or paid out.

derrick crane (*Eng.*). See **derricking jib crane.**

derrick tower gantry (*Build.*). A robust form of staging, for the support of a derrick to be used in the construction of large buildings. It consists of three tall timber towers approximately equidistant from one another and carrying a platform on which the derrick is erected. See **anchor tower, king tower.**

derricking jib crane (*Eng.*). A jib crane in which the inclination of the jib, and hence the radius of action, can be varied by shortening or lengthening the tie-ropes between post and jib.

dertrothe'ca (*Zool.*). In Birds, the horny covering of the maxilla.

dertrum (*Zool.*). In Birds, the horny casing of the beak or any modification of it.

desam'inases (*Chem.*). Enzymes which induce the splitting off of the amino group from amino acids.

desaturation (*Photog.*). The amount of grey in a colour; the reverse of *saturation* (q.v.).

De Sauty's method, sō-tē (*Elec. Eng.*). A Wheatstone bridge method of comparing capacities; the two capacities are placed in two arms of a Wheatstone bridge and resistances are placed in the other two arms, the latter being adjusted until no kick on the galvanometer can be observed when the battery key is depressed.

de-scaling (*Eng.*). The process of (1) removing scale or metallic oxide from metallic surfaces by *pickling* (q.v.); (2) removing scale from the inner surfaces of boiler plates and water tubes.

Descemet's membrane, des-mā (*Zool.*). In *Vertebrata*, a homogeneous elastic layer covering the back of the cornea.

descending (*Bot.*). Growing or hanging downwards in a gradual curve.—(*Zool.*) Running from the anterior part of the body to the posterior part, or from the cephalic to the caudal region.

descending aestivation (*Bot.*). Aestivation in which each segment overlaps the one anterior to it.

descending letters (*Typog.*). Letters the lower part of which descends below the general line; e.g. *g*, *j*, *p*, *q*, *y*.

descloizite, dā-kloi'zīt (*Min.*). An uncommon compound of lead, zinc, and vanadium, crystallising in the orthorhombic system; occurs in the oxide zone of lead-zinc deposits.

descriptive astronomy. That branch of astronomy which is concerned with a general enumeration and description of the various kinds of heavenly bodies but omits mathematical or physical theories.

desensitisation (*Med.*). The process of abolishing the sensitivity of a person to a protein by injecting small amounts of the same protein.

desensitisation (*Photog.*). Treatment to inhibit potential development by further exposure. Effected by certain dyes.

desert (*Geol.*, *etc.*). A barren and uninhabited tract of large extent. Deserts are either cold (e.g. the Arctic and Antarctic wastes) or hot (e.g. the Sahara, Kalahari, and Nubian deserts in Africa, those of Chinese Turkestan and Gobi in Asia, and the Great Basin in N. America). Cold deserts are due entirely to the low temperature appropriate to the latitudes in which they occur; hot deserts are due to an excess of evaporation over precipitation, resulting from the physical configuration of the region; in many cases ranges of mountains cut off the moisture-bearing winds.

des'iccants (*Chem.*). Substances of a hygroscopic nature, capable of absorbing moisture and therefore used as drying agents; e.g. anhydrous sodium sulphate, calcined calcium chloride, etc.

desiccation. The process of drying.—(*Geog.*, *Meteor.*) The drying or disappearing of water from land areas. Such desiccation as is observed appears to arise from the over-cultivation of unprotected land, as in the United States and Africa, and is more accurately termed *exsiccation* (q.v.).

desiccation (*Bot.*). The drying up of a plant or of part of a plant.

desiccation (*Timber*). The process of seasoning timber by exposing it in an oven to a current of hot air.

des'iccator (*Chem.*). Laboratory apparatus for drying substances; it consists of a glass bowl with ground-in lid, containing a drying agent, e.g. concentrated sulphuric acid or calcined calcium chloride; a tray for keeping glassware, etc. in position is also provided, and if desired the desiccator can be evacuated.

design (*Textiles*). (1) Another term for the weave which shows the interlacing of the threads in a fabric.—(2) The pattern on a figured fabric.

design paper (*Textiles*). See **point paper.**

desilverisation (*Met.*). The process of removing silver (and gold) from lead after softening. See **Parke's process, Pattinson's process.**

desk switchboard (*Elec. Eng.*). A form of switchboard panel in which the operating switches, pilot lamps, etc. are mounted on panels inclined to the horizontal like the surface of a desk.

Deslandres equation, dā-lahn^{g}dr (*Light*). An empirical expression for the positions of the origins or heads in a band spectrum.

$$\nu = a + bn + cn^2,$$

ν being the wave-number of the head, a, b, and c constants and n taking successive integral values.

des'mergate (*Zool.*). A worker ant intermediate in characters between an ordinary worker and a soldier.

desmine (*Min.*). See **stilbite.**

desmochon'dria (*Zool.*). Cytoplasmic granular projections found on the surface of epithelial cells.

desmog'nathous (*Zool.*). (In Birds) said of a type of palate in which the vomers are small or wanting and the maxillopalatines meet in the middle line; the palatines and pterygoids articulate with the basisphenoid rostrum.

desmot'ropism (*Chem.*). A special case of *tautomerism* (q.v.) which consists in the change of position of a double bond, and in which both series of compounds can exist independently; e.g. keto and enol form of acetoacetic ester, malonic ester, phenyl-nitromethane, etc.

desorption (*Chem.*). The removal of a substance from the surface at which it is adsorbed.

despatcher, load (*Elec. Eng.*). See **load despatcher.**

desquama'tion (*Med.*). The shedding of the surface layer of the skin.

destarched (*Bot.*). Said of a plant which has been placed in the dark and which no longer contains starch in its leaves; the treatment stops photosynthesis, and allows translocation to remove the starch from the leaves.

destination indicator (*Elec. Eng.*). See **train describer.**

destructive distillation (*Chem.*). The distillation of solid substances accompanied by their decomposition. The destructive distillation of coal results in the production of coke, tar products, ammonia, gas, etc.

destructor station (*Elec. Eng.*). An electric generating station in which the fuel used for the boilers consists chiefly of town or other refuse.

desuperheater (*Eng.*). A vessel in which superheated steam is brought into contact with a water spray in order to make saturated or less highly superheated steam. See **superheated steam.**

desynap'sis (*Cyt.*). Abnormally early breaking up of synapsis in meiosis.

detachable-key switch (*Elec. Eng.*). A switch which can be operated only by a special key, which, for safety, is kept under supervisory control.

detached contact (*Auto. Teleph.*). The detached contact system of drawing complicated diagrams, introduced to effect facility in reading by reduction in length of lines. Thus a relay is labelled *A*/3, which means that the relay *A* has three groups of contacts operated by it; these, located elsewhere on the drawing, are labelled *A*1, *A*2, and *A*3.

detached escapement (*Horol.*). An escapement in which there is a minimum of interference with the free vibration of the pendulum or balance. See **escapement.**

detaching hook (*Mining*). A hook for suspending a cage from the end of a hoisting rope in such a way that the cage becomes detached at the top of the shaft if the engine-man omits to stop the hoisting engine in time.

detail drawing (*Build.*). A large-scale working drawing (usually of a part only) giving information which does not appear on small-scale drawings of the whole construction.

detail paper. A form of tracing paper used in the preparation of detail drawings.

detailer (*Civ. Eng.*). A draughtsman who designs the details involved in steelwork construction.

detection (*Radio*). See **demodulation.**

detector (*Elec. Eng.*). A simple form of galvanometer, used for detecting the presence of current in a circuit without giving an accurate indication of its magnitude. Used for testing continuity of circuits. See **demodulation** and **rectification.**

See also **earth—** **magnetic—** **embedded temperature—**

detector (*Radio*). The obsolete name for that part of a radio receiving equipment which is concerned with extracting the signal from the received modulated carrier, or transposing this modulated carrier to a fixed band of frequencies, as in a superheterodyne or infradyne receiver. Correctly described as a *demodulator* or *frequency changer*; these terms imply precision of conversion of the signal, not merely the detection of the presence of a radio carrier.

detector coefficient (*Radio*). In a linear rectifier, that factor by which the peak value of the applied high-frequency voltage must be multiplied to obtain the d.c. output voltage, on open circuit. In a square law rectifier, the corresponding factor multiplies the square of the applied peak voltage.

detent' (*Horol.*). A detainer or checking device. In a chronometer escapement, the detent carries a stone or jewel for locking the escape wheel.

detent escapement (*Horol.*). An escapement using a detent; e.g. chronometer escapement.

detent spring (*Horol.*). The flat spring in a chronometer escapement by means of which the detent blade, carrying the locking pallet, is attached to the detent foot.

deter'gents (*Chem.*). Cleansing agents (solvents, or mixtures thereof, sulphonated oils, abrasives, etc.) for removing dirt, paint, etc.

determinate (*Bot.*). (1) With a well-marked edge.—(2) Said of an inflorescence which ends in a flower.

determinate (*Struct.*). Said of a structure which is a *perfect frame* (q.v.). Cf. *indeterminate.*

detonation (*Eng.*). In a petrol engine, the spontaneous combustion of part of the compressed charge after the passage of the spark; the accompanying knock. It is caused by the heating effect of the advancing flame front, which raises the gas remote from the plug to its *spontaneous ignition temperature* (q.v.).

detonation meter (*Eng.*). An instrument for measuring quantitatively the severity and frequency of detonation in a petrol-engine cylinder. See **bouncing-pin detonation meter.**

det'onator. A substance which initiates an explosion. Specifically, a small copper or aluminium cap, containing fulminate of mercury or azide of lead, fixed to the end of a fuse. Used to set off high explosives such as guncotton, gelignite, and dynamite. The ignition of the charge in the detonator is often carried out electrically.

See **high-tension—** **low-tension—**

detorsion (*Zool.*). In *Gastropoda*, partial or complete reversal of torsion, manifested by the untwisting of the visceral nerve loop and the altered position of the ctenidium and anus.

detri'tal minerals (*Geol.*). Although, literally, any mineral grains resulting from detrition are detrital, in sedimentary petrology the term is restricted to grains of heavy minerals found in sand and other sediments, and separated therefrom by passing through bromoform or other heavy liquid. See **heavy minerals.**

detrition (*Geol.*). The natural process of rubbing or wearing down strata by blown wind or running water. The product of detrition is *detritus.*

detri'tus chamber (or **pit**) (*Sewage*). A tank through which crude sewage is first passed in order to allow the largest and heaviest of suspended matters to fall to the bottom from which they can be removed.

detumes'cence (*Med.*). The reduction of a swelling.

detuner (*Eng.*). See **dynamic damper.**

detuning (*Radio*). The adjustment of a resonant circuit so that its resonant frequency does not coincide with that of the applied e.m.f.

deuce (*Cinema.*). A mobile pair of incandescent lamps for studio work.

deut-, deuto-, deuter-, deutero- (Greek *deuteros*, second). A prefix used in the construction of compound terms; e g. *deutoscolex* (q.v.). See also **deutero-.**

deuterium (*Chem.*). Heavy hydrogen, i.e. hydrogen of atomic mass 2.

deutero-. Prefix. See **deut-.** (*Chem.*) (1) Containing heavy hydrogen (*deuterium*).—(2) Second in order.—(3) Derived from.

deu'terogamy (*Bot.*). Any process which replaces normal fertilisation.

deuterogna'thous (*Zool.*). Having the jaws borne on the second somite of the head.

Deuteromyce'tes (*Bot*). See **Fungi imperfecti.**

deuteron (*Chem.*). A heavy hydrogen nucleus of mass 2 and carrying unit positive charge, $_1^2\mathrm{H}$.

deu'teroplasm (*Biol.*). See **metaplasm.**

deuterosto'ma (*Zool.*). In development, a mouth which arises secondarily, as opposed to a mouth which arises by modification of the blastopore.

deu'terotoky (*Zool.*). Parthenogenesis leading to the production of both males and females.

Deuterozo'ic (*Geol.*). A term, now disused, for the younger Palaeozoic Systems—the Devonian, Carboniferous, and Permian Systems. Cf. *Proterozoic.*

deuterozo'oid (*Zool.*). A secondary zooid, produced from a primary zooid by budding.

deuthyalosome, dūt-hī-al'— (*Zool.*). The nucleus of the ovum after the first polar body has been formed.

deuto-. Prefix. See **deut-.**

deutobroque, dū'tō-brōk (*Cyt.*). In oögenesis, a stage preceding leptotene, during which the chromosomes radiate from the nucleolus, and wind about just under the nuclear membrane.

deutocere'bron, deutocere'brum (*Zool.*). In higher *Arthropoda*, as *Insecta* and *Crustacea*, the fused ganglia of the second somite of the head, forming part of the 'brain.'

deutom'erite (*Zool.*). In some *Gregarinidea*, the part of the body containing the nucleus.

deu'toplasm (*Biol.*). See **metaplasm.**

deutoplasmol'ysis (*Embryol.*). The elimination of the deutoplasm of the Vertebrate ovum which usually occurs between the formation of the second polar body and the first cleavage.

deutosco'lex (*Zool.*). In *Cestoda*, a secondary scolex arising by budding in a bladderworm.

deuto'vum (*Zool.*). In *Acarina*, a stage in the development which may come before or after the egg is laid.

Deval attrition test (*Civ. Eng.*). See **attrition test.**

develop (*Mining*). To traverse a mineralised body horizontally by drives and vertically by shafts or winzes, in order to prove its extent.

developed dyes (*Chem.*). Dyes which are developed on the fibre by the interaction of the constituents which produce them. Dyeing with aniline black provides an example of a *developed dye.*

developer (*Photog.*). Any reducing agent used in photography for reducing the exposed silver salts to metallic silver. Most of these substances are polyhydric phenols

developer, Beach's (*Photog.*). See **Beach's developer.**

development (*Bot.*). The succession of stages in the life of the plant, as distinct from the simple growth of the plant.—(*Zool.*) The processes of growth and differentiation by which a mature animal is formed from an ovum or bud.

development (*Mining*). The amount of ore in a mine developed or exposed on at least three sides.

development (*Photog.*). The reduction of silver nitrate or other silver compound to silver by chemical action, after exposure in a photosensitive emulsion. Also, the production of a relief by water, after exposing a bichromated gelatine.

See **continuous— frame— tank—**
drum— second— water—

deviation (*Ships*). The angle between the direction taken up by the needle of a ship's compass and the true direction of north and south. The deviation is due to non-coincidence of the magnetic and geographic meridians (see **declination**), and may be accentuated by magnetic material on board ship. The term is often restricted to mean such accentuation.

See **semicircular— quadrantal—**

deviation (*Maths.*). The amount by which one of a set of observed values differs from the mean value. See **standard deviation** and **variance.**

devil (*Plumb.*). A portable furnace for heating solder and soldering irons. *

devil (*Meteor.*). A small whirlwind due to strong convection, which, in the tropics, raises dust or sand in a column.

devil float (*Plast.*). A square float having four nails projecting from its working face; used to perform the scoring required in *devilling* (q.v.).

devilling (*Plast.*). The operation of scoring the surface of a plaster coat to provide a key for another coat.

devitrification (*Geol.*). Deferred crystallisation which, in the case of glassy igneous rocks, converts obsidian and pitchstone into dull cryptocrystalline rocks (usually termed *felsites*) consisting of minute grains of quartz and feldspar. Such devitrified glasses give evidence of their originally vitreous nature by traces of perlitic and spherulitic textures.—(*Glass*) A physical process which causes a change from the glassy state to a minutely crystalline state. This has to be avoided during manufacture. If the change is due to lapse of time, the glass becomes turbid and brittle.

Devonian igneous rocks (*Geol.*). During the Devonian Period volcanic phenomena were manifest in two regions in Britain: in the south, marine lavas (pillow lavas) were erupted in Devon and Cornwall; in the neighbourhood of the Midland Valley of Scotland subaerial eruptions resulted in the accumulation of several thousand feet of lavas and ashes, chiefly andesitic. Deep-seated intrusions, now uncovered, occur as great granite bosses in Scotland, while a dyke phase closed the volcanic episode.

Devonian System (*Geol.*). The rocks formed during the Devonian Period, between the Silurian and the Carboniferous Periods. They comprise rocks of two facies: *marine*, occurring typically in Devon and Cornwall; and *continental* (the so-called Old Red Sandstone). The marine Devonian comprises the Dartmouth Slates, Meadfoot Beds, and Staddon Grits in the Lower Devonian; shales and massive limestones in the Middle Devonian; and chiefly shales in the Upper Devonian. Volcanic rocks are developed locally in the Middle and Upper Devonian. See also **Devonic.**

Devonic (*Geol.*). Equivalent to *Devonian.* See **Chautauquan, Erian, Helderbergian, Oriskanian, Senecan,** and **Ulsterian.**

dew (*Meteor.*). The deposit of moisture on exposed surfaces which accumulates during calm, clear nights. The surfaces become cooled by radiation to a temperature below the dew-point, thus causing condensation from the moist air in contact with them.

dew claw (*Zool.*). In Dogs, the useless claw on the inner side of the limb (especially the hind limb) which represents the rudimentary first digit.

dew-point (*Meteor., Phys.*). The temperature at which a given sample of moist air will become saturated and deposit dew.

dew-point hygrometer (*Meteor.*). A type of hygrometer for determining the dew-point, i.e. the temperature of air when completely saturated. The relative humidity of the air can be ascertained by reference to vapour pressure tables.

dew pond. A shallow pond formed by excavating a suitable area on elevated pastures; the surface temperature of the pond is lowered by insulating it, and water collects at night through condensation.

Dewar flask (*Chem.*). A silvered glass flask with double walls, the space between them being evacuated; it is used for the storage of liquid air.

de-watering (*Civ. Eng.*). The process of pumping water from the interior of a caisson.

dexiocardia (*Med.*). See **dextrocardia.**

dexiotro'pic (*Zool.*). Twisting in a spiral from left to right, as in gastropod shells; spiral cleavage.

dextral. See **dextrorse.**

dextrin (*Chem.*). Starch gum. A term for a group of intermediate products obtained in the transformation of starch into maltose and *d*-glucose. Dextrins are obtained by boiling starch alone or with dilute acids. They do not reduce *Fehling's solution* (q.v.). Crystalline dextrins have been obtained by the action of *Bacillus macerans.*

dex'trinase (*Bot.*). A plant enzyme which hydrolyses dextrin.

dextrocar'dia, dexiocar'dia (*Med.*). A developmental anomaly in which the heart lies in the right side of the chest.

dextrorota'tory (*Light*). Said of an optically active substance which rotates the plane of polarisation in a clockwise direction when viewed in the direction of travel of the light.

dextrorse (*Bot.*, *Zool.*). Turning or twisting in a right-handed direction, or in a spiral from left to right; said of gastropod shells. Cf. *sinistrorse.*

dextrose (*Chem.*). *d*-Glucose.

dezincification (*Chem.*). A term used in metallurgical chemistry for a process involving the removal of zinc from metals in the liquid state.

D.H. (*Build.*). Abbrev. for *double-hung.*

dhootie, doo'ti (*Textiles*). A plain cotton fabric with coloured borders; worn as loin-cloths by Indian peoples.

di- (Greek *dis*, twice). A prefix used in the construction of compound terms; e.g. *dibranchiate* (q.v.).—(*Chem.*) A prefix indicating *two* atoms, groups, etc.

Di (*Chem.*). The symbol for *didymium*, a mixture of neodymium and praseodymium.

dia- (Greek *dia*, through, asunder). A prefix used in the construction of compound terms; e g *diatropism* (q v.).

Diabaig Group (*Geol.*). The lowest of the three divisions of the Torridon Sandstone of the N.W. Highlands of Scotland; it consists chiefly of sandstones, together with basal breccias.

di'abase (*Geol.*). A rock-name used in two or three different senses. In Britain it signifies an altered dolerite in which the original pyroxene has been converted into secondary amphiboles, the plagioclase has been more or less albitised, and the ilmenite converted into leucoxene and magnetite. On the Continent *diabase* signifies a pre-Tertiary dolerite. See **dolerite.**

diabe'tes insip'idus (*Med.*). A condition in which there is an abnormal increase in the amount of urine excreted, as a result of disease of, or injury to, the pituitary gland.

diabetes melli'tus (*Med.*). A disorder of metabolism in which excess of sugar appears in the blood and in the urine, associated with loss of weight and excessive thirst.

diabetogen'ic (*Med.*). Giving rise to diabetes.

diace'tic acid (*Chem.*). Acetylacetic or acetoacetic acid, $CH_3CO{\cdot}CH_2{\cdot}COOH$.

diacetone alcohol (*Chem.*). $CH_3{\cdot}CO{\cdot}CH_2{\cdot}C(CH_3)_2{\cdot}OH$, 4-hydroxy-2-keto-4-methylpentane, a colourless or light yellow liquid, m.p. −54° C., b.p. 130°-175° C., sp. gr. 0·915-0·943. Used as a lacquer solvent.

diacetyl, dī-as'— (*Chem.*). α-Diketo-butane, $CH_3{\cdot}CO{\cdot}CO{\cdot}CH_3$, a yellow-green liquid, b.p. 87° C. It is the simplest diketone, and is obtained by the action of nitrous acid on methyl ethyl ketone.

diach'ronism (*Geol.*). The transgression across time planes by a geological formation. A bed of sand, when traced over a wide area, may be found to contain fossils of slightly different ages in different places, as, when deposited during a long-continued marine transgression, the bed becomes younger in the direction in which the sea was advancing.—*adj.* **diachronous.**

diach'ylon (*Med.*). A lead plaster.

di'acoele, —sēl (*Zool.*). In *Craniata*, the third ventricle of the brain.

diacrante'rian, diacranter'ic (*Zool.*). Having the teeth in a discontinuous row; as some Snakes, in which the anterior and posterior teeth are separated by a gap. Cf. *syncranterian.*

diacritical point (*Elec. Eng.*). The point on the magnetising curve of a sample of iron at which the intensity of magnetisation has half its saturation value.

diactin'ic (*Photog.*). Having the property of transmitting rays of light which have actinic action, as camera lenses, infra-red filters.

diadel'phous (*Bot.*). Said of stamens which are arranged in two bundles.

di'adro'mous (*Bot.*). Said of venation resembling the ribs of a fan.

diaer'esis (*Typog.*). A mark (¨) placed over the second of two vowels to indicate that it is pronounced separately from the first.

diage'otro'pism (*Bot.*). The assumption, by a plant member, by means of growth, of a position across a line perpendicular to the surface of the earth.—*adj* **diageotropic.**

diagno'sis (*Bot.*). A formal description of a plant, having special reference to the characters which distinguish it from related species.

diagnosis (*Med.*). The determination of the nature of a disordered state of the body or of the mind: the identification of a diseased state.

diagnostic characters (*Zool.*). Characteristics by which one genus, species, family, or group can be differentiated from another.

diagonal. A straight line drawn between two non-adjacent angles of a polygon.

diagonal (*Bot.*). Said of any member of a flower situated in a position otherwise than median or lateral.

diagonal (*Eng.*). A tie or strut joining opposite corners of a rectangular panel in a framed structure.

diagonal (*Textiles*). The term applied to heavy fabrics which have a prominent twill line, usually at a low angle.

diagonal (*Typog*). The character /, used to divide shillings and pence, etc. Often called a SHILLING-STROKE.

diagonal bond (*Build.*). See **raking bond.**

diagonal eyepiece (*Surv.*). A special type of eyepiece used on surveying telescopes when observing high altitudes and when it is inconvenient or impossible to bring the eye into position for sighting with an ordinary eyepiece. In principle it depends on the reflection of the line of sight through 90° by means of a prism or mirror within the diagonal eyepiece.

diagonal pitch (*Eng*). In zig-zag riveting, the distance between the centres of adjacent rivets.

diagonal winch (*Eng.*). A steam-winch in which, to economise floor space, the engine cylinders are inclined instead of horizontal.

diagonalising (*Radio*). The practice of radiating the same programme at different times, on different wavelengths.

diagram (*Geom.*, *etc.*). (1) An outline figure or scheme of lines, points, and spaces, designed (*a*) to represent an object or area; (*b*) to indicate the relation between parts; (*c*) to show the value of quantities or forces.—(2) A curve which indicates the sequence of operations in a machine.

diagram factor (*Eng.*). The ratio between the actual mean effective pressure developed in a steam-engine cylinder and the ideal pressure deduced from the hypothetical indicator diagram.

diahe'liotrop'ic (*Bot.*). See **diaphototropic,** which is a better term.

diakine'sis (*Cyt.*). The last stage of meiotic prophase, in which the nuclear membrane breaks down and the tetrads pass on to the spindle.

dial. The observable functional part of an indicating instrument, carrying the scale over which the indicating pointer moves. See also **counter.**

dial (*Auto. Teleph.*). The arrangement by which the subscriber may send the necessary number of impulses to secure the exchange and the required number. Also CALLING DIAL.

dial (*Horol.*). The graduated plate immediately behind the hands of a clock or other timekeeper, from which the time is read.

dial (*Mining, Surv.*). A large compass mounted on a tripod, used for surveying or mapping workings in coal-mines.

dial (*Radio*). The mechanism for adjusting, and for indicating the adjustment, of the tuning controls.

dial (*Surv.*). See **dial** (*Mining*), also **Hedley's dial, Lean's dial.**

dial foot (*Horol.*). (1) Circular pins, attached to the back of a dial, which enter corresponding holes in the pillar plate to ensure its correct location.—(2) In some clocks the dial feet are pinned to the pillar plate to hold the dial in position.

dial gauge (*Eng.*). A sensitive measuring instrument in which small displacements of a plunger are indicated in 1/1000 inch units by a pointer moving over a circular scale.

dial impulses (*Auto. Teleph.*). The slightly variable impulses received from a subscriber's dial, as compared with machine impulses generated for use in an automatic exchange.

dial plate (*Horol.*). See **bottom plate.**

dial sight (*Artillery*). A sight by which lateral angles can be measured, when firing from behind cover.

dial switch (*Elec. Eng*). A multi-contact switch in which the contacts are arranged in the arc of a circle, so that contact can be made by a radial moving arm.

dial'dehydes (*Chem.*). Compounds containing two aldehyde groups. The most important one is *glyoxal* (q.v.).

dialectical materialism. See **materialism (dialectical).**

di'allage (*Min.*). A schillerised monoclinic pyroxene, in composition comparable with augite; occurs typically in basic igneous rocks such as gabbro.

dial'lagite (*Geol.*). A coarse-grained, deep-seated ultramafic rock consisting essentially of diallage with small amounts of other minerals in an accessory rôle only; essentially monomineralic, and a differentiation product of gabbroic magma.

dialling (*Auto. Teleph.*). The act of sending trains of impulses by rotating the dial against its control spring and then releasing it, thereby opening the circuit a prescribed number of times.

dialling (*Mining, Surv.*). The process of running an underground traverse with a mining *dial* (q v.).

dialling, duplex (*Teleg.*). See **duplex dialling.**

dialling in, dialling out (*Auto. Teleph.*). The manual operation of dialling into an automatic exchange from a manual exchange, or dialling out of an automatic exchange into a manual exchange.

dialling tone (*Auto. Teleph.*). The audible tone sent to a subscriber by the automatic switching apparatus which has been seized at the exchange, and which is ready to receive the trains of impulses caused by dialling.

dial'ogite (*Min.*). A mineral closely related to rhodochrosite, the trigonal carbonate of manganese.

dialycar'pic (*Bot.*). See **apocarpous.**

dialyneu'ry (*Zool.*). In some *Gastropoda*, the condition of having the pallial nerves from the pleural ganglion anastomosing with the pallial nerves from the supra-intestinal ganglion or the sub-intestinal ganglion, or, if they are absent, from the corresponding parts of the visceral nerve. Cf. *zygoneury*.

dialypet'alous (*Bot.*). See **polypetalous.**

dial'ysis (*Chem.*). The separation of a colloid from a substance in true solution by allowing the latter to diffuse through a parchment membrane.

dialyste'lic (*Bot*). Having several separate steles.

diamagnetic (*Elec. Eng.*). A term applied to substances having a permeability less than that of a vacuum, i.e. less than 1.

diamagnetism (*Elec. Eng.*). The properties exhibited by a diamagnetic substance under the influence of a magnetising force.

diameter (*Geom.*). (1) A straight line passing through the centre of a figure or body and terminated by its boundaries.—(2) A straight line bisecting a system of parallel chords in a curve.

diameter of commutation (*Elec. Eng.*). The diametral plane in which the coils of an armature winding that are undergoing commutation should be situated if the commutation is to be perfect.

diam'etral pitch (*Eng.*). In a gear-wheel, the number of teeth per inch of pitch circle diameter; equal to π/circular pitch.

diametral winding (*Elec. Eng.*). A term occasionally used to denote an armature winding in which the number of slots is a multiple of the number of poles.

diametrical tappings (*Elec. Eng.*). Tappings taken on a closed armature which are diametrically opposite to each other, i.e. displaced from each other by 180 electrical degrees.

diametrical voltage (*Elec. Eng.*). The voltage between opposite lines of a symmetrical 6-phase system, or the voltage between tappings on an armature winding which are diametrically opposite to each other, i.e. displaced from each other by 180 electrical degrees.

diamide, dī'am-īd (*Chem.*). See **hydrazine hydrate.**

diamines, dī-am-ēnz′ (*Chem.*). Compounds containing two amino groups.

diamond (*Min*). One of the crystalline forms of carbon; it crystallises in the cubic system, rarely in cubes, commonly in forms resembling an octahedron, and less commonly in the tetrahedron. Curved faces are characteristic. It is the hardest mineral (10 in Mohs' scale); hence valuable as an abrasive, for arming rock-boring tools, etc, and as a gemstone. Occurs in the blue ground in the Kimberley District, in river gravels above the Vaal, in shore sands in S.W. Africa, also in Brazil, the Congo, British Guiana, and elsewhere. See **black diamond, bort.**

diamond (*Textiles*). The term applied by woolsorters to wool taken from the sides of a Down fleece; the term is also applied to a type of fancy worsted twist yarn, and to designs woven in diamond form.

diamond (*Typog.*). The old name for a type-size, about 4½-point.

diamond antenna (*Radio*). See **rhombic antenna.**

diamond dust (*Abrasives*). The hardest of the substances used for abrasive purposes; used also by lapidaries on the edge of rotating wheels.

diamond frame (*Bicycles*). The name given to the frame of a bicycle of diamond pattern.

diamond mesh (*Build., Civ. Eng.*). A form of *expanded metal* (q.v.) with a diamond-shaped network.

diamond saw (*Tools*). A stone-cutting circular saw used with diamond dust for cutting rock sections.

diamond-skin disease (*Vet.*). See **swine erysipelas.**

diamond-type coil (*Elec. Eng.*). A former-wound armature coil in which the overhang is diamond-shaped, i.e. made up of two straight sides meeting at a point.

diamond-work (*Masonry*). A wall constructed of lozenge-shaped stones laid in courses.

dian'drous (*Bot.*). Having two antheridia or two stamens.

diapede'sis (*Zool.*). In *Porifera*, the passage to the exterior of cells primarily occupying the interior of certain types of larva: in *Vertebrata*, the passage of blood-leucocytes through the walls of blood-vessels into the surrounding tissues.

diaper (*Textiles*). Linen and cotton fabric with a square or diamond pattern of a counter-changing character; used chiefly for table linen.

diaper-work (*Masonry*). Paving constructed in a chequered pattern, composed of stones or tiles of different colours.

diaphone (*Acous.*). In an organ, a resonating Helmholtz pipe in which the frequency is determined by a pallet vibrating on a spring, as contrasted with metal-reed and flue pipes.

diaphore'sis (*Med.*). Perspiration.

diaphoret'ic (*Med.*). Producing perspiration: a medicine which does this.

diaphototrop'ic (*Bot.*). Said of a plant member which grows and comes to a fixed position across the direction of incident light.

diaphragm (*Acous.*). (1) A rigid or stretched plane or cone used for generating sound-waves by virtue of its capacity for displacement of a large volume of air for small movement.—(2) By inversion, the area set in motion by a sound-wave in a microphone; it generates an electrical replica of the wave-form of the sound-wave.

See **closed—** **pleated—**
cone— **stretched—**
open—

diaphragm (*Bot.*). (1) A plate of cells with very small intercellular spaces between them, lying here and there across the large intercellular spaces in stems of some aquatic plants.—(2) A transverse plate of cells across a stem, generally at a node.

diaphragm (*Build.*). A web across a hollow terra-cotta block, forming separate compartments.

diaphragm (*Elec. Eng.*). A sheet of perforated or porous material placed between the positive and negative plates of an accumulator cell.

diaphragm (*Light, Photog.*). See **stop**; also **iris diaphragm.**

diaphragm (*Surv.*). A flanged brass ring which is held in place in a telescope tube by means of four screws, and which receives the *reticule* (q.v.).

diaphragm (*Zool.*). Generally, a transverse partition subdividing a cavity.—In *Mammalia*, the transverse partition of muscle and connective tissue which separates the thoracic cavity from the abdominal cavity: in *Salientia*, a fan-shaped muscle passing from the ilia to the oesophagus and the base of the lungs: in some *Arachnida*, a transverse septum separating the cavity of the cephalothorax from that of the abdomen: in certain *Polychaeta*, a strongly developed transverse partition dividing the body cavity into two regions.

diaphragm plate (*Struct.*). A connecting stiffener between the webs of a box girder.

diaphragm pump (*Eng.*). A pump in which a flexible diaphragm replaces a piston or bucket, being clamped round the edge and attached at the centre to a reciprocating rod of short stroke.

diaphragmless microphone (*Acous.*). The same as *cathodophone* (q.v.).

diaphysec'tomy (*Surg.*). Excision of part of the shaft of a long bone.

diaph'ysis (*Zool.*) The shaft of a long limb bone. Cf. *epiphysis.*

diaphysi'tis (*Med.*). Inflammation of the diaphysis.

diapoph'yses (*Zool.*). A pair of dorsal transverse processes of a vertebra, arising from the neural arch.

diapositive (*Photog.*). The description of a positive transparency on glass or film, in contrast to *kata-positive.*

diap'sid (*Zool.*). Said of skulls in which the supra- and infra-temporal fossae are distinct. Cf. *synapsid.*

diarch, dī'ark (*Bot.*). Having two xylem strands.

diarrhoea, diarrhea (*Med.*). The frequent evacuation of liquid faeces.

diarthro'sis (*Zool.*). A true (as opposed to a fixed) joint between two bones, in which there is great mobility; a cavity, filled with a fluid, generally exists between the two elements.

diaschisis, dī-as'kis-is (*Med.*). A disturbance of function of one part of the brain, consequent upon disease of another more remote part which is functionally connected with it.

diaschis'tic (*Cyt.*). In meiosis, said of tetrads which divide once transversely and once longitudinally.

dī'aspore (*Min.*). A group of minerals comprising diasporite, goethite, and manganite. *Diasporite* is an aluminium hydroxide occurring as platy orthorhombic crystals in clays, notably in some of the bauxites.

dī'astase (*Chem.*). An enzyme, or group of enzymes, capable of converting starch into sugar. Diastase is produced during the germination of barley in the process of malting.

dias'tasis (*Surg.*). The separation, without fracture, of an epiphysis from the bone.

dias'tataxy (*Zool*.). In Birds, absence of the fifth secondary remex or fifth flight feather carried by the ulna.

dias'tema (*Zool.*). (1) An equatorial modification of protoplasm preceding cell-division.—(2) A gap in a jaw where there are no teeth.

dias'ter (*Cyt.*). In cell-division, a stage in which the daughter chromosomes are situated in two groups near the poles of the spindle, ready to form the daughter nuclei.

dī'astole (*Bot., Zool.*). Rhythmical expansion, as of the heart, or of a contractile vacuole; growth and expansion of the nucleus from the end of one mitosis to the commencement of the next. Cf. *systole.*

dī'astolic murmur (*Med.*). A murmur heard over the heart during diastole and indicative of valvular disease.

dias'trophism (*Geol.*). Relatively rapid and intense change in the configuration of the earth's surface alternating periodically with long spells of time during which the normal processes of denudation and sedimentation take place imperceptibly slowly. See **orogenesis.**

diastyle (*Build.*). A colonnade in which the space between the columns is equal to three times the lower diameter of the columns.

diather'manous (*Phys.*). Capable of transmitting radiant heat.

diather'my (*Med.*). The generation of heat in body tissues by passage of an electric current through them.

diath'esis (*Med.*). The constitutional state of the body which renders it liable to certain diseases; e.g. the epileptic diathesis.

dī'atom (*Bot.*). A member of the *Bacillariophyta* (q.v.).

diatom ooze (*Geol.*). A deep-sea deposit consisting essentially of the frustules of diatoms; widely distributed in high latitudes.

diatomite or **diatom earth** (*Min.*). A siliceous deposit occurring as a whitish powder consisting essentially of the frustules of diatoms. It is resistant to heat and chemical action, and is used in fireproof cements, insulating materials, as a backing for more refractory materials for furnace walls, and as an absorbent in the manufacture of explosives. Also known as KIESELGUHR.

diatoni, dī-at'— (*Masonry*). Quoins having two dressed faces projecting from the wall.

diatro'pism (*Biol.*). The tendency of organs or organisms to orientate themselves with their main axis at right-angles to the line of action of a stimulus.

Diatto surface-contact system (*Elec. Eng.*). A surface-contact electric traction system in which the skate under the vehicle is magnetic and lifts iron plungers which close contacts to make the studs in the road alive.

diax'on (*Zool.*). Having two main axes, as some Sponge spicules.

diax'one (*Zool.*). A bipolar nerve-cell.

diazo compounds (*Chem.*). Compounds of the general formula $R{\cdot}N{:}N{\cdot}R'$, obtained by the action of nitrous acid on aromatic amines at low temperatures. They are important intermediates for dyestuffs.

diazoamino compounds (*Chem.*). Pale yellow crystalline substances obtained by the action of a primary or secondary amine on a diazonium salt. Their general formula is $\mathrm{R{\cdot}N\,N{\cdot}NHR'}$. They do not form salts and most of them are easily transformed into the isomeric aminoazo compounds.

diazomethane (*Chem*). CH_2N_2, an aliphatic diazo compound, an odourless, yellow, poisonous gas, very reactive, used for introducing a methyl group into a molecule. It is prepared from nitroso-methyl-urethane by decomposition with alcoholic caustic potash.

diazonium salts (*Chem.*). The acid salts of diazobenzene of the general formula $\mathrm{R\,N(Cl){\cdot}N}$, important intermediates for azo-dyestuffs. They are usually prepared only in aqueous solution, by the action of nitrous acid on an aromatic amine at low temperatures in the presence of excess of acid. The —N:N— group can easily be replaced by hydrogen, hydroxyl, halogen, etc. and the diazonium salts can thus be transformed into other benzene derivatives.

diazotisation (*Chem.*). The process of converting amino into diazo compounds.

diaz'otype (*Photog*). A process for obtaining coloured dye images on paper or fabrics, starting with primuline and sensitising, then exposing and treating with selected dyes.

dibasic acids (*Chem.*). Acids containing two replaceable hydrogen atoms in the molecule.

dibenzyl group (*Chem.*). A synonym for the stilbene group, comprising compounds containing two benzene nuclei linked together by a chain of two or more carbon atoms.

diblas'tula (*Zool*) In certain Invertebrates, an embryonic stage consisting of two layers of cells surrounding a central cavity.

Dibran'chia (*Zool.*). A subclass of *Cephalopoda*, in which the visceral mass is naked, the shell being rudimentary and embedded in the integument; there is one pair of ctenidia, and the eyes possess a crystalline lens.

dibran'chiate (*Zool.*). Having two gills or ctenidia.

dicar'yon, dikar'yon (*Cyt*). A pair of closely associated nuclei which divide at the same time.

dice-pattern (*Textiles*). The term applied to small check patterns of chess-board type.

dicentrine (*Chem.*). $C_{20}H_{21}O_4N$, an alkaloid of the isoquinoline group, obtained from the roots of the *Dicentra* species; it crystallises in prisms, m p. 168° C. It affects the heart and the respiratory centres.

diceph'alus (*Med*). A developmental monstrosity in which a foetus is born with two heads.

dicephalus tetrabra'chius (*Zool.*). In experimental embryology, an abnormal embryo produced by tight constriction in the sagittal plane of the two-celled stage, when the sagittal plane coincides with the first furrow, and characterised by the possession of two pairs of fore-limbs and two heads.

dicha'sial cyme (*Bot.*). See **dichasium.**

dicha'sium, diacha'sium (*Bot.*). A cymose inflorescence in which each branch bears two lateral branches, both of about the same strength of development.—*adj.* **dicha'sial.**

dichlamyd'eous (*Bot.*). Said of a flower having calyx and corolla.

dichlamydeous chimaera (*Bot.*). See **diplochlamydeous chimaera.**

dichoceph'alous (*Zool*). Said of ribs which have two heads, a tuberculum, and a capitulum. Cf. *holocephalous*.

di'chogamy (*Bot.*). The condition in which, in a given flower, the stamens and stigmas are not mature at the same time.—*adj.* **dichogamous.**

dichopo'dium (*Bot.*). A sympodial branch system made up of successive parts of a dichotomising branch system, of which only one part assists in forming the axis.

dichop'tic (*Zool.*). Having the eyes of the two sides distinctly separated.

dichot'omy (*Bot.*). The production of two branches of the same size by the apical cell or apical growing point dividing into two equal parts, each then growing into a branch.—*adj.* **dichotomous.**—FALSE DICHOTOMY is equivalent to *forking* (q.v.).

dichro'ic fog (*Photog.*). Fog which arises from the formation of an organic compound of silver; so-called because of its reddish coloration by transmitted light, and greenish coloration by reflected light.

di'chroism (*Light*). The property possessed by some crystals (tourmaline, for example) of absorbing the ordinary and extraordinary ray to different extents; this has the effect of giving to the crystal different colours according to the direction of the incident light.—(*Min.*) See **pleochroic haloes.**

di'chroite (*Min.*). *Cordierite* (q.v.).

dichromates (*Chem.*). See **chromates.**

dichromatism (*Optics*). Colour blindness in which power of accurate differentiation is retained for only two bands of colour in the spectrum.

dichthadiigyne, —di'i-jin (*Zool.*). A peculiar gynaecoid, found among Driver Ants (*Dorylinae*), which lacks eyes and wings and has exceptionally large gaster and ovaries.

Dick test (*Bacteriol*). A test of susceptibility to scarlet fever; the toxins of streptococci obtained from scarlet fever patients are injected into the skin.

dickite (*Min.*). A form of hydrated silicate of aluminium, of the same chemical composition as kaolinite, with which it is grouped, and from which it differs only in the details of atomic structure and in certain physical properties.

dicli'ny, dicli'nism (*Bot*). Having the sexes separate. The term is applied to the condition where the stamens and carpels are produced in separate flowers, either on the same or on a different plant, as well as to that in lower plants where the antheridial and oögonial branches are not obviously closely related in origin.—*adj.* **diclinous.**

dicosta'lia (*Zool.*). The secondary brachial ossicles in *Crinoidea*.

Dicotyle'dones (*Bot.*). A large group of Angiosperms, containing between 150,000 and 200,000 species. The embryos have two cotyledones, the leaves are commonly net-veined, the parts of the flowers are in twos or fives, or multiples of these, and the vascular bundles in the axes usually contain cambium.—*adj.* **dicotyle'donous.**

dicrot'ic (*Med.*). Having a double beat or wave; said of the pulse.

di'crotism (*Med.*). In the arterial pulse, the occurrence of a double beat or wave to each beat of the heart.

Dictaphone. A machine that records dictation on an electrically driven revolving wax cylinder, which is controlled by a 'button.' The cylinder, when placed on a transcribing dictaphone, reproduces the dictation as speech. (Trade-name.)

dictaphone reception (*Radio*). A system of reception in which the signals are recorded on a dictaphone.

dicty-, dictyo- (Greek *diktyon*, net). A prefix used in the construction of compound terms; e.g. *dictyosporangium* (q.v.).

dic'tyate stage (*Cyt.*). A resting stage succeeding *diplotene* (q.v.) in oögenesis; during it the karyosome and the chromosomes lose their staining capacity and sharp contours, and the nucleus increases in size.

dic'tyokine'sis (*Cyt.*). The division of the Golgi apparatus which accompanies division of the nucleus by karyokinesis.

Dictyone'ma Band (*Geol.*). Thin beds of shale rich in the remains of the Dendroid Graptolite *Dictyonema*, occurring in at least two levels in the Upper Cambrian Tremadoc Slates in N. Wales, Shropshire, the Malvern Hills, Bristol District, etc.

dic'tyosome (*Cyt.*). An element of the Golgi apparatus.

dic'tyosporan'gium (*Bot.*). A sporangium found in some *Oomycetes*, in which the spores encyst in the sporangium, then emit their contents separately, and leave a network of empty spore walls.

dic'tyospore (*Bot.*). A multicellular spore divided into segments by both transverse and longitudinal walls.

dic'tyostele (*Bot.*). A tubular network of vascular tissue, wholly enclosed by an endodermis.

dictyoxy'lic (*Bot*). Having a network of meristeles or of vascular bundles.

dicy'clic (*Zool.*). Said of the calyx of *Crinoidea* when a row of infrabasals is present. Cf. *monocyclic.*

didac'tyl (*Zool.*). Having two digits.

didel'phic (*Med*). Pertaining to a double uterus.

didym'ium (*Chem*) An obsolete term for a supposed element which was later found to be a mixture of neodymium and praseodymium.

did'ymospore (*Bot.*). A spore consisting of two cells.

did'ymous (*Bot*). Said of a fruit composed of two similar parts slightly attached along one edge.

didy'namous (*Bot.*). Having two long and two short stamens.

die (*Eng.*) (1) A metal block used in stamping operations. It is pressed down on to a blank of sheet-metal, on which the pattern or contour of the die surface is reproduced.—(2) An internally threaded steel block provided with cutting edges, for producing screw threads by hand or machine.

die (*Masonry*). (1) The body of a pedestal.—(2) The enlarged part at either end of a baluster, where it comes into the coping or the plinth.

die box or **die head** (*Eng.*). The holder into which screw dies are fitted in a screwing machine.

diecasting (*Met.*). A process by which castings of various alloys and cast-iron are produced in permanent moulds. The moulds are generally of metal, in two halves, which are closed for casting. See **gravity—** **pressure—**

diecasting alloys (*Met.*). Alloys that are suitable for diecasting, and which can be relied on for accuracy and resistance to corrosion when cast. Aluminium-base, copper-base, tin-base, zinc-base, and lead-base alloys are those generally used.

die chuck (*Eng.*). A small two- or three-jaw *independent chuck* (q.v.).

die nut (*Eng.*). See **die** (2).

die square (*Carp.*). A squared timber intermediate in size between a baulk and a quartering.

die-stock (*Eng.*). A hand screw-cutting tool, consisting of a holder in which screwing dies can be secured; it is held and rotated by a pair of handles.

dielectric (*Diel.*). A substance capable of supporting an electric stress.

dielectric absorption (*Diel.*). The phenomenon that the charging or discharging current of a dielectric does not die away exponentially with time, but continues for a much longer time at an appreciable value.

dielectric constant (*Diel.*). K or ϵ. The ratio of the capacitance of a condenser with dielectric between the electrodes to the capacitance when air is between the electrodes. The force between charges Q_1 and Q_2 immersed in the dielectric is $(Q_1 Q_2/Kr^2)$. See also **permittivity.**

dielectric fatigue (*Diel.*). The breakdown of a dielectric subjected to a repeatedly applied stress, which is insufficient to break down the dielectric if applied once or a few times.

dielectric hysteresis (*Diel.*). Owing to dielectric absorptions the charge-potential curve has properties of hysteresis. (Obsolescent.)

dielectric loss (*Diel.*). The dissipation of energy within a dielectric due to a sinusoidal electric stress. It has the value $\omega CV^2\delta$, where ω is $2\pi \times$ frequency, C the capacitance, V the voltage, and δ the power factor.

dielectric strain (*Diel.*). See **displacement.**

dielectric strength (*Diel.*). The stress (volts per cm. or mm.) required to puncture the dielectric. It depends greatly upon the conditions of test, the time of application of the voltage, and the thickness of the sample.

dienceph'alon, di-en— (*Zool.*). In Vertebrates, the posterior part of the fore-brain connecting the cerebral hemispheres with the mid-brain.

Diesel cycle (*I.C. Engs.*). A compression-ignition engine cycle in which air is compressed, heat added at constant pressure by the injection of fuel into the heated charge, expanded (so doing work on the piston), and the products exhausted, the cycle being completed in either two revolutions (4-stroke) or one (2-stroke). See **Diesel engine, four-stroke cycle, two-stroke cycle.**

Diesel-electric locomotive (*Elec. Eng.*). A locomotive in which the motive power from a Diesel engine is used to drive an electric generator (d c.) which supplies electric motors connected to the driving axles.

Diesel engine (*Eng.*). A compression-ignition engine in which the oil fuel is introduced into the heated compressed-air charge by a blast of air; in modern engines this is being superseded by solid-injection. See **compression-ignition engine, air blast.**

Diesel locomotive (*Eng.*). A locomotive powered by a Diesel or compression-ignition engine geared to the driving wheels, as distinct from a *steam locomotive* (q.v.).

Diesel oil (*Fuels*). See **gas oil.**

dietary standards (*Chem.*). Standards for daily food consumption, usually based upon the number of large calories produced from foods. Another standard specifies that a certain amount of proteins, carbohydrates, and fats should be consumed daily.

diethyl ether, di-eth'— (*Chem.*). Ether, $C_2H_5{\cdot}O{\cdot}C_2H_5$, m.p. −118° C., b.p. 35° C., sp. gr. 0·72, a mobile, very volatile liquid of ethereal odour, used as an anaesthetic and as a solvent. It is prepared from ethyl alcohol and sulphuric acid.

Dietl's crisis (*Med.*). Attack of severe pain in the loin and abdomen, with vomiting and other symptoms, in a patient with a movable kidney.

Dieulafoy's aspirator, dyė-la-fwa' (*Surg.*). A glass cylinder, with piston and tubes attached, for removing by suction fluids from cavities of the body.

dievrite (*Min.*). See **ilvaite.**

differdange beam (*Struct.*). A beam of I-section having specially broad flanges to impart greater lateral strength.

difference of departure (*Surv.*). The same as *departure* (q.v.).

difference of latitude (*Surv.*). The same as *latitude* (1; q.v.).

difference of phase (*Phys., etc.*). See **phase difference.**

difference of potential (*Elec. Eng.*). See **magnetic difference of potential, potential difference.**

difference tone (*Acous.*). One of the combination tones produced subjectively when two or more pure tones are applied to the ear; most easily observed when the difference is sufficiently low to be recognisable as *beats* (q.v.).

differential anode conductance (*Thermionics*). The reciprocal of the differential anode resistance.

differential anode resistance (*Thermionics*). The slope of the anode voltage versus anode current curve of a multi-electrode valve, when taken with all other electrodes maintained at constant potentials with respect to the cathode. Also called A.C. RESISTANCE, INCREMENTAL RESISTANCE, SLOPE RESISTANCE.

differential booster (*Elec. Eng.*). A booster in which a series winding on the field is connected in opposition to the shunt winding.

differential calculus (*Maths.*). A branch of mathematics dealing with continuously varying quantities; based on the differential coefficient, or derivative, of one quantity with respect to another of which it is a function.

differential car axle (*Automobiles*). The driving (usually rear) axle of a motor vehicle, in which a differential gear, driven by bevel or worm gear from the propeller shaft, permits relative rotation of the two separate half-axle shafts which drive the road wheels.

differential condenser (*Radio*). A condenser consisting of one set of moving plates and two sets of fixed plates so arranged that, as the capacity of the moving plates to one set of fixed plates is increased, that to the other set is decreased. Used for balancing purposes and for the control of regeneration.

differential duplex (*Teleg.*). A duplex or two-way system of telegraphy, using differentially wound relays and galvanometers, each taking marking currents to line and to a line balance, in such directions that their resultant magnetic effect is reduced to zero.

differential flotation (*Met.*). A process of flotation which permits different metallic sulphides to be separated from each other as well as from the gangue of the ore. See **flotation.**

differential galvanometer (*Teleg.*). A pivoted needle galvanometer operated by two identical coils, so that equal and opposite currents in them neutralise each other in their magnetic effect, and therefore no deflection of the needle results.

differential gear (*Eng.*). A gear permitting relative rotation of two shafts driven by a third. The driving shaft rotates a cage carrying planetary bevel wheels meshing with two bevel wheels on the driven shafts. The latter are independent, but the sum of their rotation rates is constant.

differential hardening (*Photog.*). Hardening in an emulsion depending on the silver density in the image, or due to the action of light on some special chemical, e.g. bichromate, in the gelatine.

differential iron tester (*Elec. Eng.*). An apparatus for iron testing consisting of two magnetic squares, one of the sample to be tested and the other of a standard material. The windings on the squares are connected to a differential wattmeter, so that there will be no deflection when the quality of the two specimens is the same.

differential leakage flux (*Elec. Eng.*). A general term given to the leakage flux occurring in and around the air-gap of an induction motor. See **belt leakage, zig-zag leakage.**

differential milliammeter (*Teleg.*). A moving-coil milliammeter with two equal windings on its deflecting coil, so that equal and opposite currents in them do not deflect the indicating needle from its central position.

differential motion (*Eng.*). A mechanical movement in which the velocity of a driven part is equal to the difference of the velocities of two parts connected to it.

differential permeability (*Elec. Eng.*). The ratio of a small change in the magnetic flux density in a magnetic material to the change in the magnetising force producing it, i.e. the slope of the magnetisation loop at the point in question.

differential pressure gauge (*Eng.*). A gauge, commonly of U-tube form, which measures the difference between two fluid pressures applied to it.

differential protective system (*Elec. Eng.*). See **balanced protective system.**

differential pulley block (*Eng.*). A lifting tackle in which a two-diameter chain wheel carries a continuous chain. Rotation of the chain wheel by a hanging loop shortens a second loop supporting the load pulley in such a way as to give a large mechanical advantage.

differential relay (*Elec. Eng.*). A relay whose action depends on the difference in the forces produced by two operating coils. See **percentage differential relay.**

differential relay (*Teleg.*). A relay provided with two identical windings, so that equal and opposite currents in them do not operate the relay, their magnetic effects neutralising each other.

differential resistance (*Elec. Eng.*). The ratio of a small change in the voltage drop across a resistance which does not obey Ohm's law to the change in current producing the drop, i.e. the slope of the volts-current characteristic for the material.

differential stain (*Zool.*). A stain which picks out details of structure by giving to them different colours or different shades of the same colour.

differential susceptibility (*Elec. Eng.*). The ratio of a small change in intensity of magnetisation of a magnetic material to the change of magnetisation force producing it, i.e. the slope of the intensity-magnetising force loop.

differential winding (*Elec. Eng.*). A winding on a machine, instrument, or relay, in which two sections are connected in opposition, so that the flux produced depends on the difference between the m.m.f.'s of the two windings. In a machine it may be called a DECOMPOUNDING WINDING.

differentially compound-wound machine (*Elec. Eng.*). A compound-wound d.c. machine in which the magneto-motive-forces of the two windings oppose one another.

differentially-wound motor (*Elec. Eng.*). A d.c. motor with series and shunt windings on the field connected so that the series winding opposes the shunt winding and therefore causes the speed of the motor to rise as load is put on the machine.

differentiation (*Bot.*). The organisation of mature tissues or mature members from generalised rudiments.

differentiation (*Geol.*). A complex process, still little understood, by which a homogeneous magma in solidifying and cooling gives rise to a series of rocks of different compositions. (See **gravitational differentiation.**) Liquid immiscibility is another possible factor, while differentiation is aided by contamination and hybridisation.

differentiation (*Zool.*). (1) The process of removing the excess stain from certain organs in the preparation of specimens for microscopical examination, in order to show up the structure of the whole specimen more clearly.—(2) The development of modifications in the structure of tissues or organs owing to the development of division of labour.

dif'fluent (*Bot.*). Readily becoming fluid.

difform, difformed (*Bot.*). Of unusual or irregular form.

diffract (*Bot.*). Said of a surface divided into areolae.

diffraction (*Acous.*). The alteration in direction of the propagation of a sound-wave due to change in velocity over its wave-front, either owing to stratification of density or to varying velocity of wind with height.

diffraction (*Light*). A small-scale spreading of light beyond the limits of the geometrical shadow, which is observable when the source of light is small. At the edge of the shadow and parallel to it, a few alternately light and dark bands are seen which are called *diffraction fringes*. Diffraction observations established the wave theory of light.

diffraction (*Radio*). The property, exhibited by all electromagnetic waves, of curvature around the edges of an obstruction in their path. It is one of the factors which account for the propagation of radio waves around the curved surface of the earth.

diffraction fringes (*Light*). See **diffraction.**

diffraction grating (*Light*). One of the most useful optical devices for producing spectra. In one of its forms the diffraction grating consists of a flat glass plate on the surface of which have been ruled, with a diamond, equidistant parallel straight lines, which may be as close as 20,000 to the inch. If a narrow source of light is viewed through such a grating it is seen to be accompanied on each side by one or more spectra, produced by diffraction. See **concave grating.**

Diff'ulume (*Build.*). A trade-name for special lenses designed to scatter light in pavement lights.

diffuse (*Bot.*). (1) Said of a prostrate stem which is freely and loosely branched, and spreads widely over the ground.—(2) Said of parenchymatous cells scattered throughout the xylem.

diffuse density (*Photog.*). The density of a photographic image as measured with diffuse light instead of with a beam of parallel light. Cf. *specular density*.

diffuse growth (*Bot.*). The growth of the thallus of an alga by the division of any of its cells.

diffuse nebulae (*Astron.*). See **irregular nebulae.**

diffuse nucleus (*Cyt.*). The chromidia sometimes present in non-nucleated cells.

diffuse placentation (*Zool.*). Having the villi scattered, as Lemurs, most Ungulates, and Cetacea.

diffuse porous (*Bot.*). The condition of xylem when the vessels are scattered uniformly throughout, or when there is little difference between the vessels formed at different parts of the growing season.

diffuse reflection (*Illum.*). Reflection from a surface such that an incident beam of light is reflected from the surface in all directions.

diffuse-reflection factor (*Illum.*). The ratio of the luminous flux diffusely reflected from a surface to the total luminous flux incident upon the surface.

diffuse series (*Light*). A name first applied, on account of the diffuse character of the lines, to certain series of lines in the arc spectra of the alkalis and alkaline earth metals, but afterwards applied to corresponding series in other spectra even if the lines were well defined.

diffuse sound (*Acous.*). The sound in a reverberant enclosure, the energy density being considered uniform, and the component wave-trains having random directions.

diffuse stimulus (*Bot.*). A stimulus which does not affect the plant from any fixed position.

diffuse tissue (*Bot.*). A tissue consisting of cells which occur in the plant body singly or in small groups intermingled with tissues of distinct type.

diffuse transmission (*Illum.*). Transmission of a beam of light through a screen in such a way that the transmitted light travels in all directions from the surface of the screen.

diffuse-transmission factor (*Illum.*). The ratio of the luminous flux transmitted through a screen to the total incident flux.

diffused lighting (*Illum.*). Lighting in which all the light reaches the area to be illuminated by diffuse reflection or through diffuse transmission, thus avoiding any glare effects and giving an even light distribution.

diffuser (*Acous.*). A wedge or cone placed in front of an open-diaphragm loudspeaking sound-radiator, to obviate the focusing effect obtained at high frequencies, and so obtain a more uniform polar distribution of radiated sound with frequency.

diffuser (*Eng.*). A chamber surrounding the impeller of a centrifugal pump or compressor, in which part of the kinetic energy of the fluid is converted to pressure energy by a gradual increase in the cross-sectional area of flow.

diffuser (*Photog.*). A frame carrying lightly-ground glass, or fine silk, for *softening* (q.v.) the lighting in photographic work; placed over the lens aperture.

diffusion, circle of (*Photog.*). See **circle of confusion** (or **diffusion**).

diffusion law (*Chem.*). See **Graham's law.**

diffusion layer (*Chem.*). The layer of liquid surrounding an electrode across which the electrolyte concentration changes.

diffusivity (*Phys.*). A quantity which determines the rate of rise of temperature of a point in a bar which is being heated at some other point. It is equal to the thermal conductivity divided by the product of the specific heat and the density.

difluorophosphor'ic acid (*Chem.*). HPO_2F_2. Formed by partial hydrolysis of phosphoryl fluoride, POF_3, with cold dilute alkali, or preferably by heating phosphoric acid with ammonium fluoride.

digame'tic (*Zool.*). Having gametes of two different kinds.

digastric (*Zool.*). (Of muscles) having fleshy terminal portions joined by a tendinous portion.

digen'esis (*Zool.*). (1) *Alternation of generations* (q.v.).—(2) The condition of having two hosts; said of parasites.—*adj.* **digenet'ic.**

digenetic reproduction (*Bot.*). See **sexual reproduction.**

digester (*Paper*). A receptacle in which raw materials are boiled, in the first stages of paper-making.

digestion (*Zool.*). The process by which food material ingested by an organism is rendered soluble and assimilable by the action of enzymes. —*adj.* **digestive.**

digestive cell (*Bot.*). One of the cells of the cortex of a root, in which the hyphae of an endophytic fungus are killed and digested.

digestive gland (*Bot.*). A glandular hair characteristic of carnivorous plants, producing enzymes by means of which the prey is digested.

digestive pouch (*Bot.*). A layer of cells on the apex of a lateral root; these cells secrete enzymes which help to bring about the breakdown of the cortical cells of the parent root as the lateral grows through it.

digger (*Civ. Eng.*). A general term for a mechanical excavator.

digger plough (*Agric. Mach.*). A type of mouldboard plough that leaves the soil over which it has travelled flat and broken, and not in an unbroken furrow slice. See **disc plough, mouldboard plough.**

digit-, dij'it- (Latin *digitus*, finger). A prefix used in the construction of compound terms; e.g. *digitigrade* (q.v.).

digit (*Zool.*). A finger or toe: one of the free distal segments of a pentadactyl limb.

digit-absorbing selector (*Auto. Teleph.*). A special selector which is required to waste dialled codes or digits which, though redundant, are included in some automatic telephone areas to afford consistency in the numbering scheme.

digit key strip (*Auto. Teleph.*). The strip of plunger keys used by an operator as a *key sender* (q.v.).

digits, compensating (*Auto. Teleph.*). See **compensating digits.**

digital (*Zool.*). In Spiders, the distal joint of the pedipalp: pertaining to, or resembling, a digit.

digital formula (*Zool.*). A figure expressing the number of phalanges in each digit of the metapodium of a pentadactyl limb.

digita'liform (*Bot.*). Shaped like the finger of a glove.

digita'lin (*Chem.*). A glucoside which, together with digitonin, digitalein, and digitoxin, is present in commercial digitalis.

digitalisa'tion (*Med.*). Administration of digitalis to a patient with heart disease, in amounts sufficient to produce full therapeutic effect.

digitate (*Bot.*). Said of a compound leaf in which the leaflets arise from the top of the petiole and spread like the fingers of a hand.

digit'igrade (*Zool.*). Walking on the digits, as Dogs.

digitule, dij'—(*Zool*). Any small finger-like process.

digoneu'tic (*Zool*). Producing offspring twice a year.

digonop'orous (*Zool*). Having two genital pores.

digue, dēg (*Hyd. Eng*) An artificial sea-wall, or breakwater, constructed to prevent the encroachment of the water on the land behind.

digy'nous (*Bot*). Having two carpels.

dihedral angle (*Maths., Aero.*). Angle between two planes, as measured in the plane normal to their line of intersection. Especially applied to the angle of tilt of the wings of an aircraft with respect to the plane containing the lateral axis and the longitudinal axis.

dihy'brid (*Gen.*). The product of a cross between parents differing in two heritable characters.

dihy'drol (*Chem.*). The supposed compound H_4O_2, present in liquid water.

dikaryon (*Cyt.*). See **dicaryon.**

dikar'yophase (*Bot.*). That part of the life-history of many *Basidiomycetae* in which the hyphae are made up of segments, each containing two nuclei.

dike (*Hyd. Eng.*). See **dyke.**—(*Masonry*) A Scottish term for a stone fence.

dike'tones (*Chem.*). A group of compounds containing $-CO-$ groups, which, according to their position in the molecule, are termed α-diketones $-CO{\cdot}CO-$, or β-diketones $-CO{\cdot}CH_2{\cdot}CO-$, etc.

dikon'tan (*Bot*). Having two flagella.

dilac'erate, dī-las'—(*Bot.*). As if torn into strips.

dilapidations (*Build*). A term applied to the damage done to premises during a period of tenancy.

dilated (*Bot.*). Expanded and flattened.

dilatom'eter (*Chem.*). An apparatus for the determination of transition points of solids. It consists of a large bulb joined to a graduated capillary tube, and is filled with an inert liquid. The powdered solid is introduced, and the temperature at which there is a considerable change in volume on slow heating or cooling may be noted; alternatively, the temperature at which the volume shows no tendency to change with time may be found.

dilatom'etry (*Chem.*). The determination of transition points by the observation of volume changes.

dila'tor (*Zool.*). A muscle which by its contraction opens or widens an orifice. Cf. *sphincter.*

dilly (*Mining*). A short self-acting incline where light loads are run.

dilsh (*Mining*). A band of inferior coal.

dil'uent (*Paint.*). Any substance, such as turpentine, used for thinning out paints or varnishes.

diluted (*Bot.*). Pale and faint-coloured.

dilution (*Chem.*). (1) Decrease of concentration.—(2) The volume of a solution (generally in litres) which contains one gram-molecule of dissolved substance.

dilution law (*Chem.*). See **Ostwald's dilution law.**

dilu'vium (*Geol.*). An obsolete term for those accumulations of sand, gravel, etc. which, it was thought, could not be accounted for by normal stream and marine action. In this sense the deposits resulting from the Deluge of Noah would be *diluvial.*

dimeg'aly (*Zool*) The condition of having spermatozoa of two different sizes.

dimension lumber (*Timber*). Lumber which is sawn to special (as opposed to stock) sizes.

dimension stone (*Masonry*). A term sometimes used for an *ashlar* (q.v.).

dimensions paper (*Build., Civ. Eng.*). The sheets on which dimensions are entered in the process of *taking-off* (q.v.).

dimer'ic (*Chem.*). Having the same empirical formula but double the molecular formula.

di'merous (*Bot*). Having two members in a whorl.

Dimetian (*Geol*). A name applied (by Dr Hicks), owing to a misconception of its true nature, to the granite intruded into the **Pre-Cambrian** rocks of the St David's district in Pembrokeshire.

dimet'ric system (*Crystal.*). See **tetragonal system.**

dimid'iate (*Bot.*) (1) Said of an anther which is lop-sided because one lobe is absent or abortive.—(2) Said of a pileus when one side is larger than the other.—(3) Said of the perithecium of a lichen when the upper part only is enclosed in a wall.—(4) In general, lop-sided.

diminished stile (*Join*). A door-stile which is narrowed down for a part of its length, as, e.g., in the glazed portion of a sash door. Also called GUNSTOCK STILE.

diminishing courses (*Build.*). *Graduated courses* (q.v.).

diminishing pipe (*Plumb., San. Eng., etc.*). A tapered pipe length used to connect pipes of different diameters.

dimity (*Textiles*). (1) A strong cotton fabric resembling diaper and damask but with a stripe pattern; used chiefly for bed upholstery.—(2) A light plain cotton cloth with cord stripes.

dimmer (*Cinema*). The mechanical arrangement for hand or automatic regulation of the current in lamps, so that they are switched on and off gradually.—(*Elec. Eng.*) A variable resistance connected in series with electric lights, for controlling their intensity; used chiefly in stage lighting. Also called DIMMING RESISTANCE. See **liquid dimmer.**

dimmer wheel (*Elec. Eng.*). A handwheel for operating one or more dimmers; commonly used in stage-lighting equipments.

dimming resistance (*Elec. Eng.*). See **dimmer.**

dimonoecious, —ē'si-us (*Bot.*). Having perfect flowers, as well as staminate, pistillate, and neuter flowers.

dimor'phic, dimor'phous (*Bot., Zool.*). Existing in two forms.—(*Chem.*) Capable of crystallising in two different forms.

dimorphic heterostyly (*Bot.*). The condition when flowers of the same species of plant have styles of two different lengths.

dimor'phism (*Zool.*). The condition of having two different forms; as animals which show marked differences between male and female, animals which have two different kinds of offspring, and colonial animals, in which the members of the colony are of two different kinds.

dimple (*Eng.*). A slight conical depression produced by a twist drill after a small initial feed into the work; used as a guide for further drilling.

Dimya'ria (*Zool.*). A class of *Nemertinea* in which there are two muscle layers in the body wall, an external circular and an internal longitudinal layer, in addition to diagonal muscles.

dimya'rian (*Zool.*). Having two muscular layers, as certain *Nemertinea*.

D.I.N. (*Photog.*). Abbrev. for *Deutsche Industrie Normal*, referring to the German method of stating the speed of emulsions. The D.I.N. figure is found by exposing and developing the emulsion under standard conditions, and matching its density on a standard scale. See **S.M.P.E.**

Dinantian Series (*Geol.*). The Lower Carboniferous rocks of N.W. Europe, comprising Tournasian and Viscan Stages. Succeeded by the Namurian Stage. Synonymous with AVONIAN.

Dinas bricks, dē'nas (*Build.*). Firebricks made almost entirely of sand with a small amount of lime.

Dinas rock (*Met.*). A natural rock or sand of high silica content, used as an acid refractory.

diner'gate (*Zool.*). A worker ant having a very large head and powerful mandibles; a soldier ant

Dines hygrometer (*Meteor.*). A form of hygrometer in which the dew-point is determined by cooling a glass plate by a flow of iced water until dew forms on it, the temperature of the plate being indicated by a thermometer.

dinging (*Build.*). Rough plastering for walls, a single coat being put on with a trowel and brush.

Di'noflagella'ta (*Zool.*). An order of *Phytomastigina*; forms having two flagella, one directed backwards, the other transverse and lying in a spiral groove, the annulus; yellow, brown, green, or colourless; sometimes of amoeboid form, but usually covered by cellulose plates; usually without a gullet, having food-reserves of starch or oil or both.

dinting (*Mining*). The operation of taking up the floor of a road or level in a coal-mine to increase its height.

diocoel, dī'ō-sēl (*Zool.*). The lumen of the diencephalon.

Dioc'tophymoi'dea (*Zool.*). A class of *Nematoda* in which the body is sometimes spiny; the mouth is hexagonal and surrounded by from one to three circles, each of six papillae; the gut is suspended by four well-developed longitudinal muscles inserted in the middle-line of the muscle tracts of the body wall; in the female there is a single ovary, in the male a caudal bursa without rays and a single copulatory spicule.

diode valve or **diode** (*Thermionics*). A two-electrode thermionic tube. See **Fleming valve.**

dioecious, dī-ē'shus (*Bot.*). Having the male and female organs on separate plants of the same species, each plant being unisexual.—(*Zool.*) Having the sexes separate.—*n.* **dioecism.**

dioestrus, dī-ēs'trus (*Zool.*). In female Mammals, the growth period following metoestrus.

dionic water tester. An instrument for gauging the purity of water by measurement of its electrical resistance, which is reduced by dissolved salts.

diop'side (*Min.*). A monoclinic pyroxene, ideally consisting of silicate of calcium and magnesium, $CaMgSi_2O_6$, but commonly containing a variable content of $FeSi_2O_6$ in addition, and then strictly known as *ferriferous diopside*.

diop'tase or **emerald copper** (*Min.*). A rare hydrated silicate of copper, crystallising in the trigonal system and found occasionally, as rich emerald-green crystals, in association with other copper ores. When first found it was used as a gemstone.

diop'trate (*Zool.*). Having the compound eye transversely divided into an upper and a lower organ, as in *Gyrinidae* (Whirligig Beetles).

dioptre, dī-op'ter (*Light*). The unit of power of a lens. A convergent lens of 1 metre focal length is said to have a power of +1 dioptre. Generally, the power of a lens is the reciprocal of its focal length in metres, the power of a divergent lens being given a negative sign.

dioptric mechanism (*Zool.*). A mechanism by which the images of external objects may be focused on the retina of the eye.

di'orite (*Geol.*). A coarse-grained deep-seated (plutonic) igneous rock of intermediate composition, consisting essentially of plagioclase feldspar (typically near andesine in composition) and hornblende, with or without biotite in addition. Differs from granodiorite in the absence of quartz. See also **tonalite.**

Dio'tocar'dia (*Zool.*). See **Aspidobranchia.**

dip (*Elec. Eng.*). (1) The angle between the earth's magnetic field at any point and the horizontal; also called INCLINATION or MAGNETIC DIP.—(2) A liquid used for chemically cleaning or colouring metals.—(3) The sag of an overhead transmission line conductor.

dip (*Geol.*). A term implying inclination of strata, measured to the horizontal. The *angle of dip* is measured in the direction of maximum slope of the strata. Indicated on geological maps by a small arrow (the *dip arrow*), with a figure alongside giving the inclination in degrees.

dip (*Hyd. Eng.*). Any departure from the regular slope at which a pipe is laid, when the slope is increased locally.

dip arrow (*Geol.*). See **dip.**

dip circle (*Elec. Eng.*). An instrument consisting of a magnetic needle pivoted on a horizontal axis; by it accurate measurements of magnetic dip can be obtained.

dip fault (*Geol.*). A fracture in the rocks of the earth's crust which coincides in direction with the dip of the strata and is therefore at right-angles to their strike.

dip of the horizon (*Astron., etc.*). The angular difference between the true mathematical and the visible horizon; the difference is due to the curvature of the earth, and its amount depends upon the height of the observer above sea-level. Also called APPARENT DEPRESSION OF THE HORIZON.

dip slope (*Geol.*). A land form developed in regions of gently inclined strata, particularly where hard and soft strata are interbedded. A long gentle sloping surface which coincides with the inclination of the strata below ground.

dip stick (*Eng.*). A rod inserted in a tank or sump to measure the depth of oil or other liquid present.

dipstone trap (*Masonry*). A form of trap in which a stone slab on edge dips below the water surface.

di'phase (*Elec. Eng.*). A term sometimes used in place of *two-phase.*

dipha'sic (*Zool.*). (Of certain Trypanosomes) having a life-cycle which includes a free active stage. Cf. *monophasic*.

di'phe'nyl (*Chem.*). Phenylbenzene, $C_6H_5{\cdot}C_6H_5$; colourless, monoclinic crystals; m.p. 71° C.; b.p. 254-5° C.; soluble in alcohol and ether. It occurs in coal-tar, and is prepared by heating iodobenzene to 220° C. with finely divided copper.

diphenyl ether (*Chem.*). $C_6H_5{\cdot}O{\cdot}C_6H_5$, diphenyl oxide, a liquid of pleasant odour, m.p. 28° C., b.p. 253° C., obtained from phenol by heating with $ZnCl_2$ or $AlCl_3$.

diphenylmethane (*Chem.*). $(C_6H_5)_2CH_2$, colourless needles, m.p. 26° C., b.p. 262° C., obtained by the action of benzyl chloride on benzene in the presence of aluminium chloride.

diphenylmethane dyes (*Chem.*). Dyestuffs derived from diphenylmethane. The only important dyestuff of this class is Auramine O, the ketoneimide of diphenylmethane.

diphenylmethane group (*Chem.*). Compounds containing two benzene nuclei attached to a single carbon atom, derivatives of *diphenylmethane* (q.v.).

diphtheria (*Med.*). An acute infectious disease caused by the Klebs-Löffler bacillus, *Corynebacterium diphtheriae*; characterised by the formation of false membranes on the mucous membranes, especially of the throat.

diphtheria, avian (*Vet.*). See **fowl pox.**

diphtheria, calf (*Vet.*). An infectious disease of calves, due to *Fusiformis necrophorus.*

diph'theroid (*Bacteriol.*). A common term for describing many bacilli similar morphologically to the diphtheria bacillus, belonging to the genus *Corynebacterium*, but harmless to man.

diphthongs (*Typog.*). The characters æ, œ. They are more properly termed vowel-ligatures. In modern usage the tendency is to revert to separate letters in words of Greek and Latin origin, keeping the diphthong, however, in words from the French (e.g. manœuvre).

diphycercal, dī-fi-ser'kal (*Zool.*). Said of a type of tail-fin (found in Lung-fish, adult Lampreys, the young of all Fish, and many aquatic Urodeles) in which the vertebral column runs horizontally, the fin being equally developed above and below it.

diphyge'nic (*Zool.*). Having two different modes of development.

diphylet'ic (*Biol.*). Of dual origin: descended from two distinct ancestral groups.

diph'yodont (*Zool.*). Having two sets of teeth—a deciduous or milk dentition and a permanent dentition.

dipl- (Greek *diploos*, double). A prefix used in the construction of compound terms; e.g. *diploneural.*

diplan'etary (*Zool.*). (Of *Protozoa*) having two different kinds of zoospores.

diplanet'ic (*Bot.*). Swimming for a short time, encysting, and leaving the cyst for a second period of swimming, and with the second swimming phase differing in morphology from the first.

dip'leco'lobous (*Bot.*). Said of an embryo with an incumbent radicle and with the cotyledons folded twice or more.

diple'gia (*Med.*). Bilateral paralysis of like parts of the body.

dipleu'rula (*Zool.*). A free-swimming ciliated larval stage of eleutherozoan *Echinodermata* which is bilaterally symmetrical and possesses three pairs of coelomic sacs.

diplex (*Teleg.*). The possible system of telegraphy in which two messages can be sent independently, in the same direction, over a telegraph circuit. *

diplobi'ont (*Bot.*). A plant which includes in its life-cycle at least two kinds of different individuals; if the species is dioecious, there are three kinds of individuals.—*adj.* **diplobion'tic.**

diploblas'tic (*Zool.*). Having two primary germinal layers, namely, ectoderm and endoderm.

diplocaules'cent (*Bot.*). Having a main axis with branches upon it.

diplochlamyd'eous chimaera (*Bot.*). A periclinal chimaera consisting of an outer skin, two layers of cells thick, representing one constituent, and surrounding a core representing the other constituent.

diplodal (*Zool.*). (Of *Porifera*) having a prosodus as well as an aphodus.

diplodes'mic (*Bot.*). Having two parallel vascular systems.

diplodisation, diploidisation (*Bot.*). The conversion of a mycelium composed of uninucleate segments into one composed of binucleate segments.

diploe, dip-lō'ē (*Zool.*). In certain bones of the skull, cancellous tissue between outer and inner layers of compact bone.—*adj.* **diploic.**

diplogan'gliate (*Zool.*). Having paired ganglia.

diplohap'lont (*Bot.*). A plant having a sexual process, and having a morphological alternation between a haploid generation and a diploid generation.

diploid (*Cyt.*). Having the somatic number of chromosomes characteristic of the species. Cf. *haploid.*

diploid apogamety (*Bot.*). See **euapogamy**

diploid apogamy (*Bot.*). The development of a sporophyte containing diploid nuclei, without any preliminary fusion of gametes, from one or more cells of the gametophyte.

dip'lokaryot'ic (*Cyt.*). Having twice the normal diploid number of chromosomes.

diplone'ma (*Cyt.*). A stage in the meiotic division at which the chromosomes are clearly double.

diplont (*Bot.*). A plant body containing diploid nuclei.

dip'lophase (*Biol.*). The period in the life-cycle of any organism when the nuclei are diploid. Cf. *haplophase.*

diplo'pia (*Med.*). Double vision of objects.

diploplac'ula (*Zool.*). In the life-history of some Invertebrates, a larval stage resembling a flattened blastula.

Diplop'oda (*Zool.*). See **Chilognatha.**

diplo'sis (*Cyt.*). The doubling of the chromosome number.

dip'losome (*Cyt.*). A paired heterochromosome: a double centrosome lying in the cytoplasm.

dip'lospon'dyly (*Zool.*). The condition of having two vertebral centra, or a centrum and an intercentrum, corresponding to a single myotome.—*adjs.* **diplospondylic, diplospondylous.**

dip'lostem'onous (*Bot.*). Having twice as many stamens as there are petals, with the stamens in two whorls, the members of the outer whorl alternating with the petals.

dip'lotene (*Cyt.*). The fourth stage of meiotic prophase, intervening between pachytene and diakinesis, in which homologous chromosomes come together and there is condensation into tetrads.

diplozo'ic (*Zool.*). Bilaterally symmetrical.

Dipnoi or **Dipneusti** (*Zool.*). The only living order of *Crossopterygii*, in which the air-bladder is adapted to function as a lung, and the dentition consists of large crushing plates. Lung-fish.

di'pole (*Chem.*). A molecule in which the effective centres of the positive and negative charges are separated.

dipole (*Diel.*). A positive and a negative charge at a fixed distance. Tends to set itself along the line of electric force and thus gives a contribution to the dielectric constant and the dielectric losses.

dipole antenna (*Radio*). An antenna comprising a straight conductor, of overall length one half-wavelength or less, connexions to which are made at the centre. It responds to waves polarised along the axis of the conductor, and is used at short wavelengths for discriminating between waves of different polarisations. See also **doublet antenna.**

dipole moment (*Chem.*). The product of the magnitude of the charges of a dipole and the distance between them.

dipole radiator (*Radio*). See **dipole antenna.**

Dippel's oil (*Chem.*). Bone-oil. A product obtained by the dry distillation of bones from which the fat has not been extracted; contains a mixture of pyridine bases and their homologues.

dipper (or **dipper-bucket**) **dredger** (*Eng.*). A dredger consisting of a single large bucket at the end of a long arm, swung in a vertical plane by gearing. The bucket capacity may be up to about 12 cubic yards.

dipping (*Eng.*). The immersion of pieces of material in a liquid bath for surface treatment such as pickling or galvanising.

dipping (*Paint.*). A process of painting or varnishing by dipping into tanks filled with paint or varnish.

dipping (*Pot.*). The immersing of pottery in slip (as in the *jasper dip*) or in liquid glaze.

dipping (*Vet.*). The process of immersing animals in a medicated bath, for the destruction of ectoparasites.

dipping needle (*Elec. Eng., Surv.*). A magnetic needle pivoted on a horizontal axis, used for obtaining approximately the magnetic dip, i.e. a rough form of dip circle. Occasionally called an INCLINATORIUM. See **miner's dip needle.**

dipping refractometer (*Chem.*). A type of refractometer which is dipped into the liquid under examination.

dipro'sopus (*Med.*). A foetal monster which has two faces.

diprosopus triophthal'amus (*Zool.*). In experimental embryology, an abnormal embryo produced by constriction of the two-celled stage in the sagittal plane; characterised by the duplication of the anterior part of the head and the fusion of the median pair of eyes.

diprosthom'erous (*Zool.*). Having two somites in front of the mouth.

dipro'todont (*Zool.*). Having the first pair of upper and lower incisor teeth large and adapted for cutting, the remaining incisor teeth being reduced or absent: pertaining to the *Diprotodontia*. Cf. *polyprotodont.*

dipsoma'nia (*Med.*). The condition in which there is a recurring, temporary, and uncontrollable impulse to drink excessively.

Dip'tera (*Zool.*). An order of *Endopterygota*, having one pair of transparent wings, the hinder pair being represented by a pair of club-shaped balancing organs or halteres; the mouth-parts are suctorial; the larva is legless and sluggish. Flies, Gnats, and Midges.

dipy'gus (*Med.*). A foetal monster with a double pelvis.

dipyre, dipyrite (*Min.*). See **mizzonite.**

direct-acting pump (*Eng.*). A steam-driven reciprocating pump in which the steam and water pistons are carried on opposite ends of a common rod.

direct adaptation (*Bot.*). Any adaptation which does not appear to stand in relation to natural selection.

direct arc furnace (*Elec. Eng.*). An electric arc furnace in which the arc is drawn between an electrode and the charge in the furnace. See **Heroult furnace.**

direct call (*Teleph.*). In international telephony, a call which involves a single international telephone circuit, i.e. one between two trunk centres and over one frontier.

direct circuit (*Teleg.*). A telegraphic circuit going from one station to another without the use of relays at intermediate stations.

direct-coupled exciter (*Elec. Eng.*). An exciter for a synchronous or other electric machine, which is mounted on the same shaft as the machine that it is exciting.

direct-coupled generator (*Elec. Eng.*). A generator which is mechanically coupled to the machine which is driving it, i.e. not driven through gearing, a belt, etc.

direct coupling (**d.c.**) (*Elec. Comm.*). The omission of the series condenser in resistance capacity intervalve coupling so that zero-frequency currents are amplified to the same extent as higher frequency currents. The correct grid-bias for the succeeding valve is obtained either by a potentiometer or by a reversed polarity battery.—(*Radio*) Coupling between two circuits effected without an intervening amplifier; e.g. by mutual inductance or capacity.

direct current (*Elec. Eng.*). A current which flows in one direction only, and which does not have any appreciable pulsations in its magnitude. Abbrev. **d.c.** or **D.C.**

direct-current amplifier, —balancer, etc. See **d.c. amplifier,** etc.

direct drive (*Radio*). A transmitting system in which the antenna circuit is directly coupled to the oscillator circuit.

direct germination (*Bot.*). The germination of a spore of any kind by means of a hypha or a filament.

direct haulage (*Mining*). The system in which an engine with a single drum and rope draws loaded trucks up an incline. The empties run downhill dragging the rope after them.

direct heating (*Build.*). A system of heating by radiation. Cf. *indirect heating.*

direct labour (*Civ. Eng.*). A method of carrying out engineering works in which the engineer who prepares the scheme also undertakes the duty of carrying it out, for which purpose he hires labour and plant.

direct laying (*Cables*). Cables are laid in a trench and covered with soil; planks, bricks, tiles, or concrete slabs are put over the cable as protection. Cables used to be armoured, but modern practice is merely to put a serving of bituminised paper or hessian over the lead sheath.

direct lighting (*Illum.*). A system of lighting in which not less than 90% of the total light emitted is directed downwards, i.e. in the lower hemisphere.

direct line (*Teleph.*). The line connecting the subscriber's main telephone instrument to the exchange, as contrasted with an extension line from this instrument.

direct mixing (*Textiles*). The usual method of blending cotton of different types at the bale opener or the hopper feeder in order to obtain material suitable for spinning the desired yarn. See **stack mixing.**

direct nuclear division (*Cyt.*). See **amitosis.**

direct oxidation (*Met.*). The reaction of metals with dry gases, leading to the formation of oxide or other compounds on the surface; it does not occur to a pronounced extent except at elevated temperature.

direct petrol injection (*I.C. Engs.*). A method of operating a petrol engine by injecting liquid petrol directly into the induction pipe or cylinder during the suction-stroke, thus dispensing with a carburettor; in aero engines it avoids carburettor freezing troubles.

direct pickup (*Television*). The transmission of television images directly, without intermediate photographic recording.

direct process (*Met.*). The method originally used for obtaining from ore a form of iron similar to wrought-iron in one operation, i.e. without first making pig-iron.

direct ray (*Radio*). That portion of the wave from a transmitter which proceeds directly to the receiver, without reflection from the Heaviside layer. Also called GROUND RAY, GROUND WAVE.

direct-reading instrument (*Elec. Eng.*). An instrument in which the scale is calibrated in the actual quantity measured by the instrument, and which therefore does not require the use of a multiplying constant.

direct-reading tacheometer (*Surv.*). A tacheometer with which the horizontal and vertical components of a sloping sight may be read directly, without the necessity for measuring the vertical angle.

direct reductive analysis (*Psychol.*). A method of analysis, introduced by Hadfield, which stresses the environmental factor, particularly any specially traumatic or *nuclear* incidents in the life-history of the individual, in the causation of neurosis. He relates the existing emotional attitudes of the patient back to the people for whom they were first felt, thus lessening the phenomenon of transference to the person of the analyst.

direct sound (*Acous.*). The sound intensity arising from the direct radiation from a source to a listener, as contrasted with the reverberant sound which has experienced a large number of reflections between the source and the listener.

direct stroke (*Elec. Eng.*). When a transmission line or other apparatus is struck by a lightning stroke, it is said to receive a *direct stroke*. Cf. *induced stroke*.

direct-suspension construction (*Elec. Eng.*) A form of construction used for the overhead contact wire on electric traction systems; the contact wire is connected directly to the supports without catenary or messenger wires.

direct-switching starter (*Elec. Eng.*). An electric motor starter arranged to switch the motor directly across the supply, without the insertion of any resistance or the performing of any other current-limiting operation.

direct-trip (*Elec. Eng.*). A term used in connexion with circuit-breakers, starters, or other similar devices, to indicate that the current which flows in the tripping coil is the main current in the circuit, not an auxiliary current obtained from a battery or other source.

direct vernier (*Surv.*) A vernier in which n divisions on the vernier plate correspond in length to $(n-1)$ divisions on the main scale.

direct viewing (*Television*). Television reception in which the received image is viewed directly on the screen of a cathode ray tube, without intermediate amplifying or reflecting devices.

direct-vision prism (*Light*). A compound prism with component prisms of two glasses having different dispersive powers and cemented together so that, in passing through the combination, light suffers dispersion but no deviation.

direct-vision spectroscope (*Light*). A spectroscope employing a *direct-vision prism* (q v). Such an instrument is usually in the form of a short straight tube with a slit at one end and an eyepiece at the other; it is used for rough qualitative examination of spectra.

direct-vision view-finder (*Photog.*). A view-finder using a lens and sighting pin or hole with axis parallel to that of the camera lens, or slightly tilted to compensate for distance.

direction-finder (*Radio*). A directional receiver in which the directions of maximum and minimum signal response can be varied, so as to determine the direction of arrival of incoming waves.

See **Adcock—**
automatic—
Bellini-Tosi—
cathode ray—
loop (or frame)—
Robinson—
Robinson-Adcock—
spaced-loop—

direction-finding (*Radio*). The principle and practice of determining a bearing by radio means, using a discriminating antenna system and a radio receiver, so that the direction of an arriving wave, ostensibly the direction or bearing of a distant transmitter, can be determined.

direction switch (*Elec. Eng.*). A switch which determines the direction of travel; used on electric lifts or similar equipments.

directions image (*Min.*). See **interference figure.**

directional antenna (*Radio*). An antenna in which the transmitting and receiving properties are concentrated along certain directions. See also **beam antenna.**

directional baffle (*Acous.*). A baffle taking the form of a widely flared horn with the reproducing diaphragm located at its throat.

directional circuit-breaker (*Elec. Eng.*). A circuit-breaker which operates when the current flowing through it is in the direction opposite to normal.

directional filter (*Elec. Comm.*). An electric wave filter used in carrier telephone systems to separate the bands of frequencies of the outgoing currents from those of the incoming currents.

directional lighting fittings (*Illum.*). Lighting fittings (often used in street lighting installations) which direct a high proportion of their light output towards a point on the roadway, mid-way between adjacent lamp standards.

directional loudspeaker (*Acous.*). A loudspeaker in which the normal directivity of a moving diaphragm is increased by a horn with a large flare, so that the radiated sound-power is mostly directed in a beam.

directional microphone (*Acous.*). A microphone which is directional in its response, either inherently (as in the ribbon microphone) or with the assistance of a parabolic reflector of adequate dimensions.

directional radio (*Radio*). A radio system using directional antennae at the transmitting and/or receiving ends.

directional receiver (*Radio*). A receiving system using a directional antenna.

directional relay (*Elec. Eng.*). A relay whose operation depends on the direction of the current flowing through it.

directional transmitter (*Radio*). A transmitting system using a directional antenna.

directive efficiency (*Radio*). The ratio of maximum to average radiation or response of a directional antenna.

directive force (*Elec. Eng.*). A term used to denote the couple which causes a pivoted magnetic needle to turn into a north and south direction.

directive mesenteries (*Zool.*). In *Anthozoa*, a pair of mesenteries, opposite the siphonoglyph, which have the longitudinal muscle bands facing away from each other.

directive movement (*Bot.*). Movement of orientation.

directives (*Zool.*). In *Zoantharia*, two pairs of mesenteries in which the muscles are on opposite sides, instead of facing each other.

directivity (*Acous.*) The enhancement of response of microphones and loudspeaking receivers in particular directions, usually along an axis, a phenomenon which determines the definition of transmission of sounds during conversion by these electro-acoustic transducers.

directivity (*Radio*). A term loosely employed to express the extent to which a directional antenna concentrates the radiation or response in certain directions.

directly heated cathode (*Thermionics*). See **filament.**

director (*Artillery*). An optical instrument used for measuring horizontal and vertical angles, when calculating the line of fire and angle of sight.

director (*Auto. Teleph.*). The apparatus which obtains a channel, through exchange junctions, to the required exchange. During dialling the trains of impulses are registered, and when the required exchange is found the numerical trains are passed to the required exchange, and operate the selectors, to get the required subscriber.

director (*Surg.*). A grooved instrument for guiding a surgical knife.

director meter (*Auto. Teleph.*). In an automatic switching exchange, a meter which is attached to a director to total the number of times it is taken into operation.

director system (*Auto. Teleph.*). An automatic switching system for routing calls between exchanges. It uses a storage mechanism for the numerical impulse trains, while the code impulses are being translated and used to find a route over junctions to the required exchange, which, when found, receives the numerical trains and hence, by step-by-step mechanism, connects to the wanted subscriber.

dirt (*Mining*). Broken valueless mineral, even if clean.

dirt beds (*Geol.*). A general name applied to old fossil soils, particularly to those in the Purbeck Series. The 'Fossil Forest' of the Lulworth District lies immediately upon such a dirt bed.

dis (*Elec. Eng.*). See **discontinuity.**

disaccharoses (*Chem.*). A group of carbohydrates considered to be derived from two molecules of a monosaccharose by elimination of one molecule of H_2O.

disappearing-filament pyrometer. An instrument used for estimating the temperature of a furnace by observing a glowing electric-lamp filament against an image of the interior of the furnace formed in a small telescope. The current in the filament is varied until it is no longer visible against the glowing background. From a previous calibration the required temperature is derived from the value of the current.

disarticulation (*Surg.*). Amputation of a bone through a joint.

disa'zo dyes (*Chem.*). Dyestuffs containing two azo groups of the type: $C_6H_5{\cdot}N{:}N{\cdot}C_6H_4{\cdot}N{:}N{\cdot}C_6H_4$ OH. These dyes are obtained by diazotising an amino-derivative of azobenzene and then coupling it with a tertiary amine or with a phenol, or by coupling a diamine or dihydric phenol with two molecules of a diazonium salt.

disc or **disk** (*Bot.*). (1) An outgrowth from the receptacle of the flower, arising beneath the carpels or stamens, and often secreting honey.—(2) The central part of a capitulum.—(3) The portion of an apothecium that bears the asci and paraphyses.

disc (*Zool.*). Any flattened, circular, disc-like structure.

disc-and-drum turbine (*Eng.*). A steam-turbine comprising a high-pressure impulse wheel, followed by intermediate and low-pressure reaction blading, mounted on a drum-shaped rotor. Also called COMBINATION TURBINE or IMPULSE-REACTION TURBINE.

disc anode (*Cathode Ray Tubes*). The final anode in an electrostatically focused cathode ray tube, usually a circular plate containing a central aperture through which the beam passes.

disc (or plate) clutch (*Eng.*). A friction clutch in which the driving and driven members have flat circular or annular friction surfaces, and consist of either one or a number of discs, running either dry or lubricated. See **single-plate clutch, multiple-disc clutch.**

disc, colour (*Photog.*). See **colour disc.**

disc condenser (*Elec.*). A variable condenser in which the variation in capacity is effected by the relative axial motion of discs.

disc coulter (*Agric. Mach.*). A saucer-shaped steel disc; used on a drill to make a shallow trench for the seed.

disc discharger (*Elec. Eng.*). A spark gap in which the sparks take place between a fixed contact and studs on a rotating disc. Also called a ROTARY SPARK GAP.

disc filter (*Photog.*). The synchronously rotating disc, containing sectors with appropriate filters, used in taking or projecting colour films.

disc floret (*Bot.*). One of the regular tubular flowers occupying the central part of a capitulum when this contains two kinds of flowers.

disc harrow (*Agric. Mach.*). A harrow consisting of saucer-shaped steel discs mounted on two axles. See **harrow.**

disc pile (*Civ. Eng.*). A hollow pile having a wide flange at the foot with projecting radial ribs on it; used for piling in sand.

disc plough (or plow) (*Agric. Mach.*). A plough which cuts a furrow slice by means of a sharp-edged steel disc, of saucer-like shape, set obliquely to the ground surface. See **mould-board plough.**

disc prism (*Television*). A disc scanner consisting of a glass disc ground in such a way that its periphery forms a series of prisms, so that a ray of light passing through it is deflected through an angle dependent on the position of the disc.

disc, Rayleigh (*Acous.*). See **Rayleigh disc.**

disc record (*Acous.*). The normal type of gramophone shellac record, in which the reproducing needle follows a spiral groove, while the record is rotated at constant speed; devised by Berliner.

disc recording (*Acous.*). The system of recording on circular slabs of wax for subsequent disc pressing, as contrasted with recording on cylindrical waxes, as in the dictaphone.

disc scanner (*Television*). A rotating disc carrying the apertures, lenses, prisms, or other picture-scanning elements used in mechanical scanning systems. See also **apertured disc, disc prism, Nipkow disc.**

disc separator (*Eng.*). A machine for separating grain or seeds of different sizes; used in flour-milling. The grain passes between revolving iron discs on a horizontal shaft, their faces carrying numerous small indents which remove the unwanted seed and discharge it at a higher level.

disc valve (*Eng.*). A form of suction and delivery valve used in pumps and compressors; it consists of a light steel or fabric disc resting on a ported flat seating; steel valve discs are usually spring-loaded.

disc wheel (*Eng.*). A wheel in which hub and rim are connected by a solid disc of metal instead of by separate spokes.

disc winding (*Elec. Eng.*). A type of winding, used for medium and large transformers, in which the turns are made up into a number of annular discs.

discal (*Zool.*) Pertaining to or resembling a disc or disc-like structure: a wing-cell of various Insects.

discard (*Met.*). The portion of an ingot cropped off to remove the pipe and other defects. Also called CROP.

discharge (*Elec. Eng.*). The process of taking energy from a charged accumulator. See also **electric discharge.**

discharge (*Hyd.*). The rate of flow through a pipe or channel, expressed in units such as cubic feet per second, pounds per second, gallons per hour.

discharge bridge (*Diel.*). A method of measuring the ionisation, or discharge, in dielectrics or cables, depending on the selection and amplification of the high-frequency components of the discharge.

discharge coefficient (*Hyd.*). See **coefficient of discharge.**

discharge electrode (*Elec. Eng.*). See **active electrode.**

discharge lamp (*Illum.*). See **electric discharge lamp.**

discharge rate (*Elec. Eng.*). A term used in connexion with the discharge of accumulators. An accumulator has a certain capacity at, say, a one-hour discharge rate when that capacity can be obtained if the accumulator is completely discharged in one hour. If the discharge rate is lower, i.e. more than one hour, the capacity obtainable will be higher.

discharge resistance (*Elec. Eng.*). A non-inductive resistance placed in parallel with a circuit of high inductance (e.g. the field winding of an electric machine) in order to prevent a high voltage appearing across the circuit when the current in it is switched off.

discharge tube (*Thermionics*). A general term for any device in which an electric discharge takes place in a vacuum or a gas at low pressure; it includes thermionic valves, thyratrons, and cathode ray tubes.

discharge valve (*Eng.*). A valve for controlling the rate of discharge of fluid from a pipe or centrifugal pump.

discharger (*Elec. Eng.*). (1) A device, such as a spark gap, which provides a path whereby a piece of electrical apparatus may be discharged.—(2) An apparatus containing an electrically heated wire for firing explosives in blasting.

See **disc—** **multigap—**
Lepel— **rotary—**

discharging arch (*Build.*). An arch built in a wall to protect a space beneath from the weight above.

discharging pallet (*Horol.*). The pallet mounted in the discharging roller of the chronometer escapement, which brings about the unlocking of the escape wheel by removing the locking pallet from a tooth of the escape wheel.

discharging roller (*Horol.*). The circular disc carrying the discharging pallet mounted on the balance staff in the chronometer escapement.

discharging tongs (*Elec. Eng.*). A pair of metal tongs used for discharging condensers before they are touched by hand.

Disciflo'rae, dis-ki— (*Bot.*). A group of dicotyledonous families with polypetalous corollas, usually with a disc in the flower bearing the stamens, and with a superior ovary.

discission (*Surg.*). An incision into a part; especially, needling of a cataract.

discoblas'tula (*Zool.*). The type of blastula formed by the cleavage of a megalecithal egg consisting of a disc-like blastoderm.—*adj.* **discoblastic.**

dis'cocarp (*Bot.*). See **apothecium.**

Discoceph'ali (*Zool.*). An order of *Neopterygii*, characterised by the presence of a large flat complex sucker situated on the dorsal surface of the head. Remoras or Sucking-fish.

discodac'tylous (*Zool.*). Having the ends of the digits flattened out to form circular sucking discs.

discoid (*Bot.*). (1) Round and flat.—(2) Said of a capitulum which has no ray florets.—(3) Said of an open rounded fructification of a lichen.—(4) Said of the form of an algal thallus which is closely applied to a substratum, and is one layer of cells in thickness.

discoi'dal segmentation (*Zool.*). Cleavage of an ovum, leading to the formation of a disc-like germinal area, as in the Chick.

Discolichenes, —li-kē'nēz (*Bot.*). A group of lichens in which the fungus is a Discomycete.

discolor, discolorous, —kul'ur(-us) (*Bot.*). Not of the same colour throughout.

discolouring (*Paint.*). A defect in painted work, characterised by change of colour.

Discomedu'sae (*Zool.*). An order of *Scyphozoa*, comprising active marine forms with eight or more tentaculocysts; regular alternation of generations occurs.

Discomyce'tes (*Bot.*). A group of *Ascomycetes* characterised by the possession of an apothecium as the fructification.

disconformity (*Geol.*). That type of break in the rock sequence in which there is no angular discordance of dip between the two sets of strata involved. Cf. *unconformity*.

disconnecting link (*Elec. Eng.*). See **isolating link.**

disconnection (*Elec. Eng.*). See **discontinuity.**

disconnector (*San. Eng.*). See **interceptor.**

discontinuity or **disconnection** (*Elec. Eng.*). A break, whether intentional or accidental, in the conductivity of an electrical circuit; colloquially called a *dis*. See also **magnetic discontinuity.**

discontinuous distribution (*Biol.*). Isolated distribution of a species, as the Tapir, which is found in the Malay Peninsula and Sumatra and again in Central and South America.

discontinuous variation (*Biol.*). A rare variation: sport: saltation.

discon'ula (*Zool.*). A larval type of certain *Siphonophora*, having eight rays, and producing buds on the ventral side of its umbrella.

discoplacen'ta (*Zool.*). A type of placenta having the villi arranged on a flat disc-shaped area.

discoplank'ton (*Bot.*). Plankton with cells in the form of thin discs.

discrete (*Bot.*). Remaining separate; said especially of paraphyses of lichens.

discriminating circuit-breakers (*Elec. Eng.*). A term sometimes used to denote circuit-breakers which operate only when the current is in a given direction.

discriminating protective system (*Elec. Eng*). An excess-current protective system which causes to be disconnected only that portion of a power system upon which a fault has actually occurred.

discriminating satellite exchange (*Auto. Teleph.*). A small automatic exchange which can decide, without engaging its main exchange, whether or not it can complete a call arising from one of its subscribers.

discriminating selector (*Auto. Teleph.*). A selector which discriminates between calls which are to be completed locally and those which are to be completed through other exchanges, the mode of operation being by the absorption of a train of impulses.

discriminator (*Elec. Eng.*). A device occasionally used in connexion with the metering of an electrical supply; when the demand exceeds a certain predetermined figure, it automatically switches one meter out of circuit and inserts another.

discus (*Bot.*). The hymenium of an apothecium.

discus prolig'erus (*Zool.*). In a Graafian follicle, the layer of cells immediately surrounding the ovum.

dish (*Photog.*). A flat receptacle for chemical solutions; made of neutral chemical material (e.g. porcelain, vulcanite, etc.), it is of standard shape for processing plates and films.

disharmony (*Zool.*). See **hypertely.**

dished (*Furn.*). A term indicating that the seat or back of a chair or couch is curved to shape of the body.

dished-out (*Build.*). Said of the wooden framework or bracketing on which the laths and plastering are fixed in vaults, domes, coved ceilings, and the like.

dished plate (*Eng.*). A plate forged or pressed into a dish-like shape, in order to increase its stiffness when subjected to pressure on the convex side.

dishing (*Carp.*). A hollowed-out recess in a piece of wood.

disincrustant (*Eng.*). See **anti-incrustator.**

disinfectant (*Chem.*). Any compound for destroying microbes and germs. The most powerful disinfectants are potassium permanganate, hydrogen peroxide, and phenol derivatives.

disinfection (*Med.*). The destruction of pathogenic bacteria, usually with an antiseptic chemical or *disinfectant* (q.v.).

disinfestation (*Med.*). The destruction of insects, especially lice.

disintegration (*Masonry*). The gradual crumbling away of building-stone.

disintegration of filament (*Illum.*). The gradual breaking up of the filament of an electric filament lamp, owing to projection of particles from the filament; the particles adhere to the inner surface of the bulb, causing blackening.

disintegrator or **disintegrating mill** (*Eng.*). A mill for reducing lump material to a granular product. It consists of fixed and rotating bars in close proximity, crushing being partly by direct impact and partly by inter-particulate attrition.

disintegrator (*Mining*). A comminuting appliance which produces a fine dry powder by impact, i.e. by a succession of blows by steel hammers, slings, or pegs.

disjunct (*Zool.*). Having deep constrictions between the different tagmata of the body.

disjunction (*Cyt.*). The separation during meiosis of the two members of each pair of homologous chromosomes.

disjunctive symbiosis (*Zool.*). A mutually beneficial partnership between two animals, in which there is no direct connexion between the partners.

disjunctor (*Bot.*). A portion of wall material forming a link between the successive conidia in a chain, and serving as a weak place where separation may occur.

disk. A variant spelling of *disc* (q.v.).

dislocation (*Surg.*). The displacement of one part from another; especially, an abnormal separation of two bones at a joint.

dislocation of meromes (*Zool.*). The passage of a merome from its proper somite to another somite; as the forward movement of the pelvic fins in some Fish.

diso'mic, di— (*Cyt.*). Relating to two homologous chromosomes or genes.

disorientation (*Psychol.*). A mental state in which there is inability to judge the proper relations between events in time and space.

dispensable circuit (*Elec. Eng.*). A separate circuit used in a wiring system to which is connected apparatus that can be cut out of circuit at times of heavy load.

dispensary (*Med.*). A place where drugs, etc. are dispensed (i.e. prepared for administration): a clinic, often charitable, for the treatment of out-patients.

disper'my, di— (*Zool.*). Penetration of an ovum by two spermatozoa.

dispersal (*Biol.*). The establishment of individuals in a new area: the process of reaching such a new area.

dispersed phase (*Chem.*). A substance in the colloidal state.

dispersion (*Light*). The variation of the refractive index of a substance with wavelength (or colour) of the light. It is on account of its dispersion that a prism is able to form a spectrum. For most media the refractive index increases as the wavelength decreases. See **Cornu-Hartmann formula, Cauchy formula, anomalous dispersion, rotatory dispersion.**

dispersion coefficient (*Elec. Eng.*). A term often used to denote the leakage factor of an induction motor.

dispersion curve (*Light*). A curve obtained by plotting the deviation of light produced by a prism against the wavelength of the light.

dispersion hardening (*Met.*). See **precipitation hardening.**

dispersion medium (*Chem.*) A substance in which another is colloidally dispersed.

dispersion photometer (*Illum.*). A photometer for measuring the luminous intensity of strong sources of light. The light from the source is reduced in intensity by means of lenses before being compared with the standard.

dispersive power (*Light*). The ratio of the difference in the refractive indices of a medium for the red and violet to the mean refractive index diminished by unity. This may be written

$$\nu = \frac{\mu_V - \mu_R}{\mu - 1}.$$

dispi'reme, di— (*Cyt.*). The stage of telophase in which the spireme thread of each daughter nucleus has been formed.

displacement (*Aero.*). The mass of the air displaced by the volume of gas in any lighter-than-air craft.

displacement (*Diel.*). The electric displacement in a dielectric is the charge displaced over unit area. It is represented by D and is given by $D=(K/4\pi)E$, where K is the dielectric constant and E the electric stress.

displacement (*Eng.*). (1) The volume of fluid displaced by a pump plunger per stroke or per unit time.—(2) The swept volume of a working cylinder.

displacement (*Hyd. Eng.*). The weight of water displaced by a vessel. It is equal to the total weight of the vessel and contents. See **Archimedes' principle.**

displacement (*Psychol.*). A mechanism commonly observed in dreams, whereby a hidden element may be replaced by something more remote; or the accent may be shifted from an important to an unimportant element, the affect also being transferred from one idea to another. See also **distortion.**

displacement current (*Radio*). The current postulated in a dielectric when the electric stress or potential gradient is varied. It is distinguished from a normal or conduction current in that it is not accompanied by motion of charges in the dielectric. Term introduced by Maxwell.

displacement law (*Phys.*). (1) The law of Soddy and Fajans which states that the emission of an α-particle causes a displacement of two places to the left in the periodic table, and the emission of a β-particle a displacement of one place to the right.—(2) The law of Kossel and Sommerfeld according to which the arc spectrum of an element resembles the singly ionised spectrum of the element one place to the right in the periodic table.—(3) *Wien's displacement law* (q.v.).

displacement series (*Chem.*). See **electromotive series.**

display panel (*Teleph.*). The panel, with illuminated numbers, in front of a manual operator, who completes connexions arising in an automatic system. The displayed numbers are selected by marginal currents translated from impulse trains by a coder.

display work (*Typog.*). Displayed type-setting (such as title pages, jobbing work, advertisements), distinguished from solid text composition.

disposition (*Psychol.*). The mental constitution of an individual, as formed by his reactions to experience and environment.

disruptive discharge (*Elec. Eng.*). The sudden passage of electricity which occurs as a result of a breakdown of insulating material under the influence of electric stress.

disruptive strength (*Elec. Eng.*). See **electric strength.**

disruptive voltage (*Elec. Eng.*). The minimum voltage required to produce a disruptive discharge in an insulating medium.

dissected (*Bot.*). Cut deeply into many narrow lobes or leaflets.

dissecting (*Typog.*). The removal of type matter which is to be printed in a second colour in order to impose it in another chase, position and spacing being carefully regulated.

dissector multiplier (*Television*). See **image dissector multiplier.**

dissector tube (*Television*). See **image dissector.**

disseminate (*Bot.*). Scattered.

disseminated sclerosis (*Med.*). A chronic progressive disease in which patches of thickening appear throughout the central nervous system, resulting in various forms of paralysis.

dissemination (*Bot., Zool.*). The spread or migration of species in plants, usually by means of spores or seeds.

dissem'inule (*Bot.*). Any part of a plant which serves for the dissemination of the plant.

dissep'iment (*Bot.*). (1) A wall dividing the loculi of a syncarpous ovary.—(2) See **trama.**

dissepiment (*Zool.*). In *Hydrocorallinae* and certain Corals, an imperfect horizontal calcareous partition stretching between the septa and partially shutting off the lower part of the polyp cup. Cf. *tabula*.

dissimilation (*Bot.*). See **respiration.**

dissipation (*Elec. Comm.*). The power losses in condensers and inductances, which make the assumption of pure reactances invalid, and make indefinite the nominal cut-off frequencies in filters.

dis'sipative network (*Elec. Comm.*). A network designed to absorb power, as contrasted with networks which attenuate power by impedance reflection. All networks dissipate to some slight extent, because neither inductances nor condensers can be made entirely loss-free.

dissociation (*Chem.*). The reversible or temporary breaking-down of a molecule into simpler molecules or atoms.

dissociation (*Psycho-path.*). A state of temporary loosening of control over consciousness, in which unconscious complexes take control of the personality. In extreme cases this amounts to a splitting of the personality.

dissociation constant (*Chem.*). The ratio of the product of the active masses of the molecules resulting from dissociation to the active mass of the undissociated molecules, when equilibrium is reached.

dissociation of ideas (*Psychol.*). A term used by Janet to denote the splitting off from consciousness of certain ideas with their accompanying emotions; similar to the term *repression* as used by Freud.

dissoconch, dis'ō-konk (*Zool.*). The shell of a veliger larva.

dissogeny, —soj'en-i (*Zool.*). The condition of having two periods of sexual maturity, one during the larval stage and one during the adult stage.

dissolution (*Chem.*). The taking up of a substance by a liquid, with the formation of a homogeneous solution.

dissolve (*Cinema.*). The intermingling during the transition from one shot to another. Effected by overlapping an end fade with a start fade in printing, either by actual overlapping of the negatives or by successive printings in an optical printer.

dist. (*Build.*). Abbrev. for (1) *distemper*, (2) *distributed*.

distal (*Biol.*). Far apart, widely spaced: pertaining to or situated at the outer end: farthest from the point of attachment. Cf. *proximal*.

distance block, distance piece (*Build., Civ. Eng.*). A wooden or other block serving to separate two pieces by a desired distance.

distance control (*Elec. Eng.*). See **remote control.**

distance piece (*Civ. Eng.*). See **distance block.**

distance protection (*Elec. Eng.*). See **impedance protective system.**

distance receptors (*Zool.*). Exteroceptors which can perceive objects at a distance.

distance relay (*Elec. Eng.*). See **impedance relay.**

distant (*Bot.*). Widely spaced.

distant-reading instrument (*Eng.*). A recording or indicating instrument (such as a thermometer or pressure gauge) in which the reading is shown on a scale at some distance from the point of measurement. See **remote control.**

distemper (*Paint.*). A mixture of a dry pigment with size and water; used as a paint for internal walls and ceilings.

distemper, canine (*Vet.*). A contagious infection of dogs and ferrets, due to a filterable virus.

distemper, feline (*Vet.*). A contagious infection of the *Felidae*, due to a filterable virus.

disthene (*Min.*). A less commonly used name for the mineral *kyanite* (q.v.). The name is applied on account of the striking differences in hardness, even on the same crystal face, when tested in different directions.

distichalia, —kā'li-a (*Zool.*). See **dicostalia.**

distichi'asis, distich'ia (*Med.*). A condition in which there are two complete rows of eyelashes in one or both eyelids.

disti'chous (*Bot.*). Arranged in two opposite vertical rows.

distillation (*Chem.*). A process of evaporation and re-condensation used for separating liquids into various fractions according to their boiling points or boiling ranges. See also **molecular—*.**

distillation flask (*Chem.*). A laboratory apparatus, usually made of glass; it consists of a bulb with a neck for the insertion of a thermometer and a side tube attached to the neck, through which the vapours pass into a condenser.

distinct (*Bot.*). (1) Said of a species which has strongly marked characters.—(2) Said of plant members which are quite free from one another.

distomi'asis or **distomato'sis** (*Vet.*). Infection of the bile ducts by flukes or trematode worms.

distorted wave (*Elec. Eng.*). A term often used in electrical engineering to denote a non-sinusoidal wave-form of voltage or current.

distorting network (*Elec. Comm.*). An electrical network altering the response of a part of a system, and anticipating the correction of response required to restore a signal wave-form before actual distortion has occurred, e.g. owing to the inevitable frequency-distortion in a line.

distortion (*Elec. Comm.*). Any departure from the initial wave-form of a signal during transmission.

See **acoustic—**
amplitude—
envelope—
harmonic—
intermodulation—
line—
linear—
non-linear—
modulation—
phase—
phase delay—
phase intercept—
pre—

distortion (*Photog.*). Any departure from the criteria for the perfect formation of an image by a lens.

See **barrel—**
colour—
pillow—
pincushion—

distortion (*Psycho-an.*). A feature of dream-life whereby, mainly, elements are distorted in order to make the real meaning of the dream unrecognisable. A mechanism brought about by the censor to exclude painful elements from the dream.

distortion correction (*Teleg.*). An arrangement for restoring accurate shapes to telegraph signals after their distortion in passing through a circuit.

distortion of field (*Elec. Eng.*). A term commonly used in connexion with electric machines to denote the change in the distribution of flux in the air gap when the machine is put on load.

distortion set (*Elec. Comm.*). A measuring instrument which measures the extent of a specified type of distortion in a communication system. See **telegraph distortion set.**

distortionless line (*Elec. Comm.*). A transmission line with constants such that there is no frequency or delay distortion, the characteristic resistance impedance being constant with frequency and resistive. The condition is $L.G.=R.C.$

distribute (*Typog.*). To put individual letters and spaces back into their proper compartments in the case after use. Machine-set matter is usually melted down to be used again in the caster.

distributed constant (*Elec. Comm.*). The resistance, capacity, inductance, and leakage resistance of a line are distributed along the line, and are expressed in terms of unit-length (e.g. the mile) on the assumption that the electrical properties of the line are uniform with length. Cf. *lumped constant*.

distributed inductance (*Elec. Eng.*). Said of a circuit which has an inductance distributed uniformly along it; e.g. a power transmission line, or a loaded telephone circuit.

distributed load (*Eng.*, *Struct.*). A load spread out over the length of a girder, or part of the length, expressed in lbs. or tons per foot.

distributed winding (*Elec. Eng.*). The winding of an electric machine which is spread uniformly over the stator or rotor surface.

distributing-board, distributing-box (*Elec. Eng.*). See **distribution board.**

distributing centre (*Elec. Eng.*). In an electric power system, a point at which an incoming supply from a feeder is split up amongst a number of other feeders or distributors.

distributing main (*Elec. Eng.*). See **distributor** (1).

distributing-point (*Elec. Eng.*). See **feeding-point.**

distribution (*Bot.*, *Zool.*). (1) The occurrence of species considered from a geographical point of view.—(2) See **dissemination** (*Bot.*).

distribution (*I.C. Engs.*). The provision of the same quantity and quality of petrol-air mixture to each of the cylinders of a multi-cylinder engine by the carburettor and induction manifold.

distribution board (*Elec. Comm.*). An insulating panel carrying terminals and/or fuses, for the distribution of power supplies to repeaters or telegraph circuits.—(*Elec. Eng.*) A box or panel containing bus-bars, switches, fuses, etc. for connecting, controlling, or protecting a number of branch circuits fed from one main circuit of a wiring installation. Also called DISTRIBUTING-BOARD, DISTRIBUTING-BOX.

distribution-board wiring system (*Elec. Eng.*). The system of wiring usually adopted in electric installations; all the various branch circuits are taken from one or more distribution boards.

distribution coefficient (*Chem.*). See **partition coefficient.**

distribution factor (*Elec. Eng.*). A factor used in the calculation of the e.m.f. generated in the winding of an a.c. machine, in order to allow for the fact that the e.m.f.'s in each of the individual coils are not in phase with one another. Also called BREADTH FACTOR.

distribution frame (*Teleph.*). A structure with large numbers of terminals, for arranging circuits in specified orders.

See **combined—** **main—**
intermediate—

distribution fuse-board (*Elec. Eng.*). A distribution board having fuses in each of the separate circuits.

distribution pillar (*Elec. Eng.*). A structure, in the form of a pillar, containing switches, fuses, etc. for interconnecting the distributing mains of an electric power system.

distribution reservoir (*Hyd. Eng.*). See **service reservoir.**

distribution switchboard (*Elec. Eng.*). A distribution-board having a switch in each of the branch circuits.

distributor (*Elec. Eng.*). (1) The cable or overhead line forming that part of an electric distribution system to which the consumers' circuits are connected. Also called a DISTRIBUTING MAIN.—(2) The device used on the ignition system of an internal-combustion engine to ensure that the voltage is applied to the sparking-plugs of the various cylinders in the correct sequence.

distributor (*Teleg.*). An arrangement, generally by a rotating arm with a number of brush contacts, for allocating the line to a number of channels of telegraphic communication so that they each have it for transmitting a signal during a specified fraction of time.

distributor rollers (*Typog.*). In a cylinder printing press, the rollers which distribute ink on the inking table. They are often set at an oblique angle.

district (*Mining*). An underground section of a coal-mine served by its own roads and ventilation ways: a section of a coal-mine.

distrix (*Med.*). Splitting of the ends of hairs.

distuning (*Radio*). *Detuning* (q.v.).

disturbance (*Radio*). Any signal originating from a source other than the wanted transmitter, e.g. atmospherics, unwanted stations, valve noise in the receiver.

disulphide of carbon (*Chem.*). See **carbon disulphide.**

disuse atrophy (*Med.*). Wasting of a part as a result of diminution or cessation of functional activity.

ditch (*Civ. Eng.*). A channel cut in the surface of the ground for drainage purposes.

ditch canal (*Hyd. Eng.*). See **level canal.**

dithal'lic, dī— (*Bot.*). Said of a mycelium formed by the union of material from two distinct strains.

dithe'cal, dī— (*Bot.*). Said of an anther with two lobes, the usual number.

dithionic acid (*Chem.*). *Hyposulphuric acid* (q.v.).

ditre'matous, dī— (*Zool.*). (Of hermaphrodite animals) having the male and female openings separate: (of unisexual forms) having the genital opening separate from the anus.

ditro'chous, dī— (*Zool.*). Having the trochanter divided.

dit'róite (*Geol.*). A coarse-grained deep-seated rock, falling in the alkali-syenite subdivision; named from the type locality of Ditró, Transylvania. Consists essentially of alkali-feldspar, together with nepheline (elaeolite), sodalite, and a (usually) small content of soda-amphiboles and/or pyroxenes.

Dittrich's plugs (*Med.*). Small, yellow, foetid plugs of secretion present in the sputum and in the bronchi, in chronic suppurative bronchitis.

diuresis, dī-ūr-ē'sis (*Med.*). The excretion of urine, especially in excess.

diuret'ic (*Med.*). Producing diuresis: a drug which does this.

diurnal. During a day. The term is used in astronomy and meteorology to indicate the variations of an element during an average day.

diurnal parallax (*Astron.*). See **geocentric (or diurnal) parallax.**

diurnal range (*Meteor.*). The extent of the changes which occur during a day in a meteorological element such as atmospheric pressure or temperature.

diurnal variation (*Surv.*). The regular oscillation of a compass needle from its mean position during the day, amounting in some places to as much as 12 minutes of arc.

diva'lent, dī— (*Chem.*). Capable of combining with two atoms of hydrogen or their equivalent.

divan (*Furn.*). An armless and backless couch, furnished with cushions.

divar'icate, di— (*Bot., Zool.*). Spreading widely apart, forked, divergent.

divar'icators (*Zool.*). In *Brachiopoda,* muscles passing from the cardinal process to the ventral valve.

dive (*Aero.*). A steep descent, the nose of the aircraft being down. Cf. *spin.*

dive, terminal nose (*Aero.*). A nose dive at the greatest obtainable velocity of the machine in that altitude. Also called POWER DIVE.

divergence (*Elec. Eng.*). The limiting value of the *flux* (q.v.) which emanates from a closed surface, divided by the volume of the closed surface when this becomes vanishingly small.

divergence (*Meteor.*). The opposite of *convergence* (q.v.). Divergence is usually accompanied by fine dry weather.

divergent, diverging (*Bot.*). Said of two or more organs which gradually spread so that they are farther apart at their tips than at their bases.

divergent lens (*Light*). A lens which increases the divergence, or diminishes the convergence, of a beam of light passing through it. Such a lens will be double concave, plano-concave, or convexo-concave, the concave surface having the smaller radius of curvature.

divergent nozzle (*Eng.*). A nozzle whose cross-section increases continuously from entry to exit; generally used in compound impulse turbines.

divergent strabismus (*Med.*). Squint in which the eyes diverge from each other.

divers' paralysis (*Med.*). See **caisson disease.**

diversion cut (*Civ. Eng.*). See **bye channel.**

diversity antenna (*Radio*). The antenna system of a diversity receiver.

diversity factor (*Elec. Eng.*). The ratio of the arithmetical sum of the individual maximum demands of a number of consumers connected to an electric supply system to the simultaneous maximum demand of the group.

diversity ratio (*Illum.*). The ratio of the maximum illumination on a given plane to the minimum illumination on that plane.

diversity reception (*Radio*). A system of reception designed to reduce fading; several antennae, each connected to its own receiver, are spaced several wavelengths apart from one another. The demodulated outputs of the receivers are combined.

diverter (*Elec. Eng.*). A low resistance connected in parallel with the series winding or the compole winding of a d.c. machine in order to divert some of the current from it, thereby varying the m m f. produced by the winding.

diverter relay (*Elec. Eng.*). A relay employed with certain excess-current protective systems; it increases the stability of the protective system by putting resistance in parallel with the tripping relay in the case of a heavy fault.

diverticuli'tis (*Med.*). Inflammation of diverticula in the colon.

diverticulo'sis (*Med.*). The presence of diverticula in the colon.

divertic'ulum (*Anat., Zool.*). (1) Saccular dilatation of a cavity or channel of the body.—(2) Lateral outgrowth of the lumen of an organ.—(3) Pouch-like protrusion of the mucous membrane of the colon through the weakened muscular wall.—*pl.* **diverticula.** See also **Meckel's diverticulum.**

divided (*Bot.*). See **dissected.**

divided bearing (*Eng.*). See **split bearing.**

divided circuit (*Teleg.*). A telegraph circuit extending to more than one receiving station, each receiving the transmitted signals.

divided lens (*Photog.*). An incomplete lens, i.e. one which is sawn off along a chord; used in colour photography.

divided pitch (*Eng.*). The axial distance between corresponding points on successive threads of a multiple-threaded screw.

divided touch (*Elec. Eng.*). The magnetising of a steel bar by stroking it with the opposite poles of two permanent magnets, these being drawn apart from the centre of the bar to the ends.

divided winding (*Elec. Eng.*). A term proposed for that class of windings (for d.c. machines) usually called multiple or multiplex, in which there are two or more separate windings on the armature joined in parallel by the brushes.

divider (*Elec. Eng.*). See **potential divider.**

dividers (*Instruments*). Compasses used only for measuring or transferring distances, and not for describing arcs.

dividers (*Mining*). The cross-timbers in a rectangular timbered shaft, other than the end timbers or end plates.

dividing box (*Elec. Eng.*). A box for bringing out separately the cores of a multi-core cable. The insulation of the cable is hermetically sealed and the cores may be brought out either as bare or insulated conductors. See **bifurcating box, trifurcating box.**

dividing engine (*Eng.*). An instrument for marking or engraving accurate subdivisions on scales; it consists of a carriage adjusted by a micrometer screw and holding a marking tool.

dividing fillet (*Elec. Eng.*). See **barrier.**

dividing head (*Eng.*). See **indexing head.**

dividing lines (*Furs*). Lines on a fur, marking changes of colour or length of hair.

diving-bell (*Civ. Eng.*). A water-tight working chamber, open at the bottom, which is lowered into water beneath which excavation or other works are to proceed. The interior is supplied with compressed air to maintain the water-level inside at a reasonable height, and thus leave free a space within which men may work.

divinity calf (*Bind.*). The name given to bindings in dark brown calfskin, with blind tooling; used chiefly for theological works.

division plate (*Eng.*). A plate used for positioning the plunger of an indexing head; provided with several concentric rings of holes accurately dividing the circumference into various equal subdivisions.

division wall (*Build.*). A wall within a building, or serving two houses.

divisu'ral line, di— (*Bot.*). The line along which the peristome teeth of a moss split.

dizo'ic, di— (*Zool.*). (Of spores) containing two sporozoites.

dl- (*Chem*). Containing equimolecular amounts of the dextro-rotatory and the laevo-rotatory forms of a compound; racemic.

D.M. (*San. Eng.*). Abbrev. for *disconnecting manhole.* See **interceptor.**

DN (*Elec. Comm.*). Abbrev. for *deci-neper* (q.v.).

dobbie or **dobby** (*Weaving*). A shedding mechanism used on a loom for the production of fabrics of complicated structure. Very useful also for weaving fancy-striped textures.

Dobie's line (*Zool.*). A dark line which subdivides transversely each of the light areas of a striated muscle fibre; believed to represent a membrane. See **Krause's membrane.**

dock (*Civ. Eng.*). An enclosed basin for the accommodation of shipping.

See **dry— self-docking—**
floating dry— wet—

doctor (*Elec. Eng.*). A device used in electroplating for depositing metal on imperfectly plated parts; it consists of an anode of the metal to be deposited, covered with a spongy material saturated with the plating solution.

doctor (*Paper*). In the paper-making machine, a device consisting of metal blades which scrape off pulp, etc.

doctor (*Plumb.*). A playful name for a soldering iron.

doctor (*Typog.*). On a photogravure or intaglio machine, a blade which scrapes superfluous ink from the plate.

doctor test (*Chem.*). A test for sulphur in petroleum with a sodium plumbite solution.

doctoring (*Elec. Eng.*). See **doctor.**

documentary (*Cinema.*). A style of motion-picture production which uses natural characters and objects for cultural use, as contrasted with the normal basis of films, which uses artificial characters and scenes for pleasure or entertainment.

documentary film (*Cinema.*). Motion picture which aims at the presentation of reality as contrasted with artificiality.

dodecahe'dron, rhombic (*Crystal.*). A crystal form of the cubic system, consisting of twelve exactly similar faces, each of which is a regular rhombus. Does not occur in the orthorhombic system, in spite of its name. See **pyritohedron.**

doeskin (*Textiles*). A woollen overcoating fabric of fine quality, with a soft dress face; made from fine yarns spun from Merino wool.

doffer (*Textiles*). (1) A young operative whose duty it is to remove full cops or bobbins from a machine.—(2) A wire-covered cylinder of the carding engine used to remove fibres from the wire-covered surface of the main cylinder.

doffing (*Textiles*). The process of removing from a machine full cops or bobbins.

doffing comb (*Woollen*). A steel oscillating blade extending across the doffer of a carding engine, from which it strips the carded material in the form of a sheet or web.

dog (*Build., Eng., etc.*). A steel securing-piece used for fastening together two timbers, as in the process of shoring, for which purpose it is hooked at each end at right-angles to the length, so that the hooked ends may be driven into the timbers. The term is also applied to a great variety of gripping implements, viz.—a clutching attachment for withdrawing well-boring tools; a pawl; an adjustable stop used in machine tools; a spike for securing rails to sleepers; a lathe carrier.

dog clutch (*Eng.*). A clutch consisting of opposed flanges, or male and female members, provided with two or more projections and slots, one member being slidable axially for engaging and disengaging the drive. See **clutch.**

dog down (*Ship Constr.*). To secure in position by pieces of bent-round iron, driven through holes in a cast-iron slab in such a manner as to be jammed.

dog-eared fold (*Plumb.*). See **dog's ear.**

dog-ill (*Vet.*). See **distemper (canine).**

dog-leg chisel (*Carp.*). A chisel with a bent shank adapting it to the smoothing of the beds of grooves.

dog-legged stair (*Build.*). A stair having successive flights rising in opposite directions, and arranged without a well-hole.

dog-nail (*Carp.*). A large nail having a head projecting over one side.

dog nose (*Med.*). See **goundou.**

dog-tooth spar (*Min.*). A form of calcite in which the scalenohedron is dominant, giving a sharply pointed crystal like a canine tooth.

dog's ear (*Plumb.*). The corner of a sheet-lead tray, formed with a folding joint.

dog's ear (*Furn.*). A projecting corner on chair backs, etc.

dog's tooth (*Build.*). A string course in which bricks are so laid as to have one corner projecting.

doggers (*Geol.*). Flattened ovoid concretions, often of very large size, in some cases calcareous, in others ferrugineous, occurring in sands or clays. They may be a yard or more in diameter.

dolab'riform (*Bot.*). Shaped like a pick-axe.

doldrums (*Meteor.*). Regions of calm in equatorial oceans. Towards the solstices, these regions move about 5° from their mean positions, towards the north in June and towards the south in December.

dol'erite (*Geol.*). The general name for basic igneous rocks of medium grain-size, occurring as minor intrusions or in the central parts of thick lava flows; much quarried for road metal. Typical dolerite consists of plagioclase near labradorite in composition, pyroxene, usually augite, and iron ore, usually ilmenite, together with their alteration products. See note at **alkali-granite,** also **minverite, teschenite.**

Dolezal'ek electrometer (*Elec. Eng.*). A modified form of a quadrant electrometer designed to give greater sensitivity.

Dolgelley Beds (*Geol.*). The highest of the three divisions of the Lingula Flags (Upper Cambrian) of N. Wales, consisting of blue shales below and sooty black shales and mudstones above, to the maximum thickness of about 600 ft.

Dolgelley Gold Belt (*Geol.*). A belt of land lying north of Dolgelley in Merionethshire, N. Wales, traversed by quartz lodes which, where they cut the Middle Cambrian especially, carry gold in rich pockets.

dol'ichocephal'ic (*Anat.*). Long-headed; said of a skull the breadth of which is less than four-fifths the length.

dol'ichoco'lon (*Anat.*). An excessively long colon.

doli'iform, do'lioform. Barrel-shaped.

Doliol'ida (*Zool.*). An order of *Thaliacea,* having a free tailed larval stage, a free well-formed oözoid, a thin test, two rows of stigmata on the posterior wall of the pharynx; the muscular rings of the body wall are complete.

dollar spots (*Vet.*). The skin lesions of dourine.

dolly (*Cinema.*). A small mobile platform for carrying cameras, directors, etc.; sometimes running on portable rails, for tracking in motion-picture production.

dolly (*Civ. Eng.*). An object interposed between the monkey of a pile-driver and the head of a pile in order to prevent damage to the latter by blows from the former.

dolly (*Elec. Eng.*). The operating member of a tumbler switch; it consists of a small pivoted lever projecting through the outer cover.

dolly (*Eng.*). A heavy tool, shaped like a hammer, for supporting the head of a rivet during the forming of a head on the other end.

dolly (*Mining*). A counterbalance weight sometimes used in a hoisting shaft.

dolly tub or **kieve** (*Mining*). A large wooden tub used for the final washing of valuable minerals separated by water concentration in ore dressing. See **tossing.**

dolly wagon (*Mining*). A wagon for the conveyance of dirt from a mine.

dolmen (*Archaeology*). A term applied to the stone framework of prehistoric sepulchral structures, formerly called *cromlechs.* On the Continent the term is expanded so as to include also the mound of earth which in some cases covers such structures.

Doloment (*Build.*). The name of a composition used in making jointless flooring.

dol'omite (*Min.*). The double carbonate of calcium and magnesium, crystallising in the rhombohedral class of the trigonal system, occurring as cream-coloured crystals or masses with a distinctive pearly lustre, hence the synonym PEARL SPAR. An important gangue mineral.—(*Met.*) Calcined dolomite is used as a basic refractory for withstanding high temperatures and attack by basic slags in metallurgical furnaces. The name is also used to describe refractories made from magnesian limestone, which does not necessarily contain the mineral dolomite.

dolomite rock (*Geol.*). A limestone consisting entirely of the mineral dolomite and therefore containing the $CaCO_3$ and $MgCO_3$ in equal molecular proportions. See also **dolomitic limestone.**

dolomitic conglomerate (*Geol.*). The local basal bed of the Rhaetic Series or of the Lias where banked up against the old limestone ridges of the Mendip Hills and S. Wales. Actually the rock is a limestone-conglomerate, often stained red by infiltration of iron salts from the overlying Trias.

dolomitic limestone (*Geol.*). A calcareous sedimentary rock containing calcite or aragonite in addition to the mineral dolomite. Cf. *dolomite rock.*

dolomitisation (*Geol.*). The process of replacement of calcium carbonate in a limestone or ooze by the double carbonate of calcium and magnesium (dolomite). In *contemporaneous dolomitisation* the replacement is effected at the same time as the formation of the sediment; in *subsequent dolomitisation* the replacement takes place at any time after the deposition of the sediment, and is effected by solutions working their way along fractures, joints, and bedding planes.

Dolo'res Beds (*Geol.*). Continental strata comprising a lower group, equivalent to the Leroux, and an upper group, equivalent to the Lower Painted Desert Beds, occurring in the Trias of S.W. Colorado.

Dolter surface-contact system (*Elec. Eng.*). A form of surface-contact system for electric traction in which the magnetised skate on the car operates switches within the studs, so making these alive when the car passes over them.

doma'tium (*Bot.*). A cavity or other form of shelter formed by a plant which harbours mites or insects with which it appears to live in symbiosis.

dome (*Bot.*). The growing point of the receptacle of a flower.

dome (*Build.*). A vault springing from a circular, or nearly circular, base.

dome (*Crystal.*). A crystal form consisting of two similar inclined faces meeting in a horizontal edge, thus resembling the roof of a house. The term is frequently incorrectly applied to a four-faced form which is really a prism lying on an edge.

dome (*Eng.*). A domed cylinder attached to a locomotive boiler to act as a steam space and to house the regulator valve.

dome (*Geol.*). A form of igneous intrusion the roof of which has a dome-like shape, that is, the roof-rocks dip gently outwards from a central point. Ideally, the roof of a batholith has this form, so has a laccolith; but these two terms can be applied only when the walls and floor can be examined. See also **bathylith.**

domestic (*Textiles*). A plain cotton cloth; it may be grey, coloured, or with a check pattern.

domical vault (*Build.*). A vault in which the centre is higher than the sides.

dominance (*Bot.*). (1) The prevalence of one or of a few species in a plant community, determining the physiognomy and influencing the rest of the plant population.—(2) See **dominant character.**

dominance (*Crysta..*). See under **habit.**

dominant (*Bot.*). Said of a species or group of species in a plant community; see **dominance.**

dominant character (*Gen.*). Of a pair of allelomorphic characters, the one which will be manifested if both are present, i.e. a character that appears in the hybrid resulting from the cross-breeding of parents unlike with respect to that character.

dominant wavelength (*Photog.*). In colorimetry, the hue in a colour which determines the match.

Do'molac (*Diel.*). A plastic insulating material made from cellulose acetate and glycerine.

Dongola leather (*Leather*). Upper leather produced by a combination of vegetable and mineral tannages, together with alum and oil.

donkey boiler (*Eng.*). A small vertical auxiliary boiler for supplying steam-winches and other deck machinery on board ship when the main boilers are not in use.

donkey pump (*Eng.*). A small steam reciprocating pump independent of the main propelling machinery of a ship; used for general duty.

donor (*Chem.*). (1) That reactant in an induced reaction which reacts rapidly with the inductor.—(2) That atom which supplies the two electrons of a semi-polar bond.

donor (*Med.*). One who gives his blood for transfusion to another.

donskoi (*Textiles*). Wool from the Don districts in Russia; the fibre is coarse.

dook (*Join.*). A wooden plug or block fixed in a wall to provide a substance to which joinery may be nailed. (Scottish.)

door (*Build.*). A hinged or sliding barrier closing an opening in a wall.

door by-pass switch (*Elec. Eng.*). See **gate by-pass switch.**

door case (*Join.*). The frame into which a door fits to shut an opening.

door check (*Build.*). A device fitted to a door to prevent it from being slammed, and yet to ensure that it closes.

door cheeks (*Join.*). The jambs of a door frame. Also called DOOR POSTS.

door closer (*Elec. Eng.*). See **gate closer.**

door contact (*Elec. Eng.*). A contact attached to a door or gate, so arranged that it closes a circuit when the door is opened or closed, and rings an alarm bell or gives some other signal.

door frame (*Join.*). The framework of stiles, rails, and muntings into which the panels are fitted.

door interlock (*Elec. Eng.*). See **gate interlock.**

door lock, automatic (*Elec. Eng.*). See **automatic gate lock.**

door operator (*Elec. Eng.*). See **gate operator.**

door posts (*Join.*). See **door cheeks.**

door stop (*Build.*). A device fitted to a door, or to the floor near to a door, to hold it open as far as may be required, or to prevent the door from being opened beyond a certain amount.

door strip (*Join.*). A strip, often of flexible material, attached to a door to cover the space between the bottom of the door and the threshold. Also called a WEATHER STRIP.

door switch (*Elec. Eng.*). A switch mounted on a door so that the opening or closing of the door operates the switch. Also called a GATE SWITCH when used on electric lifts.

doorway (*Build.*). An opening constructed to serve as a means of entrance to, or exit from, a building or room.

dope (*Aero., etc.*). A chemical treatment applied to the fabric coverings of aircraft surfaces, for the purposes of tautening, strengthening, rendering airtight, and weatherproofing.

dope (*Build.*). A preparation serving as a retarder.

dope (*Photog.*). Oil, paste, or wax used for regulating the printed image on photographic paper.

doping. Any process involving treatment with *dope* (see above).

Doppler's principle (*Phys.*). When a vibrating source of waves and an observer are approaching each other, the frequency observed is higher than the emitted frequency. If the source and observer are receding from each other, the observed frequency is lower than that emitted. Doppler's principle is widely used in astronomy for measuring the line-of-sight velocity of heavenly bodies by observing the shift in the position of lines in their spectra.

doré silver (*Met.*). Silver bullion, i.e. ingots or bars, containing gold.

doria stripes (*Textiles*). Light cotton cloth of plain weave, with crammed stripes or cords lengthways with the piece.

doric (*Typog.*). A type face. The same as sans-serif or gothic.

dormancy (*Bot.*). In seeds and other resting structures, a condition of inactivity caused by some structural or physiological condition.

dormant bolt (*Join*). A hidden bolt sliding in a mortise in a door; operated by turning a knob or by means of a key.

dormant bud (*Bot.*). A bud which remains inactive for an indefinite period.

dormer (*Build.*). A small window projecting from a roof slope.

dormitory (*Build.*). A large sleeping apartment, sometimes divided into cubicles for the separate beds.

dors-, dorsi-, dorso- (Latin *dorsum*, back). A prefix used in the construction of compound terms; e.g *dorsoventral*, *dorsiventral*.

dorsal (*Anat.*). Said of the back of any part.

dorsal or **dorse** (*Arch.*). A canopy.

dorsal (*Bot.*). (1) The side or part of a plant member turned away from the axis.—(2) Attached to, or on the back of, a plant member.

dorsal (*Furn*). (1) A carpet or hanging on a wall at the back of a divan or couch.—(2) The tall back of a chair. Also called DORSE, DORSEL, DOSSAL, DOSSEL, DOSSER.

dorsal (*Zool.*). Pertaining to that aspect of a bilaterally symmetrical animal which is normally turned away from the ground.

dorsal suture (*Bot.*). The midrib of the carpel in cases where dehiscence occurs along it.

dorsal trace (*Bot.*). The median vascular supply to a carpel.

dorsal'gia (*Med.*). Pain in the back.

dorsa'lis (*Zool.*). An artery supplying the dorsal surface of an organ.

dorse. See **dorsal** (*Arch.*), **dorsal** (*Furn.*).

dorsel (*Furn.*). See **dorsal.**

Dorset Down (*Textiles*). One of the Down breed sheep with fine close wool which is used largely for Cheviot quality woollens and for hosiery yarns.

dorsif'erous (*Zool.*). Said of animals which bear their young on their back.

dor'sifixed (*Bot.*). Said of an anther when the filament is attached firmly to one point on the dorsal surface: (by some authorities) adnate.

dorsiflexion (*Anat.*). The bending towards the back of a part; e.g. flexion of the toes towards the shin.

dor'sigrade (*Zool.*). Walking with the backs of the digits on the ground, as Sloths.

dorsiven'tral (*Bot.*). Said of a flattened plant member with structural differences between its dorsal and ventral sides.

dorsiventral symmetry (*Bot.*). See **zygomorphy.**

dorsodyn'ia (*Med.*). Painful fibrositis of the muscles and the ligaments of the back.

dor'sulum (*Zool.*). See **mesonotum.**

dorsum (*Zool.*). In *Anthozoa*, the sulcular surface: in *Arthropoda*, the tergum or notum: in *Vertebrata*, the dorsal surface of the body or back.

Dortmund tank (*Sewage*). A deep tank, with conical bottom, to which liquid sewage is supplied by a pipe reaching down nearly to the bottom. The resulting upward flow assists sedimentation of the sludge.

doryla'ner (*Zool.*). An abnormally large male ant, with a long cylindrical abdomen and large peculiar jaws, which is the typical male form in the subfamily *Dorylinae* (Driver Ants).

dose (*Med*). The prescribed quantity of a medicine or of a remedial agent.

dossal, dossel, dosser (*Furn.*). See **dorsal.**

dot (*Teleg.*). The unit telegraphic impulse, the basis of telegraphic codes. See **baud.**

dots (*Plast.*). Nails partially driven into a wall, so that the projecting lengths may serve as guides to thickness in laying on a coat of plaster.

dot frequency (*Teleg.*). The number of dots per second in a continuous train of dots. A measure of speed of telegraphic transmission. See **baud.**

dot, lead (*Build.*). See **lead dot.**

dot, soldered (*Plumb.*). See **soldered dot.**

dotting-on (*Build.*). The process of adding together similar items when *taking off* (q.v.).

double (*Build.*). A slate size, 13 × 6 in.

double-acting engine (*Eng.*). Any reciprocating engine in which the working fluid acts on each side of the piston alternately; most steam-engines and a few internal-combustion engines are so designed.

double-acting pump (*Eng.*). A reciprocating pump in which both sides of the piston act alternately, thus giving two delivery strokes per cycle.

double-acting relay (*Auto. Teleg*). A relay which operates in two steps, each time making changes in circuits.

double amplitude (*Elec. Eng.*). The sum of the maximum values of the positive and negative half waves of an alternating quantity. Usually assumed to refer only to those waves in which the maximum values of the positive and negative half waves are equal. Occasionally called the AMPLITUDE, but such use is incorrect and ambiguous.

double bar and yoke method (*Elec. Eng*). A ballistic method of magnetic testing, in which two test specimens are arranged parallel to each other and clamped to yokes at the ends to form a closed magnetic circuit. A correction for the effect of the yokes is made by altering their position on the bars, and repeating the test.

double-bead (*Join.*). Two side-by-side beads, separated by a quirk.

double-beat valve (*Eng.*). A hollow cylindrical valve for controlling high-pressure fluids. The seatings at the two ends exposed to pressure are of only slightly different area, so that the valve is nearly balanced and easily operated.

double-bellied (*Build.*). A term applied to a baluster which has had both ends turned alike.

double belting (*Eng.*). Belting of double thickness, formed by sewing or cementing together two layers; used for very heavy duty.

double block (*Teleg.*). Large blocking condensers used at both ends of a submarine cable to improve the definition of the variations in the signal wave-form. See **single block.**

double bond (*Chem.*). An indication of a state of unsaturation between two polyvalent atoms, showing that two monovalent atoms or radicals may become attached to such a linkage before saturation is reached.

double book (*Photog.*). A pair of dark slides hinged together.

double-break (*Elec. Eng.*). Said of switches or circuit-breakers in which the circuit is made or broken at two points in each pole or phase.

double bridge (*Elec. Eng.*). A special form of bridge network in which there are two sets of ratio coils; it is used for the measurement of very low resistances. Also called the KELVIN DOUBLE BRIDGE.

double bridging (*Carp.*). Bridging in which two pairs of diagonal braces are used to connect adjacent floor joists at points dividing their length into equal parts.

double-broad (*Typog.*). Spacing material, or 'furniture,' 96 points or 8 picas broad.

double-cant brick (*Build.*). A purpose-made brick which has a splay on two sides. See **splay brick.**

double-carbon arc lamp (*Illum.*). See **twin-carbon arc lamp.**

double case (*Typog.*). A case comprising half an upper case and a complete lower case. Erroneously called a HALF-CASE.

double casting (*Cinema.*). The use of one artist for two rôles; they may or may not appear together in the finished motion-picture, the former instance requiring special trick photography.

double-catenary construction (*Elec. Eng.*). A method of supporting the overhead contact wire of an electric traction system; the contact wire is suspended from two parallel catenary wires so that the three wires are in a triangular formation.

double cathode ray tube (*Cathode Ray Tubes*). A cathode ray tube containing two complete sets of beam-forming and beam-deflecting electrodes operated from the same cathode, thus allowing two separate waveforms to appear on the screen simultaneously.

double cloth (*Textiles*). Two distinct cloths woven and bound together at the same time to obtain greater thickness without affecting the face texture.

double-coated film (*Photog.*). A film base with emulsions on both sides, generally of differing colour sensitivities (except for X-ray photography).

double contraction (*Pattern-making*). The total shrinkage allowance necessary to add to the dimensions of a finished casting when making a wood pattern from which a metal pattern is to be cast.

double course (*Build.*). See **doubling course.**

double-cover butt joint (*Eng.*). A butt joint with a cover plate on both sides of the main plates.

double crown (*Paper*). A standard size of printing paper, 20 × 30 in.

double-current (*Teleg.*). The term applied to the use of current reversals in changing from mark to space, when transmitting telegraphic signals.

double-current furnace (*Elec. Eng.*). A special form of electric furnace in which direct current is used for an electrolytic process and alternating current for heating, on the principle of the induction furnace.

double-current generator (*Elec. Eng.*). An electric generator which can supply both alternating and direct current.

double dagger (*Typog.*). The third of the reference marks (‡), following the dagger.

double decomposition (*Chem.*). A bimolecular reaction in which the atoms are redistributed into different molecules, the number of molecules remaining constant before and after the reaction.

double-delta connexion (*Elec. Eng.*). A method of connecting the windings of a 6-phase transformer, or other piece of electrical equipment, so that they may be represented diagrammatically by two triangles.

double demy (*Paper*). A standard size of printing paper, 22½ × 35 in.

double detection receiver (*Radio*). See **supersonic heterodyne receiver.**

double-diode (*Thermionics*). See **binode.**

double-disc winding (*Elec. Eng.*). A form of winding used for transformers, in which two disc coils are wound in such a way that, when placed side by side to form a single coil, the beginning and end of the complete coil are at the outside periphery.

double dovetail key (*Join.*). A piece of wood used to connect together two members lengthwise; shaped and fitted like a *slate cramp* (q.v.).

double driver plate (*Eng.*). A lathe *driver plate* (q.v.) provided with two pins for engaging the carrier on the revolving work.

double earth fault (*Elec. Eng.*). A fault on an electric power transmission system, caused by two of the phases going to earth simultaneously, either at the same point on the system or at different points.

double-edged (*Carp.*). An arrangement of two parallel circular saws, one fixed in position and the other movable towards or away from the first; used for cutting away wane left on the edges of boards of various widths.

double elephant (*Paper*). A standard size of writing and drawing paper, 26¾ × 40 in.

double-ended boiler (*Eng.*). A marine boiler of the shell type provided with a furnace at both ends, each with its independent tubes and uptake.

double-ended bolt (*Eng.*). A bar screwed at each end for the reception of a nut.

double ends (*Textiles*). Two warp threads passing through the same heald eye and functioning as one thread.

double exposure (*Photog.*). The re-exposure of a film in a camera, after winding back, to obtain two superimposed potential images on the negative before development.

double-faced (*Join.*). Said of an architrave, skirting board, or other moulding which is formed of two separate parts, with faces in different planes.

double-faced hammer (*Eng.*). A hammer provided with a flat face at each end of the head

double-faggoted iron (*Met.*). See **faggoted iron.**

double fertilisation (*Bot.*). The union, in the embryo sac of an angiosperm, of one male nucleus with the egg nucleus, and of the other male nucleus with the two polar nuclei, before or after they have themselves fused.

double Flemish bond (*Build.*). A bond in which both exposed faces of a wall are laid in Flemish bond.

double floor (*Carp.*). A floor in which the bridging joists are supported at intervals by binding joists. Cf. *single floor, framed floor.*

double-flow turbine (*Eng.*). A turbine in which the working fluid enters at the middle of the length of the casing and flows axially towards each end.

double flower (*Bot.*). A flower which has more than the normal number of petals.

double flowering (*Bot.*). An abnormal condition exhibited by a plant which flowers in the spring and again in the autumn.

double fluid cell (*Elec. Eng.*). A primary cell in which two different solutions are used, one surrounding the anode and the other surrounding the cathode, the two being separated by a porous vessel or diaphragm. See **Daniell cell.**

double fluid theory (*Elec. Eng.*). See **two-fluid theory.**

double foolscap (*Paper*). A standard size of printing paper, 17 × 27 in.

double four-pound (*Paper*). A standard size of brown paper, 21 × 31 in.

double frame (*Typog.*). A frame holding two pairs of type cases, with a rack for ten pairs of cases, and room for trays.

double-frequency oscillator (*Radio*). An oscillator in which two sets of oscillations, having different frequencies, are simultaneously generated.

double gulley (*San. Eng.*). A gulley used in cowshed and stable drainage, for which purpose it is fitted with inlet and outlet in duplicate, so as to permit segregation of the drainage of urine and washing water.

double-headed rail (*Rail.*). A rail section similar to the *bull-headed rail* (q.v.) but having equal heads top and bottom, so that a reversal may be effected to increase the life of the rail, when one of the heads has become worn.

double-helical gearing (*Eng.*). *Helical gearing* (q.v.) in which two sets of teeth having opposite inclinations are cut on the same wheel, thus eliminating axial thrust.

double-hump effect (*Radio*). The property of two resonant circuits, coupled by mutual reactance and each separately resonant to the same frequency, of showing maximum response to two frequencies disposed about the common resonance frequency.

double-hung window (*Build.*). A window having top and bottom sashes, each balanced by sash cord and weights so as to be capable of vertical movement in its own grooves.

double image (*Television*). A second image, displaced from and generally weaker than the main image, formed on the screen of a television or photo-telegraph receiver, usually as the result of the presence of echo signals from the transmitter. Also called GHOST IMAGE.

double-image prism (*Photog.*). A prism which divides the rays from a lens in a *beam-splitter camera* (q.v.).

double-image tacheometer (*Surv.*). A type of tacheometer, used with a horizontal subtense bar, which gives two images of the bar in the field of view, one above the other and displaced relatively in the direction of their length by an amount proportional to the distance of the sight.

double imperial (*Paper*). A brown-paper size, 29 × 45 in.

double-jointed compasses (*Instruments*). A pair of compasses in which the limbs of the instrument are jointed, so that the parts carrying the marking points may be arranged, when in use, to be always normal, or nearly so, to the plane of the paper.

double junction (*Build.*). A drainage or water-pipe fitting made with a branch on each side.

double large (*Paper*). A standard size of cut card, 4½ × 6 in.

double large post (*Paper*). A standard size of printing paper, 21 × 33 in.

double laths (*Build.*). *Wood laths* (q.v.) 1 in. by ⅜ in. to ½ in. thick in section.

double-layer winding (*Elec. Eng.*). An armature winding, always employed for d.c. machines and frequently for a.c. machines, in which the coils are arranged in two layers, one above the other, in the slots.

double letters (*Typog.*). Ligatures and old-face letters, e.g. æ, œ, ct, st.

double lock (*Hyd. Eng.*). A construction consisting of two side-by-side lock-chambers, across the same canal. They are interconnected through a sluice so that the amount of water lost in lockage is only half that which is lost by a single lock.

double magazine (*Cinema.*). A magazine holding two reels of film for feeding into a camera; one (e.g. a finished positive) is used as a mask for the other (an unexposed negative). Also used for double films in colour photography. See **bipack.**

double-margined door (*Join.*). A door hinged as one leaf but having the appearance of a pair of folding doors.

double measure (*Join.*). Joinery work which is moulded on both sides.

double-narrow (*Typog.*). Spacing material one inch, or 72 points, broad.

double oblique crystals (*Crystal.*). See **triclinic system.**

double parting (*Mining*). A double line of rails in a haulage way to allow trams to pass one another.

double partition (*Build.*). A partition having a cavity in which sliding doors may move.

double phantom circuit (*Teleph.*). A telephone circuit which uses two phantom circuits in parallel for both the go and return speech channels.

double pica (*Typog.*). The old name for a type size, about 22-point; now superseded by 24-point.

double-pitch skylight (*Build.*). A skylight having two differently sloped glazed surfaces.

double plains (*Textiles*). Compound fabrics formed from two plain cloths stitched together. The two cloths are often of different colours, and interchange to form a pattern.

double plane-iron (*Carp.*). A plane-iron consisting of two connected parts—the cutting iron and the break iron.

double-pole (*Elec. Eng.*). Said of switches, circuit-breakers, etc. which can make or break a circuit on two poles simultaneously.

double post (*Paper*). A paper size, 18½ × 29 in. Sometimes the old size, 19 × 30½ in., is used.

double printing (*Cinema.*). The process of exposing a positive emulsion in a printing machine successively with more than one negative, resulting in a superposition of two positive images after development.

double purpose valve (*Radio*). Any valve used for two separate functions simultaneously; e.g. radio and audio-frequency amplification.

double quad (*Paper*). See under **quad.**

double quirk-bead (*Join.*). A bead sunk into a surface so as to leave a quirk on each side.

double quotes (*Typog.*). Inverted commas.

double reaction (*Radio*). Reaction obtained by a combination of electromagnetic (inductive) and electrostatic (capacity) coupling.

double-reading theodolite (*Surv.*). A theodolite with which it is possible to observe, from one position, the readings of the diametrically opposite points of both horizontal and vertical circles.

double reception (*Radio*). Simultaneous reception of two signals on different wavelengths by two receivers connected to the same antenna.

double refraction (*Phys.*). A property possessed by most crystalline substances whereby a ray of light, on entering the crystal, is split into two rays which pursue different paths and are plane-polarised in directions at right-angles. Only one of these rays obeys Snell's law; it is known as the *ordinary ray*, the other being the *extraordinary ray.*

double-roller safety action (*Horol.*). The safety action of a lever escapement in which two rollers are employed, one carrying the impulse pin, the other being used for the guard finger.

double roof (*Build.*). A roof truss in which the characteristic features of more than one type appear.

double-row radial engine (*Eng.*). A *radial engine* (q.v.) in which the cylinders are arranged in two planes, and operate on two crank pins at 180° apart.

double royal (*Paper*). A standard size of printing paper, 25 × 40 in.; U.S., 24 × 38 in.

double salts (*Chem.*). Compounds of two normal salts.

double shrinkage (*Pattern-making*). See **double contraction.**

double silk-covered wire (*Elec. Eng.*). Wire insulated with two layers of silk covering; commonly used for the fine wire coils of delicate instruments, etc. Abbrev. **d.s.c.**

doublesize (*Paint*). A trade name for size of extra strength.

double-small (*Paper*). A standard size of cut card, 3⅝ × 4¾ in.; U.S., 3½ × 5 in.

double-spun (*Cotton Spinning*). Said of mule yarns of superior quality in which the twist is imparted in two stages.

double squirrel-cage motor (*Elec. Eng.*). A squirrel-cage motor with two cage windings on its rotor, one of high resistance and low reactance, and the other of high reactance and low resistance. The former carries most of the current at starting and therefore gives a high starting torque, while the latter carries most of the current when running and results in a high efficiency.

double stars (*Astron.*). A system in which two stars are gravitationally related so that they revolve about their common centre of mass under mutual gravitational attraction.

double super royal (*Paper*). A standard size of printing paper, 27½ × 41 in.

double switch call (*Teleph.*). In international telephony, a transit call which includes three international circuits.

double-tariff meter (*Elec. Eng.*). See **two-rate meter.**

double tenons (*Carp., Join.*). Tenons cut at both ends of a member so as to be co-axial.

double-threaded screw (*Eng.*). A screw having two threads, whose distance apart is half the true pitch; also called a TWO-START THREAD. See **multiple-threaded screw, divided pitch.**

double-throw switches (*Elec. Eng.*). Switches which are arranged so that the moving contact can be made to engage with two alternative sets of fixed contacts. Also called TWO-WAY (or THROW-OVER) SWITCHES.

double thrust-bearing (*Eng.*). A thrust-bearing for taking axial thrust in either direction.

double touch (*Acous.*). The use of two-step keys on manuals and pedals of an organ, the initial depression playing on one set of stops, the further depression adding further stops. Also for stop keys, the initial depression bringing in the relative stop in addition to all others drawn on the manual, the full depression cancelling all others.

double transfer process (*Photog.*). The use of an additional intermediate support, slightly waxed, in the carbon photographic process.

double-trolley system (*Elec. Eng.*). A system of electric traction where, instead of the running rails, a second insulated contact wire is used for the return or negative current. It avoids trouble due to stray earth currents.

double vibration (*Acous.*). The obsolete name for the *cycle* (q.v.).

double-wall coffer-dam (*Civ. Eng.*). A coffer-dam formed of a pair of parallel walls, separated by a mass of clay puddle, carried down to a water-tight stratum and to a level below the bottom of the water.

double-warp (*Textiles*). Said of lace for the manufacture of which two main warp beams are necessary.

double-webbed girder (*Eng.*). A built-up box girder in which the top and bottom booms are united by two parallel webs.

double window (*Build.*). A window arranged with double sashes enclosing air, which acts as a sound and heat insulator.

double-wire system (*Elec. Eng.*). The usual system of electric wiring; it employs separate wires for the go and return conductors, instead of using the earth as a return.

doubler (*Radio*). See **frequency doubler.**

doublet (*Jewel.*). A thin slice of precious stone backed by a thicker slice of darker-coloured or less precious material.

doublet (*Light*). A pair of associated lines in a spectrum, such as the two D lines of sodium. The arc spectra of the alkali metals consist entirely of series of doublets.

doublet (*Photog.*). A pair of simple lenses designed to be used together, so that optical distortion in one is balanced by reverse distortion in the other.

doublet antenna (*Radio*). An antenna comprising two short straight conductors arranged in line and connected at the centre to a transmission line. It is very similar to a dipole antenna, and the terms are frequently used interchangeably, but strictly a *doublet* refers to an antenna whose dimensions are small compared to a quarter of a wavelength.

doubling (*Spinning*). The combining of two or more threads to form a folded or compound yarn.

doubling course (*Build.*). A special course of slates laid at the eaves, to ensure that the lowest margin there has two thicknesses of slate throughout its depth. Also called a DOUBLE (or EAVES) COURSE.

doubling (or **twisting**) **frame** (*Spinning*). A machine (flyer, cap, or ring type) in which yarns are folded or twisted together.

doubling piece (*Build.*). A *tilting fillet* (q.v.).

doubly-fed series (or **repulsion**) **motor** (*Elec. Eng.*). A single-phase series (or repulsion) motor in which the armature receives its power partly by conduction and partly by induction.

Douglas bag (*Med.*). A specially constructed bag for the collection of air expired from the lung, from the analysis of which the rate of metabolism can be determined.

Douglas fir (*Timber*). See **Oregon pine.**

Douglas sea and swell scale (*Meteor.*). A combination of two numbers, each 0-9, the first of which describes the degree of disturbance of the sea and the second the degree of swell.

Douglas's pouch (*Anat.*). In the female pelvis, the pouch of peritoneum between the rectum and the posterior wall of the uterus.

doup (*Textiles*). A half heald used in weaving gauze fabrics to facilitate the movement of particular warp threads.

dourine (*Vet.*). A contagious infection of breeding horses, characterised by inflammation of the external genital organs and paralysis of the hind limbs; due to *Trypanosoma equiperdum*, which is transmitted through coitus.

douse (*Cinema.*). To switch off illumination provided by lamps. (Colloquial.)

douser (*Cinema.*). The automatic screen which cuts off the light falling on to the film from the projector arc, when it is not passing intermittently through the gate.

douzième, dooz-yem' (*Horol.*). A unit of measurement used in the watch trade. See **ligne.**

douzième gauge (*Horol.*). A form of calliper gauge on which the readings are given in douzièmes.

dovetail (*Carp., Join.*). A joint formed between a flaring tenon, having a width diminishing towards the root, and a corresponding recess or mortise.

dovetail box plane (*Join.*). A special rabbeting plane for finishing dovetails.

dovetail cutter (*Carp.*). A specially shaped rotary cutting tool, used for shaping dovetail grooves.

dovetail halving (*Carp.*). A form of *halving* (q.v.) in which the mating parts are cut to a dovetail shape.

dovetail hinge (*Join.*). A hinge whose leaves increase in width outwards from the hinge joint.

dovetail key (*Eng.*). A parallel key in which the part sunk in the boss or hub is of dovetail section, the portion on the shaft being of rectangular section. See **key.**

dovetail key (*Join.*). A batten, of dovetail-shaped section, which is driven into a corresponding groove cut across the back of adjacent boards in a panel, and serves to prevent warping.

dovetail mitre (*Join.*). See **secret dovetail.**

dovetail saw (*Join.*). A saw similar to the tenon saw but of smaller size and having usually 12 teeth to the inch.

Dow metal (*Met.*). Magnesium base alloys. Manufactured by the Dow Chemical Co. Alloys are of Elektron type, i.e. contain aluminium and manganese and sometimes zinc. See **Elektron.**

dowel (*Eng.*). (1) A pin fixed in one part which, by accurately fitting in a hole in another attached part, locates the two, thus facilitating accurate re-assembly.—(2) A pin similarly used for locating divided patterns.

dowel (*Masonry*). A copper, slate, or stone pin sunk into opposing holes in the adjacent faces of two stones, when it is required to unite these more strongly than is possible with a mortar joint.

dowel bit (*Carp.*). A wood-boring bit of semi-cylindrical form, with the cutting end ground to a conoidal shape. Also called a SPOON BIT or DUCK'S-BILL BIT.

dowel plate (*Join.*). A steel plate having a number of tapered holes in it; used as a pattern for making tapered dowel pins.

dowel screw (*Join.*). See **handrail screw.**

dowelling jig (*Build.*). A device for directing the bit in drilling holes to receive dowels.

dowk (*Mining*). Impure barytes, barium sulphate; a mineral occurring in lead- and zinc-mines.

dowlas (*Textiles*). A plain linen fabric of coarse texture, used for towelling, etc.

down (*Bot.*). A fine soft coating of hairs on the surface of a plant member.

down feathers (*Zool.*). See **plumulae.**

downcast (*Mining*). A contraction for *downcast shaft*, i.e. the shaft down which fresh air enters a mine. The fresh air may be sucked or forced down the shaft.

downcast (or **downthrow**) **side** (*Geol.*). That side of a fault on which the strata have been displaced downwards in relation to the up-throw or up-cast side.

downcomer (*Build.*). A *downpipe* (q.v.).—(*Met.*) See **downtake.**

downlead (*Radio*). The vertically inclined conductor connecting the uppermost parts of an antenna to the transmitting and/or receiving apparatus.

downpipe (*Build.*). A pipe (usually vertical) for conveying rain water from the gutter to the drain, or to an intermediate gulley. Also called a DOWNCOMER, DOWNSPOUT, FALL PIPE.

downrights (*Textiles*). The term applied by woolsorters to wool from the lower part of the sides of a fleece.

downspout (*Build.*). See **downpipe.**

downtake or **downcomer** (*Met.*). The pipe through which the blast-furnace gas is taken down outside the furnace from the top of the furnace to the duct catcher.

downthrow (*Geol.*). In a fault, the vertical displacement of the fractured strata. Indicated on geological maps by a tick attached to the fault line, with (where known) a figure alongside indicating the downthrow in fathoms.—(*Mining*) A plane of fracture along which a seam or lode has slipped down. See **fault.**

downwash (*Aero.*). The air which is deflected downwards from the relative motion of an aerofoil.

Down wools (*Textiles*). Wools of medium fineness produced by the Down breeds of sheep; the staple is crimpy and ranges from 3 inches (Shropshire Down) to 6 inches (Oxford Down); Southdown Wool is the best of this class.

downer (*Mining*). See **crib** (1).

Downton Castle Sandstone (*Geol.*). A prominent yellow sandstone, massive enough to be used as building-stone, occurring near the base of the Downtonian Stage.

Downtonian Stage (*Geol.*). The lowest stage of the Old Red Sandstone facies of the Devonian System, named from its typical development around Downton Castle, and reaching a thickness of 2500 ft. in the Welsh Borderlands. It commences with the Ludlow Bone Bed, and consists essentially of red marls with thin, chemically formed limestones (cornstones) and sandstones By some the highest part of the Silurian and lowest parts of the Devonian are included.

dowsing. The process of locating underground water by the twitching of a twig held in the hand.

draconti'asis (*Med.*). The presence of the Guinea worm, *Dracunculus medinensis*, in the subcutaneous and interstitial tissues of the body.

draft. See also **draught.**

draft (*Moulding*). The taper given to the sides of a pattern to enable it to be withdrawn easily from the mould.

draft (*Spinning*). The term used to indicate the attenuation of a textile material on passing from the feeding end to the delivery end of a carding engine, draw frame, fly frame, or spinning frame.

draft (*Weaving*). The order in which the warp threads are drawn through the eyes of the heald shafts.

draft stop (*Build*). See **fire stop.**

draft tube (*Eng.*). A discharge-pipe from a water-turbine to the tail race. By running full, it decreases the pressure at outlet and increases the turbine efficiency.

drafting (*Lace*). The process of indicating the details of a design on ruled paper by means of numerals, which show the movement of the different threads.

drafting (*Weaving*). The process of determining the arrangement of warp threads in the heald eyes and the dents of the reed.

drag (*Aero.*). (1) That component of the aerodynamic force on an aircraft part which lies along the longitudinal axis of the machine. The component of the airscrew thrust is not included in this. Known as the ***head resistance*** of a part.—(2) The sum of the induced and the profile drags of a lifting surface.

See **form—** **pressure—**
induced— **profile—**
parasitic— **surface-friction—**

drag (*Foundry*). The bottom half of a moulding box or flask.

drag (*Masonry*). A steel-toothed tool for dressing stone surfaces.

drag axis (*Aero.*). The line through the centre of gravity of an aircraft and parallel to the wind, considered relative to the aircraft.

drag-bar (*Eng.*). See **draw-bar.**

drag conveyor or **drag chain conveyor** (*Eng.*). A conveyor in which an endless chain, having wide links carrying projections or wings, is dragged through a trough into which the material to be conveyed is fed; it is used for loose material.

dragline excavator (*Civ. Eng.*). A mechanical excavating appliance consisting of a steel scoop bucket which is suspended from a movable jib; after biting into the material to be excavated, it is dragged towards the machine by means of a wire rope.

drag link (*Eng.*). A rod by which the link motion of a steam-engine is moved for varying the cut-off. See **link motion.**

drag link or **steering rod** (*Automobiles*). A link which conveys motion from the drop arm of a steering gear to the steering arm carried by a stub axle, which it connects through ball joints at its ends.

dragged work (*Masonry*). Stone-dressing done with a drag.

dragon-beam or **dragging-beam** (*Build.*). The horizontal timber on which the foot of the hip-rafter rests.

dragon-tie (*Carp.*). An *angle-tie* (q.v.).

dragon's blood (*Chem.*). A resinous exudation from the fruit of palm trees and the stems of different species of *Dracaena*. It is a red, amorphous substance, m.p. 120° C., soluble in organic solvents. By destructive distillation the resin yields toluene and styrene. It is used for colouring varnishes and lacquers; also, in photo-engraving, to protect parts of a plate in the etching process.

drain (*Civ. Eng., San. Eng.*). (1) A water-channel to carry away surface or excess waters.—(2) A pipe or channel to carry away wastes and liquid sewage. See also **rubble drain***.

drain (*Surg.*). Any piece of material, such as a rubber tube, used for directing away the discharges of a wound.

drain cock (*Eng.*). A cock placed (1) at the lowest point of a vessel or space, for draining off liquid; (2) in an engine cylinder, for discharging condensed steam.

drain pipe (*San. Eng.*). See **drain.**

drain plug (*San. Eng.*). A device for closing the outlet of drain pipes when these are to be tested. See **bag plug, screw plug.**

drain tiles (*Civ. Eng.*). Hollow tiles laid end to end without joints, to carry off surface or excess water.

drain-trap (*San. Eng.*) See **air-trap.**

drain-well (*Civ. Eng.*). An *absorbing well* (q.v.).

drainage (*Geol.*). The removal of surplus meteoric waters by rivers and streams. The complicated network of rivers is related to the geological structure of a district, being determined by the existing rocks and superficial deposits in the case of youthful drainage systems; but in those that are mature, the courses may have been determined by strata subsequently removed.

See **consequent— superimposed— insequent—**

drainage (*Surg.*). The action of draining discharges from wounds or infected areas.

drainage area (*Civ. Eng.*). See **catchment area.**

drainage coil (*Elec. Comm.*). A coil bridged between the legs of a communication pair, with its electrical mid-point earthed, in order to prevent the accumulation of static charges on the conductors.

dramatic control (*Elec. Comm.*). The use of a number of isolated channels carrying the outputs of microphones for mixing, under the action of a director, in building up an aural effect in broadcasting-programme material.

Draper effect (*Chem.*). See **photochemical induction.**

drapery panel (*Join.*). A raised panel moulded and carved in imitation of draped linen. Also called a LINEN-FOLD PANEL.

draught. See also **draft.**

draught (*Eng.*). (1) The flow of air through a boiler furnace.—(2) The degree of vacuum inducing air-flow through a boiler furnace, measured in inches of water.

draught (*Ship Constr.*). The depth of water that a ship will require to float freely. *Load draught* is the same, with a ship fully loaded; but this is regulated by law, and the amount of cargo must not be such as to cause the ship to exceed its specified draught as indicated by freeboard markings.

draught-bar (*Eng.*). See **draw-bar.**

draught bead (*Join.*). A *deep bead* (q.v.).

draught gauge (*Eng.*). A sensitive vacuum gauge for indicating, in inches of water, the draught in a boiler furnace or flue.

dravite (*Min.*). According to Kunitz, one of the three chief varieties of tourmaline; a complex borosilicate of magnesium and sodium; may be referred to as magnesium-tourmaline; used as a gemstone.

draw (*Cotton Spinning*). The outward and inward run of a mule carriage.

draw (*Horol.*). The action whereby one part is drawn into another. In a lever escapement, the locking faces of the pallets are formed at an angle relative to the teeth such that a tooth of the escape-wheel, when pressing against the locking face, tends to draw the pallet into the wheel.

draw (*Mining*). (1) To allow ore to run from working places, stopes, through a chute into trucks.—(2) To withdraw timber props or sprags from overhanging coal, so that it falls down ready for collection.—(3) To collect broken coal in trucks.

draw (*Typog.*). When type has not been locked securely in the forme, the rollers *draw* it out during printing.

draws (*Foundry*). Internal cavities or spongy areas occurring in a casting at junctions of bosses or ribs with walls, due to lack of feeding and to unequal contraction.

drawback (*Foundry*). An independent section of a mould, made like a core, to facilitate delivery of the pattern or reduce the number of joints.

draw-bar (*Acous.*). The unit which is pulled out by the hand and thereby adjusts the contribution of harmonic tone in a stop of an electronic organ (such as the Hammond).

draw-bar, drag-bar, or **draught-bar** (*Eng.*). The bar by which the tractive effort of a locomotive is transmitted to the vehicles behind it; it usually terminates in a hook which engages the coupling link.

draw-bar cradle (*Eng.*). A closed frame or link for connecting the ends of the draw-bars of railway vehicles, so coupling them together.

draw-bar plate (*Eng.*). On a locomotive frame, a heavy transverse plate through which the draw-bar is attached.

draw-bar pull (*Eng.*). The tractive effort exerted, in given circumstances, by a locomotive drawing a train.

draw-bar spring (*Eng.*). A shock-absorbing spring fitted between the end of a railway carriage draw-bar and the frame.

draw-bit (*Lace*). A hook which connects the steel bar with the jacquard dropper box.

draw-bore (*Carp.*). A hole drilled transversely through a mortise and tenon so that, when a pin is driven in, it will force the shoulders of the tenon down upon the abutment cheeks of the mortise.

draw box (*Textiles*). This consists of two or more pairs of fluted rollers between the doffer and the coiler of a carding engine. The web of fibres from the doffer passes through the draw box and is delivered to the coiler in the form of sliver.

draw-bridge (*Civ. Eng.*). A general name for any type of bridge of which the span is capable of being moved bodily to allow of the passage of large vessels.

draw-door weir (*Civ. Eng.*). A weir fitted with doors or gates capable of being raised vertically, so as to retain water when desired.

draw-filing (*Eng.*). The operation of finishing a filed surface by drawing the file along the work in a direction at right-angles to the length of the file.

draw-gate (*Hyd. Eng.*). A name given to the valve controlling a sluice.

draw-in box (or **pit**) (*Elec. Eng*). A box or pit to enable cables to be drawn into, or removed from, a conduit or duct.

draw-in system (*Cables*). The system whereby the cables are pulled into conduits or ducts of earthenware, concrete, or iron, from one manhole to another. The cables have a serving of hessian but no armouring.

draw knife (*Carp.*). A cutting blade with a handle at each end at right-angles to the blade; used for shaving wood.

draw knob, draw stop (*Acous.*). The knob on the jamb of an organ console which is drawn to bring in the associated stop.

draw-nail (*Moulding*). A pointed steel rod driven into a pattern to act as a handle for withdrawing it from the mould. See **draw-screw.**

draw-off valve (*Plumb.*). A *bib-valve* (q.v.).

draw-out metal-clad switchgear (*Elec. Eng.*). Metal-clad switchgear in which the switch itself can be isolated from the bus-bars, for inspection and maintenance, by moving it away from the bars along suitable guides.

See **horizontal—** **vertical—**

draw plate (*Eng.*). The plate on which dies are supported in wire- and tube-drawing operations.

draw-screw (*Moulding*). A screwed rod provided with an eye at the end to act as a handle; screwed into a pattern for lifting it from the mould. See **draw-nail.**

draw sheet (*Print.*). The sheet drawn over the completed make-ready on a press before proceeding with the printing.

draw stop (*Acous.*). See **draw knob.**

draw-tube telescope (*Surv.*). A form of surveying telescope in which the object-glass and the eyepiece are fixed in separate tubes, of which one is capable of sliding axially within the other under the action of a rack gearing with pinion attached to the focusing screw.

drawer-front dovetail (*Join.*). See **lap dovetail.**

drawing compasses. See **compasses.**

drawing (*Cotton Spinning*). The running together and attenuation of a number of slivers, usually six, preparatory to spinning.

drawing (*Met.*). The operation of producing wire, or giving rods a good surface and accurate dimensions, by pulling through one or a series of tapered dies.

drawing (*Worsted*). The operation by which worsted tops are reduced to a roving suitable for spinning.

drawing-down (*Eng.*). The operation of reducing the diameter of a bar, and increasing its length, by forging.

drawing fires (*Eng.*). The operation of raking out the fires from boiler furnaces, when shutting down.

drawing-in (*Weaving*). The operation of placing the warp threads in the eyes of the healds, in accordance with the draft.

drawing of patterns (*Foundry*). The removal of a pattern from a mould; also termed LIFTING. It is facilitated by the taper or draught of the pattern, and by loosening the pattern by *rapping* (q.v.).

drawing of tubes (*Eng.*). See **tube drawing.**

drawing rollers (*Cotton Spinning*). The rollers through which cotton sliver is passed to effect attenuation. The top roller of a pair is covered with leather and the bottom one is fluted.

drawing temper (*Eng.*). The operation of tempering hardened steel by heating to some specific temperature and quenching, in order to obtain some definite degree of hardness. See **tempering.**

drawing timber (*Mining*). The operation of removing timber props from a worked-out area.

drawn (*Bot.*). Etiolated.

drawn on (*Bind.*). Said of a book cover which is attached by gluing down the back; if the end-papers are pasted down it is said to be *drawn on solid.*

drawn-wire filament (*Illum.*). An incandescent lamp filament, made by a wire-drawing process as opposed to a squirting process.

dredge (*Civ. Eng.*). Any apparatus used for excavating under water.

dredge or **dredger** (*Mining*). A large raft or barge on which are mounted either a chain of buckets or suction pumps and other appliances, to elevate and wash alluvial deposits and gravel for gold, tin, platinum, diamonds, sapphires, etc.

dredge (*Ocean.*). A type of bag-net used for investigating the fauna of the sea-bottom where it is too rough to admit of trawling.

dredger (*Civ. Eng.*). A vessel specially equipped for dredging.

See **bucket-ladder—** **sand-pump—**
dipper— **suction-cutter—**
grab—

dredger excavator (*Eng.*). An excavator working on the same principle as the *bucket-ladder dredger* (q.v.) but designed to work on land.

dredging (*Civ. Eng.*). A form of excavation conducted under water.

dredging well (*Civ. Eng.*). The opening through a dredging vessel in which the bucket ladders work. See **bucket-ladder dredger.**

dreikanter, drī′— (*Geol.*). A three-edged stone which has been so shaped by the natural sand-blast operating in sandy deserts. The term is often expanded to include wind-shaped pebbles with more than three sides: a better general term is *ventifacts,* a term comparable with artefacts.

drenching (*Leather*). A process for removing from light skins (intended for gloves, etc.) any traces of lime present after bating.

drepa′nium (*Bot.*). A monochasial cyme in which all the branches arise on the same side of the relatively main axis.

drep′anocyto′sis (*Med.*). Sickle-celled anaemia; a severe anaemia, afflicting negroes, in which red blood-cells of a peculiar sickle shape appear in the blood.

dress linen (*Textiles*). A linen fabric, generally made from half-bleached yarns and then mercerised and dyed; used for curtains as well as for dresses.

dressed stuff (*Build.*). Timber which has been worked more or less to shape.

dresser (*Eng.*). (1) An iron block used in forging bent work on an anvil.—(2) A mallet for flattening sheet-lead.—(3) A tool for facing and grooving millstones, or for trueing grinding wheels.

dresser (*Med.*). A medical student who assists a surgeon in the treatment of patients; one who dresses wounds.

dresser (*Plumb.*). A boxwood tool for straightening lead piping and sheet-lead.

dresser sizing (*Textiles*). See **Scotch dressing.**

dressing (*Cotton*). A method of preparing a warp for the loom. Threads are taken from one or more ball warps, they are tensioned, opened out into sheet form, and wound on a beam.

dressing (*Furs, Leather*). A process in which fleshed skins are treated with oil in order to give them a smooth finish.

dressing (*Lace*). The process of stretching lace in a wet condition on a tenter frame in order to straighten it.

dressing (*Linen*). The process of (1) applying a slight coating of starch to warp yarns when on the beam, in order to prevent fraying by the shuttle during weaving; (2) preparing a warp for the loom.

dressing (*Masonry*). The operation of smoothing the surface of a stone.

dressing (*Plumb.*). The operation of flattening out sheet-lead with a dresser.

dressing (*Surg.*). The application of sterile material, gauze, lint, etc., to a wound or infected part; material so used.

dressing (*Typog.*). The operation of fitting furniture around the pages in a forme preparatory to locking it up.

dressings (*Build.*). The mouldings, quoins, strings, and like features, in a room or building.

dressing-off (*Foundry*). The process of removing runners, risers, and cores from a casting after removal from the mould, cleaning the surfaces, and chipping away projections, before sand-blasting and machining. Also called FETTLING, TRIMMING.

driers (*Chem.*). Substances accelerating the drying of vegetable oils; e g. linseed oil in paints. The most important representatives of this group are the resinates, naphthenates and oleates of lead, calcium, manganese, cobalt, tin, copper, and zinc.

drift (*Aero.*). The motion of an aircraft in a horizontal plane, under the influence of an air current.

drift (*Civ. Eng.*). The direction in which a tunnel is driven.

drift (*Eng.*). (1) A tapered steel bar used to draw rivet holes into line.—(2) A brass or copper bar used as a punch.

drift (*Geol.*). A general name for the superficial, as distinct from the solid, formations of the earth's crust. It includes typically the Glacial Drift, comprising all the varied deposits of boulder clay, outwash gravel, and sand of Quaternary age. Much of the drift is of fluvio-glacial origin.

drift (*Hyd. Eng.*). The rate of flow of a current of water.

drift (*Mining*). (1) A level or tunnel pushed forward underground in a metal-mine, for purposes of exploration or exploitation. The inner end of the drift is called a *dead end*.—(2) A heading driven obliquely through a coal-seam.—(3) A heading in a coal-mine for exploration or ventilation.—(4) An inclined haulage road to the surface.

drift currents (*Meteor.*). Ocean currents produced by prevailing winds.

drift-net (*Ocean.*). A form of *gill-net* (q.v.) used for fishing at or near the surface; allowed to drift with the tide; used especially by herring-boats or drifters.

drift plug (*Plumb.*). A wooden plug which is driven through the bore of a lead pipe in order to smooth out a kink.

drifter (*Mining*). A cradle-mounted compressed-air rock drill, used for making tunnels (drifts or cross-cuts).

drifting (*Eng.*). The process of bringing holes into line by hammering a drift through them.

drifting test (*Eng.*). A workshop test for ductility; a hole is drilled near the edge of a plate and opened by a conical drift until cracking occurs.

drill (*Agric. Mach.*). A machine for sowing seed in regularly spaced rows. See **cup-feed drill.**

drill coulter (*Agric. Mach.*). A form of coulter used on a drill to make the shallow trench into which the seed drops. See **disc coulter, hoe coulter, Suffolk coulter.**

drill (*Eng.*). A revolving tool with cutting edges at one end, and having flats or flutes for the release of chips; used for making cylindrical holes in metal. See **twist drill.**—See also **drilling machine.**

drill (*Mining*). (1) An abbrev. for *compressed-air-operated rock drill*, either of the piston or hammer type. Also used to denote only the 'steel' or 'borer' itself, a straight steel bar, generally with a shank at one end and a bit or cutting edge at the other.—(2) To bore a short hole for blasting, or a long hole for exploration for coal, oil, or mineral.

drill chuck (*Eng.*). A small self-centring chuck usually having three jaws which are contracted on to the drill by the rotation of an internally coned sleeve encasing them.

drill-extractor (*Civ. Eng.*). A tool used to remove from a boring a broken drill or one which has fallen free of the drilling apparatus.

drill feed (*Eng.*). The hand- or power-operated mechanism by which a drill is fed into the work in a drilling machine.

drill-rod (*Civ. Eng.*). The long rod reaching down into a boring, and carrying at its lower end the boring-tool proper.

drill (*Textiles*). (1) A linen or cotton fabric with a twill weave, used for tropical suitings, etc.—(2) A heavy twilled cotton cloth used for sheeting and clothing. There are numerous qualities.

drilling (*Mining*). (1) The operation of tunnelling or stoping, whether with a compressed-air rock drill, a jack hammer, or a drifter.—(2) The operation of making deep holes with a diamond drill for prospecting or exploration. Cf. *boring.*

drilling cramp (*Eng.*). A frame bolted to a large or unwieldy piece of work for the purpose of supporting a portable drilling machine.

drilling machine (*Eng.*). A machine tool for drilling holes, consisting generally of a vertical standard, carrying a table for supporting the work and an arm provided with bearings for the drilling spindle. See **pillar drill, radial drill, sensitive drill.**

drilling spindle (*Eng.*). The revolving spindle holding the drill in a *drilling machine* (q.v.).

drilling table (*Eng.*). The table on which work is supported and clamped in a *drilling machine* (q.v.).

drillette (*Textiles*). A cotton fabric with fine twill lines; used for linings.

drip (*Build., Civ. Eng.*). A groove in the projecting under-surfaces of a coping brick or stone wider than the wall; designed to prevent water from passing from the coping to the wall. Also called GORGE or THROAT.

drip (*Plumb.*). A joint made across the direction of fall, between the edges of two lead sheets on a roof surface, the sheets being overlapped over a 2 in. or 3 in. step in the roof.

drip-feed lubricator (*Eng.*). A small reservoir from which lubricating oil is supplied in drops to a bearing, sometimes through a glass tube to render the rate of feed visible. See **sight-feed lubricator.**

drip mould (*Build.*). A projecting moulding arranged to throw off rain water from the face of a wall.

drip-proof (*Elec. Eng.*). Said of an electric machine or other electrical equipment which is protected by an enclosure whose openings for ventilation are covered with suitable cowls, or other devices, to prevent the ingress of moisture or dirt falling vertically.

drip sink (*Build.*). A shallow sink at, or just higher than, floor level, to take the drip from a tap.

dripstone (*Build.*). A projecting moulding built in above a doorway, window opening, etc., to deflect rain water.

drip tip (*Bot.*). A marked elongation of the tip of the leaf, said to facilitate the shedding of rain from the surface of the leaf.

dripping eave (*Build.*). An eave which is not fitted with a gutter and which therefore allows the rain to flow over to a lower roof or to the ground.

drive (*Mining*). See **driving.**

drive (*Radio*). Generally, the alternating voltage applied to the grid of an amplifying thermionic tube. Specially, the master oscillator circuit and its immediately subsequent amplifying stages in a transmitter using independent drive.

driver plate (*Eng.*). A disc which is screwed to the mandrel nose of a lathe, and carries a pin which engages with and drives a carrier attached to the work. See **double driver plate.**

driver unit (*Radio*). See **exciter.**

driving (*Mining*). (1) The making of a tunnel or level (a *drive*) in a mineralised lode or vein, as distinct from making one in country rock (*cross-cutting*).—(2) Breaking down coal with wedges and hammers.

driving axle (*Eng.*). A vehicle axle through which the driving effort is transmitted to the wheels fixed to it. Also called a LIVE AXLE.

driving band (*Ammunition*). A band, usually of copper, which is pressed round the rear end of a projectile and engages with the rifling, thus causing rotation of the projectile and preventing escape of gas to the front. See **rifling.**

driving blade (*Textiles*). In a lace machine, a brass strip on the front edge of a catch bar, or on the rollers of locker bars.

driving chain (*Eng.*). An endless chain consisting of steel links which engage with toothed wheels, so transmitting power from one shaft to another. See **roller chain.**

driving chuck (*Eng.*). A lathe *driving plate* (q.v.) provided with slots by which dogs are attached for gripping the work, instead of a projecting pin.

driving fit (*Eng.*). A degree of fit between two mating pieces such that the inner member, being slightly larger than the outer, must be driven in by a hammer or press.

driving gear (*Eng.*). Any system of shafts, gears, belts, chains, links, etc. through which power is transmitted from one shaft to another.

driving plate (*Eng.*). A flange screwed to the spindle of a lathe, and carrying a projecting pin for engaging and driving the carrier attached to the work.

driving-point impedance (*Elec. Eng.*). A term sometimes used to denote the ratio of the e.m.f. at a particular point in a system to the current at that point.

driving potential (*Photo-Electronics*). The positive potential applied to the anode of a photo-electric cell to drive the electrons to the anode after they have been released from the cathode by the incident light.

driving side (*Eng.*). The tension side of a driving belt; the side moving from the follower to the driving pulley.

driving-trailer (*Elec. Eng.*). A trailer-coach for use in a multiple-unit electric train; provided with driver's equipment at one end.

driving wheel (*Eng.*). (1) The first member of a train of gears.—(2) The road wheels through which the tractive force is exerted in a locomotive or road vehicle.

drizzle (*Meteor.*). Very fine rain.

drogue (*Aero.*). A sea anchor used on seaplanes and flying-boats; it is a conical canvas sleeve, open at both ends, like a bottomless bucket. Used to check the way of the aircraft.

dromaeog'nathous (*Zool.*). (In Birds) said of a type of palate in which the vomers are large and flat and diverge posteriorly to prevent the junction of the basisphenoid rostrum with the pterygoids and palatines.

drone (*Zool.*). In social Bees (*Apidae*), a male.

drop (*Elec. Eng.*). A term commonly used to denote *voltage-drop*.

See **impedance—** **resistance—** **reactance—**

drop (*Horol.*). The space moved by a tooth of the escape wheel when it is entirely free from contact with the pallets.

drop (*Mining*). The vertical displacement in a downthrow fault: the amount by which the seam is lower on the other side of the fault.

drop (*Typog.*). To unlock a forme and remove the chase after printing. The type matter is then either distributed or tied up and stored.

drop-annunciator (*Elec. Eng.*). A device used in connexion with an electric signalling system, e.g. an electric bell, to indicate the point from which the signal has originated, the indication being given by the dropping of a coloured disc.

drop arch (*Build.*). An arch similar to, but less pointed than, the *equilateral arch* (q.v.).

drop arm (*Automobiles*). A lever attached to a horizontal spindle which receives rotary motion from the steering gear; used to transmit linear motion through the attached steering rod or drag link to the arms carried by the stub axles.

drop black (*Dec., Paint., etc.*). Charcoal black pigment in drop or cone form.

drop box (*Weaving*). A shuttle box constructed to hold shuttles carrying weft of different sorts, which can be brought into position for picking as required.

drop cuts (*Furs*). Cuts of V or W shape.

drop-down curve (*Hyd. Eng.*). The longitudinal profile of the water surface in the case of non-uniform flow in an open channel, when the water surface is not parallel to the invert, owing to the depth of water having been diminished by a sudden drop in the invert.

drop elbow (*Plumb.*). A small elbow with ears, by means of which it can be fixed to a support.

drop electrode (*Chem.*). A half-element consisting of mercury dropping in a fine stream through a solution.

drop ell (*Plumb.*). A small ell with ears, by means of which it can be fixed to a support.

drop foot (*Med.*). Dropping of the foot from paralysis of the muscles maintaining its normal position, due to injury or inflammation of the nerves supplying them.

drop forging (*Met.*). The process of shaping metal parts by forging between two dies, one fixed to the hammer and the other to the anvil of a steam or mechanical hammer. The dies are expensive, and the process is used for the mass-production of parts such as connecting-rods, crankshafts, etc.

drop gate (*Foundry*). A pouring-gate or runner leading directly into the top of a mould.

drop-in winding (*Elec. Eng.*). A term sometimes used for an armature winding which can be dropped into the slots on the armature instead of having to be pushed through from the end.

drop-point slating (*Build.*). A mode of laying asbestos slates so that one diagonal is horizontal.

drop shaft (*Mining*). A shallow shaft, connecting two coal-seams, through which full trucks are lowered and empties raised by gravity.

drop siding (*Build.*). Weather-boarding (see **weather board**) which is rebated and overlapped.

drop stamping (*Met.*). See **drop forging.**

drop tee (*Plumb.*). A small tee with ears, by means of which it can be fixed to a support.

drop test (*Elec. Eng.*). (1) A test employed for locating a fault in a commutator winding; the voltage drop between each pair of adjacent segments when a current is passed through the winding is measured.—(2) The *fall-of-potential test* (q.v.) for locating a fault in a cable.

drop test (*Eng.*). A strength test for steel tyres, consisting in dropping on to a rail from a specified height (dependent on the tyre diameter).

drop tracery (*Arch.*). Tracery which lies partly below the springing of the arch which it decorates.

drop valve (*Eng.*). A conical-seated valve used in some steam-engines; rapid operation by a trip-gear and return spring reduces wire-drawing losses.

drop wrist (*Med.*). Limp flexion of the wrist from paralysis of the extensor muscles, as a result of neuritis or of injury to the nerve supplying them; e.g. in lead poisoning.

dropped beat (*Med.*). Intermission of a regular pulse wave at the wrist, due to intermission of the heart beat or to an extrasystole.

dropped head (*Typog.*). The first page of a chapter, etc., which begins lower down than ordinary pages. As far as possible, the drop should be constant throughout the book.

dropper (*Elec. Eng.*). In catenary constructions for electric traction systems, the fitting used for supporting the contact wire from the catenary wire.

dropper (*Lace*). One of the distance pieces in a lace machine which are lifted into position between the dropper box and the driving blade by the jacquard card.

dropper box (*Lace*). A movable metal blade on the jacquard in a lace machine; to it the steel bar is connected.

dropper gauge (*Lace*). The thickness of the distance piece of a dropper, determined by the gauge of the lace machine.

dropping bottle (*Chem.*). A small bottle having usually a ground-glass stopper in which is cut a narrow channel. The bottle neck, in which this stopper fits tightly, has a similar channel, so that the stopper can be rotated until the two channels meet. By this means liquid poured from the bottle and down the channel, drop by drop, can be readily controlled.

dropping-out (*Furs*). The operation of lengthening skins by means of *drop cuts* (q.v.).

dropsy (*Med.*). See **oedema.**

drosom'eter (*Meteor.*). An instrument for measuring the amount of dew deposited.

dross (*Met.*). Similar to slag but consisting of metallic oxides that rise to the surface in metallurgical oxidation processes.

dross (*Mining*). Small coal which is inferior or worthless.

drossing (*Met.*). The process for removing copper from work lead. Molten metal from the blast-furnace is allowed to cool while agitated in a drossing kettle. Owing to its low solubility in molten lead, copper separates from solution. Iron and certain amounts of other impurities are also eliminated.

drought (*Meteor.*). Lack of rain. A *partial drought* is a period of at least 29 days the mean daily rainfall of which does not exceed ·01 in. An *absolute drought* is said to exist if, for at least 15 days, the rainfall on each day has been less than ·01 in.

drought resistivity (*Bot.*). The degree of fitness of a plant for withstanding drought, upon which depends its chances of success in competition, in dry places, with other plants.

drove (*Hyd. Eng.*). A narrow channel used for irrigation.

drove (*Masonry*). A broad-edged chisel for dressing stone.

drove work (*Masonry*). Stone dressing done with a boaster, leaving rows of parallel chisel marks on the slant across the face. Also called BOASTED WORK.

drowned (*Mining, etc.*). Flooded; e.g. *drowned workings*, flooded workings.

drowned valleys (*Geol.*). Literally, river valleys which have become drowned by a rise of sea-level relative to the land. This may be due to actual depression of the land, sea-level remaining stationary; or to a eustatic rise in sea-level, as during the interglacial periods in the Pleistocene, when melting of the ice-caps took place. See also **ria** and **fiords.**

drowning pipe (*Plumb.*). A storage cistern inlet pipe which reaches down below the surface of the water in the tank, the noise of the discharge being thereby lessened.

drum (*Build.*). (1) A circular wall carrying a cupola.—(2) A cylindrical section of a column.

drum (*Eng.*). (1) Any hollow cylindrical barrel; e.g. a metal barrel in which oil is stored.—(2) The rotor of a reaction turbine. See **brake drum, disc-and-drum turbine, winding drum.**

drum (*Join.*). (1) Any timber structure cylindrical in shape.—(2) Any cylinder used as a form for bending wood to shape.

drum (*Lace*). A cylinder on which threads are wound to definite length, for transfer to brass bobbins.

drum (*Mining*). The large cylinder or cone on to which the rope is coiled when hoisting a load up a shaft.

drum (*Photog.*). A light wooden frame, in the form of a drum, on which lengths of cinematograph film are wound so that on rotation they dip into a small quantity of developer or fixer.

drum (*Textiles*). The term is applied to various revolving parts which transmit motion to other parts by surface contact.

drum armature (*Elec. Eng.*). An armature for an electric machine, having on it a drum winding.

drum breaker starter (*Elec. Eng.*). A drum starter in which a separate circuit-breaker is provided for interrupting the circuit.

drum controller (*Elec. Eng.*). A controller in which the connexions for performing the desired operation are made by means of fixed contact fingers, bearing on metallic contact strips mounted in the form of a rotating cylindrical drum.

drum-curb (*Civ. Eng.*). See **curb.**

drum development (*Cinema.*). The use of rotating drums for carrying film during processing, as contrasted with frame or continuous development.

drum, ear. See **ear drum.**

drum movement (*Horol.*). A clock movement housed in a cylindrical metal case.

drum pump (*Eng.*). See **rotary pump.**

drum, recording (*Cinema.*). See **recording drum.**

drum scanner (*Television*). A rotating drum carrying a set of apertures, lenses, mirrors, or other picture-scanning elements, used in mechanical scanning systems.

drum starter (*Elec. Eng.*). A motor starter in which the necessary operations are carried out by fixed contact fingers bearing upon contact strips mounted in the form of a rotating cylindrical drum.

drum washer (*Paper*). A gauze-covered cylinder in the breaking engine which washes the pulp by withdrawing dirty water and replacing it with clean.

drum weir (*Civ. Eng.*). A weir formed by a gate capable of rotation about a horizontal axis in the line of the river bed, by which means the discharge over the weir may be controlled.

drum winding (*Elec. Eng.*). A winding for electrical machines in which the conductors are all placed under the outer surface of the armature core. It is the form of winding almost invariably used.

drum winding (*Textiles*). The method of winding yarn on to a flanged bobbin by means of a driving drum in contact with the bobbin.

drumlin (*Geol.*). An Irish term, meaning a little hill, applied to accumulations of glacial drift moulded by the ice into small hog-backed hills, oval in plan, with the longer axes lying parallel to the direction of ice movement. Drumlins often occur in groups, giving the 'basket of eggs' topography which is seen in many parts of Britain and dates from the last glaciation.

Drumm accumulator (*Elec. Eng.*). A special form of alkaline accumulator capable of high discharge rates; the positive plate contains nickel oxides and the negative plate is of zinc.

drumming (*Furs*). The process of tossing skins in drums or cages to remove dust.

drumming (*Leather*). The term covers any of the processes to which raw hides and skins are subjected in a revolving drum to convert them into leather; e.g. soaking, tanning, currying, dyeing.

drunken saw (*Carp.*). A circular saw revolving about an axis which is not absolutely at right-angles to the plane of the saw, consequently cutting a wide kerf.

drupa'ceous (*Bot.*). Resembling a drupe.

drupe (*Bot.*). A succulent fruit formed from a superior ovary, usually one-seeded, with the pericarp clearly differentiated into epicarp, mesocarp, and endocarp.

dru'pel or **dru'pelet** (*Bot.*). A small drupe. Drupels usually occur in groups, forming together a larger fruit.

druse (*Bot.*). A globose mass of crystals of calcium oxalate around a central foundation of organic material, occurring in some plant cells.

drusy (*Mining*). Containing cavities; said of mineralised lodes or veins.

drusy cavities (*Geol.*). See **geodes.**

drusy structure (*Geol.*). See **miarolitic structure.**

dry area (*Build.*). The 2 in. or 3 in. cavity in the wall below ground-level in basement walls built hollow; the purpose of the cavity is to keep the basement walls dry.

dry assay (*Chem.*). The determination of a given constituent in ores, metallurgical residues, and alloys, by methods which do not involve liquid means of separation. See also **wet assay, scorification, cupellation.**

dry-back boiler (*Eng.*). A shell-type boiler with one or more furnaces passing to a chamber at the back, from which an upper bank of fire-tubes leads to the uptake at the front.

dry battery (*Elec. Eng.*). A battery composed of *dry cells* (q.v.).

dry blowing (*Textiles*). A process used for setting and lustring fancy woollens and worsteds.

dry bone ore (*Min.*). See **smithsonite.**

dry cell (*Elec. Eng.*). A primary cell in which the contents are in the form of a paste. Usually of the Leclanché type, the combination of the hydrogen at the carbon anode and the oxygen from the depolariser, manganese dioxide, tending to keep the paste moist.

dry copper (*Met.*). Copper containing oxygen in excess of that required to give 'tough pitch.' Such metal is liable to be brittle in hot- and cold-working operations.

dry-core cable (*Elec. Comm.*). A multi-core lead-covered core for telephone or telegraph use, in which the separate conductors are covered with a continuous spiral of ribbon-shaped paper. The paper covering provides the insulation after being dried with carbon dioxide, which is pumped through the cable and kept under pressure.

dry dock (*Civ. Eng.*). A dock in which ships are repaired. Water is excluded by means of gates or caissons, after the dock has been emptied. Also called a GRAVING DOCK.

dry electrolytic condenser (*Elec. Comm.*). An electrolytic condenser in which the negative pole of the condenser takes the form of a sticky paste, which is sufficiently conducting to maintain the oxide film on the positive aluminium electrode.

dry flashover voltage (*Elec. Eng.*). The voltage at which the air surrounding a clean dry insulator breaks down, causing the insulator to flash over. Also called DRY SPARKOVER VOLTAGE.

dry flue gas (*Eng.*). The gaseous products of combustion from a boiler furnace, excluding water vapour. See **flue gas.**

dry fruit (*Bot.*). A fruit in which the pericarp does not become fleshy at maturity.

dry hopping (*Brew.*). The addition of a small quantity of raw hops to certain classes of beers, to improve the flavour.

dry liner (*Eng.*). See **liner.**

dry moulding (*Foundry*). The preparation of moulds in dry sand, as distinct from the use of greensand or *loam* (q.v.).

dry mounting (*Photog.*). The use of a shellac or gum tissue for fixing photographic prints on supports; heat is applied with an iron or from a steam bath.

dry pile (*Elec. Eng.*). An early form of primary battery consisting of a pile of discs separated by layers of paper; the discs were alternately of different metals and formed the electrodes, while the electrolyte was the slight moisture contained in the paper.

dry pipe (*Eng.*). A blanked-off and perforated steam-collecting pipe placed in the steam space of a boiler and leading to the stop-valve, for the purpose of excluding water resulting from *priming* (q.v.). See **anti-priming pipe.**

dry plate (*Photog.*). The normal glass plate supporting emulsion for photographic purposes, as contrasted with the older *wet plate* (q.v.).

dry-plate rectifier (*Radio*). A term sometimes applied to a copper oxide, selenium, or similar rectifier; a *metal rectifier* (q.v.).

dry rot (*Build.*). A decay of timber due to the attack of certain fungi, the wood becoming light, dry, and friable, and so quite unsuitable for building purposes.

dry sand (*Foundry*). A moulding sand possessing the requisite cohesion and strength when dried. It is moulded in a moist state, then dried in an oven, when a coherent and porous mould results.

dry sparkover voltage (*Elec. Eng.*). See **dry flashover voltage.**

dry spinning (*Textiles*). A method of spinning flax which produces a coarse and bulky yarn; also used for tow yarns.

dry steam (*Eng.*). Steam free from water, but unsuperheated. Often called DRY SATURATED STEAM.

dry sump (*I.C. Engs.*). An internal-combustion engine lubrication system in which the upper crankcase is kept dry by an oil scavenge pump, which returns the oil to a tank, from which it is delivered to the engine bearings by a pressure pump.

dry taping (*Textiles*). See **Scotch dressing.**

dry-thread raising (*Textiles*). A process of raising used to produce a rough fibrous type of pile, e.g. moss or blanket type; or for loosening the short fibres on the surface of Saxony and Cheviot woollen fabrics of certain kinds.

dry valley (*Geol.*). A valley produced at some former period by running water, though at present streamless. This may be due to a fall of the water table, to river capture, or to climatic changes. Dry valleys are common in the Chalk uplands of S.E. England and are believed to date from the close of the Pleistocene glaciation, when precipitation was possibly greater and erosion by running water was certainly much more active than now.

dry wood (*Timber*). Seasoned timber which is free from sap.

drying box (*Photog.*). A container for drying sensitised plates or for other photographic purposes; calcium chloride is the drying agent.

drying cylinder (*Paper*). A hollow cylinder, heated by steam, over which the web of paper is passed to dry it.

drying-off (*Furs*). The process of placing furs in a hot closet to remove moisture.

drying oils (*Paint.*). Vegetable oils forming, by oxidation, a film on exposure to air (e.g linseed oil), in contrast to non-drying oils (e g olive oil); used extensively as vehicles in paints and varnishes.

drying-out (*Elec. Eng.*). (1) The process of heating the windings of electrical equipment in order to drive all moisture out of the insulation; usually done by passing current through the windings.—(2) In electroplating, the process of removing moisture from a metal by passing it through hot water and then through sawdust or a current of hot air.

drying rack (*Photog*) An arrangement for supporting plates or films during drying, preferably in a stream of warm air.

drying room or **drying loft** (*Paper*). A room in the paper mill in which sheets of hand-made paper are hung to dry before and after sizing.

drying stove (*Foundry*). A large stove or oven in which dry sand moulds and cores are dried. See **dry sand, core oven.**

dryness fraction (*Eng*). The proportion, by weight, of dry steam in a mixture of steam and water, i.e. in wet steam.

Drysdale permeameter (*Elec. Eng*). An instrument for determining, by a ballistic method, the permeability of a sample of iron; a plug carrying a primary and secondary coil is inserted in an annular hole in the sample of material under test.

Drysdale potentiometer (*Elec. Eng.*). A form of potentiometer for use with alternating currents. A known current is passed through the potentiometer wire, and a phase-shifting transformer is used to bring this into phase with the e.m.f. to be measured.

Ds (*Chem.*). An alternative symbol for *dysprosium.*

d.s.c. (*Elec. Eng*). An abbrev. for *double-silk-covered wire.*

dual-amplification circuit (*Radio*). See **reflex circuit.**

dual combustion cycle (*Eng.*). An internal-combustion engine cycle sometimes taken as a standard of comparison for the compression-ignition engine, in which combustion takes place in two stages, i.e. partly at constant volume and partly at constant pressure.

dual ignition (*I.C. Engs.*). (1) The provision of two sparking-plugs in each cylinder of an aero engine or other petrol engine, the plugs being supplied by two independent magnetos.—(2) A duplicated ignition system comprising battery ignition and magneto ignition with separate sparking-plugs; used on some high-quality automobiles to ensure reliability.

dual ion (*Chem.*). See **zwitterion.**

dual lift control (*Elec. Eng.*). A control system for an electric lift whereby the latter can be operated either fully automatically or by a car-switch inside the lift.

dual personality (*Psycho-an.*). That type of multiple personality in which the split is in two parts only.

dubbing (*Cinema.*). The re-recording of sound tracks for sound-films, particularly when there is to be alteration in the level of the recorded sound, or when a number of tracks are separately reproduced and, after mixing, re-recorded together.

dubbing (*Plast.*). The operation of filling in hollows in the surface of a wall with coarse stuff, as a preliminary to plastering.

dubbing (*Vet.*). See **cropping.**

dubbing-out (*Plast*). The operation of attaching pieces of slate, tile, etc. to a wall with plaster, and then likewise covering them in order to fill out hollows or to form projections.

Dubi'ni's disease (*Med.*). Electric chorea. A nervous disease of acute onset, with severe pains and involuntary shock-like movements.

Du Bois balance, du bwah (*Elec. Eng*). An instrument used for measuring the permeability of iron or steel rods. The magnetic attraction across an air gap in a magnetic circuit, of which the sample forms a part, is balanced against the gravitational force due to a sliding weight on a beam.

Duchemin's formula, du-shem-an^{g} (*Struct.*). An expression giving the normal wind pressure on an inclined area in terms of that on a vertical area. It states that:

$$N = F \cdot \frac{2 \sin \alpha}{1 + \sin^2 \alpha},$$

where F = force of wind in lb. per sq. ft. of vertical surface; α = angle of the inclined surface with the horizontal; N = normal pressure per sq ft of inclined surface.

Duchenne-Erb paralysis, du-shen′ (*Med.*). A form of paralysis in which the arm can be neither abducted nor turned outwards nor raised nor flexed at the elbow, as a result of a lesion of the fifth and sixth cervical nerves.

duchess (*Build.*). A slate, 24 × 12 in.

duchess (*Paper*). A notepaper size, 5¾ × 8¾ in.

duck (*Textiles*). A heavy plain cotton cloth, used for tropical suitings; heavier makes are used for sails and for tents. A similar linen cloth is used for coarse suitings.

duck board (*Build.*). A board which has slats nailed across it at intervals and is used as steps in repair works on roofs.

duck cholera (*Vet.*). See **cholera (fowl, duck).**

duck sickness (*Vet.*). Botulism of waterfowl due to *Clostridium botulinum, type C.*

duck's-bill bit (*Carp.*). See **dowel bit.**

duct (*Elec. Eng.*). (1) A pipe for containing electric cables, usually laid underground.—(2) An air passage in the core or other parts of an electric machine along which cooling air may pass; also called VENTILATING DUCT or COOLING DUCT.

See **armature—** **earthenware—**
axial— **multiple—**
cable— **radial—**

duct (*Eng.*). A large sheet-metal tube or casing through which air is passed for forced-draught, ventilating, or conditioning purposes.

duct (*Print.*). See **ductor.**

duct or **ductus** (*Zool.*). A tube formed of cells: a tubular aperture in a non-living substance, through which gases and liquids or other substances (such as spermatozoa, ova, spores) may pass.

ducter (*Elec. Eng.*). A measuring instrument which gives a direct reading of low resistances.

ductility (*Met.*). The property of metals that enables them to be mechanically deformed when cold, while becoming progressively more resistant to deformation. See **work-hardening.**

ductless glands (*Zool.*). Masses of glandular tissue which lack ducts and discharge their products directly into the blood; as the lymph glands and the endocrine glands.

ductor or **duct** (*Print.*). A reservoir holding the ink in a printing machine. The supply is regulated by a number of screws.

ductule (*Zool.*). A duct with a very narrow lumen: a small duct: the fine terminal portion of a duct.

ductus (*Zool.*). See **duct.**

ductus arterio'sus (*Zool.*). See **Botall's duct.**

ductus carot'icus (*Zool.*). In some Vertebrates, a persistent connexion between the systemic and carotid arches.

ductus Cuvierii (*Zool.*). See **Cuvierian ducts.**

ductus ejaculato'rius (*Zool.*). In many *Invertebrata*, as the *Platyhelminthes*, a narrow muscular tube forming the lower part of the vas deferens and leading into the copulatory organ.

ductus endolymphat'icus (*Zool.*). In lower Vertebrates and the embryos of higher Vertebrates, the tube by which the internal ear communicates with the surrounding medium.

ductus pneumat'icus (*Zool.*). In physostomous Fish, a duct which connects the gullet with the air-bladder.

ductus veno'sus (*Zool.*). In the development of Vertebrates, the left omphalomesenteric vein during the formation of the liver.

Duddell oscillograph (*Elec. Eng.*). An oscillograph operating on the moving-coil principle. The coil consists of two fine wires carrying the current to be observed, and these move in the field of an electromagnet. Mirrors are attached to the wires, so that their movement can be observed by means of a light beam.

Dufaycolor (*Photog.*). An additive colour process using a ruled coloured mosaic on the base before coating it with panchromatic emulsion. After exposure and development this negative is used to print a positive on similar stock.

duff (*Mining*). Fine coal obtained from a coal-screening plant.

Duguet's ulcerations, dü-gā' (*Med.*). Ulcers in the tonsillar region and the pharynx, occurring in typhoid fever.

Dühring's disease, dü'ring (*Med.*). Dermatitis herpetiformis. A skin disease in which weals or reddish patches, surmounted by vesicles, appear in successive crops on the surface of the body.

duke (*Paper*). A notepaper size, 7 × 10½ in.

dukey (*Mining*). (1) A train, or journey of tubs or trains, travelling on an inclined haulage road underground.—(2) A carriage or platform on wheels on which tubs or trams are placed in a horizontal position to be lowered on unusually steep self-acting inclines.

dull (*Med.*). Not resonant to percussion; said of certain regions of the body, especially the chest.

dull-emitter cathode (*Thermionics*). A cathode from which electrons are emitted in large quantities at temperatures at which incandescence is barely visible. The emitting surface is usually the oxide of one or more of the alkaline-earth metals.

dull-emitter valve (*Thermionics*). Any thermionic valve employing a dull-emitter cathode.

Dulong and Petit's law (*Chem.*). See **law of Dulong and Petit.**

dulo'sis (*Zool.*). Among Ants (*Formicoidea*), an extreme form of social parasitism in which the work of the colony of one species is done by captured 'slaves' of another species: slavery, helotism.

dumb aerial (*Radio*). A non-radiating resistive network, similar to an artificial antenna; used for absorbing the output power from a transmitter during the spacing periods, in some systems of absorber keying.

dumb-bell bone (*Zool.*). See **prevomer.**

dumb buddle (*Mining*). A buddle without revolving arms or sweeps, for concentrating tin ores.

dumb iron (*Automobiles*). Forgings attached to the front of the side-members of the frame, to carry the spring shackles and front cross-member.

dumb pintle. See **pintle.**

Dumfries sandstone (*Build.*). A not very durable brownish-red sandstone, used locally for general building purposes; of Permo-Triassic age.

dummy (*Plumb.*). A lump of lead fastened to the end of a cane, to form a mallet which may be used for straightening out lead pipes.

dummy (*Print.*). An unprinted volume, generally unbound, made up for the use of publishers in estimating their requirements. Measurement should be tested at the fore-edge and bottom.

dummy antenna (*Radio*). Same as *artificial antenna.*

dummy coil (*Elec. Eng.*). A coil put on to an armature in order to preserve mechanical balance and symmetry, but not electrically connected to the rest of the winding.

dummy piston (*Eng.*). A disc placed on the shaft of a reaction turbine; to one side of it steam pressure is applied in order to balance the end thrust; sometimes called a BALANCE PISTON

dummying (*Eng.*). The preliminary rough-shaping of the heated metal before placing between the dies for drop-forging.

dump or **tip** (*Mining*). The heap of accumulated waste material from a metal-mine, or of treated tailings from a mill or ore-dressing plant.

dumping wagon (*Civ. Eng.*). A wagon used, in the construction of earthworks, for conveying excavated material about on site and dumping it where required.

dumpling (*Civ. Eng.*). The soil remaining in the centre of an open excavation which is commenced by sinking a trench around the site; the dumpling is removed later.

dumpy level (*Surv.*). A type of level in which the essential characteristic is the rigid connexion of the telescope to the vertical spindle.

dun whin (*Mining*). A hard compact stone occasionally occurring in a coal-seam.

Dundee Sandstone (*Geol.*). See **Arbroath Sandstone.**

dune (*Geol.*). See **sand dunes.**

dune bedding (*Geol.*). That type of current bedding commonly exhibited by sand dunes and interpreted in sandstones as evidence of desert conditions.

dungaree (*Textiles*). A coloured cotton cloth, with a twill or satin weave; generally used for men's overalls.

dun'ite (*Geol.*). A coarse-grained, deep-seated igneous rock, almost monomineralic, consisting essentially of olivine only, though chromite is an almost constant accessory. In several parts of the world (e.g. Bushveld Complex, S. Africa) it contains native platinum and related metals. Named from Mt. Dun, New Zealand.

Dunkard Series (*Geol.*). Continental strata, including thin coal-seams, similar to the Pennsylvanian, but of Permian age, occurring in N. America. Strata of the same age are marine in Kansas, but include marginal red beds with gypsum, and thick salt deposits were formed later in the Kansas basin. See also **Cimarron Series.**

dunking (*Cinema.*). A colloquialism for the process of dipping the film into chemical solutions for any stage of processing.

Dunning (*Cinema.*). A double-exposure system in motion-picture production; a yellow transparent print of a previously photographed background is used as a synchronous mask while photographing action illuminated with yellow against a violet plain background.

dunted (*Pot.*). Said of ware which cracks after firing in the biscuit oven.

duodecimo (*Print.*). A sheet of paper folded into twelve leaves. Usually called TWELVEMO, and written 12*mo.*

duode′nal ileus (*Med.*). Chronic obstruction of the duodenum from kinking of its wall by anomalously placed blood-vessels, associated with visceroptosis.

duodenec′tomy (*Surg*). Excision of the duodenum.

duodeni′tis (*Med.*). Inflammation of the duodenum.

duode′nochol′ecystos′tomy (*Surg.*). A communication, made by operation, between the duodenum and the gall-bladder.

duode′nojejunos′tomy (*Surg*). A communication surgically made between the duodenum and the jejunum.

duode′num (*Zool.*). In Vertebrates, the region of the small intestine immediately following the pylorus, distinguished usually by the structure of its walls; so called because it is approximately twelve inches long in Man.—*adj.* **duode′nal.**

duody′natron (*Radio*). A system comprising two resonant circuits, connected to the inner grid and anode of a tetrode, the outer grid being maintained at a higher potential than any of the other electrodes, oscillations of different frequencies being maintained in the two resonant circuits owing to secondary emission from the inner grid and anode. See also **dynatron.**

duolateral coil (*Radio*). See **honeycomb coil.**

duophase (*Elec. Comm.*). The use of a choke in the anode circuit of a valve in an amplifier, to obtain a reversed-phase voltage for driving a push-pull output-stage. Cf. *paraphase.*

Duosonic (*Cinema.*). The trade-name of sound-film reproducing equipment manufactured by Gaumont-British; it provides for the uniform high quality reproduction over an entire auditorium.

Dupack (*Photog.*). A bipack made by Du Pont in America.

dupe (*Cinema*). A colloquialism for *duplicate*, particularly the duplicate negative made from a positive in order to print further positives.

duped print (*Cinema*). A print, usually of reduced photographic quality, from a duplicate negative, which has been made from a good positive to avoid import duties.

Duperreys lines (*Elec. Eng.*). Lines on a magnetic map indicating the direction of the magnetic meridian.

du′plet (*Chem.*). A pair of electrons shared between two atoms, forming a single bond.

duplex (*Cyt.*). Said of a triploid organism which has three homologous chromosomes, two of them carrying a given dominant gene, and the third carrying the corresponding recessive.

duplex balance. Telegraph name for *line balance.*

duplex carburettor (*I.C. Engs.*). A carburettor in which two barrels or mixing chambers are fed from a single float chamber; used on some aero engines.

duplex channel (*Elec. Comm.*). A channel which is used independently in both directions, over the same frequency band.

duplex dialling (*Auto. Teleph.*). Dialling over both line wires of a subscriber's loop, with separate batteries and earth return.

duplex, differential (*Teleg.*). See **differential duplex.**

duplex escapement (*Horol.*). An escapement in which the escape wheel has two sets of teeth, one for giving impulse and one for locking. The locking teeth are in the plane of the wheel, and lock by pressing against the outside of a hollow cylinder on the axis of the balance staff. This cylinder has a notch to allow the tooth to escape for unlocking. The impulse teeth are raised above the plane of the escape wheel and give impulse to the balance by striking against a finger fixed to the balance staff; impulse is given every alternate vibration. Although capable of giving very satisfactory results, this escapement is now rarely met with in watches, as it is sensitive and liable to set.

duplex group (*Cyt.*). The diploid outfit of factors and chromosomes.

duplex lathe (*Eng*). A lathe in which two cutting tools are used, one on each side of the work, either to avoid springing of the latter, or to increase the rate of working. See **multiple tool lathe.**

duplex paper (*Paper*). (1) Paper having two differently coloured surfaces.—(2) Any paper made up by pasting two sheets together.

duplex processes (*Met*). The combination of two alternative methods in performing one operation; as when steel making is carried out in two stages, first in the open hearth and second in the electric furnace.

duplex pump (*Eng*). A pump with two working cylinders side by side.

duplex winding (*Elec. Eng.*). A winding for d.c. machines in which there are two separate and distinct windings on the machine, the two being connected in parallel by the brushes.

duplicate feeder (*Elec. Eng.*). A feeder forming an alternative path to that normally in use.

duplicating papers (*Paper*). Absorbent or semi-absorbent papers used on duplicating machines They are specially prepared to prevent the ink smearing.

duplication (*Cyt*) The union of a fragment of a chromosome with a whole chromosome of the same sort.

duplicational polyploid (*Cyt*). See **autopolyploid.**

du′plicature (*Zool.*). In some *Polyzoa*, a circular fold surrounding the base of the protrusible portion of a polyp.

duplicident, —plis′i-dent (*Zool.*). Having two pairs of incisor teeth in the upper jaw; as Hares and Rabbits.

duplic′itas anterior (*Zool.*). In experimental embryology, an abnormal embryo produced by constriction of the two-celled stage in the sagittal plane; characterised by the duplication of the anterior parts of the head (cerebral hemispheres, epiphysis, hypophysis, and paraphysis, but not the eyes).

Dupuytren's contraction, dū-pwĕ-trahn^{g}′ (*Med.*). Thickening and contraction of the fascia of the palm of the hand, with resulting flexion of the fingers, especially of the ring and little fingers.

dura mater (*Zool.*). The outermost of the three membranes surrounding the brain and spinal cord in Vertebrates, a tough fibrous layer.

durain′ (*Min.*). A separable constituent of dull coal; of firm, rather granular structure, sometimes containing many spores.

Dural′umin (*Met.*). An aluminium base alloy containing copper 3·5-4·5%, magnesium 0·4-0·7%, manganese 0·4-0·7%, and silicon up to 0·7%. Capable of age-hardening at room temperature, after quenching from 500° C. Tensile strength, after forging and heat treatment, 25-28 tons per sq. in.; sp. gr. 2·7-2·8. Specific electrical resistivity 5 microhms per cm^3.

du′ramen (*Bot.*). See **heart wood.**

durchmu′sterung (*Astron.*). The German word meaning a systematic counting or cataloguing of the stars; often applied in the title of catalogues; e.g. the *Bonn Durchmusterung.*

Durness Limestone (*Geol.*). A massive dolomitic limestone, at some levels somewhat argillaceous, occurring in the N.W. Highlands of Scotland. The lower part is Lower Cambrian in age, but the upper part has yielded the fossils of the Beekmantown Limestone of the U.S A., this being Arenigian in age. See **Beekmantown Limestone.**

Duroziez's murmur, dū-rō-zi-ā (*Med.*). A murmur heard over the main artery in the thigh during diastole of the heart; indicative of disease of the aortic valve.

dust catcher (*Met.*). A chamber in which dust is extracted from furnace gases by causing a sudden change in the direction of the gas stream.

dust collector. Apparatus by means of which suspended dust can be precipitated; the process is generally effected by means of an exhausting fan or by an electrical precipitation plant.

dust counter (*Meteor.*). An instrument for counting the dust particles in a known volume of air.

dust cover (*Print.*). See **jacket.**

dust explosion (*Eng.*). An explosion resulting from the ignition of small concentrations of inflammable dust (e g. coal dust or flour) in the air.

dust figure (*Elec. Eng.*). See **Lichtenberg figure.**

dust panel (*Join.*). A thin board fixed horizontally between two drawers.

dust-proof (*Elec. Eng.*). Said of a piece of electrical apparatus which is constructed so as to exclude dust or textile flyings.

duster (*Paint.*). A brush used to remove dust from a surface which is to be painted.

dusting-on process (*Photog.*). The deposition of powdered colouring matter on a bichromate tacky material which has been differentially hardened by exposure to an image.

Dutch arch (*Build.*). See **French arch.**

Dutch bond (*Build.*). A bond differing from English bond only in the angle detail, the vertical joints of one stretching course being in line with the centre of the stretchers in the next stretching course.

Dutch clinkers (*Build.*). Small, hard, well-burnt yellow bricks, used mostly for paving purposes.

Dutch gilding (*Dec.*). Transparent yellow lacquer over burnished silver or tinfoil.

Dutch gold (*Dec.*). A cheap alternative to *gold-leaf* (q.v.), consisting of copper-leaf, which, by exposure to the fumes from molten zinc, acquires a yellow colour.

Dutch marble paper (*Bind.*). A strong paper with variegated marble patterns on the face; used extensively as end-papers in account books.

Dutch pink (*Paint.*). A transparent yellow pigment produced by staining whiting with a tincture of quercitron bark. Also called ENGLISH PINK and ITALIAN PINK.

Dutch process (*Chem.*). A process of making *white lead* (q.v.) by corroding metallic lead in stacks where fermentation of tan or bark is taking place, in the presence of dilute acetic acid.

dutchman (*Carp.*). A piece of wood driven into a gap left in a joint which has been badly cut.

duty cycle (*Elec. Eng.*). The cycle of operations which a piece of electrical apparatus is called upon to perform whenever it is used; e.g. with a motor, it is the starting, running for a given period, and stopping; or with a circuit-breaker, it may be closing and opening, for a given number of times with given time intervals between.

duty-cycle factor (*Elec. Eng.*). The ratio of the equivalent current taken by a motor or other apparatus running on a variable load to the full-load current of the motor (continuous rating).

DV (*Elec. Comm.*). Abbrev. for *double vibration* (q.v.).

dwang (*Carp.*). A *nogging-piece* (q.v.).

dwang (*Masonry*). A mason's term for a crowbar.

dwarf male (*Zool.*). A male animal which is greatly reduced in size, and usually in complexity of internal structure also, in comparison with the female of the same species; such males may be free-living but are more usually carried by the female, to which they may be attached by a vascular connexion in extreme cases, as some kinds of deep-sea Angler Fish.

dwarf rafter (*Carp.*). A *jack rafter* (q.v.).

dwarf shoot (*Bot.*). See **short shoot.**

dwarf star (*Astron.*). The name arising from Russell's theory of stellar evolution according to which a star passes through the spectral sequence M to O as a 'giant,' and then retraces the sequence O to M as a 'dwarf,' so that the stars of any given spectral type below O fall into two classes differing greatly in mass.

dwarf wall (*Masonry*). A low parapet or retaining wall.

dwarf waves (*Radio*). Electromagnetic waves of length less than one centimetre, produced by electronic oscillations in the inter-electrode space of a thermionic valve.

dwell (*Eng.*). (Of a cam) the angular period during which the cam follower is allowed to remain at its maximum lift.

dwell (*Print.*). The slight pause in the motion of a hand-press or platen when the impression is being made.

Dy (*Chem.*). The symbol for *dysprosium.*

dy (*Ecol.*). A type of lake-bottom deposit largely composed of plant detritus and having a marked effect on the fauna.

dy'ad (*Cyt.*). Half of a tetrad group of chromosomes passing to one pole at meiosis.

dyads (*Photog.*). Colour combinations in pairs, according to aesthetic rules.

Dyas (*Geol.*). An obsolete term for the Permian System.

dyestuffs (*Chem.*). Groups of aromatic compounds having the property of dyeing silk, wool, or cotton, and containing characteristic groups essential to their qualification as dyes. The more important dyestuffs are classified as follows: (*a*) nitroso- and nitro-dyestuffs, (*b*) azo-dyes, (*c*) stilbene, pyrazole, and thiazole dyestuffs, (*d*) di- and triphenylmethane dyes, (*e*) xanthene dyestuffs, (*f*) acridine and quinoline dyestuffs, (*g*) indamine and indophenol dyestuffs, (*h*) azines, oxazines, and thiazines, (*i*) hydroxyketone dyestuffs, (*j*) sulphide dyes, (*k*) vat dyestuffs, indigo, and indanthrenes.—(*Photog.*) For **acid dyes** and **colloidal dye** see these headings.

dye toning (*Photog.*). The chemical process whereby a dye is made to replace the silver in a normal photographic image, or to adhere to it by mordanting.

dyke (*Geol.*). A form of minor intrusion injected into the crust during its subjection to tension, the dyke being thin, with parallel sides, and maintaining a constant direction in some cases for more than a hundred miles. Some dykes prove less resistant to weathering than the surrounding country rock and therefore form long narrow depressions in the surface of the ground, thus resembling ditches (hence the name); others, on the contrary, stand up like walls.

dyke (*Hyd. Eng.*). A wall or embankment of timber, stone, concrete, fascines, or other material, built as training works for a river, so as rigidly to confine flow within definite limits over the length treated.*

dyke phase (*Geol.*). That episode in a volcanic cycle characterised by the injection of minor intrusions, especially dykes. The dyke phase usually comes after the major intrusions, and is the last event in the cycle.

dyke swarm (*Geol.*). A series of dykes of the same age, usually trending in a constant direction over a wide area. Occasionally dykes may radiate outwards from a volcanic centre, as the Tertiary dyke swarm in Rum, Scotland; but usually they are rigidly parallel; e.g. the O.R.S. dyke swarm of S.W. Scotland, of which the trend is north-east to south-west.

dynam-, dynamo- (Greek *dynamis*, power) A prefix used in the construction of compound terms; e.g. *dynamometer* (q.v.).

dynam'ics. See **mechanics.**

dynamic balancing (*Acous.*). See **balancing (dynamic).**

dynamic braking (*Elec. Eng.*). See **rheostatic braking.**

dynamic characteristic (*Radio, Thermionics*). Generally, any characteristic curve taken under normal working conditions. Specifically applied to the anode-current-versus-grid-voltage relationship, when the effect of the anode-circuit load impedance is included.

dynamic damper or **detuner** (*Eng*). A supplementary rotating mass driven through springs attached to a crankshaft at a point remote from the node, in order to eliminate a troublesome critical speed. See **vibration dampers, pendulum damper.**

dynamic drive (*Acous.*). The actuation of a mechanism (e.g. a loudspeaking receiver) by a current in a coil situated in the air-gap of a permanent or coil-excited magnet.

dynamic electricity (*Elec. Eng*). A term sometimes used to denote electric currents, i.e. electric charges in motion, as opposed to *static electricity*, in which the charges are normally stationary.

dynamic isomerism (*Chem.*). See **tautomerism.**

dynamic metamorphism (*Geol.*). A name, now little used, for that type of metamorphism in which the chief factor is greatly increased pressure. As rise of temperature is, under natural conditions, inseparable from increase of pressure, a better term is *dynamo-thermal metamorphism*. See **metamorphism.**

dy'namite (*Chem.*). A mixture of nitro-glycerine with kieselguhr (3:1), a most powerful explosive.

dy'namo (*Elec. Eng.*). A term used to denote any electromagnetic generator, but commonly used only for a direct-current generator.

dynamom'eter (*Elec. Eng.*). An electrical measuring instrument in which the pointer is deflected as a result of the force exerted between fixed and moving coils, the pointer being attached to the latter. The term is also used for a *torque meter*. See **Siemens dynamometer, Weber dynamometer, dynamometer ammeter, dynamometer voltmeter, dynamometer wattmeter.**

dynamometer (*Eng.*). A machine for measuring the brake horse-power of a prime-mover or electric motor. See **absorption dynamometer, electric dynamometer, Froude brake, rope brake, transmission dynamometer.**

dynamometer (*Med.*). An instrument for measuring the force of contraction of muscle.

dynamometer ammeter (*Elec. Eng.*). An ammeter operating on the dynamometer principle, the fixed and moving coils being connected in series and carrying the current to be measured.

dynamometer voltmeter (*Elec. Eng.*). A voltmeter operating on the dynamometer principle, the fixed and moving coils being connected in series, and in series with a high resistance across the voltage to be measured.

dynamometer wattmeter (*Elec. Eng.*). A commonly used type of wattmeter operating on the dynamometer principle, the fixed coil being usually in the current circuit and the moving coil in the pressure circuit.

dy'namotor (*Elec. Eng.*). An electric machine having two armature windings, one acting as a generator and the other as a motor, but only a single magnet frame. Also called a ROTARY TRANSFORMER.

dy'natron (*Thermionics*) A multielectrode thermionic tube, usually a triode or tetrode, in which two adjacent electrodes are maintained at positive potentials with respect to the cathode, that nearer the cathode being at the higher potential. The emission of secondary electrons from the electrode at the lower potential, usually the anode, causes the current thereto to be decreased by an increase in its potential, and vice versa, over a certain range of potentials.

dynatron oscillator (*Radio*). An oscillator in which the negative differential resistance exhibited by the anode-to-cathode circuit of a dynatron maintains oscillations in a resonant circuit connected in parallel therewith.

dyne (*Mech*). The unit of force in the c.g.s. system of units. A force of one dyne, acting on a mass of 1 gm., imparts to it an acceleration of 1 cm. per sec. per sec. Approximately 981 dynes are equal to 1 gm. weight.

dynode (*Thermionics*). An electrode the chief function of which is to emit secondary electrons; e g. the anode of a dynatron. See also **dynatron.**

dys- (Greek *dys-*, =English mis-, un-). Prefix used in the construction of compound terms; e.g. *dysphoria* (q.v).

dysan'alyte (*Min*). A rare accessory mineral, apparently cubic, and related to perovskite in composition, but containing columbate as well as titanate of calcium, and a variable content of iron.

dysar'thria (*Med.*). Difficult articulation of speech, due to a lesion in the brain.

dysba'sia (*Med.*). Difficulty in walking.

dysbasia an'giosclerot'ica (*Med.*). Pain in the legs on walking, due to thickening of the arteries. See **intermittent claudication.**

dysbou'lia, dysbu'lia (*Psychol.*). Psychopathological weakness of the will.

dyschezia,—ked'zi-a (*Med.*). A form of constipation in which the faeces are retained in the rectum, as a result of blunting of a normal reflex due to faulty habits.

dyscra'sia (*Med.*). Any disordered condition of the body, especially of the body fluids.

dys'diado'kokine'sia (*Med.*). Inability to perform rapid alternate movements as a result of a lesion in the cerebellum.

dysentery (*Med*). A term formerly applied to any condition in which inflammation of the colon was associated with the frequent passage of bloody stools. Now confined to *amoebic dysentery*, the result of infection with the *Entamoeba histolytica*; and to *bacillary dysentery*, due to infection with *Bacterium dysenteriae*.

dysentery, lamb (*Vet.*). An infectious disease of newborn lambs due to *Clostridium welchii, type B*.

dysgen'ic (*Zool.*). Causing, or tending towards, racial degeneration.

dyshidro'sis, dysidro'sis (*Med.*). See **cheiropompholyx.**

dyskine'sia (*Med.*). A term applied to any one of a number of conditions characterised by involuntary movements which follow a definite pattern; e.g. tics.

dysmenorrhoe'a, dysmenorrhe'a (*Med.*). Painful and difficult menstruation.

dysme'tria (*Med.*). Faulty estimation of distance in the performance of muscular movements, due to a lesion in the cerebellum.

dysosto'sis (*Med.*). Defect in the normal ossification of cartilage.

dyspareu'nia (*Med.*). Painful or difficult coitus.

dyspep'sia (*Med.*). Indigestion: any disturbance of digestion.

dyspha'gia (*Med.*). Difficulty in swallowing.

dyspha'sia (*Med.*). Disturbed utterance of speech due to a lesion in the brain.

dyspho'nia (*Med.*). Difficulty of speaking, due to any affection of the vocal cords.

dyspho'ria (*Med.*). Unease; absence of feeling of well-being.

dyspitu'itarism (*Med.*). A condition in which there is disordered function of the pituitary gland.

dyspla'sia (*Med.*). Abnormality of development.

dysplastic (*Psychiatry*). Showing deviations from the three well-defined Kretschmer types, or showing a mixture of features from these types, with possible predomination of one of them.

dyspnoe'a, dyspne'a (*Med.*). Laboured or difficult respiration.

dyspro'sium (*Chem.*). Symbol, Dy. A metallic element, a member of the rare-earth group. At. no. 66, at. wt. 162·5. It is the most basic of the erbium sub-group (Dy, Ho, Er, Tm) of the yttrium family.

dyssyner'gia (*Med.*). Inco-ordination of muscular movements, due to disease of the cerebellum.

dystectic mixture (*Chem.*). A mixture having a maximum melting-point.

dysto'cia, dysto'kia (*Obstet.*). Painful or difficult childbirth.

dystro'phia adipo'sogenita'lis (*Med.*). Fröhlich's syndrome. A condition characterised by obesity, hairlessness of the body, and underdeveloped genital organs, due to disordered function of the pituitary gland.

dystrophia myotonica (*Med.*). See **myotonia atrophica.**

dystro'phic (*Ecol.*). Said of a lake-habitat in which iron and humic acids in the water reduce the dissolved oxygen-content.

dys'trophy (*Bot.*). The condition when insects visiting flowers do not enter in the normal fashion, but perforate the perianth and remove the nectar without working the pollination mechanism; the flower is damaged, and the plant obtains no advantage from the visit.

dysu'ria, dys'ury (*Med.*). Painful or difficult passage of urine.

Dzierzon's theory, dzyer'zhon (*Zool.*) The theory that a Queen Bee can lay at will eggs which will produce either males or females, and that all the eggs will develop into males if unfertilised, into females if fertilised.

e-. Prefix. See under **ex-**.

e (*Chem.*). (With subscript) a symbol for single electrode potential. See ***E*** (2).

e or **ε** (*Maths.*). The base of hyperbolic or natural logarithms, defined as the limiting value of $\left(1+\frac{1}{m}\right)^m$ as m approaches infinity; e has the value 2·718282 to six places of decimals.

e (*Struct.*). A symbol for eccentricity of a load.

ε (*Chem.*). A symbol for molar extinction coefficient.

ε- (*Chem.*). (1) Substituted on the fifth carbon atom.—(2) *epi-*, i.e. containing a condensed double aromatic nucleus substituted in the 1.6 positions —(3) *epi-*, i.e. containing an intramolecular bridge.

ε (*Maths.*). See ***e***.

η (*Chem.*). A symbol for electrolytic polarisation, overvoltage.

η (*Eng.*). A symbol for some specified efficiency of a machine.

η (*Phys.*). A symbol for the *coefficient of viscosity*.

E (*Chem.*). A symbol for (1) potential difference, especially electromotive force of voltaic cells; (2) (With subscript) single electrode potential—

E_H, on the hydrogen scale;
E_0, standard electrode potential.

[E] (*Light*). One of the Fraunhofer lines in the green of the solar spectrum. Its wavelength is 5269·723 A., and it is due to iron.

E. & O.E. (*Build.*, *Civ. Eng.*). The common abbrev. for *errors and omissions excepted*.

E-layer (*Radio*). The most regular of the upper ionised regions in the ionosphere, with effective maximum density increasing from zero before dawn, to its greatest at noon, and decreasing to zero after sunset, at heights varying between 110 and 120 km.; the 'Kennelly-Heaviside layer.'

eagle (*Cinema.*). (1) Same as *bug*.—(2) A take which is photographically perfect.

ear (*Acous.*). The organ of hearing (see below **ear**, *Zool.*). The normal pair of ears provide directive facility, in addition to the faculty of perceiving of sound waves of suitable frequency and amplitude.

ear (*Build.*). A *crossette* (q.v.).

ear (*Elec. Eng.*). A metal fitting attached to the contact wire of an electric traction system, for the purpose of suspending it.

See **anchor—** **splicing—**
feeder— **straight-line—**

ear (*Eng.*). A projection, cast or forged integral, or attached to an object, for the purpose of supporting it or of attaching another part to it pivotally; often referred to as a LUG.

ear (*Plumb.*). A projection on a metal pipe, by means of which the pipe may be nailed to a wall.

ear (*Zool.*). Strictly, the sense-organ which receives auditory impressions: in Invertebrates, various sensory structures formerly supposed to be auditory in function, as the statocysts of medusae: in some Birds and Mammals, a prominent tuft of feathers or hair close to the opening of the external auditory meatus: in Mammals, the pinna: more generally, any ear-like structure.

ears (*Mining*). The cross-piece forming two projections, one on each side of a sprag, near to the handle. The ears prevent the sprag, or drag, which is used to lock the wheels of tubs or trains on inclines, from falling through the spokes.

ear, artificial (*Acous.*). See **artificial ear.**

ear defenders (*Acous.*). Plugs of various materials for insertion into the ear to reduce perception of noise, particularly impulse noises, such as gun-fire.

ear drum (*Anat.*). The outer termination of the aural mechanism of the ear, consisting of a membrane, in tension, for transferring the acoustic pressures applied from without to the ossicles for transmission therefrom to the inner ear.

ear muffs (*Acous.*). (1) Pads of rubber or similar material which are placed on head telephone receivers to minimise discomfort during long use. —(2) Large pads for reducing the effect of noise on factory workers.

Earth (*Astron.*). The third planet in the solar system, counting from the sun outwards. It has one satellite, the *moon* (q.v.). Its mass is 1/329,390 that of the sun's mass, or $5{\cdot}98 \times 10^{27}$ grams. Its mean distance from the sun is 92,900,000 miles. It revolves round the sun in one year, its orbit being slightly elliptical, and it rotates on its own axis from west to east in one day. Its axis is inclined to the plane of the ecliptic (see **obliquity of the ecliptic**). The origin of the earth, and of the other planets, is attributed to condensation from a filament ejected from the sun under the gravitational influence of a large star passing, in the remote past, close to the sun's surface.—Estimates of the AGE OF THE EARTH have varied between large limits, but two lines of argument, the one from cosmogony and the other from geology, now seem to indicate an age of about three thousand million years.—CRUST OF THE EARTH. The outer shell of the earth consists of igneous rocks having a composition approximating to that of granite; covering this there is a thin veneer of sedimentary rocks. See also **lithosphere.**—DENSITY OF THE EARTH. The average density is about 5·6; but as that of the surface rocks is approximately only 2·5, it is inferred that denser materials lie beneath and include a core of nickel-iron, with a density of about 8.—FORM OF THE EARTH. An oblate spheroid, flattened at the poles and having a bulge round the equator, is the true figure of the earth; the equatorial and polar radii of the earth are respectively 3963·35 miles and 3950·01 miles.—TEMPERATURE OF THE EARTH. The temperature of the earth's crust varies seasonally to a depth of about 30 feet, and diurnally to about 2 feet. Below 30 feet the temperature rises with increasing depth at an average rate of about 30° C. per kilometre.

earth (*Elec.*). Connexion to the main mass of the earth by means of a conductor having a very low impedance.—(*Radio*) A system of plates or wires buried in the ground, to which connexion is made to provide a path to ground for currents flowing in the antenna circuit.—The U.S. equivalent is GROUND.

See **artificial—** **intermittent—**
counterpoise— **partial—**
dead— **earth plate.**

earth circuit (*Radio*). That part of a radio transmitter or receiver circuit which includes the earth lead or counterpoise.

earth closet (*San. Eng.*). A metal-lined receptacle, usually placed beneath a pierced seat, for receiving human excreta, the latter being deodorised by covering with dry earth, sometimes mixed with chemicals.

earth coil (*Elec. Eng.*). A pivoted coil of large diameter for measuring the strength of the earth's magnetic field; this is done by suddenly changing the position of the coil in this field and observing the throw of a ballistic galvanometer connected to it. Also called an EARTH INDUCTOR.

earth colours (*Paint.*). Pigments prepared from natural earths; e.g. ochres, umbers, chalk, lime.

earth current (*Radio*). The current flowing in the earth lead.

earth currents (*Elec. Comm.*). (1) Currents in the earth which, by induction, cause irregular currents to flow in submarine cables and so interfere with the reception of the transmitted signals.—(2) Direct currents in the earth, which are liable to cause corrosion of the lead sheaths of cables; they are the earth return currents of electric power systems (such as single-rail traction systems).

earth-detector (*Elec. Eng.*). See **leakage-indicator.**

earth fault (*Elec. Eng.*). An accidental connexion between a live part of an electrical system and earth.

earth impedance (*Elec. Comm.*). The impedance as normally measured—with all extraneous electromotive forces reduced to zero—between any point in a communicating system or a measuring circuit and earth.

earth inductor (*Elec. Eng.*). See **earth coil.**

earth inductor compass (*Aero.*). A course indicator used on aircraft. It consists of a mechanically driven coil which generates an e.m.f. due to its rotation in the earth's magnetic field; the magnitude of the e.m.f. varies if the aircraft deviates from its straight course and causes a deflection on a galvanometer. Also called INDUCTION COMPASS.

earth (or **ground) lead** (*Radio*). The connexion between a radio transmitting or receiving apparatus and the earth.

earth magnetism (*Elec. Eng.*). See **terrestrial magnetism.**

earth movements (*Geol.*). The general term covering change of attitude of strata due to compression and tension in the earth's crust; it includes folding and faulting of different kinds. See **epeirogenic earth movements, orogenesis, eustatic movements, fault.**

earth-pillars (*Geol.*). These occur where sediments consisting of relatively large and preferably flat stones, embedded in a soft, finer-grained matrix, are undergoing erosion, especially in regions of heavy rainfall. As the ground is progressively lowered the flat stones protect the softer material beneath them and are therefore left standing on tall, acutely conical pillars.

earth plate (*Elec. Eng.*). A metal plate buried in the earth for the purpose of providing an electrical connexion between an electrical system and the earth.

earth potential (*Elec.*) The electric potential of the earth; it is usually regarded as zero, so that all other potentials are referred to it.—(*Radio*) A term applied to the potential of any point in a circuit when the potential of that point does not vary at a radio-frequency, no matter what the steady or low-frequency potential may be. See **earthy.**

earth pressure (*Civ. Eng.*). The pressure exerted on a wall by earth which is retained, i.e. supported laterally by the wall.

earthquake (*Geol.*). A shaking of the earth's crust caused, perhaps in most cases, by displacement along a fault. The place of maximum displacement is the *focus* (cf. *epicentre*). Although the amount of the displacement may be small, a matter of inches only, the destruction wrought at the surface may be very great, due in part to secondary causes; e.g. the severing of gas mains and water mains, as in the great San Francisco earthquake in 1906. Earthquakes are classified as *simple*, *twin*, or *compound*, according to the nature of the shock, which is recorded by a seismometer. Volcanic phenomena are frequently accompanied by earthquakes. See **seismology.**

earth resistance (*Elec. Comm.*). The resistance offered by the earth between two points of connexion, and therefore forming a coupling between all circuits making use of the same current path in the earth.

earth return (*Elec. Eng.*). The return path of an electric circuit in which the current returns to the source through the earth.

earth return circuit (*Elec. Comm.*). A telegraphic circuit using one transmission wire, the return current passing through the earth and thereby encountering a low resistance.

earth screen (*Radio*). See **counterpoise.**

earthshine (*Astron.*). The reflected sunlight from the surface of the earth which enables the part of the moon not directly illumined by the sun to be seen faintly against the sky.

earth-table (*Build.*). The course of bricks or stone which just appears above ground-level.

earth terminal (*Elec. Eng*). A terminal provided on the frame of a piece of electrical apparatus for making a connexion to earth. Also called an EARTHING TERMINAL.

earth thermometer (*Meteor.*). A thermometer used for measuring the temperature of the earth at depths up to a few feet. Symons's earth thermometer (the most commonly used) consists of a mercury thermometer, with its bulb embedded in paraffin wax, suspended in a steel tube.

earth wax (*Chem.*). *Ozokerite* (q.v.).

earth-wire (*Elec. Eng.*). A wire which is electrically connected to earth and strung from the same supports as the conductors of an overhead transmission line; it minimises the probability of the transmission line's being damaged by lightning strokes.

earthwork (*Civ. Eng.*). A bank or cutting.

earth's magnetic field. See **terrestrial magnetism.**

earths, rare (*Chem.*). See **rare earths.**

earthed circuit (*Elec. Eng.*). An electric circuit which is intentionally connected to earth at one or more points.

earthed concentric wiring system (*Elec. Eng.*). A 2-wire system, for wiring or general distribution, which employs twin-concentric conductors, the outer conductor being earthed.

earthed neutral (*Elec. Eng.*). A neutral point of a polyphase system or piece of electrical apparatus which is connected to earth, either directly or through a low impedance.

earthed pole (*Elec. Eng.*). The pole or line of an earthed circuit which is connected to earth.

earthed switch (*Elec. Eng.*). A switch, used in wiring installations, in which provision is made for earthing all exposed metal parts. Also called a HOME-OFFICE SWITCH.

earthed system (*Elec. Eng.*). A system of electric supply in which one pole or the neutral point is earthed, either directly or through a low impedance, the former being known as a solidly earthed system.

earthenware (*Pot.*). Glazed or unglazed pottery, with soft body; usually inferior to china.—(*San. Eng.*) Earthenware made from ordinary brick earths is used for some sanitary fittings.

earthenware duct (*Elec. Eng.*). A conduit made of earthenware, used for carrying underground cable.

earthing reactor (*Elec. Eng.*). (1) A reactor connected between the neutral point of an a.c. supply system and earth, in order to limit the earth current which flows on the occurrence of an earth fault.—(2) An arrangement of reactors or transformers, so connected to a polyphase system that a neutral point is artificially obtained. Also called EARTHING AUTO-TRANSFORMER, NEUTRAL COMPENSATOR, NEUTRAL AUTO-TRANSFORMER, NEUTRALATOR.

earthing resistor (*Elec. Eng.*). A resistance through which the neutral point of a supply system is earthed, in order to limit the current which flows on the occurrence of an earth fault. Also called EARTHING RESISTANCE.

earthing switch (*Radio*). A switch for connecting an antenna to ground when not in use, as a protection against lightning and/or the accumulation of static charge.

earthing terminal (*Elec. Eng.*). See **earth terminal.**

earthy (*Elec. Comm.*). Said of (1) circuits when they are connected to earth, either directly (as for direct currents) or through a condenser (in the case of alternating currents); (2) any point in a communicating system (e.g. the mid-point of a shunting resistance across a balanced line) which is at earth potential, although not actually connected to earth, through zero impedance.

earthy cobalt (*Min.*). A variety of wad containing up to about 32% of cobalt oxide. Also called ABSOLITE.

Easdale Slates, ēz′dăl (*Geol.*). A series of graphitic slates occurring in the Dalradian System in the South-West Highlands of Scotland.

easement (*Build., Civ. Eng.*). A right which one man may have at law over the land of another; e.g. a private right of way, a right to draw water, or *ancient lights* (q.v.).

easement curve (*Surv.*). See **transition curve.**

easing (*Build., Civ. Eng.*). The shaping of a curve so that there is no abrupt change of curvature in it.

easing centres (*Build., Civ. Eng.*). The process of gradually removing the centring from beneath a newly completed arch, thereby transferring its weight slowly to the arch abutments.

easing motion (*Weaving*). A movable bar over which the crossing ends are passed in order to facilitate the making of a crossed shed in weaving gauze fabrics.

easing wedges (*Civ. Eng.*). *Striking wedges* (q.v.).

East Coast fever (*Vet.*). An infectious disease of cattle in East and South Africa, due to a protozoan *Theileria parva*; transmitted by ticks of the genus *Rhipicephalus.*

Eastern Schists (*Geol.*). See **Moine Schists.**

easting (*Surv.*). An east departure.

eat-out (*Mining*). Said of a seam when the district or working place reaches a fault, or the boundary of old workings, or any other barren part of a mine.

eau de Javelle, ō de zha-vel′ (*Chem.*). See **Javel water.**

eave (*Build.*). The lower part of a roof which projects beyond the face of the walls.

eave-board (*Build.*). See **tilting fillet.**

eave-lead (*Build.*). A lead gutter behind a parapet around the edge of a roof.

eaves catch (*Build.*). A *tilting fillet* (q.v.).

eaves course (*Build.*). See **doubling course.**

eaves fascia (*Carp.*). See **fascia** (2).

eaves gutter (*Build.*). A trough fixed beneath an eave to catch and carry away the drip from the roof.

eaves plate (*Build.*). A beam carried on piers or posts and supporting the feet of roof rafters in cases where there is no wall beneath.

eaves pole (*Build.*). A *tilting fillet* (q.v.).

eaves soffit (*Build.*). The horizontal surface beneath a projecting eave.

Ebanoid (*Build.*). Trade-name for a form of bitumen used for setting wood block flooring.

ébauche, ā-bōsh′ (*Horol.*). A partly finished watch movement, consisting of the dial plate, bridges, and balance cock.

Eberhardt effect, ā′ber-hart (*Photog.*). The blurring of sharp edges in a photographic image because of the differential diffusion of developer in the emulsion.

Ebnerite (*Build.*). Trade-name for a particular material used in making jointless flooring.

ebonite (*Diel.*). Rubber vulcanised with sulphur; called HARD RUBBER in America. It attacks copper, and must not be put on a conductor.

ebony sindanyo (*Elec. Eng.*). See **Sindanyo.**

ebrac′teate (*Bot.*). Without bracts.

ebrac′teolate (*Bot.*). Without bracteoles.

ebullios′copy (*Chem.*). The determination of the molecular weight of a substance by observing the elevation of the boiling-point of a suitable solvent.

ebullition (*Heat*). See **boiling.**

eburnation (*Med.*) Ivory-like hardening of bone which occurs in chronic infection of bone and in osteo-arthritis.

eburneum process (*Photog.*). The treatment of a photographic image on glass with zinc white to give the image an ivory-like backing.

ec′ad (*Bot.*). A plant form which is assumed to be adapted to the habitat.

ecal′carate (*Bot.*). Not spurred.

ecar′dinal, ecar′dinate (*Zool.*). Without a hinge, as some *Brachiopoda.*

Ecar′dines, —din-ēz (*Zool.*). A class of *Brachiopoda* in which there is no internal skeleton to support the lophophore; the shell is without a hinge, and an anus is present.

ecbol′ic (*Med.*). Promoting expulsion of the foetus.

eccentric (*Eng.*). (1) Displaced with reference to a centre; not concentric.—(2) A crank in which the pin diameter exceeds the stroke, resulting in a disc eccentric to the shaft; used as a crank, particularly for operating steam-engine valves, pump plungers, etc.

eccentric, excentric (*Bot.*). (1) Situated to one side.—(2) Having fatty drops lying towards one side of a globular structure.

eccentric fitting (*Plumb.*). A fitting in which the centre line is offset.

eccentric load (*Struct.*). A non-axial load which is carried by a structural member and is incident at a point other than the centroid of the section.

eccentric oösphere (*Bot.*). A fungal oösphere with one large fatty drop to one side, or several large drops included in the protoplasm to one side, or a crescentic set of small drops lying to one side.

eccentric pole (*Elec. Eng.*). A pole on an electric machine in which the pole face is not concentric with the armature but has a greater air-gap at one pole tip than at the other, in order to assist in neutralising the effect of armature reaction.

eccentric sheave (*Eng.*). The disc of an *eccentric* (q.v.), often formed integral with the shaft.

eccentric strap (*Eng.*). A narrow split bearing, fitting on to an eccentric sheave and bolted to the end of a valve rod, etc.; corresponds to the 'big end' of a connecting-rod.

eccentric throw-out (*Eng.*). A device for engaging the back gear of a lathe. The back gear shaft runs in eccentric-bored bearings, which are rotated to bring the gears in and out of mesh with those on the mandrel. See **back gear.**

eccentricity (*Struct.*). The perpendicular distance from the centre of application of a load or system of loads to the centroid of the section of the structural member supporting them non-axially.

ecchondro′ma (*Med.*). A tumour composed of cartilage and growing from the surface of bone.

ecchondro'sis (*Med.*). An abnormal outgrowth of the joint cartilage, in chronic arthritis.

ecchymo'ma (*Med.*). A swelling due to extravasation of blood under the skin.

ecchymo'sis (*Med.*). A large discoloured patch due to extravasation of blood under the skin.

eccyesis, ek-si-ē'zis (*Med.*). Ectopic gestation. Fertilisation of the ovum and growth of the foetus outside the uterus.

ecdem'ic (*Zool.*). Foreign: not indigenous.

ecdy'sis (*Zool.*). The act of casting off the outer layers of the integument, as in *Ophidia* and many *Arthropoda*.

ecesis, ē-sē'sis (*Biol.*). An invasion of an area by a species which is unable to establish itself there, and which dies out after a few generations because it is not sufficiently well adapted to the new environment.

ec'gonine (*Chem.*). Tropine-carboxylic acid, a coca-base alkaloid, m.p. 198° C.

echard, ek'ard (*Bot.*). Water present in the soil which cannot be used by plants.

echelon grating, esh'el-on (*Light*). A form of interferometer resembling a flight of glass steps, light travelling through the instrument in a direction parallel to the treads of the steps. The number of interfering beams is therefore equal to the number of steps. Owing to the large path difference, $t(\mu-1)$ where t is the thickness of a step, the order of interference and therefore the resolving power are high, making the instrument suitable for studying the fine structure of spectral lines.

echinate, ek'in-āt (*Bot.*). Bearing an evenly distributed coating of rather long, stiff, pointed bristles or outgrowths.—*dim.* **echinulate.**

echi'nococ'cus (*Zool.*). A bladderworm possessing a well-developed bladder containing daughter bladders, each with numerous scolices.

Echi'noder'mata (*Zool.*). A phylum of radially symmetrical marine animals, having the body-wall strengthened by calcareous plates; there is a complex coelom; locomotion is usually carried out by the tube-feet, which are distensible finger-like protrusions of a part of the coelom known as the water-vascular system; the larva is bilaterally symmetrical and shows traces of metamerism. Starfish, Sea Urchins, Brittle Stars, Sea Cucumbers, and Sea Lilies.

Echinoi'dea (*Zool.*). A class of *Echinodermata* having a globular, ovoid, or heart-shaped body which is rarely flattened; there are no arms; the tube-feet possess ampullae and occur on all surfaces, but not in grooves; the anus is aboral or lateral, the madreporite aboral; there is a well-developed skeleton; free-living forms. Sea Urchins.—(*Geol.*) Fossil echinoids are found in strata ranging from the Lower Palaeozoic to the present. They are particularly important in the Jurassic (Clypeus Grit, etc.) and Cretaceous, where, in the Chalk, they have proved invaluable indices of horizon, especially the various species of *Micraster* and *Holaster*.

echinopae'dium (*Zool.*). See **dipleurula.**

echinoplu'teus (*Zool.*). In *Echinoidea*, a pelagic ciliated larval form, in which the posterolateral arms, if present, are small and directed outwards or backwards; see also **pluteus.**

echi'nus (*Arch.*). An ornament in the shape of an egg carved on a moulding, etc.

Echi'uroi'dea (*Zool.*). A class of *Annelida* of sedentary marine habit, in which nearly all trace of metamerism has been lost in the adult, and the setae are much reduced in number; the body is sac-shaped, and feeding is effected by an anterior non-retractile proboscis, bearing a ciliated groove leading to the mouth.

echo (*Acous.*). A delayed sound-wave which arrives at the recipient at a later time than the directly radiated sound-wave from a source because of its longer path *via* reflecting surfaces. See **flutter echo***, **multiple echo.**

echo (*Radio*). The reception of a signal additional to, and later than, the desired signal; caused by its having traversed a path completely round the earth instead of the direct path—(*Teleph.*) The perception of reproduced speech arising from the reflection of telephonic currents from the termination of lines where the matching of the impedances is not perfect.

echo meter (*Acous.*). An arrangement for recording the short intervals between direct sounds and their echoes from objects. Usually the principle is that of picking up the sounds with a microphone, and applying the output to a recording pen on a rotating drum carrying paper.

echo sounder (*Ocean.*). A sounding apparatus, used in sea water, for determining automatically the depth of sea beneath a ship. It makes use of echo delay, and is operated generally by transmitting an impulse of sound and obtaining an indication of the time elapsing before the return of the echo.

echo studio (*Acous.*). An enclosure of long reverberation period, used for the artificial introduction of an adjustable degree of reverberation in the main channel of a broadcast programme.

echo suppressor (*Elec. Comm.*). An arrangement of valves and relays, permitting speech in one direction only at a time in a four-wire telephone channel, so that the speaker does not hear an echo of his own speech through reflection at the far-end termination.

echograph'ia (*Med.*) Ability to copy writing associated with inability to express ideas in writing, due to a lesion in the brain.

echola'lia (*Med.*). Senseless repetition of words heard, occurring in disease of the brain or in insanity; often seen in catatonic schizophrenia.

echoprax'ia, echoprax'is (*Med.*). Imitation by an insane person of postures or of movements of those near him; commonly present in the catatonic type of schizophrenia.

eclamp'sia (*Med.*). A term now restricted to the acute toxaemia occurring in pregnancy, parturition, or in the puerperium, associated with convulsions and loss of consciousness.—*adj.* **eclamptic.**

eclipse (*Astron.*). A name strictly applicable only to cases where a non-luminous body passes into the shadow of another, as the moon does in a lunar eclipse; used in *eclipse of the sun* to mean the interposition of the moon's disc between the observer and the sun.

eclipse year (*Astron.*). The interval of time between two successive passages of the sun, in its apparent motion through the same node of the moon's orbit; it amounts to 346·62003 days.

Eclipse board (*Build.*). Trade-name for a form of plywood faced with metal.

Eclipse scaffold (*Build.*). An extensible form of scaffold board.

eclipsing binary (*Astron.*). See **binary (eclipsing).**

ecliptic (*Astron.*). The great circle in which the plane containing the centres of the earth and sun cuts the celestial sphere; hence, the apparent path of the sun's annual motion through the fixed stars. See **obliquity of the ecliptic.**

ec'logite (*Geol.*). A coarse-grained deep-seated ultramafic rock, consisting essentially of pink garnet, green pyroxene (some of which is often chrome-diopside) and (rarely) kyanite. Good examples occur in the Fichtelgebirge and in the kimberlite pipes in S. Africa.

eclosion (*Zool.*). The act of emergence from an egg or pupa case.

ecolog'ical (*Biol.*). Pertaining to the surroundings or environment of an organism or organisms.

ecological factor (*Bot.*). Anything in the environment which affects the growth, development and distribution of plants, and therefore aids in determining the characters of a plant community.

ecol′ogy. The study of organisms in relation to their environment.

economic ratio (*Civ. Eng.*). In reinforced concrete work, the ratio between steel reinforcement and concrete which allows the full strength of both to be developed.

economiser (*Eng.*). A bank of tubes, placed across a boiler flue, through which the feed water is pumped, being heated by the otherwise waste heat of the flue gases. See also **Supermiser.**

economiser (*Illum.*). A small hood of refractory material placed over the tip of an arc-lamp carbon. It results in a slower burning-away of the carbon, and also gives an improved light distribution.

Economo's disease (*Med.*). See **von Economo's disease.**

economy resistance (*Elec. Eng.*). A resistance inserted into the circuit of a contactor coil or other electromagnetic device after its initial operation, in order to reduce the current to a value just sufficient to hold the device closed.

ecor′ticate (*Bot.*). Lacking a cortex; said particularly of some seaweeds.

e′cospe′cies (*Biol.*). A category of variant individuals, based on genetical behaviour and ecological relationship.

e′cotone (*Bot.*). A boundary between two plant communities of major rank.

e′cotype (*Biol.*). See **ecospecies.**

ecphy′ma (*Med.*). An outgrowth or protuberance.

ecrusta′ceous (*Bot.*). Said of a lichen having no well-defined thallus.

ect-, ecto- (Greek *ektos*, outside, without). A prefix used in the construction of compound terms; e.g. *ectocranial*, outside the skull.

ectade′nia (*Zool.*). In Insects, accessory glands of the genital system, of ectodermal origin. Cf. *mesadenia.*

ectal layer (*Bot.*). A thin membrane at the extreme edge of an excipulum.

ecta′sia, ec′tasis (*Med.*). Pathological dilation or distension of any structure of the body.—*adj.* **ectatic.**

ecten′tal line (*Zool.*). In a gastrula, the line of union between ectoderm and endoderm at the lip of the blastopore.

ectep′icon′dylar (*Zool.*). (In many Reptiles and Mammals) said of a foramen, near the lower end of the humerus, for the median (ulnar) nerve.

ecteth′moid (*Zool.*). One of a pair of cartilage bones of the Vertebrate skull, formed by ossification of the ethmoid plate.

ectho′raeum (*Zool.*). The thread of a nematocyst.

ecthy′ma (*Med.*). Local gangrene and ulceration of the skin as a result of infection, the ulcer being covered by a crust and the skin round it being inflamed.

ecto-. See **ect-.**

ec′toblast (*Zool.*). See **epiblast.**

ectobron′chi (*Zool.*). In Birds, secondary bronchi leading to the air-sacs, being diverticula of the mesobronchium.

ectocar′pous (*Zool.*). Said of gonads which originate from ectoderm: having such gonads.

ec′tochondrosteo′sis (*Zool.*). Ossification of cartilage, beginning at the inner surface of the perichondrium and gradually invading the cartilage.

ectocoelic, —sē′lik (*Zool.*). In *Coelenterata*, situated outside the coelenteron.

ec′tocyst (*Zool.*). In *Polyzoa*, the cuticular exoskeleton of a zooecium secreted by the ectoderm: in *Protozoa*, the resistant outer layer of a cyst. Cf. *endocyst.*

ec′toderm (*Zool.*). The outer layer of cells forming the wall of a gastrula: the tissues directly derived from this layer.

ectogen′esis (*Bot.*). Variation under the influence of conditions outside the plant.

ectog′enous (*Zool.*). Independent: self-supporting.

ec′togen′y (*Bot.*). The effect of pollen on the tissues of the female organs of the plant.

ec′tolec′ithal (*Zool.*). Said of ova in which the yolk is deposited peripherally.

ec′topar′asite (*Zool.*). A parasite which lives on the exterior of its host.—*adj.* **ectoparasitic.**

ec′topata′gium (*Zool.*). In *Cheiroptera*, that part of the patagium borne by the metacarpals and phalanges.

ectophloeodal, —flē′dal (*Bot.*). Living on the outside of bark.

ectophlo′ic (*Bot.*). Said of a stem which has no internal phloem.

ec′tophyte (*Bot.*). A parasite growing on the surface of its host.

ecto′pia, ec′topy (*Med.*). Displacement from normal position.

ectopia cordis (*Med.*). Congenital displacement of the heart outside the thoracic cavity.

ectopia ve′sicae (*Med.*). A congenital abnormality in which the anterior wall of the bladder is absent and the posterior wall opens on to the surface of the abdomen, the lower abdominal wall being also absent.

ectopic gestation (*Med.*). See **eccyesis.**

ec′toplasm (*Cyt.*). A layer of clear non-granular cytoplasm at the periphery of a cell. Cf. *endoplasm.*

ec′toplast, ec′tosarc (*Bot.*). The outer surface of the cytoplasm of a plant cell, lying against the inner surface of the cell wall.

Ectoproc′ta (*Zool.*). A class of *Polyzoa* in which the anus is outside the circlet of tentacles; freshwater or marine forms.

ectopterygoid, —ter′i-goid (*Zool.*). In some Fish, a paired ventral bone of the skull, lying between the entopterygoid and the quadrate: in some Reptiles, a bone of the skull extending from the pterygoid to the maxilla.

ec′tosarc (*Bot.*). See **ectoplast.**—(*Zool.*) See **ectoplasm.**

ec′tosome (*Zool.*). In eurypylous *Porifera*, the dermal membrane covering the openings of the incurrent sinuses.

ectospo′rous (*Bot.*). Having exogenous spores.

ec′totrache′a (*Zool.*). A layer of pavement epithelium, lying outside the chitinous lining of a trachea.

ectotroph′ic mycorrhiza (*Bot.*). A mycorrhiza in which most of the fungal hyphae lie on the surface of the root of the higher plant.

ectotur′binals (*Zool.*). The longer outer series of ethmoturbinal plates in Mammals. Cf. *entoturbinals.*

ec′tozoon (*Zool.*). See **ectoparasite.**

ectrome′lia (*Med.*). (1) Congenital absence of a limb or limbs.—(2) An infectious disease of mice, due to a filter-passing virus.

ectro′pion, ectro′pium (*Med.*). Eversion of the eyelid.

ec′zema (*Med.*). The term generally applied to an itching inflammatory condition of the epidermis occurring as a reaction to irritants, such as chemical agents, poisons of some plants, materials used in trades, etc.—*adj.* **ecze′matous.**

ecze′matous conjunctivitis (*Med.*). See **phlyctenular conjunctivitis.**

Edale Shales (*Geol.*). A series of argillaceous sedimentary rocks in Derbyshire, belonging to the Namurian Stage of the Carboniferous System.

edaph′ic climax (*Bot.*). A climax community of which the existence is determined by some property of the soil.

edaphic factor (*Bot.*). Any property of the soil, physical or chemical, which influences plants growing on that soil.

edaph'on (*Bot.*). A community of bacteria, algae, fungi, protozoa, worms, crustacea, and insects, living in the soil and influencing its nitrogen content.

Eday Sandstones (*Geol.*). A division of the Middle Old Red Sandstone strata of the Orkney Islands, comprising 500 ft. of yellow fossiliferous flags succeeded by red barren sandstones.

eddy. An interruption in the steady flow of a fluid, caused by an obstacle in the line of flow.

eddy current (*Elec. Eng.*). A current induced in a mass of conducting material by a varying magnetic field. Also called FOUCAULT CURRENT. See **eddy-current brake, eddy-current loss.**

eddy-current brake (*Elec. Eng.*). (1) A form of brake for the loading of motors during testing; it consists of a mass of metal rotating in front of permanent magnets so that heavy eddy currents are set up in it.—(2) A form of brake, used on tramways, in which the retarding force is produced by the induction of eddy currents in the rail by an electromagnet on the vehicle.

eddy-current loss (*Elec. Eng.*). A loss caused in electric machinery or other apparatus by eddy currents. Losses will appear in the iron of any magnetic circuit if it carries an alternating flux, although they may be minimised by laminating the iron.

eddy-current speed indicator (*Elec. Eng.*). A speed indicator consisting of a rotating disc and a spring-controlled magnetic needle; the latter is deflected as a result of eddy currents induced in the disc.

eddy flow (*Hyd.*). A type of fluid flow in which there is an unsteady motion of the particles, the motion at a fixed point varying in no definite manner. Also called TURBULENT FLOW, SINUOUS FLOW.

eddy wind (*Meteor.*). See **whirlwind.**

Eddy's theorem (*Struct.*). The bending moment at any point in an arch is equal to the product of the horizontal thrust at the abutment and the vertical distance between the line of action of this thrust and the given point in the arch.

Edeleanu process, yā-dā-lyah'noo (*Chem.*). A process for the removal of unsaturated compounds from petroleum distillates by extraction with liquid SO_2.

edema, edematous (*Med.*). See **oedema, oedematous.**

E'denta'ta (*Zool.*). An order of primitive terrestrial Mammals characterised by the incomplete character of the dentition; incisors are almost always absent, and the canines and grinding teeth are devoid of enamel; there is no milk dentition; in some cases teeth are entirely lacking; the testes are abdominal; phytophagous or insectivorous forms. Sloths, Ant-eaters, Armadillos.

eden'tulous, eden'tate (*Zool.*). Without teeth.

edge coal (*Mining*). Highly inclined coal-seams: seams which dip steeply.

Edge Coal Group (*Geol.*). A subdivision of the Lower Carboniferous rocks of the Midland Valley of Scotland. So named from their steep dip where they plunge underground, off the Pentland anticline, to form the East Lothian coalfield. Now frequently known as the LIMESTONE COAL GROUP.

edge hinge (*Join.*). A butt hinge (Scottish).

edge-joint (*Carp.*). A general name for a joint made between the edges of two boards so that they include an angle.

edge nailing (*Carp.*). Secret nailing used on boarded surfaces.

edge runner. A grinding mill used for putty, mortar, pigments, etc.; it consists of cylindrical stones or rollers so mounted as to run on their edges in a circular pan containing the materials to be ground.

edge-shot (*Carp.*). Said of a board which has a planed edge.

edge tone (*Acous.*). A periodic disturbance, manifested as a sound-wave, radiated from a resonator, the latter being excited by the unstable vortex motion occurring when a stream of air is blown across an edge. The typical example is a flue organ pipe.

edge winding (*Elec. Eng.*). A form of winding frequently used for the field windings of salient-pole synchronous machines; it consists of copper strip wound on edge around the pole. Such a winding has good heat-dissipating properties.

edged (*Bot*). Having a margin of a different colour from the rest.

edger (*Carp.*). A circular-saw for cutting away wane left on the edges of boards.

edgewise instrument (*Elec Eng.*). A switchboard indicating instrument in which the pointer moves in a plane at right-angles to the face of the switchboard. The end of the pointer is bent, and moves over a narrow vertical or horizontal scale.

edifice (*Build.*). A building, usually large and/or fine.

Edison accumulator (*Elec. Eng.*). See **nickel-iron-alkaline accumulator.**

Edison effect (*Thermionics*). The name first given (after its discoverer) to the phenomenon of electrical conduction between an incandescent filament and an independent cold electrode contained in the same envelope, when the second electrode is made positive with respect to the filament.

Edison phonograph (*Acous.*). The original type of gramophone, in which the records were registered on the surface of hollow cylindrical waxes.

Edison screw-cap (*Illum.*). A lamp cap in which the outer wall forms one of the contacts, and which is in the form of a coarse screw for inserting into a corresponding socket. A central pin forms the other contact.

See **goliath—** **miniature—**
medium— **small—**

Edison screw-holder (*Elec. Eng.*). A holder for electric lamps with Edison screw-caps.

Ediswan wiring system (*Elec. Eng.*). A wiring system employing flat rubber- or metal-sheathed cables, with special junction boxes and fixing arrangements.

editing (*Cinema.*). In making up a motion-picture, the process of determining the shots to be taken, and the cutting of the resulting shots.

editor (*Cinema.*). The person who acts under the director in film production, and who does the cutting and editing of the shots while making up the final sequence in a film.

ed'riophthal'mic (*Zool.*). Having sessile eyes, as some *Crustacea.*

Edser and Butler's bands (*Light*). Dark bands, having a constant frequency separation, which are seen in the spectrum of white light which has traversed a thin, parallel-sided plate of a transparent material, or a thin parallel-sided film of air between glass plates. Unless the bounding surfaces are half-silvered, the bands are rather faint.

education. The process whereby the innate intelligences and emotions of individuals are exercised so as to prepare them to accept and appreciate social organisation, withstand deleterious propaganda, and, as far as possible, enable them to develop creative thoughts and actions. Training, in so far as it means the attainment of reliable repetition of specified processes of thought or action, is in opposition to education, which implies freedom of thought, with, however, acceptance of established knowledge. Modern education holds the balance between true education and training, so that the individual becomes responsible in his work and happy in his leisure.

educational film (*Cinema.*). Film, generally in the documentary style, for showing to children for educational purposes.

eduction (*Eng.*). The process of exhausting gases from an engine; more usually called *exhaust* (q.v.).

eduction port (*Eng.*). The *exhaust port* of an engine, more commonly referred to as such.

Edward's tiles (*Build.*). A special form of terracotta tile for making sills.

Edzell Shales (*Geol.*). A group of mottled and variegated shales and marls, occurring near the top of the Lower Old Red Sandstone in the Midland Valley of Scotland.

eel-grass (*Acous.*). A sea plant (*Zostera marina*) whose grass-like leaves are used for sound-insulation and for the correction of acoustical defects.

effective depth (*Civ. Eng.*). The depth of a reinforced concrete beam as measured from the surface of the concrete on the compression side to the centre of gravity of the tensile reinforcement. See **cover.**

effective heating surface (*Eng.*). The total area of a boiler surface in contact with water on one side and hot gases on the other.

effective height of antenna (*Radio*). The height (in metres) which, when multiplied by the field-strength (in volts per metre) incident upon the antenna, gives the e.m.f. (in volts) induced therein. It is less than the physical height. It differs from the equivalent height in that it is a function of the direction of arrival of the incident wave.

effective pillar length (*Struct.*). The pillar length which is used in finding the *ratio of slenderness* (q.v.).

effective range (*Elec. Eng.*). That part of the scale of an indicating instrument over which a reasonable precision may be expected.

effective resistance (*Elec. Eng.*). The resistance of a conductor measured on an alternating or pulsating current, and including the effect of any losses caused by the current. It is obtained by dividing the total loss by the square of the r.m.s. value of the current.

effective span (*Build.*). The horizontal distance between the centres of the two bearings at the ends of a beam.

effective temperature (*Astron.*). The temperature which a given star would have if it were a perfect radiator, or 'black body,' with the same distribution of energy among the different wavelengths as the star itself.

effective value (*Elec. Eng*). A term sometimes used to denote the r.m.s. value of an alternating quantity.

effective wavelength (*Photog.*). See **dominant wavelength.**

effector (*Zool.*). A tissue-complex capable of effective response to the stimulus of a nervous impulse; e.g. a muscle or gland.

effector neurone (*Zool.*). A motor neurone.

ef′ferent (*Zool.*). Carrying outwards or away from; as the *efferent branchial vessels* in a Fish, which carry blood away from the gills, and *efferent nerves*, which carry impulses away from the central nervous system. Cf. *afferent.*

effervescence (*Chem.*). The vigorous escape of small gas bubbles from a liquid, especially as a result of chemical action.

efficiency (*Mech.*). The performance of a machine, etc. judged with respect to its theoretical maximum performance; or the ratio of the energy output to the energy input of a machine. For a simple mechanical device this may also be considered as the ratio of the mechanical advantage to the *velocity ratio* (q.v.). 'Efficiency,' which applies strictly to energy ratios, should not be used when efficacy is meant.

See **ampere-hour—**
boiler—
brake thermal—
current—
declared—
mechanical—
overall—
Rankine—
relative—
watt-hour—
efficiency ratio.

efficiency (*Illum.*). The ratio of the total luminous flux emitted by a light source to the total power or fuel consumed. For *window efficiency ratio* see **daylight factor.**

efficiency index (*Bot.*). The rate at which dry matter accumulates in the plant.

efficiency ratio (*Eng.*). (Of a heat engine) the ratio of the actual thermal efficiency to the ideal efficiency corresponding to the cycle on which the engine is operating.

effig′urate (*Bot.*). Having a distinct shape.

effleu′rage (*Med.*). The action of lightly stroking in massage.

efflores′cence (*Bot.*). Production of flowers: period of flowering.

efflorescence (*Build.*). Formation of a white crystalline deposit on the face of a wall; due to the drying out of salts in the mortar or stone.

efflorescence (*Chem.*). The loss of water from a crystalline hydrate on exposure to air, shown by the formation of a powder on the crystal surface.

efflorescence (*Min.*). A fine-grained crystalline deposit on the surface of a mineral or rock.

ef′fluent (*Sewage*). Liquid sewage after having passed through any stage in its purification.

effort syndrome (*Med*). *D.A.H.* (q.v.). Soldier's heart. A condition in which there are nervousness and symptoms of circulatory inefficiency and exhaustion after exercise, in the absence of heart disease; common in armies.

effuse (*Bot*). Spread out on a substratum, and often having a vaguely defined edge.

effusiom′eter (*Chem*). An apparatus for comparing the molecular weights of gases by observing the relative times taken to stream out through a small hole.

effusion (*Med.*). An abnormal outpouring of fluid into the tissues or cavities of the body, as a result of infection or of obstruction to blood-vessels or lymphatics.

effusion (*Phys.*). The flow of gases through larger holes than those to which diffusion is strictly applicable; see **Graham's law.** The rate of flow is approximately proportional to the square-root of the pressure difference.

e′gest (*Zool.*). To throw out, to expel: to defaecate, to excrete.—*n. pl.* **eges′ta.**

egg (*Bot., Zool.*). See **ovum.**

egg albumen (*Chem.*). A simple protein from the white of the egg, soluble in water and coagulable by heat.

egg and anchor (*Arch.*). An ornament carved on a moulding, resembling eggs separated by vertical anchors.

egg and dart (*Arch.*). Similar to the above, arrows taking the place of anchors.

egg apparatus (*Bot.*). The egg and the two synergidae in the embryo sac of an angiosperm.

egg-bound (*Vet.*). Said of the oviduct of birds when obstructed by an egg.

egg-cell (*Zool.*). The ovum, as distinct from any other cells associated with it.

egg-eating (*Vet.*). A vice developed by individual birds, characterised by the eating of their own eggs or of those of other birds.

egg nucleus (*Zool.*). The female pronucleus.

egg-peritonitis (*Vet.*). Septic peritonitis extending from an infected and obstructed oviduct of birds.

egg-shaped sewer (*Civ. Eng.*). A type of sewer section much used where the flow is a fluctuating one; the section resembles the longitudinal profile of an egg placed with the end of smaller radius at the bottom.

egg-shell finish (*Paper*). A soft dull finish on paper, obtained by omitting the calendering process.

egg-shell gloss (*Dec.*). A subdued gloss in enamel-paint-finish. Also called BASTARD FLATTING.

egg-shell porcelain (*Pot.*) The 'bodiless' porcelain of china, in which the clay body appears as a transparent membrane between two coats of thin, bright glaze.

egg sleeker (*Foundry*). A moulder's sleeker with a spoon-shaped end; used for smoothing rounded corners in a mould.

egg, soft-shelled (*Vet.*) A bird's egg in which lime salts are deficient or absent.

egg tooth (*Zool.*). A sharp projection at the tip of the upper beak of a young bird, by means of which it breaks open the egg shell.

Eg'gertz's method (*Chem.*). A method in chemical analysis for quickly forming an estimation of carbon in iron and steel. The metal is dissolved in nitric acid under standard conditions, and the colour of the solution is compared with that produced by a similar metal of known carbon content.

e'go (*Psycho-an.*). That part of the self formed originally from the instinctual life forces or *id*, which have become modified by contact with reality and the outside world, and has tested which part of the *id* can be accepted by the self in conjunction with the demands of reality.

ego-ideal (*Psycho-an*). The conscious aims and ideals of the individual, formed by his own conscious judgment, education, and culture, and supported by his early moral and ethical standards, based on those of the parents. See **super-ego.**

egophony (*Med.*). See **aegophony.**

Egyptian (*Typog*). A type face with square serifs and lines of uniform thickness.

Egyptian cotton (*Textiles*). Cotton of long staple, 1¼ in., of excellent quality and therefore used for spinning fine counts.

Egyptian jasper (*Min.*). A variety of jasper occurring in rounded pieces scattered over the surface of the desert, chiefly between Cairo and the Red Sea; used as a broochstone and for other ornamental purposes.

E.H.P. (*Eng.*). Abbrev. for *effective horse-power.*

Ehrlich's theory (*Med.*). See **side-chain theory.**

eidet'ic imagery (*Psychol.*). The ability to reproduce on a dark screen, or when the eyes are closed, a vividly clear picture or visual memory-image of previously seen objects. Commonly present in children up to 14 years, and occasionally persisting into adult life. The general representation of the previously seen objects is preserved, but in each instance certain features in form and colour are altered, depending on the characteristics of the individual.

eidograph, ī'dō— (*Surv.*). An instrument for reducing and enlarging plans.

Eife'lian Stage (*Geol.*). A series of marine Devonian strata, defined in terms of the succession in the Eifel. Smaller stage-names are now commonly used, *Eifelian* being almost obsolete.

eigenperiod, eigenton, ī'gen—, —tōn (*Acous.*). Frequencies at which acoustic resonance is experienced in rectangular chambers, because of continued reflections between opposite walls. These natural periods are largely obviated by skewing the walls.

eight-to-pica leads (*Typog.*). Strips of metal, 1½-point in thickness, used to space out lines of type. They are usually called thin leads, two being equivalent to a thick lead, and eight to a pica em or ⅛ in.

eighteenmo (*Print.*). Decimo-octavo, usually written 18*mo*; a sheet of paper folded into eighteen leaves. See also **octodecimo.**

eighth bend (*Eng.*). A pipe bend or junction piece for joining two pipes inclined at 22½°, i.e. one-eighth of a complete reversal of direction.

Eikmeyer coil, īk'mī-er (*Elec. Eng.*). The name given to the original type of former-wound armature coil which can be dropped straight into the slots of an electric machine.

Einhorn's tube, īn'horn (*Med.*). A narrow tube for the collection of the gastric secretion; it is passed through the mouth into the stomach.

Einstein shift, īn'stīn (*Astron.*). A spectroscopic phenomenon, predicted by the Einstein theory of gravitation and subsequently verified by observation, in which the lines of the solar spectrum are slightly displaced from their normal positions towards the red, owing to the intense gravitational field of the sun.

Einstein's law of photochemical equivalence (*Chem.*). Each quantum of radiation absorbed in a photochemical process causes the decomposition of one molecule.

Einthoven galvanometer, īnt'hō-ven (*Elec. Eng.*). A galvanometer in which the current is carried by a single current-carrying filament in a strong magnetic field, the deflection being usually magnified by a microscope. Also called a STRING GALVANOMETER.

eisenkiesel, ī'zen-kē'zel (*Min.*). A ferruginous quartz, yellow, red, or brown, according to the amount and kind of iron ore included.

eiso'dal aperture (*Bot.*). The enlargement of the stomatal pore nearest to the surface of the leaf.

ejaculation, ejection (*Bot.*). The forcible expulsion of spores from a sporangium.

ejaculatory duct (*Zool.*). See **ductus ejaculatorius.**

ejector. A device for extracting cartridge-shells from a fire-arm.

ejector (*Eng.*). A device for exhausting a fluid by entraining it by a high-velocity steam or air-jet; e.g. an *air-ejector* (q.v.).

ejector (*San. Eng.*). An appliance used for raising sewage from a low-level sewer to a sewer at a higher elevation; worked by compressed air.

eka- (*Chem.*). A prefix denoting the element occupying the next lower position in the same group in the periodic system; used in the naming of new elements and unstable radio-elements.

elae'oblast (*Zool.*). In certain *Urochorda*, a posterior mass of large mesodermal cells filled with nutritive matter.

elaeod'ochon (*Zool.*). See **oil-gland.**

elae'olite (*Min.*). A massive form of the mineral nepheline, greenish-grey or (when weathered) red in colour, usually shapeless, but in some S. African syenites exhibiting the hexagonal prismatic form of nepheline.

elaeolite-syenite (*Geol.*). See **nepheline-syenite.**

elaioplast, ē-lā'ō— (*Bot.*). A plastid which forms oils and fats.

elai'osome (*Bot.*). An outgrowth from the surface of a seed, containing fatty or oily material (often attractive to ants) and serving in seed dispersal.

Elasip'oda (*Zool.*). An order of abyssal *Holothuroidea*, characterised by the possession of shield-shaped buccal tentacles, without either ampullae or retractor-muscles, and having no respiratory trees or Cuvierian organs.

elastance (*Elec. Comm.*). The reciprocal of the capacity of a condenser, so termed because of its electromechanical analogy with a spring.

elastic bitumen (*Min.*). See **elaterite.**

elastic fatigue (*Eng., Phys.*). A temporary departure from perfect elasticity shown by some materials, which, after suffering elastic deformation, return only gradually to their original form.

elastic fibres (*Zool.*). See **yellow fibres.**

elastic fibrocartilage (*Zool.*). See **yellow fibrocartilage.**

elastic limit (*Phys.*). The limiting value of the deforming force beyond which a body does not return to its original shape or dimensions when the force is removed.—(*Met.*) The highest stress that can be applied to a metal without producing a measurable amount of plastic (i.e. permanent) deformation. Usually assumed to coincide with the limit of proportionality.

elastic medium (*Phys*). A medium which obeys *Hooke's law* (q.v.). No medium is perfectly elastic, but many are sufficiently so to justify the making of calculations which assume perfect elasticity.

elastic moduli (*Eng.*). See **Young's modulus, modulus of rigidity, bulk modulus.**

elastic packing (*Eng.*). Rubber-impregnated canvas material used for packing the glands or stuffing-boxes of water pumps. See **packing.**

elastic strain (*Eng.*). The strain or fractional deformation undergone by a material in the elastic state, i.e. a strain which disappears with the removal of the straining force.

elastic tissue (*Zool.*). A form of connective tissue in which elastic fibres predominate.

elas'tica exter'na (*Zool.*). In developing Vertebrates, a thin membrane secreted by the notochordal epithelium, lying outside the fibrous sheath.

elastica inter'na (*Zool.*). In developing Vertebrates, a thin membrane near the notochord, on the inner side of the fibrous sheath.

elasticity (*Phys.*). The tendency of a body to return to its original size or shape, after having been stretched, compressed, or deformed. The ratio of the stress called into play in the body by the action of the deforming forces to the strain or change in dimensions or shape is called the *coefficient* (or *modulus*) *of elasticity*. See the following definitions and **Hooke's law.**

elasticity of bulk (*Phys.*). The elasticity for changes in the volume of a body caused by changes in the pressure acting on it. The bulk modulus is the ratio of the change in pressure to the fractional change in volume. See **elasticity.**

elasticity of compression. See **elasticity of bulk.**

elasticity of elongation (*Phys.*). The stress in this case is the stretching force per unit area of cross-section and the strain is the elongation per unit length. The modulus of elasticity of elongation is known as Young's modulus. See **elasticity.**

elasticity of flexure (*Phys.*). The elasticity of a bent beam or cantilever which tends to straighten it. For a weightless beam supported at two points distant L apart, the sag, produced by a force P applied at the centre is equal to $\frac{PL^3}{4bd^3E}$, where b and d are the breadth and thickness of the beam and E is Young's modulus of elasticity.

elasticity of gases (*Phys.*). If the volume V of a gas is changed by δV when the pressure is changed by δp, the modulus of elasticity is given by $-V\frac{\delta p}{\delta V}$. This may be shown to be numerically equal to the pressure p for isothermal changes, and equal to γp for adiabatic changes, γ being the ratio of the specific heats of the gas.

elasticity of shear (or **rigidity**) (*Phys.*). The elasticity of a body which has been pulled out of shape by a shearing force. The stress is equal to the tangential shearing force per unit area, and the strain is equal to the angle of shear, that is, the angle turned through by a straight line originally at right-angles to the direction of the shearing force. See **elasticity, Poisson's ratio.**

elas'tin (*Zool.*). The substance of which elastic fibres are composed; it is resistant to the action of reagents.

el'ater (*Bot.*). (1) An elongated cell with spiral thickenings on the walls, found mixed with the spores of some liverworts.—(2) A thread of a capillitium.

elat'erite or **elastic bitumen** (*Min.*). A solid bitumen resembling dark-brown rubber; used in building. Sometimes known as MINERAL CAOUTCHOUC; occurs at Castleton, Derbyshire, and in Colorado and Utah.

elat'erophore (*Bot.*). The organ which bears elaters.

elaulic (*Hyd*). A term meaning *oil in pipes*, to correspond with the term *hydraulic* (meaning *water in pipes*).

elbow. A bend; as in a length of piping, or in a wall.

elbow (*Elec. Eng.*). A *sharp-bend* (q.v.).

elbow (*Eng.*). A short right-angle pipe joint for connecting gas, water, and steam pipes, as distinct from a bend which is circular, not angular.

elbow (*Masonry*). An arch stone whose lower bed is horizontal, while its upper bed is inclined towards the centre of the arch, to correspond with those of the voussoirs.

elbow (*Mining*). A sharp turn in a roadway underground: a sharp bend in a cable or pipe line.

elbow (*Plumb.*). A short pipe fitting used to connect two pipes at an angle, generally a right-angle.

elbow-board (*Carp.*). The window-board beneath a window, in the interior.

elbow linings (*Join.*). The panelling at the sides of a window recess, running from the floor to the level of the window-board. Cf. *jamb linings.*

Electra complex (*Psycho-an.*). Attraction for the father and hostility to the mother; analogous to the Oedipus complex in boys, but applied to girls.

electric-arc welding (*Elec. Eng.*). See **arc welding.**

electric balance (*Elec. Eng.*). A name sometimes applied to a type of electrometer, to a current weigher (which establishes the absolute ampère), and to a Wheatstone bridge.

electric bell (*Elec. Eng.*). A bell in which the hammer is operated electrically by means of a solenoid. A single stroke may be given, or, more commonly, a rapid succession of strokes may be maintained by means of a make-and-break contact on the solenoid.

electric boiling plate (*Elec. Eng.*). See **boiling plate.**

electric braking (*Elec. Eng.*). A method of braking for electrically driven vehicles; the motors are used as generators to return the braking energy to the supply, or to dissipate it as heat in resistances.

electric calamine (*Min.*). See **calamine.**

electric cautery (*Med.*). The burning of parts of the human body for surgical purposes by means of electrically heated instruments. Also called ELECTROCAUTERY.

electric cement (*Civ. Eng.*). See **Ciment Fondu.**

electric chorea (*Med.*). See **Dubini's disease.**

electric cleaner. (1) A vacuum or suction cleaner used for domestic or other purposes, when it is operated by an electric motor.—(2) In electroplating work, a cleansing solution in which the cleansing is accelerated by the passage of an electric current.

electric clocks (*Horol.*). Electric clocks may be regarded under the following heads: (*a*) Battery operated; (*b*) Impulse type; (*c*) Self-winding; (*d*) Synchronous a.c. mains clocks.

(*a*) *Pendulum type*, in which the vibrations of the pendulum are maintained by means of a solenoid and permanent magnet; *balance type*, in which impulse is given to the balance electromagnetically. (*b*) *Impulse type*, in which a master pendulum clock controls the operation of a number of slave clocks. The vibrations of the pendulum of the master clock are maintained by a gravity arm falling on to a pallet on the pendulum rod. The gravity arm is re-set electromagnetically. When the gravity arm falls for impulse it also closes the circuit to the slave clocks, giving an impulse to each of the slaves. Normally, the master clock has a seconds pendulum, and the gravity arm falls every half-minute, giving half-minute impulses to the slaves. (*c*) *Self-winding*. A spring-driven movement which is automatically wound, from either a.c. or d.c. supply, after a definite period of running. (*d*) *Synchronous a.c. mains clocks*, in which the motive power is a synchronous motor. The motor may be either of the 'self-starting' or 'non-self-starting' type, and as the speed of the motor is directly proportional to the frequency of the power supply, it is essential that these clocks be connected to a supply which is 'time-controlled.'

electric coal-cutter (*Mining*). A coal-cutter operated by an electric motor; used in coal-mines.

electric component (*Radio*). That component of an electromagnetic wave which produces a force on an electric charge, and along the direction of which currents in a conductor exposed to the field are urged to flow. Also called ELECTROSTATIC COMPONENT.

electric connective tissue (*Zool.*). Jelly-like connective tissue in which the electroplaxes of certain types of electric organs are embedded.

electric cooker (*Elec. Eng.*). An assembly of electric boiling plates and an electrically heated oven, for commercial or domestic cooking.

electric current (*Elec. Eng.*). See **current.**

electric discharge (*Elec. Eng.*). The passage of electricity through a gas as a result of ionisation of the gas; it takes the form of a brush discharge, an arc, or a spark.

electric discharge lamp (*Illum.*). A form of electric lamp in which the light is obtained from an electric discharge between two electrodes in an evacuated glass tube. Sometimes called a GAS-DISCHARGE LAMP.

See **cold-cathode— sodium—**
hot-cathode— Moore lamp
mercury— neon lamp.

electric displacement. See **displacement.**

electric dynamometer (*Eng.*). An electric generator used for measuring brake horse-power. The stator frame is capable of partial rotation in bearings concentric with those of the armature, and the torque is balanced and measured by hanging weights on an arm projecting from the frame.

electric field (*Elec. Eng.*). A region in which forces are exerted on any electric charge present in the region. Also called ELECTROSTATIC FIELD.

electric field strength (*Elec. Eng.*). The strength of an electric field at any point; measured by the force in dynes exerted on a unit charge at the point.

electric flux (*Elec. Eng.*). The surface integral of the electric field intensity normal to the surface. The electric flux is conceived as emanating from a positive charge and ending on a negative charge without loss.

electric flux density (*Elec. Eng.*). The integration of the electric field intensity per unit area, the integration being taken over an elementary area normal to the direction of the field intensity.

electric furnace (*Elec. Eng.*). A furnace for industrial purposes in which the heat is produced electrically. See **arc furnace, induction furnace, resistance oven.**

electric gas-lighter (*Elec. Eng.*). A device incorporating a battery which produces a spark for igniting the gas from a gas burner.

electric generator (*Elec. Eng.*). A machine for converting mechanical energy into electrical energy. Commonly called a GENERATOR. See **electromagnetic generator, electrostatic generator.**

electric harmonic analyser (*Elec. Eng.*). An electrical device for determining the magnitudes of the harmonics in the wave shape of an alternating current or voltage.

electric induction (*Diel.*). See **displacement.**

electric lamp (*Illum.*). A lamp in which an electric current is used as the source of energy for radiating light. See **electric discharge lamp, filament lamp, arc lamp.**

electric-light (*Illum.*). Light produced by the use of electric power, whether by heating a filament in a partially evacuated translucent or transparent container, or by the radiation from ionisation in an electric discharge, as in an arc in air or in a partially evacuated space. The basic colour distribution in the thermal method depends on the temperature; in the arc method, on the materials between which the arc is struck; and in the gas discharge method, on the composition of the gas.

electric-light ophthalmia (*Med.*). See **photophthalmia.**

electric locomotive (*Elec. Eng.*). A locomotive in which the driving power is supplied by electric motors, supplied either from a battery (*battery locomotive*), from a Diesel-driven generator mounted on the vehicle (*Diesel-electric locomotive*), or from a contact wire or rail (*track electrification*).

electric motor (*Elec. Eng.*). A machine for converting electrical energy into mechanical energy; occasionally called an ELECTROMOTOR. See **direct-current motor, alternating-current motor, electrostatic motor.**

electric nerve (*Zool.*). A modified motor nerve, serving an electric tissue.

electric organ (*Zool.*). A mass of muscular or epithelial tissue, modified for the production, storage, and discharge of electric energy; occurring mainly in Fish.

electric oscillations (*Radio*). Electric currents which periodically reverse their direction of flow, at a frequency determined by the constants of a resonant circuit. Distinguished from ordinary alternating currents in that their amplitude is not necessarily constant from one cycle to the next. See also **continuous oscillations, damped oscillations, electronic oscillations.**

electric rods (*Zool.*). Small rod-like structures, attached to the electrolemma of an electroplax, through which the electricity is discharged.

electric shock. The sudden pain or convulsion which results from the passage of an electric current through the body of a human being or animal. The shock may be sufficiently severe to cause death (*electrocution*).

electric storm (*Meteor.*). A condition of high electric field within a cloud, such that aircraft exhibit a *brush discharge* (q.v.) when passing through it.

electric strength (*Elec. Eng.*). The maximum voltage which can be applied to an insulator or insulating material without spark-over or breakdown taking place. The latter arises when the applied voltage gradient coincides with a breakdown strength at a temperature which is attained through normal heat dissipation.

electric tissue (*Zool.*). Modified tissue capable of generating electricity.

electric traction (*Elec. Eng.*). The operation of a railway or road vehicle by means of electric motors, which obtain their power from an overhead contact wire or from generators or batteries mounted on the vehicle.

electric wave filter (*Elec. Comm.*). The same as a *frequency-discriminating filter*, implying that there is a phase retardation in the filter for those currents which are passed and that there is an effective time-delay for a signal, comprising these frequencies, in getting through the filter.

electric wave telegraphy (*Radio*). An obsolescent term for *radio telegraphy*.

electric wind (*Elec. Eng.*). A stream of air caused by the repulsion of charged particles from a sharply pointed portion of a charged conductor.

electrical analogy (*Acous.*). The correspondence between electric and acoustic systems, which assists in applying to the latter procedures familiar in the former.

electrical angle (*Elec. Eng.*). A term often used in connexion with electrical machinery to denote distances measured round the periphery of the armature or air-gap. One pole pitch is equivalent to 180 electrical degrees, since the rotating vector representing the e.m.f. generated in a conductor, as it moves through this distance, rotates through 180°.

electrical bias (*Teleg.*). The use of a polarising winding on a relay core, for adjusting the sensitivity of the relay to signal currents.

electrical chain (*Elec. Comm.*). A number of circuits (e.g. tuned circuits) coupled together so that energy is transferred from one to the next.

electrical communication. The technique which employs electrical means for the conveyance of information, either between individuals or broadcast to a number of persons; e.g. the telephone, television, facsimile, and radio broadcasting, and extensions using similar apparatus (such as gramophone records and sound-films).

electrical degree (*Elec. Eng.*). See **electrical angle.**

electrical discharger gear (*Aero.*). Bands of copper, or other good electrical conductor, arranged so as to earth an aircraft before it actually alights.

electrical element. See **cell** (*Elec.*).

electrical engineer. A member of the engineering profession who is concerned particularly with electrical work. See also **chartered electrical engineer.**

electrical engineering. That branch of engineering chiefly concerned in the design and construction of all electrical machinery and devices, electrical communications, power transmission, etc.

electrical precipitation (*Elec. Eng.*). The precipitation of solid or liquid particles suspended in a gas by means of a unidirectional electric field, the precipitated particles being attracted to, and collected on, the positive electrode. Also called ELECTROSTATIC PRECIPITATION.

electrical recording (*Acous.*). The use of amplified currents from microphones for operating electromagnetic or electrodynamic drives for the cutting stylus in wax recording.

electrical reproduction (*Acous.*). Reproduction from gramophone records by electromagnetic devices operated by the tracking needle, as contrasted with *acoustic reproduction*, in which the tracking needle drives the centre of the diaphragm of a sound-box connected to a horn.

electrical resonance (*Elec.*). The condition arising when maxima of current or voltage occur when the frequency of the electrical source is varied; also when the length of a transmission line approximates to multiples of a quarter-wavelength and the current or voltage becomes abnormally large.

electrical technology. The science covering the practical applications of electricity. Also called ELECTROTECHNICS.

electrical thread (*Elec. Eng.*). A form of thread used on screwed steel conduit for electrical installation work.

electrician. A person engaged in the construction or maintenance of electrical apparatus or electrical installations.

electricity. The manifestation of a form of energy believed to be due to the separation or movement of certain constituent parts of an atom known as *electrons*.

voltaic—

electricity meter (*Elec. Eng.*). See **integrating meter.**

electrification (*Elec. Eng.*). (1) The production of an electric charge on a body by frictional or other means.—(2) The process of changing over to electric operation a mechanically operated factory, railway, or other works.

elec'tro- (Greek *ēlektron*, amber). A prefix used in the construction of compound terms; e.g. *electrochemical, electrocardiograph.*

electro (*Print.*). Abbrev. for *electrotype.*

electro copper glazing (*Build.*). See **copper glazing.**

electroanal'ysis (*Chem.*). The quantitative separation of metals by electrolysis.

electroblast (*Zool.*) An embryonic cell which will give rise to an electroplax.

electrocar'diogram (*Med.*). A photographic record of the electrical variations which occur during contraction of the muscle of the heart.

electrocar'diograph (*Med.*). A modification of Einthoven's string galvanometer, used for making graphic records of the electrical changes during contraction of the muscle of the heart.

electrocardiog'raphy (*Med.*). The making or the study of electrocardiograms.

electrocautery (*Med.*). See **electric cautery.**

electro-cement (*Elec. Eng.*). Cement made, in an electric furnace, by adding lime to molten slag.

electrochemical condenser. See **electrolytic condenser.**

electrochemical constant (*Chem.*). See **faraday.**

electrochemical equivalent (*Chem.*). The weight of a substance or ion associated with unit quantity of electricity, i.e. with one coulomb.

electrochemical series (*Chem.*). See **electromotive series.**

electrochemistry (*Chem.*). The study of the relation between electricity and chemical change.

electrochon'dria (*Zool.*). Granules occurring in the cytoplasm of an electroplax.

electrocoagulation (*Med.*). Coagulation of bodily tissues by means of high-frequency electric current.

electrocrat'ic (*Chem.*). Owing its stability to an electric charge.

electro-culture (*Bot.*). The stimulation of the growth of plants by electrical means.

electrocution (*Elec. Eng.*). The causing of death by electric shock.

electrode (*Elec. Eng., etc.*). A conductor whereby an electric current is led into a liquid (as in an *electrolytic cell*) or into a gas (as in an electric discharge tube). See **anode, cathode, arc-welding, half-element.**

electrode boiler (*Elec. Eng.*). A boiler in which heat is produced by the passage of an electric current through the liquid to be heated.

electrode efficiency (*Elec. Eng.*). The ratio of the quantity of metal deposited in an electrolytic cell to the quantity which should theoretically be deposited according to Faraday's laws.

electrode-holder (*Elec. Eng.*). In electric arc-welding, a device used for holding the electrode and leading the current to it.

electrode potential, normal (*Chem.*). See **standard electrode potential.**

electrodeposit'ion (*Met., etc.*). The production of a layer of one metal on another, by making them the anode and cathode in an electrolytic cell containing a solution of a salt of the metal to be deposited.

electrodynamic instrument (*Elec. Eng.*). An electrical measuring instrument which depends for its action on the electromagnetic force between two or more current-carrying coils.

electrodynamic loudspeaker (*Acous*). The same as *moving-coil loudspeaker.*

electrodynamic microphone (*Acous.*). The same as *moving-coil microphone.*

electro-endosmo'sis (*Biol.*). Flow of liquid through a pore or pores in a membrane, due to a difference of electrical potential on the two sides of the membrane.

electro-extraction (*Met.*). The recovery of a metal from a solution of its salts by passing an electric current through the solution; a common process for extracting metal from its ore. Also called ELECTRO-WINNING.

electrofacing (*Elec. Eng.*). The process of coating, by electrodeposition, a metal surface with a harder metal in order to render it more durable.

electro-farming. A term applied to that type of farming in which many of the operations (e.g. ploughing, milking, driving of farm machinery) are performed electrically.

electroform'ing (*Met., etc.*). The production of metallic objects by electrodeposition. Also called GALVANOPLASTY.

electro-galvanising (*Elec. Eng.*). The electrodeposition of a protective coating of zinc on metal objects.

electro-gilding. The electrodeposition of a decorative coating of gold on metal objects.

electro-goniometer (*Elec. Eng.*). A name sometimes used to denote a *phase-indicator* (q.v.).

electrogram (*Elec. Eng.*). A chart, obtained from an electrograph, of variations in the atmospheric potential gradient.

electrograph (*Elec. Eng.*). A recording electrometer for measuring the potential gradient in the atmosphere.

electrokinet'ic potential (*Chem.*). The difference of potential existing at the surface of a colloidal particle.

electrolem'ma (*Zool.*). A thin membrane surrounding an electroplax.

electrolier' (*Illum.*). A hanging ornamental light-fitting carrying more than one lamp.

electrology (*Med.*). See **electro-therapy.**

electrol'ysis (*Chem.*). See **electrolytic conduction.**

elec'trolyte (*Chem.*). (1) An electrolytic conductor, especially a liquid.—(2) A substance which, on dissolution in a suitable solvent (usually water), conducts electrolytically.

electrolytic arrester (*Elec. Eng.*). See **aluminium arrester.**

electrolytic capacitor (*Elec. Eng*). A capacitor in which the dielectric between the plates is an electrolyte, instead of the more usual solid insulating material. Also called ELECTROLYTIC CONDENSER.

electrolytic cell (*Chem.*). A vessel in which electrolysis is carried out.

electrolytic condenser (*Elec. Comm.*). A condenser which is dependent on a thin film of aluminium oxide on the surface of aluminium foil for capacity, the other electrode being either a solution of non-corrosive salt, or a thick paste containing same. The aluminium base must be maintained positive, otherwise released hydrogen removes the oxide film. See also **electrolytic capacitor.**

See **d.c.—** **dry—** **wet—**

electrolytic conduction (*Chem.*). The conduction of electricity accompanied by the actual transfer of matter (migration of ions), which is shown by the occurrence of chemical changes at the electrodes.

electrolytic copper (*Met*). Copper refined by the electrolytic method. This gives metal of high purity (over 99·94% copper), and enables precious metals, such as gold and silver, to be recovered; used in refining about 80% of the copper produced.

electrolytic depolarisation (*Chem.*). The prevention of the accumulation of decomposition products at the electrodes during electrolysis, production of current by a galvanic cell, or electrochemical corrosion.

electrolytic detector (*Radio*). A fine wire, generally of platinum, immersed in an electrolyte and polarised by a small steady voltage. The incidence of a small high-frequency voltage breaks down the polarising film and permits the passage of direct current. Also called SCHLOEMILCH DETECTOR.

electrolytic dissociation (*Chem.*). The dissociation of a substance into ions on dissolution in a suitable solvent.

electrolytic instrument (*Elec. Eng.*). An instrument depending for its operation upon electrolytic action, e.g. an electrolytic meter.

electrolytic lead (*Met.*). Lead refined by the Betts Process; has purity of about 99·995-99·998% lead.

electrolytic lightning arrester (*Elec. Eng.*). A lightning arrester consisting of a number of electrolytic cells in series; it breaks down, allowing the lightning stroke to discharge to earth, when the voltage across it exceeds about 400 volts per cell.

electrolytic meter (*Elec. Eng.*). An integrating meter whose operation depends on electrolytic action.

electrolytic polarisation (*Chem.*). See **polarisation.**

electrolytic rectifier (*Elec. Eng.*). A rectifier consisting of an electrolytic cell, i.e. two electrodes immersed in an electrolyte, and depending for its action on the properties of certain combinations of metals and solutions to allow current to flow in one direction only. Sometimes called an ELECTROLYTIC VALVE.

electrolytic refining (*Met.*). The method of producing pure metals, by making the impure metal the anode in an electrolytic cell and depositing a pure cathode. The impurities either remain undissolved at the anode or pass into solution in the electrolyte.

electrolytic valve (*Elec. Eng.*). See **electrolytic rectifier.**

electrolytic wire bar (*Elec. Eng.*). A bar of electrolytically refined copper of suitable dimensions for rolling to form wire.

electrolytic zinc (*Met.*). Zinc produced from its ores by roasting (to convert sulphide to oxide), solution of oxide in sulphuric acid, precipitation of impurities by adding zinc dust, and final electrolytic deposition of zinc on aluminium cathodes. Product has purity over 99·9%.

electromagnet (*Elec. Eng.*). A core of iron or steel which is magnetised when a current is passed through a coil surrounding the core, and behaves as a magnet.

electromagnetics (*Elec. Eng.*). See **electromagnetism.**

electromagnetic brake (*Elec. Eng.*). A brake in which the braking force is produced by the friction between two surfaces pressed together by the action of a solenoid, or by magnetic attraction, the necessary flux being produced by an electromagnet.

electromagnetic component (*Radio*). (1) Strictly, that component of the combined field surrounding a transmitting antenna which represents the radiated energy.—(2) The magnetic component of an electromagnetic wave.

electromagnetic control (*Elec. Eng.*). A form of remote control for switchgear, etc. in which operation is effected by means of a solenoid.

electromagnetic damping (*Elec. Eng.*). See **magnetic damping.**

electromagnetic deflection (*Cathode Ray Tubes*). Deflection of the beam in a cathode ray tube by means of a magnetic field produced by a system of coils carrying a current.

electromagnetic generator (*Elec. Eng.*). An electric generator which depends for its action on the induction of e.m.f.'s in a circuit by a change in the magnetic flux linking with that circuit.

See the articles on the following electromagnetic generators:

alternating-current—
direct-current—
heteropolar—
homopolar—
induction—
inductor—
magneto—
reaction—
synchronous—

electromagnetic induction (*Elec. Eng.*). The production of an e.m.f. in a circuit by a change in the magnetic flux linking with that circuit.

electromagnetic inertia (*Elec. Eng.*). A term occasionally used to denote the energy required to stop or start the current in an inductive circuit.

electromagnetic instruments (*Elec. Eng.*). Electrical measuring instruments whose action depends on the electromagnetic forces set up between a current-carrying conductor and a magnetic field. See **moving-coil instrument, moving-iron instrument, dynamometer.**

electromagnetic loudspeaker (*Acous.*). The same as *moving-iron loudspeaker.*

electromagnetic microphone (*Acous.*). A type of microphone in which the generated electromotive force arises from the motion of a magnetic circuit, so that a varying flux generates the electromotive forces in a coil.

electromagnetic pick-up (*Acous.*). A pick-up in which the motion of the needle, in following the recorded track, causes a fluctuation in the magnetic flux carried in any part of a magnetic circuit and consequent electromotive forces in any coil embracing such magnetic circuit.

electromagnetic reaction (*Radio*). Reaction between the anode and grid circuits of a thermionic tube obtained by electromagnetic coupling. Also called INDUCTIVE REACTION, MAGNETIC REACTION.

electromagnetic separation. Removal of ferrous objects from town refuse, or 'tramp iron' from bulk materials, as they travel along a conveyor, over a drum, or into a revolving screen, by setting up a magnetic field which diverts the ferrous material from the rest.

electromagnetic switch (*Elec. Eng.*). A switch whose opening and closing is effected by means of electromagnets or solenoids.

electromagnetic theory (*Phys.*). The theory which accounts for the phenomena of radio transmission and of light in terms of electromagnetic waves.

electromagnetic wave (*Phys.*). A travelling disturbance in space produced by the acceleration of an electric charge, and comprising an electric field at right-angles to a magnetic field, both moving at the same velocity in a direction normal to the plane containing the two fields. Light waves and the waves used in radio are of this nature.

electromagnetism (*Elec. Eng.*). A name given to the science of the properties of, and relations between, magnetism and electric currents. Also called ELECTROMAGNETICS.

electromalux (*Television*). A tube employing a mosaic, which functions photo-electrically when used as a television camera.

electromechanical brake (*Elec. Eng.*). A form of electric brake in which the braking force is obtained partly as the result of the attraction of two magnetised surfaces, and partly by mechanical means, as a result of the operation of a solenoid.

electrom′erism (*Chem.*). A form of tautomerism caused by a redistribution of electrons among the atoms of a molecule or group.

electrometallisation (*Elec. Eng.*). The electrodeposition of a metal on a non-conducting base, either for decorative purposes or to give a protective covering.

electrometallurgy (*Met.*). A term covering the various electrical processes for the industrial working of metals; e.g. electrodeposition, electrorefining, and operations in electric furnaces.

electrom′eter (*Elec. Eng.*). An electrical measuring instrument for measuring potential difference; it depends for its action on the force of attraction or repulsion between charged plates or needles.

See **absolute—**
attracted disc—
capillary—
Dolezalek—
filament—
portable—
quadrant—
tachometric—

electrometer gauge (*Elec. Eng.*). A small attracted-disc electrometer sometimes attached to the needle of a quadrant electrometer in order to determine whether the needle is sufficiently charged.

electrometric titration (*Chem.*). A titration in which the end-point is determined by observing the change of potential of an electrode immersed in the solution titrated.

elec′tromobile, —ĕl′ (*Elec. Eng.*). A name sometimes given to a battery-driven road vehicle.

electromotive force (*Elec. Eng.*). The force which tends to cause a movement of electricity around an electric circuit. Commonly abbreviated to **e.m.f.**

See **back—** **counter—** **thermo—**

electromotive intensity (*Elec. Eng.*). See **potential gradient.**

electromotive series (*Chem.*). The chemical elements arranged in order of their standard electrode potentials.

elec′tromo′tor (*Elec. Eng.*). See **electric motor.**

electron (*Phys.*). An electrically charged particle, or element of charge having inertia, which is the most numerous constituent of matter. Although normally existing within the system known as the atom, electrons may be isolated from matter (as in cathode rays). The electronic charge e is $-4{\cdot}774 \times 10^{-10}$ *E.S.U.*, its mass when at rest m_0 is $9{\cdot}042 \times 10^{-28}$ gm.

electron affinity (*Chem.*). The tendency of certain substances, oxidising agents, to capture an electron.

electron camera (*Television*). A generic term for any device which converts an optical image into a corresponding electric current directly by electronic means, without the intervention of mechanical scanning. See **Emitron, Iconoscope, image dissector.**

electron cloud (*Thermionics*). A region in the inter-electrode space of an electron discharge tube containing large numbers of relatively stationary electrons. See also **space charge.**

electron-coupled oscillator (*Radio*). An oscillator using a four- (or more) electrode tube, the first three electrodes being used for the production of the oscillations, the output being taken from a subsequent electrode which is electron-coupled to the oscillator circuit proper. Characterised by the very small effect of the load on the frequency of oscillation.

electron coupling (*Radio*). Coupling between two circuits due to an electron stream controlled by the one circuit influencing the other circuit. Such coupling tends to be unidirectional, currents in the second circuit having little influence on the first.

electron diffraction (*Phys.*). Diffraction effects obtained when electrons are passed through very thin metal foil, the metal crystals forming a diffraction space lattice in a similar manner to X-ray diffraction crystals. Electron diffraction experiments have supported De Broglie's wave hypothesis. See **De Broglie waves.**

electron discharge (*Thermionics*). An electric current produced by the passage of electrons through otherwise empty space.

electron discharge tube (*Thermionics*). An evacuated container containing two or more electrodes between which an electron discharge takes place.

electron gun (*Cathode Ray Tubes*). The assembly of electrodes in a cathode ray tube which produces the electron beam. It comprises a cathode from which electrons are emitted, an apertured anode, and one or more focusing electrodes. Those electrons which pass through the aperture form the beam.

electron jet (*Thermionics*). A narrow stream of electrons, similar to a beam, but not necessarily focused.

electron lens (*Cathode Ray Tubes*). A distribution of electric field in the path of the electron beam which concentrates the electrons to a focus, in the same manner as an optical lens acts on a ray of light. See also **electrostatic focusing.**

electron microscope (*Thermionics*). A thermionic tube in which the electrons emitted from the cathode are focused, by means of suitable electrostatic fields, to form an enlarged image of the cathode on a fluorescent screen.

electron multiplier (*Photo-electronics*). A photo-electric cell comprising a photo-cathode and a series of auxiliary electrodes, maintained at successively increasing positive potentials up to the final anode. Photo-electrons emitted from the cathode impinge on the first of the auxiliary electrodes, from which secondary electrons are ejected and travel to the next electrode, where the process is repeated. By the use of suitable materials for the auxiliary electrodes, the number of secondary electrons emitted at each stage is made greater than the number of incident electrons, so that very high overall amplification of the original photo current results.

electron pair (*Chem.*). See **duplet.**

electron relay (*Thermionics*). An electron discharge tube in which the discharge is controlled, without the expenditure of energy, by the controlling agent; e.g. a three- (or more) electrode vacuum tube.

electron tube (*Thermionics*). See **electron discharge tube.**

electron valve (*Thermionics*). A *thermionic valve* (q.v.).

electron waves (*Phys.*). See **De Broglie waves.**

Electron (*Met.*). See **Elektron.**

Electrone (*Acous.*). The trade-name of a system of electronic music generation using electrostatic generators for pure frequencies, which are synthesised into desired timbres. Recently applied to church and theatre organs.

electronegative (*Chem.*). (1) Carrying a negative charge of electricity.—(2) Tending to form negative ions, i.e. having a relatively positive electrode potential.

electronics. The science which deals with the behaviour of free electrons.

electronic formula (*Chem.*). A formula in which the electrons in the outermost shells of the atoms are represented, generally by dots surrounding the symbols of the elements; thus,

$$\mathrm{H}:\underset{\cdot\cdot}{\overset{\cdot\cdot}{\mathrm{O}}}\cdot\mathrm{H},\ \underset{\cdot\cdot}{\overset{\cdot\cdot}{\mathrm{O}}}:.\mathrm{C}.:\underset{\cdot\cdot}{\overset{\cdot\cdot}{\mathrm{O}}}\,.$$

electronic music (*Acous.*). Music generated by synthetic means, as by valve oscillators, electrostatic or electromagnetic generators, photo-electric filters, or amplified string motions, etc., which are controlled by keyboards, etc.; put forward as economic alternatives to normal types of musical instruments, such as organs, etc.

electronic oscillations (*Radio*). Oscillations of very high frequency performed by electrons during their journey from cathode to anode of a thermionic tube, the frequency being determined by the transit time. See **Barkhausen-Kurz oscillations.**

electronic rectifier (*Elec. Eng.*). See **metal rectifier.**

electro-osmosis (*Chem.*). The movement of a liquid through a membrane under the influence of an electric field.

electro-parting (*Elec. Eng.*). The electrolytic separation of two or more metals.

electro-pathology, electropathy (*Med.*). See **electro-therapy.**

electrophone (*Elec. Comm.*). An electrical relay system for reproducing theatre programmes in domestic premises.

elec'trophore'sis (*Chem.*). The migration of suspended particles under the influence of an electric field.

electroph'orus (*Elec. Eng.*). A device, used in simple electrostatic experiments, which consists of a sheet of ebonite attached to a metal plate, together with a second metal plate with an insulated handle. A charge initially obtained by rubbing the ebonite can be multiplied many times. See **continuous electrophorus.**

electro-physiology (*Biol.*). The science of electrical phenomena associated with living organisms.

electroplating. The production of a thin coating of one metal on another by *electrodeposition* (q.v.), either for protection against corrosion or for the sake of appearance.

electroplating (*Acous.*). The deposition of a layer of copper on wax recordings, after the surface of the latter has been made conducting by brushing on graphite powder or by sputtering.

electroplating bath. See **electroplating vat.**

electroplating generator (*Elec. Eng.*). A direct-current electric generator, specially designed for electroplating work; it gives a heavy current at a low voltage.

electroplating vat. A tank in which objects to be electroplated are hung. The tank is filled with the electrolyte and contains plates of the metal to be deposited, while the objects themselves form the cathodes. Also called ELECTROPLATING BATH.

elec'troplax (*Zool.*). In certain Vertebrates, one of the plates of which the electrical organ is built up.

electro-pneumatic contactor (*Elec. Eng.*). A contactor operated by compressed air but controlled by electrically operated valves.

electro-pneumatic control (*Elec. Eng.*). A form of remote control in which switches or other apparatus are operated by compressed air controlled by electrically operated valves; commonly used on electric trains.

electro-pneumatic signalling (*Elec. Eng.*). A signalling system operated by compressed air, the valves which control the latter being operated electrically.

electropositive (*Chem.*). (1) Carrying a positive charge of electricity.—(2) Tending to form positive ions, i.e. having a relatively negative electrode potential.

electrorefining (*Met.*). See **electrolytic refining.**

elec'troscope (*Elec. Eng.*). An apparatus, depending for its action on the electrostatic repulsion between charged bodies, which indicates the presence of a charge or a potential difference.

See **condensing—** **pith-ball—**
gold-leaf—

electroscopic powder (*Elec. Eng.*). A mixture of finely divided materials which can acquire charges by rubbing together, so that, if dusted on to a plate, the different materials adhere to differently charged portions of the plate, forming a figure.

electro-sherardising (*Met.*) A method of *sherardising* (q.v.) in which the vessel is heated electrically.

elec'trosol (*Chem.*). A colloidal solution prepared by arcing metal electrodes under distilled water.

electrosonic music, etc. (*Acous.*). Music or other sounds produced by electronic means (e.g. by oscillators, photo-electric cells, or generators), which are combined electrically and reproduced through loudspeakers, as contrasted with the normal production of sounds by musical instruments.

electrostatics (*Elec. Eng.*). The science which deals with the behaviour of electric charges and potentials.

electrostatic adhesion (*Elec. Eng.*). Adhesion between two substances, or surfaces, due to electrostatic attraction between opposite charges.

electrostatic component (*Radio*). See **electric component.**

electrostatic coupling (*Radio, etc.*). See **capacity coupling.**

electrostatic deflection (*Cathode Ray Tubes*). Deflection of the beam of a cathode ray tube by means of an electrostatic field between two plates between which the beam passes on its way to the fluorescent screen. Cf. *electromagnetic deflection.*

electrostatic error (*Radio*). The error in bearings given by a direction-finder due to asymmetrical distribution of the capacity of the loop to earth. See also **antenna effect.**

electrostatic field (*Elec. Eng.*). See **electric field.**

electrostatic focusing (*Cathode Ray Tubes*). A method of focusing high-vacuum cathode ray tubes by the electrostatic field produced by two or more electrodes maintained at suitable potentials. See also **electron lens, gas focusing, magnetic focusing.**

electrostatic generator (*Elec. Eng.*). An electric generator which depends for its action on electrostatic processes for the production of charges at high potentials. Also called INFLUENCE MACHINE, INDUCTION MACHINE, STATIC MACHINE, FRICTIONAL MACHINE.

See **Bonnetti machine** **Tudsbury machine**
Holtz do. **Voss** do.
Lemstrom do. **Wimshurst** do.
Pidgeon do. **Wommelsdorf** do.
Toepler do.

electrostatic induction (*Elec. Eng.*). The production of a charge on a body by virtue of the presence of an opposite charge on a neighbouring conductor.

electrostatic instrument (*Elec. Eng.*). An electrical measuring instrument depending for its action on electrostatic forces set up between charged bodies.

electrostatic Kerr effect (*Television*). The dispersion of the plane of polarisation experienced by a beam of plane-polarised light on its passage through a transparent medium subjected to an electrostatic strain. It is the basis of action of several light-modulation systems.

electrostatic loudspeaker (*Acous.*). The same as *condenser loudspeaker.*

electrostatic microphone (*Acous.*). The same as *condenser microphone.*

electrostatic motor (*Elec. Eng.*). An electric motor depending for its action on electrostatic attraction and repulsion.

electrostatic oscillograph (*Elec. Eng.*). An oscillograph in which the moving element is actuated by electrostatic attraction or repulsion.

electrostatic precipitation (*Elec. Eng.*). See **electrical precipitation.**

electrostatic reaction (*Radio*). (1) Reaction between the anode and grid circuits of a thermionic tube due to the inter-electrode capacity coupling.—(2) Capacity reaction obtained by the use of a separate condenser.

electrostatic screening (*Radio*). The same as *electrostatic shielding.*

electrostatic separator (*Elec. Eng.*). An apparatus in which materials having different permitivities are deflected by different amounts when falling between charged electrodes, and therefore fall into different receptacles.

electrostatic shield (*Elec. Eng.*). A metallic shield surrounding instruments or other apparatus, in order to prevent their being influenced by external electric fields.—(*Radio*) An earthed conducting plate interposed between two circuits to prevent unwanted *capacity coupling* (q.v.) between them. Also called ELECTROSTATIC SCREEN.

electrostatic units (*Elec. Eng.*). A fundamental system of units based on the force exerted between two charges of electricity. Abbrev. **E.S.U.**

electrostatic voltmeter (*Elec. Eng.*). A voltmeter depending for its action upon the attraction or repulsion between charged bodies.

electrostatic wattmeter (*Elec. Eng.*). A quadrant electrometer used in conjunction with a shunt and arranged in such a way that its deflection is proportional to the power consumed by the circuit to which it is connected.

electrostenol'ysis (*Chem.*). The precipitation of metals in the pores of a membrane by electrolysis.

electrosynton'ic switch (*Elec. Eng.*). A switch remotely controlled by means of a high-frequency current superimposed on the main circuit.

electrotax'is (*Zool.*). See **galvanotaxis.**

electrotechnics. See **electrical technology.**

electrotellu'rograph (*Elec. Eng.*). An apparatus for the study of earth currents.

electro-therapy, electro-therapeutics (*Med.*). The treatment of diseases by electric currents, or by electrically produced radiations. Also called ELECTROLOGY, ELECTRO-PATHOLOGY, ELECTROPATHY, PHYSIO-THERAPY.

electrother'mics. The application of electrical energy to the production of heat, in chemical or metallurgical processes.

electrotint (*Print.*). A printing block produced by drawing with varnish on a metal plate, and depositing metal electrically on the parts not covered with the varnish.

elec'trotomes (*Zool.*). In the electric organ of some *Selachii*, a series of concentric cones into which the mass of electroplaxes is divided by the myotomes of the tail-muscles.

electroto'nus (*Physiol.*). The state of a nerve which is being subjected to a steady discharge of electricity.

electrotro'pism (*Zool.*). See **galvanotaxis.**

electrotype. A facsimile in relief of an object, produced by the electrodeposition of copper on a conducting matrix.—(*Print.*) A hard-wearing printing plate made by depositing a film of copper electrolytically on a wax mould taken from type or an original plate. The copper shell is backed with a lead alloy. Commonly abbreviated to ELECTRO.

electroty'pograph (*Typog.*). An electrically operated type-setting machine.

electrova'lence (*Chem.*). A chemical bond in which an electron is transferred from one atom to another, the resulting ions being held together by electrostatic attraction.

electro-winning (*Met.*). See **electro-extraction.**

electrum (*Met.*). An alloy of gold and silver (55-88% of gold) used for jewellery and ornaments. Also, nickel-silver (copper 52%, nickel 26%, and zinc 22%); it has the same uses as other nickel-silvers.

elec'tuary (*Med.*). A medicine consisting of the medicinal agent mixed with honey, syrup, or jam.

ele'idin (*Zool.*). A substance which occurs in the cells of the superficial layer of the rete mucosum of the skin of Vertebrates; it is in the form of granules or droplets, and stains deeply with haematoxylin.

Elektron, Electron (*Met.*). A series of magnesium-base alloys containing aluminium 3-12%, manganese 0·2-0·4%, and sometimes zinc 0·5-3·5%. They are comparatively strong and very light.

element (*Chem.*). A substance which cannot be decomposed by chemical means into simpler substances. There are 92 chemical elements. See **periodic system.**

element (*Elec. Eng.*). A term often used to denote the resistance wire and former of a resistance type of electric heater. Also used to denote one of the electrodes of a primary or secondary cell.

elements (*Meteor.*). Those components (such as temperature, pressure, humidity, wind, rainfall, cloudiness) which determine the state of the weather.

elements (*Photog.*). The individual filter particles of a colour screen, or the minute lenses of a lenticular film.

element-former (or **-carrier**) (*Elec. Eng.*). A refractory substance upon which the heated wire of a resistance type of electric heater is wound.

elements of an orbit (*Astron.*). The six data mathematically necessary to determine completely a planet's orbit and its position in it: viz. (1) longitude of the ascending node, (2) inclination of the orbit, (3) longitude of perihelion, (4) semi-axis major, (5) eccentricity, (6) epoch, or date of planet's passing perihelion.

elementary analysis (*Chem.*). The qualitative and quantitative analysis of the elements present in an organic compound, by combustion with cupric oxide. Carbon is oxidised to CO_2 and absorbed in a concentrated KOH solution, hydrogen is oxidised to H_2O and absorbed in a tube charged with anhydrous calcium chloride, oxygen is estimated by difference. Nitrogen is estimated by a separate combustion and measured as N_2, the CO_2 and H_2O being absorbed in concentrated KOH. Halogens, sulphur, etc. are estimated by different methods.

elementary bodies (*Med.*). Particles present in cells of the body in infections with filter-passing viruses.

elementary colours. See **primary colours.**

elephant (*Paper*). A paper size: writing and drawing, 23 × 28 in.; brown paper, 24 × 34 in.

elephanti'asis (*Med.*). Enlargement of the limbs, or of the scrotum, from thickening of the skin and stasis of lymph; due to obstruction to lymphatic channels, especially by filarial worms.

Elephantide pressboard (*Diel.*). This has a large cotton content and is used for the insulation of transformers, armature and stator coils. It is specially suitable for use under oil.

Eleu'theroblaste'a (*Zool.*). An order of *Hydrozoa* in which the medusoid phase is unknown, and the polyps are solitary and develop both male and female gonads from the ectoderm; there is no skeleton.

eleu'therodac'tyl (*Zool.*). Having the hind toe free.

eleu'theropet'alous (*Bot.*). Polypetalous.

Eleu'therozo'a (*Zool.*). A subphylum of *Echinodermata*, comprising forms of free and active habit. Cf. *Pelmatozoa.*

elevated railway (*Rail.*). An overhead railway which runs on girders supported by steel or iron pillars erected on the roadway.

elevation (*Build.*). The façade of a building.

elevation (*Surv.*). The American equivalent for *reduced level.*

elevation head (*Hyd.*). The energy possessed per unit weight of a fluid, due to its elevation above some datum. If at a given point the elevation is z feet, the elevation head at this point is said to be z feet. Also called POSITION HEAD.

elevation of boiling-point (*Chem.*). The raising of the boiling-point of a liquid by substances in solution.

elevator (*Aero.*). An aerodynamic surface, under the control of the pilot, for producing a pitching moment on the line of flight of an aircraft.

elevator (*Eng.*). (1) A type of *conveyor* (q.v.) for raising or lowering material which is temporarily carried in buckets or fingers attached to an endless chain.—(2) A *lift* (q.v.).

elevator (*Zool.*). A muscle which by its contraction raises a part of the body. Cf. *depressor.*

elevator dredger (*Civ. Eng.*). A *bucket-ladder dredger* (q.v.).

elimination (*Chem.*). The removal of a simple molecule (e.g. of water, ammonia, etc.) from two or more molecules, or from different parts of the same molecule. See **condensation** (2).

elimination filter (*Elec. Comm.*). See **band-elimination filter.**

eliminator (*Radio*). See **battery eliminator.**

elit'toral zone (*Ocean.*). The portion of the sea bottom over which is 40 metres or more of water.

elix'ir (*Med.*). A strong extract or tincture.

ell (*Plumb.*). A short L-shaped connecting pipe.

Elland stone (*Build.*). A fine greyish-brown sandstone from the Millstone Grit of Yorkshire.

ellipse (*Maths.*). (1) The section of a right circular cone by a plane, the whole of the section lying on one side of the vertex of the cone.—(2) The plane locus of a point such that the sum of the distances of the point from two fixed points (*foci*) is constant.—(3) The plane locus of a point such that the ratio of the distances of the point from a fixed point (*focus*) to the distance from a fixed line (*directrix*) is constant, and less than unity, this being the *eccentricity*. The *major* and *minor* axes are the maximum and minimum normally-bisecting diameters. The equation is of the form: $x^2/a^2-y^2/b^2=1$.

ellip′soid (*Geom.*). A closed solid figure of which all plane sections are ellipses. An ellipsoid of revolution is generated by the revolution of an ellipse about one of its axes, the major axis giving the prolate form, the minor axis the oblate form.

ellipsoi′dal hypothesis of star-streaming (*Astron.*). The method of analysing stellar motions graphically which results in a polar curve of oval or ellipsoidal form, the directions of observed motion being plotted in angle and the radius vector being proportional to the number of stars moving in any one direction.

elliptic comets (*Astron.*). See **comet.**

elliptic polarisation (*Light*). This may be regarded as being produced by two mutually perpendicular plane-polarised components which are not in phase. See **circular polarisation** (*Light*), **polarised light.**

elliptic polarisation (*Radio*). The state of polarisation of an electromagnetic wave in which the electric and magnetic fields each contain two unequal components, at right-angles in space and in phase quadrature. See also **circular polarisation** (*Radio*).

elliptic trammel (*Drawing*). An instrument for drawing ellipses, consisting of a straight arm having a pencil point at one end and two adjustable studs (all three of which project at right-angles to the arm), and a frame with two grooves crossing one another at right-angles. If a stud is placed in each of the grooves, then, as the arm is rotated, the pencil point describes an ellipse.

elliptical arch (*Build*, *Civ. Eng.*). An arch formed to an elliptical curve, or sometimes to a curve which is not a true ellipse but a combination of circular arcs.

elm (*Timber*). A dark-brown tough wood which soon rots if alternately exposed to wet and dry conditions, but is durable under either alone; largely used for piles, water pipes, pumps, etc.

Elo (*Plastics*). A thermosetting plastic, of the phenol-cresol-formaldehyde type. See **Bakelite.**

elongated (*Typog.*). A narrow form of type, often used in display work. It is commonly known as CONDENSED.

elongating stage (*Bot.*). The period of growth when an organ increases in length, before secondary thickening begins.

elongation (*Astron.*). The difference between the geocentric celestial longitude of the moon or planets and that of the sun, amounting to 0° at conjunction, 180° at opposition, 90° and 270° at the two quadratures; its period is the synodic period of the body in question. The planets Mercury and Venus have maximum elongations of about 28° and 46° respectively.

elongation (*Met.*). The total extension produced in a tensile test. Expressed as a percentage of the original gauge length, which should also be given. See **uniform extension, local extension.**

Elsworth Rock (*Geol.*). A compact limestone occurring at the base of the clay facies of the Corallian in the south Midlands of England.

elu′triator (*Chem.*, *Mining*). An appliance for washing or sizing very fine powders in an upward current of water.

elu′vial (eluvium) gravels (*Geol.*). Those gravels formed by the disintegration *in situ* of the rocks which contributed to their formation. Cf. *alluvial deposits.*

elvan (*Geol.*). A term applied by Cornish miners to the dyke rocks associated with the Armorican granites of that county. Elvans are actually quartz-porphyries, microgranites, and other medium- to fine-textured dyke rocks of granitic composition.

ely′tra (*Zool.*). In *Coleoptera*, the hardened, chitinised fore-wings which form horny sheaths to protect the hind-wings when the latter are not in use: in certain *Polychaeta*, plate-like modifications of the dorsal cirri.—*adjs.* **elytroid, elytriform.**

El′zevir, —vêr (*Print.*). A class of book named after the Elzevir family, Dutch printers of the 16th-17th century. A distinctive type-face used by them is also known by the same name.

Em (*Chem.*). The symbol for an *emanation.*

e/m (*Phys.*). The ratio of the electric charge to the mass for particles such as electrons and positive rays. For slow-moving electrons, the value of e/m is $1{\cdot}77 \times 10^8$ coulombs per gram. The value decreases with increasing velocity, however, on account of the increase in effective mass. See **mass of the electron.**

em (*Typog.*). The square of the body of any size of type; used as a unit of measurement in computing the cost of composition, size of pages, and for indicating the size of dashes, spaces, etc.

em quad (*Typog.*). A square quadrat one em in width. Less than type height, it is used for spacing. The full point at the end of sentences is usually followed by an em quad. Known to the compositor as a MUTTON.

em rule (*Typog.*). The dash. A thin horizontal line one em of the type body in width. Apart from its uses as a mark of punctuation, it is often employed to build up rules in tabular work. 2-, 3-, and 4-em rules are used for particular purposes. Also known as EM SCORE, METAL RULE, MUTTON RULE.

E.M. wave (*Radio*, *etc.*). See **electromagnetic wave.**

emanations (*Chem.*). Radon and its isotopes, radioactive, chemically inert gases resulting from the disintegration of radium, thorium, and actinium.

Emanueli porosimeter, ā-man-ū-ā′-li (*Diel.*). A double U-tube arrangement for measuring the porosity of a given sample. One tube has the sample in parallel with it, and the other a known porosity across it.

emar′ginate (*Bot.*). (1) Having a slight notch at the tip.—(2) As if scooped out close to the point of attachment.—(3) Lacking a distinct margin.—(*Zool.*) Having the tip or margin notched.

emasculation (*Bot.*). The removal of the stamens from an unopened flower.—(*Med.*) Removal of testes, or of testes and penis.

emas′culator (*Vet.*). An instrument for castrating horses and bulls by crushing the spermatic cord.

embankment (*Civ. Eng.*). A ridge of earth, stones, etc. specially constructed to carry a highway or railroad at a higher level than the surrounding ground; or as a protective bank to prevent water encroachment, etc. Also called a BANK.

embankment wall (*Civ. Eng.*). A retaining wall from the top of which the supported earth rises at a slope.

embattlemented (*Build.*). A term applied to a building feature (such as a parapet) which is indented along the top like a battlement.

embedded column (*Build.*). A column which is partly built into the face of a wall.

embedded temperature detector (*Elec. Eng.*). A resistance thermometer or thermocouple built into a machine or other piece of equipment during its construction, in order to be able to ascertain the temperature of a part which is inaccessible under working conditions.

embellishment (*Build.*). Ornamentation applied to building features.

Embiop′tera (*Zool.*). An order of small, elongate, soft-bodied *Exopterygota*, with short anal cerci; the males have two equal pairs of small wings, the females are wingless; the mouthparts are adapted for biting; the basal joint of the tarsi of the first pair of legs is swollen and contains a silk-gland; gregarious tropical Insects living in silken tunnels.

embolec'tomy (*Surg.*). Excision of an embolus.

embol'ic gastrulation (*Zool.*). Gastrulation by invagination.

em'bolism (*Med.*). The blocking of a blood-vessel by a mass carried, to the point of obstruction, from a remote part of the circulation.

em'bolite (*Min.*). The chief silver ore in some of the Chile mines, occurring as yellow-green incrustations and masses. Chemically, chloride and bromide of silver.

embo'lium (*Zool.*). In some *Hemiptera*, a narrow strip of the corium.

Embo'lobran'chia'ta (*Zool.*). A group of *Arachnida*, breathing by lung-books or tracheae, or both, usually of terrestrial habit.

embolom'erous (*Zool.*). Having the neural and haemal elements of the vertebrae alternating as a series of wedge-shaped bones, and forming two vertebral rings in each somite, completely enclosing the notochord.

embo'lus, *or* em'— (*Med.*). A clot or mass formed in one part of the circulation and impacted in another, to which it is carried by the blood-stream.

embolus (*Zool.*). The distal portion of the palpal organ of a male Spider, comprising the ejaculatory duct and the conductor.

em'boly (*Zool.*). Invagination: the condition of pushing in or growing in.—*adj.* **embolic.**

embossed (*Bot.*). Umbonate.

embossed (*Build.*). A term applied to any form of ornamentation which is raised from the general surface which it is decorating.

embossing (*Leather*). The process of imprinting a grain or pattern on leather by means of heated plates or rollers suitably engraved.

embossing (*Photog.*). The minute lenses and the process of impressing them on the film base of a colour film.

embrasure (*Arch.*). The splayed reveal of a window opening.

embrocation (*Med.*). The action of applying or rubbing a medicated liquid into an injured part: the liquid so used.

embroidery (*Textiles*). (1) Lace work consisting of a ground of traverse bobbin net on which an ornamental design has been stitched.—(2) Ornamental work done by needle or machine on a cloth, canvas, or other ground.

em'bryo (*Bot.*). A young plant in a rudimentary state of development, usually contained in a seed or surrounded by protective tissue.—(*Zool.*) An immature organism in the early stages of its development, before it emerges from the egg or from the uterus of the mother.—*adj.* **embryonic.**

embryo sac (*Bot.*). A cavity in the ovule of an angiosperm, formed by the enlargement of the megaspore, and usually containing eight nuclei, of which the most important is the egg nucleus.

embryocar'dia (*Med.*). A sign of cardiac weakness, in which the sounds of the heart in an adult resemble those heard in the foetus.

embryogeny, —oj'en-i (*Biol.*). The processes leading to the formation of the embryo: the study of these processes.

embryol'ogy (*Biol.*). The study of the formation and development of embryos.

embryo'ma (*Med.*). A tumour formed of embryonic or foetal elements.

embryon'ic fission (*Zool.*). See **polyembryony.**

embryonic tissue (*Bot.*). Meristematic tissue.

em'bryophore (*Zool.*). In the embryonic stages of certain *Cestoda*, a ciliated envelope which encloses the embryo and is formed from the superficial blastomeres.

em'bryophyte (*Bot.*). A plant which forms an embryo.

embryot'omy (*Med.*). The removal of the viscera or of the head of a foetus, in obstructed labour.

Emdecca (*Build.*). Zinc sheets so treated as to resemble tiling.

emerald (*Min.*). The brilliant green gemstone, a form of beryl; silicate of beryllium and aluminium, crystallising in hexagonal prismatic forms, occurring chiefly in mica-schists, and rarely in pegmatites.

See **Brazilian— Oriental— Uralian—**

emerald copper (*Min.*). See **dioptase.**

emerald green (*Paint.*). A bright-green pigment, produced from aceto-arsenite of copper.

emerald nickel (*Min.*). See **zaratite.**

emergence (*Biol.*). An epidermal or subepidermal outgrowth. In *Insecta*, the appearance of the imago from the cocoon, pupa-case, or pupal integument.

emergence (*Bot.*). An outgrowth from a plant, derived from epidermal and cortical tissues, but not containing vascular tissue, and not developing into a stem or leaf.

emergence of land (*Geol.*). The mere fact of emergence of land from the sea is proved by the occurrence of strata which are obviously indurated marine clays, and sands containing marine shells and fish-remains at many different levels in the stratigraphical column. It is also clearly demonstrated by the occurrence of raised beaches round our coasts. It is an open question as to how far these changes are due to isostatic readjustment, to eustatic changes of sea-level, or to other causes.

emergency release-push (*Elec. Eng.*). A switch fitted to an electric lift, to allow the car, in case of emergency, to be moved with the doors open.

emergency stop (*Elec. Eng.*). A switch installed in a lift-car, or other similar piece of equipment, by means of which the power to the operating motor can be cut off. Also called a SAFETY SWITCH.

emergency switch (*Elec. Eng.*). A switch placed in a convenient position for cutting off the supply of electricity to a piece of apparatus or to a building, in case of emergency.

emersed (*Bot.*). (1) Protruding upwards.—(2) Amphibious.

emersion (*Astron.*). The exit of the moon, or other body, from the shadow which causes its eclipse.

emery (*Min.*). A finely granular intimate admixture of corundum and either magnetite or haematite, occurring naturally in Greece and localities in Asia Minor, etc.; used extensively as an abrasive.

emery paper, emery cloth, emery buff (*Eng.*). Paper, or more often cloth, surfaced with emery powder, held on by an adhesive solution; used for polishing and cleaning metal. See **emery.**

emery wheel (*Eng.*). A *grinding wheel* (q.v.) in which the abrasive grain consists of emery powder, held by a suitable bonding material.

em'esis (*Med.*). The act of vomiting.

emet'ic (*Med.*). Having the power to cause vomiting: a medicament which has this power.

em'etine (*Chem.*). $C_{29}H_{40}O_4N_2$, an alkaloid of unknown constitution, obtained from the roots of Brazilian ipecacuanha. It forms a white amorphous powder, m.p. 74° C., soluble in alcohol, ether, or chloroform, slightly in water. Emetine is used in medicine as an emetic; its principal use, however, is in the form of emetine bismuthous iodide, a remedy for amoebic dysentery.

e.m.f. (*Elec. Eng.*). A commonly used abbrev. for *electromotive force.*

See **contact— induced—**

emic'tory (*Med.*). A drug which excites the excretion of urine.

eminently hydraulic lime (*Build.*). *Lime* (q.v.)

made by burning a limestone containing more than 22% clay.

emissa'rium (*Civ. Eng.*). A flood-gate or *sluice* (q.v.).

emissary (*Zool*). Passing out, as certain veins in *Vertebrata* which pass out through the cranial wall.

emission (*Thermionics*). Generally, the process of ejection of electrons from a conducting surface through the agency of heat, incidence of light, or ionic or electronic bombardment. Specifically, the total electronic current emitted from a heated cathode. Also called EMISSION CURRENT.

emission limitation (*Thermionics*). See **filament limitation.**

emissive power (*Phys.*). The ratio of the rate of loss of heat per unit area of a surface at a given temperature to the rate of loss of heat per unit area of a *black body* at the same temperature and with the same surroundings. The values of emissive powers range from 1·0 for lampblack down to ·02 for polished silver.

Emitron (*Television*). Trade-name for a form of electron camera in which the optical image is focused on a photo-emitting mosaic which is scanned by an electron beam.

emmen'agogue (*Med.*). Having the power to stimulate the menstrual flow: a drug which so acts.

em'metrope (*Med.*). One who is emmetropic.

emmetro'pia (*Med.*). The normal condition of the refractive system of the eye, in which parallel rays of light come to a focus on the retina, the eyes being at rest.

emmetrop'ic (*Med.*) Distinguished by emmetropia.

emotion (*Psychol.*). A mental state characterised by a strong degree of feeling, accompanied by psychological and physiological disturbances which represent primitive patterns of behaviour and action.

empais'tic (*Dec.*). Said of embossing or inlaying effected by stamping.

empennage (*Aero.*). See **tail.**

emperor (*Paper*). A standard size of writing and drawing paper, 48 × 72 in.; U.S., 40 × 60 in.

emphyse'ma (*Med.*). (1) The presence of air in the connective tissues.—(2) The formation in the lung of bullae or spaces containing air, as a result of distension of alveoli and rupture of weakened alveolar walls.

emphysema, cutaneous (*Vet.*). Distension of the tissues of the neck of birds by air which has been expired through a wound or ulcer in the pharynx or oesophagus.

emphyse'matous chest (*Med.*). The barrel-shaped, immobile chest which is the result of chronic emphysema and bronchitis.

Empire broadcasting (*Elec. Comm.*). The broadcasting, by directed radiation, of programmes to remote localities, for local radiation at appropriate times.

Empire cloth (*Diel.*). A varnished cambric or one impregnated with linseed oil, used for insulating armature windings. etc.

empirical. Said of a rule or generalisation which is induced solely from observations, without correlation with other scientific laws by an acceptable theory. See **law.**

empirical formula. A formula founded on experience or experimental data only, not deduced in form from purely theoretical considerations.

empirical formula (*Chem.*). A formula expressing the simplest numerical relationship between the atoms of the elements present in a compound; e.g. the empirical formula of benzene is CH, though its molecular formula is C_6H_6.

empiricism. The regular scientific procedure whereby scientific laws are induced by inductive reasoning from relevant observations. Critical phenomena are deduced from such laws for experimental observation, as a check on the assumptions or hypotheses inherent in the theory correlating such laws. Scientific procedure, described by empiricism, is not complete without the experimental checking of deductions from theory. See **idealism and positivism.**

emplas'trum (*Med*). A medicated plaster for external application.

emplec'tite (*Min.*). Sulphide of copper and bismuth occurring, at Tannenbaum and elsewhere, as thin, striated grey metallic prisms intimately associated with quartz.

emplec'tum (*Masonry*). An ancient form of masonry, showing a squared stone face, sometimes interrupted by courses of tiles at intervals.

empo'dium (*Zool.*). In Insects, a pad-like or bristle-like process of the terminal joint of the tarsus.

empress (*Build.*). A slate size, 26 × 16 in.

em'prosthot'onos (*Med*). Bending of the body forwards caused by spasm of the abdominal muscles, as in tetanus.

empty glume (*Bot*). See **sterile glume.**

empyema, em-pi-ē'ma (*Med*) Accumulation of pus in any cavity of the body, especially in the pleural cavity.

emulsifier (*Chem.*). An apparatus with a rotating or stirring device, used for making emulsions.

emulsifying agents (*Chem*). Substances whose presence in small quantities stabilises an emulsion; e g. ammonium linoleate, certain benzenesulphonic acids.

emul'sin (*Chem.*). An enzyme which splits lactose into galactose and induces hydrolysis of β-glucosides and β-galactosides.

emulsion (*Build.*). A preparation serving as a retarder.

emulsion (*Chem.*). A colloidal suspension of one liquid in another; e.g. milk.

emulsion (*Photog*). The light-sensitive coating, on supports, which forms the basis of photography.

emulsoid (*Chem.*). See **lyophilic colloid.**

emunc'tory (*Med.*). Conveying waste matter from the body: any organ or canal which does this.

Emy's roof (*Build.*). A form of roof in which the principal member is built up to a semicircular shape.

en (*Chem.*). A symbol for *ethylenediamine,* $NH_2CH_2CH_2NH_2$.

en (*Typog.*). A unit of measurement used in reckoning up composition. It is equal to the average width of a letter; and the average word, including the space following, is equal to six ens.

en quad (*Typog.*). A type space half an em wide. It is more usually known as a NUT, the word *en* being easily mistaken for *em.*

en rule (*Typog.*). A dash cast on an *en* body. Half the width of an *em* rule, it is often used to divide dates, etc. Also called EN SCORE.

en cabochon, ahn^g ka-bosh-on^g (*Jewel.*). A style of cutting used in the case of certain gemstones, notably garnets (carbuncles), and those gems which depend for their beauty largely upon minute orientated inclusions, such as cat's eye, crocidolite, star ruby, and star sapphire. Such stones are not facetted, but a smooth-domed surface is produced, the plan of the stone being circular or oval.

en gaine, ahn^g gen (*Build.*). A term applied to flutings which do not run parallel but converge downward to a point.

enamel (*Build.*). *Glaze* (q.v.).

enamel (*Dec.*). A transparent, opaque or semi-opaque vitreous material applied to metal, pottery, or glass and fired in the enamelling kiln.

enamel (*Diel.*). A finely ground oil paint containing resin. The oil is thickened by heating linseed oil with china-wood oil for some hours at 300° C. Unrivalled for insulating very fine wires.

enamel (*Zool.*). The external calcified layer of a tooth, of epidermal origin and consisting of elongate hexagonal prisms, set vertically on the surface of the underlying dentine; enamel also occurs in certain scales.

enamel cell (*Zool.*). See **ameloblast.**

enamel-insulated wire (*Elec. Eng.*). Wire having an insulating covering of *enamel* (q.v., *Diel.*), used for winding small magnet coils, etc.

enamel kiln (*Pot.*). A muffle kiln for firing painted and gilded ware.

enamel organ (*Zool.*). The epithelial dental rudiment of Mammals.

enamel paint (*Paint.*). A special class of oil paint, prepared ready for use without grinding or mixing and without the addition of oil, turpentine, or driers; it dries with a firm glossy surface or with a flat surface.

enamelled brick (*Build.*). A brick having a glazed surface.

enamelled cloth. A cloth with an enamel coating on one face, used for covering furniture, etc. The English name is AMERICAN CLOTH or AMERICAN LEATHER.

enamelled leather (*Leather*). Leather which has been coated with a special varnish—black or other colours.

enamelled paper (*Paper*). Paper coated on one side with china clay and highly finished. The best quality is used for litho work, cheaper sorts for box covers.

enamelled slate (*Elec. Eng.*). Slate covered with a coating of hard enamel in order to render it suitable for the construction of switchboards.

enamelling (*Photog.*). The production of a high glaze on prints, by using a volatile solution of pyroxyline and castor oil.

enan'them, enanthe'ma (*Med.*). An eruption on a mucous membrane.

enantiom'erism (*Chem.*). See **optical isomerism.**

enan'tiomor'phous (*Crystal.*). Related to one another as object to mirror image.

enan'tiosty'lous (*Bot.*). Said of a flower having the style or styles projecting to one side, the stamens often then projecting to the other.

enan'tiotrop'ic (*Chem.*). Existing in two crystalline forms, one stable above, the other stable below, a certain transition temperature.

enar'gite (*Min.*). Sulpharsenate of copper, often containing a little antimony. Occurs as black, metallic orthorhombic crystals in several mines in both N. and S. America.

enarthro'sis (*Zool.*). A ball-and-socket joint.

ena'tion (*Bot.*). (1) A general term for an outgrowth.—(2) An outgrowth from the veins of the underside of a leaf, caused by some virus infections.

encal'low (*Build.*). The mould which is first removed from the surface of the site where clay for brick-making is to be obtained, and which is stored in a spoil bank for resurfacing later.

encallowing (*Build.*). The process of removing the mould at the top surface of a site from which clay for brick-making is to be obtained. See **encallow.**

encase (*Build., Join.*). To surround or enclose with linings or other material.

encased knot (*Timber*). A *dead knot* (q.v.).

encastered (*Struct.*). A term applied to the end of a beam when it is fixed.

encastré, ahn^{g}kas-trā (*Build., Civ. Eng.*). A term applied to the end-fixing of a beam which is built in at one or both ends.

encaustic (*Pot.*). A term loosely applied to articles decorated with impressed designs filled in with coloured slip and fired.

encaustic painting (*Dec.*). A process of painting in which hot wax is used as a medium.

encaustic (or **cerate**) **paste** (*Photog.*). A paste made of white wax dissolved in oil, used for rubbing over prints to make them more brilliant by adding a gloss to the highlights.

encaustic tile (*Build.*). An ornamental coloured tile whose colours are produced by substances added to the clay before firing.

enceph-, encephalo- (Greek *enkephalos*, brain). A prefix used in the construction of compound terms; e.g. *encephalocystocele* (q.v.).

encephalal'gia (*Med.*). Pain inside the head.

encephalit'ic (*Med.*). Of the nature of, or affected with, encephalitis.

encephali'tis (*Med.*). Inflammation of the brain substance.

encephalitis lethar'gica (*Med.*). See **Von Economo's disease** and **epidemic encephalitis.**

encephalitis per'iaxia'lis, encephalitis periaxialis diffu'sa (*Med.*). Schilder's disease. A disease characterised by progressive destruction of the nerve fibres composing the central white matter of the brain, causing blindness, deafness, paralysis, and amentia.

enceph'alocele (*Med.*). Hernial protrusion of brain substance through a defect in the skull.

encephalocoele, —sēl (*Zool.*). The cerebral ventricle or brain cavity of *Cephalochorda.*

enceph'alocys'tocele (*Med.*). Hernia of brain substance which is also distended by cerebrospinal fluid.

enceph'alogram (*Med.*). An X-ray photograph of the skull and the brain obtained by encephalography.

encephalog'raphy (*Med.*). Radiography of the brain after its cavities and spaces have been filled with air previously injected into the space round the spinal cord.

enceph'aloid cancer (*Med.*). A cancer which is soft and rapidly growing.

enceph'alomala'cia (*Med.*). Pathological softening of the brain.

enceph'alomy'eli'tis (*Med.*). Diffuse inflammation of the brain and the spinal cord.

encephalomyelitis, enzootic, en-zō-ot'ik (*Vet.*). See **Borna disease.**

enceph'alon (*Zool.*). The *brain* (q.v.).

encephalop'athy (*Med.*). Any general disease of the brain; e.g. *lead encephalopathy* is the brain disorder caused by lead poisoning.

enceph'alospi'nal (*Zool.*). See **cerebrospinal.**

enchondro'ma (*Med.*). A tumour, often multiple, composed of cartilage and occurring in bones.

enchyle'ma (*Cyt.*). The more fluid constituents of cytoplasm.

enclit'ic (*Obstet.*). Having the planes of the foetal head inclined to those of the maternal pelvis.

enclosed arc lamp (*Illum.*). A lamp consisting of a carbon arc maintained in a translucent enclosure. The latter is designed to exclude air, so that the arc burns in an atmosphere of the products of combustion.

enclosed-flame arc lamp (*Illum.*). An enclosed arc lamp employing flame carbons.

enclosed fuse (*Elec. Eng.*). A fuse in which the fuse wire is enclosed in a tube or other covering.

enclosed self-cooled machine (*Elec. Eng.*). An electric machine which is enclosed in such a way as to prevent the circulation of air between the inside and the outside, but in which special provision is made for cooling the enclosed air by some attachment; e.g. an air cooler, forming part of the machine.

enclosed-ventilated (*Elec. Eng.*). Said of electrical apparatus which is protected from ordinary mechanical damage by an enclosure, with openings for ventilation.

enclosure (*Build.*). The framing surrounding a shop-window.

encysted (*Med.*). Enclosed in a cyst or a sac.

encyst'ment (*Bot.*). The formation of a walled, non-motile body from a swimming spore.

encystment, encystation (*Zool.*). The formation by an organism of a protective capsule surrounding itself.—*v.* **encyst.**

end (*Textiles*). (1) A warp thread.—(2) In the woollen trade, the name applied to one portion of a standard length of cloth that has been cut into two equal parts.

ends (*Carp.*). Odd lengths of timbers of various sizes.

end-and-end (*Weaving*). A term indicating an alternate arrangement of warp threads which vary in colour or style.

end-artery (*Anat.*). A terminal artery which does not anastomose with itself or with other arteries.

end bell (*Elec. Eng.*). A strong metal cover placed over the end-windings of the rotor of a high-speed machine, e.g. a turbo-alternator, in order to prevent their being displaced by the centrifugal forces.

end bracket (*Elec. Eng.*). An open structure fitted at the end of an electrical machine, for the purpose of carrying a bearing.

end-bulb (*Zool.*). In Vertebrates, a type of sensory nerve-ending in which the nerve loses its medullary sheath and breaks up into small branches, within a cylindrical or spherical connective-tissue capsule.

end-cell (*Elec. Eng.*). See **regulator-cell.**

end connexions (*Elec. Eng.*). That part of an armature winding which does not lie in the slots, and which serves to join the ends of the active or slot portions of the conductors.

end fixing (*Struct.*). A term used in referring to the condition of the ends of a pillar, whether fixed or only partially so.

end grain (*Timber*). The arrangement of the fibres shown on a section exposed by a cut across the grain, usually at right-angles.

end-lap joint (*Carp.*). A *halving* (q.v.) joint formed between the ends of two pieces of timber.

end leakage flux (*Elec. Eng.*). Leakage flux associated with the end connexions of an electric machine.

end links (*Eng.*). The links at either end of a chain; they are made slightly stronger than the remainder to allow for wear when attached to hooks, couplings, etc.

end measuring instruments (*Eng.*). Measuring instruments (e.g. micrometers, callipers, gauges) which measure length by making contact with the ends of an object.

end mill (*Eng.*). A *milling cutter* (q.v.) having radially disposed teeth on its circular cutting face; used for facing operations.

end-on (*Mining*). Headings or stalls are *end-on* when the coal is being worked away in a direction at right-angles to the natural cleats or main slips.

end-papers (*Bind.*). Stout papers formed from a folded sheet which is firmly attached to the first and last sections of a volume at the fold. One half of each sheet is securely pasted to the inner side of the front and the back cover, the other half forming a fly-leaf. Ornamental or illustrated end-papers are often used.

end plate (*Thermionics*). A disc-shaped electrode, partially or completely closing the end of a concentric cylindrical arrangement of anode and cathode in a thermionic tube, to which a negative potential is applied to prevent the escape of electrons from the end of the tubular anode.

end plate (*Zool.*). A form of motor nerve-ending in muscle.

end plates (*Elec. Eng.*). Thick plates between which the laminations of a laminated core or other structure are clamped.

end plate magnetron (*Thermionics*). A magnetron fitted with end plates which, in conjunction with a magnetic field directed exactly parallel with the filament, performs in the same manner as one without end plates, in which the magnetic field is slightly inclined to the axis of the filament.

end-play device (*Elec. Eng.*). A device, used with rotary convertors and other commutator machines, which gives a small oscillatory axial movement to the rotor, in order to prevent the wearing of grooves in the commutator.

end-point (*Chem.*). The point in a volumetric titration at which the amount of added reagent is equivalent to the solution titrated.

end-products of weathering (*Geol.*). These vary with the nature of the rocks acted upon; but in general the end products are: quartz sand, which is chemically stable and hard; clay, which is deposited, after transportation by rivers, on the bed of the sea; and salts, which are carried in solution and ultimately added to the amount already present in sea water.

end-sac (*Zool.*). In some *Arthropoda*, the small coelomic vesicle in which a coelomoduct terminates, in the absence of perivisceral coelom.

end-shake (*Horol.*). See **shake.**

end sheet (*Elec. Eng*). A sheet of insulating material placed between the end section of an accumulator and the lining of the container.

end shield (*Elec. Eng.*). A cover which wholly or partially encloses the end of an electric machine; it may carry a bearing.

end spring (*Elec. Eng.*). A small spring of hard lead placed in a lead-acid accumulator, between the end plates and the container, in order to prevent the plates from spreading.

end stone (*Horol.*). A flat jewel which acts as a bearing surface for the end of a pivot; e.g. the balance staff is provided with jewels, with through holes for the parallel portions of the pivots and end stones for the ends of the pivots.

ends down (*Weaving*). A term applied to warp threads that have broken during the operation of weaving.

enda'orti'tis (*Med*). Inflammation of the intima of the aorta.

en'darch (*Bot.*). Said of a xylem strand having the protoxylem on the edge nearest to the centre of the axis.

endar'teri'tis (*Med.*). Inflammation of the intima of an artery.

endarteritis oblit'erans (*Med.*). Obliteration of the lumen of an artery, as a result of inflammatory thickening of the intima.

endecan'drous (*Bot.*). Having eleven stamens.

endel'lionite (*Min.*). Another name for *bournonite.*

Endemann's process (*Photog.*). An early photographic process in which an exposed bichromated emulsion was treated with aniline fumes, giving a blue-black image.

endem'ic (*Med.*). Prevalent in, and confined to, a particular country or district; said of disease.

endemic (*Zool.*). See **indigenous.**

en'deron (*Zool.*). See **endoderm.**

endite (*Zool.*). In *Crustacea*, a lobe on the inner side of a phyllopodium: any process on the inner side of a limb, such as a gnathobase.

endless paper (*Print.*). Paper used on rotary printing machines. It is supplied in large reels, and flows continuously through the press.

endless rope haulage (*Mining*). A method of hauling trucks underground by means of a long loop of rope, guided by many pulleys along the roads or haulage ways, and actuated by a power-driven drum. Much favoured in Britain.

endless saw (*Tools*). A *band saw* (q.v.).

endo- (Greek *endon*, within). A prefix used in the construction of compound terms; e.g. *endocranial*, inside the skull.

en'doaneurysmor'rhaphy (*Surg.*). (1) Obliteration, by suture at either end, of an aneurysm of an artery.—(2) Obliteration, by suture, of the aneurysmal sac, with reconstruction of the original arterial channel.

endobiot'ic (*Bot.*). (1) Growing inside another plant.—(2) Formed inside the host cell.

en'doblast (*Zool.*). See **hypoblast.**

endocar'diac (*Zool.*). Within the heart.

endocardi'tis (*Med.*). Inflammation of the lining membrane of the heart, especially of that part covering the valves.

endocar'dium (*Zool.*). In Vertebrates, the layer of endothelium lining the cavities of the heart.

en'docarp (*Bot.*). A differentiated innermost layer of a pericarp, usually woody in texture.

endocel'lular enzyme (*Biol.*). An enzyme which functions within the cell in which it is developed.

en'docervici'tis (*Med.*). Inflammation of the mucous membrane lining the cervix uteri.

endochon'dral (*Zool.*). Situated within or taking place within cartilage; as *endochondral ossification*, which begins within the cartilage and works outwards.

en'dochondros'teo'sis (*Zool.*). Endochondral ossification.

endocoelar, —sē'lar (*Zool.*). See **splanchnopleural.**

en'docoele, —sēl (*Zool.*). In *Zoantharia*, the portion of coelenteron enclosed by each pair of mesenteries. Cf. *exocoele.*

endoconid'ium (*Bot.*). A conidium formed inside a hypha.

endocra'nium (*Zool.*). In Insects, internal processes of the skeleton of the head, serving for muscle attachment.

en'docrine (*Zool.*). Internally secreting; said of certain glands, principally in Vertebrates, which pour their secretion into the blood, and so can affect distant organs or parts of the body. See **hormone.**

en'docrinol'ogy (*Zool*). The study of the endocrine glands and their secretions.

en'docrinop'athy (*Med.*). Any disease due to disordered function of the endocrine glands.

Endocy'clica (*Zool.*). An order of *Echinoidea* in which the mouth is central, the ambulacra are not petalloid, and the anus is in the centre of the aboral surface. Regular Urchins.

en'docyst (*Zool.*). In *Polyzoa*, the soft part of the body-wall of a zooecium, consisting of ectoderm and mesoderm: in *Protozoa*, the membranous inner layer of a cyst. Cf. *ectocyst.*

en'doderm (*Zool.*). The inner layer of cells forming the wall of a gastrula and lining the archenteron: the tissues directly derived from this layer.

endoderm disc (*Zool.*). In certain *Malacostraca*, a posterior unpaired thickening on the ventral surface of the blastoderm during early development.

endoderm lamella (*Zool.*). In certain medusae, a sheet of endoderm lying in the thickness of the mesogloea, in the radial segments bounded by the circular canal, the central enteric cavity, and the radial canals.

endoder'mal pressure (*Bot.*). See **root pressure.**

endoder'mis (*Bot.*). A sheath of cells, one layer thick, at the boundary between the cortex and the stele. The radial walls of the cells develop characteristic bands of thickening (Casparian strip), and may subsequently become heavily thickened over most of their surface. There are no spaces between the cells composing the endodermis. It is thus a firmly built layer, and probably plays a part in controlling the horizontal movement of water in the root or stem.

en'dodyne (*Radio*). The same as *autoheterodyne.*

en'doen'zymes (*Chem.*). Enzymes which are endocellular, and do not leave the cell or diffuse through the cell walls. Zymase, the enzyme of alcoholic fermentation, is a typical example of an endoenzyme.

en'dogam'y, *or* en-dog'— (*Bot.*). (1) Pollination between two flowers on the same plant.—(2) The union of two sister gametes, both female.—(*Zool.*) See **inbreeding.**

endogas'tric (*Zool*). Said of spirally coiled shells in which the coil is directed on to the posterior face of the animal. Cf. *exogastric.*

en'dogen'ous, *or* en-doj' (*Bot.*). Formed inside another organ of the plant.
